voyage to Iceland, and published the highly popular *Letters from High Latitudes*. Sent by Lord Palmerston, in 1860, as British Commissioner in Syria, he investigated with firmness and ability the difficult question of the massacre of the Christians, and was rewarded with a K.C.B. Under-Secretary of State for India (1864-6), he was transferred from that post to the War Office, as Under-Secretary, until June, 1867. From 1867 to 1872, he was Chancellor of the Duchy of Lancaster, and was then appointed Governor-General of Canada. Lord Dufferin must rank among the highest of the administrators of the Dominion. The growing prosperity of Manitoba was carefully encouraged, the discontent which inspired British Columbia to secede from the Dominion was soothed. On his return to England in 1878, when the Marquis of Lorne succeeded him, honours were showered upon him in the shape of honorary degrees. Appointed ambassador to St. Petersburg in 1879, Lord Dufferin was sent to Constantinople in May, 1882, to conclude a convention with the Porte for the joint occupation of Egypt, and displayed great ability in thwarting the Ottoman guile, while events were deciding in our favour at Tel-el-Kebir, and thus a convention became unnecessary. On October, 1882, he went to Cairo, and remained there until April 1883, to settle the affairs of the country after Araby Pasha's rebellion. Immediately after his arrival, the Dual Control was abolished by Khedival decree. In a series of highly humorous despatches, he described the shortcomings of Egyptian government, and on Feb. 6th he formulated a brand-new Constitution, including village communities, provincial councils, a legislative council, a general assembly, and ministerial responsibility. In December, 1884, he succeeded Lord Ripon, who had become highly unpopular with the European community, as Governor-General of India. The chief events of the earlier months of his administration were the vigorous measures taken to strengthen the frontier against Russian advance, and the important durbar at Rawul Pindi, where relations of the most friendly character were established with Abdurrahman (q.v.), Ameer of Afghanistan. In December, 1885, Burmah (q.v.) was annexed to England on the deposition of King Thébaw, and in a Budget speech made shortly afterwards the Viceroy announced the necessity of increased military preparations in view of the southward advance of Russia.

* **Duffy, Sir Charles Gavan** (b. 1816), an Australian statesman, was born in County Monaghan, Ireland, and became, in 1836, sub-editor of the *Dublin Morning Register*. He was subsequently employed at Belfast as a journalist, but returned to Dublin in 1841, and took an active part in the political

agitation under O'Connell. In 1842 he started, in conjunction with Mr. Thomas Davis and Mr. John Dillon, the *Nation*, the organ of what was known as the Young Ireland party. Mr. Duffy contributed several papers on the *Ballad Poetry of Ireland* to this journal, which were afterwards published in book form, and have since run through forty editions. With O'Connell and five others, he was tried in January, 1844, for sedition, and convicted; the conviction, however, was set aside, on appeal, by the House of Lords. Mr. Duffy acted with O'Connell in the agitation for repeal until 1847, when, O'Connell having quarrelled with the Young Ireland party, the latter established the Irish Confederation, of which Mr. Duffy was one of the founders. He joined Smith O'Brien in his schemes for "the redress of the wrongs of Ireland." In 1852 he was elected member for New Ross, defeating Sir John Redington, Under-Secretary for Ireland. In the House of Commons he distinguished himself in the debates on the Constitution Bills for the Colonies of New South Wales and Victoria. The disruption of the Independent Irish party induced him to resign his seat in Parliament in 1856, when he proceeded to Australia. On his arrival at Melbourne, he was entertained at a banquet, where he made use of the expression so often quoted for and against him, "I am an Irish rebel to the backbone and spinal marrow." He practised for some time at the Melbourne bar, but ultimately took to politics, and in 1857 became Minister of Public Works in the first administration under responsible government in 1862. On his return from a two years' travel in Europe, he re-entered Parliament in Victoria, and became Prime Minister in 1871. He was defeated, however, in the following year, and resigned. He was knighted in 1873, and was elected Speaker of the Legislative Assembly in 1877. In 1880 he published an admirable account of the dramatic events of forty years ago, entitled, *Young Ireland*, followed in 1883 by *Four Years of Irish History*.

Dufrénoy, Adélaïde Gillette (b. 1765, d. 1825), a French poetess, whose maiden name was Billet, made her *début* in 1787 by an anonymous little piece entitled *Boutade à un Ami*, and the following year she ventured on the stage, where she acted *L'Amour exilé des Cieux*. She was born and lived nearly all her life in Paris, where, after the success of her literary productions, her *soirées* were frequented by Condorcet, La Harpe, and the other leading authors of the day. In 1815, her poem, *Derniers Moments de Bayard*, was awarded the Academy prize. Madame Dufrénoy also wrote several odes, elegies, tales, and dramas, the vivid realism displayed in which entitles her to a place among the poetesses of France.

Duleep Singh, MAHARAJAH. [PUN-JAUB.]

Dumas, ALEXANDRE (b. 1802, d. 1871), is the greatest *romance* writer, properly so-called, in France—for Dumas (*père*) is essentially a writer of *dramatic romances*, not a *novelist*. Much of his wonderful energy he owed to his fiery tropical blood. By his father, the famous General Dumas of the First Empire, he was a Creole of no colder clime than San Domingo, his mother being from the north-east of France. In 1823 he came to Paris to seek his fortune, and obtained a clerkship in the *hôtel* of the Duke of Orleans. Active life was so masterful in Alexandre Dumas that, before he was twenty, it burst forth in the shape of a drama, and in little more than a certain number of days he called to life the terrible tragedy of the murdered Monaldeschi, and under the title of *Christine à Fontainebleau* offered it to the *Théâtre Français*, where it was refused. At the advent of Louis Philippe, however, when the author was about twenty-three, and had made himself conspicuous in the revolution of July, his second play, *Henri III.*, was performed, and literally took Paris by storm (1829). With *Henri III.* began his series of sixteenth century pieces, which would of themselves have sufficed to establish a world-wide reputation, for from *Henri III.* to *La Reine Margot* (1845), and *La Dame de Monsieau* (1860), the way in which men and women thought and acted under the reign of the Valois Kings was reproduced with living truth. There is no greater mistake than to accuse Dumas of neglect of historical knowledge in his *théâtre*. In the first place, no one ever devoured the documents of the period on which he was busy more conscientiously than did he, and in the next, his power of receptivity was so extraordinary that while the fit was on him he was positively penetrated, absorbed, by the atmosphere of that period. The severest critic of the age in France, M. Villemain, always said, "Never attempt to depreciate Alexandre Dumas' dramas; they are a great *historical* achievement—*son théâtre est un grand fait*." Whatever particular moment of time he chooses, when he is in sympathy with it, he re-creates with an almost incredible power of truth. Now his instructive sympathies are with the sixteenth and seventeenth centuries, and his Valois dramas and those of the reigns of Louis XIV. and Louis XV. are equally remarkable for their quality of intense revivification. *Mlle. de Bellisle*, one of his later works, and the *Jeunesse de Louis XIV.* (played after his death), are each a perfect *chef d'œuvre*. The Mazarin of the latter play, and the Duc de Richelieu of the former, will endure for all time as historical portraits, and the method and manner of the piece in which they are framed can never be surpassed. It would be impossible to attempt even a

catalogue of Dumas' works in an article—they comprise over 2,000 volumes—but there can be no doubt that his one master quality—the central fire, so to say, of his inspiration—is dramatic. In his romances, as in the events he relates autobiographically, you are invariably witnessing *facts being acted* before you by living actors, whether on a stage or on the real stage of existence. Something is always being done, not described; you do not read—you see. There is no proportion between the value of Dumas' work in the epochs above mentioned, and those of either an earlier or a later period. Of *Charles VI.* or *Caligula* (besides both being in *verse*, of which Dumas was never an even mediocre master) there is no more to say than might be said of any of his inferior productions; and of his modern pieces the less said the better. *Antony*, *Richard Darlington*, *Kean*, and all their tribe, are unrealities, in which nothing atones for the extravagance of language and plot; and the entire series of his *revolutionary* plays, *Les Girondins* and others, have no claim whatever to be remembered. If we come to his romances, a work stands out which can be ignored in no tongue in the universe: *Les Mousquetaires*, in their three progressive developments. Here Dumas really held, nay, to this day holds, the humanity of the entire world enthralled, and has to a certain degree deserved the surname of the "modern Cervantes." *Monte Cristo* (1844), as far as mere *effect* goes, was also a remarkable undertaking, but quite without intrinsic worth. After his dramas, the next title of Dumas (*père*) to fame must be found in the recital of his own personal adventures. Allowing here for far more imagination than in his historical *théâtre*, the same dramatic power is always forthcoming. Deeds are for ever being done before you, and you remain spell-bound. Out of the two thousand volumes which bear his name, had Dumas written only *La Reine Margot*, *Henri III.*, *Mlle. de Bellisle*, *Les Mousquetaires*, and his own *Voyage en Espagne*, he would remain one of the chief enchanters of the age, and it is impossible to dispute the enormous place he fills in the domain of the modern intellectuality of France. The details of his manhood may be summarised as follows:—In 1842 commenced his unhappy union with Ida Ferrier, an actress; 1844 was the year of his greatest literary activity, when, by means of unsparing use of literary hacks, he produced some forty volumes; 1846 was the year of his romantic voyage in the Mediterranean, at the expense of the French Government. After the revolution of 1848 began the inundation of lawsuits and failures in theatrical speculation, which, combined with profuse expenditure, caused his last days to be spent in destitution and frantic efforts to raise the necessities of life. In the intellectual movement which took place in France from

1815 to 1845, and which was ushered in by Chateaubriand, the two great inventive currents are represented by Balzac and Alexandre Dumas. As far as prose is concerned, these two men sufficed for over twenty years to furnish the sources whence proceeds the entire French work of fiction. But their creative force is of an absolutely opposite kind. Whilst Balzac reproduces the complete social life around him, and, to use his own words, writes under the dictation of society itself, Dumas extracts the populations that move through his books from his own brain, and makes them live and act, not as they might perhaps have done had he merely described them or copied them from nature, but as they are bound to act, being what they are. Dumas' personages are, once granted, perfectly true to themselves, perfectly consistent and logical; above all, they are always alive and always in action. No creation of Dumas' is ever quiescent. Incessant action is the very essence of both the man and his works, and it may with truth be said, that since the almighty "wizard," Scott, no man ever evoked such a number of living human creatures as Dumas.

Materials for a life of Dumas are to be found in his *Voyage en Espagne*, and in his extraordinary *Mémoires*, although it is difficult to separate fiction from fact. [Y. B. de B.]

* **DUMAS, ALEXANDRE** (8. July 28, 1824), son of the above, is a native of Paris. The interest of his life—if the Mediterranean voyage of 1846, in which he accompanied his father, be excepted—has been almost entirely literary, and it is only necessary here to mention the date of his election to the French Academy, 1874. The younger Dumas is the absolute reverse of his father. Instead of exuberance, his *raison d'être* is precision; truth of the cruellest, most implacable kind, and the precision of a mathematician. The father is all action, all passion, all imagination, all life; the son is a teacher, a reformer, whose aim is, through his talent, to awaken the public mind in France to the strongest possible sense of the evils of modern French manners and civilisation. It is for this reason that Dumas (the younger) is relatively so little appreciated in other countries, he being needed only in France; his talent being applicable to society in France alone. Dumas (*fils*), like his father, has the instinct of the stage, and the manifestation of what is in him assumes exclusively the dramatic form. As a novel-writer he is utterly devoid of all importance. His *Préfaces* (new edition, 1877), of which he invariably adds one to each published play, are amongst the most remarkable specimens of French prose writing in this day, but are, in fact, only the explanations of the theories on which his plays are based. The son expresses himself, as did the father, through the theatrical form, but from a totally different

cause, and with a totally different purpose: had circumstances been other than they were, no doubt the younger Dumas would have "moralised" otherwise than from before the footlights. Had he been a priest he would have had the pulpit, or a deputy he would have had the tribune; but he was, so to say, born "behind the scenes," and he preached, naturally and spontaneously, from the boards. His first success was the *Dame aux Camélias* (1848), and it was the last of its description. For this piece he has become famous in all countries, but this piece is the very one in which Dumas is not himself. The *Dame aux Camélias* is the outcome of what had preceded it, of *Marion Delorme*, and the reclaimed Foolish Virgins of the Victor Hugo school. It was the product of youth, and is full of talent, but not the talent—that is, that of its author. It is an eminently sentimental drama, and in the creations of the younger Dumas there is no place awarded, or meant to be awarded, to sentiment. Dumas is a born flagellator—he excuses nothing, pities no one, sees the wrong which is around him, and "castigates" vigorously, but *non ridendo*, for he esteems it no laughing matter. There is no "fun" in Dumas, whilst his father brimmed over with it, and no youth. From the moment of his success, nearly a quarter of a century ago, he stripped the mask from every face, and bade the most immoral public in Europe look at itself as it was, and recognise the ugliness of vice. But in all his pieces the tone was too sharp, too hard; and from the *Demi-Monde* (1855) onwards, the first movement of the public has invariably been one of revolt. Take the complete riper tone, and whether *La Princesse Georges*, or *Monsieur Alphonse* (1873), *L'Étrangère* (1876), or *Danièle*, or whichever you may choose, the instinctive feeling of the public has always been to take offence. The blows are so unsparingly dealt, there is such an absence of all sympathy, of all pity for human failings—in a word, such a cruel lack of the human element. On the other hand, the truth is so undeniable, the wrong exposed is so glaring, that, in spite of shame, anger, and all unpleasantness, the public has to submit, and does, in every case, submit; and no theatre in France could subsist if it had not a fairly good cast for Dumas's plays, at all events, several times within each year. Hard as he may be, painfully pitiless, aggressive, careless of wounding the public, Dumas is possessed of such a supremely fine tact, of such an extraordinary sense of what the public will, and must eventually accept, that he proceeds *à coup sûr*. In the conduct of his dramas, in the development of his personages, he never commits a mistake. His theatrical mechanism is always faultless; that which the public expects comes forth at its proper moment; the dramatic interest never flags, and every word tells.

That Dumas (*file*) may be the most unpleasant, even cynical, reflector of the morals and ways of his age in his own country, it would be difficult not to admit, but what is not to be disputed is, that he is the greatest professor of dramatic *technique*, and the master of all dramatic literature in France. Among his later novels, which are of distinctly minor importance compared with his plays, may be mentioned *Le Régent Mustel* (1852), *Sophie Printemps* (1853), *Thérèse* (1875), *Les Femmes qui tuent et les Femmes qui volent* (1880).

Dumas, JEAN BAPTISTE ANDRÉ (b. 1800, d. 1884), a celebrated French chemist, was born at Alais, and received his preliminary education in his native place. He appears to have been originally intended for the naval service. This plan was, however, abandoned, and the lad was apprenticed to an apothecary. In this situation he remained for only a short period, for when only sixteen he travelled on foot to Geneva, where he found employment in the pharmacy of Le Royer, and an opportunity of attending the lectures of De Candolle, Pictet, and Gaspard de la Rive, then ranked among the first scientific teachers of Europe. Having not only shown that burnt sponge owed its merits as a remedy for goitre to the presence of iodine, but that the drug might be administered in a way which has now rendered it almost a specific for that Alpine disease, he attracted the attention of Coindet and Prevost, and was induced to begin, in connection with the latter, a series of physiological investigations, which gained for the young Frenchman the friendship of Alexander von Humboldt, who exerted his influence in order to obtain for him a footing in the scientific circle of Paris. In 1826, three years after his removal from Geneva, he married Hermione, eldest daughter of Alexandre Brongniart, the most illustrious geologist of the day, and whose house became, as did Dumas' after his father-in-law's death, the chief resort of the best scientific society of Paris. In 1828-9 Dumas united with Olivier and Pécelet in founding the École Centrale des Arts et Manufactures, in the management of which he took an active part. In 1832 he succeeded Gay-Lussac as professor at the Sorbonne; in 1835 he accepted the Chair at the École Polytechnique vacated by Thenard, and in 1839, he was appointed to succeed Deyeux at the École de Médecine—thus before the age of forty filling successively, and for some time simultaneously, all the most important chemical Chairs in Paris, except that of the Collège de France. In 1832, recognising the necessity of laboratory instruction, he founded one at his own expense. When the social upheaval of 1848 came, Dumas, anxious to do what he could to avert the calamities of his country, accepted his election to a seat in the Legislative Assembly,

and shortly afterwards, at the invitation of the Prince-President of the Republic, the Ministry of Agriculture and Commerce. When the Second Empire was established, Dumas was elevated to the rank of secretary, and soon afterwards to the post of Vice-President of the Council of Education, to which he added, from 1859-70, the position of President of the Municipal Council of Paris. In 1868 he was appointed Master of the Mint, which post he occupied until 1870, when, with the fall of the empire, his political career came to an abrupt termination. Some years previously he had resigned his professorships. As early as 1832 he had been elected a member of the Academy of Sciences, and in 1868 he had succeeded Flourens as its permanent secretary. In 1875 he was elected a member of the French Academy, as successor to Guizot, a distinction rarely attained by a man of science. To within a short period of the close of his life, Dumas showed few signs of impaired vitality. In 1883, however, his health began to decline, and on April 11th, 1884, the famous chemist died at Cannes, where he had retreated before the severity of the Paris winter. The merest summary of Dumas' discoveries would fill many pages, though his merits as an investigator were equalled by his ability as a teacher and an administrator. The molecular volumes of æriform substances, and the atomic theory, occupied much of his early labours, and had an important influence on modern chemical philosophy. His investigations regarding the action of chlorine gas on acetic acid established the important fact that "the qualities of a compound substance depend not simply on the nature of the elements of which it consists, but also on the manner or type according to which these elements are combined." The third great investigation of Dumas was his revision of the atomic weights of many of the chemical elements. Unlike Faraday, he did not attempt to popularise his science, but he excelled in clearness and elegance of exposition, and his exuberant fancy made him one of the most attractive of lecturers to a French audience. His published contributions to science are for the most part continued in the scientific journals and the transactions of the different learned societies, though these are by no means so numerous as the papers of some of his less illustrious contemporaries. In 1828 he issued the *Traité de Chimie appliquée aux Arts* (8 vols., with atlas), and two volumes of lectures at a later date. It is perhaps unnecessary to add that from foreign countries he received every distinction—the roll of crosses and stars and honorary diplomas which fell to him being in itself a lengthy list.

Sketches of his career may be found in all the contemporary journals, and in the proceedings of the academies and societies to which he belonged. A full one, from which this account is partially condensed, is contained in *Science*, vol. iii., No. 72, pp. 750-1.

[R. B.]

* **Du Maurier**, GEORGE LOUIS PALMELLA BUSSON (b. 1834), artist and caricaturist, was born in Paris of a French family that had migrated to England at the time of the revolution, but is a British subject. Having come to England in 1851, he studied chemistry for a time at University College, London, but returned to Paris and adopted art as a profession. After further studies in Belgium and the Netherlands, he quickly gained a high reputation as a designer of wood engravings for the illustration of books and magazines, especially of *Once a Week*, the *Cornhill*, and *Punch*, of which he has long been a member of the staff. He has also illustrated *Wives and Daughters*, *Esmond*, and Foxe's *Book of Martyrs* (1865). In 1880 a series of his sketches for *Punch* was published, entitled, *English Society at Home*. Of late years he has chiefly devoted himself in that paper to satirising the extravagances of the so-called "æsthetic" school, and the social horrors of "things one would rather have left unsaid." Mr. du Maurier is a member of the Old Water Colour Society, in which he has been a constant exhibitor for many years. There was an exhibition of his drawings in 1885.

* **Dümichen**, JOHANNES (b. 1833), Egyptologist, was educated at Berlin and Breslau Universities, studying Egyptian subjects under the famous Lepsius, and in 1862 prosecuted his studies *in situ*, visiting Egypt under the auspices of the Prussian government, and exploring the Nile valley, as far south as the Soudan, till 1865, and again in 1868. Subsequently he acted as guide to the Crown Prince of Prussia during his tour in Egypt, on the occasion of the opening of the Suez Canal. He is now professor of Egyptology at Strasburg. His chief works are (1) *The Fleet of an Egyptian Queen*, describing the ancient Egyptian naval and military system, with numerous representations of Egyptian ships and inscriptions relating to the subject, and an appendix on the fish of the Red Sea, published in German and English, 1868; (2) his works on Egyptian inscriptions, *Geographische Inschriften* (1865), *Historische Inschriften* (1867 and 1869), *Kalenderinschriften* (1866), *Tempelinschriften* (1867); (3) his treatises on the temple of Dendera, 1865 and 1877; and (4) his history of Egypt, *Geschichte des alten Aegyptens* (1879), an accurate and learned epitome of Egyptian history, but not a work likely to supersede the monumental history of Brugsch.

Dumont-D'Urville, JULES SÉBASTIEN CÉSAR (b. 1790, d. 1842), a French navigator and botanist, born of Norman parents, failed to pass the entrance examination for the École Polytechnique, and took to the sea in consequence. He became a *novice* on board the *Aquilon*, where he soon attracted the attention of the captain by his studious disposition. He studied botany and entomology, mastered

English, German, Spanish, and Italian, and was familiar with Hebrew and Greek; and at the same time he was rising in his profession. A captain in 1826, he commanded the corvette *Astrolabe*, which was sent to obtain tidings of *La Pérouse*, and to make hydrographic observations. In this voyage, which extended over three years, he traversed the South Atlantic, and made coast surveys of the Australian continent, from King George Sound to Port Jackson, New Zealand, the Fiji Islands, the Loyalty Islands, New Caledonia, New Guinea, Amboyna, Van Diemen's Land, the Caroline Islands, Celebes, and Mauritius. He also found some evidence that *La Pérouse* had been wrecked on Jenikoro, one of the Solomon Islands. An account of this expedition was afterwards published, under the title of *Voyage de Découvertes autour du Monde* (22 vols., 1832-4). In 1837 he sailed with the *Astrolabe* and *Zélée* on a voyage of Antarctic discovery. Early in 1838 he sighted the Antarctic ice, and soon after his progress southwards was blocked by a continuous bank, which he vainly coasted for 300 miles to the east. He next proceeded westward, touched the South Orkney Islands, discovered Joinville Island and Louis Philippe's Land, crossed the Pacific, swept the Asiatic Archipelago, circumnavigated Borneo, and finally, in January, 1840, discovered Adélie Land. On his return in November he was at once appointed rear-admiral, and in 1841 received the gold medal of the Société de Géographie. He now began the publication of his *Voyage au Pôle sud et dans l'Océane* (24 vols., 1841-54) eleven volumes of which were written by the other naturalists of the expedition. Many of Dumont D'Urville's observations are now not regarded as trustworthy, on account of the defective instruments employed, but he made, nevertheless, many important additions to various departments of scientific geography; and his natural history collections are especially valuable.

Isidore Lebrun, *Biographie de Dumont d'Urville en Annales Maritimes*; De Barins, *Vie et Voyages de l'Amiral Dumont d'Urville*.

Dumont, PIERRE ÉTIENNE LOUIS (b. 1759, d. 1829), an eminent Swiss author, and the intimate literary friend of Mirabeau and Jeremy Bentham, was born at Geneva of a French family. After passing through the college at Geneva, he was ordained minister of a Protestant church there in 1781, but in consequence of the defeat of the Liberal party in the Swiss State he was forced into voluntary exile, ultimately joining his mother and sisters at St. Petersburg. While in St. Petersburg he gained a reputation as a preacher, but shortly after his settlement there, he accepted an offer to act as tutor to the sons of Lord Shelburne, afterwards the Marquis of Lansdowne, which brought him to London. He now became intimate with

Jeremy Bentham and Sir Samuel Romilly. In 1788 he visited Paris in company with Romilly, and while there he was patronised by Mirabeau, whom he assisted in composing his speeches and reports. His *Souvenirs sur Mirabeau* appeared in 1832, under the editorship of J. L. Duval. On his return from Paris in 1792, he formed that connection with Bentham which exercised a powerful influence over his future opinions, and, as it were, fixed his career as a writer on legislation. He made it one of the chief objects of his life to recast, popularise, and edit the writings of the great English jurist in a form suitable for the ordinary reading public. Among the works of Bentham edited by Dumont are:—*Traité de Legislation* (1802), *Théorie des Peines et des Récompenses* (1811), *Tactique des Assemblées législatives* (1815), *Preuves Judiciaires* (1823). In 1814 the restoration of Geneva to independence induced Dumont to return to his native place, and he became the leader of the Supreme Council. He devoted particular attention to the judicial and penal systems of his native State, and at the time of his death he had all but finished a complete code of law, by which he had fondly hoped to make the legislation of Geneva an example to Europe.

Macaulay, *Review of Dumont's Recollections of Mirabeau*; Simonde de Sismondi, *Notice nécrologique sur M. Dumont* (1829).

Dumouriez, CHARLES FRANÇOIS (b. 1739, d. 1823), French general, diplomatist, and statesman, born at Cambrai, was the son of a commissary in the royal army, who had acquired some celebrity as a poet, and from whom young Dumouriez received his earliest instructions. Having joined the army in 1757, he attained the rank of captain in 1763, but shortly afterwards retired on a small pension in consequence of a reform in the army. Having involved himself in some political trouble, he was obliged to flee from France at the instance of the Duc de Choiseul, but an amicable understanding was subsequently effected between Dumouriez and Choiseul, the latter making him ample reparation, and appointing him quartermaster-general of the troops. Dumouriez was next engaged in several important diplomatic missions to Poland and elsewhere, and mingled in all the intrigues of the age. It was the failure of one of these intrigues at Stockholm that led to his arrest and six months' imprisonment in the Bastille. On his release, Dumouriez had, naturally enough, little inclination to resume his connection with foreign politics, and he accordingly devoted his attention to the internal economy of his own country. One result of this study was a memoir in 1777 on the great importance that might be given to the harbour of Cherbourg. On the first symptoms of the great revolution, he advocated political reform without breaking with the Court, and, perhaps from his

connections with the leaders of the Girondist party, he became Minister for Foreign Affairs in place of Delessart. Although he only held this post for three months, and subsequently that of Minister of War for one month, he acquired an immense influence and a great popularity. When the allied troops were about to advance against France, he was appointed to the command of the Army of the North as lieutenant-general under Marshal Luckner. He gained the important victory of Valmy in 1792, which was followed by a successful campaign in the Austrian Netherlands. He was, however, defeated at Neerwinden in 1793, and his estrangement from the Republican party consequent on the execution of Louis obliged him a second time to seek safety in flight. An exile, he wandered from country to country for eleven years, and finally took up residence in England in 1804, where the Government conferred on him a pension of £1,200 a year. Dumouriez was singularly well qualified for the post of either general or statesman. His mind was at once powerful and resolute, and his eloquence spontaneous and captivating. He wrote his autobiography, and was the author of a large number of political pamphlets.

Mémoires de Dumouriez, written by himself (3 vols., 1794); Carlyle, *French Revolution*.

* **Duncan**, JAMES MATTHEWS (b. 1826), M.D., F.R.S.E., physician and lecturer in St. Bartholomew's Hospital, London, was born in Aberdeen, and graduated M.D. at the University in that town, subsequently studying for some time at the University of Edinburgh and the Medical School of Paris. He is a member of the Council of the Royal College of Physicians, and was formerly on the Council of the Royal Society of Edinburgh. Dr. Duncan began his professional career in Edinburgh. He has taken an active part in many of the institutions connected with his profession. He was the means of extending the operations of the Medical Benevolent Fund to Scotland, and in 1860 he founded, with a few others, the Edinburgh Royal Hospital for Sick Children. He shares the honour of the discovery of the anæsthetic property of chloroform, and in 1853 he became lecturer on midwifery and diseases of women and children in the Surgeons' Hall Medical School, one of the extramural schools of Edinburgh University. In 1877 he was appointed to the Chair of obstetric surgery in St. Bartholomew's Hospital, London. Dr. Duncan is the author of a treatise *On the Displacement of the Uterus* (1854); *Is Ovariectomy Justifiable or Not?* (1857); *Researches in Obstetrics* (1868); *On the Mortality of Childbed, and Maternity Hospitals* (1870); *Contributions to the Mechanism of Natural and Morbid Parturition* (1875); *Clinical Lectures on the Diseases of Women* (1879; 2nd edition, 1883); *Sterility of Women* (1884).

* **Duncan**, PETER MARTIN, M.D., F.R.A.S. (b. 1836), geologist, was educated at King's College, London, of which he became a fellow in 1871. He subsequently became lecturer on geology at the Royal Indian Engineering College, Cooper's Hill; examiner in geology in the University of London; vice-president of the Linnæan Society; fellow of the Royal Society, and finally, in 1881, was elected to the Chair of geology in King's College, London. Dr. Duncan is the author of several works on geology, some of which we may mention:—*A Monography of the British Fossil Corals*, etc., written for the Palæontographical Society in 1866, *The Great Extinct Quadrupeds* (1866), *The Beginners of Life* (1866), *Scientific Results of the Second Yarkand Mission* (1878), and *Botanists, Zoologists, and Geologists* (1882), in *Heroes of Science* series. In 1870 appeared *The Transformation of Insects*, and in 1872 *The Insect World*, works which he translated and edited. In 1881 he published, along with Mr. Percy Sladen, *A Memoir on the Echinodermata of the Arctic Sea to the West of Greenland*, with six plates. He has also edited *Cassell's Natural History* (1876–82), and revised Sir Charles Lyell's *Student's Elements of Geology* (1885).

Duncker, MAXIMILIAN WOLFGANG (b. 1811, d. 1886), a German historian and statesman, was born in Berlin, and educated at the Universities of Berlin and Bonn. In 1839 he became professor of history at Halle, and in 1848 he began to take an active part in politics, about which time he became a member of the National Assembly of Frankfurt, and subsequently one of the ministers. In 1859 he was transferred to the Chair of history at Tübingen, but retired from public life in 1875. He was the author of *Origines Germanicæ* (1840), *Papers Concerning the National Assembly of Germany* (*Zur Geschichte der deutschen Reichsversammlung*, Berlin, 1849), a *History of Antiquity* (*Geschichte des Alterthums*, 1852), and other works. In his *History of Antiquity* Duncker has effected a revolution in the conception of history. The history of the world, he holds, exhibits an organic unity; and although all the parts are by no means of the same importance, there is still no portion which can be profitably studied without reference to any others, and none which will not repay the labour which may be bestowed upon it. The new light he has thrown on the early history of Greece is particularly important. The first six volumes have been ably translated by Mr. Evelyn Abbott; the last, that on Greece, by Mr. S. F. Alleyne.

Dundas, SIR JAMES WHITLEY DEANS (b. 1785, d. 1862), a British admiral, was the son of Dr. James Deans, of Calcutta. He assumed the name of Dundas about the year 1808. He entered the navy as first-class volunteer in March, 1799, and accompanied

Sir Ralph Abercromby to Egypt in December, 1800. He was present at the spirited skirmish with the French 74-gun ship *Duguay Trouin*, at the capture of *Le Vautour*, and at the blockade of Rochefort, all in 1802. Up to the year 1815 there was not a year passed that Lieutenant Dundas did not distinguish himself in some encounter. In 1841 he obtained flag-rank; in 1852 he became vice-admiral, and was appointed to the *Britannia*, as commander-in-chief of the Mediterranean and Black Sea fleet. In 1854 he commanded the fleet which operated against Russia in the Black Sea, but did not perform any important action. He resigned, or was recalled, about the end of this year, and Sir E. Lyons succeeded to the command. Admiral (then Captain) Dundas was the first representative of the borough of Greenwich after the passing of the Reform Act of 1832, being elected in the Whig interest.

Gentleman's Magazine, Dec., 1862.

Dundas, THE RIGHT HON. HENRY. [MELVILLE.]

Dundonald, THOMAS BARNES COCHRANE, 10TH EARL OF (b. 1775, d. 1860), was the son of the 9th Earl, a distinguished chemist. He entered the navy, and as commander of the *Speedy* distinguished himself by his brilliant exploits in cutting out French vessels during the year 1801, until at last he was taken prisoner. In 1805 and onwards, when in command of the *Pallas*, he again took numerous prizes. As M.P. for Westminster he attacked the naval administration, and became obnoxious to the authorities. Hence, when in 1809 an attempt to destroy the French fleet off Brest failed, owing, no doubt, to the remissness of Cochrane's colleague, Lord Gambier, the latter was acquitted, while Dundonald was deprived of his command. His attempt to expose the abuses of the prize system at Malta was punished by imprisonment, but he soon burst his bonds. In 1814 he was accused of fraudulently spreading about the news of the fall of Napoleon, in order to clear a fortune on the Stock Exchange, and was condemned, and deprived of his position and honours. Hearing that his constituents had re-elected him for Westminster, he again broke out of prison, but was speedily re-committed. Going abroad, he placed his sword at the service of the Chilean Republic, which he aided in wresting independence from Spain, and similarly fought with reckless daring for Brazil against the Portuguese. A quarrel with the Brazilian Government was the cause of his return to England, whence Cochrane departed to take command of the disorganised Greek fleet, in a wild attempt on the Acropolis of Athens. With the accession of King William and the formation of a Whig ministry, Cochrane, or—to give him the title he had just inherited—the Earl of Dundonald, was

gradually rehabilitated. It was felt that he had been the victim of party spite, and one by one his honours were restored to him, and his fame shone all the brighter for its previous obscurity. His last active service was from 1848 to 1851, when he commanded the North American and West Indian squadrons.

Dundonald's *Autobiography of a Seaman*, written in a strain of transparent honesty, of which H. R. Fox-Bourne's *Life of Earl Dundonald* is a continuation.

Dunfermline, JAMES ABERCROMBY, BARON (b. 1776, d. 1858), the son of Sir Ralph Abercromby (q.v.), entered Parliament in 1812 as a member of the Whig party, and acquired distinction as a debater. In 1835 he was elected Speaker of the House of Commons, on the motion of Lord John Russell, by 316 votes against 310 given to Sir Manners Sutton, who had filled the Chair for eighteen years. This post he filled with conspicuous success until his resignation and elevation to the Upper House in 1839.

Gentleman's Magazine, May, 1858; May, *Constitutional History of England*; *Hansard, Parliamentary Debates*.

Dunglison, ROBLEY (b. 1798, d. 1869), a distinguished physician and author, the intimate friend of Presidents Jefferson and Madison, was born at Keswick, in Cumberland, and studied medicine in one of the schools of London, afterwards in the University of Edinburgh, then in the School of Medicine, Paris, and finally in the University of Erlangen, where he graduated in 1823. In 1824 he became professor of medicine in the University of Virginia, U.S.A. In 1833 he was transferred to the Chair of *materia medica* and therapeutics in the University of Maryland, and again in 1836 he was transferred to the Chair of institutes of medicine in Jefferson College, Philadelphia. Dr. Dunglison was the author of several important contributions to medical science, among which we may mention *Human Physiology* (1832; 8th edition, 1856); *Dictionary of Medical Science*, of which the 1st edition appeared in 1833; *Elements of Hygiene* (1835); *General Therapeutics, or Principles of Medical Practice* (1836; 6th edition, 1857); *New Remedies* (1839; 7th edition, 1856); and *Practice of Medicine* (2 vols., 1842; 3rd edition, 1848). Dr. Dunglison was also a frequent contributor to the principal medical and surgical journals of the United States and Great Britain, besides devoting his attention occasionally to philology and general literature.

Dr. R. J. Dunglison, *Memoir of Dr. Robley Dunglison* (1870).

***Dunkin, EDWARD** (b. 1821), an English astronomer, after being educated at various private schools in Truro, his birthplace, in London, and at Guines, near Calais, was in 1838 appointed a computer to the Royal Observatory, and in 1840 promoted to be assistant in the Magnetic and Meteorolo-

gical Department. In 1845 he became assistant in the Astronomical Department, in 1847 superintendent of the Altazimuth Observations, in 1870 superintendent of Astronomical Observations, in 1881 chief assistant, and in 1884 retired with a pension. In 1845 he was elected F.R.A.S., served as secretary from 1871 to 1877, and in 1884 was elected president to 1886. In 1876 he was elected F.R.S., and from 1879 to 1881 served on the council. Mr. Dunkin was entrusted by Sir George Airy with the charge of several important astronomical scientific researches, among which may be mentioned—(1) Observations of the total eclipse of the sun at Christiania, July 28th, 1851; (2) Galvanic determinations of the longitude of Cambridge, May, 1853—of Brussels, November, 1853—of Paris, May, 1854—and of the island of Valencia, Ireland, June, 1862; and (3) Pendulum experiments undertaken in the Harton Colliery for the purpose of determining the mean density of the earth, September and October, 1854. Mr. Dunkin is also the author of several astronomical papers published in the *Memoirs* and *Monthly Notices* of the R.A.S., as well as of various more popular contributions in periodicals, some of which have been reprinted in a volume.

***Düntzer, HEINRICH** (b. 1813), the German biographer of Goethe, was born at Cologne, and but for a few excursions into Horace, Homer, and classical subjects, has devoted his whole life to the compilation of books on the period of German literary history during which Goethe was the prominent figure. For fifty years his books have appeared with extraordinary regularity, and the minute accuracy of their author, combined with his entire absence of all theorising, imagination, picturesqueness, and brilliancy, makes them as valuable for the student or historian as they are tedious and even misleading to the "general reader." His depressing *Life of Goethe* appeared in 1880, followed by the *Life of Schiller* in the next year. But his most valuable service consists in the numerous volumes of correspondence which he has collected and edited with German care.

Dupanloup, FÉLIX ANTOINE PHILIBERT (b. 1802, d. 1878), Bishop of Orleans, was born at St. Félix, in Savoy, but having been sent to Paris in 1815, received a semi-ecclesiastical education there till he entered at St. Sulpice in 1820. Here he became acquainted with Montalembert, who was afterwards, for twenty years, his firmest friend. Ordained priest in 1825, Dupanloup devoted himself to education, and was appointed confessor to the Duc de Bordeaux, and instructor to the Orleanist princes. After the July revolution he returned to ordinary school duties, became curate of St. Roche in 1835, where he established his reputation as an orator, and vicar-general to Mgr. de Quélen in 1837,

continuing to bear the title though resigning the functions under Mgr. Affre in 1839. In 1838 he performed the sacred offices at the deathbed of Talleyrand. During this period he was highly successful also as Superior of St. Nicholas seminary. Immediately after the revolution of 1848 he took an active part in supporting the Falloux laws for securing liberty of education, and in the following year he was appointed to the bishopric of Orleans. The dignity and simplicity of his life, his courtesy and liberality, his knowledge and the breadth of his views, soon marked him out as the most influential ecclesiastic in France, in spite of the undisguised ill-will of the emperor, whose usurpation he had opposed from the very first. In 1854 he was elected member of the Academy, and about the same time became the acknowledged champion of the Liberal Catholics in their courteous opposition to the growing despotism of Rome. In the columns of the Liberal organ, the *Correspondant*, he became known as the most subtle and vigorous of militant controversialists. At the Catholic Congress at Malines, he and Montalembert seemed for a moment to have gained, if not victory, at least conciliation; but Montalembert fell mortally ill, and Dupanloup was left to do battle alone against Ultramontanes on one side and his old pupil Rénan on the other. He urged on the assembly of the Œcumenical Council, in hopes of gaining free discussion, and even carrying the Liberal or Gallican views to victory with the aid of Dollinger and Newman. But he arrived at Rome only to find that he had been tricked, and the contest was really decided already. In spite of the bitterness of his disappointment, he made his submission as a bishop, and was soon occupied in attending the woes of his city during the miseries of the double siege. In 1871 he was returned to the Assembly, and voted steadily with the Right, becoming the most prominent advocate of monarchical restoration, and distinguishing himself particularly by his speeches against secularised education. He endeavoured to induce the Comte de Chambord to assert his rights, and resolutely supported Marshal MacMahon during the crisis of May 16th. His death deprived France of one of the most interesting, but at the same time most unsuccessful, figures of her modern history.

Élie Antoine Dupanloup, by C. de Warmonth (attributed by Dr. Dollinger), *Nineteenth Century Magazine*, Feb., 1879; Abbé Lagrange, *Vie de Dupanloup* (1885).

Duperrey, LOUIS ISIDORE (b. 1786, d. 1865), a French navigator and scientific investigator, was born in Paris. In 1803 he entered the navy, and in 1809-10 assisted in the hydrographical survey of the coast of Tuscany. He served as hydrographer in the *Urania*, under De Freycinet, who made explorations in the North Pacific (1817-20). Attaining the rank of lieutenant in 1822, he

commanded an expedition sent out to explore the hydrography and natural history of the islands in the South Pacific, and along the coasts of South America. In this voyage (1822-5) he surveyed parts of Australia, New Zealand, New Guinea, and discovered Drummond, Henderville, Charlotte, and several other groups of islands, one of which received the name of Duperrey. An account of this voyage he afterwards published under the title of *Voyage autour du Monde sur la Coquille* (Paris, 1826-30), in which he makes some additions to cartography, and contributes some important data respecting the currents of the Pacific, and several pendulum observations, serving to determine the magnetic equator, and to prove the equality of the faltering of the two hemispheres. For the rest of his life M. Duperrey was engaged in making investigations in terrestrial magnetism and in contributing to Becquerel's *Traité de l'Électricité*. In 1842 he was elected to the Institute.

Dupin, ANDRÉ MARIE JACQUES (b. 1783, d. 1865), commonly called Dupin the Elder, a celebrated French advocate, president of the Chamber of Deputies and of the Legislative Assembly, was born at Varzy in Nièvre, and received the rudiments of law from his father. In 1800 he was made an advocate; and in 1802, when the schools of law were opened, he received successively the degrees of licentiate and doctor from the new faculty. In 1811 he was added to the commission charged with the codification of the laws of the empire, and, after the interruption caused by the events of 1814 and 1815, was charged with the sole care of that great work. In 1815 he entered the Chamber of Deputies, and strenuously opposed the election of the son of Napoleon as emperor after his father's abdication. He was, with M. Berryer, the defender of Marshal Ney, in 1815; and, as the steadfast enemy of the Jesuits, enjoyed a large popularity under the restoration. He was the *rapporteur* of the famous address of the two hundred and twenty-one deputies, in March, 1830, and took part in counselling the people to the resistance which led to the revolution of 1830. He was appointed *procureur-général* of the Court of Cassation, and a member of the first Cabinet of Louis Philippe, to whose elevation he contributed perhaps more than any other man. Between 1832 and 1848 he was President of the Chamber eight times, always exhibiting great tact in directing the debates to a practical conclusion. On Feb. 24th, 1848, he presented the infant Comte de Paris to the deputies, and proposed that he should be recognised as successor to the throne which Louis Philippe had just abdicated, with the Duchess of Orleans as regent. This attempt failed; but Dupin submitted to circumstances, still retaining the office of *procureur-général*. He even retained

it after the *Coup d'État* of 1851, and did not resign-till effect was given to the decrees confiscating the property of the House of Orleans. In 1857 he was offered his old office by the emperor, and now accepted it. Among his numerous works may be mentioned:—*Principia Juris Civilis* (5 vols., 1806), *Mémoires et Plaidoyers de 1806 au 1er Janvier, 1830*, in 20 vols., *Mémoires ou Souvenirs du Barreau* (4 vols., 1855-7), and *La Révolution de 1830*, in which he endeavoured to prove the legal character of the movement.

Ortolan, *Notice sur Dupin* (1840); *Fraser's Magazine* (1851).

Dupin, FRANÇOIS PIERRE CHARLES, BARON (b. 1784, d. 1873), a celebrated French geometer and statistician, brother of the above, was born at Varzy in Nièvre, and entered the navy as an engineer in 1803, in which capacity he assisted in the construction of the arsenal of Antwerp. In 1805 he was entrusted with a survey of the ports of Holland, and was afterwards sent to Genoa and Corfu for the same purpose. Returning to France in 1812, he presented several *Mémoires* to the Academy of Sciences, which, having appeared from time to time in the *Recueil des Savants étrangers*, were published in a separate form, under the title of *Développements de Géométrie*. In 1813 he founded the Maritime Museum at Toulon. His *Lois fondamentales de la France* appeared on the abdication of Napoleon I., a warm appeal to those who had "preserved their independence of mind during a long period of slavery." This was soon followed by the *Programme d'une Pompe funèbre à célébrer en l'honneur des Guerriers français morts pour la Défense de la Patrie*, published after the battle of Waterloo. In 1815 he volunteered to defend his friend Carnot by his pen and voice; but his client avoided trial by going into exile. In 1816 he visited England and inspected the various naval establishments, addressing a report of his inquiries to the Minister of Marine and Academy of Sciences. He also published an account of his observations in an important work entitled *Voyages dans la Grande-Bretagne* (1820-4), which was received with great favour on both sides of the channel. In 1818 he was elected a member of the Institute in place of M. Périer, and in 1819 he was appointed professor of mechanics at the Conservatoire des Arts et Métiers. His lectures were published (1825-6) in three works, entitled *La Géométrie appliquée aux Arts*, *La Mécanique appliquée aux Arts*, and *La Dynamique*, which were very successful. In his work, *Sur les Forces productives et commerciales de la France* (1827), he made an interesting application of statistics to moral and political questions which gained for him a popularity with the Liberal party. In 1828 he was elected to the Chamber of Deputies; in 1831 he became a Councillor of State; and in 1834 he was Minister of Marine for the space of three days.

In 1837 he was created a peer of France. Baron Dupin was elected a representative of the National Assembly for the Seine Inférieure in 1848; and, after the *Coup d'État* of 1875, was created a senator.

Dupont, PIERRE (b. 1821, d. 1871), the Burns of France, was born at Lyons, the son of hard-working, honest parents. Passing from the seminary of Largentiere to the uncongenial drudgery of a lawyer's office, he was ill at ease, and shortly after found himself in Paris. In 1839 he got some of his poems inserted in a corner of the *Gazette de France*, and in 1844 M. Lebrun, a member of the French Academy, secured for him subscribers for his first volume of poems entitled *The Two Angels*. He next obtained an appointment in the bureau of the Institute, but the drudgery experienced in the Lyons office was also experienced here. He had thoughts of trying his fortune as a writer for the stage when, in 1847, the success of his peasant song, *J'ai deux grands bœufs dans mon étable*, opened a new prospect. Although there is a clear socialistic ring about his pieces, as, e.g., *Song of Bread* and the noble *Song of Workers*, his songs were as popular in the drawing-room as in the workshop. In 1851, however, he paid the penalty for having become the laureate of the people by being condemned to seven years' exile from France. This sentence had afterwards to be cancelled. His lyric songs have a singular blending of the "natural, bold, delicate, and piquant;" and, if we look for a classification, we cannot find a better than Dupont's own—"rustic and objective, legendary and subjective, patriotic and contemporaneous." His poems have been collected under the titles of *Cahiers de Chansons*, *La Muse populaire*, *Chants et Chansons*, *Poésie et Musique*, *La Légende du Juif Errant*, and *Études littéraires, Vers et Prose*.

Dechant, *Biographie de Pierre Dupont* (1871); Sainte-Beuve, *Causeries du Lundi*, iv.; *All The Year Round*, 1861.

Dupont, SAMUEL FRANCIS (b. 1803, d. 1865), an American naval officer, was born at Bergen Point, New Jersey. He became a midshipman at the age of twelve, lieutenant in 1826, and commander in 1842. He experienced much active service in the Mexican War, when he captured San Diego; cleared the Gulf of California of Mexican vessels; took La Paz, the capital of Lower California; assisted in the capture of Mazatlan; and defended Lower California against the Indians and Mexicans. In 1861 he obtained command of the Atlantic blockading squadron, and shortly after greatly distinguished himself by gaining possession of Port Royal harbour, South Carolina. He followed up this advantage vigorously; and his operations along the southern coast were invariably successful. In 1862 he was made rear-admiral. In 1863 he made an unsuccessful attack on Charleston,

and was soon after relieved of the command of the squadrons. Admiral Dupont was one of the organisers of the naval school at Annapolis, and is the author of a report on the use of floating batteries for coast defence, a work highly commended by Sir Howard Douglas in his treatise on naval gunnery.

J. T. Headley, *Farragut and our Naval Commanders* (1867).

* **Dupré, MARIE JULES** (b. 1813), a French naval officer, was born at Strasburg, received his early education in Strasburg College, and entered the school for naval training at the age of sixteen. In 1844 he published an account of the hydrographic and meteorologic observations which he had made during the French expedition against China in 1837. Lieutenant in 1845, and captain in 1854, he commanded *La Tonnante*, which played a brilliant part in the bombardment of Kinburn and the siege of Sebastopol. He was next engaged in the Italian War, and then in the expeditions against China, Syria, and Cochinchina, and for his distinguished services in connection therewith he was promoted to the grade of Commander of the Legion of Honour in 1861. As Governor of Cochinchina he favoured Chinese emigration and the development of industries, and introduced a series of reforms in the civil, financial, and legislative administration of the country. M. Dupré was nominated vice-admiral in 1875.

Dupuis, CHARLES FRANÇOIS (b. 1742, d. 1809), an eminent French scientific writer, was born of poor parents at Tyre-Château, between Gisors and Chaumont, where his father was a teacher of mathematics and land surveying. He was in 1766 appointed professor of rhetoric at the college of Lisieux, where he had previously acquired his licence in theology. In 1781 he published an erudite and ingenious theory with respect to the origin of the Greek months, which, however, was shortly afterwards wholly refuted by Bailly in the fifth volume of his *History of Astronomy*. In 1794 he published the work by which he is best known, entitled, *Origine de tous les Cultes, ou la Religion universelle*. This work excited much bitter controversy, and the theory it propounded as to the origin of mythology in Upper Egypt led to the expedition organised by Napoleon for the exploration of that country. He was author of several other works. In 1788 he became one of the four commissioners of public instruction in Paris; in 1800 he was chosen a member of the National Convention, and in the third year of the republic he was elected secretary to the Assembly.

Dacier, *Notice sur Dupuis* (1812).

Durand, SIR HENRY (b. 1812, d. 1871), Lieutenant-Governor of the Punjab, was educated at the Military College, Addiscombe, and entered the army as second lieutenant in the Bengal Engineers in 1828. A captain in

1844, he was promoted to be colonel in 1861. He served in the Afghanistan campaign for the reinstating of Shah Sujah, and received a medal for the affair at Ghuznee, where he headed the explosion party and fired the train. He was also engaged at Gwalior, and for his brilliant services at Chillianwallah and Goojerat, in the Punjab campaign (1848-9), he received a medal with two clasps, and was raised to the rank of brevet-major. He served during the mutiny of 1857, and in 1858 attained the rank of brevet-colonel, and was made a Companion of the Bath. He next acted as agent to the Governor-General in Central India, when his conduct was frequently mentioned with praise in despatches, and subsequently as a member of the Council of the Viceroy of India. A major-general in the army in 1867, he was in the June of that year invested by the Viceroy with the Order of the Star of India. In 1870 he was appointed Lieutenant-Governor of the Punjab, where he was received with much enthusiasm. Even the feudatory chiefs welcomed the appointment, as he was identified with Lord Canning's foreign policy, and was looked upon by them as a firm and wise friend. His death on Jan. 1st, 1871, was the result of a fall from an elephant at Tonk, when on an important official tour. Sir Henry was a brave and accomplished soldier, and an enlightened and indefatigable administrator.

Times, Jan. 5th and 30th, 1871; *Good Words*, 1873.

* **Durando, GIACOMO** (b. 1807), an Italian general, was born at Mondovi, and spent the early part of his life in plotting and warfare. Retiring to Marseilles in 1844 for rest, he brought out a pamphlet in French, entitled, *De la Réunion de la Péninsule Iberique par une Alliance entre les Dynasties d'Espagne et de Portugal*. Passing on to Turin in 1847 he established *l'Opinione*, a newspaper favouring the Cavour party. He was a Minister of War at Turin during the Crimean War (1854-5). In June, 1859, he commanded a division at Solferino, and in March, 1861, became Minister of Foreign Affairs in the Cabinet of Ratazzi.

Durham, JOHN GEORGE LAMBERTON, 1ST EARL OF (b. 1792, d. 1840), was born at Lambton Hall, in Durham county, and was descended from an ancient and wealthy family. Educated at Eton, he afterwards served a short time in a hussar regiment; but in 1813 was elected M.P. for his native county. He was already an advanced Reformer. His first wife dying very early, he married in 1816 the eldest daughter of Lord Grey. In 1821 he proposed a Reform Bill of a character much more sweeping than that ultimately carried by his father-in-law. Driven to Naples by illness in 1826, he returned to support Canning and Goderich in 1827, and was made Baron Durham just before the fall of the latter minister. When

Grey became Premier Durham was appointed Privy Seal. He was one of a Cabinet committee of four to draft the Reform Bill. His ardent support of Brougham's scheme to swamp the House of Lords led him into an unseemly quarrel with Grey, but ill-health, and the death of a promising son, prevented him from playing a prominent part during the passage of the Bill through the House, though the zeal that cried for the ballot must have been but imperfectly satisfied with the actual measure. His haughty and uncontrollable temper made him extremely unpopular with his colleagues. He failed in a special mission to Russia in 1832, and in March, 1833, ill-health became a convenient pretext for a resignation, due partly to his dislike of Stanley's Irish policy, and partly to a quarrel with Palmerston about the appointment of a Russian envoy. He was then elevated to an earldom. When the Whigs began to split into two divisions, the "noble Radical" was looked upon as a likely leader of the advanced party. In 1834 Disraeli describes him as the man of the greatest ambition of his time (*Letters to his Sister*, p. 26). His energetic protest against Brougham's temporising speech at an Edinburgh banquet produced a lasting enmity between men whose weak points were singularly similar. In 1837 he was made ambassador at St. Petersburg, and remained there a year. In 1838 he was appointed Governor of Canada, immediately after the revolt of the French of the Lower Province. The best results were expected from his boldness and vigour, but his want of tact and temper made him singularly unfitted for the extraordinary powers conferred on him by the suspension of the Canadian constitution. He turned the responsible council into a council of dependents in order to freely exercise the legislative functions entrusted to them jointly, with little regard to the limitations imposed on him, or to the elementary principles of English law. Brougham seized the opportunity to force the weak Melbourne ministry to accept a resolution that condemned his arbitrary acts, and as soon as Durham read the debates in the papers he abandoned his post in great disgust, without waiting for letters of recall. The adoption of similar measures, though in a different spirit, by his successor, was at least a partial justification of his conduct. His health, always bad, became worse under his vexations, and in 1840 he died at Cowes. Durham was an able and energetic man, a striking speaker, and an ardent Reformer, but his arbitrary temper, impatience of control, overbearing manners, and prodigious self-esteem, made a career, commenced under most favourable auspices, a failure that became more and more signal in proportion as his responsibilities were increased.

Spencer Walpole, *History of England*, especially vol. iii., p. 427 seq., for short account;

Annual Register, 1838, and his own report on the state of Canada (1839), for Government of Canada; Durham's personal character is described, not in a very friendly way, in the *Memoirs of Greville and Brougham*.

[T. F. T.]

Durham, JOSEPH, A.R.A. (b. 1821, d. 1877), sculptor, was born in London, the son of a city merchant. At an early age he showed a taste for art, and at sixteen was apprenticed to the late Mr. John Francis, and afterwards worked for three years under the late Mr. E. H. Baily, R.A. The work which brought him first into public notice was his bust of Jenny Lind, exhibited at the Royal Academy in 1848. More than a thousand copies of this bust in Parian were sold within a short period. Many of his executions are in the Mansion House, e.g. *Hermione*, *Alastor*, and a bust of the Queen, and in the portico of London University, e.g. Newton, Bentham, Harvey, and Milton. His memorial of the Exhibition of 1851 in the Historical Gardens, Kensington, is the greatest of his outdoor works. His best classical group was among the Royal Academy works of 1875, and was entitled *Leander and the Siren*. He also executed groups of *Perdita and Florizel*, *Plighting Troth*, *The First Dip in the Sea*. He has likewise exhibited many minor and ideal works of merit, e.g. *Paul and Virginia* in 1857, *Fate of Genius* in 1858, *Chastity* in 1860, *Sunshine* in 1863, and *Pride, Humility, Leander, the Sense of Touch*, and *Santa Philomela*.

Duroc, GERARD CHRISTOPHE MICHEL (b. 1772, d. 1813), Duke of Friuli, a favourite officer of the camp of Napoleon, was born at Pont-à-Mousson, and in the early wars of the republic acted as aide-de-camp to General Lespinasse. In 1796 he was transferred to Bonaparte's own staff, where he again acted in the capacity of aide-de-camp. During the Consulate and the Empire, he was employed on important missions to the courts of Berlin, Vienna, and St. Petersburg, in which he acquitted himself to the entire satisfaction of Napoleon. He thus became intimate with the emperor, and is supposed to have possessed a larger share of the emperor's confidence than any of the other generals. He accompanied Napoleon in the campaigns of 1805-6 and 1807, and was killed by his side in the engagement at Machedorf, in Saxony.

Alison, *History of Europe*.

* **Duray, JEAN VICTOR** (b. 1811), a French historian, born in Paris, began his literary career early in life by publishing anonymously various elementary historical works, and in 1853 took the degree of Doctor. In 1861 he became inspector of the Academy of Paris, subsequently master of the conferences at the École Normale, then professor of history at the École Polytechnique, and finally, by decree in 1863, Minister of Public Instruction. He has published for the use of schools many popular historical works, among which are a

History of the Romans (1844), *History of France* (1852), *History of Greece* (1862), and *Synopsis of Contemporary History*, which latter has exposed him to severe censure from the clerical party.

Dussek, JOHN LOUIS (b. 1762, d. 1812), a celebrated pianist and composer, was born at Czaaslau, Bohemia, and showed, at a very early age, considerable musical talent. In 1781 he left Bohemia for Brussels, whence he removed to Holland, acting as organist at Bergen-op-Zoom, and holding concerts in various towns. During a residence at Hamburg, he took lessons with Philip Emanuel Bach, subsequently visiting Berlin, St. Petersburg, and Paris. He resided for several years in London, and started a music warehouse in the Haymarket, which was far from successful. The latter years of his life were passed as music-director in the service of Prince Talleyrand. His compositions, which are very numerous, consist of concertos, concerted symphonies, quintets and quartets for stringed instruments and piano, trios, sonatas, rondos, and fantasias. His music, though unequal, is bright and graceful, full of charming melodies and rich harmonies. His *Méthode de Piano*, which he edited jointly with Pleyel, is still widely known.

Duvergier de Hauranne, PROSPER (b. 1798, d. 1881), an eminent French statesman and historian, was born in Paris, and identified himself with the Doctrinaires in politics. In 1831 he entered the Chamber of Deputies, where he soon acquired a name as an orator and tactician. He was one of the leaders of the coalition formed of several shades of opposition in 1837, and maintained the maxim "The king reigns, but does not govern." This same principle he expounded in his work on the principles of representative government and their application. He took a leading part in the agitation for electoral reform in 1846 and 1847, and he acted with the Conservatives in the Assembly of 1848. Having opposed the *Coup d'Etat*, he was exiled for a few months. He was the author of a *History of Parliamentary Government in France* (1857-73, 10 vols.), and other works.

Louis Blanc, *Histoire de Dix Ans; Revue des Deux Mondes*, 1840-50.

Duyckinck, EVERT AUGUSTUS (b. 1816, d. 1878), an American author, was the son of a leading publisher and bookseller in New York. In 1835 he graduated at Columbia College, New York, and in 1840 started, along with Mr. Cornelius Matthews, a monthly magazine entitled *Arcturus*, a "journal of books and opinions," which, however, only survived two years. In 1847 he began the *Literary World*, a weekly critical journal, and was afterwards assisted by his brother, George Long Duyckinck (b. 1823, d. 1863), author of *George Herbert, Life of Bishop Thomas Ken, Jeremy Taylor*, etc. This periodical ceased in

1853. In 1856 the two brothers completed the *Cyclopædia of American Literature*, a work of research and value, to which was added a supplement by Evert in 1866.

New England Historical and Genealogical Register, 1879.

***Dvorák**, ANTONIN (b. circa 1840), a native of Prague, has produced vocal and instrumental works in almost every style. He has composed an opera on a national Bohemian subject, a number of songs and duets, orchestral arrangements of Slavonian—i.e., for the most part, Bohemian dances—several symphonies, a cantata, and a *Stabat Mater*. He is the son of a Bohemian inn-keeper, who is, at the same time, a farmer, a grazier, and a butcher; and his earliest knowledge of music was gained from the performances of wandering minstrels. His talents, however, soon attracted the attention of serious musicians; and before he had studied many years he gained at Vienna, in public competition, a small "purse," or scholarship, which enabled him to continue his musical career without being obliged to resort for subsistence to some more immediately profitable occupation. When he had, in a technical sense, finished his musical education—though his natural genius was as yet far from being fully developed—he composed works of various kinds for local societies, and gave lessons. But he was still without fame, and teachers of music abound in Prague; so that for a long time he was obliged to content himself with something like a shilling a lesson. A child of the people, he introduced into most of his compositions popular elements; and the Bohemian melodies, and melodic turns of Bohemian origin, which give a distinctive character to so many of his works, made their impression in due time on the musicians of the Austrian capital, and gradually on those of all Germany. Dvorák has pushed nationality in music so far that one is now disappointed to find in a new work from his pen no Bohemian characteristics. Naturally, however, there is no trace of Bohemian music in his *Stabat Mater* (1881), placed by his admirers among his foremost works. It was by his quaint and brilliant Slavonian dances, first introduced by Mr. Manns at the Crystal Palace, that Dvorák became known to English amateurs. His more important compositions gained for him soon afterwards the highest consideration; and his music is now probably better known in England than in Germany. Nearly all his works have been performed in this country, and his cantata entitled the *Spectre's Bride* was composed specially for the Birmingham festival, where it was produced in 1885. Herr Dvorák (or "Pan" Dvorák, as his countrymen in Bohemia would call him), has twice visited England. His oratorio *St. Ludmilla* was produced at the Leeds Festival of 1886.

Dwight, TIMOTHY, D.D., LL.D. (b. 1752, d. 1817), American divine and scholar, was born at Northampton, Massachusetts, and educated at Yale College. He was tutor at Yale (1771-7); army chaplain in the Confederate army (1777-8); worked on a farm, aiding in the support of his mother and family, and occasionally preaching (1778-82); ordained minister of Greenfield, in Connecticut (1782), when he opened an academy, which speedily acquired a very high reputation, and attracted scholars from all parts of the Union. He received the degree of D.D. from the Princeton College in 1785, and that of LL.D. from New Jersey in 1810. He was elected president of Yale College in 1795. Dr. Dwight was the author of *The Conquest of Canaan*, an epic poem (1785); *Greenfield Hill*, a poem (1794); *Travels in the New York and New England States*, a work of permanent value and interest in regard to the natural history and social condition of the country. But the work by which Dr. Dwight is best remembered is *Theology Explained and Defended*, in 5 vols., which has long been regarded as a standard work on the theology of the Calvinist school.

Life prefixed to Theology Explained and Defended in a Series of Sermons.

Dyce, THE REV. ALEXANDER (b. 1798, d. 1869), a distinguished dramatic editor and literary historian, and the intimate friend of Samuel Rogers, was born at Edinburgh, and was educated at the Royal High School there, and at Exeter College, Oxford. He took orders, and officiated as curate at Lanteglos, in Cornwall, and subsequently at Nayland, in Suffolk. In 1827 he settled in London. His earliest publications were *Select Translations from Quintus Smyrnaeus* (1821), an edition of the poet Collins (1823), and *Specimens of British Poetesses* (1825). He next edited, with notes and short biographies, the dramatic and poetical works of Peele, Greene, Webster, Middleton, Beaumont and Fletcher, and Marlowe, and compiled an edition of Shirley, left unfinished by Gifford. In 1836 he published the critical and theological works of Bentley, and in 1843 he carefully revised and edited the poetical works of Shelton. *Specimens of British Sonnets* was soon followed, in 1858, by *Remarks on Collier's and Knight's Editions of Shakespeare, A few Notes on Shakespeare, and Strictures on Collier's New Edition of Shakespeare*. In the same year was published, by Moxon, his own edition of Shakespeare, and the second edition, a great improvement on the old one, was issued by Chapman and Hall in 1866. He contributed the lives of Shakespeare, Pope, Akenside, and Beattie to Pickering's *Aldine Poets*. He was intimately connected with several literary societies, and undertook the publication of Kempe's *Nine Days' Wonder* for the Camden Society, and the old plays of *Timon* and *Sir Thomas More* for the Shakespeare Society. He was asso-

ciated with Halliwell, Collier, and Wright, as one of the founders of the Percy Society, and several tracts of the series were edited by him. In 1856 he issued *Recollections of the Table-Talk of Samuel Rogers*, which has run through several editions, both in England and in the United States, and subsequently a *Glossary of Shakespeare*, the most comprehensive yet published. Mr. Dyce's reputation rests on his contributions to English literary biography, and on "the untiring industry, abundant learning, and admirable critical acumen" displayed in his editions of the Elizabethan poets. Mr. Dyce bequeathed his library, invaluable for its editions of Shakespeare, to the South Kensington Museum.

Biographical Sketch by John Forster in the catalogue of the Library.

Dyce, WILLIAM (b. 1806, d. 1864), a distinguished painter, the son of a physician of some repute, and cousin of the above, was born at Aberdeen. He took his degree of M.A. at Marischal College, Aberdeen, at the age of sixteen; and at the age of twenty-two he wrote a paper on electro-magnetism, which obtained the Blackall prize at Aberdeen. He was intended for the medical profession, but showing a natural bias towards design, he studied in the school of the Royal Scottish Academy in Edinburgh, then as a probationer in the Royal Academy of London, and thence, in 1825, proceeded to Rome, where he spent nine months. A second visit to Rome in 1827 brought him in close sympathy with the earlier masters of the Florentine and allied schools. From 1830-8 the artist lived in Edinburgh; but, finding small encouragement in his attempts at historical painting, he set himself to work at portrait painting, and was successful, especially in the likenesses of children. In 1835 he became an Associate of the Royal Scottish Academy, and in the following year he exhibited his *Descent of Venus*, from Ben Jonson's *Triumph of Love*, at the Royal Academy of London. Dyce's attention had early been directed to mural decoration and ornamental design. In 1837 he published a pamphlet on the management of schools of design, then recently established by Government. In this he proposed a scheme for the improvement of the school of the Board of Manufacturers, Edinburgh. The pamphlet contained what was probably the most complete scheme for art education then known in this country, and by its own merits and the reputation of the author, fairly entitled him to hold the office, which was immediately offered, of superintendent and secretary to that branch of the Board of Trade which had charge of the new schools. Commissioned by the Government, he made a careful examination of the Continental systems of art instruction, and his report thereon was adopted, with modifications, as a text-book, for several years. In 1842 he was appointed inspector of provincial schools; and

in 1844 he was elected A.R.A., immediately on the appearance of *Joash Shooting the Arrow of Delicrance*, which has been pronounced "one of the prime productions of the English school." From 1838-61 he was an annual exhibitor at the Royal Academy. In 1844 he was commissioned by the Prince Consort to paint frescoes for the summer-house of Buckingham Palace, and subsequently he was similarly employed at Osborne; the frescoes in All Saints', Margaret Street, are also his. His ecclesiological tastes manifested themselves in the foundation of the "Motett Society," for the revival of ancient church music. He was the author of many essays on art and allied subjects, and the proposer of the establishment of the grade of retired Royal Academician. Mr. Dyer was professor of the theory of fine arts at King's College, London, a member of the Royal Scottish Academy, and of the Academy of Arts in Philadelphia.

Gentleman's Magazine, April, 1864; *Athenæum*, Feb. 20th, 1864; W. M. Rossetti, in *Encyclopædia Britannica*.

Dyer, GEORGE (b. 1755, d. 1841), preacher and scholar, was born in London, educated at Christ's Hospital, and Emmanuel College, Cambridge, and subsequently joining the Nonconformists, became a brilliant preacher. In 1792, however, he gave up preaching, and devoted his whole time to private tuition and literary labour. As a classical scholar Mr. Dyer acquitted himself by editing two plays of Euripides, and also a Greek Testament, but the greatest labour of his life was the share he had in the production of Valpy's edition of the classics in 141 volumes, being a combination of the Delphin, Bipont, and Variorum editions. Mr. Dyer was also the author of several other works, biographical, controversial, antiquarian, but his claim to immortality was his friendship with Charles Lamb.

Lamb, Essays and Correspondence.

E

Earle, SIR WILLIAM, C.B., C.S.I. (b. 1833, d. 1885), major-general, the son of the late Sir Hardman Earle, was descended from an old Lancashire family. He was educated at Harrow, and entered the army as an ensign in 1851, obtaining a lieutenancy in 1854, and captaincy in 1855. He served with the 49th Regiment throughout the Crimean campaign. A lieutenant-colonel in 1863, he was promoted to a colonelcy in 1870, and obtained the rank of major-general in 1880. In August, 1882, he was appointed brigadier-general to the expeditionary force to Egypt, and in that capacity commanded the base and line of communication, and was present at the battle of Tel-el-Kebir. He was in command of the

garrison of Alexandria from 1883 until called out to accompany the expedition sent to attempt the relief of General Gordon. He broke off from the main force to open the way to Berber, and on Feb. 9th, 1885, had reached Dulka Island, about seventy miles from Merawi. Here he stopped, and the next morning advanced to attack the enemy's position. The Black Watch, commanded by the general, advanced over broken and difficult ground, and drove the enemy before them. But just at the moment of complete victory, the general fell, on the summit of the ridge, at the head of his men. He had been made a C.B. in 1882.

Times, Feb. 13th, 1885; *Army and Navy Gazette*, Feb. 14th 1885.

* **Early, JUBAL A.** (b. 1816), an American general and lawyer, was born in Virginia, and entering the Military Academy at West Point, graduated there in 1837. He shortly afterwards became a lieutenant of artillery, but soon resigned and studied law. He, however, went back to the army on the outbreak of the Mexican War, when he was major in a Virginian volunteer regiment; and again on the outbreak of the American Civil War, he entered the Confederate service, and took an active part in several actions during the early part of the war. In 1863 he held Fredericksburg, while Lee opposed Hooker at Chancellorsville, and commanded a division of Lee's forces at Gettysburg. In 1864 he invaded Maryland, and burned Chambersburg, but was defeated by Sheridan on the Opequan Creek, at Fisher's Hill, and at Cedar Creek. General Early again resigned his commission on the close of the war; and after a visit to Europe, he resumed his briefs at Richmond. He has since resided at New Orleans, where he and General Beauregard have acted as managers of Louisiana State Lottery. In 1867 he published *Memoirs of the Last Year of the War*.

Eastlake, SIR CHARLES LOCKE, P.R.A. (b. 1793, d. 1865), painter, was the son of a wealthy lawyer of Plymouth. His methodical study of art did not commence till he entered the schools of the Royal Academy in 1809. In the meantime he had received a sound classical training at the Charterhouse. After a few months of study in Paris, he settled for a time in his native town, and was lucky enough to find an opportunity of painting the Emperor Napoleon on board the *Bellerophon*, surrounded by his officers. The sale of this picture helped him in 1816 to make a twelve months' tour through Italy and Greece, and he made Rome his head-quarters for the next twelve years. In 1823, 1825, and 1827 he sent views of the city and figure-subjects to the Academy. Among the latter was the *Spartan Iphias*. This picture gained him the Associateship of the Academy. In the following year (1828), he produced *Pilgrims Arriving in Sight of Rome*, a subject which became popular

through engraving, and which he several times repeated. In 1830 he was elected a full member of the Academy, and exhibited the same year his *Una Delivering the Red Cross Knight*. His election induced him to return to England, and in 1831 we find him settled in London. *Haidic*, *Greek Fugitives*, *The Escape of Francesco di Ferrara*, and *The Martyr*, were among his exhibited works at the time. These were followed by two of his most ambitious and successful pictures, and whatever claims he has to eminence in his art will no doubt rest on these works. The first, *Christ Blessing little Children*, was exhibited in 1839, and *Christ Weeping over Jerusalem* in 1841. These works are agreeable in arrangement and composition, refined in sentiment, and, like all his canvases, are finished to a nicety; but they partake more of the sweetness of vignette than of the impressiveness and grandeur which we associate with sacred themes. His colouring, too, by which Eastlake set great store, was not without a touch of Venetian vitality and joyousness; but in this, as in all else, he stopped short of that excellence after which he had all his life been striving. In 1841 he was appointed secretary to the Royal Commission for the decoration of the Houses of Parliament; in 1842, librarian of the Royal Academy; in 1843, keeper of the National Gallery; and in 1850, president of the Royal Academy, when he received the usual honour of knighthood. He successfully devoted no small portion of his time to the literature of art, and *Materials for a History of Oil Painting* (1847); and *Contributions to the History of the Fine Arts* (2 series), are books frequently referred to by students of art history, and he will probably be valued more as a critic than as a painter. He translated, moreover, Kugler's *Schools of Painting in Italy*, and Kugler's *Handbook of Painting*. He died at Pisa, and his widow, whose continuation and completion of Mrs. Jameson's *History of Our Lord* gives her an emphatic claim to the gratitude of all art lovers, declined a public funeral for her husband.

Lady Eastlake's memoir in the second series of the *Contributions*; W. E. Monkhouse's *Pictures by Sir C. Eastlake*. [J. F. R.]

Eastwick, EDWARD BACKHOUSE (b. 1814, d. 1883), Orientalist, after taking his degree from Merton College, Oxford, proceeded to India as a cadet in the Bombay infantry, and was soon selected, on account of his proficiency in Oriental languages, to fill political posts in Kattiawar and Scinde. Returning in broken health, he was appointed professor of Hindustani at Haileybury, and when this college was transformed he was given the office of assistant secretary in the political department of the India Office. In 1860 he went to Persia as secretary of legation, and in 1864 was a commis-

sioner for arranging a loan to the Government of Venezuela. Two years later he was appointed private secretary to Lord Salisbury (then Lord Cranborne), and received the Companionship of the Bath for his services. From 1868-74 he sat in the House of Commons for Penryn and Falmouth, and, then retiring, devoted the remainder of his life to literary work. His chief books are a translation of Sadi's *Gulistan* (1852, 2nd ed. 1880); his translations of the Persian history of the *Arrival of the Parsis in India*, of the *Life of Zoroaster*, and the *Anwar i Suhaili*; and his *Kaisar nama i Hind*, or *Lay of the Empress* (2 vols., 1878 and 1882). He also translated Schiller's *Revolt of the Netherlands*; wrote the *Journal of a Diplomat in Persia and Sketches of Life in a South American Republic*; and contributed to the *Encyclopædia Britannica*, besides compiling the admirable *Handbook to India* in Murray's series.

Eaton, AMOS (b. 1777, d. 1842), a distinguished American naturalist and man of science, graduated at Williams College, and began the study and practice of law. When the Rensselaer Institute was opened at Troy, New York, in 1828, he was appointed principal and senior professor, a position he held until his death. He is the author of *A Chemical Instructor*, *The Geological Text Book*, *Manual of Botany*, and many other scientific works. By his writings and his enthusiasm for natural history he did much to advance the cause of science in America during the early part of the nineteenth century.

Ebelmen, JACQUES JOSEPH (b. 1814, d. 1852), a French chemist, was born at Beaumelles-Dames, and educated at the college of Henri IV. and the college of Besançon. He subsequently entered the École Polytechnique, and in 1833 was received in the École des Mines, where he became professor of docimacy in 1845. In June, 1846, he was nominated an engineer of the first class, and in October director of the porcelain manufactory at Sèvres, the products of which he raised to a much higher degree of perfection. He served as one of the jurors at the London Exhibition of 1851, and was appointed engineer-in-chief of mines in 1852. He wrote for the *Annales des Mines*, *Bulletins de l'Académie des Sciences*, and *Annales de Physique et de Chimie* many important treatises, among which are the *Carbonisation of Wood*, and *Generators of Gas* (1845), *Decomposition of Rocks* (1848), and *Changes in Rock Strata under the Influence of Atmospheric Agents* (1861).

M. Chevreul, *Notice sur M. Ebelmen* (1855).

* **Ebers**, GEORGE (b. in Berlin, 1837), Egyptologist and novelist, was first educated at Fröbel's school, and subsequently at the Göttingen and Berlin Universities. After visiting the chief museums of Europe in

pursuit of his favourite study of Egyptology, he established himself at Jena, in 1865, as private teacher of the Egyptian language, until in 1870 he became professor at Leipzig, a post he still holds. The result of a visit to Egypt was the discovery of the famous hieratic medical papyrus known as the *Papyrus Ebers*, which he published in 1875 in two large volumes. His other important scientific work is the brilliant *Ägypten und die Bücher Moses*, of which only the first volume appeared, in 1868. *Durch Gosen zum Sinai und Ägypten in Bild und Wort* (1878), both of which have been translated (*Through Goshen to Sinai*, 1872; and *Egypt, Descriptive, Historical, and Pict. rescue*, 2 vols., 1880), are at once popular and valuable works. In 1876 Ebers was struck down with paralysis, and compulsory inaction led him to resume the writing of historical novels, which he had begun in 1864 by his *Egyptian Princess* (English translation 1867). In 1877 appeared *Uarda, a Romance of Ancient Egypt*; in 1878 *Homo Sum*; in 1880 *The Sisters*; in 1881 *The Emperor and The Burgomaster's Wife*; in 1883 *Only a Word*; and in 1885 *Serapis*. Most of his novels, as well as the *Egypt*, have found an able translator in C. Bell. The novels representing Egyptian antiquity possess a distinct archaeological value apart from their undoubted merits as romances.

Eckermann, JOHANN PETER (b. 1792, d. 1854), the chronicler of Goethe's conversations, was born in wretched circumstances in the village of Winsen, on the heaths of Hanover. By the kindness of some neighbours, he was for a time sent to the national school, and this was almost the only education he received till, having served as a volunteer in the War of Independence, and occupied minor posts in the civil service, he began to learn Greek at twenty-four, attending the Hanover Gymnasium. He now turned his attention entirely to literature, though before this he had supposed himself an artist. He wrote insignificant poems and plays, and in 1822 sent a treatise on poetry to Goethe. Soon afterwards he appeared in Weimar himself, and was kindly received by Goethe, who employed him in arranging his works, and in time appointed him one of his secretaries, besides procuring for him a post at the court. His importance is entirely due to his celebrated collection of the conversations of Goethe, which, in spite of the prosaic dulness and triviality of the writer, and his too frequent omission of the essential, remains the most valuable record of the last ten years of the poet's life. Eckermann died at Weimar.

See autobiographical references in the *Gespräche mit Goethe*.

Eden, GEORGE. [AUCKLAND.]

Eden, SIR FREDRICK MORTON (d. 1809), entered the diplomatic service, and from 1792

to 1796 was ambassador to Berlin, Vienna, and Madrid. He was moreover much esteemed as an authority on economic and industrial questions. His *Observations on Friendly Societies* (1801) are written in a thoroughly liberal spirit; and in 1797 appeared his *State of the Poor* (3 vols.). This is a mine of information with regard to the condition of the working classes, the later volumes, as the author approaches his own time, being of more value than the first part.

Edgeworth, MARIA (b. 1767, d. 1849), the author of about a dozen stories illustrative of Irish character, and the creator of the novel with a moral purpose, was the daughter, by the first wife, of Richard Lovell Edgeworth (q.v.). Born at Hare Hatch, Berkshire, Jan. 1st, 1767, almost the whole of her early years were spent in this country, and it was here she received her education. She accompanied her father to Ireland in 1782, and began, at his suggestion, to translate Madame De Genlis's *Adèle et Théodore*. This work was abandoned on the appearance of Holcroft's translation. Thomas Day, who was an intimate friend, had a horror of female authorship, and congratulated the father when he heard that the daughter's design had been frustrated. It was the recollection of Day's arguments, and her father's reply thereto, which led Miss Edgeworth, after Day's death, to publish *Letters to Literary Ladies* (1795). Several books for children were published in these early years, and three years after the appearance of the *Letters* came *Practical Education* (1798). In this, as in subsequent works, Miss Edgeworth was assisted by her father, who usually wrote introductions to her stories. It may be believed that his help was only an encumbrance, especially in the works of fiction. Alterations which proved to be blemishes were made in their construction at his suggestion. *Castle Rackrent* (1800), first published anonymously, went far towards establishing Miss Edgeworth's reputation as a novelist. The book touches the humorous and pathetic sides of Irish character. In *Belinda* (1801) Miss Edgeworth brought fashionable life into derision, and taught the English people something of the eloquence, wit, and talents of the lower classes of the people of Ireland. The essay on *Irish Bulls* (1802) was published under the joint names of father and daughter. It is related as a ludicrous circumstance that a copy of this book was bought by the secretary of an agricultural society in the hope that it treated of live stock. *Moral Tales* (1801) will, perhaps, be too didactical for modern readers; *Leonora* suffers from a painful plot. *Patronage, Harrington*, and stories under such collective titles as *Popular Tales* and *Tales of Fashionable Life*, followed. The last preface the father was enabled to write was for *Ormond* (1817). He died within a fortnight afterwards. Subsequent years

were devoted by Miss Edgeworth to the completion of his *Memoirs* (1821), which at the time of his death he had little more than commenced. Among Miss Edgeworth's eminent friends were Scott, Moore, and Herschel. Scott said that she might truly be said to have done more towards completing the union than any legislative enactments. In 1823 Miss Edgeworth visited Abbotsford. *Helen* (1834) was her last and best novel, but was succeeded by another book for children. At Edgeworth's Town, Longford, Ireland (May 21st, 1849), Miss Edgeworth died, having lived to see her books take high rank among English novels. Personally she was a small woman; "a nice little unassuming Jeanie - Deans - looking body," as Byron said. Her face was neither well- nor ill-looking, and promised nothing at first sight. Her conversation, according to no meaner judge than Sydney Smith, was delightfully clever and sensible; without saying witty things she put such a perfume of wit into her conversation as made it brilliant. Her literary style is chiefly remarkable for the absence of feature, and she herself could find no higher praise for Mrs. Inchbald's *Simple Story* than to say that she never recollected the writer while reading it. Her ethical teaching is simple enough, and the vices and follies of her characters bring them quite regularly to ruin. Her action is rapid for her day. She is not a great creator. Her work lacks poetic elevation of feeling, but within its range it is distinguished by observation.

Maria Edgeworth: a Study, by G. A. Oliver;
Maria Edgeworth, by Helen Zimmerman (*Eminent Women Series*, 1883). [T. H. C.]

Edgeworth, RICHARD LOVELL (*b.* 1744, *d.* 1817), an ingenious author and practical philosopher, was born at Bath, the son of Irish parents, and educated at Oxford, where at the age of nineteen he fell in love with a Miss Elers, and married her at Gretna Green. He next joined the Temple, but never practised. He became a member of the Irish Parliament about the year 1795, and distinguished himself by his warm attachment to the interests of Ireland, and by opposition to abuses of administration. His labours in perfecting several mechanical inventions, in reducing to a science the construction of roads and wheel-carriages, and in spreading improvements, agricultural and social, as well as his many valuable papers on scientific subjects, procured him his election in 1780 to the Royal Society. He brought out as separate publications:—*Rational Primer*, *Explanations of Poetry*, *Readings on Poetry*, *Letter to Lord Charlemont on Telegraph*, *Speeches in Parliament*, and *Essay on the Construction of Roads and Bridges*. This last anticipated many of the suggestions of J. L. McAdam (*q.v.*). In a few other works, his daughter, Maria Edgeworth, co-operated with

him, the most important of which was probably the *Essay on Practical Education*, which demonstrated the failure of Rousseau's plan of postponing teaching of all sorts till the faculties are pretty well matured.

Memoirs of E. L. Edgeworth, Esq., by himself, and concluded by his daughter; *Edinburgh Review*, Oct. 1809, Aug. 1820; *London Quarterly Review*, July, 1820.

* **Edhem Pasha** (*b.* 1823), Turkish statesman, entered the army, and in 1849 was appointed aide-de-camp to the Sultan. He rapidly rose to the rank of general of division, and began at the same time to play a prominent part in politics, until in 1856 he was for twelve months Minister for Foreign Affairs, and in 1864 President of the Council of State. During the Conference held at Constantinople in the winter of 1876-7, with the object of averting, if possible, war between Russia and Turkey, he acted with Safvet Pasha, the Foreign Minister, as second Turkish plenipotentiary. In February Midhat Pasha was dismissed, and Edhem succeeded him as Grand Vizier. War was declared by Russia on April 24th, and after the Turkish forces had suffered repeated disasters he was replaced by Safvet Pasha. In 1885, when the revolt of East Roumelia was followed by a change of ministry, he was appointed ambassador to the French Republic at Paris.

* **Edinburgh, H. R. H. PRINCE ALFRED ERNEST ALBERT, DUKE OF** (*b.* 1844), the second son of the Queen, was educated chiefly for the navy, and entered the service in 1858 as a naval cadet on board the *Euryalus*. Subsequently he was transferred to the *St. George*. In 1862 the throne of Greece was offered to him by the Hellenes, but he declined it. Four years later £15,000 a year was granted him by Parliament, and he took his seat in the House of Lords as Duke of Edinburgh. In 1867 he was placed in command of the *Galatee*, and it was while on shore at New South Wales, near Port Jackson, that an attempt to murder him was made by O'Farrell. In 1874 he married the Grand Duchess Marie, only daughter of the Tsar Alexander II., by whom he has several children. In Nov., 1882, he was promoted vice-admiral, and in 1885-6 he commanded the Mediterranean Squadron. The Duke of Edinburgh is a musician of some excellence, and has played first-fiddle at the concerts of the Philharmonic Society.

* **Edison, THOMAS ALVA** (*b.* 1847), an American electrician and inventor, is the son of poor parents—Dutch by descent on the father's side, Scotch on the mother's—and received an indifferent school education in his native town of Milan, Ohio. But he early developed a taste for reading and a fondness for books which almost became a passion. Before he was ten years old he had devoured Newton's *Principia*, Hume's *England*, and Gibbon's *Rome*; and at the age of twelve began

to work through the Detroit public library, only abandoning the task for a more profitable course of study, after he had waded "indiscriminately through fifteen feet of shelving." In 1855 his parents removed to Port Huron, Michigan, and a few years later he became a "train boy" or news-vendor on the Grand Trunk Railway. Here his business tact enabled him to acquire a monopoly of the business, and the right of putting up a printing office in the baggage car, from which he issued every week the *Grand Trunk Herald*, a sheet edited, "set up," and to a large extent written by himself and the *employés* of "the road." Having at great peril saved the little son of a stationmaster, the father out of gratitude assisted him in learning telegraphy, and so assiduously did he devote himself to his new pursuit that in five months he was in charge of the telegraph office at Port Huron. Progressing from one post to another, constantly improving the service by his suggestions, he was in 1865 at Louisville, where he wrote and printed a book on electricity. In 1868 he was at Boston, still intent on his work as an "operator." His first move in the direction of invention was an automatic telegraph repeater, made in 1863, while at Indianapolis. While working at this instrument the idea of duplex transmission occurred to him, though it was not until 1870 that it was actually tried upon the line. Under the encouragement of Mr. Milliken he devised in rapid succession a dial or indicating-telegraph for local lines, a chemical recorder for voting purposes, and a private-line printer, experimenting at the same time on vibratory telegraph instruments. His first efforts at duplex transmission proved unsuccessful, and compelled him, penniless and disheartened, to seek employment in New York. Here his skill in repairing the instruments of the Gold and Stock Company secured him a position in their service, and on its amalgamation with the Western Union Company, he agreed to give them the refusal of any of his future inventions. He now opened an extensive workshop in Newark, and began a laborious course of experiment and invention, having at one and the same time, it is said, as many as forty-four different improvements or original ideas in course of development. His health breaking down under this unintermitting toil, he gave up manufacturing, and in 1876 removed to Menlo Park, near New York, where he has since resided, devoting himself entirely to investigation. From this laboratory most of his inventions have been issued. These comprise over 400 patents, one-fourth of which relate to telegraphy, chemical, automatic, acoustic, duplex, quadruplex, sextuplex, printing, and fire-alarms, as well as district and domestic electrical apparatus, and inventions of one description or another coming under this theme. Among them the quadruplex telegraph, by which

two messages may be sent simultaneously in opposite directions from each end of the line, is the most remarkable. The automatic telegraph, which can transmit a thousand words a minute, the motograph relay, the carbon telephone, the "Edison system" of lighting by incandescence, and the "Edison electric railway" at Menlo Park, are also works of note. Some patents are connected with the telephone, the electric transmission of power, the electric pen, and numerous other ingenious apparatus. Of all his inventions, however, that of the phonograph is most widely known, but his most recent contribution to scientific appliances—viz., the photometer—bids fair to add greatly to his reputation. He has written little, and owing to his imperfect grounding in mathematics and physics, has been more distinguished for his ability to apply other men's discoveries than in discovering principles for himself. Yet even as an investigator he is not without merit, one of his researches resulting in his discovering independently the variation in resistance produced in semi-conductors by pressure, a fact which was utilised in the construction of his transmitting telephone. He has also the honour of having, among other data, observed the fact of an electric current between a metallic and a moist semi-conducting surface varying the friction between those surfaces. Notwithstanding the fine revenue derived from his numerous inventions, he is in comparatively moderate circumstances, owing to the large sums which he expends upon his laboratory, where he has the aid of several accomplished assistants.

Sketch in *Science*, vol. vi., Aug. 21st, 1885.

* **Edlund**, ERIC (b. 1819), a Swedish electrician, took his degree of Doctor of Philosophy at the University of Upsala, and subsequently spent two years in study in Germany. On his return he was elected professor of natural philosophy in the Academy of Science, and a member of that society in 1851. In 1858 he established throughout Sweden a system of meteorological stations, which he superintended, and in 1873 published an elaborate account of his observations. In 1871 he became president of the Institute for Technical Instruction, and about the same time was elected deputy for Stockholm in the Second Chamber. Edlund's chief contribution to electrical science consists of a number of memoirs published in German in the *Annals of Poggendorff*, and in French in the *Memoirs of the Academy of Stockholm*. Some of these may be mentioned:—*Researches on the Force of Electricity in Contact with Metals* (1871), *Researches in Electrical Currents Produced by the Movements of Liquids* (1878), and *Researches on the Appearance of Heat in a Galvanic Pile*.

Edward, THOMAS (b. 1814, d. 1886), a Scottish naturalist, the son of a private in the Fife-

shire militia, was born at Gosport and brought up at Aberdeen, where his parents had settled about the year 1818. He received little or no systematic education, and during the short time he was at school was expelled from three different establishments on account of his incorrigibility and his "affection for natural objects." At the age of six he entered a tobacco manufacturer's factory at Grandholm, on the banks of the Don, at a weekly wage of fourteen pence, and here he remained until he was apprenticed (in 1825) to a drunken shoemaker. Until close upon his death he never escaped from the daily exercise of his trade. He spent as much time as many a *savant* in pure pursuit of science; discovered new species one after another; wrote, discussed, classified; and with innumerable difficulties he worked himself into fame as a naturalist. In 1837 he married and settled in Banff, where he brought up a family of eleven children on wages that never exceeded fifteen shillings a week. For forty years he fought the "battle of scientific poverty." Collections were necessary if he wished to generalise at all, and the first zoological specimens he gathered he exhibited at the Banff fair in 1846. The success of this exhibition induced him to make a like venture at Aberdeen, but here the whole affair was a dismal failure, and Edward was obliged to part with his collection, the labour of years, for £20 to keep himself free from debt. At last, in 1866, he attained to the flattering though empty honours of a fellowship of the Linnean Society, and of the Royal Physical Society of Edinburgh eleven years later. In November, 1876, Mr. Smiles's biography appeared, and on the following Christmas Day the Queen, "touched by his successful pursuit of natural science under all the cares and troubles of daily toil," conferred on him a pension of £50 a year. Edward's "*Selections from the Fauna of Banffshire*" are appended to the biography, and there are still unpublished his observations on the insects, reptiles, star fishes, zoophytes, molluscs, plants, etc., which he found in Banffshire, sufficient to fill a bulky volume.

Samuel Smiles, *Life of a Scotch Naturalist*.

Edwardes, SIR HERBERT BENJAMIN (b. 1819, d. 1868), British soldier, was a native of Frodesley, in Shropshire, and was educated chiefly at King's College, London. In 1840 he was nominated to a cadetship in the East India Company, and became an ensign in the 1st Bengal Fusiliers. In 1845 the Sikh War broke out, and Edwardes was appointed aide-de-camp to the commander-in-chief, Sir Hugh Gough, under whom he served through the campaign, receiving a severe wound. In 1847 Edwardes first came under the influence of his guide and friend, Sir Henry Lawrence, whose assistant he became at Lahore. Under him, the young man learnt how to

administrate, and was particularly successful in quelling disturbances connected with the collection of the revenue. In 1848, the murder of Vans Agnew and Lieutenant Anderson by the Sikhs of Mooltan had to be avenged. Edwardes won a decisive victory over superior numbers at Kineyree, and assisted General Whish in the siege of Mooltan, which fell in January, 1849. A pension from the East India Company, and the rank of major, were his chief rewards for these services, and coming to England, he published *A Year on the Punjab Frontier*. Again placed under Sir H. Lawrence, he was transferred, in 1853, to the responsible position of Commissioner of the Peshawur Frontier, an appointment he held through the Mutiny. It was his great service to have secured, by timely negotiations, the neutrality of the Ameer of Afghanistan, Dost Mohammed, to have preserved the Punjab, and to have sent a force to co-operate in the capture of Delhi. Broken health was the cause of his residence in England from 1859 to 1862. In the latter year he was appointed commissioner of Umbala, a post which he was compelled to resign in the spring of 1865. Shortly before his death, he was created major-general. During his last years he was engaged on a Life of Sir Henry Lawrence, but the second volume had to be written (published 1873) by Mr. Herman Merivale. Sir Herbert Edwardes, like Havelock and so many others of his great contemporaries in India, was emphatically a pious man, and co-operated with zeal in missionary enterprise. His life, to be properly estimated, should be judged not only by his works, but by his influence.

Lady Edwardes, *Letters, etc., of Sir H. Edwardes*. See also Kaye, *Sepoy War*, and T. R. Holmes, *Indian Mutiny*. [L. C. S.]

* **Edwardes**, AMELIA BLANDFORD (b. 1831), novelist, is the daughter of an English officer. From 1853 she has been a regular contributor to magazines and other periodicals, and has brought out some very entertaining novels. She has also acted from time to time as leader-writer to some of our daily and weekly papers. In 1855 appeared her first novel in book-form, *My Brother's Wife*, which was followed by *Hand and Glove* (1859), *Barbara's History* (1864), and *Half a Million of Money* (1865). She has also written several other novels, and *Lord Brackenbury*, perhaps her best, appeared in 1880. All her stories are very readable. Their charm may be said to lie in the cheerful view they generally take of humanity, and the amount of variety, pleasant dialogue, and general *verve*, containing, at the same time, nothing either sensational or philosophically dull. Miss Edwardes has published besides two books of travel:—*Untroubled Peaks and Unfrequented Valleys* (1873), and *A Thousand Miles up the Nile* (1877). She subsequently devoted herself

chiefly to Egyptology, upon which she published some important monographs.

Edwards, GUILLAUME FRÉDÉRIC (b. 1777, d. 1842), a distinguished physiologist and ethnologist, was born in Jamaica, brought up at Bruges, and spent most of his life in Paris. In 1832 he was elected to the Institute as the author of *The Influence of Physical Agents on Life* (1824), and other scientific works of some merit. In 1839 appeared his most important work, *Physiological Characters of Human Races considered in Relation with History*, which has been regarded as a standard treatise among French ethnologists. He was the brother of Milne-Edwards (q.v.).

Edwards, MILNE. [MILNE-EDWARDS.]

Egg, AUGUSTUS LEOPOLD, R.A. (b. 1816, d. 1863), subject painter, was the son of the famous gunmaker of Piccadilly, where he was born. He entered the Royal Academy as a student in 1835, through the school of Mr. Carey, the successor of Sass. His first picture, *The Victim*, was exhibited at Liverpool in 1835. The following year he appeared on the walls of the Suffolk Street Gallery, and one of his early exhibited pictures there was purchased by Prince Albert. In 1838 his *Spanish Girl* was hung in the Academy, and from that time forward he was a constant exhibitor. Among his better-known works may be named the following:—*Sir Percie Shafton, Buckingham Rebuffed, The Wooing of Katharina, Queen Elizabeth Discovers that she is no longer Young, Peter the Great and Catherine, The Life and Death of Buckingham*, two contrasted pictures in one frame—a work which made a very strong impression on the public mind, and stamped the artist as a painter of great dramatic power. He produced also *The Night before Naseby*, with Cromwell in the interior of his tent engaged in prayer. It was his *Lucretia and Bianca*, exhibited in 1847, which led to the Associateship in the year following, as it was *The Dinner Scene from Taming of the Shrew* that brought him, in 1860, the full honours of the Academy. For the sake of his health he went to Algiers, where he died. In the depicting of historical incidents he occupies a position entirely his own. His philosophy of life had a touch of sadness in it, and hence the sombre nature of his works. His creative energy was emphatic and unmistakable, and his sense of tone and *chiaroscuro* scholarly and refined.

[J. F. R.]

Eglinton, ARCHIBALD MONTGOMERIE, 13TH EARL OF (b. 1812, d. 1861), English statesman, was eight years of age when he succeeded to the title of his grandfather. His chief pleasure as a young man was the turf, and in 1839 he held the famous Eglinton tournament, which Benjamin Disraeli described with so much gusto in *Coningsby*. He

was twice Lord-Lieutenant of Ireland under Lord Derby—in the administration of 1852, and in that of 1858. His popularity was chiefly due to his profusion.

Egypt, THE KHEDIVES OF. The dynasty of the Khedives of Egypt dates only from the present century, and the title (which is merely a Persian term for prince or king) was not applied to any Egyptian viceroys as an official style until the time of Ismail, the fifth of the line. The founder of the dynasty was the famous Mohammed 'Aly (or Mehemet Ali, as the French spell the name). He was born at Kaballa, a port in Albania, in 1768, and made his entrance into Egyptian politics as an officer of the Arnaut or Albanian contingent, which the Porte sent to support Abercromby's (q.v.) expedition against the French. When the French sailed away in September, 1801, the victors speedily followed suit, with this difference, that on the departure of the English there was no one who could be said to rule in Egypt. On the one hand there were the old Mamluk Beys, a territorial aristocracy who had always been in more or less open revolt against the Porte ever since the Turkish conquest of Egypt in the beginning of the sixteenth century. On the other was the Turkish Pasha, who was appointed from Constantinople, and liable to be recalled at any moment. Between the two stood the Albanian brigade of the Turkish army, with Mohammed 'Aly at its head. This last was the really formidable element in the country. The Beys, under their rival chiefs, Elfy and Bardisy, were too jealous of one another to make an effective resistance to any determined opponent. The Pasha was outnumbered in force, and vacillating in his policy. Mohammed 'Aly alone knew exactly what he wanted, and how to get it. He played off the Beys against one another, and against the Pasha, and he ingratiated himself with the people of Cairo, who were heartily sick of intestinal jealousies and periodical massacres. They recognised the sorely needed strong man in Mohammed 'Aly, and implored him to be their governor. He made just the necessary show of reluctance—*no-luit khedivari*—and then accepted the reins of government.

(1) **MOHAMMED 'ALY** (1805-48).—The accession of Mohammed 'Aly, in 1805, was attended by violent scenes. The Turkish Pasha, Khurshid, naturally refused to recognise so irregular an appointment, and stood to his guns in the citadel of Cairo. Mohammed 'Aly established his Albanians in the lofty walls of the great mosque of Sultan Hasan, immediately opposite the citadel, and from these two eminences the rival governors carried on a cannonade for weeks, to the serious damage of public and private buildings, until at last a message arrived from the Sultan, who had probably been bribed, announcing that he acquiesced in the popular choice, and

appointing Mohammed 'Aly Governor, or Pasha, of Egypt. Khurshid retired in disgust, and the Albanian soldiery commemorated the event by pillaging the houses of the citizens. Mohammed 'Aly now possessed the title of Governor of Egypt, but his authority was bounded by the walls of Cairo; outside, his rule was everywhere disputed by the Mamluk Beys, who were joined by many of Khurshid's troops, and by some Albanian deserters. On Aug. 18th, 1805, the Mamluk Beys, deceived by a proffered plan of treachery on the part of some of the new Governor's officers, broke into Cairo, and marched along the principal street, amid the apparent rejoicings of the citizens. As they advanced, however, signs of opposition began to appear, and shots were fired upon them from the houses. Turning back, the greater number found themselves shut in between two fires, with no escape but fighting a way through the enemy. This some of them effected; others shut themselves up in a mosque and surrendered, whereupon about fifty of them were slaughtered on the spot, and the rest were dragged, almost naked, and with every mark of humiliation, to the presence of the Governor. They were chained up like wild beasts in the court of the Pasha's palace, while the heads of their decapitated comrades were skinned and stuffed with straw before their eyes. Most of them were then tortured and put to death, and eighty-three stuffed heads were forwarded to the Sultan at Constantinople. Among the heads were those of some of Napoleon's soldiers, who had thrown in their lot with the Beys. The first massacre of the Mamluks was followed by a period of comparative tranquillity; the Beys retired into the provinces. England exerted her influence with the Sultan in their favour, but either the Beys had not money enough, or Mohammed 'Aly outbid them in bribes, for the Turkish fleet, which had come to Alexandria to their assistance, sailed away. General Fraser and 5,000 English troops landed, and endeavoured to restore the rule of the Mamluks; but his attempt ended in disaster, and this time it was the heads of Englishmen that decorated the streets of Cairo. Having now disposed of the outside enemy, bribed the Turk, and foiled the English, Mohammed 'Aly set himself to lull the suspicions of his internal foes. He restored to the Beys their large estates, and made them welcome at the capital. In 1811 he was about to send a force into Arabia, to reduce the Wahhâby rebels to submission; his son Tûsûn was to be entrusted with the command of the expedition, and a great ceremony of investiture was to celebrate the occasion. Invitations were sent to the Mamluk Beys, and on March 1st they went to the citadel, followed by their retinues, and were hospitably received by the Pasha. As they were threading the narrow passage which leads from the citadel to the open space with-

out, the gate was suddenly closed in their faces, and they found themselves shut up in a sort of stone corridor cut in the rock, with high walls, and no roof, and with the Pasha's troops lining the top of the walls. Thus cooped in, they were easily shot down; some tried to clamber upon the roof of the citadel, but were instantly killed; others fought their way through the guard that closed their rear, and found death in doing so. Four hundred and seventy Mamluks entered the citadel, and it is doubtful whether any escaped. One is said to have leaped his horse from the ramparts, and alighted safely upon the ground beneath; but an alternative tradition is more probable, that he saved his life by avoiding the Pasha's hospitable entertainment altogether. The massacre extended throughout the provinces of Egypt. Mohammed 'Aly and Tûsûn indeed exerted themselves to put a stop to the horrors of the sacking of Cairo; but 500 houses had been ransacked, and their women and servants brutally ill-used, before order was restored. The second massacre of the Mamluks left Mohammed 'Aly master of Egypt. He soon reduced Arabia to his authority, and was able to send a contingent to the Morea, under his son, Ibrahim Pasha, to assist the Turks in their struggle with the Greeks in 1821-2. Growing stronger as his reign advanced, he now dreamed of forming an independent empire of his own. He began by invading Syria, in 1831, and his son Ibrahim so skilfully conducted the campaign, that the province was speedily won, the fortress of Acre and the capital of Damascus were seized, and the Turks were terribly defeated in the battle of Koniya; 60,000 Ottomans were routed, their general, the Grand Vizir himself, was made prisoner, and nothing but six days' march intervened between the victorious Egyptians and Constantinople. The Sultan in his straits looked round for an ally. Sir Stratford Canning urged the English Government to assist the Porte in putting down its rebellious vassal, but the Duke of Wellington declined to interfere. Russia accordingly came to the aid of Turkey, and a treaty was arranged between the Porte and Mohammed 'Aly, whereby the latter was confirmed in the possession of Syria, and became practically independent of the Sultan, to whom his obligations were now restricted to the payment of an annual tribute. The Pasha of Egypt, however, was not satisfied. He coveted empire, and the tribute galled his pride. Fresh hostilities broke out after a time, and there seemed every probability of the formation of a new and powerful empire at Constantinople, under the brilliant rule of the great Pasha. The French alone among the nations of Europe were disposed to let matters take their course; the other powers resolved to permit no such revolution in the constitution of Eastern Europe. Headed by England, they intervened to enforce their commands.

In Nov., 1840, Acre was bombarded and stormed by the English fleet, and in the following year a fresh treaty compelled Mohammed 'Aly to restore Syria to the Porte, and confine himself to the domestic affairs of his viceroyalty in Egypt. His army was reduced, and his navy abolished. Henceforward the spirit of the Pasha was broken. He had failed in the great ambition of his life, and his extraordinary success in the internal settlement of Egypt, where he established order and wise government in the place of anarchy and desolation, did not satisfy him. He became imbecile in 1848, and died, Aug. 3rd, 1849, when more than eighty years old. Mohammed 'Aly was the Napoleon of the East. He possessed in a remarkable degree those qualities of daring and prudence which, combined, make up the character of a great adventurer. He was a tyrant, of iron will, invincible patience, and unshaken firmness. He could do terrible things when an obstacle had to be removed from his path; but he was not naturally cruel or bloodthirsty. Under his steadfast government, Egypt regained the order and prosperity which had disappeared amid the struggles of the Mamluks. He believed that the country could become great only by adopting the improvements of European civilisation; and he invited Frenchmen and Englishmen to help him in introducing western reforms. Under his rule the exploration of the monuments of ancient Egypt began in the hands of Salt, Belzoni, Wilkinson, Bonomi, and Lepsius, while Lane wrote his classical record of the *Manners and Customs of the Modern Egyptians*. Mohammed 'Aly created modern Egypt; the army and navy, the system of taxation (which bore and still bears heavily upon the peasantry) the Customs laws, manufactures, colleges, and administration, are all his work. Schools of medicine and European studies, the printing press of Boulak, and many other enlightened institutions, were of his foundation, and if he committed the error of misunderstanding the true resources of Egypt, and tried to convert it into a manufacturing instead of an agricultural country, it was chiefly because his zeal for Western models exceeded his comprehension of their conditions. He was a great ruler, and his mistakes were far outweighed by the immense benefits he conferred upon Egypt.

(2) **IBRAHİM PASHA** (1848) became viceroy when his father lost his intellect, but this able soldier, who inherited much of Mohammed 'Aly's genius, with more than his unscrupulousness, reigned but two months, and died before his father.

(3) **'ABBÁS** (1848-54), a son of Tūsūn, succeeded, on the Turkish principle, being the eldest male of the family. 'Abbās was a dull, sadden debauchee, who shut himself up in his dreary palaces in the desert, and there abandoned himself to unbridled vices. He was a bigoted Moslem, despite his immorality,

and his reign was a period of deliberate retrogression. He was murdered by some of his slaves in 1854; the news was secretly brought to the Governor of Cairo, who hastily travelled to Benha, where the murder took place, and taking the dead body of his master, set it upright in the carriage beside him, and drove back to Cairo. Nobody suspected the dismal farce, and the Governor, having brought the body into the citadel, levelled the guns upon the city, and was proceeding to proclaim El-Hāmī, 'Abbās' son, viceroy in his father's stead, when the English consul interfered, and convinced the Governor that such a proceeding, in direct contravention of the law of succession, was flat treason.

(4) **SA'ID** (1854-63), the eldest male of the family, and fourth son of Mohammed 'Aly, thereupon ascended the viceregal throne. He was in all respects the opposite of his nephew (though senior), 'Abbās. A genial host, Parisian in tastes, fond of his *cuisine*, and devoted to the society of men of wit, especially Frenchmen, he attracted general admiration and sympathy. He carried on the Europeanising policy of his father, encouraged education and public works, and to him Egypt owes two very different but world-renowned institutions—the Suez Canal, which was sanctioned and begun under his auspices; and the Egyptian National Debt, which was inaugurated in his reign by a trifling loan of some three millions. His luxurious life assisted the development of an internal disease, of which he died in 1863, after a brief but promising reign of nine years. He was succeeded by his nephew,

* (5) **ISMA'IL** (1863-79), son of Ibrahim, a prince who possessed to a large extent the remarkable qualities of his illustrious grandfather. He was filled with an ambition, as strong as Mohammed 'Aly's, to make Egypt a powerful kingdom, and to secure it in perpetuity for his own descendants. He possessed many of the qualities necessary in a great ruler. He was indefatigable in business, and transacted the affairs of State personally. There was not a department of the government that was not under his quick and observant eye. He had the true ruler's instinct in discovering the men who were fitted to serve him, and was a princely rewarder of his servants. But he was not to be trusted, and he was too much of an Oriental, despite his Parisian education, to be able to take a business-like view of the conditions of success. He was recklessly prodigal, and never realised that the resources of Egypt are limited, and that credit may be exhausted. One of his most costly feats was the virtual release of his dynasty from the control of the Porte. By heavy bribes he obtained a new charter from the Sultan in 1866, which did away with most of the irksome restrictions imposed by the Treaty of 1841, gave him the title of Khedive, and

granted him the long-coveted right of succession from father to son. He was now a tributary prince; and a second *firman* in 1872 gave him virtually sovereign powers, with the exception of the right of representation by ambassadors at foreign courts. Having thus obtained for himself and his dynasty a settled regal rank, Isma'il turned his attention homewards, and began a series of previously unthought-of reforms. He re-established and improved the administrative system organised by Mohammed 'Ally, which had fallen into decay under 'Abbās; he caused a thorough remodelling of the anarchic Customs system to be made by English officials; in 1865 he bought the Egyptian post-office, and placed it under the direction of an official from St. Martin's-le-Grand; he organised the military schools of his grandfather, and lent his willing support to the cause of education. Public works largely engaged the attention of the Khedive. Railways, telegraphs, lighthouses, the harbour works at Suez, the breakwater at Alexandria, were carried out under his personal auspices by some of the best contractors of Europe. The railways, which are almost entirely State property, covered in his reign more than 1,100 miles, and connect Alexandria and Cairo with every part of the Delta as well as Suez, and run parallel with the Nile as far as Asyut. The telegraphs extend over 4,000 miles. Fourteen lighthouses were built on the Mediterranean and Red Sea coasts. He abolished the old system of consular jurisdiction, and substituted mixed courts, where European and native judges tried international cases with a code based upon a compromise between the Mohammedan law and the Code Napoléon. He built numerous palaces, improved the irrigation system of Egypt, and attempted to make the Nile his servant by a huge lock, which so far has never proved efficient; and though he did not seek to extend his dominions in the direction of Turkey, he annexed the vast provinces of the Soudan, where Sir Samuel Baker, followed by the heroic Gordon, established, for a while, order and good government, and waged war upon the slave-dealers. Such a course of expensive improvements and annexations demanded immense sums of money. The revenue of Egypt amounted to about eight or nine millions, which were procured by squeezing the unfortunate *fellahin*, or agriculturists, to the uttermost. Isma'il was compelled to go to the usurers. In ten years he increased the national debt of Egypt to the vast sum of eighty millions, the mere interest on which was enough to swallow up most of the revenue. The Khedive never received this huge amount, but allowed himself to be imposed upon by the great lending banks, and would agree to any terms. As a fact, he received little more than half the nominal amount of the debt, and during his

reign he paid back in interest three-quarters of what he had actually received. Some of these unprincipled loans were calculated at an interest of more than twenty per cent., and on none did the unfortunate borrower pay less than twelve per cent., in interest and sinking fund combined. Finding himself in great straits, he shuffled and intrigued, cooked the revenue accounts, and finally declared the treasury bankrupt. The French and English bondholders had powerful friends at court, and they brought the pressure of their Governments to bear upon the Khedive. To the pressure of the money-lenders of France and England are to be traced most of the disasters that have characterised European intervention in Egypt for the last seven years. England and France assumed the financial control of Egypt, and after many expedients had been tried, and Isma'il had done his best to thwart them all, the position became intolerable, the floating debt pressed for settlement, execution was threatened upon the Khedive's establishment, and finally, in June, 1879, Isma'il was "requested" to resign by his suzerain, the Sultan of Turkey, acting under the pressure of England. The deposition of the Khedive was the natural outcome of the policy which the two Western Governments had assumed towards the financial affairs of Egypt. Having once interfered, they were led, step by step, into a position from which there was no method of retiring with dignity; and the result was Isma'il's deposition. The time was ill-chosen, for Isma'il had been very busily getting up a sort of imitation rebellion, which resembled a mesmeric trance, inasmuch as it needed to be stopped by the will that excited it; and that will England removed. Arāby was pushed forward by Isma'il as a useful instrument against the Europeans; had Isma'il remained in power, Arāby would probably have been sewn up in a sack and thrown into the Nile; but in the absence of the master-will, Arāby grew into power, and the consequence was the Anglo-Egyptian War. The ex-Khedive afterwards spent his exile in London, Paris, and Naples.

(6) * **TAWFIK**, the eldest son of Isma'il, who was now (Aug. 8th, 1879) set on the throne by the representatives of England and France, was born in 1852. He is a gentlemanly, virtuous, and thoroughly honest man, a model husband of one wife, and a devoted father to two very charming boys; but he is not a ruler of men, and had he possessed the governing faculty, the interference of England and France has allowed him no opportunity of displaying it. The present Khedive has never known what it is to govern; he has been in a perpetual state of grown-up tutelage. As international commissioners of liquidation, or Cabinet ministers, or controllers-general, Sir C. Rivers Wilson, Sir Evelyn Baring, and Sir Auckland Colvin have, seconded by their

French colleagues, and supported by the diplomatic representatives of the Western powers, exerted a pervasive and overpowering influence over all departments of Egyptian administration ever since the young Khedive's accession. The combination of a mock but responsible government and a real irresponsible government resulted in a general shirking of responsibility, which ended in practically no government at all. The dissatisfaction of the Egyptians at the supremacy of foreigners and "infidels," added to certain jealousies in the army and official classes, skilfully worked upon by two or three clever adventurers, produced the *émeute* of Sept. 9th, 1881, which launched the "national movement," and thus led step by step to the Egyptian War of 1882. The mutinous army was seconded by a popular Assembly summoned for the purpose, in which the Notables claimed the right to control the ministry and vote the supplies; but England and France placed their veto upon the proposal of the Assembly by a joint note, presented Jan. 7th, 1882, and when they found that veto disregarded, brought up their fleets to overawe the Egyptians and support the Khedive's authority. The Egyptians, however, were apparently not overawed, so the French ships sailed away in dismay, and left the English to finish the task. The riots at Alexandria on June 11th, 1882, when the European colony were menaced with extermination and had to fly for their lives, and the British consul, Mr. C. A. Cookson, was brutally attacked by the mob, had roused the Egyptians to the pitch of fanaticism, and Araby resolved to stand a siege. The British fleet, deserted by its French allies, while remaining idle during the riots of June, now took action, forbade the defensive works which Araby was perfecting, and, finding that he was secretly going on, opened fire on the morning of July 11th, and before night had silenced the forts. The English were unprovided with a suitable landing force, and did not occupy the city till the third day, after a terrible scene of plunder and incendiarism had been enacted, in which the great square, where the principal merchants' residences stood, was converted into a heap of blackened ruins. Sir Beauchamp Seymour (afterwards Lord Alcester) and his bluejackets and marines held the city until the arrival of British troops under Sir A. Alison, who kept Araby in check behind his lines at Kafr Dawar, but could not advance until reinforcements arrived. Sir Garnet Wolesey arrived in August, and after a couple of slight engagements near the Suez Canal (Magfar, Aug. 24th, and Kassassin 28th), whence he directed his attack, surprised Araby's main force by a night march, Sept. 12th, in their camp at Tell-el-Kebir, and won a complete and overwhelming victory. A brilliant ride upon Cairo by a small body of cavalry under Sir

Drury Lowe secured the surrender of the capital, and of Araby's army, and the capture of Araby himself. The war was over, and there remained only the task of pacifying and settling the country. Araby was banished to Ceylon in January, 1883. Lord Dufferin, then British ambassador at Constantinople, was sent to Egypt to draw up a scheme of settlement, and in Feb., 1883, he forwarded to the Home Government a "Constitution," which has remained a dead letter ever since. After Lord Dufferin, Sir E. Baring once more tried his hand at patching up the Egyptian State, while Sir A. Colvin, who had been usefully engaged upon adjusting the finances of Egypt and negotiating a new loan, was sent back to India. The Khedive all this time remained acquiescent, polite, and melancholy. An epidemic of cholera in the summer of 1883, during which the Khedive displayed unwonted courage and devotion, increased the distress of the country. Meanwhile Hicks Pasha had led an army of Egyptians into the Soudan to repress an insurrection, led by the so-styled "Mahdi," among the slave-dealers there, and his force was cut to pieces on Nov. 1st, 1883. A second force, under Consul Moncreiff, was, on Nov. 5th, similarly routed, with heavy loss, near Suakim; and Baker Pasha (q.v.) was terribly defeated at the battles of Teb and Tamanieb. Whatever good results might have accrued to Egypt by the English occupation and administration were frustrated by the turn of events in the Soudan. The Egyptian resources were strained beyond endurance by the cost of maintaining the English army of occupation and paying troops for the Soudan. England sent an expedition to quell the rebels, but after with difficulty winning a battle or two, it returned to England without accomplishing any definite result. General Gordon was then sent out as a forlorn hope, in the idea that his extraordinary influence over the Soudanese might quiet the rebels, and enable the Soudan to be peacefully severed from Egypt. He started in January, 1884, and after a rapid and daring journey across the desert arrived at Khartoum, the capital of the Soudan, in February. There he soon found that he had undertaken what no mortal man could accomplish without a trustworthy army to back him up; and that force was unfortunately withheld. An expedition was at last despatched to Khartoum, but its scouts only arrived in time to hear that Gordon had been assassinated, Jan. 26th, 1885. (For the details of the various British expeditions, see the *Dictionary of English History*, 2nd edition.) At the beginning of 1886 the condition of Egypt showed no signs of improvement. The Khedive was still a mere cipher; the real Khedive was Sir E. Baring, under whom the government was a shade more stable; but the people were discontented, and ripe for revolt at the first favourable opportunity; and the

ex-Khédive Isma'il was always ready, from his retreat at Naples or Paris, to lend a hand to any intrigue. Sir H. Drummond Wolff was sent out to Egypt towards the close of 1885, taking Constantinople *en route*, with the object of effecting a settlement of the Egyptian difficulty, but his efforts were not crowned with any particular success.

Ehrenberg, CHRISTIAN GOTTFRIED (b. 1795, d. 1876), one of the greatest German naturalists and men of science, was born at Delitzsch, near Leipzig, and having studied medicine at Leipzig University, went to Berlin in 1817, where he soon distinguished himself by his original investigations into fungi, especially regarding their laws of reproduction and cryptogamy. Being invited, with his friend Hemprich, to take part in an expedition to Egypt, sent out by the Berlin Academy of Sciences, he started in 1820, and after much difficulty and distress explored a great part of the country from Alexandria to Dongola. Having visited the peninsula of Sinai, and traversed the chain of Lebanon from end to end, the friends proceeded to explore the coasts of the Red Sea on their way to Abyssinia. Unfortunately Hemprich died at Massowa, and Ehrenberg, now the sole survivor of the expedition, was obliged to hasten home with the charts, observations, and enormous collections in every branch of science. He reached Berlin in 1825, and having spent some time in arranging the collections for the museum, and preparing an account of his journey, he was appointed professor in the faculty of medicine, and turned his attention entirely to microscopic work, though in 1829 he accompanied Alex. von Humboldt on his explorations in the Ural and Altai ranges and Central Siberia. In 1838 his great work, *Infusoria as Perfect Organisms*, appeared, and was at once accepted, not only as the highest authority on the subject, but as a revolution in the scientific world. Even the unscientific citizen was attracted, in spite of his fears, by this revelation of the myriad life in water. Ehrenberg next examined and explained the so-called phosphorescent illumination of the sea, the rapid red fungous growth on eatables, to which he attributed the mediæval miracles of blood, and the phenomena of red rain and red snow. He was also the first to establish the formation of chalk and other rocks of the earth's crust from the deposit of the skeletons of Bacillaria and Polythalamia, his results being published in his second greatest work, *Microgeology; or, the Life that Creates Earth and Rocks* (1854). A relic of a scientific generation that had passed away, he was ill at ease amidst the theories and speculations that have agitated

Europe since 1860. Having boldly faced superstition all his life, he now saw himself threatened by Nihilism from behind. But he died in peace and honour, cautious but not reactionary, content to "leave to science the healing of the wounds which she herself had made."

Joh. Hanstein, *Lebensabriss Ehrenberg's* (Bonn, 1877).

Eichendorff, JOSEPH VON (b. 1788, d. 1857) poet, was born on his ancestral seat of Lubowitz in the Mark, and was educated at the Catholic Gymnasium in Breslau, and at Halle University. In 1807 he removed to Heidelberg, where he joined the romantic circle of Brentano, Arnim, and Görres. After visiting the other great towns of Germany, and taking part in the War of Independence, he occupied various positions in the civil service and legal professions, finding no abiding city, though he tried to settle in Breslau and other places. One of the most conspicuous figures of the new or later romantic school, he was superior to all his fellows as a lyric poet. His simplicity and love of nature, his realism and avoidance of the antiquated and conventional, have made him a real favourite with the people. Some of his songs have been set to music by Schubert and Mendelssohn. His numerous tales and dramas were not so successful as his lyrics, though a few of them, such as *A Good-for-Nothing's Life* (1826), may still be read with pleasure. He was throughout a strict Catholic, and wrote in defence of the religion.

Leben, as introduction to Voigt's edition of his works (Leipzig, 1864).

Eichhorn, JOHANN GOTTFRIED (b. 1752, d. 1827), Orientalist, historian, and Biblical critic, studied theology at Göttingen, subsequently occupied the post of rector of the college of Ordruft, was appointed professor of Oriental languages at Jena in 1775, and was transferred to the corresponding Chair at Göttingen in 1778, which he retained till his death. His scholarly and literary industry was unbounded. His best known works are those bearing upon Biblical criticism—the *Introductions to the Old* (1780–83) and *New* (1804–10) *Testaments*, and to the *Apocrypha* (1795), the *Hebrew Prophets* (1816–20), and the *Commentary on the Book of Revelations* (1791), which may almost be said to have founded Biblical exegesis. But his reach was exceedingly wide, and there were few subjects that did not attract his pen. *Eichhorn's Repertorium for Biblical and Oriental Literature* (1777–86), is full of varied learning, and he was a constant contributor to the *Göttinger Gelehrten Anzeiger*, and other scholarly journals. In Arabic he edited Abul-Fida's *Geography of Africa*, wrote on ancient commerce with India, on Arabic coins, etc. He began a general history of the world's literature, of which six volumes appeared between

1806 and 1812, and then it abruptly collapsed; he had already abandoned another history, that of civilisation and modern literature (1796-99); he even attempted such adventurous undertakings as a history of the Guelphs, another of the French Revolution, and a third treating of the last three centuries. These are naturally somewhat out of date, but they shared the general breadth and accuracy of view which especially characterised his contributions to Biblical criticism.

[S. L.-P.]

* **Eichthal**, GUSTAVE (b. 1804), a French economist, was born of a wealthy Jewish family of bankers at Nancy, and educated at the school of St. Simon, where he devoted himself closely to the study of economics. He became a disciple of St. Simon, and was a member of the association which was formed, with *Enfantin* at its head, to propagate the views of their leader. When this association was suppressed by Government, M. Eichthal having in the meantime spent all his property in the promotion of his ideas, migrated to Greece, became a member of the Bureau of Political Economy, and published anonymously a work entitled *Les deux Mondes*, which served as an introduction to Mr. Urquhart's work on Turkey. He took a prominent part in establishing the *Société d'Ethnologie*, of which he for some time acted as secretary. In 1839, in conjunction with *Ismail Urbain*, he published *Lettres sur la Race noire et blanche*, and in 1848 he was associated in the editorship of the journal *Le Crédit*, and subsequently devoted himself to the solution of social problems. In 1863 he published an important exegetical work, entitled *Les Évangiles*, followed by *l'Examen critique et comparatif des trois premières Évangiles* (1864), and *Études sur les Origines bouddhiques de la Civilisation américaine* (1865). A refugee for some time in England on the fall of Napoleon, he was permitted to return to France in 1872, and has since published, amongst other works, *La Sortie d'Égypte d'après les Recits combinés du Pentateuque et de Manethon* (1872), and *Le Site de Troie selon M. Lechevalier ou selon M. Schliemann* (1875). As a follower of St. Simon, he, along with *Blanqui*, *Chevallier*, *Lesseps*, and others, formed a society in France which remained secluded from the world until it made an expedition to Egypt and decided on the Suez Canal enterprise.

* **Eisenlohr**, AUGUST (b. 1832), a German Egyptologist, was born at Mannheim, in the Grand Duchy of Baden, and underwent a theological training at Göttingen and Heidelberg Universities. A severe illness led to the abandonment of theological studies, and on his recovery he betook himself to the study of chemistry under *Bunsen* and *Erlenmeyer*. He took his degree in 1859, and subsequently established a chemical manufactory. About this time he began to learn

Chinese and other Asiatic languages, and in 1865 entered with passion on the study of Egyptian hieroglyphics. In 1869 he conducted a scientific expedition to Greece, Egypt, and Syria, in which he was generously aided by the Grand Duke of Baden. Whilst in Egypt he had the good fortune to obtain a favourable study of the great Harris papyrus at Alexandria, translated extracts from which he afterwards published at Leipzig (1872). Coming to England shortly afterwards, he aided Miss Harris in selling the papyrus to the trustees of the British Museum for £3,300. About the same time he read a paper on the *Political Condition of Egypt before the Reign of Ramses III.* to the Biblical Archaeological Society of London (*Transactions*, vol. i., part ii, 1872). An adverse criticism of this paper by M. Chabas drew from him a rejoinder which appeared in the *Ägyptische Zeitschrift*, 1873. In the same magazine appeared a translation of the whole of the Harris papyrus. In 1872 he became professor extraordinary in the University of Heidelberg, and an honorary member of the Society of Biblical Archaeology of London.

Elcho, LORD. [WEMYSS.]

Eldon, JOHN SCOTT, EARL OF (b. 1751, d. 1838), Lord High Chancellor of England, was a twin child of a family of sixteen. William Scott, his father, was a coal-fitter in Newcastle. Young John was educated at the Newcastle Grammar School. William (who became Lord Stowell), an elder brother, after passing through the grammar school, proceeded to Oxford, where he distinguished himself so effectually that in 1766, when the father wrote to notify an intention of making his youngest son a coal-fitter, he could reply, "Send Jack up to me; I can do better for him." Scott accordingly matriculated in 1766, and the year following was elected to a fellowship, and took his B.A. in 1770. He subsequently won the chancellor's essay prize. His intention was to enter the Church and obtain a college living. But in November, 1772, he eloped to Scotland with Elizabeth Surtees, the daughter of a respectable Newcastle banker, and married her. Neither of them had a sixpence independent of their parents; and the marriage was equally displeasing to the family of each. Scott was obliged to relinquish his fellowship; but a year of grace remained, during which he had the option of accepting a college living. During this year he began the study of the law, with the view (to use his own words) of having two strings to his bow. But the Church was "his first mistress," and it was not until all chance of a college living was at an end that he decided to pursue the legal profession. The parents, eventually reconciled, settled the interest of £3,000 at 5 per cent. upon them. The young couple removed to London, and took chambers in Cursitor

Street, and the husband entered at the Middle Temple, and devoted himself with intense earnestness to his legal studies. A kind conveyancer, knowing of his straitened circumstances, admitted him to read in his chambers without the usual fee. At length he was called to the bar in 1776. He made but ten shillings and sixpence his first year, and his prospects did not encourage a London career. He therefore took a house in Newcastle with the view of establishing himself there, but still lingered in London. In his second year at the bar his prospects began to brighten. His brother William, who by this time held the Camden professorship of ancient history, was in a position materially to advance his interests. The young barrister practised at first in the King's Bench Courts; but a whim or fancy induced him to change to the Court of Chancery. The change was fortunate, for many years might have elapsed before the stores of real-property lore, which formed the bulk of his legal knowledge, could have been brought into play in the courts of common law. As things turned out, a speedy opportunity was afforded. Early in his fourth year occurred the case of *Ackroyd v. Smithson*, settling a rule of law, which laid the foundation of his fame. "Young man," whispered a well-known solicitor to him as he left Westminster Hall, "your bread and butter is cut for life." He was next employed on an election petition by the notorious Bowes, of Gibside, and was subsequently retained as leading counsel in the Clitheroe election petition, where he greatly increased his reputation. From this time his success was certain, and in two years he took silk. In 1783 he entered Parliament for Lord Weymouth's pocket borough of Weobly. His early speeches in Parliament were not a success, but by 1788 he had so far established his position that Pitt felt justified in making him Solicitor-General, when he was knighted. In 1793 he became Attorney-General, in succession to Sir Archibald Macdonald, who had become Chief Baron of the Exchequer. The responsibility of the Crown prosecutions now devolved upon him, and it fell to his lot to institute some of the most memorable—among others those against Hardy, Horne Tooke, and Thelwall. The result is well known—they all failed; and the Attorney-General was much censured at the time, even by the friends of the Government, for preferring a charge of high treason instead of indicting the accused for sedition. It is, however, admitted on all hands that he conducted the proceedings with temper and forbearance. In July, 1799, he was made a serjeant (at that time a necessary preliminary to a seat on the bench of a Court of Common Law), and became Chief Justice of Common Pleas, with the title of Baron Eldon, of Eldon. This was the brightest period in his judicial career. When he sat with his brethren in

banc, he was obliged to keep pace with them; and when he sat at *ni si prius* by himself, he was obliged to decide upon the instant. His tendency to hesitate did not therefore become manifest. It was also the happiest period. "How I did love that court!" he exclaims in his *Anecdote Book*. In April, 1801, he received the Great Seal; but he still remained Chief Justice, because of a return of the king's illness. George III., however, soon recovered, and Lord Eldon resigned the Chief Justiceship. With the exception of the years 1806-7, when the Whigs were in office, Lord Eldon was Lord Chancellor till April, 1827, when he resigned on the formation of Mr. Canning's Government, the longest period on record. He finally withdrew from the House of Lords in 1834, and died in 1838. Lord Eldon, all through his political life, was an unbending Tory. For forty years he fought against every improvement in the law or in the Constitution. He opposed the emancipation of the Roman Catholics, toleration to dissenters, a relaxation of the criminal code—everything, in short, that interfered with the existing state of things. For him the machinery of the Constitution worked both well and quickly enough. "*Sat cito, si sat bene*," was a motto that struck him very early in life, and this was his motto to the end. But as a judge Lord Eldon ranks among the ablest. His decrees have suffered no reversals; his judgments, although negligently worded, tortuous, and involved, are looked upon as marvels of wisdom and learning; and in all that related to the principles of his court, his knowledge has never been surpassed. He had, however, a great weakness: he lacked decision. He would doubt with a tenacity and refinement unparalleled in the history of mind. "For twenty years I have had doubts on this will," he said in one decision. He loved an *if* as much as Tristram Shandy hated one. As he grew older he grew worse; and latterly there was hardly any chance of getting him to utter a sentence without a saving clause.

Horace Twiss, *The Public and Private Life of the Earl of Eldon*; Campbell, *Lives of the Chancellors*. [W. M.]

Elgin, THOMAS BRUCE, 7TH EARL OF, 11TH EARL OF KINCARDINE (b. 1766, d. 1841), succeeded his brother as Earl when only seven years old. After a somewhat varied education at English public schools, a Scottish university, and abroad, he entered the army. Though he rose to general's rank, the main business of his life was diplomacy. Successively envoy at Brussels and Berlin, he was from 1799 to 1802 ambassador at Constantinople, and then planned the act which has made him remembered—the removal from Athens of the "Elgin Marbles," which in 1816 he sold to the nation for £36,000, having spent himself over £50,000 in recovering them after their shipwreck off Cerigo, and in

bringing them to England. The vandalism involved in the desecration of the Parthenon could be excused only by the danger to the very existence of the sculptures in Athens under Turkish rule. Elgin was for many years a Scottish representative peer. He married twice, and left several children. His youngest daughter but one married Dean Stanley. He published, in 1810, a *Memorandum on the Subject of the Earl of Elgin's Pursuits in Greece*.

A. Canova, *Letters*; E. T. Visconti, *Memoir on the Sculptures in Lord Elgin's Collection*.

Elgin, James Bruce, 8th Earl of, 12th Earl of Kincardine (b. July 20th, 1811; d. Nov. 20th, 1863), son of the above, was educated at Eton and Christ Church, and gained a fellowship at Merton College, Oxford. He early came under the influence of Chalmers. In 1841 he was returned member for Southampton, but in a few months succeeded to his father's peerage. From 1842 to 1846 he was Governor of Jamaica. He became in the latter year Governor of Canada, and just before his departure contracted a second marriage, with a daughter of the first Lord Durham. His quiet and uneventful administration was decidedly successful, and amidst great difficulties he won the character of a just and ultimately of a popular ruler. In 1849 he was rewarded with an English barony, and in 1854 he returned home. In 1855 he refused to accept a seat in Palmerston's new Cabinet; but in 1857, with some boldness, he accepted the post of special envoy to China after the affair of the *Arrow* had plunged England into hostilities with that country. In 1858 he negotiated the Treaty of Tientsin, and, shortly after, the Treaty of Yeddo with the Japanese. Returning home he became Postmaster-General to Lord Palmerston's Government in 1859, but within a year of his arrival in England he was despatched on a second mission to China, rendered necessary by the failure of the Chinese to observe the earlier engagement. After the sack of the Summer Palace, he negotiated the definitive treaty that settled the relations of the two Powers. He had not been a month at home when Palmerston made him Viceroy of India. He arrived there in March, 1862. His term of office was, however, short, and in the following year he died of heart disease. His "humble task" was mainly to continue the work of his predecessors, and he showed great tact in accepting the position of comparative dependence on the new Secretary for India, to which the assumption of the Government by the Crown had reduced the Viceroy. Without any very brilliant or showy qualities, Elgin's disinterestedness, devotion to duty, steady industry, and warm and genial sympathies, invest with interest a career cut off just when circumstances gave room for the display of

his highest powers, and even so he is not among the least of our administrators.

Walrond, *Letters and Journals of Lord Elgin*; Oliphant, *Narrative of the Earl of Elgin's Mission to China and Japan*. [T. F. T.]

Élie de Beaumont, JEAN BAPTISTE ARMAND LOUIS LÉONCE (b. 1798, d. 1874), a French geologist, was born at Canon, Calvados, studied with distinction at the college of Henri IV., and was the first in the list of those students who passed in 1819 to enter the School of Mines. In 1821 he undertook a metallurgical expedition by the order of the Government. In 1824 he was appointed an ordinary engineer at mines, in 1829 professor at the School of Mines, in 1832 professor at the Collège de France, in 1833 an engineer-in-chief, and finally inspector-general of the first class. Upon the re-establishment of the empire he was raised to the dignity of Senator, and in 1860 obtained the rank of Grand Officer of the Legion of Honour. M. Élie de Beaumont wrote both on metallurgy and geology, but chiefly on the latter. His earlier writings were confined to metallurgy. In 1823 he was entrusted, along with MM. Brochant de Villiers and Dufrenoy, with the execution of a geological map of France; and these three engineers visited England, where a similar work was being executed, in order to draw up a satisfactory scheme for France. The literary result of this visit was a paper, *Voyage métallurgique en Angleterre, etc.*, in the *Annales des Mines*. This was his last work in connection with metallurgy, his whole attention henceforth being confined to geology. His most important geological works are *Recherches sur Quelques-unes des Révolutions de la Surface du Globe* (1829), and *Lectures on Geology* (3 vols., 1845 et seq.).

Galerie historique des Membres du Sénat.

Eliot, George, was the pseudonym assumed by Mary Ann Evans (b. 1819, d. 1880), one of the great novelists of the century. She was born at South Farm, about a mile from Griff, in the parish of Colton, in Warwickshire, on Nov. 22nd, 1819. Her father, who commenced life as a carpenter, was a Staffordshire man belonging to a family of Welsh origin. His character and career are said to be partially depicted in "Adam Bede," "Caleb Garth," and "Mr. Hackett." He was married twice, and by his first wife he had a son and daughter before settling in Warwickshire. His second wife, George Eliot's mother, whose maiden name was Pearson, is understood to have been the original of "Mrs. Hackett" in *Amos Barton*. There were two other children by the second marriage, Christiana and Isaac, the latter being no doubt one of the subjects of the beautiful autobiographical sonnets entitled *Brother and Sister*. George Eliot was but six months old when the family removed to Griff House, half manor-house, half farm. At an early age

Mary Ann and her brother were sent to the village free school at Colton. When twelve years of age, at a time when, in the words of a neighbour, she was a "queer, three-cornered, awkward girl," she was sent to a boarding-school at Nuneaton. In 1841, his wife having died in 1836, Mr. Evans and his daughter removed to Foleshill, near Coventry. It was here that she made the friendship of the household of Charles Bray, including Charles C. Hennell, his brother-in-law. This connection had a marked effect upon her religious views. From the most ardent Evangelicalism to scepticism of the most pronounced type was a long stride. Miss Evans changed her belief, and one of the earliest results was the desire to break away from the old forms of public worship, to which she could only with great difficulty be induced to conform. Miss Evans began her literary life by translating Strauss' *Leben Jesu*. After three years of close work the translation was brought out by Dr. Chapman in 1846. In 1849, Mary Ann, now commonly called Marian, lost her father. In order to remove the weight of her sorrow, her friends planned a tour for her to the Continent, and she went to a boarding-house near Geneva. There she made the acquaintance of Mr. D'Albert, an artist, who painted the only portrait of her that is known to exist. Returning to England, she became allied to Dr. Chapman in the editorship of the *Westminster Review*. Dr. and Mrs. Chapman were at this time in the habit of receiving a few boarders at their large house in the Strand, and Miss Evans at their invitation made her home with them. Here she found herself in the centre of a literary circle, which included George Henry Lewes, then a young man just becoming known. Miss Evans was introduced to the versatile *littérateur* in September, 1851, and makes this record of the fact:—"I was introduced to Lewes the other day in Jeffs' shop—a sort of miniature Mirabeau in appearance." Miss Evans and Lewes, who was living apart from his wife, came together, Mr. Herbert Spencer being the connecting link. Mutual interest ripened into esteem, and esteem into love. The gentleman proposed to the lady that they should, in defiance of the conventions, join their lives, and in the sequel they lived together as man and wife in every sense except the legal one. We find that George Eliot was at war with the marriage laws. Probably she considered it safest for most people to yield submission to those laws; but her own personality and her own circumstances were peculiar, and what applied to the average world was not expected to apply to herself. That she suffered for defying the conventions is well known; that society turned its back on her, and succumbed eventually only to the insatiable craving for the hunting of lions, is a familiar fact. The union with Lewes was by no means an advantageous one from a pecuniary stand-

point. They were both poor. We learn that in 1853 her personal expenses amounted only to £9 a month. When she united herself to Lewes they were so poor that one sitting-room had to serve as a study for both writers. She involved herself in the responsibility of sharing with Lewes not only her own and his maintenance, but that of his sons and their mother. It was in 1856 that Miss Evans began to write fiction, and then a new era in her life began. Fiction had always been a vague dream, but she never went farther towards the actual writing than an introductory chapter describing a Staffordshire village. One evening at Berlin she read her chapter to Lewes. He was struck by it as a piece of concrete description, and often said, "You must try to write a novel!" At this time she was still writing for the *Westminster Review*, and postponed her attempt at fiction in order to write her article on *Silly Novels*. At Richmond, in September, 1856, she began her *Scenes of Clerical Life*, opening with *Amos Barton*. The *Scenes* were sent to *Blackwood* by Lewes, and published first in the magazine and afterwards in book form under the name of George Eliot, the secret of their authorship being withheld even from the publisher. In 1857 she had begun to think of *Adam Bede*. "My new story haunts me a good deal," she writes, "and I shall set about it without delay." The success of the book when it appeared, in 1859, was beyond precedent. After reading it, even poor Mrs. Carlyle found herself "in charity with the whole human race." The author was anxious that Carlyle himself should read it. Report has it that the philosopher was eventually prevailed upon to begin the reading, and that he threw it aside at the second page, on discovering that Seth Bede was made to put a door together without the panels. Charles Reade, a better judge of a novel, said, "*Adam* was the finest thing since Shakespeare." Lytton thought the conception of character excellent, but of course concluded that the dialect and Adam's marriage with Dinah were the two defects of the book. "I would have my teeth drawn rather than give up either," said George Eliot, with more emphasis than usual. The *Mill on the Floss* followed in 1860; *Silas Marner* in 1861; *Romola* in 1863. We are told that George Eliot found her success made writing a matter of more anxiety than ever. In degree as she became famous she became timid, and wrote slower. She prepared her scheme with great care, writing out the plot of *Romola* repeatedly. She was conscious that she ran the risk of over-elaboration. "I am in danger," she says, "in all my designs, of parodying dear Goldsmith's satire on Burke, and thinking of refining when novel-readers only think of skipping." This is the best piece of criticism in her letters. It is literally true of every book after *Adam*.

That writing was in part a religion to George Eliot is also true. "I can write no word that is not prompted from within," she says. *Felix Holt* was published in 1866; *Middlemarch* in 1871-2; *Daniel Deronda* in 1876; and *Theophrastus Such* in 1879. George Eliot was now a prosperous woman. For the serial right of her first story in *Blackwood* she received £50, and her first payment for *Adam Bede* was no less a sum than £800. For the right to run *Romola* in *Cornhill* the publishers paid her £7,000, and payments of a corresponding kind were afterwards made by Blackwood for *Middlemarch* and *Daniel Deronda*. From the Chapman boarding-house of 1853, George Eliot in 1876 lived to be owner of the beautiful country mansion known as the Heights of Willey. She spent some time with Lewes on the Continent. In 1865 they visited France, and in 1867 they went to Spain, and in the following year George Eliot made her first appearance as a poet with *The Spanish Gypsy*. This poem was succeeded in 1874 by a volume of miscellaneous pieces bearing the title of *The Legend of Jubal*. Lewes died in 1878. George Eliot's sorrow was at first inconsolable. It is hinted in her letters that she survived it only because she found the world "so intensely interesting." She married Mr. Cross within two years. Her friends were not prepared for her marriage. The chief of them were, however, speedily reconciled to the union. "By the time you receive this letter," she writes to Madame Bodichon, "I shall (so far as the future can be a matter of assertion) have been married to Mr. J. W. Cross, who, as you know, is a friend of years, a friend much loved and trusted by Mr. Lewes, and who, now that I am alone, sees his happiness in the dedication of his life to me." Of the married life and final separation, the biography published by Mr. Cross after his wife's death contain but a slight record. George Eliot and her husband went abroad for a few months, and on their return they took up their residence at No. 4, Cheyne Walk, Chelsea, where, after a brief illness, she died at midnight, Dec. 22nd, 1880, of inflammation of the heart induced by a cold. She was buried by the side of Lewes in the cemetery at Highgate. Her essays contributed to the *Westminster Review* were collected in 1883, and in 1884 her husband, Mr. Cross, published in the form of a biography her journal and letters. Amiable George Eliot indubitably was, but by no means without angularities of mind and temper. The reader gathers the impression that the novelist was eminent in womanliness. To sound her deeper down, perhaps it is necessary to admit that there was sometimes apparent a little self-depreciation that was not always above suspicion. Thus it invariably occurs that as each successive novel is introduced to the publisher, she expresses a doubtful opinion

of its merit, but always accompanies her own dubious estimate with the very decided eulogy of Mr. Lewes. It must further be allowed that George Eliot not rarely exhibits a decided disposition to trim. The prevailing tone of her letters is one of humility, but it is the humility of a proud woman who has no call to show her pride. Indeed, she sometimes seems to take herself at the world's appraisal. George Eliot stood also to question herself and sound her own utmost depths. Once only, so far as we can see, did she experience a sensible humiliation, and that was in contrasting her own work with the *Times* newspaper. "Every day after reading the *Times*," she writes, "I feel as if one's writing were miserably trivial stuff in the presence of this daily history." Not a large nature, superior to petty annoyances, but a nature whose smooth surface was blown into little storms by many a passing breeze, she was charitable in her judgments on friends and contemporaries. The world dealt well with George Eliot, and forgave her the little it had to forgive; but this charitable bent of mind was sincere. Another impression strongly conveyed is that George Eliot was not much interested in any fiction but her own. In 1848 she writes to Mr. Charles Bray, "I have read *Jane Eyre*, and shall be glad to know what you admire in it," although she afterwards changed her opinion upon the book. Scott is always referred to with affection; and Lockhart's *Life* is pronounced a model book. Dickens appears to have been a frequent visitor, and was George Eliot's first and most distinguished critic; but little or nothing is said about Dickens' own wonderful books. Turgeneff was the literary man whose society George Eliot enjoyed most thoroughly and unrestrainedly, but we have not a word on Liza and Dmitri Roudine. Disraeli's novels, however, call forth an opinion: they are "more detestable stuff than ever came from a French pen." Anthony Trollope made himself liked for his straightforward, wholesome *Wisean*. George Sand alone, perhaps, commanded George Eliot's absolute homage. George Eliot's love of music is a familiar fact. She loved Schubert's *Erl King*. Long after her popularity was assured she frequented the shilling seats at the Monday concerts of St. James's Hall. In painting she was no less warmly interested. She visited nearly every gallery of consequence on the Continent. Speaking of a picture of Rosa Bonheur's, she said: "What power! That is the way women should assert their rights." In public questions George Eliot was sometimes interested. She disliked the ballot; she was a champion of the higher education for women; she took the side of the Germans against the French in their great struggle; she thought Mazzini left behind him a wider good than his personal presence could take away. Despite *Deronda*, she began life

with something like dislike of the Jews. It would not appear that George Eliot had any special love of external nature. She could stay at Ambleside with Miss Martineau and drive through Borrowdale without writing more than a word or two on the scenery. George Eliot's religion is too large a question to be dismissed in a paragraph. She accepted Dr. Congreve's statement that the *Spanish Gypsy* was a "mass of Positivism." For all Comte's writing she had feeling of high admiration, intense interest, and deep sympathy. "I do not think," says Mr. Cross, "I ever heard her speak of any writer with a more grateful sense of obligation for enlightenment." On Evangelicalism, as represented by a popular preacher, who, though not named, is easily recognised, she was very hard. Her general attitude towards life was neither that of an optimist nor a pessimist. She found the world "intensely interesting," and, on the whole, reasonably happy. A word as to her own place as a novelist. Her narrative art is not of the highest. Neither her incidents nor her characters tell their own tale. Both are interrupted at almost every turn by little essays on the tendency of events and the development of psychology. This defect is less noticeable in the earlier works, *Adam Bede* and *Silas Marner*, than in the later ones, *Romola* and *Middlemarch*. Her plots are not distinguished by ingenuity or invention. But, within conventional limits, they are often strongly felt and vividly realised. In the books by which she became known character is the dominant quality. It is generally rustic character, often robust, sometimes eccentric, always very close to nature. The atmosphere of the earlier book is hardly less than marvellously true. George Eliot's pathos is a notable quality, but perhaps her humour is her best gift. The scene of the "Rainbow" in *Silas Marner* is often cited as rich in the finest effects of humour. Vivid, exact, a close observer, a strong soul, George Eliot is one of the great novelists of the century. It is probable, however, that the fame she had at the time of her death must suffer some deduction from time.

Journal and Letters, edited by J. W. Cross (1884); *Mathilde Blind, George Eliot (Eminent Women Series, 1883)*. [T. H. C.]

Ellenborough, EDWARD LAW, BARON (b. 1750, d. 1818), was the son of a Cumberland clergyman who afterwards became Bishop of Carlisle. Educated at Peterhouse, Cambridge, he became a fellow of Trinity. Called to the bar in 1780, he soon became one of the leaders of the northern circuit. In 1787 he was appointed to conduct the defence of Warren Hastings before the House of Lords, and pressed home the legal points in his client's favour with much skill against the declamatory eloquence of Fox, Burke, and the other distinguished accusers. After seven

years' labours Hastings was acquitted. At first a Whig, Law was converted by the French Revolution to Toryism; in the trials for sedition of Hardy, Horne Tooke, and the other reformers whom the Government mistook for anarchists, he indulged in language of gross exaggeration; and in 1801 he became Addington's Attorney-General. In the following year he was created Chief Justice of the King's Bench, and raised to the peerage. The faults of his character rapidly developed themselves on the bench. To an unrivalled knowledge of the law was unfortunately added a fiery temper, and a disposition that would yield to no control. Similar outbursts in the House of Lords were more easily dealt with. Nevertheless, his services were held in high regard, and in 1806 he was given a seat in the Cabinet of the ministry of "all the Talents," retaining the while the Chief Justiceship. The dangers of such a combination of offices were freely pointed out at the time, and the precedent of Lord Mansfield was no adequate defence. Towards the end of his life Lord Ellenborough displayed an ever-increasing dislike to legal reforms, such as those proposed by Romilly, and increasing arbitrariness. The conviction of Lord Cochrane [DUNDONALD] was unnecessarily severe; and he often, as in Hone's case, attempted to browbeat the jury. It is said that the acquittal of that obscure individual on the charge of blasphemy hastened Lord Ellenborough's retirement, and even his death.

Lord Campbell, *Lives of the Judges*; Foss, *The Judges of England*; Brougham, *Statesmen of the Time of George III.*; W. C. Townsend, *The Lives of Twelve Eminent Judges*. [L. C. S.]

Ellenborough, EDWARD LAW, 2ND BARON and 1ST EARL OF (b. 1790, d. 1871), statesman, eldest son of the above, was born on Sept. 5th, 1790. He was educated at Eton, and afterwards at Cambridge, where he gained the prize for the best Latin ode on the dethronement of the House of Braganza. He married in 1813 Lady Octavia Stewart, the sister of Lord Castlereagh, by whom—she died in 1819—he had no children. He married secondly Miss Digby, and had issue one son, who died in 1830. In the same year he was divorced from Lady Ellenborough, and on his own death the earldom conferred on him in 1844 became extinct. The barony descended to his nephew, the present peer. In 1813 Mr. Law entered Parliament as member for St. Michael's, in Cornwall, but he only sat five years in the House of Commons, the death of his father in 1818 calling him to the Upper Chamber. He was a Tory in politics, and belonged to that large and liberal section of the party who represented rather the views of Mr. Pitt than those of Mr. Addington and Lord Eldon, and had been from the first in favour of Roman Catholic Emancipation. Lord Ellenborough, too, was a sympathiser with Mr. Canning's foreign policy, though his

connection with Castlereagh, whom Canning was thought to have ill-treated, inspired him with prejudices against that statesman's character which prevented him from becoming one of his followers. On the formation of the Duke of Wellington's Government in Jan., 1828, Lord Ellenborough took office for the first time as Lord Privy Seal, a post which he exchanged in the following September for the Board of Control. He held the same office in four different administrations—that is, in 1828, in 1834, in 1841, and again in 1858. The experience which he thus acquired of Indian affairs combined with his known energy and abilities to point him out as the fit man to succeed Lord Auckland at Calcutta and retrieve the disasters of the fatal Afghan campaign of 1841. In this undertaking he was perfectly successful. But his policy, upon the whole, did not meet with the approval of the Court of Directors, and opinions still differ with regard to his treatment of the Ameers at Scinde. However, Lord Ellenborough completely restored our prestige on both sides of the Indus. He chastised and pacified Afghanistan, conquered and annexed Scinde, and brought our first Chinese War to a successful termination. His removal of the gates of Somnauth to Agra may or may not have been an exception to the general good sense which he displayed. But on the whole, like Clive and Hastings, he deserved well of his employers, and it is not improbable that their treatment of him accelerated their own downfall. Lord Ellenborough himself was always in favour of transferring the Government to the Crown and making Her Majesty Empress of India. The Duke of Wellington, though he thought him indiscreet in his dealings with the Directors, and too indifferent to public opinion, approved of his policy, and defended it in his plan in the House of Lords; and though he undoubtedly laid himself open to the charge of egotism, and the Somnauth affair was managed rather too much in the King Cambyes vein, these were small things to set against such great services. Lord Ellenborough was recalled from India in 1844, and in 1846 became First Lord of the Admiralty in Sir Robert Peel's reconstituted Cabinet. He retired with that statesman in the following summer, and remained out of office during the ensuing two years of the Crimean War and the outbreak of the Indian Mutiny. But a collection of his speeches on the Eastern Question, the Chinese War of 1857, and the cause of the great outbreak which placed our Asiatic Empire for a time in much imminent peril, would show him in knowledge of details, in precent sagacity, and in military ability, far superior to the ministers of the day, and especially to the one who, placed in the most important post, was the least efficient of them all—the President of the Board of Control, Mr. Vernon Smith (afterwards Lord Lyveden). In the spring of 1858 a Conservative Govern-

ment returned to power, and Lord Ellenborough to his old office. At this time the Mutiny was beginning to be got under, though it still burnt fiercely in the more remote quarters of Bengal. On March 3rd the Governor-General, Lord Canning, had issued a proclamation to the inhabitants of Oude which amounted virtually to a decree of confiscation against half the landowners in the Province. However much they might have deserved it, the proclamation was regarded as an act of great impolicy by Sir James Outram, Sir John Lawrence, General Mansfield, and other high authorities on Indian affairs. Lord Ellenborough took the same view, and addressed a despatch to him, strongly censuring his conduct, which, by some mischance which has never been clearly explained, was published in the newspapers. Some condemned the tenor of the despatch, some the publication of it, and some both: and though Lord Ellenborough resigned rather than allow his colleagues to be implicated in an act for which he declared that he alone was responsible, Government were not permitted to take advantage of his generosity. Long debates ensued in both Houses of Parliament. In the House of Lords the Government won by a majority of nine; but in the House of Commons, as further information reached the country, the opposition gradually melted away, till finally the hostile resolution which had been moved by Mr. Cardwell was withdrawn, and Lord Ellenborough triumphantly vindicated. What contributed to the result as much as anything was the fact that Mr. Vernon Smith, the former President of the Board of Control, had received a letter from Lord Canning admitting that his proclamation required explanation, which he had neglected to show to Lord Ellenborough. The whole episode formed the subject of a very amusing speech delivered by Mr. Disraeli at Slough shortly afterwards; but it terminated the official career of Lord Ellenborough, though he continued for some years to take part in the debates of the House of Lords with great eloquence and spirit. He spoke frequently during Lord Palmerston's Government on the subject of the National Defences, and in 1864 he spoke strongly on the Danish Question. But with the death of Lord Palmerston a new class of questions arose in which he was less deeply interested, and his voice was heard among his peers less frequently. He closed a long, honourable, and patriotic career in November, 1871.

In 1881 his diary, kept during the Wellington administration, was published by Lord Colchester. It is full of interesting information concerning the history of Roman Catholic Emancipation, and the general state of parties at that period. His correspondence with the Queen and the Duke of Wellington while he was Governor-General of India has also been edited by Lord Colchester. [T. E. K.]

Ellery, WILLIAM (b. 1727, d. 1820), an American politician (Federalist), born at Newport, Rhode Island, and educated at Harvard College. First a merchant, he became a lawyer in 1770, in which capacity he soon acquired a reputation for integrity and good sense. He was elected a delegate to the memorable Congress of 1776, in which he signed the Declaration of Independence. He was a member of Congress till 1785 (with the exception of two years), when he was forced to retire into private life, having lost all his property during the war. In 1790 he was appointed to the office of Collector of Customs, which post he held till his death. Mr. Ellery was little of a debater, but he was distinguished by his business talents in Congress.

Goodrich, *Lives of the Signers of the Declaration of Independence*.

* **Ellicott, THE RIGHT REV. CHARLES JOHN** (b. 1819), Bishop of Gloucester and Bristol, is the son of the late Rev. Charles Spencer Ellicott, rector of the parish of Stamford. Educated at Oakham and Stamford schools and the University of Cambridge, he graduated B.A. with honours in 1841, and next year gained some university essay prizes. Rector of Pilton, in Rutlandshire, in 1848, he became, in 1858, professor of divinity in King's College, London, in succession to Dr. Trench, who had been translated to the Archbishopric of Dublin, and in 1860 Hulsean professor of divinity in the University of Cambridge. In 1861 he was appointed Dean of Exeter, and in 1863 was nominated to the united Sees of Gloucester and Bristol. Dr. Ellicott was Hulsean lecturer in 1860, and the treatment of his subject, *The Life of Christ*, the fruit of a very careful examination of the records of the separate Evangelists, is interesting and useful for the connected view it gives of the Gospel history. His *Commentaries* on the Epistles to the Galatians, Ephesians, Philippians, Colossians, Thessalonians, and Philemon (1854-8), are the work of a minute and painstaking critic, and are invaluable as helps to a thorough acquaintance with the text. He contributed an essay on the *Apocryphal Gospels* in *Cambridge Essays* (1856), and an article on *Scripture and its Interpretation* in Archbishop Thomson's *Aids to Faith* (1861); and wrote *Six Addresses on Modern Scepticism* (1877), and *Six Addresses on the Being of God* (1879), for the S.P.C.K. He is also the author of several separate critical publications, and edited *Old and New Testament Commentaries for English Readers*. He was chairman for eleven years of the Company of the Revisers of the Authorised Version of the New Testament published in 1881. Dr. Ellicott is thoroughly liberal in the tone of his ecclesiastical administration. He has established a theological college in his diocese, and the "Church Aid Fund" in Bristol to supply spiritual help in overcrowded parishes.

Elliotson, JOHN, M.D., F.R.S., F.R.C.P.L. (b. 1786, d. 1868), distinguished in therapeutics, was the son of a chemist and druggist in Southwark, London, became a fellow-commoner of Jesus College, Cambridge, and subsequently studied at Edinburgh, then the chief medical school in Great Britain, where he took his degree of M.D. in 1821. He next was elected a fellow of the Royal College of Physicians of London, and in 1822 entered St. Thomas's Hospital as resident physician. Dr. Elliotson early imbibed the opinion that if the practice of medicine was to be improved it must be in respect of therapeutics. Immediately after his appointment at St. Thomas's Hospital he began his experiments with regard to the action of medicines, and was the first who proved by direct experiment the value of quinine as an antiperiodic remedy, of prussic acid in vomiting, and iodide of potassium in various diseases; and the therapeutic properties of creasote and carbonate of iron. This habit of inquiry was carried on for many years, both at St. Thomas's and the North London Hospitals. He was the first in this country to advocate the use of the stethoscope, in the practice of which he was an adept. Elliotson was struck with the lamentable deficiency of clinical teaching in the metropolitan hospitals, and about the year 1826 he took the matter in hand, became the most energetic teacher of the day, and lectured on every case that came under his care. Some of his clinical lectures began to appear in the *Lancet* (1829), and these immediately arrested the attention of the profession, and as a consequence he found his practice leap in one year from £500 to £5,000. In 1831 he was appointed to the Chair of the principles and practice of physic at the London University, now University College, which at that time had an unrivalled staff of medical lecturers. He had now such power and opportunities, such a field of work, as he had wished for, and he soon attained European fame. As a teacher he was, perhaps, the most successful of his time, and he raised the number of students in his class from ninety to 197, while at the same time he enjoyed one of the largest and most lucrative practices in London. But he had reached his zenith, and another turning point in his fortune was at hand. In 1837 a Frenchman, styling himself the Baron Dupotel, an advocate of mesmerism, came to London, and met Elliotson. Elliotson's ardent and suggestive mind was excited by the mesmeric displays, and, as he could do nothing by halves, he set to work heart and soul to try the effects of mesmerism as a remedy for certain diseases of the nervous system. These experiments ended in Elliotson's resignation of the professorship and his complete professional fall. From that time he was dead to true medical science and art. Dr. Elliotson will always be remembered, however, for the work he did before his fortieth

year. He was the author of *Diseases of the Heart* (the Lumllean Lectures, 1829) and *The Principles and Practice of Medicine* (1831).

Medical Times, Aug. 8th, 1868; *Lancet*, Sept., 1837, and Aug. 8th, 1868; *The Zoist*, edited by Dr. Elliottson; *Transactions, Medico-Chirurgical Society*, 1830-3. [W. M.]

Elliott, ERENEZER (b. 1781, d. 1849), the "Corn-Law Rhymer," was born at Masborough, near Rotherham, and being the son of a Nonconformist office-clerk who went bankrupt on £70 a year, had to depend on himself entirely for any education beyond the national schools. Though he describes himself as having been only remarkable for stupidity in boyhood, he early gained an accurate knowledge of Nature, and in the course of years became a scholar of fine and critical reading. His earliest notable poem, *The Vernal Walk*, was written in 1797, under the influence of Thomson, and published amongst other *Juvenile Pieces*. Having imprudently entered into partnership with a rotten firm in Rotherham, he spent several years of hopeless effort, only to find himself ruined in the end. But, borrowing a little capital, he removed to Sheffield in 1821, and with the beginning of prosperity his poetry, written down at spare moments in the counting-house of the ironworks, became more regular and genuine. After two small volumes that attracted no attention, the *Corn-Law Rhymes*, bound up with the *Ranter*, appeared about 1827. The *Village Patriarch*, a series of tales and country sketches, something in the manner of Crabbe, followed in 1829, and in 1830 Dr. Bowring introduced him to the notice of Wordsworth and Bulwer. Southey was already his friend. After this he contributed to Bulwer's *New Monthly Magazine*, and obtained general recognition as a writer of daring and original verse. In 1838 he took a prominent part in the organisation of the Chartist movement, but abandoned the cause two years afterwards owing to its opposition to the Anti-Corn-Law League. In 1841 he retired to his small property at Argill Hill, near Barnsley, where he died. He was remarkable for the stern directness with which he stated the cause of the poor, describing the lives of working-men with unsurpassed simplicity and irony, though wasting too many words in the usual vain appeals to pity and right. The *Coronation Ode* (*Victoria Cypress-crowned*) is a model of denunciation; *Bully Idle's Prayer*, of epigram; while some stanzas of *Win Hill* come very near the highest poetry of a nobler and calmer type.

See Elliott's own *Introduction* to the edition of his works in 1833; Searle, *Life* (1852); J. W. King, *Sketch*; Carlyle, *Corn-Law Rhymer* (*Miscellanies*, vol. iv.).

* **Elliott, THE RIGHT HON. SIR HENRY GEORGE** (b. 1817), is the second son of the 2nd Earl of Minto. He was educated at

Eton, and from 1836 to 1839 was secretary to Sir John Franklin in Tasmania. In 1840 he entered the Foreign Office, and rose rapidly in the service, until, in 1858, he was nominated envoy to Denmark. Various missions to the European Courts occupied his time until 1867, when he was appointed ambassador to the Porte, and sworn of the Privy Council. At first his tenure of office was quiet enough, but in 1876 the revolt of the Herzegovina, followed by the Bulgarian atrocities, rendered the intervention of Europe in Turkish affairs unavoidable. His sympathies were on the side of the Porte, and he earnestly attempted to dissuade the Grand Vizier, Midhat Pasha, from plunging the country into war. Together with Lord Salisbury, Sir Henry Elliott represented England at the futile Conference of Constantinople (1876-7), which was shortly antecedent to the declaration of hostilities. In January he resigned on account of ill-health, and was succeeded by Sir A. H. Layard. From Dec., 1878, to Jan., 1884, he was our ambassador at Vienna.

Ellis, GEORGE (b. 1745, d. 1815), miscellaneous writer, born in London, began his literary career with contributions to the celebrated series of political satires, *The Rolliad*, *Probationary Odes*, and others. He was the author of that severe invective against Pitt, in the second number of *The Rolliad*, which begins, "Pert without fire, without experience sage." He, however, soon after changed his political connections, became an intimate friend of Pitt's, and contributed to the *Anti-Jacobin*. In 1790 he published the first edition of the *Specimens of our Early Poetry* (second edition, 1801), and in 1802 *Specimens of Early English Metrical Romances*. His *Essays* on the formation and progress of the English language have been pronounced models of arrangement, and his abridgment of the old romances more amusing and interesting than the originals.

Gentleman's Magazine, April, 1815.

* **Ellis, ROBINSON** (b. 1834), scholar, was born at Barming, near Maidstone, educated at Elizabeth College, in Guernsey; Rugby School; and Balliol College, Oxford, and became a fellow of Trinity College in 1858. In 1866 he brought out a small edition of Catullus, followed next year by a larger and more elaborate one, and, in 1871, *The Poems and Fragments of Catullus, translated in the Metres of the Original*. In 1870 he was elected to the Chair of Latin in University College, London. In 1881 he published a critical edition of Ovid, and in 1882 received the honorary degree of LL.D. from the University of Dublin. Dr. Ellis is a frequent contributor to the *Cambridge Journal of Philology* and to the *Academy*.

Ellis, SIR HENRY (b. 1777, d. 1869), librarian and antiquary, was born in London, and educated at Merchant Taylors' School and

St. John's College, Oxford. He held for some time the post of assistant-librarian to the Bodleian at Oxford, which he left for the British Museum in the year 1800. Here he rose from a humble post to the highest. He became principal librarian in 1827, and subsequently received from William IV. the honour of knighthood in the Hanoverian order. He resigned this post in 1866. He was for many years an active member of the Society of Antiquarians. In 1833 Sir Henry brought out his *Introduction to Domesday Book*, a work of real learning and ability in its day, though it falls far below the critical demands of the present time. His *Original Letters Illustrative of English History*, with notes and illustrations (first series, 1823; second series, 1827, 3 vols.; third series, 1846, 4 vols.), mainly from the autograph originals in the British Museum, the State Paper Office, and other sources, is also an important work of the compiler's kind. Among his other works are *Elgin Marbles of the Classic Ages* (2 vols., 1847), and *The Townley Gallery of Sculpture* (1847).

Athenæum, Jan. 23rd, 1869.

Elliston, ROBERT WILLIAM (b. 1774, d. 1831), comedian, was born in London, the son of a watchmaker, and educated at St. Paul's School. He was intended for the Church, but having attended some dramatic lessons, given by Madame Cotterill, in Bedford Street, Strand, he ran away from home, and proceeded to Bath. In Bath he succeeded in getting engaged by William Dimond, the then lessee of the theatre. He next proceeded to Leeds, where he was engaged by the eccentric manager of the Yorkshire circuit, the noted Tate Wilkinson. Again at Bath in 1795, he made his first appearance in London in 1796, at the Haymarket, as Octavian, in Colman's once famous musical drama of *The Mountaineer*. In 1803 he finally settled in London, acting sometimes in Covent Garden, and sometimes in Drury Lane. In 1809 he took a lease of the circus in Blackfriars Road, and changed it into a theatre, with the name of the Surrey theatre. Here he performed the plays of Shakespeare, under new titles and with such alterations as brought them within the licence granted to the minor theatres. He subsequently returned to Drury Lane, where he became sole manager in 1819. He was now manager of more than half a dozen theatres. At the same time he started a "literary association" at Bristol, where he collected old classics, black-letter volumes, antiquarian works, rare editions of choice books, fossils, shells, and curiosities; and a circulating library at Leamington. But dissipation and a course of wild speculation and extravagance brought him into the bankruptcy court in 1826. All was not lost, however. By the aid of friends he was again enabled to undertake the managership of the Surrey theatre,

which had fallen vacant at this time, when fortune once more smiled upon him. Elliston was one of the first comedians of his day, but he sometimes endangered his popularity by his extraordinary eccentricities.

G. Raymond, *Memoirs of Elliston*; Charles Lamb, *Essays*, especially *Ellistoniana*; H. Barton Baker, *Our Old Actors*.

Elmore, ALFRED, R.A. (b. 1815, d. 1881), subject painter, was born at Clonakilty, County Cork. His art education was obtained in the schools of the Royal Academy. He afterwards visited the Continent for the purpose of study. Returning to England in 1844, he exhibited *The Invention of the Stocking Loom* and *Rienzi in the Forum*, in the Academy, and continued a regular exhibitor till his last illness. *The Invention of the Combining Machine*; *The Tuileries, June 20th, 1792*; *Marie Antoinette in the Temple*; *Mary Stuart and Darnley*; *Within the Convent Walls*; *Hotspur and the Fox*; *An Eastern Bath*; *Pompeii, A.D. 79*, and *John Alden and Priscilla*, are a few of the more popular of his works. He was elected an Associate in 1845, and an Academician in 1857. His brush-work was generous, his colouring rich, and he could throw much dramatic interest into his work.

Elmsley, THE REV. PETER (b. 1773, d. 1825), Greek critic and philologist, the nephew of Peter Elmsley, the well-known bookseller, was born at Hampstead, and educated at Westminster and Oxford. Taking orders in 1797, he became vicar of Little Horkeley, in Essex, which living he held till his death. He resided for some time in Edinburgh, where he became intimate with Jeffrey and the other projectors of the *Edinburgh Review* in 1802. To this publication he contributed several articles on Greek literature. He also became a regular contributor to the *Quarterly*. His contributions to classical literature were formerly well known—an edition of the *Acharnians* in 1809, of the *Œdipus Tyrannus* in 1811, of the *Hæcælide* in 1815, of the *Medæa* in 1818, of the *Bacchæ* in 1821, and the *Œdipus Coloneus* in 1823. These publications established his fame as a judicious critic and consummate master of the Greek language. In 1819 he accepted a commission from the Government, jointly with Sir Humphrey Davy, to superintend the unrolling of the papyrus found at Herculaneum, which experiment, as is well known, proved a failure. In 1823 he became principal of St. Alban's Hall, Oxford, and Camden professor of history; and in 1825 was about to succeed to a canonry of Christ Church, when he died.

Gentleman's Magazine, April, 1825.

Elphinstone, ADMIRAL. [KEITH.]

Elphinstone, MOUNTSTUART (b. 1779, d. 1859), administrator and historian, was a younger son of the 11th Lord Elphinstone. He entered the service of the East India

Company in 1796. Attached first to Sir Arthur Wellesley's mission to the Peishwah of Poonah, the nominal head of the Mahratta Confederacy, and afterwards to that general's staff, he fought through the Mahratta War. In 1806 he was appointed British Resident at Nagpore. Thence, in 1808, he was sent on the first English mission to Cabul, with a view of concluding an alliance with the Ameer against possible French encroachments; but his efforts were rendered fruitless by the subsequent banishment of Sháh Shujáh. [AFGHANISTAN.] In 1815 he published his fine monograph—*An Account of the Kingdom of Cabul and its Dependencies in Persia and India*. In 1811 he was appointed British Resident at Poonah, and faced with courage and striking ability the intrigues of the Peishwah, and his declaration of war which compelled us to annex the country. It was Elphinstone's difficult task to reorganise and win over our new dominions. (See his *Report on the Territories Conquered from the Paishwa*, 1821). From 1820–7 he was Lieutenant-Governor of Bombay, where the Elphinstone College perpetuates his efforts on behalf of native education; and where the Elphinstone Code remains as a monument of his acute perception of the relation between means and ends. After his return to England, he was twice offered and twice declined the Governor-Generalship of India, preferring the position of unofficial adviser. The fruit of his leisure was his *History of India* during the Hindoo and Mahometan periods (1st edition, 1841). It is the result of most conscientious research, and may still be regarded as a classic; but it is written in that heavy style which for some occult reason appears inseparable from works on Indian history.

Sir T. Colebrooke, *Life of Elphinstone*; G. W. Forrest, *Selections from Elphinstone's Minutes, etc., with a Memoir*. [L. C. S.]

Elseler, Theresa (b. 1808, d. 1878), and **Fanny** (b. 1811, d. 1884), dancers, were two sisters, born at Vienna. Fanny was the more celebrated. She received her early training from Herschelt, the ballet-master of the Viennese Opera, and Anmar; while by Baron F. von Gentz she was instructed in the æsthetic portion of her art. The two sisters spent three years in Naples completing their education. Returning to Germany in 1830, they were well received in Berlin. Mlle. Theresa, after a successful career, contracted amorganatic marriage with Prince Adalbert of Prussia (q.v.) in 1851, and was subsequently ennobled. From 1830–51 the career of Mlle. Fanny was one continued ovation. At St. Petersburg and Vienna her reception was most enthusiastic; while, at Paris, she is said to have eclipsed even Taglioni by her wonderful dancing of *La Cachucha*. She appeared in London in 1838, where her reception was equally brilliant, although perhaps less demonstrative, m.w.—13*

and next visited the United States. During her triumphant progress she received many advantageous offers of marriage, but declined them all; and in 1851, having amassed an enormous fortune, retired to a private villa near Hamburg.

Elton, Captain James Frederic (b. 1840, d. 1877), traveller, was the son of Lieut.-Colonel Roberts W. Elton. He entered the Bengal army, fought through the Mutiny, and for two years was aide-de-camp to Lord Strathnairn. In 1860 he volunteered for service in China, and was present at the taking of Peking. Six years later he left the English service and fought with the French in Mexico, subsequently publishing a spirited account of his adventures, *With the French in Mexico*. In 1868 his career as an African explorer began with his journey up the Limpopo river, in Zululand (*Journal of the Royal Geographical Society*, vol. xlii.), and in 1871 he visited the Goldfields. In 1873 he was appointed assistant political agent and vice-consul at Zanzibar, and in 1875 British consul in Portuguese territory at Mozambique. The main objects of his life were the suppression of the slave trade and the opening up of the interior of Africa, and it was to carry out the first that, after the Seyid of Zanzibar had been compelled by English pressure to agree to abandon the traffic, Elton began a war of extermination against the slave dhows. In July, 1877, he started on a journey into the Nyassa country, for the purpose of exploring that centre of slaving operations. The lake was reached, but Captain Elton succumbed to sickness on Dec. 19th, when about 350 miles from the sea.

Captain Elton's journals have been edited, under the title of *Eastern and Central Africa*, by H. B. Cotterill (1879).

* **Elton, Charles Isaac** (b. 1839), jurist and politician, is the son of the late Mr. Frederick Bayard Elton, E.I.C.S., and maternal grandson of the late Sir Charles Abraham Elton (q.v.), and was educated at Cheltenham College and at Balliol College, Oxford, where he was subsequently elected fellow of Queen's College. He was called to the bar at Lincoln's Inn in 1865, and was elected in the Conservative interest for West Somerset at the by-election on Feb. 15th, 1884, but was defeated at the general election of 1885. Previous to his call to the bar Mr. Elton published a very interesting book on *Norway: the Road and the Fell* (1864), and this was followed in 1867 by an exhaustive treatise on the *Tenures of Kent*. This latter work, along with *A Treatise on Commons and Waste Lands* in 1868, and *A Treatise on Copyholds and Customary Tenures of Land* in 1874, gave the author the reputation of being one of the first English jurists of the historical school. In 1882 appeared *Custom and Tenant Right and Origins of English History*, with maps.

This last work in particular has been very well received, and has done much to settle the vexed question as to the origins of the population of Britain. Although not biassed to any preconceived theory, the author has perhaps a tendency in this book to exaggerate the importance of the Celtic element. The dissertation on the custom called "borough English," that is, the right of inheritance of the youngest son, is very profound. A vast number of facts relating to this are grouped so as to throw light on each other. In 1886 he returned to Parliament.

Elton, Sir Charles Abraham (b. 1778, d. 1853), poet, was the sixth baronet, of Clevedon Court, Somerset. He was educated at Eton, which school he left at fifteen with a commission in the 48th Foot. He rose to a captaincy in that regiment, and subsequently became colonel of the Somerset Militia. He made his first essay in literature in 1804, when he brought out a volume of poems. This was followed in 1809 by *The Remains of Hesiod*, translated into English verse, and in 1810 by *Tales of Romance, with other Poems*. In 1822 appeared *The Brothers, a Monody; and other Poems*, the principal piece in which was occasioned by the melancholy accident which in 1819 befell his two elder sons, who were drowned while bathing. Sir Charles's most important work was *Specimens of the Classic Poets, in a Chronological Series, from Homer to Tryphiodorus*, translated into English verse (1814). This collection contains passages from sixty ancient poems—thirty-three Greek and twenty-seven Latin—the translations in which are of much merit. His characters of the poets, prefixed to each specimen, are written in a spirit of fine discriminative criticism. Sir Charles was also the author of a *History of the Roman Emperors*, and of *Second Thoughts on the Person of Christ*, and was a contributor to the *Edinburgh Review*.

Gentleman's Magazine, July, 1853; *Quarterly Review*, xiii. 151.

* **Elvey, Sir George Job, Mus. Doc.** (b. 1816), organist and composer, was born at Canterbury, and began his musical education as a chorister in the cathedral of that city. In 1835 he succeeded Skeats, the great musician, as organist of St. George's Chapel, Windsor, a post which he held until 1882. He has composed a number of anthems and other church music, much of which has been published. In 1834 he obtained the Gresham prize medal for his anthem, *Bow down Thine ear*. His oratorio, *The Resurrection and Ascension*, was composed as an exercise when he took the degree of Bachelor of Music, and the anthem, *The ways of Zion do mourn*, when he took his Doctor's degree in 1841. Among his other well-known compositions are the anthems, *The Lord is King; Wherecithal shall a young man;* and a *Festal March* composed

for the wedding of the Princess Louise in 1871, in which year he received the honour of knighthood.

Elwart, Antoine Aimable Élie (b. 1808, d. 1877), musician, composer, and author, was born of Polish origin in Paris. Originally a chorister in the church of St. Eustache, he at length became a member of the orchestra of a small theatre on the Boulevards, and subsequently a pupil of the Conservatoire, learning composition under Fétis. In 1828 he founded "concerts d'émulation" among the pupils of Lesueur's class, which proved useful to both the soloists and the students in composition. He spent only two years in Italy, where, however, he composed, amongst other things, an *Omaggio alla Memoria di Bellini*, performed at the Teatro Valle in 1835. Returning to Paris in 1836, he resumed his old post of assistant professor to Reicha at the Conservatoire, where he subsequently became professor of harmony. M. Elwart composed the oratorios *Noé* (Paris, 1845), and *La Naissance d'Eve* (1846), and an opera, *Les Catalans* (Rouen), besides choruses and instrumental music for the *Alceste* of Euripides, performed at the Odéon; symphonies, overtures, string quintettes, quartettes, and trios; masses, and other church music. He is the author of a *Life of Duprés* (published in 1838), a *Petit Manuel d'Harmonie* (1839), *Le Chanteur Accompagnateur* (1844), and many other useful theoretical works. He also wrote a poem in four cantos entitled *L'Harmonie musicale*, published in 1853.

Mrs. W. Carr in *Grove's Dictionary of Music and Musicians*.

Emerson, Ralph Waldo (b. 1803, d. 1882), the greatest thinker that America has yet produced, and one of the most inspiring of essayists, was born at Boston, of high Puritan lineage, his father being a stern Protestant minister, like the rest of his ancestors since they left Gloucestershire in 1635. Having lost his father in boyhood, he owed his training almost entirely to his mother, till in early youth he entered Harvard University, and after some years' study was ordained to the Unitarian ministry, beginning his preaching at a Boston church in 1826. In spite of the powerful influence of Channing, he felt himself bound to resign his charge in 1832, though he still continued to preach occasionally for six years longer. Having lost his first wife after three years' marriage, he set out for Europe in 1833, visited France and Italy, and came to England to converse with her greatest thinkers, Coleridge, Wordsworth, and, above all, Carlyle, whom he found in the solitude of Craigenputtock, as is told in the well-known descriptions by Carlyle and himself. On his return he settled at Concord, and began to give occasional lectures, chiefly biographical, in Boston. In 1835 he married again, and entered the home in which he

peacefully remained for the half-century of life then left him. Henceforward he devoted himself almost entirely to meditation, study, the preparation of his lectures, essays, and verses, to gardening, and the other quiet pleasures of country life. Few active undertakings or external events marked the course of years. In 1836 he founded the Transcendental Club, and published his little book called *Nature*. After 1840 he was a constant contributor to the *Dial*, the organ of Margaret Fuller and other Transcendentalists, during the four years of its sublimar existence. In the following year he published his first collection of essays, and watched the cultured colonists of Brook Farm with mingled sympathy and amusement. In 1847 he published his first *Poems*, visited England again, lecturing in Manchester, London, and other towns, and next year was in Paris with Clough and Mr. W. E. Forster. *English Traits* appeared in 1856, and the *Conduct of Life* in 1860. That year, too, marks the beginning of the decade of his highest influence and most general recognition. Since 1835 he had been a prominent, though not a leading, Abolitionist of the Free Soil party. His friendship for John Brown, his enthusiastic speeches, when even speech was dangerous, his assured confidence in the final triumph, saved him from the charge of inactive criticism and literary fastidiousness. The regardless self-sacrifice around him renewed his confidence in his country's future, and the exaltation of national spirit at the close of the war prepared an audience capable of accepting his gospel. In 1872 his house was burnt, and he paid a third visit to Europe and England, remaining away for about a year. But his mind never fully recovered its early activity, and the pure serenity of his closing years was often clouded, though hardly disturbed, by periods of complete failure of memory. At length he passed peacefully away after a life more singularly unruffled than the life of any thinker of eminence so high, excepting, perhaps, only Kant and Wordsworth. To this unbroken serenity of an existence spent on virgin soil we may attribute much of the healing virtue of the essays, but something also of the sense of want that intrudes upon the reader. The welcome optimism is almost too obstinate. Saturn, who devours his children, is to Emerson a "serene power." Nature is a quaint Proteus, something of a humorist, but without the humorist's pathos. The thought is clear, but sometimes thin and chilly; as pure as a moonbeam, but sometimes almost as intangible. We feel that the great problems of life have come to him too much from the outside; that the steel has not been fused and tempered by human passions and human sins. And so, when we turn to his verse, we find it not only obscure from abstract thought and allegory, not only unlovely from

temper too severe, but passionless, which is worse than all. Now and again he only saves himself by bare wit and shrewdness from the oracular commonplace, that unfailling pitfall for all sciolists, but especially for Emerson's imitators. But, for all that, it is exactly his serenity that makes his highest service to the century. No modern thinker has so courageously fulfilled the duty of hope; none has written in so invariably happy and courteous a temper. When others stood aghast at science he accompanied her on her way, as Professor Tyndall said, with the joyful dance of a bacchanal. When others lost sight of their ideals, and turned back upon former ages, or against their former selves, he continually looked forward with wise fearlessness and an assured confidence in the power of the human soul. Amidst pessimism, he talked on of the joy of existence, the universal certainty of happiness if the means were simple and the heart sincere. Amidst the struggle and crying and heat of reforms and institutions, he talked on of the stillness of Nature and the unswerving constancy of Law. To the socialist he extolled the omnipotence and all-importance of the individual, smiling at the worthlessness of a co-operation of worthless persons. To the ecstatic he spoke of isolation in the midst of friendship, of the common dues of home, and the loveliness of sanity; to the vulgar, of peace, self-reliance, and self-constraint. To all he proclaimed the surpassing worth of the "moral sentiment," with reiteration that his followers have made nauseous. Of systematic philosophy he has no trace. Idealism came to him second-hand, and is not the important part of his teaching. His shrewd though intuitive mind saved itself from the abyss of speculation, though he sometimes looked over the edge. The centre of his thought was the actual essence or soul of things, laid bare of convention and accidental limitation, and starting from this he explored almost every province of human life and thought, and ever, like a true spy, he returned with a message of hope on his lips, and the fruits of the land of promise hanging from his shoulder. He seems to have said all that need be said, and if words were everything, and his sentences were not so easily forgotten, few would care to propose another such embassy.

Matthew Arnold, *Emerson* (Macmillan, May, 1884); John Morley, *Introduction to Macmillan's edition of Emerson's Works*; Carlyle, *Introduction to Essays* (1841); G. W. Cooke, *Emerson* (1882); Alex. Ireland, *In Memoriam: R. W. E.* (1883); *A Fable for Critics in Lowell's Poems*; *Correspondence of Emerson and Carlyle* (1883); Oliver Wendell Holmes, *Ralph Waldo Emerson* (1885). [H. W. N.]

Emery, JOHN (b. 1777, d. 1822), a comic actor, was born at Sunderland, the son of respectable provincial actors. At the age of twelve, he played the violin in the orchestras of Plymouth and Exeter and other

theatres where his father was engaged, and the next year "Master Emery" made his first appearance on the boards at his father's benefit at Sheffield. In 1795 he joined Tate Wilkinson's company, and made his first appearance at Hull as Caleb in *He would be a Soldier*. Wilkinson soon discovered his forte, and, with much difficulty, persuaded him to act the parts of two or three rustics. It was not long before Emery was universally allowed to have no equal in the representation of Yorkshire rustics. In 1798, his fame having reached London, he left Yorkshire to fulfil the engagement he had contracted for the Covent Garden theatre. In London, where he spent the remaining twenty-four years of his life, he became day by day more popular, and his acting more finished and pronounced. Contemporaneous writers speak of his acting in terms of the highest praise. "His archness, his villainy, his presumption, his agony, and his repentance, were all freely given." "Like Garrick's Lear, Kemble's Hamlet, Cooke's Shylock, or Munden's Old Dornton, Emery's Tyke (in *School of Reform*) will remain on record as a noble instance of histrionic art." Emery was also a sound musician and a good violin player, and an artist of no ordinary talent. For several years he exhibited at the Royal Academy as an honorary member. Some of his coast scenery was considered only inferior to Varley's. He had also a taste for poetising, and generally produced an original song at his benefit.

The New Monthly Magazine, part II., 1838.

Emmett, ROBERT (b. 1778, d. 1803), and **THOMAS ADDIS** (b. 1764, d. 1827), Irish revolutionists, were the sons of a Dublin doctor of some celebrity. Thomas, the elder brother, was at first educated for his father's profession, but eventually studied law, and was called to the Irish bar in 1790. He soon became conspicuous in the law courts as the advocate of the United Irishmen, and in 1797 became one of the Revolutionary Directory. In March, 1798, he was arrested and examined before secret committees of both Houses of Parliament, and put in prison. He remained at Fort George, in Scotland, until 1802, when he was released on condition that he would never return to British soil. The United States received him, and he became one of the leaders of the New York bar. Shortly after the release of Thomas Emmett, his brother Robert brought his pathetic career, the theme of Moore's verse, to a close. Expelled from Dublin University, in 1798, for his sympathy with the anti-English side, he went to the Continent, but returned, in 1802, to plan an ill-starred rising. A childish attempt to take Dublin Castle on July 23rd, 1803, in which the rabble that he led yielded to drink and plunder, was followed by his flight into Wicklow. It is well known that his desire to see

once more his sweetheart, the daughter of Curran, was the cause of his capture and execution.

Maddens, Life of R. Emmett, and Lives of the United Irishmen; Comtesse d'Haussonville, **Robert Emmett**; and C. S. Haynes, *Biography of Thomas Emmett*.

Encke, JOHANN FRANZ (b. 1791, d. 1865), German astronomer, born at Hamburg, was educated under Gauss at Göttingen, served from 1813-14 in the Hanseatic Legion, and in 1815 was appointed a lieutenant of artillery in the Prussian army. At the conclusion of the war, in 1815, he became assistant in the Observatory of Seeberg, near Gotha, and in 1825 was appointed director of the Observatory, and secretary to the Academy of Sciences at Berlin. In 1830 he became editor of the *Berliner astronomische Jahrbuch*. But his most important service to astronomy was the discovery of a comet of short periods. "Encke's Comet" was observed by Pons in November, 1818, and its period being found by Encke to be 3.29 years, it was identified with that which had been observed in 1786, 1795, and 1805. It has the shortest period and the least aphelion distance of all the known comets. It revolves in a very eccentric ellipse, which does not, however, extend to the orbit of Jupiter, and moves in a plane inclined at an angle of about 13° 20' to the ecliptic. It seems to be losing two hours and a half every revolution, a fact that is taken to prove the presence of a resisting medium pervading space. Encke was one of the foreign members of the Royal Society of London, and in 1840 was created a knight by the King of Prussia.

Bruhn's Life of Encke (1869).

Enfantin, BARTHÉLEMI PROSPER (b. 1796, d. 1864), socialist reformer, was the son of a banker, and himself entered a bank at St. Petersburg, but in 1825 he became a disciple of St. Simon, and received from him the mandate of carrying on his mission. Enfantin rapidly collected a band of disciples, and, especially after the July Revolution of 1830, proceeded to make known the particular gospel of socialism known as St.-Simonism by means of tongue and pen. His writings at this time were the *Doctrine de St.-Simon* (1830) and *Économie politique et Politique* (1831). After a struggle for supremacy, Enfantin became *Père Suprême* of the rapidly increasing sect. Unfortunately, as his views developed, they tended to extravagance and mysticism. In May, 1832, his pretensions to divine inspiration, and the peculiar tenets of his followers, particularly as to the relations between the sexes, caused the French Government to visit them with a heavy hand. Their meeting-houses were closed, and after a brief struggle for existence the society became altogether extinct. Enfantin lived on to publish his political, philosophical, and religious correspondence during the years

1835-45, and a treatise—*La Vie éternelle, passée, présente, et Future*, in 1861. After a short visit to Egypt, he held from 1834 and onwards various positions, such as director of the Paris and Lyons Railway and editor of a daily and mundane paper, having abandoned his attempts to regenerate the human species.

* **Engerth**, EDUARD (b. 1818), historical painter, was born at Pless, in Silesia, and studied art at Vienna and Rome, after which he travelled in England and the East. Having painted several Scriptural scenes, he established his fame about 1850 by his picture of the *Family of Manfred after the Battle of Benevento*. After a short residence in Prague as director of the Academy (1854), he was appointed to adorn the Altlerchenfeld Church in Vienna with fresco. Six years were spent on this work, after which Engerth painted the well-known portrait of the Emperor and Empress of Austria, was made professor of the Academy in Vienna (1865), and in the same year exhibited his masterpiece, *Prince Eugène after the Battle of Zenta*. In 1869 he painted the *Coronation of Francis Joseph as King of Hungary*, in 1871 was appointed custodian of the Belvedere Gallery, and in 1874 director of the Academy.

Enghien, DUC D'. [D'ENGHIEN.]

Eötvös, JOSEPH, BARON (b. 1813, d. 1871), Hungarian statesman, author, poet, and orator, was born at Buda, and educated partly at his father's estate at Ercsi, in the megye or county of Székesfehérvár, and partly in Buda, where also he studied law and philosophy from 1826-31. Eötvös commenced his literary career at the age of seventeen by a translation of Goethe's *Goetz von Berlichingen*, followed shortly afterwards by two original comedies and a tragedy, *Boszu*, which showed a singular beauty of style. In 1833 he became a vice-notary, and in 1835 was employed in the Hungarian chancery at Vienna. During the years 1836 and 1837 he visited Germany, Holland, France, and England, and on his return to Hungary he began his career as parliamentary orator and a leader of the Opposition in the Upper House of the Diet. He took part in the Diet of Presburg after the revolution of 1848, and was a member of the first Hungarian administration as Minister of Public Instruction. He shortly after resigned this office in consequence of the violent scenes which took place in the chamber, and proceeded to Munich, where he devoted himself to literary work for three years. On the restoration of the Hungarian Constitution in 1866, he again received the portfolio of Minister of Public Instruction, which he held till his death. Baron Eötvös rendered important service to his countrymen by his zealous endeavours to promote a higher culture among them, and by his literary works,

many of which advocate administrative purity, as, for example, *The Village Notary* (1845), where the abuses of the old system of local elections in Hungary are vividly depicted. The vigour of the narrative, combined with the humorous and political character of the incidents related, have caused it to be considered one of the best national tales in the whole circle of European literature, and to be translated into German and English (1850). *Hungary in 1514* (1847) again struck the keynote of that emancipation of the peasantry which was effected in 1848, and the political treatise entitled *The Influence of the Ruling Ideas of the Nineteenth Century on the State* (1851-4), prepared the popular mind for those constitutional changes which were afterwards so beneficially introduced. Eötvös, indeed, is the Lowell of Hungary. In 1838 he brought out a very successful novel, *The Carthusian*, which first appeared in the celebrated *Inundation Book*, of which he himself was the editor, and which was published between 1838 and 1841, at Pesth, for the benefit of the sufferers from the floods. He, in conjunction with the historian Szalvy, started a review, *Budapesti-Szemle*, an imitation of the *Edinburgh*, and was for some time joint-editor of the *Pesti Hírlap*, an influential paper.

Erard, SEBASTIEN (b. 1752, d. 1831), a French inventor and manufacturer of musical instruments, was born at Strasburg, and apprenticed at an early age to a maker of clavichords. About the year 1780 he established himself in Paris as a maker of pianos (hitherto almost unknown in France), and in a short time the house of Erard acquired a European reputation. He was the inventor of the grand piano à double échappement, and considerably improved the mechanism of the harp. Shortly before his death he completed the grand organ for the chapel of the Tuileries, perhaps the greatest of all his works. The names of his brother, Jean Baptiste, and his nephew, Pierre, are both associated with him in the manufacture of musical instruments.

Eraso, DON BENITO (b. 1789, d. 1835), a distinguished Spanish general, born at Barreznini, in Navarre, entered the army at a youthful age, served against France from 1809 to 1814, but retired into private life on the recognition of Ferdinand VII. In 1821 he joined the party of Navarre, and did important service for his party on the Spanish frontier, again retiring into private life on the establishment of peace. On the death of Ferdinand, in 1833, he took arms in favour of Don Carlos, obtained the rank of general, commanded in several important engagements during the civil war, and finally was appointed commander-in-chief of the army a short time before his death.

* **Eckmann-Chatrian**, a compound name, represents two authors, EMILE ERCKMANN (b. 1822) and ALEXANDRE CHATRIAN

(b. 1826), both of Alsace. M. Erckmann, the son of a librarian, is a native of Phalsbourg, and M. Chatrian, the son of a glass-blower, comes from the same district. They first entered into partnership while at the college of Phalsbourg in 1847; but so unsuccessful were their first efforts, made in provincial newspapers, that at one time they despaired of being able to live by the pen alone, and became—the one a law student, the other a railway clerk. In 1859, however, *L'illustre Docteur Mathéus* made a great stir, and the name of Erckmann-Chatrian became known. They gained celebrity under Napoleon III. by their admirable pictures of peasant life in Alsace, which included much graphic representation of the horrors of war as experienced during the invasion of 1814. So anti-warlike, indeed, were the Erckmann-Chatrian books, that it is difficult to understand the favourable, or at least not unfavourable, eye with which they were regarded by the Imperial Government. They were circulated in cheap form, and were even hawked about the country; though the licence of a book-hawker is dependent in France on his selling only those books which have received the formal approval of the authorities. It may be—and this was certainly the case during the earlier period of the reign of Napoleon III.—that the emperor would willingly have seen his people turned away from thoughts of war. After the war of 1870, Erckmann-Chatrian wrote a story, *Le Plébiscite*, in which the invasion of 1870 was treated with the same observance of reality, the same picturesqueness, and the same knowledge of the puzzled peasant mind, which had marked the various stories dealing with the invasion, or rather the two invasions, brought upon France by the ambition of Napoleon I. Among Erckmann-Chatrian's most successful books may be mentioned *L'Ami Fritz* (1864); *Le Fou Yégo* (1862); *Mme. Thérèse, ou les Volontaires de '92* (1863); *L'Histoire d'un Conscrit de 1813* (1864); *L'Histoire d'un Paysan* (1868); *Waterloo* (1865); and *Contes Populaires* (1883), most of which have been translated into English. To this same literary firm the public of England as well as of France is indebted for the drama of *Le Juif polonais*, known to London audiences as *The Bells*. [H. S. E.]

* **Erichsen**, JOHN ERIC, F.R.S. (b. 1818), surgeon, educated at University College, London, was admitted a member of the Royal College of Surgeons, to the council of which he was afterwards elected a member. In 1842 Mr. Erichsen published a *Practical Treatise on the Diseases of the Scalp*, one result of which was to introduce him to a good surgical practice in London. In 1850 he was elected to the Chair of surgery in University College, London, and in 1865 he was appointed Holme professor of clinical surgery, from which he was transferred in 1875 to the Chair of clinical surgeon, retiring in 1877. In 1853 he

brought out his great work on the *Science and Art of Surgery* (8th edition, by Professor Marcus Beck, 1884), and in 1875 he published a treatise *On Concussion of the Spine* (2nd edition, 1882), followed by *Surgical Evidence in Courts of Law* in 1878. In 1875 he acted as a member of the Royal Commission on vivisection: in 1883 the Erichsen prize was founded at University College for the "encouragement of skill in surgical manipulation;" and in 1885 he unsuccessfully contested the Universities of Edinburgh and St. Andrews against Lord Advocate Macdonald. Mr. Erichsen is a fellow of the Royal Society, surgeon-extraordinary to the Queen, and consulting surgeon to University College Hospital. He was President of the College of Surgeons in 1880.

* **Ericsson**, JOHN (b. 1803), inventor of the atmospheric engine, born in Sweden, produced at the age of ten a saw-mill of ingenious construction, and at twelve became a cadet in the Swedish corps of mechanical engineers, subsequently acting as an officer in the army. Crossing to England in 1826, he succeeded, in 1828, on board the *Victory*, in carrying out the principle of condensing steam and returning the fresh water to the boiler, and patented before the year 1839 over a dozen inventions, among which is the caloric engine, which he first exhibited in 1833, and fully perfected in the *Ericsson*, built in 1851. He proceeded to New York in 1839, where he was entrusted with the construction of the war steamer *Princeton*, in which he was the first to successfully apply the screw, or propeller, to steam navigation; he also invented the "monitors," or ships with revolving turrets for the guns. The caloric engine, although a mechanical success, has not accomplished all that was intended (see Ericsson's *Radiant Heat*, 1877), but, from his attempts to find a substitute for steam in heat artificially produced, Mr. Ericsson, in *Solar Investigations* (1876), has turned his attention to the problem of making "direct use of the enormous dynamic force stored up in the sun's rays," which, if effected, would be of untold service in regions where neither fuel nor coal is obtainable. In 1873 he published a work on *Movable Torpedoes*.

Eclectic Magazine, April, 1862; *Scribner's Monthly*, April, 1879; *Atlantic Monthly*, July, 1862.

Erle, THE RIGHT HON. SIR WILLIAM, D.C.L. (b. 1793, d. 1880), eminent judge, was third son of the late Rev. Christopher Erle, of Gillingham, Dorset. He was educated at Winchester College, and at New College, Oxford, where he graduated B.C.L. in 1818, and D.C.L. in 1857; and was elected an honorary fellow of New College in 1870. Called to the bar of the Honourable Society of the Middle Temple in Michaelmas term, 1819, he joined the Western Circuit, and steadily, though not very speedily, made his way. In

1834 he received silk from Lord Brougham. He now obtained a good leading business in London, and was for many years counsel to the Bank of England. In 1837 he was elected M.P. for the city of Oxford in the Liberal interest in preference to Mr. Hughes-Hughes, but retired at the general election in 1841. In 1845, although a political opponent of the Government, he was selected by Lord Lyndhurst to succeed Mr. Justice Erskine as a judge of the Court of Common Pleas, and soon after received the honour of knighthood. In the following year, on the death of Sir John Williams, he was transferred to the Court of Queen's Bench, where he sat for thirteen years under the successive presidency of Lords Denman and Campbell. In 1859, on accession to power of Lord Palmerston's second administration, Lord Campbell received the Great Seal, Lord Chief Justice Cockburn was promoted from the Common Pleas to the Queen's Bench, and Sir William Erle returned to the Common Pleas Court as Lord Chief Justice, and was sworn a member of the Privy Council. Sir William was a sound and well-informed lawyer. His judgments were always most carefully prepared, and evinced an extensive knowledge of law and great power of reasoning. Among the most important and interesting of these may be mentioned *Kemp v. Neville*, *Ionides v. Universal Marine Insurance Company*, and *Kennedy v. Brown*. Sir William rendered valuable public service as a member of the Royal Commission on Trades Unions, and he published a small treatise on *The Law Relating to Trades Unions*. His younger brother, the Right Hon. Peter Erle, Q.C., for many years Chief Commissioner of Charities, died in 1877.

The Law Times, Feb. 7th, 1880; *Solicitors' Journal*, Feb. 7th, 1880. [W. M.]

* **Ernoul**, EDMOND (b. 1829), lawyer and politician, was born in London, and educated in a religious house at Poitiers. He was elected a member of the National Assembly by the department of Vienne in 1871, took his seat upon the Right, and was known as one of the most zealous supporters of the Count de Chambord and his legal rights to the throne of France. In May, 1873, he moved his famous Order of the Day, blaming the late changes in the Cabinet as not sufficiently Conservative, which motion being carried by 360 against 344, led to the resignation of M. Thiers. The next day M. Ernoul was appointed Minister of Justice, and showed his intention of carrying out a policy "resolutely Conservative," by demanding the right of bringing to justice M. Ranc and M. Melvil-Blancourt for the part they had taken in the Commune. He resigned his office of minister in the November following, and after 1876 retired from public life.

Ernst August of Hanover. [HANOVER.]

Ernst IV. of Saxe-Coburg. [SAXE-COBURG.]

Erskine, HENRY (b. 1746, d. 1817), the elder brother of the Lord Chancellor, was called to the bar in 1768. He became Lord Advocate of Scotland in 1782, but was removed from office on the formation of Pitt's administration. From 1806 to 1807 he held the same appointment. As leader of the Scottish bar, Henry Erskine was remarkable for his tact and fascinating manners; he was a consistent Whig in politics.

Erskine, THOMAS, BARON (b. 1750, d. 1823), lawyer and statesman, was the third son of the tenth Earl of Buchan, a nobleman of ancient family but of very slender means. He was educated at the High School at Edinburgh, and at St. Andrews University. In 1764 he became a midshipman in the Royal Navy, but in 1768 spent all his scanty patrimony in purchasing a commission in the Royals. In 1770 he married a Miss Moore, but finding the army as little hopeful a profession as the navy to a poor man, he resolved to carry out an early ambition and become a barrister, and was encouraged by some slight approval of Lord Mansfield. In 1775 he entered Lincoln's Inn and Trinity College, Cambridge, at the same time, and was called in 1778, having had a very hard struggle to live during the intervening period. Chance gave him his first brief, and his defence of Captain Baillie, prosecuted for his exposure of gross abuses at the Admiralty, raised him at once to a foremost position at the bar. Never was rise so rapid. Thirty briefs were offered him before he left court. Next year his defence of Keppel, soon after his defence of Lord George Gordon, won him a reputation as the most brilliant and successful of advocates. A strong Whig, he regularly acted for the defence in all the more important political trials of the time. He contended for the rights of juries in libel cases, demolished the doctrine of "constructive treason" in the case of Horne Tooke, defended Stockdale in 1789, and scandalised his friends by acting for Tom Paine in 1792. In politics he took an important if less brilliant part. He was returned member for Portsmouth in 1783, but lost his seat at the general election in the next year, so fatal to his party. In 1790 Portsmouth again elected him. He rejected a post in Addington's ministry, but became Chancellor in Fox's ministry in 1806, and was called to the Upper House as Baron Erskine. He went out with Grenville in 1807, and took little part in any public business until, in 1821, he vigorously supported Queen Caroline. Erskine's fame as an advocate was immense. Lord Campbell calls him the greatest in ancient or modern times. His power of piercing through vast masses of detail and seizing the true points of a case, and presenting

them in a simple yet most telling manner, has never been surpassed. In his defences in State trials he rendered unique services to his party, and defended the cause of liberty in the darkest times of reaction. Yet he was not a great lawyer, and, as his failure as Chancellor proved, not a good judge. The eloquence that swayed the law courts was heard with but little emotion in Parliament. With all his great gifts, Erskine combined an inordinate vanity that afforded an easy mark to Tory satirists (for example, see parody of one of his political speeches in the *Anti-Jacobin*), and a wildness of manner that led Scott to question his sanity. Not much in earnest about anything except the cause he had to plead, not very fond of work when success removed the sharp pressure of poverty, he sank almost into complete idleness and indifference after his dismissal in 1807. The great pleader was careless of legal reform, careless of his functions as judge of appeals, and sluggish even in politics. He devoted his time to society, where his wit and exuberance atoned for his vanity and want of tact; and to diversions often more trivial than useful. He almost outlived the fleeting reputation obtained by his brilliant forensic success. To this age he is little more than a shadow, and we sometimes almost wonder why a man who fills such a large place in the talk of his contemporaries should have left so little behind of an enduring fame.

Campbell's *Lives of the Chancellors*, vol. vi.;
Erskine's *Speeches*. [T. F. T.]

Escher von der Linth, HANS KONRAD (b. 1767, d. 1823), statesman and engineer, was born at Zurich, and remained throughout his life the central figure and hero of the canton. Having travelled in England and on the Continent, and served in the Swiss army during the French War, he first began to take a leading part in politics in 1798. In this year he founded the *Swiss Republican*, and became a member of the Helvetic Directory, but having found it impossible to keep a straight course among the shifting currents of the time, he resigned in 1803, and turned his attention entirely to the construction of the "Linth Canal," by which he saved the valley from the devastation of periodical floods. The work was finished in 1810. After 1814 he again entered upon political life, but devoted most of his energy to the study of Swiss geology, his investigations being continued after his death with great success by his son, ARNOLD ESCHER (b. 1807, d. 1872), who became professor of geology at Zurich, and published several works and maps of high authority on the geology of the Alps.

J. J. Hottinger, H. K. Escher, *Charakterbild eines Republikaners* (1852).

* **Escosura**, PATRICIO DE LA (b. 1807), a Spanish author and politician, born at Madrid,

was educated at Valladolid, but returning to Madrid in 1820, he divided his time between the study of mathematics and poetry. In 1824, on account of his connection with the secret society of the "Numantinos," he fled to Paris, where he continued his studies in mathematics under Lacroix, and subsequently proceeded to London. In 1826 he entered an artillery regiment, and in 1829 was promoted to the rank of officer. In 1834 he was again exiled as a Carlist, but in 1835 he became aide-de-camp and secretary to General Cordova. Again exiled on the accession of General Espartero to power, he became, in 1843, Secretary of State, after which he was a member of the Narvaez ministry. He retired from office in 1846, and was Minister of the Interior in 1854-5. From 1872 to 1874 he acted as ambassador to the German Empire. Throughout his chequered career, Escosura has always kept up his connection with literature, which began so auspiciously in 1832, when he published the romance, *El Conde de Candespina*. This was followed in 1835 by an interesting historical novel, entitled *Ni Rey ni Roque*, tracing the adventures of the false Don Sebastian, a pastry-cook of Madrigal, who passed himself off as Don Sebastian; but the fraud was detected, and he was hanged. Escosura founds his story on this fact in history, but assumes always that the pastry-cook was really the unhappy King of Portugal. He has also published two volumes of poems, entitled *El Butto Vestido de Negro Capus*, and *Hernan Cortés en Cholula*; several dramas, as *Corte del Buen retiro*, played in 1837; *Barbara Blomberg*, and others; and *l'Historia Constitucional d'Inglaterra* (1859), an account of contemporary Spanish revolutions, and of experiences of refugees in London.

Ticknor, *History of Spanish Literature* (Boston, U.S., 1872).

* **Escott**, THOMAS HAY SWEET (b. 1844), man of letters, is the son of the Rev. H. S. Escott, of Hartrow Manor, near Taunton. He was educated at Queen's College, Oxford, and obtained a second class in classics (1865). From 1868 to 1872 he lectured on logic at King's College, London. An accomplished journalist, he is understood to have been chiefly connected with the *Standard* and the *World*. In 1879 he published a highly popular work on *England: Its People, Polity, and Pursuits*. In 1882 he was appointed editor of the *Fortnightly Review*, as successor to Mr. John Morley, but resigned that position in 1886.

* **Esher**, THE RIGHT HON. WILLIAM BALIOL BRETT, BARON (b. 1817), the son of the late Rev. J. G. Brett, of Chelsea, was educated at Westminster and Caius College, Cambridge (B.A. 1840), and called to the bar in 1840. In 1860 he became a Q.C., and having been elected M.P. for Helston in the Conservative interest in 1866, was made Solicitor-General in 1868. In the same year Sir Baliol Brett was

elevated to the bench as a Justice of Common Pleas, became Lord Justice of Appeal in 1876, and Master of the Rolls in 1883. He was raised to the peerage in 1885.

Espartero, BALDOMERO, DUKE OF VITORIA (b. 1792, d. 1879), Spanish soldier, was the son of a wheelwright of Granatula, La Mancha. He was educated for the priesthood, but was unable to resist the patriotic call of 1808, when he served as a volunteer against the French. In 1815 he went to South America, and served in the war between the mother-country and her insurgent colonies led by Bolívar (q.v.). The outbreak of the Carlist War of 1833 was followed by his appointment as Commandant-General of Biscay. In 1836 he was promoted to the post of Commander-in-Chief of the Army of the North. In the following year he drove the Carlists from before Madrid across the Ebro, followed them to Burgos, where they were defeated, and brought the war to a conclusion in 1840. A true adventurer, Espartero had by this time possessed himself of a large quantity of plunder, an example which his followers studiously imitated. Nevertheless, he was appointed Regent of Spain during the minority of Isabella, and made what head he could against socialist outbreaks and military *pronunciamentos*. In 1843, however, he had to retire from Madrid before the insurgents under Narvaez, and took refuge in England. After his return, in 1847, he found his influence on the wane. In conjunction with O'Donnell (q.v.) he formed a coalition ministry in 1854; but in the struggle between the two, which began immediately, Espartero was worsted, and after two years had to resign. After the expulsion of Queen Isabella in 1868, his name was vaguely put forward in the Cortes as a candidate for the throne, but the proposal fell very flat, and he was not heard of again in public life.

J. S. Flores, *Espartero: Historia de su Vida*.

Espronceda, JOSÉ DE (b. 1810, d. 1842), a popular Spanish poet and political agitator, the son of a colonel in the Bourbon regiment, born on the march of Estremadura, was during his short life three times imprisoned and twice banished for political offences. On the close of the Peninsular War his parents settled in Madrid, where the son became a pupil of Alberto Lista, the professor of literature in St. Matthew's College. While yet a mere boy of fourteen, he not only attracted his master's attention by his political poems, but the attention of the authorities; and his connection with the secret society of the "Numantinos," of which Escosura (noticed above) was also a member, led to his imprisonment. Not even the cold cell, however, could damp his patriotism. Withdrawing to Lisbon on his release, he was again arrested, and transported to England. He spent a few years in England, where he made a study of

the English poets. In 1830 he took part in the revolution at Paris, and soon after joined the ill-fated expedition of Pablo de Chapalanga in Spain. Ferdinand's death about this time cancelled his exile, and he became an officer in the Queen's Guards. He, however, soon forfeited this post by a political song which he published; and he was banished to Cuellar, where he had leisure to compose a six-volume historical novel, *Don Sancho Saldaña, ó el Castellano de Cuellar*. In 1835 he was once more in Spain, and was several times in trouble again for his political sentiments; but the Republican party having come into power, he was appointed, in 1841, secretary to the Spanish embassy at the Hague, and soon after was elected member of the Cortes. Espronceda belongs to the school of Byron and Victor Hugo. *El Estudiante de Salamanca* (The Student of Salamanca) is a continuation of the legend of Don Juan, and *El Diabolo Mundo* (The Devil World) is based on the story of Faust. His best lyric poems, most of which are very forcible in expression, are *El Verdugo* (The Headsman), *El Mendigo* (The Beggar), the *Hymn to the Sun*, and the *Ode to the Night*. His poetical works were collected by Villalta in 1840, and new editions have been issued under the editorship of Hartzbusch.

Kennedy, *Modern Poets and Poetry of Spain*; Ch. de Mazada, *Études sur l'Espagne*; Quinet, *Vacances en Espagne*.

Essen, HANS HENRIK, COUNT OF (b. 1755, d. 1824), a distinguished Swedish general, born in West Gothland, became Governor of Stockholm in 1796, Grand Equerry in 1800, and Commander-in-Chief in 1807. He gained a high reputation as a soldier by his defence of Stralsund against the French in 1807; and on the accession of Charles XIII. in 1809 became a Councillor of State. He led the campaign against Norway in 1813, in which he was entirely successful, and was subsequently appointed Field-Marshal and Governor of Norway. He also became chancellor of the University of Christiania. He is regarded as one of the greatest generals Sweden has produced.

Thiers, *Histoire de l'Empire*.

Esterhazy, or **Esterhazy**, PRINCE PAUL ANTHONY, DE GALANTA (b. 1786, d. 1866), diplomatist, belonged to an influential Hungarian family, which some genealogists derive from a descendant of Attila, a certain Paul Esteraz, who embraced Christianity in 926 A.D. The family name was originally Estoras, changed in 1584 to Zerhazy, and subsequently changed again to Esterhazy, or Eszterhazy. Prince Paul was the son of Prince Nicholas, and became, in 1810, ambassador at Dresden; in 1814, at Rome; and from 1815 to 1818, and again from 1830 to 1838, at the Court of England, where he lived in a style of great splendour. As a diplomatist he had the

reputation of being one of the ablest of his day. He supported the rising national movement of Hungary, and in 1848 accepted the post of Minister of Foreign Affairs in the ministry of Count Louis Batthyani, but retired the moment a rupture with the Government at Vienna became imminent. In 1856 he represented Austria at the coronation of Alexander II., Czar of Russia. The prince's possessions in Austria and Hungary were almost fabulous in extent, comprising hundreds of manors, castles, villages, and estates. He was hereditary prince of the empire.

***Etex**, ANTOINE (b. 1808), French sculptor, comes of an artistic family. He competed for the Prix de Rome, and in 1828 his *Le jeune Hyacinthe tué par Apollon* obtained the second prize. He executed the colossal group of *Cain*, which was exhibited in the Salon of 1833. The boldness and originality of this work procured him a commission to execute two of the groups on the Arc de l'Étoile. In 1868 he executed his most important monument, that of the painter Ingres. He tried politics for a short time during the troubles of 1830 and 1848, but he soon went back to art. As a painter and engraver he is scarcely less prolific than as a sculptor.

Ett, KASPAR (b. 1788, d. 1847), organist and composer, was born at Erling, a village in Bavaria, and educated at Munich, under Schlett and Gratz. In 1816 he was appointed organist of St. Michael's, Munich, an office he held uninterruptedly until his death. He applied himself diligently to reform the vitiated style of Church music, which at that time was written in the light and easy strain of the opera, and, in order to accomplish his object, he caused the beautiful Church music of the sixteenth, seventeenth, and eighteenth centuries to be performed at St. Michael's, imitating the simple, solemn style in his own compositions. His knowledge of the history of music was unequalled, perhaps, by any of his contemporaries. He was besides an excellent linguist, and set to music the responses of the Greek Church, and several Hebrew psalms for the use of the Jewish synagogue. He has left about a hundred compositions (many of which are still unpublished), consisting of masses, requiems, cantatas, and litanies.

***Ettingshausen**, CONSTANTIN, BARON VON (b. 1826), a distinguished Austrian palæontologist, educated in the convent at Kremsmünster, in Austria. He early began his scientific studies under the direction of Endlicher and Haidinger, and in 1854 was appointed professor of botany in the military medical school, the "Josephinum," in Vienna. In 1871 he was transferred to a similar Chair in the University of Gratz, which post he still fills. Baron von Ettingshausen, in addition to more than sixty memoirs on botanical and palæontological subjects, published in the

Transactions of the Imperial Academy of Sciences, at Vienna (of which he is a member), is the author of the following separate works:—*Die Tertiärfloren der Oesterreichischen Monarchie* (1851); *Physiotypia Plantarum Austriacarum* (vols. i.—x., 1855); *Die Blattsketele der Dikotyledonen* (1861); and *Die Farrnkräuter der Jetztwelt* (1865). Besides scientific distinctions, and the crosses of numerous orders of knighthood, Baron von Ettingshausen has the title of "Regierungsrath" in Austria.

Etty, WILLIAM, R.A. (b. 1787, d. 1849), painter, was born at York. His father was a baker, and, like the father of Rembrandt and Constable, kept also a mill. In his twelfth year he was apprenticed to a letterpress printer at Hull, and served his seven years faithfully. A rich uncle invited him to London, and under his encouragement he began to address himself seriously to art. Opie approved of some of his drawings, and introduced him to Fuseli, who admitted him as a probationer to Somerset House. Besides undergoing training at the Academy schools, Etty became in 1806 an indoor pupil of Lawrence (q.v.). In 1811 his *Telemachus rescuing Antiope* was hung in the Academy, and from that time forward he was rarely absent from the Academy or the British Institution. In 1822 he was able to visit Italy, and in Venice received that insight into colour and sense of harmony which afterwards characterised in so brilliant a manner every canvas he touched. *Pandora crowned by the Seasons*, which he exhibited on his return to London in 1824, procured him the associateship of the Academy, and in 1828 he was elected a full member. Among his more prominent works are his three pictures of *Judith*, *The Combat*, *The Judgment of Paris*, *Venus attired by the Graces*, *Hylas and the Nymphs*, *The Rape of Proserpine*, *The Parting of Hero and Leander*, and the highly imaginative *Youth at the Prow and Pleasure at the Helm*. The great canvas of *Joan of Arc*, in three compartments, although the most ambitious, was by no means the most successful of his works. He used to attend every evening at the schools of the Academy and paint from the living model, much against the wish of his brother Academicians. His appreciation of form was, no doubt, thereby intensified, and made itself felt in his every canvas. The present generation would perhaps be unwilling to award the high praise to the texture and colour of his flesh painting that was given to it by his contemporaries. At the same time he is still cited as one of England's brilliant colourists. In 1848 he retired in declining health to his native York, and died there the following year.

Autobiographical notice in the *Art Journal* (1849); A. Gilchrist, *Life of Etty*. [J. F. R.]

Eugénie, THE EMPRESS. [NAPOLEON III.]

* **Evans, JOHN, D.C.L., F.R.S.** (b. 1823), antiquary, was born and educated at Market Bosworth, and started in business in the firm of Dickenson, paper manufacturers, of which he eventually became the head. Like many business men of keen intellectual instincts, he devoted his leisure to antiquarian pursuits, and especially to joining in the labours of learned societies, in which he has been a leading figure for the last quarter of a century. As president of the Numismatic Society, and editor of the *Numismatic Chronicle*, he has done more to encourage the study of coins than any one man now living, and his advice and co-operation have been scarcely less valuable to the Geological Society, of which he has also been president, to the Royal Society, of which he is treasurer, and to the Society of Antiquaries, where he succeeded Lord Carnarvon as president in 1885. His principal work has been in connection with these societies, to the *Transactions* of which he is a voluminous and learned contributor; but he has also published several standard books on antiquities. His *Coins of the Ancient Britons* appeared in 1864; his most famous book, *The Ancient Stone Implements of Great Britain*, in 1872; and its sequel, *The Ancient Bronze Implements of Great Britain and Ireland*, in 1881. He is an honorary D.C.L. of Oxford, has been president of the geological section of the British Association (1878), and is a member of most of the learned societies of Europe.

Evans, MARIAN. [ELIOT, GEORGE.]

Evans, SIR DE LACY, K.C.B., D.C.L. (b. 1787, d. 1870), eminent general, born at Moig, Ireland, entered the army in 1807, and served in the Peninsular War under Wellington, rapidly gaining promotion for his many valiant deeds. In 1814 he was ordered to North America, and was present at the capture of Washington, and at the assaults upon Baltimore and New Orleans. Returning in the spring of 1815, he joined the English army in Flanders, and fought at Quatre Bras and Waterloo, where two horses were shot under him. With the peace which ensued he turned his attention to politics, and in 1831 was elected Liberal member for Rye. Losing his seat the following year for that borough, he was subsequently returned for Westminster, and represented that constituency till 1844, and again from 1846 till 1865, when he retired from political life. He headed in 1835 the "British Legion" sent to Spain to aid the Queen Regent against her rival, Don Carlos, and, returning to England two years later, was nominated a K.C.B. Upon the outbreak of the Crimean War he was put in command of the second division of the Eastern army, and distinguished himself at Alma, Sebastopol, and Inkerman, receiving the public thanks of Parliament "for his distinguished services in the Crimea," when he returned invalided to England the following spring (1856). The same year he

was made an honorary D.C.L. by the University of Oxford, and in 1856 a Grand Officer of the Legion of Honour.

Evans, SIR FREDERICK JOHN OWEN, K.C.B., F.R.S. (b. 1815, d. 1885), hydrographer, was the son of a master in the Royal Navy, and was entered on board a war-ship, when barely fourteen years of age, as a second-class volunteer in what is now known as the navigating branch of the service. From 1828 to 1833 his duties kept him on the North American and West Indian stations. But in 1833, on being transferred to the surveying vessel, *Thunder*, he was employed, under Commander Owen, in charting the banks of Bahama and other ports of the Antilles, where he laid the foundation of that high scientific reputation which he afterwards attained. In those days surveying ships were few, and continuous work in that line difficult to obtain. Accordingly the next five years of Mr. Evans's life were passed in the ordinary labours of a sailing-master in the Mediterranean and on the west coast of Africa. Here, as elsewhere, he was universally regarded as a skilful navigator and pilot; and when, in 1841, he attained the rank of master, there were few more distinguished officers of his grade in the Royal Navy. His next services were under Captain Blackwood in the exploration of the Coral Sea, the Barrier Reefs of Australia, and the waters of Torres Strait. In 1847 he began the survey of the shores of New Zealand, a work on which he was engaged for four years. During the Baltic campaign he was employed in special reconnoitring duty in various ships of the fleet, notably in the *Lightning*, under Admiral (then Captain) Sir B. J. Sullivan. In 1855 he was appointed superintendent of the Compass Department of the Admiralty; in 1865, chief naval assistant to the hydrographer; and in 1874, on the retirement of Sir George Richards, was raised to the post of hydrographer, which office he filled with great distinction until within a year of his death. Sir Frederick Evans, after going through all the grades of navigating officer, was a post-captain at the period of his death. He was nominated C.B. in 1873, K.C.B. in 1881, and served for many years on the council of the Royal Society, to the fellowship of which he was elected in 1862, and was more than once a vice-president. He also took an active interest in the Royal Geographical Society, and in all the exploring expeditions fitted out during his tenure of the hydrographer's office. In 1884 he was appointed one of the British delegates to the International Conference held at Washington to fix a prime meridian and universal day. As a scientific sailor he had few superiors. *The Admiralty Manual for Ascertaining and Applying the Deviations of the Compass*, which he and the late Archibald Smith published in 1869, is still a standard treatise, while the various sailing directions

and charts issued under his direction stamp him as a master of his profession. [R. B.]

Everest, SIR GEORGE, C.B., F.R.S. (*b.* 1790, *d.* 1866), engineer and surveyor, was born at Gwernvale, Brecon, and educated at Marlow and Woolwich, where he distinguished himself so highly that he was declared fit for a commission before he had attained the age when he could enter the army. Sailing for India as a cadet in the Bengal Artillery, he was selected by Sir Stamford Raffles for service in a surveying expedition to Java, during the time that island was occupied by the British (1814-16). On his return to India, he was employed in various engineering works, particularly in the establishment of a telegraph system between Calcutta and Benares; and in 1818 entered on what may be termed the labour of his future life by being selected as chief assistant to Colonel Lambton, the founder of the Great Trigonometrical Survey of India. For the next few years he was busily engaged in triangulating the eastern part of the Nizam's dominions, and in investigating the circumstances appertaining to the Abbé de la Caille's arc, and in other researches at the Cape of Good Hope, where he had gone to recruit. In 1823 he succeeded Lambton as chief of the survey, and applied himself with such vigour to the task that he had again to seek rest and change for his recovery. In 1830 he resumed the task better equipped than before, and, up to the year 1843, continued to discharge the duties of his office as well as that of the East India Company's Surveyor-General of India. In 1861 he was knighted, having previously received the honour of C.B., and was elected F.R.S. He died at Greenwich, Dec. 1st, 1866. His name is perpetuated in Mount Everest, 29,002 feet, the highest peak in the Himalayas; but still more honourably in the great labour with which he was so long connected. To use the words of the Asiatic Society of Bengal, on nominating him an honorary member: "Of the many works executed under Colonel Everest's direction, the most important, and that by which he will be best known to posterity, is the northern portion of the great Meridional Arc of India, $11\frac{1}{2}^{\circ}$ in length. No geodetic measure in any part of the world surpasses or perhaps equals in accuracy this splendid achievement. By the light it throws on researches into the figure and dimensions of the earth, it forms one of the most valuable contributions to that branch of science which we possess; whilst, at the same time, it constitutes a foundation of the geography of Northern India, the integrity of which must for ever stand unquestioned. Colonel Everest reduced the whole system of the Great Trigonometrical Survey of India to order, and established the fixed basis on which the geography of India now rests." His contributions to science are few, and are contained,

for the most part, in official reports and the *Memoirs of the Royal Astronomical Society*, and those of the Asiatic Society of Calcutta.

Sketch in *Journal of the Royal Geographical Society*, vol. xxxvii., pp. 115-118. [R. B.]

Everett, ALEXANDER HILL (*b.* 1792, *d.* 1847), American author and diplomatist, was a brother of Edward Everett (*q.v.*). He held several diplomatic posts in the course of his life, the first being that of secretary to John Quincy Adams, at St. Petersburg, and the last being at Canton, where he died. The result of his experiences were two political treatises on *Europe and America*. From 1830-5 he was editor of the *North American Review*, in succession to his brother. Alexander Everett was a Democrat in politics.

Everett, EDWARD, LL.D., D.C.L. (*b.* 1794, *d.* 1865), American author and statesman, was born at Dorchester, Massachusetts. He was educated at Harvard, where he graduated with the highest honours at the early age of seventeen. He went into the ministry, and at Boston acquired fame for his pulpit eloquence. In 1814 he published his *Defence of Christianity*, and the same year was chosen chief professor of Greek in Harvard University. From 1815 to 1818 he travelled in Europe, and in 1819 entered upon the duties of his professorship. He also became editor of the *North American Review*, which he conducted for five years. Both during and subsequent to his editorship, Everett was one of the most voluminous contributors to the *Review*, his articles altogether numbering upwards of one hundred. He was elected to Congress in 1824, and during the whole of his ten years of service was a member of the library committee and of the committee on foreign affairs. He gave great attention to foreign questions, and in 1827 addressed to George Canning a series of letters on the colonial trade. In 1835 he was elected Governor of Massachusetts, and in 1840 was appointed minister plenipotentiary to England. The relations between Great Britain and the United States at this juncture were somewhat strained, but Everett succeeded in adjusting several delicate matters, while others were settled by treaty at Washington. On his return to the United States in 1845, Everett was chosen president of Harvard University. In 1850 he issued a collected edition of his own speeches, and edited the works of Webster, for which also he wrote an elaborate memoir. On the death of Webster, in 1852, he was appointed Secretary of State. Though only in office four months, he initiated much valuable legislation. He was elected to the United States Senate in 1853. Everett threw himself warmly into the movement for the purchase of Mount Vernon, the home and burial-place of Washington, writing and lecturing on behalf of this national project. The amount which he individually raised for

the object exceeded £20,000. He also delivered many orations on behalf of various public and charitable enterprises. In 1860 he was nominated as Vice-President, with John Bell, of Tennessee, as President, on a "Union" or Fusionist ticket, but the Republicans were successful, electing Lincoln as President. During the Civil War, Everett delivered several patriotic speeches in the North, and at the Presidential election of 1864 he supported Lincoln and Johnson. In addition to the works already named, Everett was the author of *The Dirge of Alaric the Visigoth*, *Santa Croce*, and other poems, and *Lives of Washington and General Stark*. It was, however, as an orator that he was best known, his addresses being distinguished for their union of culture and refinement with more popular qualities. Everett received the degree of LL.D. from the University of Cambridge, and that of D.C.L. from the University of Oxford.

Memoir of Everett (Boston); Whipple, *Character and Characteristic Men*; Ripley and Dana's *American Cyclopædia*. [G. B. S.]

* **Eversley**, CHARLES SHAW LEFEVRE, VISCOUNT (b. 1794), English statesman, was educated at Winchester, and at Trinity College, Cambridge. He was called to the bar in 1819. In 1830 he entered the House of Commons as member for Downton, in the Liberal interest, but from 1832 and onwards he sat for the northern division of Hampshire. In 1839 he was chosen Speaker of the House of Commons, and held that office under Liberal and Conservative administrations until 1857, when he was raised to the peerage. Mr. Shaw Lefevre more than upheld the high traditions of his office. He was appointed Governor of the Isle of Wight, and an Ecclesiastical Commissioner in 1859.

Ewald, HEINRICH—in full, Georg Heinrich August von Ewald (b. 1803, d. 1875)—was a native of Göttingen, where he was brought up, and where he lived the greater part of his life. As a student at the university there, and a favourite pupil of Eichhorn, he published an essay on the *Composition of the Book of Genesis* (1823). After holding a post in the Gymnasium at Wolfenbüttel, he returned to Göttingen (1827), where he was appointed a professor in the philosophical faculty, and afterwards (1835) professor of Oriental languages. On Dec. 12th, 1837, he was removed from his Chair, in company with six others of the most distinguished professors in the university, on account of their protest against the overthrow of the Hanoverian Constitution by the new king, Ernest Augustus. Ewald then paid a visit to England, and in the following year accepted a call from the University of Tübingen, then perhaps at the height of its renown as the home of independent, if sometimes headstrong, criticism. For ten years he lived in its midst, constantly at issue

with his colleagues, and relieving himself by controversial pamphlets against the dangerous tendencies which he believed them to represent. Meanwhile he was setting about his great work on the history of Israel, and his commentaries on the Prophets. In 1841 he was ennobled by the King of Würtemberg. The events of the year 1848 restored Ewald to his old Chair at Göttingen, which he retained until 1867, when, in consequence of his refusal to take the oath of allegiance to the King of Prussia, now master of Hanover, he was transferred to the retired list as Emeritus professor, with the full stipend which he had previously enjoyed. In spite of the generosity with which he was treated, his rancour against Prussia continued intensely bitter for the remaining eight years of his life. He was three times returned in the Guelf interest as a member of the North German, and then of the German, Reichstag, where his demeanour rather injured than assisted his cause; more than once he was imprisoned for seditious language. Ewald's contributions to general Oriental literature, including Arabic and even Persian and Sanskrit, belong principally to his earlier years, and are not of the first importance. His reputation rests upon his Hebrew grammar and his works on the Old Testament. His *Critical Grammar of the Hebrew Language* was first published in 1827; it was afterwards enlarged into the *Ausführliche Grammatik*, which passed through eight editions by 1870, and is still, so far as the syntax is concerned, the standard grammar of the language. Sparing as Ewald was of acknowledging obligations to predecessors, such as Gesenius, he may really claim to have invented the philosophical treatment of Hebrew grammar. In the same way, his *History of the People of Israel* (1843-59; English translation, 1869, etc.) marks such an era in the study of Biblical history as Niebuhr's work does in that of Rome. Of Ewald's commentaries, those on the Psalms (in *Die poetischen Bücher des Alten Bundes*, 1835-7; translated separately, 2 vols., 1880-1), and on the Prophets (1840; English translation, 5 vols., 1875, etc.), are of the greatest value, especially the latter; for while his rich imagination makes him everywhere an illuminating commentator, he had special affinities with the prophetic genius. He was himself, it has been said, a prophet, fighting, as the Hebrew prophets did, against wrong (as he believed it) in Church and State and the movements of religious thought. Ewald also wrote on Christian subjects, including a variety of commentaries on the New Testament, all (with the exception of his Latin commentary on the Apocalypse, 1828) later than 1850. These are not considered to have increased his reputation. On the other hand, his works on the Ethiopic *Book of Henoch* and kindred apocryphal literature are among the best books on their

subjects. He also did good service in the promotion of several Oriental and Biblical journals. As a scholar Ewald stood by himself; when he came into collision with other scholars, his arrogance prevented him from doing justice, to them or recognising the merits of their work. He did not trouble himself even to take advantage of proved corrections in his own books. It was thus that he resented what he deemed the intrusion of men like Graf, Kuenen, and Nöldeke, who revolutionised the criticism of the Old Testament. His aversion from the influence of Hegel and Strauss was as great as his hostility to the Tübingen school. In the field of New Testament criticism he ignored the labours of Baur, or noticed them only rudely to dismiss them. Towards the orthodox, such as Hengstenberg, or, in a younger generation, Delitzsch, his attitude was no less contemptuous. The strength of Ewald's individuality makes his works of abiding and stimulating interest to the ripe scholar; but, except as a grammarian, his fame, however great in England, has much declined in Germany. He is recognised as standing in the foremost rank among pioneers in Semitic philology; his labours in Biblical literature are justly appreciated; but his work as a whole, his conception of Hebrew religion and history, never commended itself to the scholars of the orthodox reaction, and by the leaders of the newer critical school it is already considered antiquated. [S.L.-P.]

Ewart, WILLIAM (b. 1798, d. 1869), a leading politician, was born at Liverpool, and educated at Eton, and Christ Church, Oxford. In 1828 he was elected member for the disenfranchised borough of Bletchingley, subsequently representing, in succession, Liverpool, Wigan, and the district borough of Dumfries. In politics he was a Liberal, a supporter of Free Trade, and an earnest advocate for the abolition of capital punishment. In 1850 he was successful in passing an Act (which bears his name) establishing public free libraries and schools of design in large towns, and in 1864 carried a Bill legalising the use of the metric system.

Ewing, JULIANA HORATIA ORR (b. 1842, d. 1885), a well-known writer, was the daughter of the Rev. Alfred Scott Gatty, and of his wife Margaret, the authoress of *Parables from Nature*, etc. Accustomed from her childhood to act as story-teller to her younger brothers and sisters, Mrs. Ewing began at an early age to publish verses and to contribute to *Aunt Judy's Magazine*. In 1867 she was married to Major Alexander Ewing. The best known of her works are:—*The Brownies and other Tales* (1870); *A Flat Iron for a Farthing* (1873); *A Great Emergency, and other Tales* (1877); *We and the World* (1881); *Old-fashioned Fairy Tales* (1882); *Jackanapes* (1884); and *The Story of a Short Life* (1885).

Mrs. Ewing was pre-eminently a writer for children. The tone of her stories is fresh and healthy, and her simple, natural sketches of child-life are enlivened by dashes of real humour and pathos.

Exmouth, EDWARD PELLEW, VISCOUNT (b. 1757, d. 1833), English admiral, was born at Dover, and entered the navy at the age of thirteen. His first exploits were during the American War, when, being in command of the *Pelican*, he defeated three French privateers (1782). On the outbreak of the war of the French revolution, Pellew performed many acts of valour, and many acts of humanity. In 1802 he was returned to Parliament for Dunstable, and for a few months supported Pitt with zeal. His naval duties, however, soon called Pellew to the Indian Ocean, where he exterminated the French cruisers. In 1814 he was raised to the peerage, and two years later was directed to bombard Algiers in consequence of the connivance of the Dey at the existence of slavery within his dominions. After a battle of nine hours the Dey submitted (Aug. 26th), and surrendered about twelve hundred slaves.

E. Osler, *Life of Viscount Exmouth*.

*** Eyre, EDWARD JOHN** (b. 1815), administrator, the son of a Yorkshire clergyman, emigrated to Australia in 1833, and there made some considerable sums of money, with which he bought land on the Lower Murray. Moreover, he distinguished himself as an explorer; and in 1840 he headed an expedition from Adelaide, which, after demonstrating the barrenness and difficulty of the interior of the land, arrived at St. George's Sound in 1841 (*Discoveries in Central Australia*, published by him in 1845). In 1845 he was appointed Lieut.-Governor of New Zealand under Sir George Grey, and was subsequently made Lieut.-Governor of the Island of St. Vincent (1854-60). In 1862, after a short period of repose, he was appointed Deputy-Governor of Jamaica, and when it was seen that Governor Darling was too ill to return, Mr. Eyre became his successor. In 1865 he was confronted by a negro rebellion which he crushed with much severity, and several of the executions—notably that of George William Gordon, a mulatto member of the Jamaica House of Assembly—were thought to have been entirely unnecessary, and certainly illegal. Mr. Cardwell, the Secretary for the Colonies, suspended Mr. Eyre until a Commission of Inquiry had examined his conduct. The report made in April, 1866, was on the whole unfavourable to Mr. Eyre, and he was recalled. He returned to England to find himself the object of a bitter controversy. Thomas Carlyle was his chief defender; J. S. Mill was the leading spirit in a "Jamaica Association" for obtaining his prosecution. Various proceedings

were instituted against him, extending over the space of some four years, but in every case the grand jury threw out the Bill. In 1872 Government decided on paying his expenses, and public opinion finally declared itself in his favour.

W. E. Finlayson, *Report of the Case of the Queen v. E. J. Eyre.*

Eyre, SIR VINCENT (b. 1810, d. 1881), soldier, entered the Bengal Artillery in 1828. In the Afghan insurrection of 1841 he served at the defence of Cabul, and was the one man who was willing to offer himself with his wife and child as hostage to Akhbar Khan (q.v.). In the retreat he was made prisoner. His exploit, the relief of Arrah, was one of the most dashing of the Mutiny campaign, and as brigadier of artillery he gained great distinction in Havelock's relief of Lucknow and Outram's capture of Alumbagh.

F

* **Faed**, THOMAS, R.A. (b. 1826), painter, is the son of a Scottish millwright. His elder brother, John, who was making a position for himself as a painter in Edinburgh, superintended his studies from 1843 and onwards. Thomas attended the School of Design, under Sir William Allan, and repeatedly carried off prizes at the annual competitions. He was made an associate of the Royal Scottish Academy in 1849, and came to London in 1852, and in 1855 made a deep impression with his *Mitherless Bairn*, in illustration of William Thom's poem. Following up the same vein of sentiment, Thomas Faed in the following years produced *Home for the Homeless*, *The First Break in the Family*, *My Ain Fireside*, *His Only Pair*, etc. In 1859 he was elected an associate of the Academy, and his *From Dawn to Sunset* procured him, in 1864, its full honours. The pictures named, and especially *The Last of the Clan* (1880) and *The Waefu' Heart* (1885), indicate the emotional mood in which Mr. Faed delights to work, and he finds in the ballad lore, and in the homely scenes of his own country, material for his pencil.

* **Faidherbe**, LOUIS LÉON CÉSAR (b. 1818), French general, received a military education, and entered the French army in 1840. After seeing service in Africa and the West Indies, he was appointed, in 1854, Governor of Senegal, a post which he held, with a slight interval, until 1865, when he sent in his resignation. His administration was remarkable for several annexations and a number of successful expeditions, chief of which was that against the formidable prophet of Islam, El-Hadji Omar, which rescued the province

from a serious danger. Faidherbe, now brigadier-general, governed a district of the province of Algiers from 1867 to 1870. On the outbreak of the Franco-German War he, owing to his Republican opinions, was not offered a command; and it was not until November, when Gambetta was in the ascendant, that he was appointed commandant-in-chief of the Army of the North. His object, the relief of Paris, was never within a reasonable distance of accomplishment; and all that he did was to fight some bloody and indecisive battles with Manteuffel and his successor, Goeben. On Dec. 23rd he failed to recapture Amiens; and after an attempt on St. Quentin had miscarried on Jan. 19th, he retired to Lille, and remained there until the conclusion of the armistice. General Faidherbe was for a few months, in 1871, a member of the Assembly, but resigned in consequence of its reactionary proceedings; in 1879 he was elected senator. An ardent archæologist, he was sent by the Government, in 1872, to Upper Egypt, and spent some time in the study of monuments and inscriptions. Of his numerous works it is sufficient to mention some interesting monographs on Senegal, the Soudan, and north-west Africa:—*Collection des Inscriptions numidiques* (1870), *Épigraphie phénicienne* (1873), and *La Campagne de l'Armée du Nord* (1871).

* **Fairbairn**, ALEXANDER M., D.D. (b. 1839), theologian, and principal of Airedale College, Bradford, was born in Leith Walk, Edinburgh, and educated at the university of that town, and received his theological training from the Rev. Dr. Morison and the Rev. Dr. Guthrie, of the Evangelical Union Church. In due course he was inducted to the pastorate of the Evangelical Union congregation at Bathgate, in West Lothian, and began to publish his brilliant essays in the *Contemporary Review*. Obtaining leave of absence for a lengthened period from his Bathgate charge, he spent the time industriously at a German university, where he met some of the most distinguished of Continental Biblical scholars. He was subsequently removed to Aberdeen, where his Sunday evening lectures on *The Non-Christian Religions*, and *Studies in the Life of Christ* (since published, 1881), drew very large congregations. In 1877 he was an unsuccessful candidate for the Chair of moral philosophy in the University of Aberdeen, but in 1878 he was elected principal of Airedale Congregational College, Bradford, in which year also he received the honorary degree of D.D. from his *alma mater*. The work which made Principal Fairbairn so widely known was *Studies in the Philosophy of Religion and History* (1876), in which he treats of the idea of God—its genesis and development; theism and scientific speculation; and the belief in immortality, which is traced through all the ancient philosophies and religions of India

and Greece. It is one of the most valuable contributions on the question in our language, and explodes many modern errors. In 1881-3 Dr. Fairbairn was Muir lecturer in the University of Edinburgh. Some of his other works are:—*Christianity in the First and Nineteenth Centuries* (1883); *The City of God*, a series of discussions in religion (1883); *Religion in History and in the Life of To-day* (1884).

The Christian Leader, Feb. 2nd, 1882.

Fairbairn, Sir William, Bart. (b. 1789, d. 1874), engineer, was the son of a farm bailiff of Kelso, Roxburghshire. Chiefly self-educated, he worked first as a mason, then as a carter. In 1804 his prospects, hitherto very dark, began to improve; he was apprenticed to a millwright at Percy Mains, and shortly afterwards made the acquaintance of George Stephenson. Steadied somewhat by marriage, he set up business in a small way in 1817 with a friend, Lillie by name, in Old Street, Manchester, and soon acquired a reputation as a mechanic of great talent, particularly in the construction of water-wheels. Fairbairn's investigations into canal navigation, made in 1830, for the Forth and Clyde Canal Company, led incidentally to the great development of the use of iron in the construction of vessels of every description which is associated with his name. Having dissolved his partnership with Lillie in 1832, he launched out on a large scale, becoming in 1835 proprietor of a great ship-building yard at Millwall, London. In 1837 he went to Turkey, and executed extensive works for the Sultan, and in 1845 he and Stephenson began to lay their heads together on the subject of tubular bridges. The most remarkable feature of those engineering triumphs, the rectangular self-supporting tube, was the invention of Fairbairn, and the patent for it was his. (See his *Account of the Construction of the Britannia and Conway Tubular Bridges*, 1849.) During the remainder of his life he invented several mechanical improvements, notably the tubular crane, and from 1861-5 was engaged by the Government in demonstrating how iron could best be applied to defensive purposes. He wrote treatises on *Iron Ship-building* (1865), and the *Strength, etc., of Steel* (1869). He became a baronet in 1869, and was the recipient of numerous honorary degrees.

W. Pole. *Life of Sir W. Fairbairn*, partly autobiographical.

* **Faithfull, Emily** (b. 1835), lecturer and authoress, the well-known supporter of the cause of women, was born at Headley Rectory, and educated at a school in Kensington. Struck by the lack of remunerative occupation for women, she founded, in 1860, in spite of many difficulties, a printing establishment in Great Coram Street, where only female compositors were employed. The Queen gave a token of her approval of the scheme, appoint-

ing Miss Faithfull, by warrant, printer and publisher in ordinary to Her Majesty. Miss Faithfull, in 1864, founded and edited the *Victoria Magazine*, the pages of which were chiefly dedicated to the question of women's work. She has also published a novel, *Change upon Change* (1868), a modern story, containing a clever analysis of one phase of female character, the coquette—conscious of her deficiencies, and yearning for higher things, but vain and unstable, the curse of all men who fall into her toils. This story was afterwards republished in America under the title, *A Reed Shaken by the Wind* (1873).

Falconer, Hugh (b. 1808, d. 1865), a distinguished botanist and palæontologist, was born at Forres, N.B., and educated at the University of Aberdeen, and subsequently at the University of Edinburgh, where he took the degree of M.D. in 1829. Proceeding to India in 1830 as assistant surgeon on the Bengal establishment of the East India Company, he made, on his arrival, an examination of the fossil bones from Ava in the possession of the Asiatic Society of Bengal; and a description of the collection which he presently published gave him a recognised position among the scientists of India. In 1832 he became superintendent of the botanic garden of Saharunpoor, in succession to Dr. Royle; and in 1834 he published a description of the geological character of the neighbouring Sewalik Hills, in the tertiary strata of which he discovered a sub-tropical fossil-fauna of unprecedented extent and richness. In this same year he was appointed to inquire into the fitness of India for the growth of the tea-plant, and it was on his recommendation that the tea-plant was introduced into India. In 1842 he returned home on furlough, and classified and arranged the Indian fossils presented to the British Museum and the East India House by himself and Captain Cautley. From 1848 to 1855 he was superintendent of the Botanical Garden at Calcutta, and professor of botany in the Medical College, but in 1855 he had to return to England again on account of the bad state of his health. He now engaged himself with examining fossil species in England and on the Continent, corresponding to those which he had discovered in India, and in writing a treatise on *Primeval Man*, which, however, was never finished. For his valuable discoveries in India, Dr. Falconer, along with Captain Cautley, received, in 1837, the Wollaston medal in duplicate from the Geological Society of London. He was a member of many learned societies, British, Indian, and foreign. His botanical notes, with 450 coloured drawings of Kashmere and Indian plants, have been deposited in the library at Kew, and *Palæontological Memoirs and Notes*, comprising all the papers he read before learned societies, have been edited by Dr. Charles Murchison.

Biographical sketch prefixed to *Palæontological Memoirs and Notes of Dr. Hugh Falconer* (1868).

* **Falk, or Falck, PAUL LUDWIG ADALBERT** (b. 1827), Bismarck's lieutenant in the *Kulturkampf*, was the son of the pastor of Metschkau, in Silesia. Having been educated at the Gymnasium and University of Breslau, he entered the law, and rose very rapidly in his profession, being also elected to the Prussian parliament in 1858, and to the North German Reichstag in 1867. Having taken part in the preparation of the new civil and criminal code for the North German Confederation, he was appointed Minister of Justice in 1871, and representative of Prussia in the Federal Council. Early in the following year, however, he was transferred to the ministry of *Kultur* (Public Worship and Education), in which he succeeded Herr von Mühler, and it at once became evident that Bismarck had selected him as a fitting instrument for his meditated onslaught upon Ultramontane pretensions. In politics he was a member of the moderate "National," or "Old" Liberal party, by whose aid Bismarck had built up his power. The campaign against the Vatican began by a proposal from Dr. Falk that all educational institutions, public or private, should be subject to the supervision and direction of the State. The proposal became law, in spite of the opposition of the Ultramontanes and the supposed hostility of the Court. In the following year (1873) Dr. Falk introduced his celebrated "May Laws," which aimed professedly at securing individual liberty for every German subject by enacting that all theological colleges should be liable to State inspection, that all Roman Catholic priests should have spent a certain time at a State gymnasium and a State university, and that Roman Catholic bishops should take the oath of allegiance. At the same time several religious Orders were suppressed, and later in the year a Bill was passed, enforcing public registration of all births, deaths, and marriages. These laws at once gave rise to a violent correspondence between the Emperor and the Pope, and roused a dogged opposition amongst Catholic prelates, in which the Archbishop of Posen especially distinguished himself. In 1874 he and four of his fellows were sent to prison, and the May Laws were supplemented by some minor provisions, the opposition continuing unabated and rising almost to dangerous outbreaks after the sweeping enactments of the following year, when ecclesiastical marriages were declared invalid unless completed by the civil ceremony, which was made sufficient by itself. At the same time the State funds were withdrawn from the Catholic bishops, though in the conference at Fulda they appealed to the Emperor himself with good show of reason, and later in the year the conventual and religious orders, whose numbers had increased tenfold within the last twenty years, were definitely abolished throughout all Prussian territory, exception

being made only in the case of nursing societies. For the next three years the contest continued without any important advances on either side. In 1878 a great petition to the Emperor against the May Laws was got up in Silesia, but was referred by him to his minister. At the end of the year Dr. Falk, seeing that a crisis was at hand, tendered his resignation, but was induced to withdraw it. In the following year, however, Bismarck, partly perhaps owing to the succession of a new Pope, partly to check the growth of socialism, opened negotiations with Conservatives and Ultramontanes, and threw over his trusty retainers of the National Liberal Party. He announced the rupture in July. In October the party was in a minority. Dr. Falk had shared their fate, and was succeeded by Herr von Puttkamer, who, in 1880, healed the grievance of the Falk Laws by his Bill known as the "Slow Train to Canossa." Dr. Falk's administration was also marked by an extraordinary development of national education.

Reden des Staats Ministers Dr. Falk gehalten in den Jahren 1873 bis 1879 (Berlin, 1890).

Falkenstein, EDOUARD VOGEL VON (b. 1797, d. 1885), general, was born in Silesia, and served with great distinction during the two campaigns of the War of Independence (1813-14). In 1815 he entered Paris with the army of occupation. Having risen by the usual stages to the rank of commander of a battalion of Grenadier Guards, he was called upon to fulfil the unenviable task of crushing the revolution in the streets of Berlin in 1848. Though wounded, he was immediately afterwards sent to take part in the Schleswig-Holstein campaign. After this he rose rapidly to high place in the army, till in 1863, as chief of the general staff, he was entrusted with the command of the troops in Holstein. Raised to the rank of general of infantry in 1866, he was appointed to command the Prussian army that held Hanover in check at the outbreak of the Austro-Prussian War. The Hanoverian army, making its way southwards from Göttingen, found itself suddenly confronted by General von Falkenstein at Eisenach, and was forced to fall back on Langensalza, where it capitulated after a severe engagement. Falkenstein immediately hurried southwards to engage the Bavarians, defeated them in several battles, and occupied Frankfurt. He was then appointed to the military command of Bohemia, and, after the peace, to the command of the First Army Corps. During the French War he commanded the troops remaining in Germany to oppose the expected invasion by sea.

Fallmerayer, JACOB PHILIPP (b. 1790, d. 1861), traveller and historian, was born of peasant parents in a village near Brixen, in the Bavarian Tyrol, and studied at Salzburg

and at the University of Landshut. Having served with distinction during the War of Independence, he was appointed to various scholastic posts in Bavaria, and gave lectures on mediæval history at Landshut that brought upon him the suspicion of the Government. In 1831, therefore, he gladly accepted the offer of a journey in the East as companion to the Russian Field-Marshal, Ostermann-Tolstoi, and in 1840-3 Fallmerayer repeated parts of the journey by himself. In 1845 he published his most popular book, *Fragments from the East*, a model of satire and critical penetration. In 1847 he visited Turkey again, and on his return found he had been elected representative of Munich to the parliament at Frankfurt. After this he continued to live for the most part at Munich, engaged in ceaseless literary and historical activity. The three principal points which he endeavoured to establish were the worthlessness of the modern Greeks, the certain absorption of Constantinople and Greece into Russia, and the immense stupidity of German professors. As the second is still prophecy, and the third a matter of opinion, his title to fame must rest on the vast researches by which he strove to establish the complete extinction of the ancient Greek stock, and the Slav origin of the modern Hellenes. His most important single work on this subject was his *History of the Morea during the Middle Ages* (1830-6).

Biographical sketch prefixed by Dr. G. M. Thomas to his edition of Fallmerayer's *Miscellanies* (Munich, 3 vols., 1865).

Falloux, FRÉDÉRIC ALFRED, COMTE DE (b. 1811, d. 1886), a French politician and man of letters, was born at Angers, and brought up in the Legitimist principles, as shown by his two earliest books, *Histoire de Louis XVI.* (1840) and *Histoire de St. Pie V., Pape de l'Ordre des Frères Prêcheurs* (1844). In 1846 he was returned by the department of Maine-et-Loire to the Chamber of Deputies, where he distinguished himself by his ardent zeal for liberty with regard to religious teaching. After the abdication of Louis Philippe, he acquiesced in the Republic, and proposed a motion for the dissolution of the Chamber, the signal for the revolt of the Red Republicans, the absurdity of whose public worship system he had demonstrated. He was appointed, to the disgust of his friends, Minister of Public Instruction, in 1848, by Louis Napoleon, but resigned the following year, having been censured for submitting his measure for breaking down the education monopoly, *La Liberté d'Enseignement*, to the Assembly before it had been laid before the Council of State. After the *coup d'état* of Dec. 2nd he retired from political life, occupying himself with literary, charitable, and agricultural pursuits, his name, however, being constantly before the public in connection with his Catholic and Legitimist views. The "only

statesman on the Right," as M. Thiers called him, he constantly gave good advice to the Comte de Chambord, but it was always overruled by the Royalist reactionaries, who could not endure his moderation and caution. He was the recognised leader, despite his retirement, of the Royalist party in France. Besides the two works already mentioned, he has written *Souvenirs de Charité* (1857), *Madame Swetchine, sa Vie et ses Œuvres* (1859), *Méditations et Prières* (1863), *Agriculture et Politique*. In 1882 a collection of his speeches and political writings was published.

The Guardian, Jan. 13th, 1886.

• **Falquière, JEAN ALEXANDRE JOSEPH** (b. 1831), French sculptor and painter, was a native of Toulouse. He was a pupil of Jouffroy, studied in the École des Beaux-Arts, and in 1859 carried off the Prix de Rome. From the Eternal City he sent home several important busts and groups, and one of the latter, *The Combat of the Cocks*, was bought by the State in 1864. His *Christian Martyr* was shown in plaster in 1867, and in marble the following year. *Ophelia's* first appearance was also in plaster, and 1872 saw it reproduced in marble. His *Pierre Corneille* of the same year was destined for the Théâtre Français. His marble statue of *St. Vincent de Paul* (1879) adorns the church of St. Genevieve, and among his portrait busts are those of Carolus Duran, Lamartine, and Cardinal de Bonnechose. His bronze statue of a *Nymph Chasseresse*, exhibited in 1885, like many of his other masterpieces, was exhibited first in plaster. Exquisite in every way, as this creation undoubtedly is, it must give place in importance to the Titanic group in plaster which has, by way of trial, crowned the Arc de Triomphe during the last four years. When reproduced in bronze, there will be no triumphal group in Europe to equal it in heroic grandeur and spontaneity. Falquière, in short, is the greatest living sculptor in France, and there is scarcely a young wielder of the chisel whom he has not inspired and taught. But Falquière is a painter as well as a sculptor, and his originality, if not his technical skill, is as apparent in the one art as in the other. His *Cain and Abel*, the *Beheading of John the Baptist*, his *Acis and Galatea*, and especially his grim vision of the *Sphinx*, are all works of high creative powers. He is professor of sculpture at the École des Beaux-Arts.

[J. F. R.]

Faraday, MICHAEL, F.R.S. (b. 1791, d. 1867), a famous physicist and chemist, was the son of a blacksmith, who, originally from Yorkshire, removed to Newington, London, shortly before his distinguished son was born. Receiving little school education, he was early apprenticed to a bookbinder, when, attracting the attention of Mr. Dance, one of his master's customers, he was presented with a ticket to four

of Sir Humphry Davy's lectures at the Royal Institution. Of this opportunity he took such good advantage, that on sending Davy the notes he had taken, he was, at the age of twenty-one, engaged as assistant and amanuensis to the illustrious chemist, and in this capacity accompanied him on a Continental tour. The relations between Davy and his future successor were, however, never cordial, the great man always treating his modest assistant as an inferior, and so far from encouraging him in the course he had entered upon, was rather inclined to throw cold water on his scientific aspirations. He, however, persevered, until in 1825 he was appointed director of the Laboratory, and in 1827, on the resignation of Davy, Fullerton professor of chemistry, though in 1833, in order to allow him to carry out the brilliant researches he had entered upon, he was excused from delivering any stated lectures. Altogether, from the time he first entered upon his duties to the period of his death, he was connected with the Royal Institution for fifty-four years. In 1835 he received a Civil List pension, and in 1858 a residence in Hampton Court Palace, where he remained for the rest of his life. He was married, but left no family, and beyond the record of his discoveries, the daily duties of his life, and his discourses on Sunday to the Sandemanians, a small religious sect to which he belonged, his career was singularly uneventful. Modest and unambitious, he neither solicited honours nor cared for the tribute of society, and though of a cheerful, kindly disposition, found no such happiness as when in the bosom of his simple household and among the apparatus of his laboratory. His researches extend over a wide range of subjects in physical science. The compounds of chlorine and carbon, the alloys of steel, the compounds of hydrogen and carbon, the action of sulphuric acid on naphthalene, the decomposition of hydrocarbons by expansion, and the important series of experiments which have done so much to improve the manufacture of glass for optical purposes, are only a few of them. Nearly all of his investigations have directly or indirectly had a practical bearing. But his lighthouse lamps, and his suggestions for preparing the lungs prior to diving, have an immediate application to every-day life; while his lectures on mental education and on table-turning did much to throw light upon popular delusions. His discoveries in physical science are so extensive that it is impossible to do more than name the principal. Regelation, the limits of vaporisation, the condensation of gases, optical deceptions, acoustical figures, and conservation of force may be mentioned. His greatest reputation is, however, connected with the researches in electricity, which he began as early as 1830. They range over the entire field of magnetism, diamagnetism, electro-magnetism, and electricity proper. He

elucidated the application of induced electricity to lighthouses, the firing of mines, telegraphy, and the magnetic currents of the earth. The electro-tonic condition of matter, the identity of elements from different sources, the equivalents in electro-chemical decomposition, electro-static induction, the relation of magnetic and electric forces, the electricity of the *Gymnotus*, or electric eel, hydro-electricity, magnetic rotatory polarisation, the magnetic condition of all matter, the relation of gravity to electricity, and a host of other investigations, were also the fruits of his labours between 1830 and the close of his working career. Almost to the last he was busily engaged in his chosen toil, his final lecture to the Royal Institution being one delivered in 1862 on gas furnaces. In 1865, feeling the approach of years, and his inability to perform his duties with that precision which he regarded as imperative, he resigned his posts as scientific adviser to the Trinity House and director of the Royal Institution Laboratory, and thenceforward lived much in private. Few men—none in this country since the time of Davy, and even he covered only a small portion of the ground which Faraday made his own—have accomplished anything like the triumphs of this humble labourer in the laboratory. Slenderly educated, and never quite mastering the amount of mathematics necessary for fully understanding the researches of more abstruse writers, he was gifted with an admirable literary style, so clear and simple that it is hard to say whether Faraday has done more to advance science by popularising his own and other men's knowledge, than by adding to the actual amount of hitherto unknown data. His lectures on the chemistry of a candle, and on the non-metallic elements, are models of addresses delivered before a non-scientific audience, while his work on chemical manipulation is so valuable that, in spite of the advances of late years, it is still regarded as a classic.

His other separate volumes—in addition to many papers embodied in the *Philosophical Transactions* and the scientific periodicals—comprise *Experimental Researches in Electricity* (4 vols., 1844-55); *Fundamental Researches in Chemistry and Physics* (1859); and *On the Various Forces in Nature* (circa 1864). His life has been chronicled in Tyndall's *Faraday as a Discoverer* (1870); Benck-Jones' *Life and Letters of Faraday* (1870); and J. H. Gladstone's *Michael Faraday* (1872).

[R. B.]

Farini, CARLO LUIGI (b. 1822, d. 1866), a popular Italian statesman, orator and historian, born at Russi, in the Roman States, studied medicine at Bologna, and early became noted for his remarks upon organic disease, and for his essays to scientific journals on medical subjects. A political exile in 1842, he travelled in France and England, visiting most of the medical colleges in these countries, returned to Italy after the amnesty published by Pius IX., was chosen deputy for Faenza in 1848, and appointed director-general of health

and of the prisons. Upon the advent of Mazzini and the proclamation of the Roman Republic, he removed to Florence, where he remained during the French occupation of Rome, but was recalled in 1850, when he was appointed to the office of Minister of the Interior in Piedmont. Many of the energetic measures carried out by Cavour have been ascribed to Farini's suggestions; and when the approach of the allied troops, in 1859, had forced the Duke of Modena to seek a refuge in the Austrian ranks, he was appointed, at the urgent request of the people, dictator at Modena, which, together with Parma, was, by his influence, annexed to the kingdom of Sardinia. In 1860 he became Minister of Commerce in the last Cabinet of Cavour, and from December, 1862, to March, 1863, was Prime Minister, when he resigned on account of ill-health. The principal works of Signor Farini are *Il Stato Romano*, a history of Rome from 1815 to 1850, which has been translated into English by Mr. Gladstone, published in 2 vols. in 1851; a continuation of Botta's *History of Italy*, and *Letters to Lord John Russell and Mr. Gladstone*.

Quarterly Review, Jan., 1852; *Edinburgh Review*, April, 1852.

Farragut, DAVID GLASGOW (b. 1801, d. 1870), American admiral, was of Spanish origin, and was born near Knoxville, Tennessee. He entered the navy in 1821, became commander in 1841, and captain in 1855. On the outbreak of the Civil War, he offered his services to the Unionists, and in 1861 was selected by the Government to command the naval force, "the Western Gulf Squadron," which was to take New Orleans. Accompanied by a land army, under General B. F. Butler, he went up the Mississippi, and on April 18th he confronted Fort Jackson and Fort St. Philip, which commanded the approach to the city. After bombarding Fort Jackson for six days, he determined to run past it in the darkness, and accomplished that most dangerous feat with thirteen out of seventeen ships. The enemy's fleet, which had co-operated with the forts, was destroyed, and on the 26th, New Orleans, lying helpless under Farragut's guns, was evacuated by its garrison and surrendered. This important victory was followed by an attempt upon Vicksburg; but the position was found to be impregnable to naval attack, and the task of reducing it was left to General Grant. Nevertheless Farragut was promptly despatched to Mobile Bay, which had now become the harbour of the enemy's blockade-runners. Its defences were Forts Morgan, Gaines, and Powell, besides a powerful iron-clad ram, the *Tennessee*, and some gunboats. Farragut, repeating his former manoeuvres, ran past the forts, silenced the *Tennessee*, and his fleet being now in possession of the bay, the capture of Fort Gaines and Fort Morgan by the land forces speedily followed, and Mobile Bay was closed to the Federal ships.

Congress recognised the value of these brilliant achievements by creating for their author the rank of vice-admiral, and in 1866 he was promoted to the rank of admiral. After a cruise in the *Franklin* in European waters (1867 and 1868), during which he was everywhere received with great honour, Farragut retired into private life. A simple and pious man, he was undoubtedly a sailor of rare ability, who accomplished great deeds, because, as he said, he "attacked, regardless of consequences, and never turned back."

L. Farragut, *Life and Letters of Admiral D. G. Farragut* (1879). [L. C. S.]

* **Farrar**, THE VEN. FREDERIC WILLIAM, D.D. (b. 1831), distinguished scholar and divine, was born at Bombay, and is the son of a former rector of Sidcup. After being educated at King William's College, Isle of Man, King's College, London, and the University of London, he was elected scholar of Trinity College, Cambridge, where he gained the Chancellor's medal for English verse on the theme of the "Arctic Regions," graduated as fourth classic in 1854, and was elected to a fellowship. He became an assistant master at Marlborough College under Dr. Cotton, when he was ordained, and later at Harrow School, under Dr. Vaughan and Dr. Butler. In 1858 he first attracted general attention by *Eric; or, Little by Little*, a story of school life. It was followed in the next year by *Julian Home and Lyrics of Life*, and in 1862 by *St. Winifred's; or, the World of School*. Meantime he had also published a pamphlet on the *Origin of Language*, and for the next ten years philology continued to occupy his thoughts to the exclusion of fiction. The result was a series of works on grammar and scholastic philology, of which we may mention:—*Chapters on Language* (1865), *Greek Grammar Rules* (1865), *Greek Syntax* (1866), and *Families of Speech* (1869). About 1870 he began the publication of those theological works through which he has attained his highest popularity. In that year he published his Hulsean lectures on the *Witness of History to Christ*. In 1871 he was appointed head-master of Marlborough College, and during his tenure of office, which lasted till 1876, he found time to produce his most celebrated work, *The Life of Christ* (1874), perhaps the most widely popular English theological work of this century. It consists of a brilliant reproduction of the Gospel narrative, filled in by a vivid pictorial imagination that drew its inspiration from a considerable knowledge of the contemporary history, and some personal acquaintance with the scenery of Judæa. In 1876 Dr. Farrar was appointed canon of Westminster, and rector of St. Margaret's, Westminster. About a year afterwards he created great controversy in theological circles by a series of sermons, published under the title *Eternal Hope*, in which he denied the probability of everlasting damnation. His second great work on theological

history, *The Life and Works of St. Paul*, appeared in 1879, and was followed, in 1882, by *The Early Days of Christianity*. Dr. Farrar has also published several volumes of sermons, and has contributed numerous articles to magazines, encyclopædias, and theological commentaries. In 1883 he became Archdeacon of Westminster. In theological views he might be described as standing between the Evangelical party and the Broad Church; but his knowledge, coloured by a poetic temperament, his superabundant fertility, and eloquent luxuriance of style, have gained for him a unique position in the theological thought of the last twenty years.

* **Farre, ARTHUR, M.D., F.R.S.** (b. 1811), a distinguished physician, was born in London, and educated at the Charterhouse and at Cambridge, subsequently studying medicine at St. Bartholomew's Hospital. He was, from 1836 to 1837, lecturer on comparative anatomy and forensic medicine at St. Bartholomew's Hospital, and professor of obstetric medicine at King's College (1838-40), and physician-accoucheur at King's College Hospital (1841-62). In 1872 he was appointed Harveian orator; he was president of the Royal Microscopical Society in 1851-2, and is now honorary president of the Obstetrical Society. Dr. Farre is physician extraordinary to the Queen, and physician-accoucheur to most of the Princesses belonging to the Royal Family. He was elected F.R.C.S. in 1843. During a period of twenty-four years he was examiner in midwifery in the Royal College of Surgeons. He is the author of several articles upon anatomy and physiology, published in the *Transactions* of the Royal and Royal Microscopical Societies, and in the *Cyclopædia of Anatomy and Physiology*.

Fatteh-Ali-Shah. [PERSIA.]

* **Faucit, HELEN** (LADY THEODORE MARTIN), (b. 1816), actress, the daughter of the late Mrs. Faucit, the actress, received her early education for the stage from Mr. Percival Farren, of the Haymarket theatre. She made her first public appearance at the Theatre Royal, Richmond, in 1833, as Juliet, in *Romeo and Juliet*; and in 1836 she first appeared in London at Covent Garden as Julia, in *The Hunchback*. She was at once received with enthusiasm, and during the year sustained several important characters at Covent Garden. She joined Macready's company for the Shakespearean revivals at Covent Garden and Drury Lane during the year 1837; and subsequently acted as the original representative of the heroines of the most important of Lord Lytton's plays. In 1845 she played Ophelia at the Tuileries before Louis Philippe, who rewarded her with a valuable bracelet. She became the wife of Mr. (now Sir) Theodore Martin in 1851, since

which time she has appeared on the stage at rare intervals. Lady Martin is the authoress of *Some of Shakespeare's Female Characters* (1885).

Prof. Henry Morley, *Journal of a London Playgoer*.

* **Faugère, ARMAND PROSPER** (b. 1810), a French author, born at Bergerac (Dordogne), made his *début* in literature in 1835 by a pamphlet on *La Vie et les Bienfaits de la Rochefoucauld-Liancourt*, and the following year started the newspaper entitled *Le Moniteur religieux*. Between 1836 and 1842 he thrice gained the prize of eloquence offered by the French Academy. The subjects were *Du Courage civil, ou L'Hôpital chez Montaigne* (1836); *Éloge de Gerson* (1838), and *Éloge de Blaise Pascal* (1842). He edited the works of Pascal, *Pensées, Fragments, et Lettres de Blaise Pascal* (2 vols., 1844), which is said to have been the first correct and complete edition of Pascal's *Thoughts*. In 1839 he became chief secretary to the Minister of Instruction, in the following year translator to the Minister of Foreign Affairs, and subsequently director of the Record Office and Chancery. In 1864 he published a revised edition of the *Mémoires de Mme. Roland*, and in 1868 a *Défense de Blaise Pascal, Newton, Galilée*, etc., against the attacks of M. Charles. In 1853 he became an officer of the Legion of Honour, and in 1861 he was promoted commander.

E. Regnard in *Nouvelle Biographie Générale*.

* **Fauriel, CHARLES CLAUDE** (b. 1772, d. 1844), a distinguished French philologist, historian, and critic, was born of poor parents at St. Étienne, studied at Tournon and Lyons, and in 1799 became private secretary to Fouché, Minister of Police. In 1802, however, he was forced to resign this post on the plea of ill-health, and devoted himself with intense passion to the pursuits of literature. Some articles which he published in the *Décade*, edited by Madame de Staël, in 1800, were the means of ripening his slight acquaintance with that distinguished authoress into intimate friendship, which procured for him an introduction into the literary society of Auteuil. He made himself familiar with Sanskrit, Arabic, and the treasures of classical antiquity and of the Middle Ages, and hence saw the importance of studying philosophy in its historical relations, and began to advocate what is known as eclecticism, thus becoming the precursor of that school of philosophy in France which recognises Cousin as its head. In 1810 he published a translation of the *Parthénais oder die Alpenreise* of the Danish poet Baggensen, with a preface on the various kinds of poetry; in 1823 translations of two tragedies of his friend Manzoni, with a preface on the theory of the dramatic art; and in 1824 his translation of the popular songs of modern Greece, with a preliminary discourse on popular poetry. After the July Revolution

of 1830 he became professor of foreign literature at the Sorbonne, a Chair expressly established for him, and in 1836 he was elected a member of the Academy of Inscriptions and Belles-Lettres. In 1836 he published his learned work, *Histoire de la Gaule méridionale sous la Domination des Conquérants Germains* (4 vols., Paris); and in 1837 he issued an edition of the Provençal rhymed chronicle, entitled *Histoire de la Croisade contre les Hérétiques Albigeois*, which is valuable for its historical introduction. In 1846, two years after his death, a number of his professorial lectures were published under the title *Histoire de la Littérature Provençale*, in which he seeks to prove that from the embers of the civilisation of Greece and Rome, which, by a peculiar combination of circumstances, had been transferred not wholly quenched to Provence, was lighted that spark which originated the greater part of the romances of chivalry (that is, not only those of the cycle of Charlemagne, but of the cycle of the Round Table), and thus kindled the civilisation of modern Europe. This theory, however, it should be added, has met with considerable opposition. Another volume of professorial lectures appeared in 1854 under the title of *Dante et les Origines de la Langue et de la Littérature Italiennes*. Among the best of his miscellaneous writings are his examination of the *Système de M. Raynouard sur L'Origine des Langues Romanes*, contributed to the *Bibliothèque de L'École des Chartes*.

Sainte-Beuve, in *Portraits Contemporains*, vol. iv.; *Revue des Deux Mondes*, May, 1846, Dec., 1855; *Encyclopædia Britannica*, 9th edit.

Favre, Jules (b. 1809, d. 1880), French politician, was the son of a Lyons tradesman. He was a law-student in Paris on the outbreak of the revolution of 1830. Into that movement he plunged with enthusiasm; and in a letter to the *National* expressed himself in favour of a republican form of government. As a member of the Lyons bar he distinguished himself by his defence of political prisoners, and in 1846 was called to the bar of Paris. The revolution of 1848 brought him even more prominently forward; as secretary to Ledru-Rollin (q.v.) he was the author of some of the latter's loud-sounding manifestoes; and later on supported the prosecution of Louis Blanc for the affair of the 15th of May. In the Constituent Assembly, to which he was returned by the department of the Loire, Jules Favre proved at first something very like a trimmer; but circumstances gradually forced him to declare himself. He opposed most of the acts of Louis Napoleon's presidency, particularly the expedition to Rome; and on the flight of Ledru-Rollin in June, 1879, he found himself the leader of the Mountain. The *Coup d'État* of December followed, and for six years he thought it advisable to retire from political life, confining himself to the bar. In 1868, however, his

defence of Orsini for the attempt on the life of the Emperor secured Jules Favre's return for Paris, and he became, with Thiers, the leader of an Opposition which increased in strength year by year. A profound impression was created throughout France by his speeches upon the Mexican expedition; and the difficulty with which he managed to obtain a seat at the general elections of 1869 is to be accounted for by the over-confident manner in which he pushed his friends' candidatures, and left his own to take care of itself. Undeceived by the pretended Liberalism of the Ollivier ministry, and undismayed by the result of the Plébiscite, Jules Favre pursued the Empire during its last days with undiminished vehemence, and was one of the few who seriously opposed the declaration of war with Germany. After the overthrow of the Second Empire, he became Vice-President of the Provisional Government of National Defence, and Minister of Foreign Affairs. In that capacity it was Jules Favre's evil fortune to have to conduct the negotiations with Prince Bismarck which were the preliminaries to an ignominious peace. It is obvious that the Chancellor's terms would not in any case have been mild, but it may be doubted whether Jules Favre had in him the combination of suppleness and tenacity which constitutes a good diplomatist. His energy during this period was something marvellous; not only was he engaged in futile attempts to bring Prince Bismarck to reason, but he took some part in the negotiations which preceded the London Conference on the Black Sea question, and in Paris, as *ad interim* Minister of the Interior, was constantly occupied in dealing with the rapidly rising spirit of Communism. The armistice of the 28th of January contained at every turn evidence of Jules Favre's want of skill. Not only was Bourbaki's army excluded from it, but by forgetting to notify that fact to the Bordeaux Government, Jules Favre rendered the ruin of that army inevitable. A still greater blunder was his insistence, against the advice of Prince Bismarck, upon the National Guard retaining its arms, thereby rendering inevitable the Commune and its attendant horrors. Finally, the terms of the peace which he and M. Pouyer-Quertier signed at Frankfurt on May 10th, especially the surrender of Alsace-Lorraine, were a fine comment on the prescience of a man who could enter upon his responsible position with the flourish, "We will not give up an inch of our land, nor a stone of our fortresses." At the February elections Jules Favre had been returned to the National Assembly by several departments, and he became M. Thiers's Foreign Secretary, but in November he had to be sacrificed to the resentment of the Right. His retirement was hastened by the result of an action for defamation, which he won, indeed, but at the price of having to disclose many past irregularities of conduct. In 1871-2 appeared his

political apology, *Le Gouvernement du 4 Septembre*. The excitement which attended his occasional reappearances in the tribune proved that France had not forgotten him, and in 1876 the department of the Rhône returned him to the Senate. His religious views, which in 1867, when he was elected to the Academy as Victor Cousin's successor, were those of a pure Theist, became in his later years those of a Protestant. He died on January 20th. Jules Favre was great in opposition, but in opposition only; his speeches are full of fire, and are emphatically inspiring if taken in small quantities. As a diplomatist he was a failure; his cards were bad, but his method of playing them was that of one who did not understand the game. Very ludicrous was his theatrical "business" during the negotiations with Prince Bismarck. "He ought to know," said the Chancellor, "that bursts of feeling are out of place in politics."

Jules Favre, *Discours parlementaires et Plaidoyers politiques et judiciaires*, edited by Mme. Favre, who has also published a defence of her husband, *La Vérité sur les Désastres de l'Armée de l'Est*, etc. (1883). Bismarck's estimate of his character, in Busch's *Bismarck and the Franco-German War*, is worthy of notice.

[L. C. S.]

Fawcett, HENRY, LL.D., D.C.L. (b. 1833, d. 1884), economist and statesman, was the son of Mr. William Fawcett (b. 1793), a magistrate of Salisbury. The elder Fawcett was one of the earliest members of the Anti-Corn-Law League. Educated first at a local school near Salisbury, then at Queenwood College, Hampshire, Henry Fawcett in his seventeenth year entered at King's College School, London. At Cambridge, where he had entered at Trinity Hall, his course was on the whole a successful one; he was elected a scholar, graduated B.A. as seventh wrangler in 1856, and was subsequently chosen a fellow. He next repaired to London, and joined the Middle Temple; but the dry study of the law was not congenial to him, and he soon renounced it. A vacancy occurred in the representation of Southwark, and Fawcett was nominated in the Radical interest. He was forced to retire, but he had already shown of what stuff he was made. The autumn of 1858 he spent at home, and it was when out partridge-shooting with his father that he met with an accident which inflicted on him total blindness. Blindness, however, was to prove no impediment. Next year young Fawcett went up to Cambridge for his M.A.; and expounded to the British Association at Aberdeen his views on the gold and silver question. He attracted the notice of Mill and Cobden, who encouraged him to persevere in his economic studies; and a speech which he delivered on co-operation at a meeting of the Social Science Congress at Glasgow, in 1860, drew high praise from Lord Brougham. He now devoted himself with zeal to the science of political

economy, and to politics in general, having books and papers read to him, and dictating to an amanuensis the essays which he composed for various magazines and reviews. He became a member of the Political Economy Club, and was a regular attendant at its meetings, and participator in its discussions. In February, 1863, he published his chief work, *A Manual of Political Economy* (7th ed. 1883), a condensation of Mill's main positions, and this was immediately followed by his election to the Chair of Political Economy in the University of Cambridge, where he had for an opponent Mr. Leonard Courtney. In this same year, also, he stood for the borough of Cambridge, and was again defeated; and a similar fate was in store for him at Brighton in February, 1864. In 1865 he brought out a series of lectures on the *Economic Position of the British Labourer*, and in July of the same year, the last occasion on which Lord Palmerston appealed to the country, he was elected M.P. for Brighton, which constituency he continued to represent till the general election in 1874. He was a Radical of the advanced type, and at every contested election he refused, on principle, to pay any expenses beyond those of official and strictly necessary arrangements. Furthermore, his private income, it has been stated, did not exceed £500 a year. But, poor as he was, he soon made his mark in Parliament. Not a little of the esteem felt for him was due to his high sense of duty and sturdy independence. He supported the Whig Reform Bill of the "Sixties," and there was no more earnest advocate of the abolition of university tests. He sympathised, from the very first, not only with female suffrage, but with all measures for raising the position of women to an equality with that of men. He investigated and described the misery of the agricultural labourer. He opposed and defeated the Irish Universities Bill of 1873 because its range of education was too narrow. It is undeniable that the failure of the Liberal Government to settle that question partly led to its overthrow in the following year, and this probably accounts for Fawcett losing his seat at Brighton in February, 1874. In April of the same year he was returned for Hackney, and was again returned at the general election in 1880. At a very early period of his parliamentary career, Mr. Fawcett took a deep interest in all questions affecting India. In fact, so warmly did he identify himself with India, that he won for himself the honourable name of "the member for India." The finances of India were his peculiar care; and in 1872 he succeeded in obtaining the nomination of a committee of the House to inquire into their condition. In 1879 he contributed a series of articles on the finances of India to the *Nineteenth Century*, which was afterwards published in a volume entitled *Indian Finances* (1880). Many of the reforms therein

advocated have since been adopted. On the formation of the second Gladstone administration, in 1880, Mr. Fawcett became Postmaster-General. It is an open secret that he would have been a member of the Cabinet but for an official scruple on account of his blindness, namely, that he could not read confidential documents without the assistance of another person. His management of the Post Office during the four and a half years was characterised by great diligence and administrative skill, and by the introduction of valuable reforms and new institutions, particularly in the money-order system, the Savings Bank, annuities, and life assurance provisions, the telegraph service, reply post-cards, and the Parcels Post. In 1883 he was elected Lord Rector of Glasgow University, and subsequently received the honorary degrees of D.C.L. and LL.D. He died, after a short illness, at Cambridge, on Nov. 6th, 1884. The record of Fawcett's life is one of encouragement and success. Endowed with little genius or originality, he succeeded in impressing the minds of men and influencing their ideas by the sheer force of a strong and independent personality, and by the faculty of giving lucid expression to clear and vigorous thinking. In politics he lacked some of the more delicate gifts of the first-rate statesman. There was a dash of pedantry in his opinions, which, but for the counteracting effect of his real geniality, might have stood more in his way than it did. He did not fear to hit hard. He belonged to the older and stricter school of Radicalism. He was a disciple of Cobden, a firm believer in *laissez-faire*. His political economy was also of the older school. The influence of John Stuart Mill upon him was undoubtedly powerful. He rigidly carried out the doctrines of the Ricardo school as developed and interpreted by Mill. He held along with Cairnes and Lampertico to the Wages Fund Theory, when, on the appearance of Thornton *On Labour*, Mill began to feel sceptical on the point; and even advanced on the advance Mill had made on the signification of the terms "productive" and "unproductive labourer." His own views are seen particularly in the *Economic Position of the British Labourer, Pauperism, and Free Trade and Protection*.

Leslie Stephen, *Life of Henry Fawcett* (1885); Reminiscences by an M.P., in *Daily News*, Nov. 8th, 1884.

[W. M.]

* **Fawcett**, MILICENT (b. 1847), wife of the above, to whom she was married in 1867, is the daughter of Mr. Newson Garrett, of Aldborough, in Suffolk, the native village of Crabbe, and is the sister of Mrs. Garrett Anderson (q.v.). Mrs. Fawcett shared her husband's studies and pursuits, and published in 1869 *Political Economy for Beginners*, a compendium of her husband's larger works. She also contributed to a joint volume of

essays and lectures upon various political and economical questions, which they published in 1872; and in 1874 she wrote a series of tales illustrative of political economy. Mrs. Fawcett has taken a leading part among those who advocate the claims of women to the parliamentary franchise.

* **Faye**, HÉRVÉ AUGUSTE ÉTIENNE ALBANS (b. 1814), a French astronomer, is the son of an engineer of Saint-Benoit-du-Sault (Indre), was educated at the École Polytechnique, and, on the recommendation of M. Arago, was admitted a pupil in the Observatory. In 1843 he discovered a new comet, now known as Faye's comet, and received the Lalande prize from the Academy of Sciences. In 1847 he was elected a member of the Section of Astronomy in place of Baron de Damoiseau; in 1862 a member of the Bureau of Longitudes; and in 1864 a member of the Imperial Council of Public Instruction. From 1848 to 1854 he acted as geodesic professor at the École Polytechnique, and was subsequently appointed rector of the University Academy of Nancy. In 1873 he became professor of astronomy at the École Polytechnique; and in 1878 director of the Paris Observatory. In 1843 M. Faye submitted a paper on *La Parallaxe d'une Étoile anonyme de la Grande Ourse* to the Academy of Sciences; and shortly afterwards published a treatise, *Sur un nouveau Collimateur Zénithal et sur une Limite zénithale nouvelle*. He has also published *Sur l'Anneau de Saturne* (1848), *Méthode de Détermination en Mer de l'Heure et de la Longitude* (1864), *Cyclones solaires* (1873), *Leçons de Cosmographie*, and a few other works, and has translated Humboldt's *Cosmos*, in conjunction with M. C. Galusky. In 1843 he was decorated with the Cross of the Legion of Honour, and in 1864 was promoted to the rank of Officer of the Legion of Honour.

Fayette, LA. [LA FAYETTE.]

* **Fayrer**, SIR JOSEPH, K.C.S.I., F.R.S., etc. (b. 1824), an eminent surgeon and physician, was born at Plymouth, and educated at Edinburgh and London. After taking his M.D. degree and gaining various distinctions, he entered the medical service of the navy, and that of the army in 1849. He served in the Bengal medical service in India from 1850 to 1874, being at the front during the Burmese War; and during the Indian Mutiny he was present at the defence of Lucknow as Political Assistant. From 1859 to 1874 he was professor of surgery in the Medical College of Bengal, and for some time president of the Asiatic Society of Bengal. During the visit of the Prince of Wales to India, in 1875-6, Dr. Fayrer accompanied him as physician. He is the author of *Clinical and Pathological Observations in India*, and of various papers upon the climate and fevers of India. Amongst the most important may be mentioned:—*Disease in India, European*

Child-life in Bengal, and *Liver Abscesses*. He also wrote *The Claws of the Felida* and *Anatomy of the Rattlesnake*. He holds various foreign orders, and was created an LL.D. by the University of Edinburgh in 1878, and was knighted in 1876.

Fazy, JEAN JACQUES (b. 1796, d. 1878), a Swiss economist and statesman, descended from a French Protestant family, which was expatriated by the revocation of the Edict of Nantes, was born at Geneva and educated at Paris. He sided with the Liberals in opposing the Restoration. A disciple of Adam Smith and J. B. Say, he successively published *De la Banque de France, considérée comme nuisible aux Transactions commerciales* (1819), and *L'Homme aux Portions* (1821). In 1830, as editor of *La Révolution*, he signed the protest of the journalists against the *ordonnances* of Charles X., opposed the candidature of Louis Philippe, and when the latter ascended the throne of France joined the Radical Opposition. In 1821 he published some observations on the fortification of Geneva, which have the credit of causing the demolition of its ancient fortifications, thereby giving it increase of territory and greater power of material development; and in recognition of his services in this respect, his fellow-citizens presented him with a considerable portion of land. He fell into disgrace in August, 1862, on account of the part he took in the election of M. Arthur Chénevère to a seat in the Federal Assembly, and in consequence he thought it prudent to withdraw from the representation of Geneva. He was, however, re-elected in the following November. Fazy brought out, in 1826, a tragedy in three acts, *La Mort de Levier* (Geneva, 8vo), a strong national piece, evidencing some dramatic power.

Fechter, CHARLES ALBERT (b. 1823, d. 1879), actor, was born in London, of French parentage, though his father was descended from a German stock. In 1836 the family returned to Paris, and Fechter, who was being brought up as a sculptor, soon developed such high talents for the stage that he secured engagements at some of the leading theatres, especially the Vaudeville. In 1846 he visited Berlin, and two years later made his first appearance in London, together with a French company engaged at the St. James's theatre. After rising to the highest position in his profession in Paris, he visited England again in 1860, acting at the Princess's, where he astonished the critics by his impersonification of Hamlet. During the years that followed he frequently appeared in London, and in 1870 undertook a very successful professional tour to the United States. Unfortunately this success induced him to establish theatres of his own, first at Boston, then at New York. But the attempts failed, and three years before his death Fechter retired to a small farm near

Philadelphia, where he died. Besides Hamlet, his most celebrated parts were Othello, Monte Cristo, Ruy Blas, and Claude Melnotte. His English was difficult to comprehend, owing to a strong French accent; nevertheless, it can hardly be doubted that he was an artist of remarkable, though not of first-rate, power.

Kate Field, Charles Albert Fechter (Boston, 1892).

Fellowes, SIR CHARLES (b. 1799, d. 1860), antiquarian, was a native of Nottingham. His first valuable discovery was made in 1838, when, while exploring the valley of the Xanthus, he identified the remains of the cities of Xanthus and of Tlos. His journal, which was published in 1839, induced the Government to equip him for a new expedition, the result of which was the discovery of the sites of thirteen more cities of Asia Minor; and after a fourth visit he returned with numerous marbles. These are now to be seen in the Lycian saloon of the British Museum.

Ferdinand IV. and V. OF NAPLES.
[NAPLES.]

Ferdinand II. OF PORTUGAL. [PORTUGAL.]

Ferdinand of Saxe-Coburg. [PORTUGAL.]

Ferdinand I., EMPEROR OF AUSTRIA (b. April 19th, 1793, d. June 29th, 1875), was the eldest son of the Emperor Francis I. by his second wife, Maria Theresa of Naples. He was well educated, studied with success natural sciences and economics, and was exceedingly popular during his father's lifetime owing to his amiable character and popular manners. In February, 1831, he married Maria, daughter of King Victor Emmanuel of Sardinia. In March, 1835, he became emperor by his father's death, having been crowned King of Hungary some years before (1830). His first act was to confirm the union existing between the courts of Venice, Berlin, and St. Petersburg. His health, however, was bad, and he was unable to continue the system by which his father had personally superintended the details of government. Accordingly a small Council of State (*Staatsconferenz*) was constituted, consisting of his uncle Louis, his brother Francis, Prince Metternich, and Count Kolowrat, which practically carried on the administration of the country. The absolutist system suffered under this delegation of authority; and the mild and humane emperor was quite incapable of dealing with the growing revolutionary spirit, which at last found vent in the outbreak of March, 1848. On April 25th he declared his intention to grant a Constitution. Next month, frightened by the popular excitement, he fled secretly from Vienna to Innsprück. He was induced to return, but after the tumult in September, and the murder of Latour, he

again fled (Oct., 1848), and on Dec. 2nd, at Olmütz, resigned the crown in favour of his nephew Francis Joseph. He lived twenty-seven years longer, dividing his time between his Bohemian country estates and Prague. His amiable and affectionate character, and his unaffected piety and benevolence, won him the esteem of all who came in contact with him; but he was not strong enough, physically or mentally, for the crisis which closed his reign.

C. Noel, *Nécrologe de Ferdinand le Démonnaire*;
A. Schmidt, *Zeitgenössische Geschichten*.

Ferdinand VII., KING OF SPAIN (b. 1784, d. 1833), was the son of Charles IV. of Spain and Maria Louisa of Parma. He early learnt to chafe under the dominion of his mother and the court favourite Godoy (q.v.); and his first wife, Maria, daughter of Ferdinand, King of the Two Sicilies [NAPLES], encouraged his resistance. The death of Maria was attributed to Godoy, and Ferdinand's arrest in 1807 on the charge of conspiracy made him the idol of the populace. It was under the pretext of furthering Ferdinand's interests that Napoleon, with whom he had long been in correspondence, invaded Spain in December, 1807. The populace thereupon rose and proclaimed Ferdinand king (March, 1808). Napoleon, however, deceived Charles and Ferdinand to Bayonne under pretence of arbitrating between them; forced them both to abdicate, and placed Joseph Bonaparte on the throne. During the Spanish War of Independence Ferdinand remained a prisoner at Valençay, his attitude towards the emperor being submissive, not to say servile; but after the battle of Vittoria had finally ruined the cause of Joseph, Napoleon restored Ferdinand to his throne. His reign (1813-33) was one of varied disaster; much of which must be attributed to his perfidy, ferocity, and folly. In America the colonies rebelled in rapid succession, and Mexico, Chili, Peru, not to speak of minor possessions, were soon finally lost to Spain. At home he placed himself under the control of the Clerical party, who supported him in Government by proscription, the re-establishment of the Inquisition, and the rejection of the charter put forward by the Liberals in 1812, which he had promised to observe. An insurrection in 1820 placed him for a time at the mercy of the Liberals; but the Powers assembled in congress at Verona in 1822 decided that Ferdinand should "be delivered from slavery" by French arms. This odious task was duly executed, and Ferdinand was thus set free for a further period of tyranny, so vile that it even called forth remonstrances from Louis XVIII. During the latter years of his life he sank into sulky indifference, from which, however, he suddenly emerged in 1829 to defeat the hopes of the Clericals, who had fixed upon Don Carlos (q.v.) as his

successor, by contracting a private marriage with Maria Christina of Naples, and in the following year he revoked the Salic Law in favour of his daughter Isabella. The result of this arrangement was the outbreak of the first Carlist War upon the death of Ferdinand, the worst of an indifferent line of princes.

[L. C. S.]

Ferguson, SIR SAMUEL, Q.C., LL.D. (b. 1810, d. 1886), Celtic antiquary, third son of John Ferguson, of Collon House, Antrim, was born at Belfast, educated at Trinity College, Dublin, called to the bar 1838, and to the Inner bar 1859. In 1867 he was appointed the first Deputy Keeper of the Records for Ireland, in recognition of his eminent services to Irish antiquities, of which study he was the *doyen*. As president of the Royal Irish Academy, he, in conjunction with the late Sir William Wilde, created the scientific study of the beautiful and interesting relics of early Irish art, of which the Academy possesses a magnificent collection. In his capacity of Keeper of the Records he displayed remarkable powers of organisation, and was rewarded with knighthood in 1878. His contributions to the *Dublin University Magazine*, and to *Blackwood*, were marked with learning and literary finish. As a poet of Celtic antiquity and patriotism he takes high rank; his verses are full of spirit, and eminently musical. *The Lays of the Western Gael* appeared in 1865; *Congal, a Poem in Five Books*, in 1872; the edition of *Leabhar Breac* in 1876; *Poems*, 1880; *Shakespearean Brevitates*, 1882; and *The Forging of the Anchor*, 1883. *The Cromlech on Howth* (1864) is enriched with valuable notes on Celtic ornamental art.

Fergusson, JAMES (b. 1808, d. 1886), writer on architecture, was born at Ayr. His youth and early manhood were devoted to industrial pursuits, and he was for several years a partner in a firm of indigo merchants. On retiring from business he devoted his fortune and his energies to the study of architecture, and with that view, and the object also of studying early civilisations, he travelled much in the East. The result has been a series of works of the highest importance. In 1845 he published *Illustrations of the Rock-cut Temples of India*, and in 1847 books on the ancient architecture of Hindostan and on the ancient topography of Jerusalem. He designed the Nineveh Court in the Crystal Palace. His knowledge of Mohammedan and Oriental architecture generally, also of Gothic, and all forms peculiar to the West, eminently fitted him to be the historian and expositor of art. Much of this knowledge is embodied in his *History of Ancient and Modern Architecture* (1865, 2nd

ed. 1874), by far the most exhaustive work of the kind known to English literature. His essay on earth-work fortifications, and his large illustrated work on *Tree and Serpent Worship*, are equally authoritative. In 1883 he published treatises on the Parthenon and on the Temple of Diana at Ephesus. The Royal Institute of British Architects presented him with their gold medal in 1871.

***Fergusson, RIGHT HON. SIR JAMES, BART.** (b. 1832), was educated at Rugby, and at University College, Oxford. He entered the Coldstream Guards, but retired from the army in 1854. He represented the county of Ayr, with a short break in 1858, from 1854 to 1868; was Under-Secretary of State for India (1866-7) and Under-Secretary of State at the Home Office (1867-8). In the last year he was appointed Governor of South Australia, whence he was transferred in 1872 to New Zealand, where he remained until 1874. From 1880-5 he was Governor of Bombay. At the general election of 1885 he was elected M.P. for N.E. Manchester, and in 1886 became Under-Secretary of State for Foreign Affairs.

Fergusson, SIR WILLIAM, BART., LL.D. (b. 1808, d. 1877), eminent surgeon, and serjeant-surgeon to the Queen, was born at Prestonpans, East Lothian, and received his early education at the parish school of Lochmaben, the High School of Edinburgh, and the University of Edinburgh. He was intended at first for the law, but he abandoned that pursuit, and in November, 1825, entered the medical profession. In due course Fergusson became demonstrator to Dr. Knox, the anatomist. He subsequently obtained the fellowship of the Edinburgh College of Surgeons, became attached to the dispensary, and in 1839 was elected surgeon to the Edinburgh Royal Infirmary. He now rose rapidly in public estimation, and divided the surgical honours of Scotland with Syme, who was nine years his senior. In 1840 he was appointed to the Chair of surgery in King's College, London, and to the surgeoncy of King's College Hospital, and came to London. Imbued with the spirit which had animated Liston and Syme in inaugurating a new era in surgery, Fergusson followed closely in their path, rendered himself conspicuous by the manner in which he performed the most brilliant and unusual operations, and at the same time simplified his art by strongly leaning towards what he himself was pleased to call "conservative surgery." At that period the operation of the excision of the elbow-joint had hardly become generally established, notwithstanding the powerful example of Syme. Fergusson, however, was one of the first to practise it on a large scale; and his operations on the upper jaw caused at this time a great sensation. He was now widely known, and his appointment as surgeon-in-ordinary to the Prince Consort,

in succession to Aston Key, in 1849, met with universal approbation. In 1855 he was appointed surgeon-extraordinary, and in 1867, on the death of Sir William Lawrence, serjeant-surgeon to the Queen. In 1861 he was admitted into the Council of the College of Surgeons, having only passed the examination in 1840, when he first came to London; in 1870 he was elected president of the College; and in 1875 received the honorary degree of LL.D. from his *alma mater*. In 1866 he published a volume of lectures under the title of *The Progress of Anatomy and Surgery in the Nineteenth Century*, which embody his views on amputation, a procedure he described, with characteristic fervour, as "one of the meanest, and yet one of the greatest, operations in surgery—mean when resorted to when better may be done; great as the only step to give comfort and prolong life." His *System of Practical Surgery* has run through five editions; and his papers on excisions and cleft palate in the *Medical and Chirurgical Society's Transactions*, and on lithotripsy in the *Edinburgh Medical and Surgical Journal*, are marked as eminently practical contributions. Fergusson's chief contributions to surgery are the closing of the cleft palate, the excision of the head of the femur in a case of incurable disease of the hip-joint, the excision of the scapula in a case of disease of the bone, and the excision of the joint in a case of incurable disease of the knee-joint in place of amputation. Fergusson was without doubt one of the greatest practical surgeons of his time. It is true he had not Syme's genius, but he had none of that narrow-mindedness which arose probably out of Syme's intellectual force and concentration of character. He was created a baronet in 1866.

The Lancet, Feb. 17th, 1877; *Medical Times*, Feb. 17th, 1877; *British Medical Journal*, Feb. 17th, 1877. [W. M.]

Ferrey, BENJAMIN (b. 1810, d. 1880), architect, the son of the late Mr. Benjamin Ferrey, of Christchurch, Hants, belonged to a French Huguenot family. While still a boy, Benjamin Ferrey evinced a strong taste for drawing and love for old buildings. He was educated at the grammar-school at Wimborne, Dorset, and subsequently was placed under the charge of Pugin (q.v.), with whom he studied for several years. In 1834 he brought out *Antiquities of the Priory Church of Christchurch, Hants*. In the literary portion of this work he was assisted by Mr. William Bayley. About this time he commenced practice in Great Russell Street, Bloomsbury. In 1839 he carried out a portion of Dorset County Hospital, Dorchester, and in 1841 he was appointed hon. diocesan architect, Bath and Wells, a post he held up to the time of his death. His earliest works in the diocese were the restoration of the nave and transepts of Wells Cathedral, and of the Lady Chapel there, the additions to and restoration of the

palace at Wells for Bishop Bagot, and the restoration of the beautiful chapel at Wells. He was one of the original members of the Architectural Society, and in 1839 became a fellow of the Institute of Architects, of which he was afterwards twice vice-president. In the competition for the Houses of Parliament, he acted as honorary secretary to the Committee of Architects, and was himself a competitor. In 1843 he designed the costly church of St. James, Morpeth, in the Norman style, which has been pronounced to be one of the most successful adaptations of the grander features of that style in England. Mr. Ferrey had now a very large practice, and enjoyed the reputation of being one of the best church architects of the day. Among his works may be mentioned Cliffe House, Dorchester; St. Stephen's, Westminster; church at Penn Wood; St. Peter's church, Elsted; Diocesan School, Saltley; St. John's church, Eton; St. Mary's, Buckland; Chase Cliffe, Derbyshire; besides many mansions and schools. His last work was the mansion for the Duke of Connaught, at Bagshot Park, which was commenced early in the spring of 1877. In 1861 he published his *Recollections of A. Welby Pugin*, a work which received favourable notice from the press, and was read by the public with great interest; and about this time he invented and patented a mode of stamping plaster, which was inexpensive and very effective, and this process he adopted at Maclean Church, near Amphill; All Saints', Blackheath; Streatham parish church, and at other churches. In 1863 he was elected a fellow of the Society of Antiquaries. Mr. Ferrey was one of the most eminent agents in the early days of the Gothic revival. As a church architect he has been excelled by few of the moderns, and many of his buildings have the grace of the ancient examples.

The Builder, Sept. 4th, 1880, which gives a full list of Mr. Ferrey's principal works; *The Architect*, Aug. 28th, 1880.

* **Ferrier, DAVID, M.D., LL.D., F.R.S., F.R.C.P.** (b. 1843), professor of forensic medicine in King's College, London, was born at Aberdeen. He was educated at the gymnasium and grammar-school of that city, and subsequently matriculated at the University of Aberdeen as a student in the faculty of arts, in 1858, as senior bursar of his year. He took his Master's degree in 1863 with first-class honours in classics and philosophy, and in the same year won "the blue riband" of the Scottish universities—the Ferguson scholarship, open for competition to graduates of Aberdeen, St. Andrews, Edinburgh, and Glasgow. In 1864 Dr. Ferrier proceeded to Heidelberg University, and in 1865 he entered the University of Edinburgh as a medical student, where his career was one of the most brilliant on record. He graduated as M.B. and C.M. in 1868, and became assistant to Dr. Lay-

cock, professor of the practice of physic, almost immediately afterwards. In 1869 he went to Bury St. Edmunds as assistant to Mr. Image, a distinguished practitioner in that town, and there prosecuted with untiring industry his researches into the comparative anatomy and histology of the brain. These he worked up into an academic thesis on the *Comparative Anatomy of the Corpora Quadrigemina*, for which the University of Edinburgh, when he took his Doctor's degree in 1870, awarded him a gold medal. In that year Dr. Burdon Sanderson appointed him as his assistant, and he was also appointed lecturer on physiology at Middlesex Hospital. In 1871 he resigned these posts for the demonstratorship of physiology at King's College. In 1872 the council of King's College elected him professor of forensic medicine, in succession to the celebrated Dr. Guy. In 1872 Dr. Ferrier was appointed junior physician to the West London Hospital; in 1874 assistant physician to King's College Hospital, and full physician in 1880. From 1877 to 1880 he was assistant physician to the Hospital for Epilepsy and Paralysis, Regent's Park. In the latter year he was appointed physician to the National Hospital for the Paralysed and Epileptic. He was elected to the fellowship of the Royal Society in 1876, and of the Royal College of Physicians in 1877. In 1883 the University of Aberdeen conferred on him the honorary degree of LL.D. He is a *lauréat* of the Institut de France; and in 1883 was Marshall Hall prizeman. It was owing to his early friendship with Dr. Hughlings Jackson that Dr. Ferrier began his elaborate series of experimental researches into the functions of the brain, mainly for the purpose of testing Dr. Jackson's theories as to the causes of various forms of epilepsy. Sir J. Crichton Browne, in 1873, invited him to embody the early results of these researches in the West Riding Lunatic Asylum reports. His great aim has been to localise the functions of the brain by experiments on living animals—to found, in fact, a natural and scientific, as distinguished from an imaginary and conjectural, phrenology. In 1876 he published his great work on the *Functions of the Brain*; and in 1878 his treatise on *The Localisation of Cerebral Disease* constituted the Colstonian lectures at the Royal College of Physicians. He was one of the founders, and is one of the editors, of the medico-psychological journal called *Brain*; and part ii. of the *Royal Society's Transactions* for 1884 contains an elaborate memoir on *The Effects of Lesion of Different Regions of the Cerebral Hemispheres*, in which Professor G. F. Yeo was his *collaborateur*. His experiments on the brains of living animals caused him to be prosecuted by the anti-vivisectionists at Bow Street police-court, where he was triumphantly acquitted.

Ferrier, JAMES FREDERICK (b. 1808, d. 1864), metaphysician, was born at Edinburgh, and having been educated at the High School, and at Magdalen College, Oxford, and studied for a time at Heidelberg, he returned to his native city, and devoted himself principally to the abstract branches of philosophic speculation. Having published some pamphlets and contributions to magazines, the most important of which were the series of articles afterwards published as an *Introduction to the Philosophy of Consciousness* (1838-9), he was appointed professor of civil history in Edinburgh, in 1842, and in 1845 professor of moral philosophy at St. Andrews, where he continued till his death. His masterpiece of philosophic speculation, the well-known *Institutes of Metaphysics: the Theory of Knowing and Being*, an elaborate constructive system, built up with brilliant originality and almost mathematical precision from the minimum assumption of the inevitable self-consciousness of all intelligence, was published in 1854, and immediately raised a storm of controversy in the learned world, in which metaphysics were then falling more and more into discredit. Though often accused of Hegelianism, and compared, strangely enough, with Spinoza, no doubt mainly on account of his choice of the deductive mathematic form of exposition, and though undoubtedly largely indebted to Fichte and Kant, he himself always maintained the independence of his position. He never published anything afterwards of equal importance with the *Institutes*. His *Lectures on the History of Greek Philosophy* appeared between the years 1859 and 1862, and a few other pamphlets and occasional papers have been issued since his death by his son-in-law, Sir Alexander Grant, and Professor E. J. Lushington, in their edition of his *Philosophical Works* (1875). He married a daughter of John Wilson ("Christopher North").

Introductory Notice by Mr. Lushington to the *Philosophical Works* (1875).

Ferrière. [LA FERRIÈRE.]

***Ferry, JULES FRANÇOIS CAMILLE** (b. 1832), French politician, is an Alsatian from the Vosges. Though called to the French bar, he devoted himself almost entirely to journalism, and between 1856 and 1869 his signed articles in the *Presse*, *Courrier de Paris*, and, above all, in the *Temps*, with which his connection began in 1865, attracted much attention. He further distinguished himself as a pamphleteer, notably by a brochure, *Les Comptes d'Hausmann*, the title being a clever pun on the popular *Contes d'Hoffmann*. After one failure, he succeeded in being chosen as deputy for the sixth arrondissement of Paris (1869), and distinguished himself by some eloquent attacks upon the Ollivier ministry. During the siege of Paris, he acted as a member of the Government of the National Defence, and in 1872 was appointed by M. Thiers Minister Resident

at Athens, an office which he resigned on the overthrow of the President. During the presidency of Marshal MacMahon, M. Ferry, as leader of the Republican Left, combatted with zeal and success the insidious designs of the Broglie and Rochebouet Cabinets, and attempted to inspire the wooden Dufaure administration with zeal for reform. In the winter of 1879 M. Ferry's ministerial career began; he accepted a seat, as Minister of Public Instruction, in President Grévy's first Cabinet, that presided over by M. Waddington. He promptly introduced an Education Bill, in which the Jesuits were attacked by the famous "Article 7," which forbade "unauthorised communities" to teach in schools. The Bill was shelved, owing to the vigorous opposition it encountered in the Senate, and in the following year the clause was rejected outright by the same body. Nevertheless, on the fall of the De Freycinet ministry, in September, M. Ferry was requested by the President to form a Cabinet, and did so, retaining most of the old ministers, but placing M. Barthélemy St. Hilaire at the Foreign Office. His first step was to execute the March decrees against the Jesuits with great severity. M. Ferry proceeded to develop a vigorous colonial policy with some rapidity, and laid hands upon Tunis in 1881, establishing a French protectorate there under the treaty of Bardo, much to the indignation of Italy and of the Porte. The scandals connected with the acquisition, and the turbulence of the province, cast considerable odium on the Government, and in November the ministry resigned. After the short-lived Gambetta and De Freycinet ministries had come and gone, M. Ferry, in Feb., 1883, was requested by the President to form a new ministry, and there seemed a prospect of a stable Government. Undeterred, however, by previous experience, he plunged once more into colonial enterprises. The protectorate was finally established in Tunis, and the unjust claims recently advanced upon Madagascar and Tonquin speedily involved the republic in two wars. "One must think," said the Prime Minister on the latter question, "for the future position of the sons of honest Frenchmen." Neither was successful; the Malagasy Government, though driven from the seaports, held out with energy in the interior; while in Tonquin the struggle—at first one against the piratical Black Flags—speedily developed into an undeclared war against China. Peace was made only to be broken, and early in 1885 the French arms suffered a series of reverses, culminating in a disastrous retreat from Langson, which M. Ferry in vain attempted to conceal. Early in April he fell amid the execrations of the Parisian populace, and was succeeded by M. Brisson (q.v.). M. Ferry's subsequent attempts to justify his colonial enterprises were not favourably received by the French electorate.

***Festing, SIR FRANCIS WORGAN, C.B.** (b. 1833), entered the Royal Marines in 1850, whence he passed into the Marine Artillery in 1851. He served with distinction in the Crimean and Chinese Wars, and rising rapidly in the service, became lieutenant-colonel in 1872. On the outbreak of the Ashantee War (1873), he was in command of the British forces at Cape Coast Castle, and by destroying the town of Elmina, deprived the enemy of a valuable basis of operations for an attack on that settlement. After the arrival of Sir Garnet Wolseley to take command, Colonel Festing was severely wounded while resisting an attack upon the fortified camp of Dunquah. He was thanked by both Houses of Parliament for his services on the Gold Coast. He was Assistant Adjutant-General to the Marines from 1876 to 1883, and became aide-de-camp to the Queen in 1879.

Feuerbach, LUDWIG ANDREAS (b. 1804, d. 1872), the philosopher, was the fourth son of Paul Johann Feuerbach (q.v.), and was born at Landshut. He studied theology with a view to the Church, first at Heidelberg, and then at Berlin, where he heard Schleiermacher, and attended nearly all Hegel's lectures. Under this influence he abandoned theology in 1825, and proceeded to Erlangen, to study natural science. At the same time he began his profound investigations into the history of philosophy. Soon afterwards (1828) he received permission to lecture in public, but was deprived of the right in 1832, owing to the tendency of his first published work, *Thoughts on Death and Immortality*, in which, like the modern Positivists, he limited immortality to personal influence on the human race. After some years of a wandering life, he married in 1837 and settled at Brückberg, a hamlet near Anspach, where his wife had a small share in a factory. The years that followed were extremely productive. He had already published two volumes of his *History of Philosophy*, and *Pierre Bayle, a Contribution to the History of Philosophy*, followed in 1838. The next year was devoted to attacks on the Hegelian system; and in 1841, *The Essence of Christianity*, perhaps his most celebrated work, attracted general notice, as well for its audacity as for its sublimity of thought. By referring the mysteries of religion to the mysteries of self, and identifying the predicates of God with the predicates of man, Feuerbach here established a system of anthropology that again bears close resemblance to the Comtist creed. The book was translated by George Eliot at the beginning of her literary career. In his next two works, *Temporary Theses for the Reform of Philosophy* (1842), and *Principles of the Philosophy of the Future* (1843), Feuerbach definitely broke with Hegelianism. Of the numerous works that followed in these years, *The Essence of Religion* alone need here be mentioned. His speculation led Feuerbach

more and more to identify God with nature, and to deny the possibility of existence beyond sensuous apprehension. These years (1840-50) formed the period of his highest influence, especially on the youth of Germany; and after the revolution of 1848, by invitation of the students of Heidelberg, he lectured to enthusiastic audiences in the town-hall. In 1852 he published the biography of his father; and in 1857, *Theogony, according to the Sources of Classical, Hebrew, and Christian Antiquity*. In 1860 he was obliged to leave Brückberg, and spent the remainder of his life in distressed circumstances near Nuremberg. In his last work, *Godhead, Freedom, and Immortality, from the Point of View of Anthropology* (1866), he attempted a controversion of Schopenhauer's pessimism. He was distinguished from other German philosophers by the lucidity of his exposition, and his genuinely popular influence through many critical years of German history.

Albrecht Rau, *Feuerbach's Philosophie* (1892); Karl Grün, *Ludwig Feuerbach in seinem Briefwechsel und Nachlass* (1874); C. Beyer, *Leben und Geist L. Feuerbach's* (1873). [H. W. N.]

Feuerbach, PAUL JOHANN ANSELM VON (b. 1775, d. 1833), one of the most distinguished German jurists and reformers of criminal law, was born near Jena in 1775, and educated at Frankfurt and in his native town. He took up the profession of the law in obedience to his father's wishes, and very much against his own inclinations, which would have led him to the study of philosophy. His first work, entitled *Anti-Hobbes; or, on the Limits of Civil Power, and the Compulsory Rights of Subjects against their Sovereigns* (1798), attracted much attention, and subsequently the whole science of criminal law was reformed by his exertions and the influence of his writings. In 1804, after the publication of his *Critique of a Project of a Penal Code for Bavaria*, he was appointed to draw up a criminal code for that country, which was the basis of penal codes subsequently accepted in other German states. In his work, *Consideration on the Jury*, he severely censures the weak points in French legislation. He was a zealous opponent of all civil and ecclesiastical aggressions, and of the abuse of the power of the strong against the weak, all his measures being made in the cause of justice and humanity. In the latter years of his life he took much interest in the child Kaspar Hauser, who was kept in a dungeon from early childhood to about the age of seventeen, and in 1832 published the treatise, *Kaspar Hauser: an Instance of a Crime against a Soul*, translated 1834, in which he gives the results of his investigations of the case. Feuerbach was appointed in 1817 the first president of the Court of Appeal at Anspach.

Leben und Wirken Anselm von Feuerbach, by his son (1852); *Kaspar Hauser, with a Memoir*

of the Author; E. Holder, *Savigny und Feuerbach, die Koryphäen der deutschen Rechtswissenschaft* (1881).

• **Feuillet**, OCTAVE (b. 1812), French novelist and dramatist, made his literary *début* in 1844. He was elected to the French Academy in 1862, and from 1865–70 was librarian of the Imperial Residences. Of his numerous novels, the best, perhaps, are *Le Roman d'un jeune Homme pauvre* (1858), *Histoire de Sibylle* (1862), *Monsieur de Camors* (1867), *Julia de Trécaur* (1872), and *La Mort* (1886); and of his still more numerous plays, *La Crise* (1848), *Péril en la Demeure* (1855), and *Le Sphinx* (1874). Many of M. Feuillet's novels have been translated into English, notably his masterpiece, the *Roman d'un jeune Homme pauvre*. M. Feuillet is undoubtedly one of the greatest of living French novelists. His style is correct, without being affected; his humour is refined, and his pathos, except where it degenerates into sentimentalism, is genuine. Moreover, he is not brutally indecent like most of his contemporaries, though his ideas of morality are occasionally questionable.

• **Féval**, PAUL HENRI CORENTIN (b. 1817), French novelist, was born at Rennes, and, having completed his studies in his native town, adopted the profession of a barrister. After his first case, however, he gave up all thoughts of the bar, and resolved to devote himself to literature. The success of *Le Loup blanc* led to a commission to write *Les Mystères de Londres*, which he published under the pseudonym of "Francis Trollope." This romance, with its stirring incidents and thrilling interest, was eminently successful, and was immediately translated into various languages, and rapidly went through about twenty editions. After the revolution of 1848, M. Féval endeavoured to establish some journals, but being unsuccessful, he returned to his novels, though the books written after this period—*Les Belles de Nuit*, *La Forêt Noire*, *Le Paradis des Femmes*, *Le Jeu de la Mort*, and others—have not attained the same popularity as his earlier writings. "The revolution had cut the rails," as he said himself. About 1876 he became converted to Roman Catholicism of the strictest type, and his new convictions manifest themselves in his latter writings. M. Féval possesses great powers of imagination, and his stories are well constructed and well told, but his style is somewhat monotonous, and wanting in the more delicate touches of humour and pathos. Many of his novels have been dramatised, though, with the exceptions of *Le Fils du Diable* and *Les Mystères de Londres*, they have not been so successful on the stage.

Fichte, JOHANN GOTTLIEB (b. 1762, d. 1814), German philosopher and patriot, was born of humble parentage, May 19th, 1762,

at Rammenau, in Saxon Lusatia. He was educated at Schulpforta, and at the Universities of Jena and Leipzig. Originally intended for the ministry, he found himself unable, through poverty, to proceed to his theological examination, and at the same time but little drawn to the profession. After spending some years as house-tutor near Leipzig, he proceeded, in 1788, in the same capacity to Zurich. Here he made the acquaintance of his future wife, Johanna Rahn; but his situation proved full of petty annoyances, and in 1790 he returned to Leipzig, full of plans. None of these was destined to be successful; but in the autumn of that year Fichte at last found his true vocation. This was revealed to him by the reading of Kant's *Critique of Pure Reason*. The book was as yet hardly ten years old, and was only beginning to take hold of the ardent spirits of the time. With characteristic enthusiasm, Fichte gave himself up entirely to the study of the Kantian philosophy, and in the following year proceeded to Königsberg to make the acquaintance of Kant himself. In Königsberg Fichte wrote his *Versuch einer kritischen Offenbarung*, in which he expounds on Kantian lines the relation of religion to morality. By the help of the aged philosopher, the essay was brought out in 1792 by Kant's own publisher; and as, by some accident, the preface and the author's name were omitted, the work was at first received as Kant's. The accident was the making of Fichte's reputation, and life began to wear another aspect for him. In October, 1793, he married Johanna Rahn, and two months later he was offered the post of extraordinary professor of philosophy at Jena, then one of the chief centres of intellectual life in Germany, and the second home of the Kantian philosophy. Here his principal works were published, in which he develops Kantianism in an idealistic direction: *Grundlage der Gesammten-Wissenschaftslehre* (1794); *Grundlage des Naturrechts* (1796-7); *System der Sittenlehre* (1798), besides various essays and two important *Introductions* to his system published in 1797. Fichte's connection with Jena was brought to an abrupt termination in 1799, in consequence of a charge of atheism brought against him. The immediate cause was a questionable essay by Forberg, which he had admitted to his *Philosophical Journal*, and certain pre-fatory observations to the same by Fichte himself *On the Ground for our Belief in a Divine Government of the Universe*. Fichte's dismissal was undoubtedly largely due to his own impetuous behaviour in the proceedings to which the charge gave rise. He now removed to Berlin, where his philosophy entered upon what is known as its second phase. This later form was expounded by him in a series of semi-popular works, the chief of which are the *Bestimmung des Menschen* (1800); the *Bestimmung des Gelehrten*, delivered

as lectures at Erlangen in 1805, and the *Anweisung zum seligen Leben* (1806). In 1806 came the humiliation of Prussia by Napoleon, and Fichte contributed powerfully to the moral regeneration of his country by his impassioned *Reden an die deutsche Nation*, delivered in the winter of 1807-8. In 1810 he became a professor in the newly founded University of Berlin, of which, in 1811, he was rector. Fichte died on Jan. 27th, 1814, of fever, caught while nursing his wife, who had herself been struck down by it in the midst of her labours for the wounded, of whom the city hospitals were then full. It is impossible fully to understand Fichte's system without a previous study of Kant; but it may be described as a speculative idealism of the boldest type, founded more especially upon the fact of duty and moral activity. In the world of sense, which materialism accepts as the type of reality, Fichte sees only the necessary sphere of moral action. He denies it any independent reality—it is simply the means by which the self-conscious spirit realises its destiny. In order to have a material to work in, and, indeed, in order to attain to self-consciousness at all, the *Ego* must, in Fichte's phrase, posit a *Non-Ego*, or, in other words, set up a limit to its own activity. But such a *Non-Ego* is entirely relative to the *Ego*, and does not exist in its own right, as the *Ego* does. Hence we have not a Dualism of two mutually independent principles, but a Monism which explains all existence as a product of the free activity of the *Ego*. As Fichte thus seems to absorb the world of objects in the thinking subject, sacrificing nature, as it were, to thought, his system is generally described as subjective idealism. It must be remembered, however, that the *Ego* spoken of is not the consciousness of the individual, but a divine or universal consciousness, of which finite *Egos* are no more than reproductions. It was to obviate misunderstanding in this respect that Fichte in his later years altered the terminology of his system. The exclusively moral, and, so to speak, militant attitude of his first works gives place to a more comprehensive and more religious view of experience, as the process of the divine life encompassing our lives and working itself out to its own issues. He was thus on his way to correct the chief defect of his philosophy; for, noble and ethically bracing as his thought is, it suffers from a certain one-sidedness and exclusiveness of spirit which was closely connected with the character of the man.

Fichte's life has been written by his son, J. H. Fichte. His works have been collected in eight volumes, besides three volumes of posthumous works. The more popular treatises have been translated into English by Dr. William Smith. An account of his life and philosophy will be found in Adamson's *Fichte* (*Blackwood's Philosophical Classics*).

[A. S.]

* **Field**, CYRUS (b. 1819), an American merchant, who successfully established telegraphic communication between Europe and America, was born in the State of Massachusetts. In 1854 he procured a charter, authorising him to lay a telegraphic cable between America and Newfoundland, and for many years he devoted his whole time and fortune to this enterprise. The "Atlantic Telegraph Company" was organised by his exertions, and after two failures they succeeded in working the submarine cables satisfactorily, August, 1866. Mr. Field accompanied the two expeditions sent from England to lay the cable in 1857 and 1858.

Fielding, COPLEY VANDYKE, or ANTHONY VANDYKE COPLEY, always known as Copley Fielding (b. 1787, d. 1855), one of the leaders of the English water-colour school, was born of an artistic family near Halifax, and came to London at the beginning of this century to study art under John Varley, whose sister-in-law he married (1806). He began to exhibit in the Water Colour Society in 1810, and continued a constant and very large contributor to those exhibitions till the year of his death, at which time he had been president of the society for fourteen years. He occasionally tried oil-painting, but was only successful in water-colour, and in this medium his works were extremely numerous. Their names are of no importance; for as it has been said that properly speaking he only painted *one sea*, it may further be said that at the time of his highest power he only painted one moor, one down, one lake, and one misty gleam. As a result of this apparently voluntary limitation in subject, combined with the habit of forsaking nature for his studio, and constantly exhibiting tricks of effect to his numerous and admiring pupils, he fell into the most rigid mannerism of self-repetition, crudeness of colour, and feeble or blurred confusion of detail; and yet from isolated specimens of his work it might seem as though he might have been second only to Turner among water-colour artists. No one has more faithfully portrayed certain fine elements of English scenery, the rushing seas, and misty mornings, broad sunlit downs, and the lustrous surface of quiet lakes. In Ruskin's words, "He has done in his peculiar walk, what for faithful and pure truth, truth indeed of a limited range and unstudied application, but yet most faithful and most pure, will remain unsurpassed, if not unrivalled."

Ruskin, *Modern Painters* (especially vol. i., p. 245).

Fieschi, JOSEPH MARIE (b. 1790, d. 1836), conspirator, was a native of Corsica. He entered the French army, was sentenced to ten years' imprisonment for robbery, and coming to Paris in 1830 obtained a pension under the pretence that he had lost his property at the Restoration. Deprived of an

appointment by the Prefect of the Seine owing to his misconduct, he fell into distress, and conceived the idea of murdering King Louis Philippe. The "infernal machine," consisting of twenty barrels, to be discharged simultaneously, was accordingly devised, and placed in a house of the Boulevard-du-Temple. The attempt, however, made on July 28th, was not a success. The king escaped with a slight scratch, although eleven persons round him were killed. Fieschi, with his accomplices, Morey, Boireau, and Pepin, was duly executed.

Figueras, STANISLAS (b. 1819, d. 1882), Spanish politician, began life as a law-student, and early embraced Republican opinions. After retiring for awhile to Tarragona during the confusion which followed the *coup d'état* of Espartero (q.v.), he was returned to the Cortes by Barcelona in 1851, and joined the Republican Union. Having taken part in the revolution of 1866, he was exiled for several months; but, after that of 1868, which drove Isabella from Spain, he, in conjunction with Castelar (q.v.), led the Republican party in their Opposition to a monarchical form of government. When, in February, 1873, Amadeus of Savoy grew tired of being scoffed at as a *re intruso*, and abdicated the throne, Figueras appeared to have triumphed. He became chief of the Provisional Government as President of the Executive Power, but was unable to maintain the slightest semblance of order in a country distracted between Unionist and Federal Republicans, Carlists and Socialists, and in April he fled from Spain. On the accession of Alphonso he retired altogether from public life.

* **Figuiet, GUILLAUME LOUIS** (b. 1819), a distinguished chemist and scientific writer, was born at Montpellier, and educated in his native town under his uncle, Pierre Oscar Figuiet, professor in the School of Pharmacy. He has been a constant contributor to various scientific papers, and was for some time scientific editor of *La Presse*, and subsequently of *La France*. Amongst his scientific works we may mention:—*Exposition et Histoire des principales Découvertes scientifiques modernes* (1851–3), *Histoire des Merveilleux dans les Temps modernes* (1859–60), *Le Lendemain de la Mort, ou la Vie future selon la Science* (1872), *Les Races humaines* (1871). Most of his works have been translated into English and other European languages. His wife, Madame Juliette Bouscareau (b. 1829, d. 1879), also distinguished herself by her literary achievements. She is the authoress of a number of novels, most of which appeared in the *Revue des deux Mondes*, and of several plays.

Fillmore, MILLARD (b. 1800, d. 1874), thirteenth President of the United States, was the son of a settler in Cayuga County, New York. He was apprenticed to a wool-carder;

M.W.—14*

but by dint of sheer hard work managed to educate himself, and became a clerk in the office of a judge. In 1822 he entered a law-office at Buffalo, and was admitted to the bar in that city in 1823. In 1832 he was elected to Congress on the anti-Jackson ticket, and was re-elected in 1836 and 1840. After the triumph of the Whigs at the last election, Fillmore was appointed chairman of the Committee of Ways and Means, and was the author of the tariff of 1842. After standing for the Governorship of New York without success, he became Controller of that State in 1844. In 1848 he was elected Vice-President of the United States on the Zachary Taylor (q.v.) ticket, and as President of the Senate won considerable praise for the impartial way in which he presided over the discussions on Mr. Clay's Compromise Bill for the organization of the territories. Raised unexpectedly to the presidency by the death of General Taylor in 1850, Fillmore chose Daniel Webster as his Secretary of State, and did his best to prevent a collision between North and South by pushing on the Compromise Bill, though it was feared at the time that neither party would accept it. The North was further alienated by the President's signing the Act for the surrender of fugitive slaves, and the consequence was that the Whig party, which had carried Taylor and Fillmore in 1848, was utterly defeated at the polls in 1853. Fillmore's presidency was, in fact, a very unlucky one, only redeemed from absolute failure by some highly successful exploring expeditions conducted under its sanction. He retired to Buffalo; and in 1856, while absent in Europe, was nominated for the presidency, but received somewhat scanty support. He took no part in the Civil War, but during the remainder of his life was fond of attending public meetings, over which he frequently presided with admirable suavity of manner.

The American Annual Cyclopædia, 1874.

[L. C. S.]

Finlay, GEORGE (b. 1799, d. 1875), historian, was the son of an officer in the Engineers. Stirred by the cause of Greek independence, he went, in 1823, with Lord Byron and his comrades to Greece, and was fortunate enough to witness the triumph over the Turks. Thenceforward he lived at Athens; and more than once, while Otho was king, came into collision with the authorities, on account of his sympathy with democratic ideas. He was the Athenian correspondent of the *Times*, and wrote for the *Saturday Review*. But his days were chiefly occupied in writing the history of Greece under foreign rule. This great undertaking was published from time to time under different titles. *Greece under the Romans* appeared in 1844; *The History of Greece and Trebizond* in 1851; *Greece under the Ottoman and Venetian Domination* in 1856; and *The*

Byzantine and Greek Empires in 1861. Concerning the affairs with which he was more immediately concerned, Finlay wrote *The Hellenic Kingdom and the Greek Nation* (1836), and *History of the Greek Revolution* (1864). The whole was edited by Mr. H. F. Tozer in 1880, and republished under the title, *History of Greece from its Conquest by the Romans to 1864*. Too extensive to be equally valuable throughout, and marred by diffuseness of style and a tendency to recapitulate, Finlay's history is nevertheless a work of much excellence, and the only authority in English on a great period of history too often passed over as completely unimportant—namely, the Byzantine. The Germans have complimented it by translating two of the volumes, despite the learned researches of Hopf and Hirsch in the same field.

The short autobiography in the 1880 edition of Finlay's *History of Greece*.

Finelli, CARLO (b. 1780, d. 1854), an Italian sculptor, belonged to an old family of sculptors, and studied the *chefs d'œuvre* of the ancient masters for some time at Florence, and subsequently at Rome, where Canova was resuscitating Italian art. His first education under that master was *The Infant Mars and Juno*, which excited the admiration of connoisseurs. He declined the professorship of sculpture at Amsterdam in 1814, as he did not wish to leave Italy. His chief works are *The Triumph of Cæsar*, *Raphael*, and *St. Michael the Archangel*, which are good examples of the unfinished but massively impressive style.

* **Fischer, KUNO** (b. 1824), one of the foremost philosophic critics in Germany, was born at Sandewalde, in Silesia, and educated at the gymnasium of Posen and the Universities of Leipzig and Halle. Having settled as a *privat-docent* at Heidelberg, he was appointed to lecture on philosophy in 1850, and had become remarkably popular with the students when, in 1853, he was suddenly forbidden by the Government to continue his course. In 1856 he was invited to Jena, and became the intimate friend and companion of the Grand-Duke of Weimar. In 1872 he was recalled to Heidelberg, where he still occupies the philosophic Chair. As one of the most prominent members of the new Hegelian school, and perhaps the most lucid of all the interpreters of Kant, he is highly esteemed in philosophic circles throughout Germany. He has written treatises on Spinoza, Bacon, Fichte, and other philosophers; and a *History of Modern Philosophy* (1852-72); besides several important contributions to the history of German literature, such as *Schiller as Philosopher* (1858), and *Lessing as Reformer of German Literature* (1881).

Fitzgerald, EDWARD (b. 1809, d. 1883), the translator of *Omar Khayyâm*, was born at Bredfield, in Suffolk, and educated at the

Grammar School of Bury St. Edmunds, whence he proceeded to Trinity College, Cambridge, and took his degree in 1830. James Spedding was among his schoolfellows, and he made lifelong friendships with Thackeray and Tennyson at Cambridge. His private means rendered a profession unnecessary, and he led a life of simplicity and retirement, devoted to reading, and especially to the study of southern classics, such as Calderon and Cervantes. Indifferent to fame, and averse to publicity, he never cared to take the place in literature to which his wonderful literary faculty entitled him. He was diffident of his own powers, and his work took the form of translations, or rather, as has well been said, "transfusions, for no translations were ever so much like originals" (*Athenæum*, 2,904). In 1853 he published his *Six Dramas of Calderon*, and then withdrew the book in consequence of an unfavourable review. This was probably the only work to which he put his name. His translation of *La Vida es Sueño* and *El Mágico Prodigioso* were only issued to a few friends; his magnificent rendering of the *Agamemnon* was also intended only for friends, till the acclamation with which it was received induced the author to publish a second edition; and his most famous work, the quatrains of *Omar Khayyâm*, was equally issued anonymously. This version of the Persian poet is now a recognised English classic, and in perfection of form and intuitive sympathy of interpretation it can never find a rival. Other works are the translation of the *Salamân and Absâl* of Jamy; the *Memoir* prefixed to the life of Barton, the Quaker poet; *Euphranor, a Dialogue on Youth*, his first work, which went to a second edition; *Polonius, a Collection of Wise Saws and Modern Instances*, with a preface; and he also wrote a translation of the *Œdipus Tyrannus* and *Coloneus* of Sophocles, but only allowed one friend in England to have a copy. Literary modesty could no further go, and surely was never more needless. [S. L.-P.]

Fitzherbert, MARIA ANNE (b. 1756, d. 1837), whose maiden name was Smythe, was a Roman Catholic by religion. Four years after she had been left a widow a second time, by the death of Mr. Thomas Fitzherbert, in 1781, she, the "sweet lass of Richmond Hill," attracted the notice of the Prince of Wales, afterwards George IV. Despite the extraordinary statement in Lord Holland's memoirs, that it was the Prince who insisted upon the solemnisation of the marriage, there can be no doubt that the ceremony, which took place secretly in 1785, was entered into by the bridegroom solely because he had failed to overcome the virtue of Mrs. Fitzherbert. Soon afterwards he had the effrontery to acquiesce in Fox's statement, made in perfect good faith, that there had

been no marriage, and his wife accordingly sank in public estimation. A marriage contracted by one of the royal family without the consent of the king, or twelve months' notice to the Privy Council, being invalid by law, George was free to enter upon his ill-assorted union with Caroline of Brunswick (1795). At that time Mrs. Fitzherbert was separated from the prince, but the connection was afterwards resumed, with the consent of the Pope, only to be broken off again in 1806. The final separation was due to the prince's attachment to Lady Hertford, as the first had been to his connection with Lady Jersey. Throughout her career Mrs. Fitzherbert behaved with admirable discretion under very trying circumstances, and was invariably treated by the royal family, particularly by the Duke of York, with great consideration. During the last years of her life, which were spent at Brighton, she busied herself in charitable works.

Langdale, *Memoirs of Mrs. Fitzherbert* (1856).

Fitzroy, ROBERT (b. 1805, d. 1865), admiral, was a member of the Grafton family. He entered the navy in 1819, and became lieutenant on board the *Adventure* in 1824. In 1828, on the death of Commander Stokes, he was placed in command of the *Beagle*, and completed some surveys on the coast of Patagonia and Terra del Fuego. In 1831 he started on his famous expedition to South America, with Charles Darwin on board as naturalist, during which the latter conceived the theory of the origin of species. After returning to England, in 1836, Fitzroy published a narrative of the adventure and its results, *Narrative of the Surveying Voyages of the Adventure and Beagle*, which, however, was necessarily eclipsed by Darwin's *Journal of a Voyage Round the World*. In 1842 he entered Parliament as member for Durham, and in 1843 was appointed Governor of New Zealand, but his sympathy for the natives made him exceedingly unpopular in the colony, and the Government recalled him in 1845. *Remarks on New Zealand* were published in the following year. Leaving active service in 1850, he was subsequently advanced to the grade of vice-admiral, and in 1854 was appointed meteorological statist to the Board of Trade. In that capacity he carried out the investigations in meteorology with which his name is chiefly associated. His system of "storm-signals," although at first the subject of ridicule, soon became recognised as of infinite practical value to navigators; was adopted throughout the English ports, and began to find its way to Continental harbours. Shortly after publishing his explanatory *Weather Book*, his nerves gave way from overwork, and in a fit of depression he committed suicide.

Good Words, vol. vii.

Fitzwilliam, WILLIAM WENTWORTH, 4TH EARL (b. 1748, d. 1833), statesman, took his seat in the House of Lords in 1769. Besides his father's estates he inherited the fortune and lands of the Marquis of Rockingham, whose political traditions he followed sedulously. Together with a considerable portion of the Whig party, he transferred his support to the Government of Pitt on the outbreak of the French revolution, and was rewarded with the post of Lord Lieutenant of Ireland in 1794. A warm supporter of Catholic emancipation, he found himself received in Ireland with enthusiasm, and the wildest hopes were indulged in, which Earl Fitzwilliam undoubtedly countenanced. His sudden recall by Pitt in the following year, probably from motives of caution, dashed those hopes to the ground, and made the rebellion inevitable. In 1798 he became Lord Lieutenant of the West Riding; and on the death of Pitt, in 1806, he became Lord President of the Council, but retired from office with the Grenville ministry in the following year. From that time forward he did not take any active part in political life. His son, *Charles Wentworth* (d. 1857), distinguished himself as a warm advocate of liberal measures, notably of parliamentary reform.

Flaubert, GUSTAVE (b. 1821, d. 1880), French novelist, was the son of a distinguished surgeon, and was at first intended for his father's profession, but soon abandoned it for literature. He first attempted to walk in the steps of Victor Hugo, but eventually became a convert to realism. His masterpiece, *Madame Bovary*, was prosecuted, in 1856, by the Government as an immoral work, but without success; and promptly had an immense circulation, which was by no means undeserved, despite the fact that it is very strong meat. Although his other works, *Salammbô* (1862), and *L'Éducation Sentimentale*, are unequal to *Madame Bovary*, Flaubert holds a high place among the "naturalist" school. He was much beloved by his friends for his generosity, and pitied for his afflictions.

Flaxman, JOHN, R.A. (b. 1755, d. 1826), sculptor, was the second son of John Flaxman, who worked as a modeller to both Roubiliac and Scheemakers, and kept a shop in Covent Garden for the sale of plaster casts. He was born in the city of York, acquired his first technical instruction from his father, and probably his first inspiration among the classic models in his father's shop. In 1769 he became a student at the Royal Academy, and soon became a frequent exhibitor of portraits in wax, and of figure subjects. To his bitter chagrin he failed to carry off the gold medal in 1772. He went on, however, working assiduously at his art, and during the next fifteen years continued contributing regularly to the Academy exhibition subjects of a purely classic kind. In the

meantime he was largely employed by the Wedgwoods. His designs for their pottery made them famous, and must have immensely elevated the general art-taste of the country. This constant employment enabled him to marry, in 1782, Anne Denman, who was an accomplished lady, and proved a kindly and sympathetic helpmate. With her he went to Italy in 1787, and spent seven years there pursuing his studies. His designs in illustration of the *Iliad* and the *Odyssey*, *Æschylus* and *Dante*, were all executed during this sojourn, and engraved at Rome, in 1797, by Piroli, under his own supervision. He took up his abode in Buckingham Street, Fitzroy Square. On the completion of his monument to Lord Mansfield in Westminster Abbey he was elected an associate in 1797, and in 1800 a full member of the Academy. The monuments in St. Paul's to Captain Montague, Sir Joshua Reynolds, Earl Howe, and Lord Nelson, are also from Flaxman's chisel, not to mention those in other places. In 1810 he was elected professor of sculpture to the Royal Academy, and the ten lectures then delivered have been published and are appreciated. His *Shield of Achilles*, comprising upwards of 100 figures, was completed in 1818. The greatest monument to his genius is doubtless the Flaxman Gallery in University College, founded by his wife's sister, and his adopted daughter, Miss Denman. The heroic group of *Michael vanquishing Satan* is there, besides his countless drawings and bassi-relievi. Always delicate, his health gradually gave way, and he died Dec. 7th, 1826, in the house where he had lived thirty years. His wife died in 1820. Flaxman's early friends were Stothard and Blake, and he imbibed a good deal of the mysticism of the latter, and, so far as his own speculative opinion went, he was a Swedenborgian. As an artist, he was more deeply imbued with the spirit of the antique world than any other English sculptor that can be named. He is an honour to the English school, and the classicalism of his genius has been recognised by Europe at large. At the same time he scarcely comes within the popular notion of a sculptor proper. His modelling in the round lacks strength, and his chisel bite; but his sketches and works in low relief are quite Phidian in spirit, and, in this country, at least, unrivalled in execution.

Cunningham, *Lives of the British Painters*, v. 1. iii.; Mr. S. Colvin, *The Drawings of Flaxman*, etc. (1878). [J. F. R.]

* **Fleischer**, HEINRICH LEBERECHE (b. 1801), the first of living Arabic grammarians, was born in Saxony, and was educated at the gymnasium of Bautzen, whence he proceeded to study in the theological faculty at Leipzig. His taste for Oriental scholarship displayed itself at an early age, and in 1824 he went to Paris to secure the advantages of the tuition

of the celebrated Sylvestre de Sacy. Returning to Germany in 1828, he was presently appointed (1831) to an educational post at Dresden, and in 1835 became professor of Oriental languages at Leipzig, a Chair he has now occupied for more than half a century. In 1860 he was offered the new Chair for the same subjects at Berlin, but remained constant to his old connection with Leipzig. A professor of Oriental languages in Germany in the old time used to consider it a chief part of his duty to give lectures on Biblical exegesis and kindred theological subjects; but Fleischer, whose talents are chiefly philological, resolved by degrees to sever the theological element from his teaching, and after a short time succeeded in confining his lectures to the three languages which properly belonged to his Chair—Arabic, Persian, and Turkish. In the two last he has limited his work to grammatical training, without undertaking any very special researches, though his edition of Mirza Ibrahim's *Persian Grammar* (1847, 2nd ed. 1875) is a valuable work. His favourite study has always been Arabic, and in the philology and criticism of that language he stands supreme among living scholars. His grasp of the intricacies of Arabic grammar is a faculty of unique perfection; his delicacy of apprehension and exactness in analysis are unapproached. He has published in the *Transactions* of learned societies, especially in the *Proceedings* of the Saxon Scientific Society, a series of critical papers on various Arabic texts and editions, among which the most important are his ten instalments of *Beiträge zur arabischen Sprachkunde*, or notes on De Sacy's *Grammaire arabe*, a precious collection of ripe judgments on difficult points. Fleischer has shown unvarying generosity in placing his learning at the disposal of other scholars. His own works are not numerous, but they are one and all characterised by unimpeachable scholarship. In 1831 he published Abulfeda's *Historia Antislamica*; in 1837, Zamakhshary's *Golden Necklaces*; and in 1837 Aly's *Hundred Sayings*. When Habicht died in 1839, Fleischer completed his Breslau edition of the *Thousand and One Nights*, vols. ix.-xii. In 1846-8 he brought out (in 2 vols.) his admirable and laborious edition of El-Beydawý's celebrated *Commentary on the Koran*. But Fleischer's work has been even more in speech than in print. His personal influence in Germany can only be compared to the earlier prestige of De Sacy at Paris. Fleischer has made Leipzig the centre of Oriental studies in Germany; his pupils have spread over the Continent, prosecuting the researches which his example inspired; while to him, more than to anyone else, the German Oriental Society owes its foundation and its uniformly high level of scholarly work. He was made a correspondent of the French Institute in 1861, and a foreign member in 1867. At the age of

eighty-five, he is still an energetic professor, a genial and instructive correspondent, ever ready to help others up the ladder he has ascended himself.

Fleischer's works; Dugat, *Histoire des Orientalistes*; Brockhaus, *Conv. Lex.* [S. L.-P.]

* **Fleming, GEORGE, LL.D., F.R.G.S.** (b. 1833), veterinarian and traveller, was born at Glasgow, and studied veterinary medicine in Edinburgh. After a very distinguished student career, he entered the army towards the end of 1855, and served in the Crimea until the withdrawal of the troops in 1856. From 1859-61 he took part in the expedition to North China. During 1867 he served in Syria; and between that date and his appointment in 1879 as Inspecting Veterinary Surgeon at the War Office, served in the 3rd Hussars, Royal Engineers, and 2nd Regiment of Life Guards. In 1883 he was appointed principal veterinary surgeon to the forces, an office which he still fills. In addition to these military distinctions, Dr. Fleming was for four consecutive years elected president of the Royal College of Veterinary Surgeons, during which period he did much for the improvement of the education and position of the profession, and was chiefly instrumental in obtaining the passage of the Veterinary Surgeons' Act of Parliament. He has also been for many years a member of the council and of the examining board of the college, of which he is a fellow; first president of the British National Veterinary Medical Association; and, among numerous other honours, he received the Prince of Wales's medal from the Society of Arts (1875), and was the first recipient of the Queen's medal (1884) of the Royal Society for the Prevention of Cruelty to Animals. He is an hon. LL.D. of Glasgow University; F.R.G.S.; and, among other medical and scientific societies, a member of the Anthropological Institute, and the Pathological and Epidemiological Societies. His chief works are:—*Travels on Horseback in Manchuria Tartary* (1863), *Horse-shoes and Horse-shoeing* (1869), *Animal Plagues* (1871), *Rabies and Hydrophobia* (1872), *The Comparative Anatomy of the Domesticated Animals* (1873), *A Manual of Veterinary Sanitary Science and Police* (1875), *A Text-book of Veterinary Obstetrics* (1878), *A Text-book of Operative Veterinary Surgery* (1884), and in addition to a number of separate brochures, a large number of memoirs in the *Veterinary Journal* (which he founded and edits), the *Encyclopædia Britannica*, and *The Nineteenth Century*. Dr. Fleming has been presented by the veterinary profession in the United Kingdom, the colonies, and the United States, with two testimonials, consisting of plate, jewellery, paintings, and money, as a mark of their esteem, and nearly every veterinary association throughout the world has bestowed on him its honorary diplomas.

* **Fleming, SANDFORD, C.M.G.** (b. 1827), civil engineer, was born at Kirkcaldy, N.B., and was early apprenticed to a surveyor. In 1845 he settled in Canada, and for some time after was engaged as engineer on the works of the Northern Railway Company. In 1863 he took an important part in the negotiations with the home Government concerning the then projected line of railway through the Red River district (now Manitoba); and when this scheme developed into the bolder one of a transcontinental line of railway connecting the Atlantic Ocean with the Pacific, Mr. Fleming was commissioned by the Governments of Canada, Nova Scotia, New Brunswick, and Great Britain, to survey and superintend the construction of the first part of the route—that now known as the Intercolonial Railway. This great work was finished in 1876, an historical sketch of which, entitled *The Intercolonial* (1876), has since appeared from Mr. Fleming's pen. Simultaneously with this work, Mr. Fleming was engaged in surveying the line of route for the Pacific Railway, a task which extended to 1879, when, on account of some differences with the Colonial Government, he resigned, having in the meantime been made a C.M.G. An interesting account of his share in this undertaking occurs in Principal Grant's *Ocean to Ocean*. Mr. Fleming advocated *The Adoption of a Prime Meridian to be Common to all Nations* (1881), a proposal which has since been adopted by the International Congress of Scientists. In 1884 he published *England and Canada*, a racy narrative of a summer tour between old and new Westminster.

Flinders, MATTHEW (b. 1760, d. 1814), navigator, was born at Donington, in Lincolnshire, entered the merchant service at an early age, and afterwards the Royal Navy. In 1795 he, in company with Surgeon George Bass and a crew of five men, left Port Jackson, New South Wales, determined to explore the coast south of Port Jackson, about 250 leagues of which were laid down on the charts as "unknown." He discovered the strait called (after the surgeon) Bass Strait, between the continent and Tasmania. In 1801 he obtained from the Government the command of a scientific expedition to explore the Australian coasts. In this expedition, full of romance, and important in geographical achievement, he surveyed the Australian coast from Cape Leuwin to Bass Strait, then northwards to the Gulf of Carpentaria, then across to Timor, then back to Cape Leuwin, and round the coast to Port Jackson. On his return voyage in 1803 he was captured by the French, and imprisoned for six years in the Isle of France. In 1814 he published an account of his travels in a book entitled *A Voyage to Terra Australis*.

Quarterly Review, Oct., 1814.

* **Flint**, ROBERT, D.D. (b. 1837), theologian, was born at Dumfries, and educated at the University of Glasgow. In 1858 he became a licentiate of the Church of Scotland, and in 1859 he was ordained to the pastoral oversight of the East Church, Aberdeen, from which he was transferred two years later to Kilconquhar, in Fife. In 1864 he was elected professor of moral philosophy and political economy in the University of St. Andrews; and in 1876 he became professor of divinity in the University of Edinburgh, when he received the honorary degree of D.D. from that university. Among Professor Flint's works may be mentioned:—*Philosophy of History in France and Germany* (1874), *Antitheistic Theories* (1877), and *Theism* (1877, 4th ed. 1883).

* **Floquet**, CHARLES THOMAS (b. 1828), French politician, was called to the French bar in 1851, and started life as a journalist and barrister. He attained notoriety through shouting, "Vive la Pologne, monsieur!" to the Czar Alexander, on the occasion of his visit to Napoleon III., and subsequently acted as counsel for the prosecution in the case of the murder of Victor Noir by Prince Pierre Bonaparte (q.v.), on the question of damages. As holder of a post in the Government of Paris during 1870, he was thought to have coquetted with the Commune, and was in consequence imprisoned during the following year for several months. He was first returned to the Chamber of Deputies in 1876, for the 11th Arrondissement of Paris, and promptly became remarkable as one of the staunchest opponents of the reactionary and monarchical designs of the Duc de Broglie, M. de Fourtou, and General Rochebouet's "Gouvernement de Combat." In April, 1885, M. Brisson having accepted the premiership, M. Floquet succeeded him as President of the Chamber, and was re-elected after the general elections of November.

Flotow, FRIEDRICH ADOLPHUS VON (b. 1812, d. 1883), composer, was a native of Mecklenburg-Schwerin, and was intended for a diplomatic career, but eventually went to Paris, and there studied music under Reicha. After spending a short time in Germany during the year of the July revolution (1830), Flotow returned to Paris, and sought, but in vain, to get his compositions produced on the operatic stage. At last the *Naufrage de la Méduse* was produced at the Renaissance theatre in 1839, and at once made his reputation. It was followed by *L'Esclave de Camoëns* (1843), and *L'Ame en Peine* (1846), performed in London as *Leoline Stradella*, regarded on the Continent as one of his masterpieces, but unappreciated in this country, was first brought out at Hamburg in 1844, and the universally popular *Martha* at Vienna in 1847. Flotow continued to produce with great rapidity, but his later

operas, though as bright and sparkling as ever, failed to catch the public ear to any great extent, with the exception of *Indra* (1853), *La Veuve Grapin* (1859), *L'Ombre* (1869), and *L'Enchanteresse* (1878). Indeed, it may be doubted whether, despite the composer's consummate knowledge of the *technique* of his art, and the attractiveness of much of his work, the music of Flotow will live, so destitute is it of motive force, and so frequently does it degenerate into mere tune. He became director of the Court theatre at Schwerin in 1855, a post which he resigned in 1863, and during the last years of his life resided chiefly at Vienna.

* **Flower**, WILLIAM HENRY, LL.D. (b. 1831), zoologist, a native of Stratford-on-Avon, was educated at University College and the Middlesex Hospital, London. In April, 1854, after obtaining the diploma of the Royal College of Surgeons, he entered the army as assistant-surgeon, and served for some time in the Crimea. After the close of the war he resumed civil practice, and became assistant-surgeon and demonstrator of anatomy to the Middlesex Hospital and the medical school attached to it. In 1861 he became conservator of the Hunterian Museum, and in 1869 Hunterian professor of comparative anatomy and physiology to the R.C.S., and in 1884, on the retirement of Sir Richard Owen, was appointed superintendent of the natural history collections in the British Museum. Dr. Flower is LL.D., Dublin (1873), and president of the Zoological Society (1879). In 1882 he received one of the royal medals from the Royal Society, of which he is a fellow, and is at present a vice-president of the Linnean Society. His contributions to science have been mainly ethnological, and for the most part contained in the *Journal of the Anthropological Institute*, of which he was president in 1883-4, or on the characteristics of the Cetacea and the other mammalia. On these subjects he had published a number of memoirs in the *Transactions of the Zoological and other societies*. He is also the author of an *Introduction to the Osteology of the Mammalia* (new ed., by Dr. Gadow, 1886), and *Diagrams of the Nerves of the Human Body*.

Flügel, GUSTAV LEBRECHT (b. 1802, d. 1870), Arabic scholar, was educated at the Bautzen Gymnasium, like Fleischer, and continued his studies at the University of Leipzig. Attracted by the Semitic tongues, he went to Vienna, to work under Von Hammer, and there he published *Thalaby's Arabic Anthology* (1829). After studying at various German universities, and at Paris under De Sacy, he became professor at Meissen, and held the post till illness compelled him to resign in 1850. The rest of his life was spent in laborious publications, relieved by frequent travelling. His greatest work is his edition and Latin

translation of Hajjy Khalfa's *Bibliographical Dictionary*, which he executed for the Oriental Text Committee of London between 1835 and 1858, in 7 vols. quarto—a work of inestimable value to all students of Arabic literature. Another very important contribution to literary history and criticism is his edition with notes of the *Kitāb El-Fihrist* of En-Nedim, published after his death (1871–2). His text of the *Koran*, 1834 (new eds. 1837, 1841, 1858, and 1869), has proved the most generally useful, and his *Concordance to the Koran* (1842) is a valuable companion volume. His *History of the Arabs* (1832–40) went to a second edition in 1864. Other works are his edition of El-Jurjany's *Definitions* (1845), *Al-Kindy* (1857), *Ibn Kulubughha* (1862), and a contemplated species of literary history, which he began by an essay on the *Grammatical Schools of the Arabs* (part i. 1862). He also wrote a catalogue of the Arabic, Persian, and Turkish manuscripts in the Vienna library. As a painstaking editor of Arabic texts, and on account of his wide-reaching knowledge of Arabic literary history, Flügel deserves a high place among the Semitic scholars of this century. He died at Dresden, July 5th, 1870.

Dugat, *Histoire des Orientalistes*; Brockhaus, *Conv. Lex.* [S. L.-P.]

Foggo, JAMES (b. 1790, d. 1860), historical painter, was born in London: but his father, who was an ardent friend of freedom, on the suspension of the Habeas Corpus Act went to Paris, and there his sons, James and George, were educated in the schools of the French Academy. On the return of Napoleon from Elba, James hastened back to England with high hopes as to what he would accomplish as an historical painter. In 1819, his brother George (b. 1793, d. 1869) joined him, and from that date forward they worked on the same canvas. In spite of such works as *Napoleon signing the Death of the Duc D'Enghien*, *The Christian Inhabitants of Parga preparing to Emigrate*, *Hagar and Ishmael*; and notwithstanding the approbation of such men as Sir Thomas Lawrence, Fuseli, Hilton, Flaxman, and others, it would have gone hard with the brothers Foggo in the struggle for existence, had it not been for what they earned by teaching. For nearly half a century these brothers pursued their ideal lovingly together, and the lack of public appreciation never lessened their loyalty to art.

Foley, JOHN HENRY, R.A. (b. 1818, d. 1874), sculptor, was born in Dublin, and when a lad of thirteen entered the art schools of his native city. In 1834 he came to London, and in 1835 he was admitted a student of the Royal Academy. In 1840 his *Juno and the Infant Bacchus* attracted the admiration of judges, and it was quickly followed by *Lear and Cordelia*, *Venus rescuing Aeneas from Diomed*, and *Prospero and Miranda*. His *Youth at a*

Stream, one of the most classic and refined of his creations, was exhibited at the national competition in Westminster Hall, and his statue of Hampden appeared in the same place in 1847. The year following he was elected an associate, and 1858 a full member of the Academy. His Selden and Hampden are in St. Stephen's Hall, Westminster, his Goldsmith and Burke in Trinity College, Dublin, and his Daniel O'Connell in the same city. His Lord Hardinge and Sir James Outram, which went to India, were by far the finest equestrian statues ever produced in England. When Baron Marochetti failed to satisfy the authorities with his model of Prince Albert for the Albert Memorial, Foley was the sculptor to whom they had recourse, and the dignified figure seated under Sir Gilbert Scott's baldachino is the happy result. The worry and anxiety connected with the production of this noble work, which he did not live to see completed, affected his health, which was never very robust, and after a short illness he died at Hampstead, Aug. 27th, 1874, and was buried in St. Paul's Cathedral. In manner he was extremely simple and genial, had a decided talent for music, and as a sculptor he was, in England, unequalled. Among his pupils were Thomas Brock and Charles Bell Birch, of the Royal Academy. He left the bulk of his fortune to the Artists' Benevolent Fund; but even imprisonment failed to induce his executor either to hand over the money or account for it. [J. F. R.]

Fonblanque, ALBANT WILLIAM (b. 1793, d. 1872), journalist, was the son of an eminent lawyer, and was first intended for the army, then for the bar, but in 1812 he devoted himself to journalism. In 1820 he had gained a position on the staff of the *Times*, and was also a frequent contributor to the *Westminster Review*. In 1830 he became editor of the *Examiner*, and retained his post until 1847. The paper became of great importance as the exponent of Moderate Liberalism, and numbered among its contributors Landor, Dickens, and Stuart Mill. He ceased to be editor on receiving the office of Statistical Secretary to the Board of Trade, but for some years continued to contribute to the *Examiner*. He represented England at the Paris International Statistical Congress of 1854. Some of his articles were published under the title *England Under Seven Administrations* (1837).

E. B. de Fonblanque, *The Life and Labours of Albany Fonblanque*.

Fontaine, PIERRE FRANÇOIS LÉONARD (b. 1762, d. 1853), an eminent French architect, was born at Pontoise, and educated in Rome. In 1801 he was appointed architect of the Tuileries, and, in conjunction with Percier and Bernier, directed the public works of France for more than half a century, being employed in the extension and restoration of

the palaces of the Louvre, Saint Cloud, and Fontainebleau. He received the title of First Architect of Napoleon, and was elected a member of the Institute in 1812. He is the author of two books entitled *Palaces and other modern Edifices designed at Rome* (1798), and *Interior Decorations* (1812), published jointly with his friend Percier.

Journal des Beaux-Arts, 1842; *Annuaire statistique des Artistes*, 1836.

Fontanes, Louis, Marquis de (b. 1757, d. 1821), a distinguished French politician and man of letters, was born at Niort (Poitou), and commenced his literary career in 1778, with a descriptive poem entitled *Le Forêt de Navarre*. His translation of Pope's *Essay on Man* appeared in 1783, and his poems *Le Verger*, and *Essai sur l'Astronomie*, shortly afterwards. In 1797 he was proscribed and expelled from the Institute, by order of the Directory, in consequence of the part he had taken in the publication of the *Mémorial*, a journal opposed to them. He took refuge in England, where he met Chateaubriand, also an exile, with whom he formed a deep and lasting friendship. He was appointed in 1804 president of the Corps Législatif, and gained a high reputation as an orator, having to reply annually to the speeches from the throne. Napoleon, with whom he had much influence, created him a peer of France, and Grand Master of the Imperial University. Among his latter works, not published until after his death, we may mention *La Grèce délivrée*, *Le vieux Chateau*, and *Les Tombeaux de Saint Denis*. His poetical writings are studied and correct, they show careful labour and conscientious revision, and only want the spirit of poetry. As a prose writer he was far more successful.

The notice by Sainte-Beuve in the collected edition of his works.

* **Forbes, Archibald** (b. 1838), journalist, the son of a Presbyterian minister, and a native of Morayshire, was educated at Aberdeen University. After an adventurous career, part of it being spent as a private in the Royal Dragoons, from which regiment he was invalided, Mr. Forbes settled in London, and succeeded in forming a journalistic connection. On the outbreak of the Franco-German War he was sent to the front as war correspondent to the *Morning Advertiser*, whence, having gained some valuable information as to the plans of the Parisians for withstanding a siege, he transferred his services to the *Daily News*, and accomplished some marvellous feats in the way of transmission of intelligence. The *War Correspondence of the Daily News* was republished in 1871. Shortly afterwards he repaired to Spain, and witnessed the outbreak of the Carlist War there; and, after an interval of eight months, which he spent on a mission of investigation into the Bengal Famine (1874), he returned

to Spain, and watched the triumph of the Alphonists. In 1875-6, still as representative of the *Daily News*, he accompanied the Prince of Wales on his tour through India. He was next employed as special correspondent during the Russo-Turkish War, and at great personal risk sent to the *Daily News* the famous accounts of the crossing of the Danube, of the battles round Plevna and in the Shipka Pass. His letters, and those of his *confrères*, MacGahan (q.v.) and Millet, were republished by the *Daily News* in 1878. Struck down with fever after the fall of Plevna in September, 1877, he recovered to witness the occupation of Cyprus by the British, and was present at the first battles in the Afghan War. After interviewing Thibaw, the King of Burmah, Mr. Forbes, in obedience to instructions, repaired to Zululand, and was present at the victory of Ulundi. The story of his famous ride of 110 miles in fifteen hours, by which he was enabled to convey the earliest account of the battle to England, is one on which admirers of British pluck love to dwell. Mr. Forbes went on to Pietermaritzburg, where Sir Garnet Wolseley was anxiously expecting news from the front, the whole distance of 280 miles being covered in ninety-six hours. He has published a novel, *Dracn from Life* (1870); two series of sketches, *Glimpses through the Cannon-smoke* (1880); *Soldiering and Scribbling* (1882); and a short life of *Chinese Gordon* (1884).

Scribner's Monthly, vol. xxi.

Forbes, Edward, F.R.S. (b. 1815, d. 1854), a celebrated naturalist, was born at Douglas, in the Isle of Man, and early evinced a strong taste for verification and caricature. In June, 1831, he proceeded to London, where he studied drawing under Mr. Sass, with a view to becoming an artist, but in the following October he became disgusted, and went to Edinburgh to study medicine. At Edinburgh he showed an intense interest in botany and natural history, and in 1835 he published in *London's Magazine of Natural History* the botanical results of a tour in Norway, undertaken in 1833. In 1836 he finally abandoned the idea of taking a medical degree, and resolved to devote himself to science and literature. He spent the winter of 1836-7 studying in Paris. In the spring of 1837 he repaired to the South of France, whence he went to Algiers, and during a month thus spent he obtained materials for a paper on land and freshwater mollusca, published in the *Annals of Natural History* (vol. ii., p. 250). In 1838 he brought out the first volume of *Malacologia Monensis*, a synopsis of the species of Manx Mollusca; in 1841, *A History of the Star-fishes*, his greatest work, embodying the results of researches carried on for a long series of years, and containing 120 illustrations, inclusive of humorous tail-pieces, all designed by the

author; and in 1843 the results of his investigations in the Mediterranean in his *Report on the Mollusca and Radiata of the Aegean Sea*, presented to the British Association, and in *Travels in Lycia* (1846). In 1842 he obtained the curatorship of the collections of the Geological Society of London, and subsequently the professorship of botany at King's College. In 1844 he resigned the curatorship, and became palaeontologist to the Geographical Survey, at a salary of £300 a year. In 1846 he published in the *Memoirs of the Geological Survey* (i. 336) an important treatise *On the Connection between the existing Fauna and Flora of the British Isles and the Geographical Changes which have affected their Area*, wherein he points out that, in accordance with the theory of their origin from various specific centres, the plants of Great Britain may be divided into five well-marked groups, corresponding with the flora of foreign countries—for instance, the west and south-west Irish, represented in the north of Spain. In 1851 he became professor of natural history to the Royal School of Mines; in 1852 he brought out, in conjunction with Mr. Hanley, *History of British Mollusca* (4 vols.); and in 1853 he obtained the fulfilment of a long-cherished wish in his appointment to the Chair of natural history in the University of Edinburgh, in succession to the late Mr. Jameson, his former teacher. But he was not destined to hold this post long; he died in the following year, after a few days' illness. Professor Forbes married, in 1848, the daughter of the late General Sir C. Ashworth.

G. Wilson and A. Geikie, *Memoir of Edward Forbes*, in which is given a list of Forbes's writings; *Literary Gazette*, Nov. 25th, 1855; *Quart. Journal Geol. Society*, May, 1855.

[W. M.]

Forbes, JAMES DAVID, D.C.L., LL.D. (b. 1809, d. 1868), scientist, born in Edinburgh, was the fourth son of Sir William Forbes, of Pitaligo. He entered the University of Edinburgh with a view to joining the bar, and in due time received his call; but his natural bent turned towards physics, consequently he soon left the legal profession. Whilst still a student at the university he contributed certain able papers anonymously to Sir David (then Dr.) Brewster's journal, the *Edinburgh Philosophical Journal*, and the latter encouraged him in his scientific pursuits, and proposed him as a fellow of the Royal Society of Edinburgh, to which he was elected at the early age of nineteen. Immediately after his election as fellow of the Royal Society of London, in June, 1832, he started on an extensive scientific tour, but was suddenly recalled from Geneva by news of the death of Sir John Leslie, professor of natural philosophy at the University of Edinburgh. He at once became a candidate for the vacant Chair, and was elected, his age being only twenty-four.

This Chair he occupied for twenty-seven years, and had for some time Professor Balfour Stewart (now of Manchester) as an assistant. In 1859 he succeeded Sir David Brewster in the principalship of the United College of St. Andrews; and here he spent the remainder of his days in scientific research. Professor Forbes was awarded the royal medal of the Royal Society of London for a paper on *The Transparency of the Atmosphere and the Laws of Extinction of the Sun's Rays passing through it*, and a subsequent paper to the same society on *The Selective Absorption of the Sun's Light in passing through Steam*, was one of the first steps in the direction of the spectrum analysis. He wrote some valuable memoirs on the thermal springs of the Pyrenees, the extinct volcanoes of the Vivarais (Ardèche), and the geology of the Cuchullin and Eildon Hills. His researches in heat were very successful. He commenced experiments with Melloni's thermo-multiplier, measured the refractive index of rock-salt with heat from various sources, luminous and non-luminous, and pursued a course of investigations which led him to his most brilliant discovery, the polarisation of non-luminous heat by transmission through tourmaline and thin mica plates, and by reflection from the latter. By employing mica for depolarisation he succeeded in showing the double refraction of non-luminous heat—a fact of which this experiment remains the only proof. He also produced circularly polarised heat of two internal reflections, using Fresnel's rhombs made of rock-salt. He thus established by these researches the identity of thermal and luminous radiations. He subsequently determined the thermal conductivity of trap-tufa, sandstone, and pure loose sand; and finally obtained quantitative measurements of the absolute thermal conductivity of iron at various temperatures, and showed that this is diminished (contrary to the assumption of Fourier) by increase of temperature, thus following the known laws of electrical conductivity. In 1840-1 Forbes made numerous observations on glacier motion. He received the degree of D.C.L. from Oxford, and LL.D. from Edinburgh. A list of his scientific writings appears in the Royal Society's catalogue.

Life and Letters of Prin. Forbes (1873), by Principal Shairp, Prof. Tait, and A. Adams-Reilly; Mr. A. A. Reilly in *Encyclopedia Britannica*.

[W. M.]

Forbes, SIR JOHN (b. 1787, d. 1861), physician, was born at Cattlebrass, Banffshire, and after a preliminary education at the Fordyce Academy and Aberdeen Grammar School, entered, in 1805, Marischal College, Aberdeen, and graduated at Edinburgh in 1817, having spent the nine previous years as assistant-surgeon and surgeon in the navy. Having retired from the service, he practised as a

physician, first at Penzance, and subsequently at Chichester. In 1840 he repaired to London, and was appointed physician to the Prince Consort, and in the following year he received a similar appointment in the Queen's household. He was knighted in 1853. As a physician Sir John Forbes never had an extensive practice; his name is more closely connected with the profession as an author and editor. His first work was a translation of Laënnec's *Treatise on Auscultation and Diseases of the Chest*, published in 1831, which was followed by *Original Cases illustrating the Use of the Stethoscope*, with a translation of Auenbrügger in 1833, both of which gave a great impulse to the art of mediate auscultation. He edited, conjointly with Drs. Tweedie and Conolly, the *Cyclopædia of Practical Medicine* (4 vols., 1833-5), to which he contributed several valuable articles. In 1836 he founded the *British and Foreign Medical Review*, which for a time was conducted with great ability, but ultimately lost its influence, involved its editor in pecuniary loss, and finally ceased to exist, in consequence of its advocacy of homœopathy and other doctrines obnoxious to the profession. His subsequent works, with the exception of *Nature and Art in the Cure of Disease* (1857), partook more of a literary than a medical character. Besides being a homœopathist, he was a phrenologist and a believer in mesmerism; and the results of his investigation into some cases of clairvoyance were published in a series of letters to the *Athenæum* and *Medical Gazette*.

Medical Times and Gazette, Nov. 16th, 1861.

Forcade-Laroquette, JEAN LOUIS VICTOR ADOLPHE DE (b. 1820, d. 1874), a French statesman and lawyer, a half-brother of Marshal Saint-Arnaud, was born in Paris, and admitted an advocate in 1845. After acquiring a successful bar practice he was appointed, in 1857, Director-General of Forests, and in 1859 Director-General of Customs, and State Counsellor. In 1860 he succeeded M. Magne as Minister of Finance, and in 1867 M. Béhie as Minister of Agriculture. In 1869 he became a Minister of the Interior, but retired into Spain upon the fall of the empire. Returning to Paris on the termination of the war, he died suddenly in that city on Aug. 15th, 1874. He was decorated with the Legion of Honour in 1855, and became Grand Officer in 1864. He published, in 1872, a brochure on *Défense du Traité de Commerce avec l'Angleterre*.

Forey, ÉLIE FRÉDÉRIC (b. 1804, d. 1872), Marshal of France, was born in Paris, and educated at the military school of St. Cyr. He distinguished himself in Africa, at the battle of Medeah, and on other occasions, being promoted to the rank of general in 1848. At the *Coup d'Etat* in December, 1851, he played a very prominent part, and the following year was made a general of division and commander of the Legion of Honour. During

the Crimean War, he held for a time the command of the besieging army before Sebastopol, and in the Italian War of 1860 gained the battle of Montebello against the Austrians, being present also in the subsequent engagements at Magenta and Solferino. In 1861 he was put in command of the Mexican expedition, and after overcoming many dangers and difficulties, succeeded in taking by storm the stronghold of Puebla. Shortly afterwards he was made Marshal of France, and after appointing a provisional Government for Mexico, he resigned his command to General Bazaine and returned home. He had been called to the Senate in 1859.

Forrest, EDWIN (b. 1806, d. 1872), a celebrated American tragedian, born in Philadelphia, early manifested a strong disposition for the stage, and performed in many parts before he was thirteen years of age. As Douglas in Home's play of that name, he made his *début* at the Walnut Street Theatre in Nov., 1820, and shortly afterwards proceeded to the west, returning to New York after some years' absence. In 1834 he visited Europe, and met with much success in England, for which he expressed himself indebted to the attention of Macready. On his second visit to England, in 1837, he married the daughter of John Sinclair, the vocalist, from whom he was divorced in 1852; and on his third and last visit, in 1844, he quarrelled with Macready. On the occasion of Macready's professional tour in America, in 1849, the partisans of Forrest were the cause of a riot at New York, from which the English tragedian barely escaped with his life, and in which twenty-two men were killed. Forrest continued to act with great success till 1871, after which he gave a few Shakespearean readings. He particularly distinguished himself in the rôles of Othello, Macbeth, Richard III., and Spartacus.

Rev. W. F. Alger, *Life of Edwin Forrest* (1874); *American Annual Cyclopædia*, 1872; Baker, *Our Old Actors*.

Forrester, ALFRED HENRY (b. 1804, d. 1872), miscellaneous writer, better known by the *nom de plume* of Alfred Crowquill, entered upon a literary career at an early age, being engaged at the same time in business as a notary at the Royal Exchange. He was associated with Theodore Hook in the *Humorist* in 1828, was one of the original contributors to *Bentley's Magazine* and to *Punch*, a graceful song-writer, the author of some charming children's tales, and of some burlesques of average merit. Crowquill was also an etcher of some excellence, and his pen-and-ink drawings were favourably criticised when exhibited at the Academy.

Forster, JOHN (b. 1812, d. 1876), biographer and journalist, was the son of a Newcastle butcher, and received a grammar-school education. In 1828 he arrived in London;

and, while studying law, devoted his spare time to press work, becoming literary critic of the *Examiner*, and after a while contributing biographical and historical articles to the reviews. They were republished in 2 vols. in 1858. In the years 1831-4, his sketches of English statesmen appeared in Lardner's *Cyclopædia*, and when they were republished in 1840, under the title of *Statesmen of the Commonwealth of England*, their excellence at once gained admittance for their author to the literary society of the day. Called to the bar in 1843, he was appointed secretary to the Lunacy Commission in 1855, and a Commissioner in Lunacy in 1861. But his main interests were always journalistic and literary. He succeeded Dickens in 1846, as editor of the *Daily News*, but after a year transferred his services to the *Examiner* (1847-56). His historical work comprises some laborious studies in the period of Charles I., namely, the *Arrest of the Five Members*, the *Debates on the Grand Remonstrance*, and his admirable *Life of Sir John Eliot* (1864), all of which are specimens of thoroughly conscientious research. His *Life of Goldsmith*, published in 1848, was received as one of the most perfect pieces of biographical writing in our literature; and high praise is also due to his *Walter Savage Landor: a Biography* (1869), although the treatment occasionally shows a want of appreciation of Landor's merits. Between 1871 and 1874 appeared the three volumes of Forster's biography of his own familiar friend, Charles Dickens, which may almost certainly be regarded as the finally authoritative work on its subject. In order to produce it the author was compelled, for the time being, to lay aside the materials for the *Life of Swift*, which he was collecting, and, to the great loss of our literature, death cut short the task when it was on the eve of accomplishment; indeed, the first volume had already appeared. John Forster, despite occasional faults of temper—he was called by the cabman “that harbitrary cove”—was universally beloved by his notable contemporaries, and his own merits may be said to have raised him to a position considerably higher than that of a mere friend of the great. His valuable collection of MS. and books was bequeathed to the South Kensington Museum.

Forster, THE RIGHT HON. WILLIAM EDWARD, M.P. (b. 1818, d. 1886), was the son of an eminent minister of the Society of Friends, and a nephew of Sir Fowell Buxton (q.v.). He was educated at the Friends' School, Tottenham, and received an appointment in a woollen manufactory at Bradford. In 1850 he married Jane, the eldest daughter of Dr. Arnold of Rugby. During the Irish famine he visited the distressed districts as distributor of a relief fund raised by his fellow-religionists. After unsuccessfully contesting Leeds in the Liberal interest in 1859, he was

returned unopposed for Bradford at a bye-election in 1861. He served as Under-Secretary for the Colonies from November, 1865, to December, 1866, and next became vice-president of the Education Committee in 1868, and a member of the Cabinet in 1870. Of the great measures then carried into law, Mr. Forster had charge of the Education Bill of 1870, and the Ballot Bill of 1872. In both cases he displayed great patience and engineering skill, having to stave off the vigorous assaults of Sir W. Harcourt against the Ballot Bill, and in the case of the Education Bill, those of the Nonconformist members, who resented the 25th clause, which enabled School Boards to pay the fees of indigent children at denominational schools out of the rates. Hence, on the retirement of Mr. Gladstone from the leadership of the party in 1875, Mr. Forster's name was mentioned in connection with that position, but he wrote declining it, being of opinion that he could not unite all the sections of Liberalism. In November he was elected Lord Rector of Aberdeen University. On the return of the Liberals to power, Mr. Forster patriotically accepted the office of Chief Secretary for Ireland, with a seat in the Cabinet. The country being in the throes of an agrarian and political revolution, his task was a hard one; in the House he was constantly attacked by the Irish members, and it was afterwards discovered that the “Invincibles,” who murdered his successor, Lord F. Cavendish, had on several occasions nearly compassed the death of Mr. Forster. While the agrarian suffering was met by the Compensation for Disturbance Bill—rejected by the House of Lords, much to Mr. Forster's indignation—and the Land Bill of 1881, agitation and agrarian crime were attacked by a Coercion Bill, and finally by the suppression of the Land League and the arrest of Mr. Parnell and his friends. As the condition of Ireland did not improve, the Government, in April, 1882, determined to change its policy and release the “suspects.” Mr. Forster was unable to agree to this, and, together with the Lord Lieutenant, Earl Cowper, resigned. The correspondence with Mr. Parnell, dubbed by the Conservatives the “Kilmainham Treaty,” was provocative of several violent scenes in Parliament, and Mr. Forster became very popular with the Opposition in consequence of his conduct. He subsequently spoke against the Government policy on several points, notably on the condition into which Bechuanaland had been allowed to lapse; and in company with Mr. Goschen (q.v.) voted in favour of the vote of censure upon their Soudanese policy after the death of General Gordon in January, 1885. Another subject in which he took a warm interest was Imperial Federation. At the general election Mr. Forster was returned once more for Bradford by a large majority, despite the fact that he was too ill to address the electors. Shortly

afterwards his illness assumed a dangerous form, and he died in the following April. His literary publications are few in number.

Forsyth, Sir Thomas Douglas, C.B., K.C.S.I. (b. 1827, d. 1886), a distinguished Indian civilian, was the son of the late Mr. Thos. Forsyth, of Liverpool, and was educated first at Rugby, and afterwards at Haileybury. Entering the Civil Service of the East India Company in 1848, he was sent to the Punjab in the capacity of assistant-commissioner, and from 1852 to 1856 held the post of deputy-commissioner. He held office at Umballa at the outbreak of the Mutiny in 1857, and for his services in the suppression of the rebellion was created C.B. He was successively secretary to the chief commissioner of Oudh, commissioner and civil judge in the Punjab, and financial commissioner in that province between the years 1859 and 1870. In 1870 he conducted a difficult mission to Yarkand, in Eastern Turkestan, and was thanked by Lord Mayo for his services. An account of this mission has since been published by Dr. George Henderson and Mr. A. O. Hume. In 1873 he was again sent to Yarkand, this time to negotiate a commercial treaty with the ruler of that country, in which he was entirely successful. An interesting account of this mission, with geographical and historical information regarding the possessions of the Ameer, has appeared from the pens of Mr. H. W. Bellew and others (Calcutta, 1875). In 1874 Mr. Forsyth was made a Knight Commander of the Order of the Star of India, and was appointed member of the Legislative Council of India; and in 1875 was sent as an envoy to the King of Burmah, and managed to avert a possible war. Sir T. D. Forsyth wrote the introduction to N. M. Przheval'sky's *From Kula to Lob-Nor* (1879).

Fortune, Robert (b. 1813, d. 1880), a Scottish botanist, born in Berwickshire, was educated at the parish school in the Merse, and was subsequently apprenticed in the Botanical Gardens of Edinburgh. In 1833 he removed to the gardens of Chiswick, where he acquitted himself with so much credit that, in 1842, when news of the peace with China reached England, the Botanical Society of London appointed him its collector of plants in Northern China. The result of his visit appears in *Three Years' Wanderings in China* (1847), which attracted much attention. In 1846 he became curator of the Physic Garden at Chelsea, and in 1848 he was entrusted by the East India Company with a mission to make investigation respecting the tea-plant. After an absence of more than three years he returned to England, and published his valuable work, entitled *Two Visits to the Tea Countries of China* (1851). In 1853 he made further scientific researches in China, an account of which he brought out under the title of *Residence among the Chinese, Inland,*

on the Coast, and at Sea; being the Third Visit, from 1853 to 1856. In 1857 he was employed by the United States Patent Office to collect in China the seeds of the tea-shrub and other plants, a duty which occupied him two years. In 1863 he published *Yedo and Peking*, in which he treats of the natural products and agriculture of Japan and China. In 1866, having, unlike most collectors of plants, prospered in the world, he settled down in Scotland, and occupied himself with farming.

Athenaeum, April 17th, 1880.

Foscolo, Ugo (b. 1778, d. 1827), was born on a Venetian frigate, in view of Zante, one of the Ionian Islands. His father, a Venetian, was a naval surgeon in the service of the republic. Ugo, having lost his father in his childhood, was educated partly in Venetian Dalmatia, and partly at the University of Padua, where, before the age of twenty, he produced a tragedy, called *Il Tieste*, which attracted attention chiefly by its bold political sentiments. When Venice was given by Napoleon to Austria, Foscolo, who had written an ode to the hero, in order to induce him to favour the independence of the republic, retired in despair to Florence, where he began to write his celebrated *Lettere di Jacopo Ortis*, which is a political Italian romance, written in an imaginative style, and by it he exercised a most beneficial influence upon his countrymen, as it taught them to cherish virtue, even though inseparably wedded to sorrow and evil. He then went to Milan, at that time capital of the short-lived Cisalpine republic, took an active part in the political agitations, and enrolled his name in the list of the First Italian Legion, and was in Genoa with Massena during the siege of 1800. In that city he wrote some of his most beautiful poems, such as the *Ode to Luisa Pallavicini*. The fall of Genoa and the return of Napoleon from Egypt restored Foscolo to Milan; and Napoleon having summoned a congress of the Lombard representatives in Lyons, Foscolo wrote for the occasion an *Oration*, in which he urged the necessity of a complete change in the administration of Lombardy. It was not read, but only printed, and it remains as an everlasting monument of Foscolo's lofty feelings. He continued with the Italian army until 1805, when he was sent to Calais with the troops designed by Napoleon for the invasion of England; and being stationed at St. Omer, he commenced there to study the English language, and as an exercise he translated Sterne's *Sentimental Journey*. In 1805 he returned to Italy, and resided for a short time in the environs of Brescia, where he wrote *I Sepolcri*, the most touching and popular of his poems. He was subsequently appointed professor of eloquence at Pavia, but the language of his introductory lecture so much displeased Napoleon that the professorship

very soon after was suppressed. He then retired to the house of a friend on the borders of the Lake of Como, where the scenes of rural beauty dissipated the gloom which so often overshadowed his spirit, and he wrote his *Hymn to the Graces*. In 1812 he produced the tragedy *Ajax*, which, being supposed to be a satire on Napoleon, led to his enforced withdrawal to Florence, where he wrote his third tragedy, *Riocardia*. On the fall of Napoleon he repaired to Switzerland, and resided for two years in the vicinity of Zurich, but not finding there any encouragement in his literary work, he went to England, where he was received with great enthusiasm. He wrote many articles for the reviews, and also books, above all on Dante and Petrarch; delivered lectures on Italian literature, for which he received a thousand pounds, and might have lived with respectability and comfort had he not indulged in unbounded extravagance, which involved him in much embarrassment, and at last consigned him to prison. When released he felt bitterly the change in his social position. In consequence he retired, broken-hearted, to Turnham Green, near London, and there, poor and desolate, he died, not leaving means to defray the expenses of his funeral. He was buried in the neighbouring cemetery of Chiswick. Forty-four years afterwards, in 1871, his remains were taken to Florence, by Italy, with all the pomp due to his merit, and found their final resting-place in the church of Santa Croce, the Italian Pantheon, among the mighty dead whom, during his life, Foscolo had so much admired, extolled, and imitated.

Opere complete di Ugo Foscolo (Firenze, 1850-63); *Artusi, Vita di Ugo Foscolo* (Firenze, 1878); *Pecchio, Vita di Ugo Foscolo* (Luigano, 1830); *Gemelli, Vita di Ugo Foscolo*. [A. O.]

* **Foster, GEORGE CAREY** (b. 1835), man of science, was educated at University College, London (B.A. 1856), and studied chemistry under Kekulé at Ghent, under Wartz in Paris, and under Bunsen at Heidelberg. From 1862 to 1865 he was professor of natural philosophy at Anderson's University (now Anderson's College), Glasgow, and from 1865 to 1867 professor of experimental physics at University College, London, after which he became professor of physics. Professor Carey Foster is a fellow of University College, London, and in 1885 became a member of the Senate of the University. He was president of the Physical Society, 1876-8, and in 1877 president of the Mathematical and Physical Section of the British Association. He is known to the world outside the lecture-room as the editor of Lardner's *Handbook of Natural Philosophy*.

Foster, JOHN (b. 1770, d. 1843), essayist, was born at Halifax, in Yorkshire, received his education at a Baptist college at Bristol,

and preached in various parts of England until, in 1806, an affection of the throat compelled him to resign his charge. In the same year he published a volume of *Essays*, containing the remarkable one *On Decision of Character*, which attracted widespread interest. He thereupon resolved to devote himself to literature, and contributed largely to the *Eclectic Review*. In 1820 appeared his once celebrated essay on *Popular Ignorance*. Though now little read, Foster is worthy of attention by those who love the productions of a scholarly, meditative, and imaginative mind.

Foster's Life and Correspondence, edited by J. E. Ryland (1846).

Foster, STEPHEN COLLINGS (b. 1826, d. 1864), American song-writer, a native of Pennsylvania, entered his brother's office in Cincinnati, but found verse-making so lucrative that he took to it exclusively. He was the author of the enormously popular songs, *The Old Folks at Home*, *Old Uncle Ned*, *Old Dog Tray*, *Willie, we have missed you*, and *Come where my love lies dreaming*, the airs to which were also his composition.

Fouché, JOSEPH, DUKE OF OTRANTO (b. 1763, d. 1820), was the son of a merchant captain. In 1792 he was sent by Nantes, his native town, as delegate to the National Convention, and voted for the death of Louis XVI. He had a hand in most of the excesses of the revolution, the atrocities of Collot d'Herbois at Lyons, and Robespierre's reign of terror, and showed great address in deserting his patrons, first Robespierre and then Barras, when good-fortune began to fail them. In 1800 he became Minister of Police, and readily lent himself to Napoleon's schemes for the overthrow of the Directory. It was in vain that Napoleon tried to do without him; Fouché's spy system could not be dispensed with; and although he was dismissed for a time in 1802, he was restored to office, and made, in addition, Minister of the Interior, on the creation of the empire in 1804. In 1809 he became Duke of Otranto; but though his powers of detecting conspiracies and smoothing over difficulties were invaluable to the emperor, the two men were too unscrupulous to have much confidence in one another, and he was dismissed in 1810, it having been discovered that he was intriguing on his own account with the English court. During the remainder of the empire he was given the empty honours, first of Governor of Rome, then of Governor of Illyria. On the entry of the Allies into Paris, he promptly made his peace with the new Government, and as promptly deserted to Napoleon during the Hundred Days. The morrow of Waterloo found him once more Minister of Police; and being chosen head of the Provisional Government, he made himself of importance as mediator between France and her conquerors. Hence he became one of the ministers of

Louis XVIII., but finding himself in an untenable position he resigned, and was shortly afterwards exiled as one of the authors of the death of Louis XVI. He never returned to France, but died at Prague. Absolutely devoid of moral feelings, he played entirely for his own hand; and though, during the latter part of his life, he was guilty of few crimes, the system of suspicion which he made his own was fatal to the health of French political life, and may be said to exist even now.

The *Mémoires de Fouché* (1824) are unauthentic, but evidently founded on original information, supposed to be by A. de Beauchamp; *Vie de Fouché* (anon.), 1821; Count Martel de Porzou, *Études sur Fouché*.

Fouqué, FRIEDRICH HEINRICH KARL DE LA MORTE (b. 1777, d. 1843), one of the leading heroes in the Romantic school of poets, was born at Brandenburg, on the Havel, and, having entered the Grand Duke of Weimar's regiment in 1794 as a cornet, served throughout the campaign on the Rhine. Being encouraged in literature by August von Schlegel, and to a certain extent by Goethe, he quitted the army in 1802, and retired to his second wife's estate at Nennhausen. The following ten or eleven years were the period of Fouqué's highest productivity. During this time he published several dramas and short tales, besides the greatest and most enduring of his works, such as the vast trilogy of *The Northland's Hero* (1808), consisting of *Sigurd the Serpent-slayer*, *Sigurd's Vengeance*, and *Aslauga*; the romance of the *Magic Ring* (1813), and *Undine* (1811), the loveliest of his creations. Having served with distinction as a volunteer during the earlier campaigns of the War of Liberation, he returned to his literary life, and, apparently in the following year (1814), produced *Sintram*, after *Undine* the most popular of all his tales. For the next seventeen years he continued to publish innumerable stories, dramas, lyrics, hymns, and romances, of which only the two extraordinary productions called *Mandragora* and *Fata Morgana* (1830 and 1831) need here be mentioned. Having lost his second wife, Karoline Auguste, originally Von Briest (b. 1773, d. 1831), herself of some renown at the time as a Romantic novelist, Fouqué migrated to Halle, lectured in the university, and married his third wife, Albertine Tode, afterwards also known as the authoress of *Reinhold* (1865) and other novels. After this Fouqué abandoned himself, not to artistic Catholicism, like others of his Romantic fellows, but to the gloom of Evangelical pietism, from the depths of which his art but seldom emerged. In 1842, at the invitation of Frederick William IV., he repaired to Berlin, where he died. Fouqué was the literary Don Quixote of Germany. He was full of an imaginary mediævalism. No high-souled girl has lived in a world so

efficiently equipped with mere and moonbeam and castle, with knights and love and maidens and dwarfs, with henchmen and caparisons, and all the other properties of that misty stage. His hero, Sigurd, as Heine observed, had "the bravery of a hundred lions, and the understanding of two asses." Nevertheless, some of his lyrics may stand by the songs of the great masters, and his *Undine*, the spiritualised consummation of all German fairy lore, will find a place in every youthful heart when the Romantic school and all its theories are only remembered by the uninterested professor.

Heine, *Die romantische Schule*, book iii., part 4; *Lebensgeschichte*, by Fouqué himself (1840).

[H. W. N.]

Fourier, FRANÇOIS CHARLES MARIE (b. 1772, d. 1837), a French socialist writer, born at Besançon, was in youth engaged in trade. During a famine at Toulon, he was required to assist in the throwing overboard of rice which, for the purpose of keeping prices up, had been kept out of the market, and so become spoilt. This occurrence in a time of scarcity much impressed Fourier, and from it he began to conceive that social arrangements resulting from the principles of individualism and competition were imperfect, if not immoral. In 1808 he published his *Théorie des Quatre Mouvements*, in which he proposed to substitute co-operation for individualism. After publishing this work he repaired to Paris, where he announced that he would be at home every day at noon to meet anyone disposed to lend 1,000,000 francs to establish his scheme. He continued thus for twelve years. He greatly believed in the manipulation of numbers, by which he thought he could solve any problem. He found out by it that the human race was to exist for 80,000 years, and that in 10,000 years the millennium would come. He could also by it pay off the national debt of England in six months by two billions of hens' eggs, a hen laying at the rate of two hundred eggs a year, and the eggs sold at fivepence per dozen. His economic principle was to divide the world into phalanxes of about 2,000 persons, and to subdivide each phalanx into bodies of ten persons. If the whole were thus arranged, a man between eighteen and twenty-eight would do as much work as would enable him to live comfortably for the remainder of his life. However visionary some of Fourier's notions may be, some of his criticisms are very valuable. He was almost the first writer to observe the great benefits resulting from co-operation, from wholesale over retail dealings, and from machinery. He advocated the statutory reduction of the hours of labour in factories, and urged the importance of improved sanitary conditions of labourers' dwellings. And socialist as the whole scheme was, he would permit inequality, and would award according to the capital and

talent of the individual. Unsuccessful attempts to reduce the scheme to practice have been made in France by M. Baudet Dulary, and in America by Nathaniel Hawthorne and others. In 1822 Fourier published his *Traité de l'Association*, republished by his disciples as *Théorie de l'Unité universelle* in 1841. In 1829 appeared *Le nouveau Monde industriel*, and in 1831 he attacked the rival socialist doctrines of St. Simon and Owen in the small work *Pièges et Charlatanisme de deux Sectes, St. Simon et Owen*.

Pellarin, *Fourier : sa Vie et sa Théorie* (1872); Sargant, *Social Innovators* (1859); Reybaud, *Réformateurs modernes* (1864).

Fourier, JEAN BAPTISTE JOSEPH, BARON (b. 1768, d. 1830), an eminent French mathematician, born at Auxerre, at an early age distinguished himself by his proficiency in mathematical studies, and in 1795, on the opening of the Polytechnic School, was appointed assistant professor. He espoused the cause of the people in the revolution; but not keeping pace with the popular movement he was twice imprisoned by the dominant faction. In 1798 he was appointed a member of the scientific commission which accompanied Bonaparte to Egypt, where he acted as secretary of the Egyptian Institute. Here he distinguished himself by his industry in scientific excursions, and was subsequently employed in judicial and diplomatic affairs. Returning to France he was constituted prefect of the department of Isère at Grenoble in 1801, in which situation he was continued by Louis XVIII. On Bonaparte's flight in 1815, Fourier quitted Grenoble on his approach, and on being appointed by the emperor to the prefecture of the department of the Rhone, he refused to carry out the measures proposed to him by the minister, and was accordingly superseded. For the remaining fifteen years of his life he lived quietly at Paris, devoting himself to literature and science. In 1817 he was admitted into the Academy of Sciences, and in 1827 was elected a member of the Académie Française. In 1822 he published his most celebrated work, *La Théorie analytique de la Chaleur*, which by its new methods and great results made an epoch in the history of mathematical and physical science. Victor Cousin speaks of it in the highest terms of praise. After his death, which occurred at Paris on May 16th, 1830, appeared a remarkable work entitled *Analyse des Equations déterminées*, which had been written in his youth, and left unfinished. It was completed and edited by M. Navier in 1831. In addition to the works already mentioned, Fourier contributed many memoirs on scientific subjects to the *Mémoires de l'Académie des Sciences*, (iv.—viii.), and *Annales de Clinique et de Physique*, and wrote many *éloges* of distinguished men of science.

V. Cousin, *Éloge de Fourier*; M. Arago, *Éloge historique de J. Fourier*; *Foreign Quarterly Review*, Oct., 1831.

• **Fourton, MARIE FRANÇOIS OSCAR BARDY DE** (b. 1836), a French statesman, born at Ribérac, in the department of Dordogne, studied law at Poitiers, and was subsequently admitted a member of the local bar at Bergerac, in Dordogne. In 1871 he was elected a representative of the Dordogne in the National Assembly, as a Bonapartist, and successively held the posts of Minister of Public Works and Minister of Public Worship, resigning with M. Thiers in 1873. In May, 1874, he was appointed Minister of the Interior by Marshal MacMahon, the President of the Republic, in succession to the Duc de Broglie; but resigned this post in the following July because a Bonapartist had not been selected to fill a vacancy that had occurred in the Interior department. In May, 1877, he again became Minister of the Interior. Both during 1874 and 1877 he was supposed to have been one of the main agents in the royalist restoration that was evidently in contemplation. At the general election in the following October his election was declared invalid, and during the debate on this question M. Gambetta called him a liar. This led to a duel with pistols, which, however, was of a perfectly harmless nature. In 1879 M. de Fourton was returned deputy for Ribérac, and in 1880 was elected a senator of the department of Dordogne.

• **Fowler, JOHN** (b. 1817), civil engineer, became at an early age a pupil of Mr. J. Towlerton Leather, the well-known hydraulic engineer. Leaving Mr. Leather's office, he became an assistant to Mr. Rastrick in the construction of the London and Brighton and other lines of railway. In 1844, when but twenty-seven years of age, he was appointed engineer for constructing the Manchester, Sheffield, and Lincolnshire line, and gained a high reputation as a practical engineer for the successful manner in which he carried out the work. Since that time Mr. Fowler has been actively engaged, and has carried out many works of importance and magnitude. Some of these are the Metropolitan Railway; the District Railway; the Victoria and Pimlico Railway; the Severn Valley Railway; the Launceston and South Devon Railway; the Isle of Wight Railway; the Birmingham and Stourbridge Railway; and the Great Northern and Western of Ireland system of railways. He has also superintended works for the improvement of rivers and estuaries, and is the builder of several of our large docks. The Didcot and Southampton Railway is now (1886) nearing completion. He was consulting engineer in the public works in Egypt, but resigned in 1882, and is at present consulting engineer to the Great Western Railway and Great Northern Railway companies.

***Fowler**, THE REV. THOMAS, LL.D., D.D. (b. 1832), logician, was born at Burton-Stather, in Lincolnshire, and was educated at King William's College, Isle of Man, and Merton College, Oxford, where he graduated as a double-first classman in 1854. Next year he was elected to a fellowship at Lincoln College, and appointed to a tutorship. In 1867 he brought out his *Elements of Deductive Logic* (7th ed. 1880), followed, in 1870, by a companion volume, the *Elements of Inductive Logic* (3rd ed. 1876). A member of the Hebdomadal Council in 1869, and professor of logic in 1873, he published an elaborate edition of Bacon's *Novum Organum* in 1878, and an edition of Locke's *Conduct of the Understanding* in 1881 (2nd ed. 1882). In December, 1881, Professor Fowler was elected president of Corpus Christi College, Oxford; and in April, 1883, he received the honorary degree of LL.D. from the University of Edinburgh. In 1884 he brought out a work entitled *Progressive Morality: an Essay in Ethics*; and has also written *Locke in the English Men of Letters Series*, and *Bacon and Shaftesbury and Hutcheson in the English Philosophers Series*.

Fox, CHARLES JAMES (b. 1749, d. 1806), the third son of the celebrated Henry Fox, Lord Holland, was educated at Eton and at Hertford College, Oxford. The fountain of his nature was early spoiled by his father, who taught him the fashionable vices, notably that of gambling, which clung to him through life. He entered Parliament as member for Midhurst when nineteen years of age, and supported the ministry, and having immediately made his mark as a debater, was made a Lord of the Admiralty, and in 1773 was nominated a Commissioner of the Treasury. But he soon quarrelled with Lord North, and in 1774 went into vigorous Opposition, which is not always distinguishable from faction, but which, especially upon the question of American Independence, has received the approbation of posterity as far as its main issues are concerned. Upon the fall of Lord North in 1782 Fox became Secretary of State under Lord Rockingham, and on the death of the latter (March 27th, 1782) refused to serve under Lord Shelburne. On the collapse of the Shelburne administration in 1783, Fox formed a somewhat unprincipled coalition with Lord North, and George III., much to his disgust—for he hated Fox on account of his evil influence upon the Prince of Wales—no sooner accepted the ministry than he began to plot its overthrow. This he accomplished upon Fox's India Bill, which was defeated owing to the royal machinations in the House of Lords, and the ministry was thereupon dismissed. Fox was now doomed to Opposition for two-and-twenty years. This was partly, no doubt, owing to his own errors of conduct, especially his intemperate attacks

upon Pitt's first administration, which angered the nation; nor was he well advised in his tactics with regard to the Regency Bill of 1788. But it can hardly be doubted that the blind resentment of the king was the chief cause of England being deprived of the services of one of her greatest men through a period of exceptional peril, and the Libel Act of 1790 remains a monument of what he might have effected in the way of constructive statesmanship. In company with most of the Whig party, Fox hailed the French revolution with delight, but, as usual, he carried his advocacy too far; and when Jacobinism came forth from the States General of '89, and from Jacobinism the proscriptions, the murder of Louis and Marie Antoinette, and a European war, the upper and middle classes deserted him nearly to a man to rally round Pitt, there was a large defection of Whigs to the Tory party, and Fox was left with a scanty and dispirited band of followers. His name was struck off the list of Privy Counsellors, and in 1797 he retired from parliamentary life to the seclusion of St. Anne's Hill, where he superintended the education of his nephew, Lord Holland, wrote that fine fragment, the *History of the Reign of James II.*, gardened, and farmed. On the conclusion of the Treaty of Amiens in 1801 he visited Paris, and was easily won over by the adroit flatteries of Napoleon, so that on his return to England he was a vigorous opponent of the renewal of the war with France. Pitt wished him to be a member of his last administration, but the king refused to hear of it. Upon the death of Pitt, in 1806, Fox, who had behaved with great magnanimity during the last hours of his illustrious opponent, was at last admitted to office, and became Foreign Secretary of State in the ministry of "All the Talents," of which Grenville (q.v.) was the leader. The hopes of his friends were high; it was known that he had chosen the office of Secretary of State to improve the prospects of peace, and to carry the abolition of the slave trade. His last motion in Parliament was one against the slave trade, and he died within a few months of the measure founded upon it being passed into law. But the negotiations for peace broke down, and in July the news that a treaty had been signed between Russia and France was a bitter mortification to Fox. He died at St. Anne's Hill on Sept. 13th, and was buried in Westminster Abbey. "Little did I think," said the king to Lord Sidmouth, "that I should ever live to regret Mr. Fox's death," and seldom has a man been more truly mourned. Despite the glaring irregularities of his private life, despite the inconsistencies of his political career, he stands out as one of the finest of England's sons. The first orator of his time—for Burke was for a future generation of readers rather than for his actual hearers—and a man of varied

reading, he made sacrifices to principle such as few statesmen have ever had the courage to make. As far as actual performances go, his career was a failure, but the force of his potent example worked in our political life long after "the magician" had ceased, as Pitt said, to "lay a spell" upon the audiences which listened to the dictates of his warm and aspiring heart.

[L. C. S.]

FOX, SIR CHARLES (b. 1810, d. 1874), a civil and consulting engineer, was the youngest son of Dr. Fox, of Derby, and intended when a young man to enter the medical profession. His natural bent lay, however, in the direction of engineering and constructive design. He therefore relinquished the study of medicine, and at the age of nineteen joined the well-known John Ericsson (q.v.), then in business at Liverpool, to whom he was articulated, and whom he assisted, among other things, at the trial of locomotive engines at Rainhill, on the Liverpool and Manchester Railway, in the year 1829. He was then placed by Robert Stephenson on the London and Birmingham Railway, then in course of construction, first at Watford, and afterwards in charge of the Extension Works from Camden Town to Euston Square, London. Upon the completion of this work he joined the late Mr. Bramah in the manufacturing firm of Bramah and Fox; and some time afterwards, upon the death of Mr. Bramah, became the senior partner in the firm of Fox, Henderson and Co., of London, Smethwick, and Renfrew. In 1857 he began to practise as a civil and consulting engineer with his two elder sons, under the firm of Sir Charles Fox and Sons. During the forty-five years of his professional life, Sir Charles was engaged in works of magnitude in all parts of the world. He was the inventor of Fox's safety switch, and contributed largely to the improvement of the permanent way and fittings of railways, and of ironwork construction generally. His chief work, however, was the building in Hyde Park for the Exhibition of All Nations in 1851. The late Sir Joseph Paxton having suggested the idea of a structure of iron and glass, up to that time never applied on a large scale, Sir Charles (then Mr.) Fox was enabled, from his intimate knowledge of ironwork construction, at once to grasp the importance of the proposal, and with his own hand to work out most of the details. His firm took the contract for the erection of the building, and the work having been commenced towards the end of September, 1850, the Exhibition was opened by the Queen in person on May 1st, 1851. In connection with this event Fox received the honour of knighthood. His firm afterwards removed the building

from Hyde Park, and re-erected it, with many alterations and additions, for the Crystal Palace Company at Sydenham. In 1838 Sir Charles became a member of the Institute of Civil Engineers, and was for several years a member of council of the Institute of Mechanical Engineers. His eldest son, ***SIR CHARLES DOUGLAS FOX** (b. 1840), one of the engineers of the Mersey Tunnel, was knighted in 1886.

Engineer and Engineering, June 17th, 1874.

FRAEHN, CHRISTIAN MARTIN (b. 1782, d. 1851), the first of Oriental numismatists, was a native of Rostock, where he studied under Tychoen, and acquired a taste for Eastern languages, of which, through his teacher's influence, he became professor at the University of Kasan in 1807. In 1815 he went to St. Petersburg as director of the Asiatic Museum, chief librarian, and member of the Imperial Academy, and there he died after nearly half a century of constant and valuable scientific work. Fraehn was the founder of Oriental studies in Russia; he was almost the creator of the science of numismatics in its Oriental branches. His *Recensio nummorum Muhammedanorum* (Peters., 1823) was the first exact description of a large cabinet of Arabic coins, and it is still the guide of the modern student. The Imperial Academy collection therein described owed many of its treasures to Fraehn's zeal and knowledge; and the Russian capital was enriched with numerous manuscripts and antiquities by his watchful energy. His most important writings treat of Mohammedan coins, upon which he published a number of treatises (beginning with the *Nummophylacium Pototianum* in 1813), of which a list may be consulted in his *Opuscula Postuma*, ed. B. Dorn (Peters. 1855-77), vol. ii., p. 333 ff. He was especially learned in the history and numismatics of the Mongol Khanates (e.g. *Coins of Ulus Djudji Golden Horde*, 1832), but in every department of his subject he was singularly accurate. His fund of historical knowledge was very extensive, and he had the true archaeologist's eye, which is as rare as it is essential in such studies as Fraehn's, and which gives even his guesses a higher value than some people's proofs. The relations between Russia and the Mohammedan East in the past attracted his special interest, and he published a work on the subject (*Ibn Fozlan*, etc., 1823). His influence may be traced in every branch of Oriental research in Russia, and his works will always be classical authorities to the numismatist.

B. Dorn, *Fraehnii Opusc. post.*; Meyer's *Conv. Lex.* [S. L.-P.]

FRANCIA, JOSÉ GASPAR RODRIGUEZ (b. 1757, d. 1840), the Dictator of Paraguay, was born at Assumption, of French, or, more probably, of Portuguese extraction, and being destined for the Church, was brought up at the Jesuit University of Cordova de Tucuman.

Turning from theology to the law, he became the most prominent advocate in his native city, being distinguished for knowledge, acuteness, and, above all, the most inflexible probity. After the revolution of 1810, in which Paraguay, like most of the South American States, deposed its Spanish governor, Francia was appointed secretary of the junta elected for the government of the country and the formation of a new Constitution. This first junta, however, proved incapable; Francia retired; a new junta began its sittings in 1813, and elected Francia one of the two consuls. Next year he obtained a decree from them appointing him Dictator for three years. When the term expired, the title was renewed for life, with an income of 9,000 piastres, of which he refused to receive more than a third. His power was only threatened by one serious conspiracy. In 1819 the plot was exposed and stamped out with a severity that gave need for no second blow. Meantime, under Dr. Francia's despotic rule, Paraguay advanced to a prosperity before unknown. Brigands were shot, and brigandage ceased. Unerring justice was administered. Foreign trade was forbidden; hardly any foreigners were suffered to enter, none to leave. In the midst of the desert of South American revolutions and counter-revolutions, Paraguay remained for twenty-six years a peaceful oasis, green and unvisited. The army was drilled and organised under Francia's own eye. The Indians were restrained by cordons of fortresses. The hovels and cesspools and evil priests of Assumption were despotically cleared away to make room for drainage and square streets and schoolmasters. The citizens were whipped into honesty and gibbeted into reason. Biennial harvests doubled the yield of corn. But Francia himself lived in perpetual fear of assassination. His drunken barber was his Prime Minister, councillor, and herald. He witnessed all the executions from his window, studied the natural sciences, especially astronomy, and read the French philosophers. Napoleon was his ideal. But for a few servants he lived in complete isolation, and he died as he had lived, silent, magnificent in loneliness and power. A born tyrant, and unselfish, such a man should have had the Roman world to govern. How far the subsequent ruin of his country was due to his policy is a debatable question.

Bengger and Longchamp, *Essai historique sur la Révolution de Paraguay* (1827); John Miers, *Travels in Chili and La Plata* (1836); J. P. and W. P. Robertson, *Letters on Paraguay* (1839); Thomas Carlyle, *Dr. Francia* (*Foreign Quarterly Review*, 1843). [H. W. N.]

Francis I., EMPEROR OF AUSTRIA (b. Feb. 12th, 1768, d. March 4th, 1835) was the eldest son of Leopold II., then Grand Duke of Tuscany. Brought to Vienna in 1784, his education was completed under the eyes of his uncle, Joseph

II., by whom, however, he was greatly disliked. Francis studied hard, though somewhat irregularly, and made himself proficient in languages and the details of administration. In 1788 he married the Princess Elizabeth of Würtemberg. In March of the same year he took part in the expedition against the Turks, and wrote an account of it. In February, 1790, his wife died, and in the same month his father, Leopold, became emperor on the death of Joseph II. In the autumn of this year he married his second wife, Maria Theresa, daughter of Ferdinand IV. of Naples. On March 1st, 1792, Leopold II. died. Francis was crowned King of Hungary in June, and the following month was duly elected emperor, under the style of Francis II. Immediately after his accession he had an interview at Mainz with Frederick William II. of Prussia, and the two monarchs agreed on a plan of joint military operations against France. In 1794 the emperor went to Flanders, and joined the headquarters of the army in the campaign of the summer. Compelled to conclude the peace of Campo Formio with France in 1797, he renewed the war, in alliance with England and Russia, in 1799, but was again obliged by the defeats of Marengo and Hohenlinden to agree to the Treaty of Luneville (Feb. 9th, 1801). On Aug. 11th, 1804, Francis proclaimed himself Emperor of Austria (Francis I.), and after the disastrous campaign of 1805, and the establishment, under Napoleon's protection, of the Confederation of the Rhine, he issued a manifesto, declaring that he abandoned the title of German Emperor, and the dignity and position of head of the Holy Roman Empire (Aug. 16th, 1806). In April, 1807, the emperor's second wife died, and in the following year he married his cousin, Maria Louisa of Este. In 1809 a fresh outbreak of hostilities with France was followed by the humiliating peace of Schönbrunn. Francis reluctantly granted Napoleon's request for the hand of his daughter Maria Louisa. In the German "War of Liberation" (1812-14) Francis, with Frederick William of Prussia, was at the head of the movement, and, like that king, attended in person at the headquarters of the allied armies, and was present till the end of the campaign. In June, 1814, he returned to Vienna, amid the rejoicings of his subjects. After the conclusion of the Peace of Paris, Francis found all his losses made good to him. He was at the head of greater dominions than any previous Austrian ruler. In April, 1816, in the course of a tour in Lombardy, his third wife died, and the undaunted monarch a few months later married a fourth time. His new wife was Caroline Augusta, daughter of King Maximilian of Bavaria. The remaining years of his reign were prosperous, and, except for an outbreak in Lombardy, peaceful. His domestic policy during these later years was one of strict conservatism. In close sympathy with

his minister, Metternich, he aimed above all at preserving the *status quo* at home and abroad. No effort was spared to repress revolutionary tendencies in Germany and Italy; while in his hereditary dominions Francis took care to make it understood that he regarded himself as absolute and autocratic. The results were reaped by his successor. [FERDINAND I.] Francis himself was undoubtedly popular throughout his long reign. His patriotism, his resolute honesty, his industry, his admirable family life, and, above all, his popular manners and his genial good-nature, endeared him to his subjects, and made him the idol of the impressionable Viennese.

* **Francis Joseph, CHARLES, EMPEROR OF AUSTRIA AND KING OF HUNGARY** (b. Aug. 18th, 1830) is the son of the Archduke Francis Charles, younger son of the Emperor Francis I., and nephew of the Emperor Ferdinand I. The revolution of 1848 compelled Ferdinand to abdicate; his brother resigned his claims to the throne in favour of his son, who was thus at the early age of eighteen called to rule an empire shaken by rebellion and civil war. The first business of the young monarch's advisers was to put an end to the Hungarian rising. Defeated at first by the Hungarian generals, they called in the help of the Emperor Nicholas, who sent a hundred thousand men to the aid of his imperial neighbour. The young emperor himself took part in the campaign, and was present at the capture of Raab (June, 1849). Restored to the mastery of his dominions by the overthrow of the Magyars and the victories of Radetzky in Italy, Francis Joseph proceeded to undo the work of 1848. In 1850 a Hungarian fanatic attempted to assassinate the emperor, who escaped with a slight wound in the neck. The Hungarian Constitution was suspended, the absolute authority of the Hapsburg monarchy in all parts of the Austrian dominions proclaimed, and the imperial ministers declared responsible only to the emperor. The emperor continued to assert the supremacy of Austria in Germany. In 1852 he paid a visit to the King of Prussia. In 1854 he married the Princess Elizabeth Amelia, daughter of Duke Maximilian of Birkenfeld and Deux Ponts. The absolutist régime was maintained during the first ten years of the emperor's reign, though, as subsequent events showed, the Sovereign's own sentiments inclined to a more liberal and constitutional rule. It was not, however, till Austria had sustained severe reverses abroad that the system fell. In 1869 an alliance was concluded between Italy and France, and the Emperor Napoleon III. called upon Austria to submit the question of the Lombardo-Venetian States to a European conference. This was refused; war was

declared, and the Austrians were driven out of Lombardy by the Allies, and severely defeated at the battle of Solferino (June 24th, 1859). The emperor took part in the campaign, and was present at the decisive battle. He was compelled to sign the Treaty of Villafranca, by which Austria resigned all claims to Lombardy. In consequence of these events, and of the excitement produced by the Garibaldian expedition in 1860, a partial return to constitutionalism was attempted. By the imperial decree of October, 1860, representative Diets were restored in the different States of the empire. The Hungarians, however, were dissatisfied with the "octroyée" Constitution, and did not cease to demand the restoration of their old national institutions in their integrity. During the following years Austrian statesmen were largely occupied with the Schleswig-Holstein question. In 1864 the two powers, Austria and Prussia, drove the Danes from the Duchies. But a dispute arose as to the future position of the recovered territories, which ended in the war of 1866. In the campaign of that year the Austrians were completely defeated, and compelled to agree to the formation of the North German Confederation, under the leadership of Prussia. Italy, the ally of Prussia, received Venice. These disasters completed the change to constitutionalism. The emperor called to his councils a Saxon statesman, Count von Beust (q.v.), and with his assistance put an end to the long dispute with Hungary. National self-government was restored in that kingdom, the emperor was crowned King of Hungary (June, 1867), and the dominions of the Hapsburgs became a "dual monarchy," or federation. The two divisions of the realms were independent so far as regards internal affairs, but linked together by a common ministry for common affairs. The strongest tie, however, has been the personal influence of the Sovereign, who has been equally popular in both halves of his dominions. The difficulties of the Austrian Government, owing to the conflict of races which prevails in the empire, have continued to be great; but the emperor has constantly striven to promote the spirit of constitutionalism, and to develop industry and commerce. In foreign affairs his influence has been considerable, and it has been chiefly directed to establishing and preserving a close alliance with Germany. Since 1871 he has had frequent interviews with the Emperor William, and since 1874 with the Emperor of Russia. Austrian diplomacy has been generally directed to preserving the peace of Europe, in spite of the dangers which have menaced it during the last fifteen years. In 1875 the emperor paid a visit to King Victor Emmanuel, as a sign that amity was restored between Austria and Italy. In 1878 the Treaty of Berlin allowed Austria to occupy

Bosnia and the Herzegovina. During the subsequent years the *entente* between Austria and Germany has been ostentatiously demonstrated. In 1885 a meeting of the Emperors of Austria and Russia, in which it is understood that matters of high policy were discussed, took place with much sumptuous ceremonial at Kremsier. The Emperor Francis Joseph is a good man of business, and an indefatigable worker. He is simple in his habits, and, except for an occasional hunting tour, allows himself little relaxation from affairs of state. His accomplishments are considerable, and he has the reputation of being able to converse in all the languages of his polyglot empire. [S. J. L.]

Francis I. and II. OF NAPLES. [NAPLES.]

* **Frankland**, EDWARD (b. 1825), man of science, is a native of Lancashire, and was educated at Lancaster Grammar School and the Universities of Marburg and Giessen. He became professor of chemistry in Owens College, Manchester, in 1851, and in St. Bartholomew's Hospital in 1857, obtaining a similar appointment in the Royal Institution in 1863, in the Royal School of Mines in 1865, and in the School of Science, South Kensington, in 1881. Dr. Frankland, who became an F.R.S. in 1863, has been president of the Chemical Society and of the Institute of Chemistry. In 1868 he became a member of the Commission for inquiring into the pollution of rivers. Among his numerous scientific works may be mentioned:—*Researches on the Radicals of Organic Compounds* (1857), *How to Teach Chemistry* (1875), *Experimental Researches in Pure, Applied, and Physical Chemistry* (1877), *Water Analyses* (1880), *Lecture Notes for Chemical Students* (3rd ed. 1881), and, in conjunction with Mr. F. Japp, *Inorganic Chemistry* (1884).

Franklin, SIR JOHN (b. 1786, d. 1841), the famous Arctic navigator, was a native of Spilsby, in Lincolnshire, where for ages his family had been yeomen, or "franklins." After receiving the elements of education at St. Ives and the grammar-school of Louth, he entered the navy in 1800 as midshipman on board the *Polyphemus* line-of-battle ship, though originally he had been intended for the Church. Next year he took part in the battle of Copenhagen, and two months later was attached to the *Investigator*, then fitting out for her surveying expedition to New Holland, under the command of Captain Flinders. During this voyage his messmates were Robert Brown (q.v.) and Ferdinand Bauer, the botanists, whose society, by enabling him to appreciate the importance of scientific knowledge, influenced his whole future life. As signal midshipman, he was present, on board the *Bellerophon*, at the battle of Trafalgar (1805), and after serving on various stations shared in the attack on

New Orleans in 1814. But it was not until the piping times of peace in 1819 that the real work of Franklin's life was to begin. In that year he penetrated with the *Trent* as far north as 80°, and next was sent with Dr. Richardson, Lieutenants Back, Hood, and a few other companions, to the Arctic Ocean, by way of Hudson Bay—not, as is usually supposed, in search of the North-West Passage, but for the purpose of ascertaining as much as possible regarding the nature of the coast between the Coppermine River and eastward along Coronation Gulf, a task which took three years and a half to accomplish, and was performed in the most satisfactory manner, though not without the party enduring terrible sufferings from hunger, cold, and other privations. In 1822 the expedition returned, when Franklin was elected F.R.S. and made a post-captain, his *Narrative* appearing next year in quarto, with an appendix by Dr. Richardson. In 1825 he set out on a second journey, with the intention of co-operating with the naval expedition of Beechey, who was penetrating from Behring Strait, and that of Parry from Lancaster Sound, and before his return surveyed the shore from the mouth of the Coppermine westward to Point Beechey, thus in eight years traversing about a third of the distance between the Atlantic and the Pacific, along the route by which the early navigators dreamed of accomplishing a north-west passage. On his return in 1827 he was knighted (K.H.), received the degree of D.C.L. from Oxford, the gold medal of the French Geographical Society (there was at that time no English one), and a few years later was elected a corresponding member of the Institute of France. The *Narrative* of his second expedition appeared in quarto the year subsequently, though Richardson's and Hooker's great works on *Fauna* and *Flora Boreali-Americana* may be regarded as the scientific portion of the report. After taking a distinguished part in the naval operations connected with the Greek War of Independence, Sir John was, in 1836, appointed Governor of Van Diemen's Land (Tasmania), where during his term of office he gained the esteem of the colonists, and did much to improve the standard of public intelligence and morals. In May, 1845, the *Erebus* and *Terror*, only recently returned from the Antarctic expedition under Sir James Clarke Ross, were despatched under Franklin's command for the purpose of ascertaining whether a water-way really existed between the Atlantic and Pacific. The vessels were fitted up with all the appliances for safety and comfort then at the command of science, and were manned by 134 officers and men. In July of the same year they were seen at the entrance to Lancaster Sound; but from that day forward were never again viewed by civilised people. In 1848, the public mind growing uneasy at their

long absence, the search for the missing ships was begun, and continued almost without intermission for eleven years, America sharing with England in this philanthropic work. The story of these expeditions would occupy too much space, and, moreover, belongs more to the history of geography than to the subject of this notice. Upwards of a million was spent on them, and though their results were mainly negative—almost the sole fact gained up to 1859 being that the expedition had wintered at Beechey Island—they form a notable chapter in the story of Arctic adventure, and indirectly added much to our knowledge of the Polar regions, besides stimulating the purely exploratory expeditions which followed. In 1859, however, the party despatched by Lady Franklin in the yacht *Fox*, under Captain (now Sir Leopold) McClintock, ascertained that the vessels had been abandoned in the ice off King William Sound the year after Franklin's death (June 11th, 1847), and that all the officers and crew died of hunger and cold and toil in trying to reach the Great Fish River. A document containing the first portion of this information was found, while the *débris* scattered about, the dead bodies, and the information of the Eskimo, were the authorities for the latter portion of the dismal tale. Further information was obtained by the subsequent journeys of Hall and Schwatka—two Americans—though in its essentials the story obtained through the exertions of McClintock and Young has not been disturbed by more recent data. Personally Sir John Franklin was the most amiable and gentle of men. In his naval he was not more loved than in his civil capacity, while his judgment was equalled by the courage and skill with which he carried out the plans he had formed. He married, in 1823, Miss Porden, daughter of a well-known architect, but after her death a few years subsequently he wedded a second time Miss Griffen (see below).

Sketches of Franklin's life may be found in hundreds of periodicals, proceedings of societies, and popular works, and the latter portion of his career is embodied in the many narratives of the search expeditions referred to. The following more special treatises may be advantageously consulted:—Osborn, *The Career, Last Voyage, and Fate of Sir John Franklin* (1859); Beesley, *Sir John Franklin* (1881); Bell, *Memoir of Lieut. John Irving, R.N.* (1881); Gilder, *Schwatka's Search* (1882); Richardson's article in the *Encyclopædia Britannica* (8th ed.); the three volumes descriptive of Hall's explorations; and Nourse, *American Explorations in the Ice Zones*.

[R. B.]

Franklin, JANE, LADY (b. 1800, d. 1875), whose maiden name was Griffen, married Sir John Franklin in 1828. Her entire life was devoted to him and to his fame, so that it is impossible to sketch the life of the husband without at the same time writing the leading incidents in the career of the wife. After her marriage she travelled in

Syria, Palestine, and Egypt, rejoining her husband in places where he was stationed for some time, and when he undertook the Governorship of Van Diemen's Land she accompanied him to Hobart Town. In 1848 she tried to stimulate interest in his fate, not only by arousing public attention to the subject, but by offering large rewards to anyone who would bring tidings regarding the missing voyagers. Never for a day did she rest from her labours in this respect, until the return of the *Fox*—which had been fitted out nearly at her private cost—put the end of Franklin and his companions beyond doubt. During the last few years of her life she travelled extensively, though still aiding any effort which might conduce to the more complete solution of the partially solved problem of the *Erebus* and *Terror*. She was present when the monument to the lost navigators, who with their lives had actually proved the existence of a channel between the Atlantic and the Pacific, was unveiled in Waterloo Place; and on the marble tablet to Sir John in Westminster Abbey is inscribed these words:—"Erected by his widow, who, after long waiting and sending of many in search of him, herself departed to find him in the realms of life."

* **Franks, AUGUSTUS WOLLASTON, F.R.S., F.S.A.** (b. 1826), antiquary, was educated at Eton, and Trinity College, Cambridge, where he took his degree of B.A. in 1849. He had already developed a taste for antiquarian studies, as is shown by his paper contributed to the Cambridge Antiquarian Society in 1846, on *Palimpsest Sepulchral Brasses*; and on leaving the university he obtained a post in the British Museum, where he devoted himself specially to mediæval and ethnological researches. On the separation of the department of antiquities into the present departments (of Greek and Roman antiquities, Egyptian antiquities, mediæval antiquities, and coins), Franks was appointed keeper of mediæval antiquities, of which he is admittedly the highest living authority. Whether the subject be Japanese pottery, English brasses, majolica, ivories, or the weapons and garments of savage races, the keeper of mediæval antiquities knows more about the matter than anyone else. It is to be regretted that, like many scholars of the finest type, he possesses the accumulative rather than the productive instinct, and stores up learning which the antiquarian world would be thankful to possess in print. His principal publications are the guide to the Christy collection of prehistoric antiquities (1868); his catalogue of the collection of Oriental pottery lent by him to Bethnal Green Museum (1876, 2nd ed. 1878); and his edition of a Japanese report on native pottery, published as one of the South Kensington Art Handbooks (1880). He also edited Kemble's

Horæ Ferales, and the catalogue of the Slade collection of glass; and has contributed many papers and criticisms to the Society of Antiquaries, of which he was appointed director in 1858, and has held the post of vice-president for many years.

* **FRANZOS, KARL EMIL** (b. 1848), a German author, the son of a Jewish physician (d. 1858), was born at Russian Podolia, and brought up in the Polish-Jewish village of Czorskow. He received his early education in the school of the Dominican monastery in this village, and subsequently proceeded to the German Gymnasium at Czernowitz. In 1867 he was, however, obliged to abandon classical studies, because, being a Jew, he had no hope of obtaining an appointment; and applied himself at Vienna and Graz to the study of jurisprudence, history, and philosophy. In 1869 he established the German annual *Buchenblätter*, a sort of almanac; and in 1871 he joined the bar, and began to practise as an advocate. In 1873 he abandoned this profession, and took to journalism, first at Vienna and afterwards at Pesth. He again relinquished journalism so soon as he found himself able to gain a means of livelihood by writing books. • Marrying in 1877, he has since been in the habit of passing the winter at Vienna and the summer in travel. He has visited all the chief places in Europe, and parts of Africa, and has produced many pleasant romances, happily successful in ethnographical descriptions of the places he has thus visited. Among his works are:—*Semi-Asiatic Life: Pictures of Civilisation in Galicia, the Bukowina, South Russia, and Roumania* (1878), *Quiet Stories* (1881), *A Fight for Right* (1882), *The Jews of Barnow*, which has been translated into English by Mr. M. W. Macdowall (1882), *The President*, and *My Franz*, a *Novel in Verse* (1883).

* **FRASER, ALEXANDER CAMPBELL**, D.C.L., LL.D. (b. 1819), professor of logic and metaphysics in the University of Edinburgh, was born in the parish manse of Ardochattan, Argyllshire, of which parish his father was minister, his mother being a sister of Sir Duncan Campbell of Barcaline. He was educated at Edinburgh University, where he took the university prize for an essay on *Toleration* in 1842. In 1846 he became professor of philosophy at New College, Edinburgh; and in 1856 succeeded Sir William Hamilton in the professorship of logic in the University of Edinburgh. From 1850 to 1857 he acted as editor of the *North British Review*. In 1871 he was chosen examiner in the moral science tripos at Cambridge; and in 1872 examiner in logic at the Indian Civil Service. Professor Campbell Fraser published *Essays in Philosophy* in 1856, and *Rational Philosophy* in 1858. In 1871 he issued a *Collected Edition of the Works of Bishop Berkeley*, with *Dissertations and Annotations*, and *Life of Bishop*

Berkeley, and many of his Writings hitherto unpublished, with an *Account of his Philosophy*, from the Clarendon Press. These were followed in 1874 by *Selections from Berkeley*, with an *Historical Introduction* (3rd ed. 1884); and in 1881 by a monograph on *Berkeley*, in *Blackwood's Philosophical Classics*. The philosophy of Professor Fraser is called the *ris media*, the philosophy of faith, or a rational eclecticism founded on faith. In 1871 Professor Fraser received the honorary degree of LL.D. from Glasgow University, and in 1883 D.C.L. from Oxford University.

FRASER, THE RIGHT REVEREND JAMES (b. 1818, d. 1885), Bishop of Manchester, was born at Prestbury, near Cheltenham, and educated at Bridgenorth, and afterwards at Shrewsbury School under Dr. Butler and Dr. Kennedy. Elected scholar of Lincoln College, Oxford, he gained the Ireland scholarship and a first class in the final classical schools, after which he was elected fellow of Oriel (1840), where he continued to act as tutor till 1847, when he was ordained, and appointed to the college living of Cholderton, near Salisbury. In 1860 he was transferred to the equally agricultural parish of Ufton Nervet, near Reading; and in Dec., 1869, was nominated by Mr. Gladstone to succeed Dr. Prince Lee, the first Bishop of Manchester. The appointment was no doubt chiefly due to Mr. Fraser's energy in the cause of education. In 1858–60 he had acted as assistant-commissioner on the Duke of Newcastle's Commission of Inquiry into Popular Education; and, as assistant-commissioner of the school inquiry commission of 1865, he visited the United States and Canada to report on the American system of education. In 1867, again, he was a member of the commission to inquire into the employment of women and children in agricultural work, that led to the Agricultural Children Act of 1873. In his new position at Manchester, the bishop soon made his influence felt in quarters usually outside the reach of episcopal attention. Throughout his years of office he was universally trusted and regarded with respect by Nonconformists as well as Churchmen. Deserting his palace and park in the country, he made his home in Manchester. He was known both as "the layman's bishop" and "the bishop of all denominations." With unflinching industry and unfailing good-humour he laboured successfully in every department of his wide and varied office, extending Christianity, multiplying churches, visiting mills and mines, reforming the stage, protecting the agriculturists, organising the unemployed, defending commerce against Mr. Ruskin, and the Scriptures against Professor Tyndall, always ready to speak his mind honestly regardless of consequences, and always listened to with the respect due to enthusiasm guided by common sense. He intervened with conspicuous success

between masters and men during the industrial troubles of 1877-9. Not a learned scholar, nor a profound theologian, he performed with complete self-sacrifice all the practical duties of a modern citizen. The great trouble of his later life was the attitude which he considered the law compelled him to assume towards the extreme Ritualists, as in the case of Mr. Green, of Miles Platting. It is significant of his influence, that after his death the town council decreed that his statue should be erected in Manchester.

Manchester Guardian, Oct., 1885.

Frauenstadt, CHRISTIAN MARTIN JULIUS (b. 1813, d. 1879), the friend of Schopenhauer, was born at Bajanowo, and studied at Berlin, whilst Hegelianism was still at its height. He afterwards acted as private tutor in various distinguished families of the Baltic Provinces, and in 1844 accompanied Prince Sayn-Wittgenstein to Frankfurt, where he became acquainted with Schopenhauer. In 1848 he returned to Berlin, where he died. He wrote several original works of theological and philosophic criticism, such as *Materialism* (1856), but he will only be remembered for his great edition of Schopenhauer's works (1873-4), and his numerous writings connected with the same subject, such as *Letters on Schopenhauer's Philosophy* (1854), and *Arthur Schopenhauer: Quotations and Observations* (1863).

Frederick VI. and VII. OF DENMARK. [DENMARK.]

Frederick Charles, PRINCE (b. 1828, d. 1885), known as the "Red Prince," was the eldest son of Prince Charles, brother of the Emperor William, his mother being a sister of the Empress Augusta. He was educated for the army, chiefly under the charge of Major von Roon, who attended him at the University of Bonn (1846-8), after which the prince entered the Foot Guards, and served in the first Schleswig-Holstein War. After this he rose steadily in the army, becoming a general of cavalry, with the command of the Third Army Corps in 1861, and commanding the right wing of the Prussian army during the Danish War of 1864. In the Austrian War of 1866 he commanded the first army, and to him the crowning victory of Sadowa was mainly due, though he was accused of hastening the engagement contrary to orders. At the outbreak of the war with France in 1870 Prince Frederick Charles was appointed to command the second army, which he led to victory in the great battles of Thionville, Gravelotte, and St. Privat, thus forcing Bazaine to take refuge within the intrenchments of Metz. The prince at once began the blockade, and after a siege of only seventy days Bazaine surrendered with about 170,000 men. The prince then hastened westwards to check the armies of Chanzy and D'Aurelles de Paladine in their attempts to raise the siege of Paris from the south. The

battles, beginning with Beaune-la-Rolande, lasted almost uninterruptedly from the middle of November till the middle of January, when the Army of the West was rendered impotent at the engagement of Le Mans. The capitulation of Paris followed, and the prince, who had been created field-marshal in the previous October, was destined to see no further active service. He spent the rest of his life in studying war, witnessing reviews, and farming his estates at Glienicke, near Potsdam, where he died. He was the father of the Duchess of Connaught. His nickname of "Red Prince" was due to the colour of his favourite hussar uniform.

Frederick William OF HESSE. [HESSE.]

Frederick William III., KING OF PRUSSIA (b. Aug. 3rd, 1770, d. June 7th, 1840), was the eldest son of the Prince of Prussia (who subsequently became king as Frederick William II.), by his second wife, Louisa of Hesse. Like all the Hohenzollerns, he was trained to the profession of arms. In 1784 he received his commission as lieutenant, and in 1790 he was promoted to a colonelcy. He went through the campaigns of 1792 and 1793, and served at the siege of Landau. In 1786 his father ascended the Prussian throne, and the young Frederick William became Crown Prince. In December, 1793, he married the Princess Louisa of Mecklenburg-Strelitz, a lady of great beauty and lofty character. On Nov. 16th, 1797, Frederick William III. succeeded to the throne, and immediately set about a series of administrative reforms, aiming especially at purifying the court and royal household, and increasing the efficiency of the army. The king, however, was not inclined to grant anything in the nature of real constitutional reform. His foreign policy during the first portion of his reign, especially while it was under the control of Haugwitz, was extremely unfortunate. Vacillating between France and the Allies, he threw away the chance of joining the Coalition till the victories of Marengo and Hohenlinden compelled Austria to make peace. In 1802 a *rapprochement* took place between Prussia and Russia, and a meeting of the czar and the king occurred at Memel in June. Almost at the same time a secret treaty was concluded with France, by which large accessions of territory in Germany were secured to Prussia. On the outbreak of hostilities between France and the Allies in 1803-4, the Prussian relations with France became exceedingly strained. In spite, however, of the pressure put upon him by Russia, Frederick William hesitated to join the Coalition in the spring and summer of 1805. He cherished the hope that he might be able to preserve his neutrality, and, at the same time, secure the annexation of Hanover, on which his ambition was set, to the Prussian monarchy. In October, however, Bernadotte, in spite of all protests, marched his troops

through Prussian territory. The king, deeply offended, prepared to yield to the advice of his guest, the czar, who visited Berlin in October, and to join the Coalition. But he hesitated and delayed till after Austria had been crushed at Austerlitz. Not till 1806 did Frederick William declare war. Within a week the Prussians had been totally defeated at Jena and Auerstadt, and the kingdom lay helpless at the feet of France. During the next seven years the work of national regeneration was quietly and steadily pursued. No small share in the credit of this work is due to the king, who dismissed his former advisers. He called Hardenberg, Stein, and Scharnhorst to his councils, and lent them a steady support in their plans of reform. In July, 1807, he instituted military reorganisation committees, which in a few years reconstructed the Prussian army afresh on the short service and reserve system. In 1810 the queen, whose heroic attitude had had the liveliest effect upon the nation at this crisis, died (July 19th). In 1811 proposals for an alliance with Russia, Austria, and England were made. Then followed the Russian campaign, during which, since Prussia was full of French troops, Frederick William was constrained to act nominally in alliance with France. But when the remnants of the *Grande Armée* were in full retreat through Germany he concluded an alliance with Russia and Austria, and declared against Napoleon. On March 17th he issued the celebrated proclamation to the people of Prussia, which began the German War of Liberation. He was present at headquarters during the eventful campaign of the autumn of 1813, and on Oct. 19th rode into Leipzig with the Emperor Alexander, the day after the decisive battle of the war. In the subsequent invasion of France in 1814 the king was also present in person with the army, and entered Paris after the battles of March. In the following autumn he went to Vienna to watch over Prussian interests at the Congress. After the close of the war Frederick William attempted some constitutional changes. In April, 1815, an edict, dividing the monarchy into new provinces and districts, was promulgated. In 1817 the Council of State assembled, and the ministry was reorganised. At the same time the king devoted his earnest attention to Church matters, and several commissions to inquire into the state of the Reformed Churches, and if possible to bring about a union between them, were constituted. But Frederick William's constitutional impulses were not lasting. Soon after the close of the great war he fell under the influence of counsellors like Wittgenstein, Tauenzien, and Ancillon, who had little sympathy with reform. Reaction in home affairs was strengthened by the close alliance of Frederick William with his despotic imperial neighbours. After 1818 a period of arbitrary government began in Prussia, in which the rising Liberal movement was

crushed; the press was gagged, and the rights of free speech and free assembly interdicted. Frightened by the fancied progress of democracy in his dominions, and overcome by the influence of Metternich, the king became a firm supporter of the absolutist principle abroad. Prussia joined the Holy Alliance, and seconded Austria and Russia at Laibach and Verona; at home some administrative changes and occasional meetings of the provincial estates were a poor substitute for the Constitution which Hardenberg and A. von Humboldt would have given. During the disturbances of 1830-2 Frederick William confined himself to securing the neutrality of Prussia, and giving valuable assistance to the Russians in suppressing the Polish insurrection, at the same time drawing closer the alliance with his eastern and southern neighbour. Unpopular as was Frederick William's home policy with many of his subjects, the king himself was personally esteemed. He kept to the Hohenzollern traditions of frugality and industry. With the exception of an occasional trip to a watering-place, he allowed himself little rest from his civil and military duties. In private life he was amiable, kind-hearted, and closely attached to his family and a few chosen friends, and in public affairs, though his intellect was narrow and limited, and his capacity for political foresight small, he was upright, conscientious, and patriotic. As one of the leading figures in the national revival after 1806, he deserves the gratitude of all Prussians.

Treitschke, Deutsche Geschichte im neunzehnten Jahrhundert; Von Sybel, Hist. of the French Revolution; W. Hahn, Friedrich Wilhelm III. und Louise; Duncker, Aus der Zeit Friedrichs des Grossen. [S. J. L.]

Frederick William IV., KING OF PRUSSIA (b. Oct. 15th, 1795, d. Jan. 2nd, 1861), was the eldest son of Frederick William III. He was carefully educated, receiving not only the usual elaborate military training of a Hohenzollern prince, but also instruction in history, economics, jurisprudence, and philosophy, from some of the most distinguished professors of the time. Among his teachers were Scharnhorst, Kneesebeck, Ritter, Savigny, Delbruck, and Ancillon. He early acquired a taste which never left him for literature and art. Without being a profound student, he was a well-read man of letters, something of an artist, an archaeologist and antiquarian, and a fluent, if too rhetorical, orator. He accompanied his father in the campaigns of 1813 and 1814, and entered Paris with the Allied Sovereigns. In 1823 he married Elizabeth, daughter of King Maximilian of Bavaria. In 1828 he travelled in Italy, and further developed his artistic tastes. Subsequently he made several journeys into Russia, and became much attached to his brother-in-law, the Czar Nicholas. In 1840, on the death of his father, he was called to the throne. He assumed the crown with a reputation, and

probably an inclination, for liberal reform. An amnesty was proclaimed, some of the persons arrested for political offences in the previous reign were liberated, and the Constitutionalist ministers, Eichhorn and Boyen, were called to the king's counsels. At the same time the breach with the Church of Rome was healed, and a brilliant circle of men of letters received the patronage and encouragement of the court of Berlin. It was the general expectation that a true parliamentary and representative system would be established in Prussia. These hopes were disappointed. Irresolute and injudicious, the king was afraid to take the decisive step demanded by the Liberals, nor could he bring himself to abandon the absolutist position of the Prussian kings. In 1847 he assembled a chamber, made up of delegates from the various provincial Diets, but refused to grant a written Constitution. The revolution of 1848 filled him with consternation. He behaved with little dignity or courage, and in his alarm promised to grant the Constitution demanded by the insurgents. At the same time he came forward actively as a supporter of the United Germany movement. In 1849 the Frankfurt national assembly offered him the imperial crown, but Frederick William declined it, a step which was probably wise, though it caused great chagrin to his subjects. In 1850 the king promulgated the Prussian Constitution. By this time, however, his alarm had subsided, and with Manteuffel as his minister, Frederick William did his best to frustrate the hopes of those who aimed at establishing the English parliamentary system in Prussia. During the next few years he was much occupied with foreign politics. His policy abroad was irresolute and not very successful. He succeeded, however, in remaining neutral during the Crimean War, and did his best to detach Austria from the Western Powers. The Neuchâtel dispute with Switzerland, which lasted for several years, ended in 1856 in the renunciation by Frederick William of all claims to the district. In 1857 the king fell a victim to paralysis and partial insanity. He lived for over three years longer, during which time the administration was carried on by his brother, Prince William, afterwards King of Prussia and German Emperor.

Ranke's art. in *Allgemeine deutsche Biographie*, vol. vii., *Briefwechsel Fried. Wilhelm IV.* (1873); *Varnhagen von Ense, Blätter aus der preussischen Geschichte* (1868) [S. J. L.]

* **Frederick William** (FRIEDRICH WILHELM NIKOLAUS KARL), (b. 1831), still generally known as the "Crown Prince," though since the creation of the Empire his title has been "Imperial Prince of Germany," is the eldest son of the present Emperor William, was born at Potsdam, and received the usual princely education for the army. At the outbreak of the war with Austria (1866), he was appointed to the command

M.W.—15

of the Second Army, with General von Blumenthal as chief of his staff. By a series of clever manœuvres, and after some sharply contested engagements, the Second Army was led south-westwards from Silesia through the mountain passes into Bohemia, where it was just in time to support Prince Frederick Charles and the First Army, who were waging a still doubtful contest against General Benedek at Sadowa. The appearance of the Crown Prince at once ensured the victory, and practically put an end to the war. At the beginning of the Franco-Prussian War, the Crown Prince was in command of the Third Army, consisting of some eight army corps, or about 200,000 men. The first action was the assault on Weissenburg (Aug. 4th), and two days later this was followed by the memorable action of Woerth, where the greater part of MacMahon's army was annihilated. The Crown Prince also highly distinguished himself by his passage of the Meuse on the day of Sedan. Three weeks later he was at Versailles, and remained with the troops beleaguering Paris till the conclusion of peace. In the middle of the following summer he visited England with the Crown Princess (Victoria Adelaide, Princess Royal of Great Britain), whom he married in 1858. The Crown Prince has been suffered to play no prominent part in political life, but it is generally believed that he inclines to a somewhat advanced Liberalism.

Frederick William V. OF PRUSSIA.
[WILLIAM I.]

Frederick William OF SAXONY.
[SAXONY.]

Frederick William OF WÜRTTEMBERG.
[WÜRTTEMBERG.]

* **Freeman, EDWARD AUGUSTUS** (b. 1823), historian, was born in Staffordshire, and educated at Trinity College, Oxford, where he gained a second class in classics in 1845, and was elected to a fellowship. He first made his mark as a student of mediæval architecture. In 1849 he published his first work, a *History of Architecture*. About this time he contributed numerous articles on the ecclesiastical antiquities of South Wales to the *Archæologia Cambriensis*. In 1856 appeared the *History and Antiquities of St. Davids*, written by him and the Rev. W. B. Jones, afterwards Bishop of St. Davids. A long series of historical works now proceeded from his pen. In 1863 appeared the first volume of a *History of Federal Government*, including a luminous introduction on the conditions and characteristics of successful federation, and the history of the Achaean League. It is to be regretted that the work was never continued. For some years Mr. Freeman concentrated his attention on the earlier portions of English history. His greatest work, the *History of the Norman Conquest*, in five large

volumes, appeared between 1867 and 1876, and the *Reign of William Rufus and Accession of Henry I.* in 1882. His *Old English History* (1869) aims at giving children of quite an early age sound and accurate knowledge of English history before the Norman Conquest. Very different fields are covered in one of his earlier works, the *History and Conquests of the Saracens*, and in his *Ottoman Power in Europe*, published during the Eastern troubles of 1877. The varied contents of his three series of *Historical Essays* are striking illustrations of the breadth and versatility of his historical culture, and the range of his knowledge is admirably displayed in his *Historical Geography of Europe* (1881) and the little *Sketch of European History* (1872). His *History of the Cathedral Church of Wells* (1870) is the fruit of a long residence in Somerset. The *Growth of the English Constitution* is a popular exposition of the more striking features of our institutions. His *Historical and Architectural Sketches* and *English Towns and Districts* combine the results of his love of history, architecture, and travel. For many years he contributed largely to the *Saturday Review*, and the leading archæological and historical periodicals contain numerous articles from him. An ardent Liberal politician, he once unsuccessfully contested a division of Somerset. He has shown in many writings his sympathy with the principle of nationality in South-Eastern Europe. In *Disestablishment and Disendowment*, he defends by explaining the endowments and status of the English Church. On the appointment of Dr. Stubbs as Bishop of Chester, Mr. Freeman was made his successor as Regius professor of modern history at Oxford, an office which he still holds. In 1883 he visited America on a lecturing tour, and on his return published *Some Impressions of the United States*, and shortly afterwards two lectures, *The English People in their Home*, and *The Practical Bearings of General European History*. Mr. Freeman's numerous historical works display great learning, freshness, thoroughness, vigour, clearness, and individuality. No one has done more than he for the spread of sound views on all historical questions, and for the cultivation of scientific views of history. He has ever united the characters of an original investigator and a popular expositor. In the great *History of the Norman Conquest*, by which he will be best known, he has given a well-nigh exhaustive narration of the turning-point of English history, and has elaborately examined in detail its causes and effects. He has made some of the most obscure parts of English history widely and accurately known. He has never wearied in preaching great lessons of historical continuity, of development, and of nationality. He has stimulated even those who have been least able to share his convictions. Among those in England who have raised history

from the condition of a department of *belles-lettres* into a subject of serious and lifelong study, at once scientific and practical, there is no greater name.

Freiligrath, FERDINAND (b. June 17th, 1810, d. March 18th, 1876), poet, was the son of a Detmold schoolmaster. His education was interrupted, owing to the narrow circumstances of his parents, and he was obliged to devote himself to commercial pursuits, first at Soest, and afterwards at Amsterdam. He found time to study, and in 1835 acquired at a stroke a reputation by some poems contributed to Chamisso's *Musenalmach*. In 1838 he obtained a mercantile post at Barmen, and became acquainted with many of the younger *littérateurs* of Germany. In 1838 his first collected volume of poems appeared. Two years later he married Ida Melos, the daughter of a Weimar professor, after a courtship which produced some exquisite love-poems. In 1841 he removed to Darmstadt, and afterwards to St. Goar, on the Rhine. During the next few years Freiligrath became an ardent supporter of the Liberal, and even the revolutionary movement, and after the publication of his volume, *Mein Glaubensbekenntnis*, judged it prudent to retire from Germany. In 1846 he settled in London, where he obtained a situation. In 1848 he returned to Germany, joined the staff of the *Neue rheinische Zeitung* at Cologne, which was edited by Karl Marx, and wrote numerous poems of such a character that he again found it necessary to withdraw to London after 1850. He lived at Hackney, and gained a modest livelihood by his work in a house of business. His leisure time was devoted to poetry and translation. Burns, Moore, Longfellow, and De Musset were among the poets whom he rendered into German. In 1867 he was involved in distress by the failure of the bank in which he was employed. But his countrymen came to the rescue, headed by the poets, and a subscription, amounting to 60,000 thalers, was collected for him. He was now free to return to Germany, where he was received with acclamation. He was no longer a revolutionist, and among the latest efforts of his muse were some stirring battle-songs during the war of 1870. His collected works were published in 6 vols. at Stuttgart in 1870. Freiligrath is one of the most popular (perhaps the most popular) of German poets during the middle portion of the present century. As a writer of lyrics he stands in the front rank. He united to a rare gift of expression a great power of embodying in verse the ideas and sentiments of what the Germans call the *Neuzeit*. Some of his translations are of extraordinary merit and felicity. Many of his poems have been translated by his daughter, Mrs. Freiligrath-Kroeker.

Freiligrath, *Gesammelte Dichtungen* (Stuttgart, 1877, 6 vols.); W. Buchner, *Ferdinand Freiligrath, ein Dichterleben* (1881, 2 vols.). [S. J. L.]

Frelinghuysen, FREDERICK T. (b. 1817, d. 1885), American statesman, was born at Milltown, New Jersey, graduated at Rutgers College in 1836, and was admitted to the bar in 1839. He acted as Attorney-General of New Jersey in 1861 and 1866, and as a United States senator from Dec., 1866, to March, 1869, and again from March, 1871, to March, 1877. In 1881 he became Secretary of State in President Arthur's Cabinet, and resigned with his party in 1885. As Secretary of State, Mr. Frelinghuysen opposed the proposal that the Powers should guarantee the neutrality of the projected Panama Canal, advocated the intervention of the United States along with the several European Powers to stay hostilities between Chili and Peru, and failed to renew the Commercial Treaty of 1848 with Mexico, although he had been assisted in the negotiations by General Grant and Mr. W. H. Prescott, partly because the sugar and tobacco interests were arrayed against him, and partly because the constitutionality of reciprocity treaties was doubted, inasmuch as they tend to hamper the Finance Minister.

United States Annual Cyclopaedia, 1882, 1883, 1884.

Frere, JOHN HOOKHAM (b. 1769, d. 1841), diplomatist and author, the son of a gentleman of good family, was born in London, and educated at Eton and at Caius College, Cambridge. At Eton he became a warm friend of Canning, and shortly after he had been returned to Parliament in 1796, as member for Looe, in Cornwall, Frere began to contribute largely to the *Anti-Jacobin*. Of its poems, *The Loves of the Triangles*, a witty parody of Darwin's *Loves of the Plants*, is wholly by him; and Canning and he claimed the co-authorship of the immortal *Needy Knife-Grinder*. In 1799 he succeeded Canning as Under-Secretary of State for Foreign Affairs, and in 1800 his services to the Tory party were further rewarded with the office of envoy extraordinary and plenipotentiary to Lisbon, whence in 1802 he was transferred to Madrid. Recalled in 1804, at the demand of the Spanish minister, Godoy, on account of his warm remonstrances against the impending alliance between Spain and France against England, Frere was sent out again in 1808 as plenipotentiary to Ferdinand VII. His conduct during his first mission had been rewarded by the Government with a pension and the title of Privy Councillor. During his second mission he committed the unfortunate mistake of persuading Sir John Moore to attempt to hold Madrid against Napoleon with totally inadequate resources. The retreat to Corunna was the consequence, and public indignation ran so high against Frere that he had to be recalled. Refusing a peerage and the post of ambassador to St. Petersburg, he eventually married, and settled down at Malta. There he occupied himself chiefly with literary labours, the most important of which

were his admirable translations of the plays of Aristophanes, in which the Attic salt of the original seems to have lost but little of its savour. He also wrote *Theocritus Restitutus*, an attempt to construct a history of the life of the poet from existing fragments. Frere was a brilliant man among brilliant contemporaries, and he does not seem to have chafed overmuch at the failure of his public life.

The Works of the Right Hon. J. H. Frere (3 vols.), with a memoir by Sir Bartle Frere (1871, 2nd ed. 1874).

Frere, SIR HENRY BARTLE, BART. (b. 1815, d. 1884), the nephew of John Hookham Frere (q.v.), was educated at Haileybury, and in 1833 passed into the service of the East India Company. Poonah was his first station, and there he was employed in the revenue department. Acquiring an intimate knowledge of the Mahratta people, he suggested several improvements in the assessment of the revenue, which removed much injustice. After being secretary to Sir George Arthur, the Governor of Bombay, he became in 1847 Resident, and then Commissioner at Sattara, and in 1850 became Chief Commissioner of Scinde, as successor to Sir Charles Napier. A period of improvements invaluable to the province—the construction of canals, the establishment of a seaport at Kurrachee—was cut short by the outbreak of the Mutiny. It was now that Frere's great qualities became manifest. Conscientious, as he wrote to Lord Elphinstone, the Governor of Bombay, "that when the head and heart are threatened the extremities must take care of themselves," he held the vast district with a handful of men—two weak English regiments, and some native troops in whom there was much disaffection. But his master-stroke, the occupation of the fortress of Moultan, had its effect; and having reduced his men to obedience, Frere was even able to send assistance to the neighbouring administrators. Honours and thanks were showered upon him, and Frere was nominated to the Viceroy's council. In conjunction with Mr. Wilson, and, after his death, with Mr. Laing, Sir Bartle Frere proceeded to re-establish Indian finance, and so staved off what he styled the risk of "drifting into bankruptcy." From 1862 to 1867 he was Governor of Bombay, and once more achieved high renown as an administrator. Bombay was made a municipality, and became a handsome and cleanly city; crises in the cotton traffic were met with a dauntless front; while Lady Frere, in conjunction with her husband, strove with zeal to ameliorate the condition of the women throughout the province. On his return to England Sir Bartle Frere became a member of the Indian Council, which appointment he held for ten years. An interval of comparative rest followed, during which he was president of the Royal Geographical Society. In Nov., 1878, an important letter from him was published in the *Times*, advocating

a change from the "masterly inactivity" to the "forward" policy on the north-west frontier. In 1872 he was sent to Zanzibar, and succeeded in negotiating an important treaty with the Sultan, by which the slave traffic with the interior was abolished. His rewards were a seat in the Privy Council and the freedom of the City. Sir Bartle Frere accompanied the Prince of Wales on his Indian tour, and in 1877 was appointed Governor of the Cape, and high commissioner for the settlement of native affairs in South Africa. One of the objects of the appointment was to carry out the confederation of the South African colonies, but it failed, owing to the hostility of a certain section of the Dutch population. After bringing the Kaffir War to a close, Sir Bartle Frere was free to deal with the Zulu king, Cetewayo. It is not desirable here to give any emphatic decision on the justice of the Zulu War. Sir Bartle Frere's conduct was blamed at the time, not only by the Liberals in Parliament, but also by the Government. Perhaps he was over-harsh, in his treatment of the Zulu king, and the questions at issue were some of them trivial; on the other hand, it cannot be doubted that Cetewayo was developing into a tyrant, or that his army constituted a menace to all his neighbours. After the war had been brought to a successful conclusion Sir Bartle Frere went to the Transvaal, and endeavoured, with temporary success, to persuade the Boers to accept the British annexation. He was recalled in 1880, soon after the formation of the Gladstone ministry, on the ground that the confederation scheme had broken down. During the remainder of his life he was frequently president of the learned societies, and displayed a great interest in missionary labour. His literary works consist of published lectures on Indian and missionary topics, an edition of Hookham Frere's works, and a preface to his daughter's delightful *Old Deccan Days*. One of the greatest of Indian administrators, he, more than anyone else, helped to bury the memories of the Mutiny.

Annual Register, 1884. Frere's South African policy is discussed by Miss Colenso, ably but bitterly, in her *History of the Zulu War*, and more favourably by W. Greswell in *Our South African Empire*, and J. Nixon in *The Story of the Transvaal*. [L. C. S.]

Fresnel, AUGUSTIN JEAN (b. 1788, d. 1827), a celebrated French geometer and optician, the son of an architect, was born at Broglie, in the department of the Eure. During his boyhood he made very little progress in learning—at the age of eight he could not read—but entering the *École Polytechnique* in his eighteenth year, he acquitted himself with distinction. He next served as a Government engineer, but his espousal of the cause of the Bourbons in 1814 occasioned, on Napoleon's re-accession to power, the loss of his appointment. On the Second Restoration he

was appointed engineer at Paris, where most of his life was afterwards spent. His researches in optics, continued until his death, began about this time. In 1818 he read his celebrated memoir on *Diffraction* before the Academy of Science, and in 1819 he was nominated a commissioner of lighthouses, for which he was the first to construct compound lenses as substitutes for mirrors. He died of consumption on July 14th, 1827. The undulatory theory of light enunciated by Hooke was extended to a large class of optical phenomena, and permanently established by the brilliant discoveries and mathematical deductions of Fresnel. In conjunction with Arago he discovered that polarised rays, though when similarly polarised they affect each other as do ordinary rays, yet when rectangularly polarised have no power of interference. He succeeded in obtaining circularly polarised light by means of a rhomb of glass, known as "Fresnel's rhomb," having acute angles of 54° and obtuse angles of 126°. His labours in the cause of optical science received little attention during his life, and many of his papers were not printed by the Academy of Science till long after his death.

Arago's *Éloge de Fresnel*, in the *Œuvres Complètes* (of Arago), tome i.

* **Freycinet**, CHARLES LOUIS DE SAULCES DE (b. 1828), French politician, was born at Dauphiné. He embraced engineering as a profession, worked on the railway of the Midi, and was employed on investigations by the Government—for instance, into the employment of women and children in English manufactures. In 1870, Gambetta, having determined on a desperate effort to resist the invading Germans, chose M. de Freycinet as chief of his military Cabinet, and with rare devotion he set himself to work to raise armies and organise commissariat. He then retired for the time being into private life, but in 1876 was elected senator by the department of the Seine, having been recommended to the constituency by Gambetta. In 1877 he became Minister of Public Works in the Dufaure Cabinet, and continued in that office under the premiership of M. Waddington. In December, 1879, the Waddington Cabinet having collapsed, M. de Freycinet undertook to reform and reconstruct it, taking at the same time the portfolio of Foreign Affairs. In the following year he had to execute the March decrees against the unauthorised orders, but finding that his Cabinet were not of one mind on the subject, he sent in his resignation to the President. After an interval, during which the Ferry and Gambetta ministries had come and gone, M. de Freycinet a second time formed a ministry, again becoming Minister for Foreign Affairs (Jan., 1882). He now had to deal with the Egyptian difficulty caused by the revolt of Arabi Pasha (q.v.), but, unsupported by his colourless Cabinet, he attempted a half policy.

which aimed solely at obtaining the neutralisation of the canal, and so, as the Radical leader, M. Clémenceau, informed him, combined the disadvantages of intervention and non-intervention. On July 24th he was defeated on a vote of credit, and resigned. On the retirement of his successor, M. Ferry, in April, 1885, M. de Freycinet became Minister of Foreign Affairs in the Cabinet of M. Brisson (q.v.); and when the latter petulantly threw up office at the close of the year, M. de Freycinet, much against his inclinations, undertook to form a ministry for the third time. Chosen from old materials, it had a very unsolid appearance, and came to an end in 1886.

Freycinet, Louis Claude de Saulces de (b. 1779, d. 1842), a French navigator, entered the French navy in 1793, and after taking part in several engagements against the English, joined in 1800—along with his brother, Henri Louis (b. 1777, d. 1840), who afterwards rose to the rank of admiral—the expedition sent out under Captain Baudin to explore the south and south-west coasts of Australia. The expedition went over most of the ground already explored, and claimed credit for discoveries which had really been made some time before by Flinders (q.v.). Returning to Paris in 1805, Louis was entrusted by the Government with the work of preparing the maps and the plans of the expedition. In 1817 he commanded the *Uranie*, in which Arago and others went to Rio de Janeiro to obtain observations and to collect specimens in natural history in South America, Australia, and the Pacific islands generally. This voyage, which lasted over three years, was entirely successful, and its results were published under Freycinet's supervision, with the title of *Voyage autour du Monde* (1825-44), in eight quarto volumes, and several folio volumes of fine plates and maps. The parts on navigation, hydrography, and magnetism were written by Freycinet.

Roquette, *Notices historiques sur MM. Henri et Louis de Freycinet* (1840); F. Grille, *L. de Freycinet, sa Vie de Savant et de Marin* (1853).

Freytag, Georg Wilhelm Friedrich (b. 1788, d. 1861), Arabic lexicographer, studied at Göttingen till 1813, when he became assistant in the library of Königsberg. In 1815 he joined the Prussian army in its march against France, in the capacity of chaplain (*Brigade Prediger*), but when he arrived in Paris he was so deeply attracted by De Sacy's lectures that he threw up his army appointment and remained in France till 1819, when he accepted the professorship of Oriental languages at Bonn, a post he held till his death, Nov. 16th, 1861. Freytag's great work is his Arabic dictionary, *Lexicon Arabico-Latinum* (4 vols., Halle, 1830-7), with an abridgment in *unum tyronum* (Halle, 1837). It is professedly a compilation from the Arabic lexicons called the *Kāmūs* and the

Sihāh, and was supposed in some respects to be a great advance upon the earlier work of Golius. Freytag's inaccuracy, which amounts sometimes to inserting whole passages on the authority of the *Kāmūs*, when not a word of them is to be found in that work, considerably detracts from the value of his dictionary, which is, moreover, arranged in a confusing manner, and written in Latin, a language which is incapable of expressing many of the shades of meaning in the Arabic. The dictionary, however, had its merits as a laborious and useful compilation, and its publication gave a stimulus to Oriental studies in Europe, while its abridged edition has been serviceable to many students, though now partly superseded by the work of Dr. Steingass. Freytag's other publications include the *Hamasa Carmina* (2 vols., Bonn, 1828-47); *Arabum Proverbia*, a very useful collection (3 vols., Bonn, 1838-43); and some smaller works, such as the *Arabic Metrology* (1830); the *Introduction to the Arabic Language* (1861); and a *Concise Hebrew Grammar* (Halle, 1835).

Freytag's works; Lane's *Arabic Lexicon*, preface; Brockhaus, *Conv. Lex.* [S. L.-P.]

* **Freytag, Gustav** (b. 1816), novelist and historian, was born at Kreuzburg, in Prussian Silesia, not far from the borders of Poland. Having been educated at the Gymnasium of Oels, and the Universities of Breslau and Berlin, he returned to Breslau, intending to follow a professor's life, and devoted himself chiefly to the study of German history and antiquity. During this period he produced a volume of lyrical poems, and four dramas, *The Betrothal* (*Die Brautfahrt*—1841); *The Man of Learning* (*Der Gelehrte*—1844); *Valentine*—1846; and *Count Waldemar* (1847). In the last-named year he removed to Dresden, and in 1848 to Leipzig, where he became editor of the *Border Messenger* (*Grenzboten*), a position which he held till 1870. In 1854 he published *The Journalists*, a comedy, and in the following year the appearance of his masterpiece, *Debit and Credit* (*Soll und Haben*), proved where his real strength lay. As a description of ordinary German life in a large provincial town, and of the dreariness of the Polish domains, it is unequalled for fidelity, humour, and keen delineation of character. A profound earnestness pervades the whole. Some of the scenes are almost worthy of tragedy. The work raised Freytag at once to the highest rank amongst all German novelists. Nevertheless, in *The Fabii* (1859) he turned to drama once more, but the piece was too far removed from modern interest to have any real success on the stage. It was followed in 1862 by the first collection of *Pictures from German History*, dealing with the social and political life of the sixteenth and seventeenth centuries. They were re-issued, with numerous additions, in 5 vols., in 1866. In the meantime (1864) he had published another novel on modern German life in a university town, *The Lost*

Manuscript (Die verlorene Handschrift). Since then he has been engaged upon a *Life of Karl Mäthly* (1870), and *Our Ancestors (Die Ahnen)*, a series of tales in 6 vols., illustrating various epochs of German history, from the earliest times down to the War of Independence.

Ueber Gustav Freytag; ein Vortrag von F. Sintenis (1881).

Fries, ELIAS MAGNUS (b. 1794, d. 1878), the most famous of modern Swedish botanists, was a native of the province of Småland, in which Linnæus also was born. He was early instructed in botanical science by his father, a country clergyman, and when barely twelve years of age was induced to begin the study of the order fungi, in which he was subsequently the greatest authority, by discovering a fine species of *Hydnium*. After receiving his preliminary education in Wexiö, he entered the University of Lund, where he graduated Ph.D., and after serving as *docent*, was in 1824 appointed professor of botany. In 1836 he was transferred to Upsala as professor of rural economy, and in 1844 and 1848 he represented the university in the Swedish Rigsdag. In 1851 he became professor of botany in the university, and there led an uneventful life to the close of his long and distinguished career. Though his fame was overshadowed by that of the illustrious Linnæus, who had been his penultimate predecessor in the Upsala Chair, it is not too much to say that the influence of Fries on Swedish naturalists was only second to that of the "Luther of biology." The order fungi was more completely investigated by him than by any of his predecessors, while he did not neglect lichens and other forms of plants. His writings were very numerous. The following are some of his separately published works:—*Novitiae Floræ Suevicæ* (1814–23); *Observationes Mycologicæ* (1815); *Flora Hollandica* (1817–18); *Elenchus Fungorum* (1828); *Epicrisis Systematis Mycologici* (1838); *Summa Vegetabilium Scandinaviæ* (1846); *Monographia Hymenomycetum Suevicæ* (1863); *Icones Hymenomycetum* (1867–77), etc. His son Theodore is at present professor in Upsala, lichens and Arctic plants being his speciality.

Fries, JACOB FRIEDRICH (b. 1773, d. 1843), philosopher, was born at Barlz, on the Elbe, where his father had charge of a Moravian community. Throughout his boyhood Fries was brought up in the Moravian school at Niesky, where at the age of twenty he first began his study of Kant. After visiting the Universities of Leipzig and Jena, he became for a short time a private tutor in Switzerland, after which he returned to Jena, began to lecture, and was appointed extraordinary professor at the same time as Hegel, in 1805. During these years the great object of his teaching was to oppose the unwarranted dogmatism, as he considered it, of Fichte's system,

and more especially of Schelling's *Philosophy of Nature*, and to restrain philosophy within the strict limits laid down by Kant. He may be regarded as the very first of those who raised the cry of "Back to Kant," of which we have heard so much in late years. With this view he published his polemic *Rheinhold, Fichte, and Schelling*, and his *System of Philosophy* (1801–3), containing a sketch of his doctrine. In 1805 he was invited to the Chair of philosophy in Heidelberg, where he remained eleven years. Whilst there he published his *New or Anthropological Critique of Reason* (1807), and attracted much attention by his inspiring lectures on theoretic politics, the main conclusions of which he embodied in the philosophic romance of *Julius and Evagoras*. His words had great influence on the general uprising of 1813, and on his return to Jena in 1816 he was speedily recognised by the newly organised Burschenschaft as one of the foremost champions of their cause. As a guest at the great Wartburg festival, he incurred the suspicion of the Saxon Government; but Karl August refused to comply with the demand for his deposition till after Kotzebue's murder in 1819. He was then banished from the university for five years, and was not allowed to lecture publicly on philosophy till 1838, though he occupied the Chair of mathematics and physics after 1824. Of Fries's very numerous writings only *The Philosophy of Religion and the Philosophic Aesthetic* need here be mentioned. The peculiar characteristic of his system was the introduction into philosophy of a new form of conviction, which he called *Ahnung* (surmise or foreboding), and placed beside knowledge and belief. But his true title to remembrance was his extraordinary influence on the South of Germany at one of the most critical periods of her history.

Henke, *Biographie von Fries*.

• **Frith, WILLIAM POWELL, R.A.** (b. 1819), painter, was born at Studley, near Ripon. In 1835 he entered Sass's academy, where he had, among others, John Phillips for a fellow-pupil. In 1840 he exhibited at the British Institution *Othello and Desdemona*, and at the Royal Academy *Malvolio before the Countess Olivia*. These were followed by scenes from Sterne's *Sentimental Journey* and *The Vicar of Wakefield*, from Dickens, Shakespeare, Molière, and wherever dramatic incident was to be found. The first important work which gave emphasis to his reputation was *Coming of Age in the Olden Time*. It was engraved, and became immensely popular. The same remark applies to his *Ramsgate Sands* (1854) and *The Derby Day* (1858), *Claude Duval* (1860), and the *Railway Station* (1862). When *The Derby Day* was exhibited at the Royal Academy it had to be protected from the pressure of the eager crowd by a barrier, and it was perhaps the first instance in the whole history of the Academy in which any such precaution was

necessary. The last of his works which fastened itself in the popular mind was *The Road to Ruin*, a series of pictures exhibited in 1878, and afterwards engraved. Since then he has produced *For Better for Worse* (1881); *A Private View* (1883); *Cruel Necessity—Cromwell* viewing the dead body of Charles I. (1884); *John Knox at Holyrood* (1885); and *Dr. Johnson's Tardy Gallantry* (1886). He was commissioned by the Queen to paint the *Marriage of the Prince of Wales*. In respect of treatment, Mr. Frith's *King Charles II.'s Last Sunday*, exhibited in 1867, is perhaps the finest of all his works. Mr. Frith is an indefatigable worker, wields an essentially dramatic pencil, and is perhaps the most widely popular of all English artists. He was made A.R.A. in 1846, R.A. in 1852, and is a member of several foreign academies.

Fröbel, Friedrich Wilhelm August (b. 1782, d. 1852), the originator of the Kindergarten system of education, was the son of the village parson at Oberweissbach, near Blankenburg, in the Thüringen Forest. His own education was very imperfect, though in 1799 he studied for a time at Jena, and in later years (1811-12) visited the Universities of Berlin and Göttingen. For some years he devoted himself to farming, but in 1805 he visited Pestalozzi at Yverdon, on the Lake of Neuchâtel, and under his encouragement and advice gave up the rest of his life to the study and practice of education, excepting only the short period during which he served in the War of Independence. Having acted for some time as private tutor, and spent another two years with Pestalozzi, he endeavoured to carry his new methods into practice successively at Griesheim, Keilhau, where he published his work on education (1825), and Willisau, till, in 1837, he settled in Blankenburg, his native country. Here he established his children's school, conducted on principles of natural development, instructive play, and healthy movement. In 1840 he gave it the name of *Kindergarten*. During the following years he undertook several journeys to the principal towns of Germany, in order to extend the knowledge of his system; for the most part, however, he was met with ridicule. In 1849 he removed to Marienthal, near Liebenstein, where he established a Kindergarten in the castle, and there he died. Since his death, in spite of the opposition of the Prussian Government, who objected to supposed "socialistic tendencies," the Kindergarten system has been widely adopted in Germany, and even more in America and England, which has now the advantage of an energetic "Fröbel Society" to direct the movement.

Hermann Goldammer, *Friedrich Fröbel; sein Leben und Wirken* (1890); Baroness von Marienholtz von Below, *Reminiscences of Fröbel*; Schmidt's *Geschichte der Pädagogik*, vol. iv.

* **Fröbel, Julius** (b. 1806), nephew of the

above, distinguished chiefly by his political writings, was born at Griesheim, near Stadt-ilm, in the Thüringen Forest, and having studied at various universities, became a scientific professor at Zurich, where he took a prominent part in advanced politics. After acting as a democratic leader in the revolution of 1848, and sitting in the Frankfurt parliament, he retired to America, but returned after ten years, was banished from Germany, and has since lived in England. Of his numerous works the most important are:—*A Sketch of a Republican Constitution for Germany* (1848); *From America* (1857); *The Errors of Socialism* (1871); and *Realistic Views and Utilitarian Civilisation* (1881).

Frost, Edward William, R.A. (b. 1810, d. 1877), painter, was born at Wandsworth. In 1825 he was introduced to Mr. Etty, whose works he admired, and whom in after-years he tried to imitate, if not to emulate; and by his advice he was placed in Mr. Sass's school. In 1829 he was admitted a student of the Royal Academy, and in due time carried off the gold medal, the subject being *Prometheus Bound by Vulcan*. In the cartoon competition of 1843 he gained a £100 prize for his *Una Alarmed by the Fauns and Satyrs*. Mythology was the field to which he devoted himself, and his figure drawing was characterised by much propriety and grace, though lacking the force and vitality of his master, Etty, and his brilliancy of colour. Mr. Frost had little sense of texture, and his sea and sky, robes and flesh, were all of one and the same surface quality. At the same time, his pictures were always pleasant and grateful to the beholder. His manners as a man were as sweet and gentle as his own pictures. He was made an A.R.A. in 1846, but he was not elected a full member till 1871.

* **Froude, James Anthony** (b. 1818), man of letters and historian, the son of an Archdeacon of Totnes, was educated at Oriel College, Oxford, where he fell under the influence of the Tractarian leaders, among whom his brother, R. H. Froude, might be numbered until his early death. In 1840 he took his degree, with a second class in classics. He was elected fellow of Exeter College, and received deacon's orders. A fundamental change of his views led to his abandonment of his fellowship, and of the clerical life. Debarred by his orders from a regular profession, he embarked upon a literary career. His *Nemesis of Faith* (1848) explained to the world the nature of his objections to his old standpoint. He mainly devoted himself, however, to historical writing. Between the years 1856 and 1869 the twelve volumes of his great work, *The History of England from the Fall of Wolsey to the Defeat of the Spanish Armada*, gradually appeared. Though it received doubtful approval from historians, its brilliant literary powers ensured it a wide popularity, and made

its author one of the most prominent literary men of his day. Other historical and critical works followed, besides numerous contributions to periodical literature, especially to *Fraser's Magazine*, of which he was for many years editor. His works include several series of essays, called *Short Studies on Great Subjects*; *The English in Ireland in the Eighteenth Century* (1872-4), a brilliant but over-accentuated defence of Protestant ascendancy; *Julius Cæsar, a Sketch* (1879), couched in an emphatic vein of hero-worship; *a Life of Bunyan*, in the *English Men of Letters Series*, a series of articles on *Thomas Becket*, which are not altogether accurate; and some interesting autobiographical reminiscences of his early Oxford traditions. He was sent by the Government of Lord Beaconsfield on an important political mission to South Africa in aid of the scheme for the federation of the South African colonies, and has embodied the results of his studies there in *Two Lectures on South Africa* (1880). His *Oceana* (1886) is a brilliant description of our colonial empire. The ardent disciple and warm friend of Thomas Carlyle's later years, he was appointed to edit the remains and write the life of that great writer. None of his works have provoked more interest and more controversy than his *Life of Carlyle*, and his publication of *Carlyle's Reminiscences*, and *The Letters and Memorials of Jane Welsh Carlyle*. Mr. Froude is undoubtedly a great literary man. A singularly brilliant, yet simple style, great rhetorical power, and vivid imagination, strong perception of character, and a keen eye for the picturesque, invest all that he has written with high artistic merit. It is, however, on these qualities that his reputation must ultimately depend. His four volumes on the reign of Henry VIII. have little or no historical importance. It was inevitable that the first essays of one who taught himself history by writing it should be lacking in the higher critical qualities. Many sources of information are ignored, others are misapplied, and, above all, he everywhere displays a strongly marked hero-worship and a love of paradox, and a thoroughly nineteenth-century view of sixteenth-century history. The later volumes are of much greater merit. His research is more complete, and his insight is developed. His supreme literary qualities are never more conspicuous than in the terribly realistic scenes of Mary Queen of Scots' execution, or in the brilliant narration of the defeat of the Armada. It is to be regretted that in most of his later works his characteristic defects have not disappeared. It is not only that to him history is a branch of literature, and nothing more: he has ever to defend some favourite cause or some cherished idea—to exalt the strong man in Henry VIII., Cæsar, or Carlyle, to expose clericalism when writing of Becket or the Oxford movement; to justify the ascendancy of the stronger race in the teeth of shams

and sentimentalities, as in his *English in Ireland*. There is no necessary divorce between the scientific and the literary historian. But with Mr. Froude the man of letters is always supreme, except when the disciple of Carlyle wrests facts to fit in with foregone conclusions.

Froude, RICHARD HURRELL (b. 1803, d. 1836), brother of the above, the eldest of a brilliant family, was educated at the Ottery Free School, at Eton, and at Oriel College, Oxford (B.A. 1824), where he became a fellow and tutor. He was a prominent member of the Tractarian movement, and was the author of the celebrated tracts Nos. 9 and 63. A martyr to ill-health, he sought strength in vain in voyages to the south of Europe and to the West Indies, and was untimely cut off at his father's house on Feb. 28th, 1836. His *Remains* were published after his death (1839) by Keble and Dr. Newman, and created much commotion in the Church; nor can it be denied that they gave considerable impulse towards the numerous secessions to the Church of Rome, which shook the Establishment to its foundations.

Froude, WILLIAM (b. 1810, d. 1879), one of the greatest masters of applied mathematics in modern times, was an elder brother of Mr. J. A. Froude (q.v.). He was educated at Westminster and at Oriel, where he took a first class in mathematics in 1832, and was a pupil of John Henry Newman. He was educated to be a civil engineer, and in 1838 became the assistant of Mr. Brunel, and was engaged in the construction of the Bristol and Exeter Railway. In 1846, on account of his father's failing health, he retired from ordinary professional work to Dartington, near Totnes. But his active and well-stored brain did not allow him to remain idle. He devoted his attention largely to the investigations on wave resistances, the oscillations of ships, the usefulness of bilge keels, on frictional, air, and wave-making resistances, on the ratio of effective to indicated horse-power, and on the best forms of screw propellers and rudders. His elaborate series of experiments at Torquay, with models of war-ships, aroused considerable discussion; but most of his conclusions have been adopted at the Admiralty, and embodied in the designs of our latest war-vessels. When the *Devastation* made her first ocean cruise Mr. Froude accompanied Captain Richards, and made a careful investigation as to her performance under every variety of waves and wind. Mr. Froude served on Lord Dufferin's Committee on "designs upon which ships of war have been constructed," appointed in 1871, and also upon the committee which was appointed to examine and report upon the stability of the *Inflexible*.

Transactions of the Royal Society, 1876; *Nature*, June 12th and 19th, 1879.

Fry, Mrs. ELIZABETH (b. 1780, d. 1845), an eminent philanthropist and prison reformer, was born at Norwich. Her father, John Gurney, was a wealthy merchant and banker. Her mother, Catherine Bell, was a great-granddaughter of Robert Barclay, the friend and companion of George Fox; and her brother, Joseph John Gurney, was intimately associated with Buxton and Wilberforce in the promotion of the anti-slavery cause. In her eighteenth year she was induced, by the stirring preaching of the American Quaker, William Savery, to become an earnest, though never a fanatical, "Friend;" and in 1800 she became the wife of Joseph Fry, a London merchant, and went to reside in St. Mildred's Court, E.C. On the establishment of the "Association for the Improvement of the Female Prisoners in Newgate" in 1817, she commenced her great work. She had paid frequent visits to Newgate prison since 1813, and had become impressed with the need of reform in prison discipline. The aim of this association, of which she was an indefatigable member, was the establishment of some of what we now regard as the first principles of prison discipline, such as the entire separation of the sexes, classification of criminals, female supervision for the women, and adequate provision for their religious and secular instruction, as also for their useful employment. In 1818, along with her brother, she visited the prisons in the north of England and Scotland (a report on which she published in 1819), and in 1827 those of Ireland, where she was led to direct her attention to other houses of detention as well. The result was, many important improvements in prison discipline, in the British hospital system, and in the treatment of the insane. In 1838-9 she visited France, and besides conferring with many of the leading prison officials, personally visited most of the houses of detention in Paris, Rouen, Caen—in short, all the important prisons in that country. In 1840 she travelled through Belgium, Holland, and Prussia, on a similar mission, and in 1841 she visited Copenhagen. She prepared reports on these visits which were submitted to the authorities of the respective countries, and had the satisfaction of hearing from almost every quarter of Europe that practical effect was being given to her suggestions.

Memoirs of Mrs. E. Fry, with extracts from her journals, and letters of her two daughters (1847); Rev. T. Simpson, *Memoirs of E. Fry* (1848); Rev. E. Neale, *Christianity and Infidelity Contrasted*; *London Quarterly Review*, Dec., 1847.

Fuad Pasha, MAHMUD (b. 1814, d. 1869), a Turkish statesman and author, born at Constantinople, was the son of Izzet Mollah, who was a man of wealth and position, and had a high reputation as a poet, but who fell into disgrace with the Turkish Government, and his estates were confiscated. From 1828 to 1832 Fuad studied medicine at Galata-Serai, and in 1834 was appointed physician to the

m.w.—15*

Admiralty, and accompanied the expedition against Tripoli. He subsequently quitted the medical service, and entered the interpreter's office, with the view of qualifying himself for a diplomatic post. In 1840 he became First Secretary to the Turkish embassy in London; in 1843 Second Interpreter to the Turkish Government, and subsequently director of the translation office; in 1845 Chief Interpreter to the Porte; and in 1848 he was named Ottoman commissioner to settle the revolutionary disputes in the principalities of Moldavia and Wallachia. On his return he was named Minister of Foreign Affairs, but having published a pamphlet in 1853 on the question of the Holy Sepulchre, which greatly irritated the Czar of Russia, and displeased Prince Menschikoff, he resigned. In 1857 he became president of the Council of Tanzimat; in 1860 Grand Vizier; in 1863 he became War Minister, and a little later returned to his old post of Foreign Minister. In 1867 he accompanied the Sultan to England and France, and died at Nice two years later. Fuad Pasha was the author of a poem entitled *Alhambra*, and of a Turkish grammar. He was one of the first members of the Turkish Imperial Academy of Sciences and Belles-Lettres, founded in 1851. He introduced many reforms into Turkish administration, but none have had any lasting effect; and, from a mistaken notion of the credit system, he was instrumental in largely increasing the financial difficulties of the Porte.

Fuller, ANDREW (b. 1754, d. 1815), an eminent Baptist preacher and theologian, was the son of a small farmer at Wicken, in Cambridgeshire, and was ordained in 1775 to the pastoral charge of the Baptist congregation at Soham, removing in 1782 to Kettering, in Northamptonshire. He was the first secretary of the Baptist Missionary Society, which was formed in 1792. In 1784 he published *The Gospel Worthy of all Acceptation*, in which he sought to counteract that hyper-Calvinism which, "admitting nothing spiritually good to be the duty of the unregenerate, and nothing to be addressed to them in a way of exhortation excepting what related to external obedience," was then prevalent among the Baptists of England. This work immediately involved him in a somewhat bitter controversy, extending over the next twenty years, but was ultimately successful in considerably modifying the views prevalent among English Dissenters with regard to the doctrines of which it treats. His reputation as a theologian rests on the powerful treatise published in 1793, in which the Calvinistic and Socinian systems are examined and compared as to their moral tendency. For this treatise he was vigorously attacked by Toulmin and Kentish, to whom he replied in a supplementary pamphlet, in which the weak side of Socinianism was still further exposed. Among his

other polemical works may be mentioned:—*Expository Discourses on Genesis* (1806); *Sermons* (1814); *The Harmony of Scripture, or an Attempt to Reconcile Various Passages* (1817). Fuller has been styled "the Franklin of theology."

Rev. Dr. Ryland, *Life of Rev. Andrew Fuller* (1817); J. W. Morris, *Memoirs of Rev. A. Fuller*; Memoirs prefixed to an edition of his works (5 vols., 1832), by his son, Andrew Gunton Fuller; *Eclectic Review*, Jan., 1818.

Fulton, ROBERT (b. 1765, d. 1815), an American engineer and inventor, early adopted the profession of a portrait and landscape painter, and in his twenty-second year visited England, with the view of improving himself in art by the instruction of his countryman, Benjamin West. There, however, he made the acquaintance of the Duke of Bridgewater, Earl Stanhope, and Watt; and partly by their influence was led to devote his attention almost exclusively to mechanical engineering. In 1793 he conceived the design of propelling vessels by steam, and in 1801 he made an experiment in the harbour of Brest, France, when he succeeded in remaining under water for an hour, and in guiding the boat with ease. Other trials were made, with partial success, at the expense of the French Government; but, as they at last declined to patronise the project, Fulton accepted in 1804 an invitation from the English Government, who had appointed a commission, and made trials of his torpedo. In 1806 he returned to New York, where, in co-operation with Robert Livingstone, he was engaged in carrying on his experiments in steam navigation. In 1809 he took out his first patent, but his rights were disputed, and, after protracted litigation, a compromise was effected. In 1814 he constructed the first war-steamer of the United States, and was engaged upon an improvement of his submarine torpedo when he died.

Cadwallader D. Colden, *Life of Robert Fulton* (1817); J. F. Reigart, *Life of Robert Fulton* (1856); *Quarterly Review*, Dec., 1818; *Scribner's Monthly*, vol. xxii., 1881.

* **Furniss, HARRY** (b. 1854), was born in Wexford, Ireland, the son of English parents. He was educated at the Wesleyan Connexional School (now the Wesleyan College), Dublin. As an artist he is chiefly self-taught, and started working for publishers at a very early age. He came to London in 1873, and joined the staff of the *Illustrated London News*. In 1880 he began to contribute to *Punch*, and in 1884 joined the staff of that paper. Perhaps the most exquisitely funny of his contributions of late is an illustration to the *Essence of Parliament*, the text of which was supplied by Lord Salisbury—"Imagine, gentlemen, a House of Lords composed of Sir William Harcourt's!"

* **Furnivall, FREDERICK JAMES** (b. 1825), philologist, was born at Egham, in Surrey,

and entered University College, London, in 1841, subsequently passing to Trinity Hall, Cambridge, where he graduated B.A. in 1846, and M.A. in 1849. Since that date he has devoted himself closely to the study of Early and Middle English literature, his researches in which have given him a high reputation, and made him one of the most distinguished members of the new school of English philology. He took a prominent part in establishing the following societies:—The Early English Text Society, in 1864; the Chaucer Society, in 1868; the New Shakspere, in 1874; the Browning Society, in 1881; the Wyclif Society, in 1882; and the Shelley Society (1886). In 1854 he became honorary secretary of the Philological Society, which post he still holds. Some of the books that he has edited are:—*Saint Graal*, the history of the Holy Grail in English verse, by Henry Lonelich (A.D. 1440), with its French original, *L'Histoire del Saint Graal* (1861-3); *Roberts of Brunne's Handlyng Synne A.D. 1303* (1862); *The Book of Quinte Essence* (1866); *Ballads from Manuscripts on the Condition of Tudor England, 1520-50* (1868-72); *Caxton's Book of Curtaseye* (1868); *A Six-Text Print of Chaucer's Canterbury Tales* (seven parts, 1868-75); *Robert of Brunne's Chronicle* (1338); and *William Goddard's Three Satires*. Dr. Furnivall was for many years editor of the Philological Society's new English dictionary, now in course of publication by the Clarendon Press under the editorship of Dr. J. A. H. Murray. His *Bibliography of Robert Browning*, whose life he has in preparation, appeared in 1881. In 1885 his philological labours were deservedly rewarded with a Civil List pension.

Fuseli, HENRY, R.A. (b. 1741, d. 1825), historical painter, was born at Zurich. His father's name was John Caspar Fuseli, or Füssli, and he was a painter, and a man of literary culture. His son Henry was educated for the Church; and, among his other literary acquirements, learned English. Obligated to leave his native town for exposing some shortcomings on the part of the chief magistrate, he came to England in 1765, bent upon literary pursuits; but on showing some of his drawings to Sir Joshua Reynolds, he turned to art. With this view he went to Italy in 1770, and remained there nearly nine years, studying from Michael Angelo and the antique; but his lack of early methodical training in drawing proclaimed itself from every canvas he ever touched. At the same time, for power and originality he is perhaps the most notable painter of the English school. He was without the technical knowledge of Michael Angelo, whom he admired, and attempted to emulate; yet he was touched with the same quality of genius, and his *Nightmare*, and several of his illustrations to *Boydell's Shakespeare* and to *Milton*, in spite of their

crude colour, are creative works in the highest sense. He was elected A.R.A. in 1788, full member in 1790, lecturer on painting in 1799, and keeper of the Royal Academy in 1804. Fuseli was a scholar, and the master of many languages; in short, the most learned man the Academy has produced. His literary gifts he often turned to account, and his published lectures on painting are still read by the wise student. He was a cynic, a wit, a poet, and an enthusiast; and the membership of the English Academy was by no means the measure of his mind. He died at Putney Heath, and was buried in St. Paul's Cathedral.

[J. F. R.]

G

Gabelents, HANS VON DER (b. 1807, d. 1874), philologist, was a native of Altenburg, and studied at the Universities of Leipzig and Göttingen. In early manhood he became known as a linguist of marvellous attainments, and by the end of his life had made himself master of more than eighty languages. In 1832 he published his important *Éléments de la Grammaire Mandchoue*, which was followed by works on the tongues of savage races in all parts of the globe. His great work was *The Melanessian Languages*, their grammatical construction and their connection with one another and with the Malayan-Polynesian Languages (1860-74), in which his vast powers of research are displayed to the greatest advantage. He also filled various posts in the administration of the Duchy of Altenburg.

Gaboriau, ÉMILE (b. 1835, d. 1873), French novelist, was the son of a notary, and when a young man served in the ranks of a cavalry regiment, from which he retired about 1858, and was employed as a clerk in a carrier's office. His first essays in literature took the form of contributions to some of the inferior newspapers, and were followed by some historical sketches, *Les Cotillons célèbres* (1860), *Les Comédiennes adorées* (1863), and some skits which were distinctly successful—*Le 13e Hussards* and *Les Gens de Bureau*. Fiction for the newspapers, however, proved eventually a more profitable form of writing, and Gaboriau devoted himself to it, the result being a number of romances, of which the best known are *L'Affaire Lerouge*, published in volume form (1866), *Le Dossier No. 113* (1867), *Le Crime d'Orceval* (1867), *Monsieur Lecoq* (1869), *Les Esclaves de Paris* (1869), *La Vie infernale* (1870), *La Clique Dorée* (1871), *La Corde au Cou* (1873), *L'Argent des autres* (1874), and *La Dégringolade* (1876). Gaboriau was the creator of the roman judiciaire, with the interest centring round a crime and the detective as the *deus ex machina*, and undoubtedly in that particular walk of fiction

he is without a rival. Mr. Wilkie Collins alone can challenge the complexity of his plots, and the situations are calculated to delight the soul of the reader who loves dramatic effect. Gaboriau was also a writer whose style, unlike that of his innumerable imitators, possesses some distinction. He is said to be Prince Bismarck's favourite author.

***Gade, NIELS WILHELM** (b. 1817), a Danish musician, born at Copenhagen, obtained in 1841 the prize offered by the Copenhagen Musical Association for his great composition, *Nachklänge von Ossian*, and proceeded in 1843 to Leipzig to complete his musical education, where he was supported by the King of Denmark. After a tour in Italy in 1844 he succeeded Mendelssohn in the leadership of the Gewandhaus concerts at Leipzig, returning in 1848 to Copenhagen. He subsequently became organist, director of music, and master of the Chapel Royal; and in 1876 the Danish Folkthing voted him a life pension of 3,000 crowns. He is the composer of the *Erl King's Daughter* and *Spring-tide Phantasy*.

***Gairdner, JAMES** (b. 1828), was born at Edinburgh, and was educated at the university. Appointed clerk in the Public Record Office in 1846, he became Assistant Keeper of Public Records in 1859. He is well known as the editor of historical documents, having edited for the *Rolls Series* the *Historia Regis Henrici Septimi* (1858), *Letters and Papers Illustrative of the Reigns of Richard III. and Henry VII.* (1861-3), and having continued the calendar of the *Letters and Papers of Henry VIII.* (vols. v. to ix., 1880-6), upon which Professor Brewer was engaged when he died. For the Camden Society he has brought out *Historical Collections of a London Citizen* (1876), and *Three Fifteenth-Century Chronicles* (1880), and for the Arber series an edition of the valuable *Paston Letters* (1872-5). His *Life and Reign of Richard III.* (1878) is eminently judicial, and may be considered the best authority on a debatable period, part of which is also covered by his admirable manual on *The Houses of Lancaster and York* (1874). In 1881 he republished some essays by himself and Mr. Spedding—*Studies in English History*.

Gaisford, THOMAS, D.D. (b. 1780, d. 1855), a distinguished classical scholar, was born at Ilford, Wiltshire, and educated at a private school at Winchester, and at Christ Church, Oxford. In 1810 he was appointed Regius professor of Greek at Oxford, and in 1831 Dean of Christ Church. He published editions of Euripides, Sophocles, Herodotus, and Hephæstion, which are works of some erudition, but are now obsolete. He also compiled a *Lexicon of Suidas* and the *Etymologicon Magnum*. Shortly after

his death a Greek prize was founded at the University of Oxford, called, in memory of the Dean, "the Gaisford Prize."

Galignani, JOHN ANTHONY (*b.* 1796, *d.* 1873), a well-known journalist, born in London, was for many years the editor and proprietor of the English daily newspaper published in Paris under the title of *Galignani's Messenger*. He founded near Paris an establishment known as the "Galignani Hospital," intended especially for distressed English subjects, and bore conjointly with his brother the expense of erecting the hospital of Corbeil. His brother, William Galignani (*b.* 1798, *d.* 1882), was associated with him through life, both in an editorial capacity and in all his schemes of philanthropy.

Gall, FRANZ JOSEF (*b.* 1758, *d.* 1828), the anatomist who shares with Spurzheim the credit of having discovered what truth there was in the doctrines of phrenology, was born at Pforzheim, in Baden, and after studying at Baden, Bruchsal, Strasburg, and Vienna, graduated M.D. in the university of the last-named city, and commenced the practice of medicine. However, he soon began to attract attention by the views which he promulgated for the first time in 1798 in the pages of Wieland's *Deutscher Mercur*—to the effect that the mental and moral disposition of anyone can be accurately presaged not only by physiognomy—as Lavater taught—but by the elevations and depressions on the exterior of the skull, which indicate corresponding deficiencies or redundancies in the brain beneath. He now began to give lectures on the subject, and met with daily increasing success, until in 1802 the Government interdicted his discourses on the plea that they were inimical to religion. In 1805 he left the city with his principal pupil and associate, Spurzheim, and in the course of the next two years repeated his lectures in most of the larger cities of Germany, and in 1807 arrived in Paris, where he established himself as a practitioner, at the same time diligently spreading his views by means of books and oral discourses, though not without having to fight a stout battle against the charge of Spinozism, or atheism. In 1819 he became a naturalised French subject, but failed to gain admission into the Academy of Sciences, owing to the suspicion of charlatanism which attached to the new theory. In London, which he visited in 1823, he was not more successful, neither society nor the medical profession showing much interest in his lectures, although at a later date the eloquence of George Combe and his disciples did much to popularise the doctrines of Gall. Disappointed with his reception, he returned to Paris, where he continued to practise until his death, which occurred through an apoplec-

tic fit, at Montrouge, near that city. Gall was a voluminous author, both singly and as the collaborator of Spurzheim; but though many of his works contain suggestive and even valuable remarks on the anatomy and physiology of the nervous system, they are all so tinged with the "theory" associated with his name as to be nowadays of more historical than practical value. The chief are:—*Philosophisch-medicinische Untersuchungen über Natur; Kunst im Kranken; Gesunden Zustande des Menschen* (1791); *Introduction au Cours de Physiologie du Cerveau* (1807); *Recherches sur le Système nerveux en général et sur celui du Cerveau en particulier* (1808); *Anatomie et Physiologie du Système nerveux en général* (1810–19)—the first two volumes of this work, as well as the *Recherches*, were written conjointly with Spurzheim; *Des Dispositions innées de l'Âme et de l'Esprit* (1811). Most of his works have been translated into different languages, or their essential features popularised in the writings of his pupils; but the only one reproduced entire in English is the *Anatomie* (Boston, U.S.A., 1835). Gall's reputation has not gained much by the researches of the last forty years. Phrenology is no longer espoused by men of profound scientific knowledge, the general belief being that though there was this much truth in Gall's views, viz., that the functions of the brain are localised, the external signs which the phrenologist relies upon are in many cases entirely unconnected with the development of the cerebral convolutions.

On the importance of Gall's brain-anatomy, see *Lewes's History of Philosophy*, vol. ii.

[R. B.]

* **Galt**, SIR ALEXANDER TILLOCH, G.C.M.G. (*b.* 1817), Canadian financier and administrator, born at Chelsea, entered the service of the British and American Land Company at the age of sixteen, and became their commissioner and manager eleven years later, which post he occupied for twelve years. In 1849 he entered the Canadian Parliament, and in 1858 became Minister of Finance in Mr. Cartier's Government, but resigned on the defeat of the Government on the Militia Bill in 1862. He was again Finance Minister from March, 1864, to August, 1866, when he resigned in consequence of the ministry being unable to carry their measure relative to the education of the Protestant minority of Lower Canada. As one of the delegates for Lower Canada to confer with the Home Government on the question of Confederation, he rendered invaluable service in obtaining the necessary privileges and protection for the Protestant party. In 1867, the Dominion having been in the meantime completed, he again resumed his former duties in the finance department, but he held office for only four months. In 1869 he was made a K.C.M.G., and in 1878 a G.C.M.G. Sir Alexander Galt

was High Commissioner for Canada in England from 1880 to 1883. He was a member, on behalf of Great Britain, of the Treaty of Washington Commission (1871), and of the Halifax Fisheries Commission.

* **Galton, FRANCIS, F.R.S.** (b. 1822), man of science, was educated at King's College, London, and at Trinity College, Cambridge (B.A. 1844). A journey in South Africa was described in the *Narrative of an Explorer of Tropical South Africa*, which obtained the gold medal of the Royal Geographical Society; and the first edition of his popular *Art of Travel* appeared in 1855. Mr. Galton at first attached himself to meteorology, the result of his investigations being *Meteorographica* (1863); but subsequently devoted himself to investigations bearing on the theory of Heredity. His books and articles on this subject are exceedingly popular, though open occasionally to the charge of over-theorising. Among them are:—*Hereditary Genius, its Laws and Consequences* (1869); *English Men of Science, their Nature and Nurture* (1874); *Inquiries into Human Faculty and its Development* (1883); the *Life-History Album* (1884); and the *Record of Family Faculties* (1884), tabular forms and directions for entering data, with a preface. Mr. Galton is an active member of the British Association, and of the various learned societies. In 1885-6 he was president of the Anthropological Society.

Gambetta, LÉON MICHEL (b. 1838, d. 1882), was sent to school by his father, a grocer at Cahors, and received the usual insufficient and ill-ordained education that the Collège de France gives to the obscure crowd of her alumni. He in no way distinguished himself in his classical studies, and from the moment when he commenced them as a boy, till the moment when, as a young man, he migrated to Paris, to take his chance at the bar, there is nothing to say of him. But what Gambetta did bring from his province, what served him better than all the learning possible, what really constituted his sole superiority, though it was recognised but by few, was his Italian blood. The life led by Gambetta during his first years of manhood in Paris, was one to have exhausted the energies and deteriorated the intelligence of any mere Frenchman, as it practically has destroyed so many hundred-thousands of them during the last half-century; but the solid Genoese nature withstood the degrading influences of the useless, loafing existence of a Parisian student in the Quartier Latin. It is, however, to the terrible Bohemianism of this coffee-house life that are due all the mistakes of his career, and all the severe penalties he paid for them. His habits were vulgar, and the vulgarity of them justified for too long a period the reproaches cast at him by the educated public; his dominion over his followers arose unluckily from the Chauvin-

istic belief caught from the military brawlers with whom he was brought in contact. Gambetta made no mark till his thirtieth year. It was his *plaidoirie* of Nov. 14th, 1868, that drew to him the attention, and it may be affirmed, the admiration of the public, and also of the nicest appreciators of judicial eloquence. This was the date of the famous *procès Delescluze*, in which Gambetta took charge of the defence, and adroitly chose all his arguments from the infamies of the Second Empire, condensing his attack upon the one initiatory and master crime of the *Coup d'État*. His reward came quickly. Six months after his harangue at the Delescluze trial (at the general elections of 1869) he was chosen deputy by both Paris and Marseilles, curiously enough in the place of Berryer, the great Royalist orator, who had just died, and for whom Gambetta felt the deepest admiration. From this moment till the defeat at Sedan, and Sept. 4th, 1870, Gambetta became the life and soul of the Opposition, from what precise cause it might be difficult to say. But somehow the popular instinct signalled out Gambetta, and even before the war, and after the apparent concessions to the Ollivier ministry (in Jan., 1870) the grocer's son of Cahors was the incarnation of the future Republic, which now every thinking man clearly foresaw as "the régime which divided Frenchmen the least." The war was forced on by the Tuileries, spite of every effort to avert it, and the Empire fell by the weight of its own misdeeds, no hand being raised to save it. To what a degree France loathed the Empire is a fact few foreigners have sufficiently realised. From this intense hatred sprang the authority of Gambetta, for his hate reflected that of the nation, and the public felt it to be sincere, and proof against all temptation. His faults served him to the full as much as his good qualities, and his want of tact, his boisterousness, and lack of all judgment and measure suited well enough the democratic instincts that were everywhere coming to the fore. He was young, and, still more, new: his utter ignorance shielded him against the recognition of obstacles that would have frightened nearly anyone else; he had night and day at his command the perpetual ebullitions of rhetoric which moved his hearers' passions, and he completely embodied the current of Democracy that lay latent in the masses. France was vanquished, though she did not know it yet—the Empire had been ignominiously thrust aside, the Republic sprang into existence *ipso facto*, a manner of Provisional Government was installed in Paris, M. Thiers was absent, roaming about Europe, trying to find some country which still retained even a lukewarm interest in France. The siege was threatening, the Government of Paris was split up into warring groups, and unable to hold communication

with the exterior, when Gambetta started in a balloon for Tours, and a French Government, such as it was, was established, having around it the members of the Diplomatic Corps. From Tours in the autumn of 1870, until the autumn of 1881 in Paris, is to be traced the rise and fall of what has been denominated the "Dictature," and falsely so, because of all men in the political world the man supposed to be its chief was the one least qualified by nature to be a Dictator. From the moment of his arrival at Tours, Gambetta investigated every department, including that of Foreign Affairs, confided to M. de Chaudordy, even after the advent of M. Thiers in October. However, he very soon devoted himself exclusively to the task of organising the National Defence, and it is clear that if the technical details of each engagement were entirely due to General Chanzy, the inspiration whence everything sprang was wholly Gambetta's. Chanzy could not have done what he did, had he not felt he had Gambetta behind him, and he was the first to admit it. It is all very well to ridicule the word *d'outrance*, but the few successes the French armies won rest upon the knowledge they had, that the man who then predominated over the Government meant that war was to be *d'outrance*. But all this was essentially old-world work, and the really important thing to observe is that Gambetta, from education, was a thinker of utterly old-world thoughts. He was pre-eminently old-fashioned and unfamiliar with what is genuinely modern. His patriotism was entirely of the past. He would have delighted in Marengo and Austerlitz and Jena, and have rejoiced at the taking of Vienna and Berlin. The mould of his mind was Napoleonic or Louis Quatorzian, for he regarded victories not as does Prince Bismarck, as the means to an end, but as gains in themselves. Notwithstanding all his many weaknesses and errors, the Tours period remains Gambetta's best title to the gratitude of France. After the peace, and until May 24th, 1873, M. Thiers reigned supreme, and the organiser of the *guerre d'outrance* suffered an eclipse. In 1872 he committed his first mistake, by the speech at Grenoble, in which he haunted his belief in the *nouvelles couches sociales* in the face of the respectability of France. Hence the first essay of reaction, the Barodet election and the overthrow of Thiers. Gambetta still believed in the "*revanche*," because he could as yet not understand anything else. But he read a great deal, sought to inform himself, studied English history, and invented "Opportunism." This occurred in a rather remarkable speech at Belleville in 1874, when he proclaimed that no *revanche* could be dreamt of save through the "justice of Europe," and until the "opportune moment" for it had arrived. During the next four years many

important incidents happened; the "Fusion" of the Royal Houses was resisted, the Republic was voted officially, and a fairly liberal ministry under Jules Simon was established, then overthrown by Marshal MacMahon, provoking the great movement of the elections of 1876, and the defeat of the reactionary parties, and in the end the fall of the Marshal, and lastly, in 1879, the presidency of M. Grévy and the nomination of the Waddington Cabinet. Gambetta had compelled MacMahon to embrace the second of the two alternatives, "*se soumettre ou se démettre*." Things wore an altered aspect now; M. Grévy was, exclusively, a civilian, the very archetype of civil government and submission to the law. Being debarred from "organising victory," like the elder Carnot, Gambetta thought that his activity in a pacific State was to be that of inspiring deeds in other men, and paying no penalty for their mistakes. Many things inclined him to this vicarious autocracy; firstly, the consciousness of unfitness for rule; secondly, the absence of all sympathy on the part of M. Grévy; thirdly, the difficulties personified by his early associates; and lastly, the conditions of his own health. He had become unwieldy from obesity. At forty-one he moved heavily, and all action, instead of being a delight, was a trouble and a pain. When M. Grévy was made President, the first universal notion was of a Gambetta ministry. Gambetta knew and felt it, but succeeded in avoiding it, and became President of the Chamber. This post he filled fairly well—not with the imperturbable ease of M. Grévy, or with the firmness and good-humour of M. Floquet, but with considerable impartiality, and visible comfort to himself. Gambetta's conduct of the general election of 1876 was his last manifestation as an active public man, and, helped as he was by the overwhelming majority of the country, he achieved a true and very great success. But from the moment of his election to the Speakership of the Chamber began the new series of his shortcomings and the proofs of incapacity that culminated in both his advent to and his retreat from power in 1881-2. His sole occupation during the months following the overthrow of MacMahon seemed to be the creation and the destruction of Cabinets; one after another he betrayed those he had recommended, and yet, when once their offices had been made vacant, contrived by all the means within his reach to avoid filling them himself. At last, however, the day arrived when all further avoidance of responsibility became impossible, and in the autumn of 1881 he was forced to accept the Prime Ministry of France. A few days were sufficient to show how absolutely he was *incapax imperii*, both from circumstances and from personal defects. He had always let his intimates know that, without electoral reform, by adoption of the *Scrutin de*

Liste, he could never accept office or ensure a Parliamentary majority, and he failed to obtain it, converting this very failure into a possible pretext for relinquishing the headship of Government. Never was so grand an opportunity so weakly, so miserably lost. The incessant shortcomings of successive Prime Ministers had gradually induced in the public mind a belief in the capacity of the man who had not been tried, and at the end of the year 1880 Gambetta might have really seen all France at his feet. No irrevocable breach had taken place between the Government and the Church, no unhealable wound had been inflicted on Society, to whom the existing régime had merely shown that it was strong, and in no way minded to assert its strength unduly. The crisis lasted barely a week. Gambetta knew he could reign over the whole nation, uniting all its forces, but he never felt himself equal to the task. He set out by drawing round him the educated, experienced men of the *Centre Gauche*, the moderate Liberals even of the *Centre Droit*—all were ready, all met him half-way; on the Saturday a Cabinet was formed that would have compelled the respect of all Europe, on Sunday those who were to compose it saw clearly that they were an embarrassment, and on the Monday the two Chambers were presented with a list of names that dismayed all reflecting men. The future of France was gone. It was now the turn of the "tail." The Bohemianism of the early years reasserted itself, and the associates of the tavern and *commis-voyageur* period claimed their rights; Gambetta, not feeling himself equal to the task of severance from old comrades, succumbed. However, the triumph was short-lived, and the ensuing spring saw the inevitable collapse of a ministry which Gambetta did nothing to save. His resignation was placed in the hands of M. Grévy on Jan. 27th, and M. de Freycinet was requested to form a ministry. Gambetta's demise was but a funeral; he really "departed this life" when he was driven to retire in the spring of 1881, for until his death, from a pistol wound accidentally inflicted upon himself, on Dec. 31st, 1882, he took very little part in public life. Gambetta served his country grandly and indisputably on more than one occasion. Before the war he kept up the fire of popular indignation against the infamies of the Empire. In the war he saved the honour of the country, which lay prostrate at the surrender of Sedan; in 1876, by his wise guidance of the elections, he rescued the public liberties of the community from intriguers and obscurantists; but when he died there was nothing left him to do that he could do well. The most curious fact, perhaps, of all to record, is, that only at his burial did the nation thank him for his services during the war. While he lived he was very frequently a subject of apprehension; when dead his country-

men reverted immediately to what they owed him eleven years before, but did so because he was dead, and could not do it again.

[B. de B.]

Gambier, JAMES, BARON (b. 1756, d. 1833), sailor, was the son of a Lieutenant-Governor of the Bahamas. He entered the Royal Navy in 1767, and in 1794, when in command of the *Defence*, fought with distinction under Lord Howe in the battle of June 1st. In 1795 he became member of the Admiralty Board, which post he retained, with a few short intervals, during one of which he was Governor of Newfoundland, until 1808. Despite the fact that the greater part of his time was passed on shore, his powerful influence gained him rapid promotion, and after the bombardment of Copenhagen in 1807, in which he commanded the fleet, while Lord Cathcart (q.v.) commanded the army, he was raised to the peerage. In 1809 he was placed in command of the Channel fleet, and engaged the French in the Basque Roads on April 12th. A victory was won, but disregarding the advice of his subordinates, Dundonald (q.v.) among them, Admiral Gambier refrained from totally destroying the enemy. For this he was tried by court-martial, but got off with a rebuke, and three years before his death was raised to the rank of admiral of the fleet, having throughout his career owed more to his patrons than to his own merits.

Lady Chatterton, *Memorials of Lord Gambier*; Dundonald, *Autobiography*.

Garcia, MANUEL (b. 1775, d. 1832), musician, was born at Madrid, and was well known at the age of seventeen as a composer and singer. In 1808 he made his *début* on the stage in Paris in Paer's *Griselda*; subsequently he travelled for several years in Italy, where his opera, *Califo di Bagdad*, was produced in 1812, obtaining great success. Rossini wrote for him the principal rôles in *Elisabetta* and *Almira*. In 1817 he went to London, and sang with great *éclat* in the *Barbieri*, and visited the United States in 1825. He then settled down at Paris, and founded his celebrated school of singing. His son Manuel, and his daughters Paulina and Maria, were celebrated vocalists, the last being well known under her subsequent name of Malibran (q.v.).

* **Gardiner, SAMUEL RAWSON** (b. 1829), born at Ropley, in Hampshire, was educated at Winchester College, and at Christ Church, Oxford, where he was a junior student. He took a first class in 1851, and became senior student, and afterwards honorary student of his college. For several years he was professor of history at King's College, London, a post which he resigned in 1885, and was succeeded by Professor J. K. Laughton. In 1882 Professor Gardiner was granted a Civil List pension of £150 in recognition of his historical

labours, and in 1884 was elected fellow of All Souls'. As an historian Professor Gardiner is distinctly a specialist, and has confined himself chiefly to one period—that of the Stuarts. His works include:—*The History of England from the Accession of James I. to the Disgrace of Chief Justice Coke* (1863); *Prince Charles and the Spanish Marriage* (1869); *England under the Duke of Buckingham and Charles I.* (1875); *The Personal Government of Charles I.* (1877); and *The Fall of the Monarchy of Charles I.*, the two volumes of which bring his labours down to the year 1642. The first volume of his *History of the Civil War* was published in December, 1886. The earlier volumes of this series have been partly rewritten, and republished, under the title of *The History of England from the Accession of James I. to the Outbreak of the Civil War*. Professor Gardiner is also the author of two admirable little books in the *Epochs of Modern History Series*, *The Thirty Years' War* (1874), and *The First Two Stuarts and the Puritan Revolution* (1875); and of *An Introduction to the Study of English History*, written in conjunction with Mr. J. Bass Mullinger (1881). Among the numerous documents he has edited for the Camden Society are the *Fortescue Papers* (1871); the *Hamilton Papers* (1880); the *Parliamentary Debates in 1610*; and *Debates in the House of Commons in 1625*. Professor Gardiner belongs emphatically to the new school of English historians, who, in imitation of the Germans, deem the research of years the necessary preliminary to the writing of history, and utterly abhor the brilliant superficialities of a former age. His great feat has been to cast an entirely new light upon the history of the earlier Stuart period, and that not by the advocacy of clever paradoxes, but through patient investigation, aided by fairness of judgment. Perhaps of all his writings those which treat upon the times of James I. may be said to be the most valuable. Guided by them, the student is able to conceive that the king is no mere buffoon, but a man in many respects in advance of his age, and frequently in the right in his contest with the Commons; he is able to appreciate the statesmanship of Lord Bristol, and to rejoice that Bacon is at last delivered from the butchery of Macaulay. Professor Gardiner is now working on a period which is more dramatic, and far more interesting, but which is also far less of an unknown land than the reign of James I.

Garfield, JAMES ABRAM (b. 1831, d. 1881), an American general and statesman, and twentieth President of the United States, was born in Ohio, the son of a pioneer, and worked at farm labour until his fourteenth year. Despite all obstacles, he acquired a liberal education, studied law, and in 1859 was elected to the Ohio State Senate. He had

married Lucretia Rudolph in 1858. He entered the army in 1861, was appointed colonel of the 42nd Ohio Regiment, and saw some service in Eastern Kentucky. He reached the battle-field at Shiloh with Buell's command. He served on the court-martial which condemned Fitzjohn Porter in Nov., 1862. In 1863, as chief of the staff to General Rosecranz, commanding the army of the Cumberland, he participated in the operations of that army until the battle of Chickamauga, and was made major-general of volunteers. Having been elected to Congress, he resigned his command in December. He sat in nine successive Congresses, beginning with the thirty-eighth, and represented the same constituency for a continuous period of eighteen years. He served on many important committees, including that on military affairs during the war, and that of ways and means; and as a member of the committee on banking and currency he was the sturdy opponent of all the dishonest projects that were advanced as "financial theories." He opposed the Bill for an electoral commission in 1876, but acted on that commission. In 1880 he was elected to the United States Senate, and in the same year, as the candidate of the Republican party, was elected President of the United States. An intense spirit of faction divided the Republican party at the time when Mr. Garfield entered upon his duties as President, and his choice of Mr. Blaine as the chief of his Cabinet irritated extremely the faction opposed to that gentleman, called "Stalwarts." On the part of this faction it was claimed that the administration owed some deference to their wishes; but it was apprehended that Mr. Blaine would advise the President against them. Upon the nomination, in March, 1881, of Mr. W. H. Robertson to be collector of the customs at the port of New York, the Stalwarts believed their apprehensions realised, and the quarrel became acute. Senator Conkling, a favourite of the Stalwarts, endeavoured to prevent the appointment of Mr. Robertson, but, finding his efforts unavailing, resigned his seat in the Senate. The excitement of the hour seized upon the feeble wits of one Guiteau, a disappointed office-seeker, then in Washington. Guiteau imagined that if Garfield were out of the way the faction of the Stalwarts would become dominant by the succession of the Vice-President, and that he himself, should he produce this change, would be entitled to the gratitude of the Stalwarts, and would receive from President Arthur the office that President Garfield had refused him. He therefore determined to kill the President, and shot him July 2nd, 1881, in the railway station at Washington, inflicting a wound that proved fatal eighty days later. Guiteau was hanged for the murder.

W. M. Thayer, *From Log Cabin to White House*.
[G. W. H.]

Garibaldi, GIUSEPPE (b. 1807, d. 1882), Italian patriot, was born at Nice, of parents who originally came there from Chiavari, in the Eastern Riviera of Genoa. His father was a small ship-master (*padrone*), and procured for his son a good education, hoping that he would become a priest, and help the family. Young Garibaldi, however, strongly objected to his father's intentions, feeling a manifest vocation for a sailor's life. He made voyages to Odessa and Jangarock, where from a Ligurian mate he learned to love Italy; and a trip to Rome excited in him those noble feelings which in following years led him to consecrate his mind and soul to the redemption of his native land. Soon after he associated himself with Mazzini in the "Young Italy" movement. To secure the Sardinian man-of-war *Eurydice* for the insurgents, he enlisted as a sailor in the Royal Sardinian Navy, and in other ways became implicated in the Genoese revolution of 1833: discovered, he fled in disguise, at great risk of his life, to Marseilles, and there he learned that he had been sentenced to death for conspiracy and desertion. He embarked in consequence for Tunis, but not finding there a sufficient field for his activity, went to Brazil, where, during the minority of the Emperor Don Pedro, the province of Rio Grande had proclaimed its independence. Garibaldi accepted a commission in the service of the young republic, and fought with great bravery and success. His influence over his troops was wonderful. In a conflict between his cruiser and two Brazilian vessels he received a serious wound, and for six months remained a prisoner at Gualaguay, and afterwards proceeded to Montevideo. When Rosas, the Dictator of Buenos Ayres, declared war against the Republic of Uruguay, Garibaldi offered his services to the latter, and gave such proofs of his ability as leader that he was raised to the supreme command of all naval and military operations. He formed a legion of eight hundred Italians, and for the bravery that they displayed at the battle of Salto St. Antonio, the Government of Monte Video ordered that Garibaldi and his volunteers should take the post of honour on every occasion. In a shipwreck at the island of Santa la Terina sixteen of Garibaldi's companions, all Italians, lost their lives; but there also he saw for the first time that beautiful, intelligent, and courageous young Creole, Anita Rivera, whom he associated to his destiny. Anita followed the hero throughout his campaigns, and neither fatiguing marches nor privations could separate her for an instant from him. She followed him in Italy when, in 1847, Garibaldi, hearing of the new era proclaimed for his country by Pius IX., went to offer his sword to the Pope. He was received with great enthusiasm, and took a prominent part in the campaign against the Austrians, above all in Southern Tyrol. After the mournful defeat of the Piedmontese at Novara

Garibaldi put himself at the service of the provisional Government of Rome, and he was there the soul of resistance during the struggle which ensued when the French troops came to restore the Papal authority. He defeated the Neapolitan army, much superior in number, at Palestrina and Velletri, where he was severely wounded, and sustained for a whole month the attacks of the French, whose generals did justice in their reports to the energy and ability of their foe. When they entered Rome Garibaldi, with the remnant of his little army, retired towards St. Marino and Ravenna, pursued by the French, Austrians, and Spaniards. It was then that the heroic Anita sank from exhaustion and dread in the painful labour of premature confinement. Garibaldi, out of his senses for such a loss, ordered his troops to disband, and, for the sake of his children, he escaped to Genoa, and afterwards to New York, and worked as a journeyman for an Italian manufacturer of soap and candles at Staten Island. In 1854 he returned to Italy, and having bought from the municipality of the island of Maddalena half of the little islet of Caprera, on the southern coast of Sardinia, he settled there with his family, and commenced farming on a small scale, but with very great success. In the war of 1859, when Napoleon III. came to the assistance of Italy, he played a very conspicuous part against the Austrians, and at the head of his volunteers he fought at Varese, Como, and Camerlata. After the peace of Villafranca, in May, 1860, he landed at Marsala (Sicily) at the head of the "Thousand Heroes" (the so-called *mille*); he defeated the Neapolitan troops at Calatafimi, took Palermo, and, after new victories, he carried the struggle to Naples, which he entered almost alone. The young king, Francis II., hearing of Garibaldi's approach, fled to Gaeta. Garibaldi, in his way to the attack of that fortress, met Victor Emmanuel, whom he saluted as King of Italy, though personally in favour of a republican form of government. The cession of Savoy, and above all of his native Nice, to France, the price of Napoleon's co-operation, justly caused him very deep sorrow. Broken-hearted, he retired to Caprera, but in 1862 published in Palermo a revolutionary address, inviting the Hungarians to revolt against Austria, hoping that thus a large part of the Austrian army would withdraw from Venice, leaving him the way open to invade it. General Klapka, however, in a letter publicly addressed to Garibaldi, demonstrated that a revolution at that moment would be perfect ruin for Hungary. In consequence, Garibaldi undertook his rash march upon Rome. But this was against the will of the Italian Government, who sent Colonel Pallavicini and a body of soldiers to bar the way to Garibaldi. He was wounded in the ankle by a rifle bullet, made prisoner, and his followers dispersed. He was then allowed

to return to his islet. In the spring of 1864 he paid a short visit to England, where he was enthusiastically received by every class—above all, in London. In 1866 he took part in the war between Prussia and Austria, and engaged in operations in the Tyrol; but the war was suddenly brought to a close, and the Italians, although defeated, regained Venice by the terms of the peace. In the following year he tried, against the express wish of the Italian Government, to free Rome from the Papal rule. Urbano Rattazzi, then at the head of the ministry, ordered his arrest at Asinalunga, on Sept. 24th, 1867, and from that place Garibaldi was escorted to the fortress of Alessandria. After a short imprisonment he was permitted to go home. Although an Italian man-of-war was placed in the vicinity of the islet to watch the general's movements, and prevent him from leaving it, he escaped in the night of Oct. 14th in a little boat, accompanied only by his son-in-law, Stefano Lanzio, and proceeded to join the insurgents on the Roman frontier. He defeated the Pontifical troops at Monte Rotonda on Oct. 26th, but was routed at Mentana by the aid of the French expeditionary corps, and was placed for awhile under confinement. On the fall of the French Empire he placed himself and his volunteers at the disposal of the National Defence, who appointed him commander of the irregular forces of the Vosges. Although he could not do much in the field against the German invaders, nevertheless the only standard taken from the enemy was seized by Garibaldi's volunteers, and, as Victor Hugo wrote, "Garibaldi was the only general who fought for France and was not conquered." Elected deputy in Feb., 1871, for Nice, Dijon, and Paris, he was forbidden as a foreigner to address the Assembly, and then returned to his home, where he had married Signora Francesca, a Piedmontese, the nurse of the children of Signora Teresita, Garibaldi's daughter (married to General Stefano Lanzio, above-mentioned), who, with her two brothers, Menotti and Ricciotti, are the surviving children of the heroic Anita. By Signora Francesca Garibaldi had a daughter, Clelia, who is married to Professor Graziadio, and a son, Manlio, who is at present being educated for the Royal Italian Navy. The pecuniary embarrassment of some of his family compelled Garibaldi to accept a pension from the nation in 1876. In the last years of his life Garibaldi occasionally left Caprera, either to take part in some important discussion in the Italian Parliament, in which he represented Rome, or to pay a fugitive visit to some grateful city, such as Palermo. He promoted, and took very great interest, in a project for the deviation of the Tiber, and the improvement of the Roman Campagna; but he did not live to see his work crowned with success. All Italy mourned his death as a

national calamity, and in all the Italian cities his memorials are to be met. No man loved his country with such fondness and disinterestedness as Garibaldi. The most heroic qualities distinguished him from ordinary men. His political sagacity may have been questioned, his military genius may have been overrated, but the presence of mind, which never abandoned him in danger, the belief in human nature, the magic power of command, the readiness to sacrifice himself for others without looking for any reward, cannot be denied to him even by the most hostile critic. He was called during his life the "only hero" in Europe, and as such his name is revered by his countrymen.

Garnett, RICHARD (b. 1789, d. 1850), an eminent philologist, was born at Otley, in Yorkshire, July 25th, 1789, and was the son of a paper manufacturer. In his youth he was placed with Mr. Facio, a Swiss gentleman, to learn French and Italian, as preparatory to a commercial career, while he taught himself German in order to study natural history. Business proving distasteful to him, he entered the Church, and after holding preferments in Lancashire and Staffordshire, became in 1838 assistant keeper of printed books at the British Museum. His philological writings, collected after his death, consist of essays contributed to the *Quarterly Review*, and papers from the *Proceedings* of the Philological Society, of which he was one of the original founders. It is his peculiar distinction to have been, after Dr. Pritchard, the first English scholar to establish the affinity of the Celtic tongues to the other members of the Aryan family.

* **Garnier, JEAN LOUIS CHARLES** (b. 1825), a distinguished French architect, born at Paris, studied sculpture and high relief at the Ecole Spéciale de Dessin, and subsequently entered the Ecole des Beaux-Arts, where in 1848 he carried off the prize in architecture for his designs for a *Conservatoire pour les Arts et Métiers*. The years 1852-3 he spent in foreign travel. In 1854 he became a sub-inspector of the works at the Tour de Saint-Jacques la Boucherie under M. Ballu, and in 1856 he contributed a paper explanatory of the Temple of Egina to the *Revue Archéologique*. In 1861 he competed for the new opera-house at Paris; his plans were unanimously adopted by the jury, over which Count Walewski presided, and he was entrusted with this great work. The Grand Opera House, which had been begun under Imperial auspices, was opened in 1875 with great éclat. In 1877 he was appointed Inspector-General of Civil Constructions at

Paris, and was subsequently retained for the great theatre at Monaco, which was opened in 1879. M. Garnier has frequently exhibited at the Salon various works in water-colours, which have been much admired.

Garnier, MARIE JOSEPH FRANÇOIS (b. 1839, d. 1873), a French traveller, born at St. Étienne, entered the navy, and in 1862 was appointed inspector of the natives in Cochinchina, and entrusted with the administration of the town of Cholen, or Sholen. At his suggestion a mission was sent through Laos to Tibet under the command of Captain Doudart de Lagrée, with Garnier as lieutenant. This expedition traversed from Catieh in Cambodia to Shanghai, a distance of about 5,400 miles, the greater part of which was through country unknown to European geography, and careful observations were taken by Garnier. In the course of the expedition he successfully led a detachment to Talifu, the capital of Sultan Suleiman, the Sovereign of the Mahometan rebels in Yunnan. When, shortly afterwards, Lagrée died, Garnier assumed the command of the whole expedition, and conducted it to the Yang-tze-Kiang, and thence to the Chinese coast. On his return to France the young traveller was received with much enthusiasm. He again proceeded to Cochinchina after the Franco-German War, when he traced the course of the Yang-tze-Kiang to the waterfalls; and was subsequently commissioned by Admiral Dupré, then Governor of Cochinchina, to found a new colony at Tonkin, or at least to establish a French protectorate. He took Hanoi on Nov. 20th, 1873, and was assassinated on Dec. 7th. Shortly before his death, the narrative of his principal expedition appeared under the title of *Voyage d'Exploration en Indo-Chine pendant les Années 1866, 1867, et 1868, publié sous la Direction de M. François Garnier, avec le Concours de M. Delaporte et de MM. Joubert et Thorel* (2 vols.). Accounts of his other travels have since been published. In 1872 M. Garnier brought out *Le Siège de Paris: Journal d'un Officier de Marine* (1871).

Colonel Yule, *Ocean Highways* (1874).

Garnier-Pagès, LOUIS ANTOINE (b. 1803, d. 1878), French politician, was a half-brother of Étienne Garnier-Pagès, leader of the Republican Opposition under Louis Philippe. He took part in the July revolution of 1830, being then a clerk, and shortly afterwards, having been returned to the Chamber by Verneuil (Eure), he took his brother's place as a leader of the Extreme Left. On the outbreak of the revolution of 1848, he was elected Mayor of Paris and Finance Minister in the Provisional Government. As such he was responsible for the desperate expedients of the Republican Government—notably the tax of 25 centimes on raw materials—which eventually were among

the main causes of its overthrow. Hence considerable odium was attached to his name; and having failed to obtain election to the Legislative Assembly, Garnier-Pagès occupied himself with an elaborate defence of his conduct, *Épisode de la Révolution de 1848*. He was absent from political life until 1864, when he was returned for one of the Paris circumscriptions, and was one of the thirteen Republicans who were prosecuted by the Government for establishing the Democratic Electoral Committee. Nevertheless, owing to the moderation of his views, he found some difficulty in obtaining a seat at the elections of 1870. On the establishment of the Government of National Defence, Garnier-Pagès became one of its members, but took small part in its proceedings. In the following year, having failed to be returned at the February elections, he retired altogether from public life.

Garrison, WILLIAM LLOYD (b. 1804, d. 1879), the American philanthropist, was first apprenticed to a shoemaker, and afterwards to a cabinet-maker; but preferring the printer's trade, he joined the staff of the *Newburyport Herald*. He subsequently became a contributor to its columns, and also to those of the *Salem Gazette*; and in 1827 he became editor of the *National Philanthropist* in Boston, the first journal to advocate total abstinence. He was next engaged on several newspapers advocating immediate emancipation of the slaves. For denouncing as "domestic piracy" the taking of a cargo of slaves from Baltimore to New Orleans, he was fined and imprisoned. After delivering a series of lectures against slavery in the principal cities, he established in Boston in 1831 the *Liberator* (where some of Whittier's early poems first appeared), a weekly journal of the most decided and uncompromising anti-slavery views, which was discontinued in 1866, the object for which it was established having been fully accomplished. His denunciations of slavery and slaveholders excited intense exasperation in the South. In 1832 he published *Thoughts on African Colonization*, in opposition to that scheme. He subsequently visited England, where he was warmly received by Wilberforce, Brougham, and their associates. While attending an anti-slavery meeting in Boston in 1835, he was seized by a mob of "gentlemen of property and standing," from whose violence he was only saved by being locked up in gaol, and on the following day he was conveyed by the city authorities to a place of safety in the country. In 1832 he established the American Anti-Slavery Society. In 1840 he attended the World's Anti-Slavery Convention in London, but refused to take his seat because the female delegates from the United States were excluded. After long and arduous labours he saw his hope of emancipation realised, though not, as he had hoped, by moral

suasion alone and without bloodshed. In 1868 he was presented with about \$30,000 as a national testimonial for his great labours. He published *Sonnets and other Poems* (1843), and *Selections from his Writings and Speeches* in 1852.

The Story of W. L. Garrison's Life, by his children (1885); Mrs. Stowe, *Men of our Times* (1868); Oliver Johnson, *Garrison, an Outline of his Life* (1879).

Gaskell, ELIZABETH CLEGHORN, (b. 1810, d. 1865), novelist, was born in Cheyne Walk, Chelsea, Sept. 29th, 1810. She was the daughter of William Stevenson, who began life as a tutor at a Manchester academy, and was for a time the editor of *Scott's Magazine*. After spending two years at a school in Stratford-on-Avon, she lived with her father until his death in 1829, when she rejoined an aunt at Knutsford, and remained there until her marriage to the Rev. William Gaskell, of Manchester, in 1832. The earlier years of married life were devoted entirely to domestic duties. She had several children, and it is said that the death of one of them gave the impulse which made her an author. Her first work was an account of Clopton Hall, contributed to William Howitt's *Remarkable Places*. This was succeeded by short stories, which appeared in *The People's Journal*. It was then that Mrs. Gaskell wrote her *Mary Barton*. She had some difficulty in getting a publisher for this first novel, but Messrs. Chapman and Hall eventually accepted the manuscript, and offered a hundred pounds for the copyright. The work appeared anonymously in 1848, and was received in some quarters with approval, and in other quarters with censure. Objection was urged against the light in which employers were placed. The book secured, however, widespread popularity. Mrs. Gaskell then visited London, and made acquaintance with Dickens, Forster, Lord Houghton, Mrs. Jameson, Mrs. Stowe, and Mr. Ruskin. At the House of Sir James Kay Shuttleworth in Westmoreland she met Charlotte Brontë. The acquaintance speedily ripened into friendship, and on the death of Currer Bell Mrs. Gaskell wrote her memoir. The book has many noble qualities, though some of its disclosures relative to the less-known members of the Brontë family have recently been called in question. Being now fairly launched, Mrs. Gaskell contributed successful serials to *Household Words* and other periodicals. *Moorland Cottage* appeared in 1850, *Cranford* and *Ruth* in 1853, *North and South* in 1855, *Cousin Phyllis* in 1857, *Right at Last* in 1860, and *Sylvia's Lovers* in 1863. Mrs. Gaskell's labours were not entirely confined to literature. To relieve the female mill-hands at the time of the cotton famine of 1862, Mrs. Gaskell started sewing-schools. These schools were the prototypes of the great system of relief which was afterwards publicly adopted. It was

while staying in Hampshire, at a house which she had secretly bought, and intended as a gift for her husband, that Mrs. Gaskell was attacked by the heart-disease which resulted in her death. She died Nov. 12th, 1865. The work on which she was engaged when stricken down was *Wives and Daughters*. This story was appearing serially in *Cornhill*, and was left incomplete. The warmly appreciative note at the end is from the pen of Mr. Leslie Stephen. What promised to be the crowning work of the novelist's life became the memorial of her death. She was buried in the graveyard of the Presbyterian church of the little market town of Knutsford. It is easy to see from whence came the incidents that chiefly brighten her pages; they came out of her own life. And what she gives of personal experience is always the best she has to offer. Her imagination was not her great gift. The stories that came out of her reading are among her less conspicuous works. Anecdotes of her own life abound in *Mary Barton*, and the glimpses of Cranford are sketches of Knutsford. The reverend gentleman in *North and South*, who quits the ministry because he could not reconcile it to his conscience to be a paid teacher of religion, is none other than her own father. Perhaps the best portions of her books are concerned with the delineation of character of the artisan type. She possessed noble powers of description and strong human sympathy. Her sweetness was equal to her strength. She was a novelist of high rank.

[T. H. C.]

* **Gatling, RICHARD JORDAN, M.D.** (b. 1818), a distinguished American engineer, born in North Carolina, assisted his father while yet a boy in perfecting a machine for sowing cotton seed, and another for thinning out cotton plants, and subsequently invented a machine for sowing rice, which was in 1844 adapted to sowing wheat in drills. He next attended for some time medical lectures in Cincinnati, and in 1849 removed to Indianapolis, where he engaged in railroad enterprises and real-estate speculations. In 1850 he invented a double-acting hemp brake; in 1857 a steam plough, which, however, proved impracticable; and in 1861 the revolving battery which bears his name. At the first trial it fired two hundred shots per minute. Twelve of such batteries were afterwards used by General Butler on the James river; and in 1866 the battery was adopted in the United States service after satisfactory trial. It has since been adopted by the English Government.

Gatty, MARGARET SCOTT (b. 1809, d. 1873), a popular writer for the young, was the younger daughter of the Rev. Dr. Scott, Lord Nelson's chaplain on board the *Victory* at Trafalgar, and was married in 1839 to the Rev. Alfred Gatty, D.D., Vicar of Ecclefield, near Sheffield, and Sub-dean of York

Cathedral, the author of various works, both secular and religious. In 1842, in association with her husband, she brought out *The Life of Dr. Scott*, her father; and in 1851 appeared her first independent work, being a graceful *mélange* of fanciful stories, entitled, *The Fairy Godmother, and other Tales*. This was a success, and she followed it up with the earliest of the five volumes of her *Parables from Nature* (1855-71). In 1858 Mrs. Gatty published *Aunt Judy's Tales*, which gave her a wide reputation as a charmingly humorous writer for children, under the fantastic *nom de plume* of "Aunt Judy," under which her real name at the last all but disappeared. *Aunt Judy's Letters*, *Aunt Judy's Song-Book for Children*, and *The Mother's Book of Poetry*, followed; and in 1866 she began the well-known monthly organ for children, entitled *Aunt Judy's Magazine*. Amongst her miscellaneous writings may be mentioned:—*The Old Folks from Home: a Record of a Holiday Ramble in Ireland* (1862); *Waifs and Strays of Natural History* (1870); *The Book of Sundials* (1872); and *The History of a Bit of Bread*, translated from the French of Professor Macé.

Athenæum, Oct. 11th, 1873.

Gaudin, MARTIN MICHEL CHARLES, DUKE OF GAËTA (b. 1756, d. 1844), an able French financier and statesman, born at St. Denis, near Paris, entered the Statistical Department of the French Government, where he was soon promoted to the headship of one of the divisions of the service. He was one of the six commissioners of the Treasury appointed by the Assembly in 1791, and took a lively interest in the discussions on the paper currency; and to him is ascribed the restoration of the national credit at that time. He was Minister of Finance from Nov., 1799, until April, 1814, a career in respect to its length and difficulty without a parallel among French financiers. He was governor of the Bank of France from 1820 to 1834. He is the author, among other works, of the *Financial History of France from 1800-14* (1818), and *Conversion of the Rentes at 5 per Cent.* (1838). He was created Duke of Gaëta in 1809.

Mémoires, Souvenirs, Opinions, et Écrits (2 vols., 1821); A. Portalis, *Essai sur la Vie et l'Administration du Duc de Gaëte* (1842).

Gauss, KARL FREDERICK (b. 1777, d. 1855), a German mathematician, born of humble parents at Brunswick, became widely known by the publication in his twenty-fifth year of the *Disquisitiones Arithmeticae*, and in 1807 was appointed director of the Göttingen Observatory, an office which he retained till his death. Two years later he published at Hamburg his *Theoria Motus Corporum Cælestium*, a work which gave a powerful impulse to the true methods of astronomical investigation; and in 1833 he brought out his first memoir on the theory of magnetism, subse-

quently inventing, in conjunction with Professor Wilhelm Weber, a new apparatus for observing the earth's magnetism and its changes. With Weber's assistance he erected in 1833, at Göttingen, a magnetic observatory free from iron, where he made magnetic observations, and from this observatory he sent telegraphic signals to the neighbouring town, thus showing the practicability of an electromagnetic telegraph. His collected works have been published by the Royal Society of Göttingen in 7 vols. (Göttingen, 1863-71), under the editorship of E. J. Schering, comprising (1) *The Disquisitiones Arithmeticae*; (2) *Theory of Numbers*; (3) *Analysis*; (4) *Geometry and Method of Least Squares*; (5) *Mathematical Physics*; (6) *Astronomy*; and (7) *Theoria Motus Corporum Cælestium*. Gauss was well versed in general literature and the chief languages of modern Europe, and was a member of nearly all the leading scientific societies in Europe.

Waltherhausen, *Memoirs of Gauss*; Professor Cayley in *Encyclopædia Britannica*; *Nature*, 1878.

Gautier, THÉOPHILE (b. 1811, d. 1872), French man of letters, was a native of Tarbes, and was educated at the Collège Charlemagne, in Paris. Some of his literary productions having attracted the attention of Sainte-Beuve, Gautier was admitted to his society, together with that of Victor Hugo, and the rest of the Romantic school. He and the younger generation soon improved upon their masters; and the strange combinations of colours in their attire, the length of their locks, and the high-flown turns of their phraseology, have found a school of imitators even in our time. Gautier, much against his will, was drawn into journalism, and lived during the greater part of his life at Paris, where changes of dynasty affected him not at all. His holidays were spent in travel, and the results were some delightful volumes on *Constantinople*, *Voyage en Russie*, and *Voyage en Espagne*. *Zigzags* (1845) was written after a visit to England. Journalism with him took the form of literary, dramatic, and art criticism, and, although his style is too flowery for some tastes, it can hardly be doubted that he, as a critic, is almost without a rival. That such consummate literary skill should have been spent on what was for the most part ephemeral, is deeply to be regretted. He will, however, live in his poetry and his works of fiction. Of the former, *Albertus* (1830), his first considerable effort, *La Comédie de la Mort* (1832), and *Émaux et Camées* (1852), are the best known; and, though entirely non-moral, their grace of diction and symmetry of workmanship have fairly won for them immortality. His greatest novels and tales have the same features; they are:—*Mademoiselle de Maupin* (1835), an unpleasant subject cleverly treated; *Les jeunes Frances* (1833), *Jettatura* (1839); *La Morte amoureuse*

(1843); *Miliona* (1847); *Le Roman de la Momie* (1856); and *Le Capitaine Fracasse* (1863). His last work of all, *Tableaux de Sièges*, a description of the siege of Paris by the Germans, was published shortly before his death.

Gavarni is the well-known pseudonym of GUILLAUME PAUL CHEVALIER SULPICE (b. 1801, d. 1866), a French caricaturist, who began life in Paris as a mechanical draughtsman, which he soon gave up for burlesque penciling in 1835. He became a regular contributor to *Charivari* and other comic journals, and acquitted himself so effectually that he earned for himself the name of the "arch-fiend of caricature." Among his best known works are:—*Les Enfants terribles*, *Les Parents terribles*, *Les Rêves*, *Comme l'on dîne à Paris*, *Les Fourberies de Femmes*, and *Impressions de Ménage*. He successfully illustrated Eugène Sue's *Le Juif Errant* (1843); the French translation of Hoffman's tales (1843); the first collective edition of Balzac's works, 20 vols. (1850); *Le Diable à Paris* (1844-6); *Les Français peints par Eux-mêmes* (1840-3); the collection of *Physiologies*, published by Aubert, in 38 vols. (1840-2); and many others. A selection from his sketches was published in Paris, 1845, in 4 vols. 8vo, with notes by Théophile Gautier; and 2 vols. subsequently, under the title of *Perles et Parures* (1850). During the latter part of his life Gavarni was much engaged in scientific pursuits, and sent several communications to the Académie des Sciences.

E. and J. de Gouwart, *Gavarni l'Homme et l'Œuvre* (1873); J. Claretie's *Essai sur Gavarni*.

Gavazzi, ALESSANDRO (b. 1809, d. 1885), a popular Italian preacher, reformer, and controversialist, was born at Bologna, and admitted in 1825 into the order of Barnabites, where he showed great natural powers of eloquence. He subsequently became professor of rhetoric at Naples. On the accession of Pius IX., the "Reforming Pope," in 1846, he threw himself heartily into the liberal policy then inaugurated, and became chaplain-general of the Roman patriotic legion sent to the aid of the Milanese. The Pope, however, soon became reactionary, and withdrew the legion. Gavazzi forthwith abandoned his allegiance to the Pope, and joined in the agitation which ended in the flight of the latter, and the establishment of a republic. On the failure of the struggle with France Gavazzi escaped to England, and after 1851 figured chiefly as an anti-papery lecturer. He was enthusiastically received in England and Scotland, and also in the United States; but in Canada some of his meetings led to riots. In 1861 he published his *Memoirs* in Italian and English, and a few months later a selection of his *Orations*. He was present with Garibaldi at Palermo during the expedition of 1860; and in 1876-8 he undertook a second lecturing tour in Britain, gathering funds for the Italian

Free Church, in the fostering of which he was deeply interested.

Scribner's Monthly, 1873.

Gay-Lussac, JOSEPH LOUIS (b. 1778, d. 1850), a distinguished French chemist and physicist, born at St. Léonard (Haute-Vienne), entered the École Polytechnique at Paris in 1793, and after three years' study was promoted to the Department des Ponts et Chaussées. He next became assistant to Berthollet (q.v.) at Arcueil; and in 1801 he published his first memoir, on *The Dilatation of Gases and Vapours*, which was speedily followed by others on *The Improvement of Thermometers and Barometers*; on *The Fusion of Vapours*, their mixture with gases, and the deterioration of their density, etc.; and on *Capillary Action*. Along with Alexander von Humboldt he investigated the properties of air brought down from a height of more than 23,000 feet; and their joint memoir to the Academy of Sciences in 1804 contained the first announcement of the fact that oxygen and hydrogen unite to form water in the simple proportion of one hundred parts by bulk (volumes) of the former to two hundred parts of the latter. From this he was led to the important discovery of the law of volumes, which he announced in 1808. In 1811 he published, along with Thenard, *Recherches physico-chimiques*, in which are described some of their most important discoveries: a new chemical process which yields potassium and sodium much more abundantly than the voltaic pile; the determination of the composition of boracic acid, both analytically and synthetically; and new methods of analysing organic compounds. He is also well known for his discovery of cyanogen. In 1809 he became professor of chemistry in the École Polytechnique, and in 1832 he was transferred to the Jardin des Plantes, where he acted in a similar capacity. In 1831 he entered the Chamber of Deputies, and in 1839 he was made a peer of France, but he never took an active part in politics. M. Gay-Lussac's chief works, besides those already mentioned, are his *Cours de Physique*, edited by Grosselin (Paris, 1827), and his *Leçons de Chimie*, collected by Marmet (2 vols., Paris, 1828).

Arago, *Œuvres*, t. iii. (Paris, 1855); Biot, *Abstracts Royal Society*, vol. v., 1843-50, p. 1013; P. A. Cap, *Le Muséum d'Histoire Naturelle* (Paris, 1854); L. de Lomeule, M. Gay-Lussac, par un Homme de Sein (1841).

Geddes, ANDREW, A.R.A. (b. 1789, d. 1844), was a native of Edinburgh, and after his father's death was allowed to pursue his inclinations, and entered the schools of the Royal Academy, London, in 1807. In 1808 he sent a picture to the Edinburgh Academy, which was successful, and in 1810 followed it up with the highly successful *Draught Players*. In 1821 his picture, *The Discovery of the Scottish Regalia*, exhibited in the London Academy, enhanced his reputation, and ten years afterwards he was elected an A.R.A., when he

exhibited *Christ and the Woman of Samaria*, an altar-piece. Perhaps his best work was done in portraiture, in which he attained great naturalness of expression and ease of pose.

Geffrard, FABRE (b. 1806, d. 1879), negro President of Hayti, was the son of Nicholas Geffrard, who, along with Pétion, framed the Haytian Constitution of 1806. Left early an orphan, young Geffrard entered the army at fifteen, and only after twenty-two years' service obtained his captain's commission. He took part—unwisely, as events proved—in the rebellion against the able but indolent President Boyer, in which, however, he greatly distinguished himself. In 1845 he became lieutenant-general. In 1846 General Riché, who became President of the Republic, and who bore him a grudge for having formerly made him a prisoner, sent him before a court-martial; but through the adroitness of Riché's Minister of War, Geffrard was acquitted. In the campaign of 1856 Geffrard displayed some military capacity. Partly from this, and partly from the superstitious interpretation of a comet that appeared in 1858, President Soulouque (Faustin I.) imbibed a bitter hostility towards Geffrard, and determined to arrest him; but Geffrard drove Soulouque from Port-au-Prince, and established himself as President in 1859. This position he held for eight years. In 1867 Salnave headed a second revolution, which was successful in compelling Geffrard to abdicate, and to fly to Jamaica. Here he resided till his death. Geffrard's administration was exceedingly popular, and was attended with great success.

Underhill, *Hist. of the West Indies*; Mr. J. M. Ludlow in *Good Words*, Sept., 1862.

Gegenbauer, CARL (b. circa 1830), morphologist, now professor of anatomy at Heidelberg, formerly occupied that position at Jena, where he had previously been student and *privat-docent*, and distinguished himself by valuable contributions to the scientific magazines. Having received an invitation to the Chair of anatomy in Heidelberg, he also became director of the anatomical institute in that university, and since 1876 has edited the *Annual of Morphology* (*Morphologisches Jahrbuch*). His fame chiefly rests on his celebrated treatise entitled, *The Elements of Comparative Anatomy* (*Grundriss der vergleichenden Anatomie*, 2nd edition, 1878), a reduced but much improved version of his larger *Outlines* (*Grundzüge*) on the same subject. In 1878 it was translated by Mr. F. Jeffrey Bell, assisted by Mr. E. Ray Lankester, who also wrote a preface for the work. Professor Gegenbauer published a *Text-Book of Human Anatomy* (*Lehrbuch der Anatomie des Menschen*) in 1883.

Geibel, FRANZ EMMANUEL (b. 1815, d. 1884), the German poet, was born at Lübeck, the town with which his name will always remain peculiarly connected. The idyllic home-

life of his youthful years in the old Hanseatic town has been described by himself in the *Book of Elegies*, unfortunately composed in the classic metres which render so much of his later work unreadable. In 1835 he entered the University of Bonn, with a view to the study of theology; but poetry already occupied his thoughts, and the poetic tendency grew after his migration to Berlin, where he became acquainted with Chamisso and other poets. In 1838, through Bettina von Arnim (q.v.) he obtained a tutorship in a Russian nobleman's family then settled in Greece. He held this position for two years, living principally in Athens, or travelling through the islands on voyages of discovery with his friend Ernst Curtius (q.v.), then beginning his explorations into classical antiquity. On his return to Germany (1840) he published his first collection of poems, and lived for a time with a friend in a castle near Cassel, where he gave himself up to the study of the Spanish romances, of which he afterwards published several translations in the original metres. Returning to Lübeck, he published *König Roderich* (1843), and in the same year received a small pension from Frederick William IV. of Prussia. Inspired by no revolutionary enthusiasm or ideal, he took no part in the stirring events of 1848, in spite of his friendship with Freiligrath and other revolutionary poets. In 1852 he was invited by Maximilian II. to the professorship of æsthetics and German literature in the University of Munich. Here he married; but lost his wife, the "Ada" of the well-known cycle of poems, in 1855. His enthusiasm for Prussia during and after the war of 1866 so disturbed the Bavarian authorities, that in 1868 he was obliged to resign his professorship, and returned to Lübeck, where he spent the rest of his life in literary retirement, publishing from time to time new editions of his poems and odes of triumph over the defeated French, or of exultation at the beginnings of German omnipotence. The period at Munich was marked by the production of the dramas, *Meister Andreas*, a comedy (1855); *Brunhild*, a tragedy on the marriage episode in the Nibelungenlied (1857); the *Loreley*, an opera in rhyme, which Mendelssohn was to have set to music, but left unfinished; *The Refiner's Fire* (*Echtes Gold wird klar im Feuer*), a comedy; and the tragedy of *Sophonisbe* (1868). But for these, and a few ballads and "dramatic idylls," such as *The Page and the King's Daughter*, *The Death of Tiberius* and *Judas Ischariot*, Geibel's work was entirely, and, on the whole, wisely, lyrical. Some of his lyrics, as, for instance, *Poor Ne'er-do-Weel* (*Der arme Taugenichts*); *In April*; *The Gipsy Boy* (*Der Zigeunerbube*); *The Answer* (*Antwort*); and *The Minstrel's Return* (*Spielmanns Heimkehr*), are songs of a high order. Many are known amongst the common people who never heard of Geibel's name. *The May is Returning* (*Der Mai ist*

gekommen) is sung by every student throughout the universities, and *When heart from heart must sever* (*Wenn sich zwei Herzen scheiden*) by almost every girl in every pension. Nevertheless, Geibel cannot rank with the great poets. He is deficient in strength, in dramatic power, and in grasp of the concrete reality. And yet since Heine's death no German poet has come so near the true thing. Geibel made several excellent translations from modern English and French writers.

Wilhelm Scherer, of Berlin, *Rede über Geibel* (1884); C. L. Leinbach, *Geibel, sein Leben und Wirken* (1877); H. Loebner, *Geibel* (1884); A. Holz, *Geibel, ein Liederbuch* (1884).

[H. W. N.]

***Geikie**, ARCHIBALD, F.R.S. (b. 1835), geologist, was born at Edinburgh, and was educated at the high-school and the university. He was appointed to the Geological Survey in 1855, became director to the survey in Scotland in 1867, and director-general to the survey of the United Kingdom in 1881, when he was placed at the head of the Museum of Practical Geology, London. From 1870 to 1881 he was Murchison professor of geology and mineralogy in Edinburgh University. He is the author of the *Story of a Boulder* (1858), numerous manuals and primers on geology, and a memoir of his teacher, Sir R. Murchison.

***Geikie**, JAMES, LL.D. (b. 1839), geologist, is a brother of the above, and received a similar education. From 1861 to 1882 he served on the Geological Survey of Scotland, and was then appointed Murchison professor of geology and mineralogy in Edinburgh University. He became F.R.S.E. in 1871, F.R.S. in 1875, and LL.D. (St. Andrews) in 1877. Professor Geikie is the author of many geological maps and reports published by the Geological Survey, and his chief works are *The Great Ice Age in its Relation to the Antiquity of Man* (1st edit. 1874, 2nd edit. 1876), *Prehistoric Europe* (1881), and *Outlines of Geology* (1886).

Genlis, STÉPHANIE, COMTESSE DE (b. 1746, d. 1830), politician and *savante*, born near Autun, in Burgundy, of a noble family, was received, at the age of four, as canoness of the noble chapter of Aix, and after that time was called La Comtesse de Lancy, her paternal name being St. Aubin. As she grew up she was distinguished for her general talents and accomplishments and a handsome person. These qualifications soon obtained her admission into the best society, and at the age of sixteen she was married to the Count de Genlis, a young nobleman of considerable fortune and a good family. By means of this union she had access to the family of the Duc d'Orleans, and in 1782 became governess to the family of the Duc de Chartres, the son

of the Duc d'Orleans. Meantime her husband, the count, had accompanied Lafayette to assist the Americans in their war against England; and shortly afterwards reports became prevalent as to an alleged *liaison* between her and the Duc de Chartres, which were subsequently strengthened by the mysterious appearance of an adopted daughter, afterwards known by the name of Pamela, who married Lord Edward Fitzgerald. About this time she began to publish her works on education: *The Theatre of Education*, *Adela and Theodore*, *The Tales of the Castle*, and *The Annals of Virtue*, which were soon followed by a religious work, the object of which was to prove that religion is the basis of all happiness and all philosophy. In 1791 she resigned her situation as governess, when she visited England; but returned to the family in 1792. She was immediately declared to be an emigrant, under the decree of the National Convention, and ordered to quit France. For the next eight years she travelled in exile throughout Europe, during which time she published *The Knight of the Swan*, *Rash Vow*, *The Rival Mothers*, *The Little Emigrants*, and *A Refutation of the calumnies* which had been heaped upon her for her conduct during the Revolution. In 1800 she was permitted to return to France, and Napoleon gave her apartments in the arsenal and a pension. She experienced a like kindness from the royal family after the restoration of the Bourbons. All Madame de Genlis's works are written in a very graceful style, and display an active mind and a keen perception. In her *Autobiography* (1825) she makes many severe strictures on the thoughts and actions of the English.

Mémoires inédits de Madame la Comtesse de Genlis (8 tom., Paris et Londres, 1825); also translated: *Westm. Review*, July, 1826; *Sainte-Beuve, Causeries du Lundi*, iii.; L. de Bevelinges, *Madame de Genlis en Miniature* (1826); *Fraser's Magazine*, April, 1863.

Gentz, FRIEDRICH VON (b. May 2nd, 1764, d. June 9th, 1832), was the son of a Prussian official at Breslau, who became subsequently director of the Berlin Mint. Gentz studied at the Joachimsthal Gymnasium at Berlin, and subsequently at Königsberg. In 1785 he entered the Prussian War Office. His early years at Berlin were divided between dissipation and severe, though irregular, study. The French Revolution awakened at first his admiration, and then his profound repugnance. He translated Burke's *Considerations on the French Revolution*, and Mallet du Pan's *Considerations sur la Nature de la Révolution française*, with notes and elucidations. In 1795 he founded the *Neue deutsche Monatschrift*, a periodical which was chiefly intended for the discussion of historical and political topics. Though altogether opposed to the Revolution, he was, at this time, a Liberal and a Constitutionalist, and he held up the English system to the admiration of his countrymen.

In 1797 he greeted the new King of Prussia, Frederick William III., in an epistle full of liberal ideas, and strongly advocating the complete freedom of the press. In 1799 he founded the *Historical Journal*, in which he constantly urged upon his countrymen a close alliance with England and war with France. In 1801 he published his work *On the Origin and Character of the War against the French Revolution*, in which he strove to saddle the French Jacobins with the chief responsibility for the conflict. While he was gaining a European reputation by these works, his position in Berlin had become increasingly unpleasant. He had already begun to receive pecuniary presents of considerable value from the English and Austrian ministers, and was not unnaturally regarded with disfavour in Berlin on that account. Moreover, the irregularities of his private life, which led to a separation from his wife, rendered his relations with Berlin society uncomfortable. For these reasons he quitted Prussia in June, 1802, and settled in Vienna, after a visit to England, where he made the acquaintance of some of the leading English statesmen. Though he may be said to have been from the first in the pay of the Austrian Government, his relations with the leading statesmen at Vienna were at first somewhat strained. But the earnestness with which he advocated German unity against the foreigner, produced a profound effect throughout Germany, and the leading Prussian statesmen sought his advice. At the opening of the campaign of 1806, he was present at the Prussian head-quarters. After Jena he returned to Austria, and continued his literary activity, until the disastrous close of the campaign of 1809, which, for the time, reduced him almost to despair. In 1812 he was taken up by Metternich, and for several years he was the useful literary and diplomatic assistant of that minister, whose foreign policy he seems to have completely accepted. From 1813 to 1815 he acted as a kind of secretary to Metternich. In 1814 he was made First Secretary to the Congress of Vienna, in which he played a somewhat important part, receiving, it may be noted, handsome *douceurs* from several of the foreign plenipotentiaries. He was subsequently secretary to the Congresses at Aix (1818), Carlsbad (1819), Laybach (1820), and Verona (1822). During these years also he took a large share in the re-organisation of the Austrian finances. Gentz's later years were passed partly at Vienna, where he continued to be the confidential adviser of Metternich, and became a conspicuous figure in society, and partly at various baths and watering-places. Among the many curious incidents of his career was his *liaison*, at the age of sixty-five, with the famous dancer, Fanny Elssler, a girl of seventeen. Gentz is altogether rather a puzzling figure. He was

at once a patriot and a "hireling scribe," as Napoleon called him, a lover of Constitutionalism and a supporter of Metternich. His writings, even when he is engaged on some subject of purely temporary interest, are full of valuable observations on the theory of politics and international relations. The most creditable portion of his public life was the period in which he was striving to animate his countrymen against Napoleon. No writer did more than Gentz to arouse the patriotic enthusiasm in Germany which culminated in the "War of Liberation."

Gentz, *Schriften* (a selection merely; 1838-40); *Mémoires et Lettres de Chev. de Gentz* (1841); Prokesch-Osten, *Aus dem Nachlasse F. von Gentz* (2 vols., Vienna, 1867); *Dépêches inédites aux Hospodars de Valachie*, by the same editor (1876); Varnhagen von Ense, *Denkwürdigkeiten; Mendelssohn-Bartholdy, F. von Gentz* (1867).

[S. J. L.]

Geoffroy St. Hilaire, ÉTIENNE (b. 1772, d. 1844), French naturalist, was the son of Jean Geoffroy, a magistrate of Étampes. He studied for the Church, but having acquired a taste for science, became a pupil of Haüy at Cardinal Lemoine's college. During the September massacres of 1792 he rescued from prison by a ladder, at the imminent risk of his life, some priests who had been arrested by the revolutionists. After this, Daubenton, one of his masters, procured for him the post of sub-keeper in the Cabinet of Natural History, and in the following year he became professor in the Museum of Natural History, and as such helped to organise the Jardin des Plantes. Shortly afterwards he began to develop his great theory of the unity of organic structure, and began, in conjunction with his friend Georges Cuvier, some treatises on natural history. In 1798 he went to Egypt on Napoleon's great scientific expedition, and succeeded in saving the collection from the clutches of General Hutchinson in 1801 by his firm demeanour. In 1808 he was sent by Napoleon on a scientific mission to Portugal, then occupied by Junot's troops, and on his return became professor of the faculty of science at Paris. During the Hundred Days he represented Étampes in the Chamber, but at the Restoration he retired into private life. The result of his studies was his celebrated *Philosophie anatomique* (2 parts, 1818 and 1822), in which he expounded his views as to the unity of organic structure, and demonstrated that "monstrosity" was only imperfect or abnormal development (*Des Monstruosités humaines*, 1822). This theory, when extended to the invertebrates, caused Georges Cuvier to rise to arms, and a war of words arose, in which Geoffroy St. Hilaire, though conquered in several engagements, won the whole campaign, and so paved the way to Darwinism. He became blind in 1840, and after that his constitution gradually became weaker. Among his other works are *Cours de l'Histoire naturelle des Mammifères* (1829); *Principes de*

Philosophie zoologique (1830); *Études progressives d'un Naturaliste* (1835).

L. Geoffroy St. Hilaire, *Vie, Travaux, etc.*, d'E. Geoffroy St. Hilaire.

Geoffroy St. Hilaire, ISIDORE (b. 1805, d. 1861), son of the above, also devoted himself to natural history, and in 1824 was appointed assistant to his father at the Jardin des Plantes. Though devoid of the originality of his great father, Étienne, he was, nevertheless, an observer, and his work, *Histoire générale et particulière des Anomalies de l'Organisation* (1832-7), adds much valuable confirmation to the latter's celebrated theory. The son was successively member of the Academy of Sciences (1833), inspector of the Academy of Paris (1840). He succeeded his father as professor of the museum, and Blainville as professor of zoology at the Academy of Sciences. The work of the establishment of the Jardin des Plantes was also complemented by him in 1854 by the foundation of the Acclimatisation Society of Paris.

George III., KING OF ENGLAND (b. 1738, d. 1820), the son of Frederick, Prince of Wales, and the grandson of George II., succeeded his grandfather in 1760. A brief summary only can be given here of that part of the reign which lies outside the century. In 1761 the king married Charlotte of Mecklenburg-Strelitz, in spite of his previous affection for Lady Sarah Lennox. The first period of the reign is mainly occupied in the King's attempt to impose upon the country a ministry of his own selection; and he succeeded when, in 1770, Lord North became Prime Minister. Meanwhile, the country was being dragged into war with America, and when that war developed into a ruinous struggle with France, America, and Spain, North, sorely against the king's will, resigned (1782). Compelled to take back the hated Whigs, George received considerable sympathy when the unprincipled Fox and North coalition forced itself upon him, Feb., 1783; he dismissed it on the first pretext, and called Pitt to his counsels. The extravagance of the Opposition helped the young minister, and he continued in power until the beginning of the century. The chief fact of this, the third period of the reign, is, of course, the French Revolution, the horrors of which, and the fear that it might be reflected in England, caused the upper and middle classes to rally round the throne, and the king's popularity was undoubtedly strengthened by the bad character of the Prince of Wales, whose regency had appeared imminent when the king was temporarily insane in 1788-9. In 1800 came the Union, and the resignation of Pitt in March, 1801, in consequence of George's stubborn refusal to agree to concessions to the Catholics. The Addington ministry was personally acceptable to the king on account of its mediocrity, but he saw that the

Peace of Amiens, concluded with France in 1801, was not likely to last. On the renewal of the war in 1803, the incompetence of Addington became obvious, and Pitt was recalled to power; but George still steadily set his face against the admission of Fox to his counsels. Pitt died in 1806, and then the king was compelled to give way; the Fox and Grenville ministry, known as that of All the Talents, was formed, and the king even laid aside his old resentment to Fox. But in September Fox died, and George seized the opportunity of Grenville's proposal of a small measure of relief for the Catholics, to dismiss ministers. They were ordered to abandon the Bill, and even to pledge themselves never to raise the question again. This demand was perfectly unconstitutional, and when Grenville and his colleagues refused to obey it, they were dismissed, the Portland and Perceval ministry took their place, and the elections resulted in a marked Tory reaction. This was the king's last triumph. A jubilee was held in 1809, in commemoration of the commencement of the fiftieth year of his reign, but blindness and ill-health came rapidly upon him, and the death of his favourite daughter, Princess Amelia, in 1810, permanently overthrew his reason. A regency Bill was passed in 1811, and the king was lost to the outside world. His wife died in 1818, but George knew nothing of her death, and after lingering on through two more weary years of blindness and insanity, in which music was his only solace, he died Jan. 29th, 1820.

Harriet Martineau's *Introduction to the History of the Peace* is still the best general authority for the years 1800-11. The ministerial changes can be studied in the authorities on Pitt, Fox, Sidmouth, Grenville, etc. (q.v.). The authorities on the whole reign are to be found in the *Dictionary of English History*, art. *George III.*

George IV. (GEORGE AUGUSTUS FREDERICK, b. 1762, d. 1830), King of England, was the eldest son of George III. and Queen Charlotte, and was born at St. James's on Aug. 12th, 1762. Educated, with his brother Frederick, in the strict seclusion of his father's gloomy and monotonous court, he no sooner reached manhood than he plunged into a career of the wildest extravagance and licentiousness. Mainly with the desire of opposing his father, he attached himself to the Whig party. Fox and Sheridan initiated him at once into Opposition politics and the fashionable vices of the aristocracy. When he attained his majority, and took his seat in the House of Lords, the Coalition Government, which was then in power, sought to requite him for his support by proposing to raise his income from the £50,000 proposed by his father to £100,000. Nothing but the king's peremptory refusal to sanction this measure prevented it from being brought forward. But gambling, betting, debauchery, and a

wonderful recklessness and profusion in personal expenditure, had already overwhelmed the Prince of Wales in debt. Pitt's refusal to liquidate this, in 1786, led to a delusive pretence of retrenchment that sprang more from spite than economy. Next year a worse scandal was made public. It was more than suspected that George had gone through the form of marriage with Mrs. Fitzherbert, a Roman Catholic lady of great beauty. Marriage with a Catholic would have excluded George from the throne; but, by the Royal Marriage Act, the marriage of a prince of the blood without the king's consent was invalid. In the course of a debate in Parliament on Alderman Newenham's motion to pay the prince's debts, Fox was deceived by George's assertion that the whole story was absolutely devoid of truth. By such means George gained an increase in his allowance of £10,000 a year, and £160,000 to pay off his debts. Having gained his point, the prince at once threw Fox over, and denied that he had authorised his contradiction of the marriage. In 1788 George III. went mad, and the Whigs started a preposterous theory that the Prince of Wales had, as heir-apparent, a constitutional right to assume the regency. Pitt maintained, with more reason, that it was a question for Parliament to determine, and though willing to make the prince regent, would only do so under certain restrictions. In 1789 the king's recovery ended the matter for the time. In 1791 a grave scandal led to the prince's almost compulsory retirement from the turf. In 1792 he publicly repudiated Fox and the friends of the French Revolution. In 1795 he was compelled to marry his cousin, Caroline of Brunswick, as the only condition on which his debts were to be liquidated and his allowance increased. But the marriage was a thoroughly ill-assorted one. Caroline was poorly educated, frivolous, and slatternly: George took liquor freely in order to overcome his repugnance to her: he continued his old course of life, and from the first they never agreed. After the birth of their only child, the Princess Charlotte (Jan. 7th, 1796), the unhappy pair separated. The old king marked his sense of displeasure by refusing higher military rank than that of colonel to his son. The scandal did not, however, end with their separation. In November, 1810, George III. became permanently insane. The Government at once brought forward a Regency Bill on the lines of Pitt's proposal in 1788. George and his brothers protested against the restrictions set to his power; and the Whig Opposition, with whom George had renewed relations since 1798, did their best to support him. But the Bill was passed as proposed, and in February, 1811, George took the oaths as regent. He was now practically king. It was generally believed that the first use he would make of his authority

would be to recall the Whigs to office; but with the assumption of power his political attitude, always purely selfish, entirely changed, and he soon became engaged in a personal quarrel with Grenville and Grey, which secured Perceval's continuance as minister. Again in February, 1812, when the term of one year, for which the regency was originally fixed, had expired, insincere advances to the Whig leaders to join the existing ministry came to nothing. After Perceval's assassination, the personal intrigues of rival statesmen led to a fresh proposal being made to Grenville and Grey to join the Tories. But this they could not possibly accept, and an attempt at forming a ministry of their own signally failed, and involved them in a dispute with George's friend, Lord Moira. Ultimately Lord Liverpool was put at the head of what was substantially Perceval's old ministry. Before long the regent began to denounce his former associates as unprincipled and factious. The events of the two years show how much power still remained with the monarch. But as long as George obtained plenty of money from his ministers to lavish on follies like the Brighton Pavilion, or on the decoration of Carlton House, his town residence, he was comparatively indifferent to the details of politics. He was more at home in such ceremonies as the entertainment of the Allied Sovereigns in 1814. His unpopularity became greater than ever during the years of distress which followed the end of the great war. In 1817 the last tie which bound him to the nation was broken by the death of the Princess Charlotte in childbirth. Her marriage in the previous year to Prince Leopold of Coburg had freed her from the harsh bondage to which she had been relegated by her father. In the same year, when George went to open Parliament, the mob broke the windows of his carriage. On Jan. 29th, 1820, the old king died. The event had no political importance in itself, but the necessity of defining the new king's relation to his wife produced a crisis of the most alarming description. Caroline was always unsteady and frivolous. A long series of persecutions had soured a character never strong at the best. In 1806 a charge had been brought against her of giving birth to an illegitimate child; but it had been disproved so completely that George III. had refused to take from her the charge of her daughter: but when her husband became regent he prevented her seeing Charlotte more than twice a month. Fresh scandal was excited in 1813, when the Princess of Wales published in the *Morning Chronicle* a letter of remonstrance to her husband, which he had refused to notice when forwarded to him privately; and a committee of Privy Councillors advised the continuance of the restriction on her interviews with her daughter. In 1814, disgusted at the prince excluding

her from court during the visit of the allied monarchs, she withdrew to Italy, where she lived a wandering and often scandalous life until the accession of her husband to the throne, and his refusal to allow her name to occur in the liturgy, brought her back to England. A Divorce Bill was promptly laid before the House of Lords by the unwilling ministry. But popular indignation rose to a great height at a man of George's life bringing such charges against his wife. Caroline became a popular heroine. The Opposition took up her cause, Brougham became her Attorney-General, and Canning, true to his generous nature, did not dissemble his sympathy. The third reading of the Bill passed the Lords by so small a majority that the Government gave it up in despair of setting it through the Commons. But in 1821 she was repelled from the magnificent coronation ceremonies on which the prodigal king had lavished vast sums. She had already alienated her more respectable supporters when her death, in 1822, saved George from further difficulties. He had already gone on a visit to Ireland, where he was received with an enthusiasm that had long been strange to him. Next year he sought popularity in Scotland, and met with a magnificent reception in Edinburgh, that owed much of its warmth to the loyalty of Sir Walter Scott. But on his return to London to arrange the crisis caused by Castlereagh's suicide, George had to submit to the mortification of admitting Canning to office, though he hated him for his support of Queen Caroline, and distrusted his liberal policy. Again, in 1827, he unwillingly permitted Canning, and the more liberal Tories, to form a Government. After Canning's death he was glad to get rid of Lord Goderich in favour of the anti-Catholic administration of Wellington and Peel. His last great political effort was directed to opposing the proposals of Catholic emancipation, into which the Clare election, and the prospect of civil war, had frightened Wellington. But the offer of resignation turned a weak resistance into a miserable submission. His health had long been impaired. For the last few years he had lived in the utmost seclusion at Windsor with Lady Conyngham. He died, lamented by none, on June 26th, 1830. George IV. was one of the most worthless kings that England ever had. Even the enthusiasm of the fervid loyalty which the reaction against the French Revolution had produced could find in him no higher subjects for eulogy than the princely magnificence and the grand manners which gave him the title of the "First Gentleman of Europe." He was dissipated, drunken, prodigal, treacherous, weak, and fickle. He had been false to all who knew him—to his father, his wife, his daughter, his mistresses, the Whig friends of his youth, the ministers who paid his debts and submitted

to his caprices. His personal influence had been productive of immense evil. It was no merit of his if his weakness of character, and personal unpopularity, necessitated his silently giving up the commanding political position won by his father, and so smoothing the transition to the more limited exercise of the royal prerogative allowed in later times.

The best general accounts of George IV.'s regency and reign may perhaps be found in Spencer Walpole's *History of England since 1815*; Pauli's *Englische Geschichte seit 1815*; C. Knight, *Popular History of England*; and Martineau's *Thirty Years' Peace*. For his personal qualities, see Fitzgerald's *Life of George IV.*; Huijah's *Memoirs of George IV.*; and Thackeray's *Four Georges*. The Duke of Buckingham's *Memoirs of the Court of the Regency*; and *Memoirs of the Court of George IV.*; Lord Malmesbury's *Diary and Correspondence*; Bell and Stapleton's *Lives of Canning*; Yonge's *Life of Lord Liverpool*; *Life of Eldon*; *Memoirs of Sir Robert Peel*; the *Croker Correspondence*; the *Greville Memoirs*; *Rose's Diary*; Lord Colchester's *Diary*; the *London Correspondence*; Alison's *Life of Castlereagh*, and *History of Europe*.

[T. F. T.]

George I. of Greece. [GREECE.]

George V. of Hanover. [HANOVER.]

* **George, HENRY** (b. 1839), the American socialist, born at Philadelphia, entered a counting-house in 1863, then learned printing, and afterwards took to the sea. In 1868 he settled in California, and in 1866 joined the staff of a San Francisco newspaper as a reporter, subsequently becoming editor of the San Francisco *Times* and *Post* in succession. His attention had already been directed to the land question, and his views are embodied in *Our Land and Land Policy*, published in 1871. In 1876 he became state inspector of gas-meters for California, and in 1879 a trustee of the San Francisco Free Public Library. In 1880 he removed to New York, and in the following year he came to this country, visiting Ireland by the way. While in Ireland he was arrested as a "suspect" under Mr. Forster's Coercion Act, then in force; and, although he was immediately released, the event directed attention to his latest work, *Progress and Poverty* (1879), which forthwith had an enormous sale. The charm of *Progress and Poverty* is the simplicity of its style, and the drastic remedy proposed for an exasperated people. Mr. George, maintaining that the "unearned increment" in rent, as Mill had called it, was rightfully the property of the nation, proposes to "appropriate rent by taxation," which he argues would be no injustice, for "it is not necessary to confiscate land; it is only necessary to confiscate rent." The fallacies in Mr. George's reasoning seem to be due to a mistaken notion of the real causes of poverty, and a somewhat superficial acquaintance with economic works and economic history. Mr. George undertook a lecturing tour throughout the United Kingdom in 1883-4, and was enthusiastically received in many

districts. In 1881 he published his opinions on the *Irish Land Question*, in 1884 his solution of *Social Problems*, and *Protection and Free Trade* in 1886, in which year he was a candidate for the Lord Mayoralty of New York.

Gérard, JEAN IGNACE ISIDORE (b. 1805, d. 1847), a French caricaturist, generally known under the pseudonym of **GRANDVILLE**, was the son of a miniature-painter at Nancy, and went to Paris in 1824, where he devoted himself to caricature. After the appearance of some minor works, he produced in 1828 his *Metamorphoses du Jour*, a series of seventy scenes, in which he was successful in making individuals with the bodies of men, and faces of animals, play a human comedy. He was next engaged as a contributor to *Le Charivari* and other comic journals, and as an illustrator of many standard works, such as the fables of La Fontaine, *Robinson Crusoe*, *Don Quixote*, and *Gulliver's Travels*. He died of mental disease. All M. Gérard's caricatures are characterised by their analysis of character and inventive ingenuity.

Charles Blanc, *Grandville* (Paris, 1855).

***Gérôme, JEAN LÉON** (b. 1824), French painter, during the last few years of the Second Empire, after the eclipse of Ingres, may be said to have divided with Cabanel the leadership of French figure-painting. Before that time he was industrious and rising, and since it he has remained celebrated. M. Gérôme was born at Vesoul, on the borders of the Vosges. Coming to Paris, he became a pupil of Paul Delaroche, the grace of whose best design he has never equalled, though he may probably have surpassed his master in draughtsmanship, and has certainly displayed a sense of comedy to which Delaroche made no claim. Gérôme, by the old French official classification, would still be called, like his master, a "painter of history;" but he, at least, has always cared that his history should be amusing and familiar, and accordingly it has generally been *genre*. In 1853 M. Gérôme first went to the East, whence he was thenceforth to obtain so much of the material for his work. In 1863 he was appointed a professor at the Ecole des Beaux-Arts, and no professor has ever worked more conscientiously, or has more effectually befriended his pupils. The earliest of his important pictures, *The Age of Augustus and the Birth of Christ*, was bought by the State, and despatched to the gallery at Amiens, a provincial museum of high rank. But few have seen this picture, and its painter owes to it none of his real popularity. *Phryne before the Tribunal* displayed the more individual qualities of his mind and hand. In it he evinced a power of figure-draughtsmanship which even Ingres could not have despised, and a force of suggestive satire which for awhile made him accounted the Rabelais of painting. Nor was the work bad in colour. Its relative excel-

lence of hue has not been maintained in all of his later works; but these have not failed to preserve that basis of satire to which Gérôme has owed much of his success. Of the canvases of a somewhat later period than that of the *Phryne*, *Son Eminence grise* (1874) is probably the most deservedly conspicuous. In it we may admire the lucidity of the painter's narration, and the exquisite instinct in patterning a given space which enables him so to dispose of the figures and accessories on his canvas. In 1870-1, during the troubles of the Franco-German War and of the Commune, M. Gérôme set up his easel for awhile in London; but in London, as in Paris, he painted only his familiar themes—the willingness of the courtier, the gladiator's death, and the luxury and cruelty of the Orient. He is a gifted and accomplished man; yet, perhaps, no more than many of his brethren a perfectly balanced artist. Story-teller, draughtsman, master of design, he is these more than a pure colourist. Yet he has deserved, upon the whole, the success he has obtained; the French Government has made him a Commander of the Legion of Honour, and Mr. Browning has paid a tribute to the fashion in which "completion speeds, with Gérôme well at work." [F. W.]

Gerstenberg, HEINRICH WILHELM VON (b. 1737, d. 1823), the author of *Ugolino*, was born at Tondern, in Holstein, studied at Jena, and in 1759 entered the Danish army, but after some years was transferred into the civil service, became consul at Lübeck, 1775, and director of the lottery at Altona in 1786. Besides *Ugolino* (1768), that dreariest of tragedies, in which a father and his sons monotonously die of hunger and madness through five long acts without change of scene, Gerstenberg was the author of several fashionable "trifles" in the bastard classical style, and of another great tragedy, *Mimona*; or, *the Anglo-Saxons*, that has probably never been read through in this century. His importance in the history of literature lies in his *Poem of a Skald* (1766), the forerunner of the "bard literature" which deluged Germany for some years, and afterwards left its traces in England. Towards the end of the century Gerstenberg eschewed the lyre, and plunged into Kantian metaphysics, that restored his energies like a Medea's bath, and spurred him to a few philosophic treatises and innumerable philosophic letters.

Gervinus, *Geschichte der deutschen Dichtung*, vol. iv.

Gervinus, GEORGE GOTTFRIED (b. 1805, d. 1871), the eminent critic and historian, was born of humble parentage at Darmstadt, and served for five years behind a counter in a draper's shop, after which he was permitted to enter the University of Giessen, but removed to Heidelberg in the following year (1826). Here he definitely turned from poetry to the study of history, and, after acting as private tutor in various families, established himself

as *privat-docent*, and published his earliest historical treatises. After a visit to Italy he undertook his great *History of German Poetry* (1835-48), originally called *Geschichte der poetischen national Literatur der Deutschen*, by which his name is, perhaps, still most widely known. From its appearance, indeed, we may date the modern or historical method of literary history as distinguished from the old-fashioned æsthetical. In 1836 he was invited to Göttingen as professor of history, but in the following year was one of the seven professors who protested against Ernst August's breach of the Constitution [HANOVER], and was banished from the university. After another visit to Italy he returned to Heidelberg, and turned all his attention to politics and political history, rightly discerning that political thought would be the next phase in German development. In 1847 he became editor of the important Liberal journal, the *Deutsche Zeitung*, and in 1848 sat for some months in the Frankfurt parliament as representative of the Hanseatic Towns. In 1849 he published the first part of his great work on Shakespeare (1849-50), the main object of which he still considered political. In 1853 he was prosecuted by the Baden Government for the Liberal tendencies of his *Introduction to the History of the Nineteenth Century*, and was sentenced to imprisonment, but acquitted on appeal. Two years later the first volume of his enormous undertaking, *The History of the Nineteenth Century*, appeared. Seven more volumes were published before 1866, and then the task was abandoned in despair at contemporary politics, though the history had only reached 1830. The author's only remaining important work was a critical treatise on *Handel and Shakespeare* (1868). The power of Gervinus lay in his comprehensiveness, checked by vigorous practical decision, in his enthusiasm, and, above all, in the skill of his historic method. In spite of occasional prejudices and grievous want of humour, he remains one of the few critics that are readable after their death.

Gervinus und seine politischen Ueberzeugungen, by Engelmann (1853); Dr. F. J. Furnivall's *Introduction to Gervinus' Shakespeare Commentaries*, translated by F. E. Bunnell (1875).

[H. W. N.]

Gibson, JOHN (b. 1790, d. 1866), sculptor, was the son of a market-gardener of Conway, who migrated to Liverpool. His instincts led him, at the cost of much persecution, to become apprentice to Francis, the owner of some marble works, and he was fortunate enough to attract the notice of Roscoe, the historian, who inspired him to the study of Greek art. After his bas-relief of *Psyche carried off by the Zephyrus* had been exhibited in the Academy, he went, by the advice of Flaxman, to Rome in 1817, and there began the systematic study of his art. A pupil first of Canova, and then of Thorwaldsen, he soon began to exhibit a rare

originality and power of passionate expression, and gradually acquired the reputation of being the best English sculptor of his time. He lived chiefly at Rome, coming to England at intervals, for instance in 1833, when he became an A.R.A., and in 1836, when he was created R.A. His strength probably lay in bas-relief, and his *The Hours leading the Chariot of the Sun*, and *Phaethon driving the Chariot of the Sun*, have not their equals in modern sculpture. But his ideal creations are also fine examples of the traditions of classic art, notably the *Hunter and Dog*, the *Hylas and the Nymphs*, now in the National Gallery, and the tinted *Venus*, which was one of the chief attractions of the International Exhibition of 1851. His portraits are somewhat unequal: those of Huskisson and of the Queen, in Westminster Palace, being admirable specimens of the dignity of tranquillity, while his Sir Robert Peel in Westminster Abbey admittedly misses its aim.

Lady Eastlake, *Life of Gibson*.

Gibson, THE RIGHT HON. E. [ASHBOURNE.]

Gibson, THOMAS MILNER (b. 1807, d. 1884), politician, was the son of the late Major T. Milner-Gibson, and took his degree, with honours, from Trinity College, Cambridge, in 1830. Returned as a Conservative for Ipswich, he became in course of time a convert to Liberalism, and was in consequence rejected by the electors in 1832. He threw himself into the Anti-Corn-Law movement, and became one of its most successful orators. This gained him a seat at Manchester in 1841, and in 1846 he was appointed by Lord John Russell Vice-President of the Board of Trade, and thus consolidated the alliance between the Government and the League leaders; but he resigned in 1848 to preserve his freedom of action. His opposition to the Crimean War cost him his seat at Manchester in the general election of 1857; but he speedily found refuge at Ashton-under-Lyne, for which he sat until his retirement from public life in 1868. From 1859 to 1866 he was President of the Board of Trade, with a seat in the Cabinet, under the premierships of Lord Palmerston and Earl Russell; and it was to a great extent to him that the removal of the paper and advertisement duties was due. He died while yachting off Algiers.

* **Giers, NICHOLAS CARLOVITCH DE** (b. 1820), Russian statesman, entered the Foreign Office in 1838, and was attached to the Asiatic department. In 1841 he was sent to Moldavia under the Russian consul, and was present as diplomatic official during the Hungarian campaign of 1848. In 1850 he became first secretary of the embassy at Constantinople, and in 1853 was sent as the adviser of the Russian commissary plenipotentiary to the principalities of Wallachia and Moldavia. In 1856

he became a member of the Council of State, and consul-general to the court of the Khedive; and from 1858 to 1863 was consul-general to Wallachia and Moldavia. From the last date until 1869 he was minister plenipotentiary at the court of the Shah of Persia. After serving as minister resident to the Swiss confederacy and the court of Stockholm, M. de Giers in 1875 became adjunct to the Minister of Foreign Affairs, and director of the Asiatic department, receiving at the same time a seat in the senate. He was thus Prince Gortschakoff's right-hand man; and as the Russian chancellor's health had become very infirm, M. de Giers transacted business in his stead on several occasions, notably in 1877, during the Russo-Turkish War, and, during his absence, at the Berlin Congress. No one was surprised when, in 1882, on the final retirement of Prince Gortschakoff, M. de Giers succeeded him as Minister of Foreign Affairs. So far his conduct of affairs has shown signs of a determination to re-establish the good understanding with Germany and Austria, which was somewhat impaired towards the end of the Gortschakoff régime. He has himself visited Berlin and Vienna, and important meetings of the emperors have been held—notably that of Skierniewice in 1884. The action of Russia during the Bulgarian imbroglio of 1885 would seem to have been chiefly actuated by the personal antipathy of the Czar to Prince Alexander. In Central Asia M. de Giers has continued his predecessor's policy of advance. The annexation of Merv and the district to the south have extended the Russian Empire to the northern frontier of Afghanistan, and the occupation of positions thought to be within Afghan territory, combined with the non-arrival of the Russian commissioner appointed to demarcate the frontier in conjunction with Sir Peter Lumsden (q.v.), almost brought about a war between England and Russia during the summer of 1885.

Gifford, Sir HARDINGE. [HALSBURY.]

* **Giffen, ROBERT, LL.D.** (b. 1837), statistician, was born at Strathaven, in Lanarkshire. He was educated at a private school, and the parish school, Strathaven, which he left, at the age of twelve, to enter a solicitor's office. While engaged as a solicitor's clerk he attended the classes at Glasgow University. Mr. Giffen became connected with the *Stirling Journal*, as reporter and sub-editor, in 1860; he was sub-editor of the *Globe* newspaper from 1862 to 1866; and from 1864 contributed "leaders" to many of the chief papers. From 1868 to 1876 he was acting editor of the *Economist*, under the direction of Mr. Bagehot (q.v.), and city editor and writer of *Trade and Finance* on the *Daily News* from 1873 to 1876. He is a proprietor of the *Statist* newspaper, established 1878. Meanwhile he had entered the Civil Service, and in 1876 became chief of the Statis-

tical and Commercial Department of the Board of Trade, which in 1882 was converted into the Commercial Department, when Mr. Giffen became assistant secretary to the Board. He was president of the Statistical Society from 1882-3 and from 1883-4, and has been secretary to the Political Economy Club since 1881. Mr. Giffen became LL.D. of Glasgow University in 1883. He is the author of *Stock Exchange Securities*, an essay on the general causes of fluctuations in their price; *Essays in Finance* (first series 1879, second 1885), besides minor works and official reports. In December, 1885, he published in the *Statist* a proposal for buying out the Irish landlords, which attracted considerable attention.

Gifford, WILLIAM (b. 1756, d. 1826), critic, born at Ashburton, in Devonshire, served first as a cooper, and, at the age of fifteen, was apprenticed to a shoemaker, but evincing a strong bias for poetry and learning, he was enabled, through the charity of some friends, to improve his imperfect education, and to proceed, in his twenty-third year, to Exeter College, Oxford. In 1794 he produced his first satirical poem, called the *Baviad*, directed against the "Della Cruscan" school of poetry, followed the next year by the *Maviad*, in a similar vein. In his third satire he attacked "Peter Pindar" (Dr. Wolcott), to which the doctor forcibly replied in *A Cut at a Cobbler*. Mr. Gifford next became editor of the *Anti-Jacobin*, the organ of Canning and his friends; and through the connections which he now formed with the Tory party, he was appointed to various offices, which gave him an aggregate income of something like £900 a year. In 1802 he published a metrical translation of *Juvenal*, which was severely criticised by the *Critical Review*, to which Mr. Gifford replied in *An Examination* (1803) and a *Supplement* (1804). In 1809 the *Quarterly Review* was started by Sir Walter Scott and his friends, when Mr. Gifford was appointed editor, and it is generally admitted that the great influence this magazine attained is greatly owing to the manner in which it was conducted by Gifford for sixteen years. Between the years 1808 and 1824 he edited, with notes, the works of Massinger, Ford, Shirley, and Ben Jonson. He died leaving over £25,000. As a critic Gifford was at times unnecessarily severe, and had the fault of being partial and one-sided. He abused Leigh Hunt because Hunt was a Liberal, and Keats because he was a friend of Hunt's. His editions of some of the Elizabethan dramatists, in which he attacked former editors with much ferocity, did good service at the time; but they are now, for the most part, forgotten. As a poet he holds no rank whatever.

Autobiography prefixed to *Juvenal; Gentleman's Magazine*, Feb., 1827; John Nichols, *Illustrations of the Literary Hist. of the Eighteenth Century*, vol. vi., 1826.

Gilbert, ANNE TAYLOR (b. 1782, d. 1866), the last of "the Taylors of Ongar," belonged to a highly intellectual family, her father, mother, husband, sons, sister, brothers, and uncles, having each written books of no mean degree. Anne Taylor was married in 1813 to the Rev. Joseph Gilbert, author of *The Christian Atonement; its Basis, Nature, and Bearings*, having previously, in conjunction with her sister Jane, published a celebrated little work, *Original Poems for Infant Minds* (1804), which has run through fifty editions. Her *Rhymes for the Nursery* (1806) were also favourably received.

Athenæum, Dec. 29th, 1866.

Gilbert, DAVIES (b. 1767, d. 1839), scientist, whose paternal name was Giddy, was born in Cornwall, and educated at Oxford. In 1791 he became a fellow of the Royal Society, and joined the Linnean Society, taking a lively interest in the geology and mineralogy of his native county. In 1792 the notorious Thomas Beddoes dedicated to him his *Observations on the Nature of Demonstrative Evidence*, complimenting him on his "uncommon proficiency in mathematical science, and no less uncommon discernment." About this time he made the acquaintance of Sir Humphry Davy, then an apprentice to a Penzance apothecary, which soon ripened into a friendship that lasted for life. In 1804 Mr. Gilbert entered Parliament, and in 1811 he published *A Plain Statement of the Bullion Question*, the object of which was to allay the popular ferment over the alleged depreciation of banknotes. In 1820 he was elected a fellow of the Society of Antiquaries, and manifested in his editions of some of the older writers a profound personal knowledge of English archæology. In 1823 he edited *A Collection of Ancient Christmas Carols*, and in 1826 *Mount Calvary*, written in Cornish by John Keigwin, gent., in 1682. He also wrote papers on steam-engines, on the nature of imaginary curves, and the vibration of pendulums. In 1828 he was elected president of the Royal Society.

Gentleman's Magazine, Feb., 1840.

* **Gilbert, SIR JOHN, R.A.** (b. 1817), historical painter, began to exhibit in 1836, and for many years was a regular contributor to the British Institution. His earlier pictures chiefly dealt with scenes from the familiar stories of the great humorists and dramatists, such as Cervantes and Shakespeare; but he is essentially a painter of Old England, which he represents as very rough and very merry, in striking contrast to more recent ideals of mediævalism and romance. He has seldom or never treated a purely modern subject. The Cavaliers mark the historic limits of his art. Having worked many years with unwearied industry, he has produced a long catalogue of pictures of every size, not to mention illustrations to several editions of British poets, and

to the magazines and newspapers. In 1871 he was elected president of the Society of Painters in Water Colours, and was knighted; in 1872 he became an A.R.A., and R.A. in 1876. The general character of his art may further be gathered from the titles of some of his late principal paintings:—*Crusaders* (1876); *Cardinal Wolsey at Leicester*, and *The Doge of Venice in Council* (1877); *The Return of the Victors* (1879); *King Henry VI.* (1880); *A Trumpeter, The Baron's Raid*, and *Thomas à Becket* (1883); *The Morning of Agincourt* (1884); and *A Standard Bearer* (1885).

* **Gilbert, WILLIAM SCHWENCK** (b. 1836), dramatist, was born in London, and was educated at King's College, London. In 1857 he obtained a clerkship in the Education Office, but finding the employment uncongenial, he was called to the bar (1862), but practised hardly at all. His first contribution to *Fun*, in which his popular *Bab Ballads* appeared, was made in 1861, when it was started under the editorship of H. J. Byron, and his first play *Dulcamara*, a burlesque on *L'Elixir d'Amore*, was produced in 1866. Other burlesques followed, of which the most successful were the *Vivandière* and *Robert the Devil*; and then came a parody on Tennyson's *Princess* and the *Palace of Truth*, the latter produced at the Haymarket by Mr. Buckstone in 1870. *Pygmalion and Galatea* (1871), a comedy, was a distinct success, and so was the *Happy Land*, which appeared at the Haymarket in 1873. Mr. Gilbert's next successes in comedy were *Sweethearts* (1874), *Broken Hearts* and *Tom Cob* (1875), *Dan'l Druce* (1876), and *Engaged* (1877). Of these *Sweethearts* and *Engaged* are perhaps the most popular and the most favourable examples of Mr. Gilbert's delicately cynical humour, which is of quite a different flavour from the rattle and repartee of the ordinary dramatist. They have been more than once revived. Mr. Gilbert's famous partnership with Sir Arthur Sullivan began in 1875 with *Theppie*, which was followed by the highly popular *Trial by Jury*, brought out at the Royalty in 1876, and the *Sorcerer* (with Mr. Grossmith in the title rôle) at the Opéra Comique in 1877. From that time, with the exception of the one-act play, *Comedy and Tragedy*, written for Miss Mary Anderson in 1884, Mr. Gilbert has confined himself to comic opera, the music of which has been contributed by Sir A. Sullivan. It is unnecessary here to do more than mention the names of these delightful pieces, with the dates of their production. They are—at the Opéra Comique, *H.M.S. Pinafore* (1878), *The Pirates of Penzance* (1880), *Patience* (1882), which was transferred to the Savoy, where also appeared *Iolanthe* (1883), *Princess Ida* (1884), and the *Mikado* (1885). Mr. Gilbert is one of the few living English dramatists who rely on their own invention, and are not content to borrow from the French.

Two series of his plays have been published (1876 and 1881).

The Theatre, April, 1883.

Gilchrist, ALEXANDER (b. 1828, d. 1861), the biographer of Blake, was the son of a learned Unitarian minister at Newington Green, but during his infancy the family removed to a mill near Reading, as the father felt himself bound to abandon orders. Gilchrist was educated at University College School, London, where he became acquainted with the Rossettis. Leaving school at sixteen, he read for the bar, and was called in 1849, but never practised. Supporting himself chiefly by art criticism, he married in 1851, visited Yorkshire to collect materials for Etty's life, and in 1853 settled for a time at Guildford. The *Life of Etty* appeared in 1855, and in the following year the family removed to Cheyne Row, Chelsea, and lived next door to the Carlyles. Here the *Life of Blake* was composed, perhaps the noblest piece of artistic biography ever written. Before the final details were concluded, the author was cut off in the midst of his work by scarlet fever. One important division of the book—the interpretation of the prophetic books—was indeed left in a very rough state; but it is certain that by his sympathy, critical perception, and unwearied accuracy of research, Gilchrist revealed Blake to the succeeding generations with such vivid power that he could be no longer now described as a "Pictor Ignotus."

Memoir of Alex. Gilchrist, by his widow, appended to the second edition of the *Life of William Blake* (1890). Also compare Mr. Swinburne's *Essay on Blake*.

Gilfillan, REV. GEORGE (b. 1813, d. 1878), critic and essayist, was born in the pleasant village of Comrie, Perthshire, where his father, who wrote under the *nom de plume* of "Leumas," his own Christian name spelt backwards, was minister of the Secession Church. Gilfillan himself was ordained as minister of a United Presbyterian congregation in Dundee in 1836, where he remained till his death. In 1846 he collected some sketches originally written for his friend Thomas Aird's paper, the *Dumfries Herald*, into a volume called *A Gallery of Literary Portraits*. In 1843 he published a sermon on *Hades, or the Unseen*, which gave great offence to many of his clerical brethren, as seeming to admit a kind of purgatory in the future world; and in 1869 a book on *Christian Heroism*, in which he affirmed that the standards of the Church were "seen now to contain many blunders." Both these works somewhat estranged Mr. Gilfillan from his brethren, and it was some time before he could satisfy them of his orthodoxy. In 1854 he brought out *The Grand Discovery, or the Fatherhood of God*, followed the next year by *The Influence of Burns on Scottish Poetry and Song*. Mr.

M.W.—16

Gilfillan was the author of numerous other works, and at his death he was engaged on the *History of British Poetry*. In 1881 appeared some of his *Sketches, Literary and Theological*, under the editorship of Mr. Frank Henderson, M.P. Mr. Gilfillan stood out with considerable prominence from the clerical profession as a man of incessant intellectual activity and unflagging sympathy with the spirit of progress. His warm impulses and ardent imagination led him almost habitually to adopt a figurative and emphatic mode of expression, which detracted to a certain extent from the effect of his literary work, but nevertheless gave him special power as a preacher and mover of a section of the public mind.

Life of Rev. George Gilfillan (Dundee, 1878). —

Gillray, JAMES (b. 1757, d. 1815), caricaturist, was the son of a Chelsea pensioner, and after a chequered career entered the Royal Academy as a student. About 1778 he began to issue the series of admirable caricatures on political personages and events which were the delight of our great-grandfathers. Much of his best satire was directed against the king—for instance, the famous *Farmer George and his Wife*, and at first he was an ardent Whig; but alarmed by the excesses of the French Revolution, he became a convert to the new Toryism of Pitt, and directed his shafts against Fox and Napoleon. *The First Kiss these Ten Years*, a satire on the peace of 1801, is one of the best of his later productions. He went mad in 1811, chiefly through intemperance, and only had a few subsequent intervals of sanity.

T. Wright and B. H. Evans' *Descriptive Account of Gillray's Caricatures*; T. Wright, *The Works of James Gillray, with the Story of his Life, and History of Caricature*.

* **Ginsburg, CHRISTIAN D.** (b. 1830), the leading Rabbinical scholar of the present day, is a native of Warsaw, where he was educated at the Rabbinic College. His first important work was the *Historical and Critical Commentary on the Song of Songs* (1857), which was followed in 1861 by a corresponding commentary on *Ecclesiastes*. In 1862 appeared *The Karaites, their History and Literature*; in 1864 the *Essenes*; 1865 *The Kabbalah, its Doctrines, Development, and Literature*; in 1867, *The Massoreth-ha-Massoreth of Elias Levita*, in Hebrew, with translation and commentary, and in the same year *Jacob ben Chajim's Introduction to the Rabbinic Bible*, Hebrew and English, with notices. A *Commentary on Leviticus* appeared in 1882; but Dr. Ginsburg, who had been made an LL.D. by the University of Glasgow, was now in the thick of his greatest work, *The Massorah*, compiled from MSS., alphabetically and lexically arranged. This vast undertaking, which has occupied many years of continuous

labour, is now practically accomplished. Three imperial folio volumes appeared in 1880-5, and the fourth is in the press (1886). Dr. Ginsburg was one of the chief contributors to Kitzo's *Encyclopædia of Biblical Literature*, and wrote many important articles for Smith's *Dictionary of the Bible*, the *Encyclopædia Britannica*, etc.; while his supreme position as a Rabbinical scholar procured him the honour of being one of the original members appointed by Convocation for the Revision of the Old Testament. Phœnician is also a favourite study of Dr. Ginsburg's, and he published a valuable work on the Moabite Stone in 1871.

Gioberti, VINCENZO (b. 1801, d. 1852), an Italian philosopher and statesman, was born and educated in Turin, where he was also ordained priest. He led for years a retired life, occupied in studies until King Charles Albert on his accession to the throne of Sardinia (q.v.), 1831, appointed him one of his chaplains: but as he belonged to the Liberal party, Gioberti became odious to the clericals, who were then directing affairs. Suddenly arrested in 1833, he was kept in prison during four months, and afterwards banished without form of trial. He resided in Paris until 1834, when he accepted a professorship of philosophy in a public school at Brussels, and there he wrote almost all those works which rendered his name famous, and endeared him to his countrymen. The first book which he published was the *Teoria del Sovrannaturale* (2 vols., 1838), directed to overcome some doubts which a friend of his had against Divine Revelation and a future life. In 1839-40 appeared in three imperial 8vo volumes his *Introduzione allo Studio della Filosofia*, in which he stated that a new method was required in philosophical studies, and declared himself the advocate of a modified Platonism. This work was followed in 1842 by the *Errori Filosofici di Antonio Rosmini*, in which he overthrew the system of Rosmini and Lamennais. The essays, *Del Bello* and *Del Buono*, were published in 1846. Then came out in succession the following works, the principal aim of which was the welfare of Italy:—*Del Primato Morale e Civile degl' Italiani*, the *Prolegomeni* to the same work, and *Il Genio Moderno*. When Pius IX., upon his accession, manifested strong Liberal sympathies, Gioberti returned to Italy, and was received in Turin with the greatest enthusiasm. He went to Rome, and had interviews with the Pope, at that time his admirer; for Gioberti, in his *Primato*, had proposed a confederation of all the Italian princes, under the presidency of the Pope. Gioberti was elected first president of the Piedmontese parliament, where he represented Turin, and subsequently was appointed Minister of Public Instruction, and, finally, Prime Minister. After the battle of Novara, and the accession of Victor Emmanuel to the throne, Gioberti was sent to

Paris on a mission. There he published his *Rinnovamento Civile degl' Italiani*, in which he pointed out the best ways and means to give unity and greatness to Italy. He was writing the *Filosofia della Revelazione* and the *Proteologia* when he died suddenly of apoplexy. Turin erected to his memory a magnificent statue, and Gioberti certainly deserved the honour, perhaps for having been the greatest philosophical writer of modern Italy, rather than for his political ideas.

MASARI, *Ricordi Carloggi di Vincenzo Gioberti* (1863); *Lettera di V. Gioberti a Giorgio Pallavicino* (1875); and Gioberti's works, above mentioned.

[A. O.]

Gioja, MELCHIORE (b. 1767, d. 1828). Italian political economist, was a native of Piacenza. He was educated there at the college of St. Lazare, and was at first destined for the Church, but his mind was turned to philosophy and statistics rather than to religion, and he published, in 1802, *Il nuovo Galateo*, a philosophic treatise, which was followed by *Logica Statistica* in 1805. An ardent republican, he was imprisoned by the Austrian Government in his youth, and hailed with enthusiasm the advent of Napoleon in Italy, and the establishment of the Cisalpine Republic, under which he received the office of historiographer. His great work is the *Nuovo Prospetto del Scienze Economiche* (1815-7), which formed a distinct advance in the science of which it treats, and curiously anticipated the ideas on co-operation which were advanced by some economists belonging to a much later period of the century. *Del Merito e delle Ricompense* (1818) is in substance borrowed from Bentham, but Gioja's *Filosofia della Statistica* (1828) is a work of much originality.

Sacchi, *Memoria Sulla Vita di M. Gioja*.

Girardin, ÉMILE DE (b. 1802, d. 1881), French journalist, was born in Paris, being the natural son of General Alexandre de Girardin, whose name he first assumed about 1828. His earliest and perhaps his most important work, *Emile*, was published in 1827. In this romance he pleads the cause of illegitimate children. The following year appeared *Au Hasard: Fragments sans Suite d'une Histoire sans Fin*, a series of papers upon a variety of subjects. He was made inspector of the fine arts in 1828, and this office being a sinecure, he was able to give his time to writing. He founded the journals *Le Voleur* and *La Mode*, and issued the cheap popular papers, *Le Journal des Connaissances Utiles* and *La Presse*, the last, a daily paper, being very successful. His political opinions were not fixed. He was known to his countrymen as "La Girandole" ("the Weathercock"). He prided himself, however, upon belonging to no party, maintaining "that principles were made for men, and not men for principles," taking for his motto "*Au jour le jour*." He was a

member of the Chamber of Deputies for many years, but through his lack of steadfastness he failed to gain the confidence of his countrymen, and his political career must be regarded more or less as a failure. A collection of his leading articles was published in 1858 under the title *Questions de mon Temps, 1838 à 1856*. In his latter years he wrote some dramas, which were far from successful. His first wife, DELPHINE (b. 1804, d. 1855), the daughter of the well-known novelist, Mme. Sophie Gay, was celebrated for her wit and beauty, being known in the literary circles of Paris as "the tenth muse." In 1831 she became the wife of M. Girardin. She continued her literary labours after her marriage, publishing in rapid succession various novels. As a dramatist Mme. de Girardin was eminently successful; two of her tragedies, *Judith* and *Cleopatra*, were written for Mlle. Rachel, and her comedies, *C'est la Faute du Mari*, *Lady Tartufe*, and *La Joie fait Peur*, excited great applause at the Théâtre Français. Her *salon* was the resort of the most distinguished members of the literary and artistic world.

Saint-Beuve, *Causeries de Lundi* (Feb., 1851); Gautier, *Portraits et Souvenirs Littéraires*; Mircourt, *Histoire Contemporaine*.

Girdlestone, THE REV. EDWARD (b. 1805, d. 1885), was a scholar of Balliol College, Oxford, whence he took his B.A. degree in 1826. In 1830 he became vicar of Deane, Lancashire, and canon residentiary of Bristol in 1854, in which town he became vicar of St. Nicholas in 1858. In 1862 he was transferred to Halberton, in Devonshire, but in 1872 he returned to the Bristol district, and became vicar of Olveston. Canon Girdlestone was a leader of the Evangelical party in the English Church, and was also conspicuous for his zealous efforts to improve the condition of the agricultural labourers, whom he encouraged to combine, and to migrate from overpopulated districts to those in which labour was in request. He may be considered one of the parents of the Agricultural Labourers' Union.

Giusti, GIUSEPPE (b. 1809, d. 1850), the Italian poet, was born, of ancient family, at Monsummano, a village on the road between Florence and Pescia. After receiving a random education at Pistoja and the college of Lucca, he entered the University at Pisa, professedly to study law, in which, in spite of his early tendencies to rhyme, he even passed his examination after three more years of solitary study at Pescia. This enabled him to establish himself in Florence as an advocate in 1834, though he appears never to have practised. In that and the following years his name gradually became known to a circle of patriots, roused like himself to new enthusiasm by the revolutionary movements of 1830, as the author of some merciless political satires, furtively but widely circulated in manuscript copies. The

first and chief of these were *The Steam Guillotine* (*La Guigliottina a Vapore*, 1834); *Dies Ira*, on the death of Francis of Austria (1835); and *The Boot* (*Lo Stivale*), on the condition of Italy (1836). Forsaking the Italian of polite drawing-rooms, Giusti chose the homely Tuscan dialect as the weapon of his satire. During the next few years he became intimate with Manzoni, Sismondi, the Marquis d'Azeglio, and other leading figures in the literature and politics of reviving Italy. Nevertheless, the fatal growth of ill-health after his thirtieth year prevented him from taking active part in conspiracy, or on the field. But his brain was still at work for his country. In 1845 he produced *The Busybody*, or *Placeman* (*Il Gingillino*), one of his longest and most celebrated satires; and in 1847 *The Congress of Police* (*Il Congresso de' Birri*), of which 10,000 copies sold in three days. In the following year he was even elected twice to the Tuscan parliament, but was powerless to direct events, and passed away in the prime of life, after witnessing what might well seem the final overthrow of all his hopes. Besides satires, he wrote a few genuine poems, a few humorous pieces, and part of a commentary on Dante, whom throughout life he chose as his study and his master.

Susan Horner, *Giusti and his Times* (1864); Paul Heyse, *Giusti, Leben und Dichtungen* (1875); *British Quarterly Review*, 1853.

Gladstone, THE RIGHT HON. WILLIAM EWART (b. 1809), orator, statesman, and man of letters, is the son of Sir John Gladstone, a well-known Lancashire merchant, and was born at Liverpool, Dec. 29th. The Gladstone family is of Scottish descent, and Burke claims for it an illustrious pedigree. The future Liberal leader was brought up under the shadow of Canning, being from the first surrounded by strong Conservative influences. After some years of private tuition he entered Eton in Sept., 1821, and left in 1827. He then became the private pupil of Dr. Turner, afterwards Bishop of Calcutta. In 1829 he proceeded to Christ Church, Oxford, where he was made a junior student. He completed his university education in 1831 by attaining the highest honours of the university—taking a double first-class. Mr. Gladstone now spent some time in Continental travel, making a stay of six months in Italy. After the passing of the Reform Act of 1832, he received an overture from the Duke of Newcastle to contest the representation of Newark, and hastened back from the Continent for that purpose. His first election address was issued on Oct. 9th, and this was followed up by active canvassing. The election was held in Dec., when Mr. Gladstone was returned at the head of the poll, the numbers being—Gladstone, 882; Handley, 793; Serjeant Wilde (the Radical candidate), 719. The reformed Parliament, in its first session of 1833, abolished the slave-trade throughout the British

Empire, and Mr. Gladstone's earliest speeches in the House of Commons were delivered in connection with this subject. Though he was not hostile to emancipation, he was unfavourable to an immediate and an indiscriminate enfranchisement. On other questions the member of Newark speedily demonstrated his very considerable powers as a debater, and when Peel came into power in 1834, he was offered and accepted the office of Junior Lord of the Treasury. The Tories quickly went out, however, and it was not until 1841 that they again came in, with the prospect of long continuance in office. In Peel's memorable administration, Mr. Gladstone first held the offices of Vice-President of the Board of Trade and Master of the Mint. In the session of 1842 the Premier proposed great fiscal reforms. The most important branch of his financial plan, the revised tariff or Customs duties scheme, was understood to be mainly the work of Mr. Gladstone. By it was secured the total abolition, or a considerable reduction, of the duties imposed on 750 articles of commerce. Mr. Gladstone succeeded the Earl of Ripon as President of the Board of Trade, and in this capacity he carried in the session of 1843 a measure for the abolition of restrictions on the exportation of machinery. In 1844 he succeeded in passing his Railway Bill, which required companies to run cheap trains, permitted the erection of electric telegraphs, and authorised the purchase of railways by Government after the year 1880. Mr. Gladstone resigned office in 1845, in consequence of the Government intentions with regard to Maynooth. The ministerial Endowment policy was opposed to the spirit of two works which Mr. Gladstone had published, and entitled respectively, *The State in its Relations with the Church*, well known through Macaulay's celebrated review, and *Church Principles Considered in their Results*. He afterwards gave his support to the Maynooth Bill, and also spoke in favour of the Government scheme for the extension of academical education in Ireland. When Peel returned to office for the purpose of abolishing the Corn Laws, Mr. Gladstone accepted the appointment of Colonial Secretary. Having been returned for Newark as a Protectionist, however, he now retired from the representation of that borough, and for a short period remained out of Parliament, though he had a considerable share in framing the great measure of 1846. Returned for Oxford University at the general election of 1847, Mr. Gladstone soon began to show that he was drifting away from the great body of the Tory party. He supported the removal of the Jewish disabilities, the repeal of the Navigation Laws, and an improved system of colonial administration. In the session of 1850 he made a speech on the affairs of Greece which was generally regarded as one of the most powerful and effective addresses

delivered by any living statesman. The death of Peel broke up the small but distinguished band of men called by his name, and henceforward the Peelites ceased to act with their old cohesion. Mr. Gladstone was amongst the small minority who opposed Lord John Russell's Ecclesiastical Titles Bill of 1851. At this time also he wrote his famous letters to Lord Aberdeen on the condition of the Neapolitan prisons. His revelations produced a great effect, and the letters formed one of the precipitating causes of the subsequent overthrow of the Neapolitan Government. When Mr. Disraeli brought forward his Budget of 1852, it was attacked with unanswerable force by Mr. Gladstone, and rejected by the House. The Derby ministry in consequence went out of office. In the Coalition Government which followed, Mr. Gladstone—who was universally designated for the post—became Chancellor of the Exchequer. He began a new era in finance by bringing forward a scheme for the reduction of the National Debt, which, being adopted, worked most successfully until the outbreak of the Crimean War. By his first Budget he abolished the duty on 123 articles, and reduced it on 133 others, the total relief amounting to £5,000,000. After the collapse of the Aberdeen Government, Mr. Gladstone and his friends accepted office under Lord Palmerston; but as the Premier did not resist Mr. Roebuck's motion for a committee of inquiry into the management of the war, they again resigned. Mr. Gladstone's conduct during this critical period was much criticised, and he subsequently put forward an apology for the course he pursued during the Crimean War. In the session of 1857 Lord Palmerston's Government was defeated on its Chinese policy, arising out of the affair of the *Lorch Arrow*. Mr. Gladstone was one of its most eloquent opponents on this question. Being placed in a minority of sixteen, the Premier appealed to the country, and was strongly supported by the constituencies. The following year, however, Lord Palmerston again sustained defeat on the Conspiracy to Murder Bill, and he now resigned office. The Derby Government, which succeeded, introduced the India Bill, by which the Government of India was transferred to the Crown. Mr. Gladstone succeeded in incorporating an important clause in this measure, providing that the Indian troops should not be employed in military operations beyond the frontiers of India without the consent of Parliament. In November, 1858, Mr. Gladstone accepted an appointment from Lord Derby as High Commissioner Extraordinary to the Ionian Islands, and went out to Corfu. The islands were formally united to Greece a few years after this mission. About this time appeared Mr. Gladstone's *magnum opus* in literature, his *Studies on Homer*, in which he ably argued in favour of the unity of the

Homeric poems, the personality of their author, and their value as representing real and not fabulous events. Mr. Gladstone again became Chancellor of the Exchequer in Lord Palmerston's ministry of 1859. His Budget of 1860, with the other measures associated therewith, formed a further advance in the financial history of the country. Free Trade principles witnessed a large extension in the French Treaty, negotiated by Mr. Cobden, with the co-operation of the Chancellor of the Exchequer. By the financial measures of this year a great number of duties were reduced or abolished, and amongst other beneficial changes it was proposed to include the abolition of the paper duty. The Lords rejected this part of the scheme, whereupon the Premier carried a resolution to the effect that the right of granting aids and supplies to the Crown is vested in the Commons alone. In the session of 1861 the Chancellor of the Exchequer continued his legislation for the people, and brought forward his Post Office Savings Bank Bill, which passed into law. By the Budget of this year the paper duties were abolished, Mr. Gladstone circumventing the Lords by including all his chief financial propositions in one Bill. At one time a great constitutional conflict between the two Houses seemed imminent, but this was averted by the timely concessions of the Upper House. Soon after the outbreak of the American Civil War, Mr. Gladstone pained many of his followers who were sympathisers with the North by a speech at Newcastle in which he expressed his conviction that Mr. Jefferson Davis had already succeeded in making the Southern States an independent nation. At a later date Mr. Gladstone frankly confessed that he had committed an error of judgment in this matter. The Budgets of the next few years effected a great relief in taxation. Parliament was dissolved in July, 1865, and Mr. Gladstone was opposed at Oxford University by Mr. Gathorne Hardy. The Chancellor of the Exchequer had a majority of the resident voters, but was defeated by the non-resident supporters of his opponent. He went down to South Lancashire, and after a spirited contest was returned for that division. Shortly after the general election, the Liberal party lost its head by the death of Lord Palmerston. The Government was reconstituted with Earl Russell as Premier and Mr. Gladstone as leader in the Lower House. Early in May, 1866, the Chancellor of the Exchequer brought forward what was destined to be his last Budget for some years. There was a surplus of £1,338,000, which allowed a further and considerable reduction of taxation. The Government attempted to grapple with the Reform question this session; and Mr. Gladstone introduced a Bill which proposed to create an occupation franchise in counties, including houses at £14 rental, to establish a savings bank franchise,

a lodger franchise, and other new suffrages, so that altogether the new voters of all classes would number 400,000. The second reading was successfully carried, and it was not until June 18th that the measure was unexpectedly wrecked upon a motion of Lord Dunkellin, substituting a rental instead of a rental basis for the borough franchise. This amendment practically disfranchised a large number of persons, and as the Government regarded it as a vital point, they threw up the measure, and resigned office. Lord Derby formed a new administration, which in its turn found itself compelled to deal with the vexed question of Reform. In 1867 a Bill was brought forward, which was greatly widened in its scope by the efforts of Mr. Gladstone and Mr. Bright, and in the end household suffrage pure and simple was enacted in the boroughs. Mr. Gladstone's Compulsory Church Rates Abolition Bill was carried in 1868; and in the same session Mr. Gladstone brought forward his series of resolutions affirming that the time had come for the disestablishment of the Irish Church. After a long and able debate the resolutions were carried by a majority of fifty-six. Mr. Gladstone next brought in his Irish Church Suspensory Bill, which was adopted by the Commons, but rejected by the Lords. The question was now remitted to the constituencies, and formed the main cry at the general election in the following November. A great Liberal majority was returned. Mr. Gladstone lost his seat for South Lancashire, but was immediately afterwards returned for Greenwich. Mr. Disraeli having resigned office on perceiving the strength of the national verdict, Mr. Gladstone succeeded to the premiership. An era of great legislative measures followed, the greatest of which was the Education Act of 1870. After much agitation out of doors, and protracted debates in Parliament, the Irish Church Disestablishment Bill was carried in 1869, and this was succeeded in 1870 by a scarcely less important measure, the Irish Land Act. On the outbreak of the Franco-German War in 1870 Mr. Gladstone maintained a disturbing reticence, but its effect was removed by Earl Russell's declaration that England would abide by her obligations to Belgium. In the session of 1871 the Royal Warrant for the Abolition of Purchase in the Army was issued, and the Treaty of Washington was concluded. The Ballot Bill became law in 1872, and in this year also the *Alabama* Claims were finally adjusted, but unfortunately the settlement threw much temporary odium upon the Government. Several valuable domestic Acts were passed, dealing with the public health, licensing, adulteration, and the regulation of mines. An Education Act for Scotland was also passed. Mr. Gladstone failed to deal successfully with the Irish University question in 1873, the ministerial

measure being lost by three votes only. The Government resigned, but resumed office on the refusal of Mr. Disraeli to form a ministry. In consequence of the unsatisfactory aspect of public affairs, and perhaps of ministerial dissension, in 1874 Mr. Gladstone issued an unexpected manifesto dissolving Parliament. The elections gave the Conservatives a clear majority of forty-six votes, and Mr. Gladstone at once tendered his resignation to the Queen. Early in 1875, the ex-Premier resigned the Liberal leadership, and was temporarily succeeded by Lord Hartington. Mr. Gladstone now occupied himself with ecclesiastical controversy, and his *Essay on Ritualism*, his pamphlet on the *Vatican Decrees*, and other publications, involved him in polemics, notably with Cardinal Newman. The foreign policy of Lord Beaconsfield's Government brought Mr. Gladstone back into the sphere of active politics, and he condemned with fervid eloquence the Bulgarian massacres. At Blackheath and at St. James's Hall he reviewed in severe terms the course of the British Government; and somewhat later he denounced the despatch of Indian troops to Malta as unconstitutional, described the Anglo-Turkish Treaty as "an insane covenant," condemned our new responsibilities in Asiatic Turkey, adversely criticised the proposed scientific frontier in India, and strongly condemned the Afghan War. He also vigorously attacked the financial policy of the Government. Proceeding to Midlothian, where he had been chosen as candidate, in December, 1879, Mr. Gladstone addressed audiences numbering altogether 75,000 persons, and in his first Midlothian Campaign submitted the Government to unsparring criticism. In the following March Parliament was dissolved, and the Liberal leader succeeded in ousting the son of the Duke of Buccleuch from the representation of Midlothian. The result of the elections generally was a great majority for the Liberal party. Lord Beaconsfield resigned, and Mr. Gladstone again took office as Prime Minister, First Lord of the Treasury, and Chancellor of the Exchequer, but in 1883 he was succeeded in the latter office by Mr. Childers (q.v.). His illness in the succeeding autumn caused universal regret, but a cruise round the British islands happily restored him to his usual health. A Coercion Act for Ireland was necessary in 1881, in consequence of the insecurity of life and property; but Mr. Gladstone accompanied this by a great and beneficial measure—a second Irish Land Bill, which was not carried without a struggle with the Lords. The year 1882 was rendered darkly memorable by the assassination of Lord Frederick Cavendish and Mr. Burke; and in consequence of this lastingly deed a Prevention of Crimes Act was passed. The Arrears Act, a useful measure framed in the interests of the Irish tenant-farmers, was carried this session. In

1883 an attempt was made to set the Bradlaugh question at rest by the passing of an Affirmation Bill; but, notwithstanding that Mr. Gladstone urged the passing of the measure by a display of eloquence rarely equalled in the House of Commons, the Bill was lost by 292 to 289 votes. Valuable Acts relating to bankruptcy, patents, corrupt practices, Irish tramways and emigration, and agricultural holdings, were carried this session. The foreign policy of the Government, especially with regard to Egypt and the Soudan, was several times challenged in the session of 1884, but on each occasion when a vote of censure was proposed the ministry were successful in defeating their opponents. The legislative results of the session included the Franchise Bill, the greatest legislative act of the administration, but not until after a struggle between the two Houses and a violent political agitation had arisen, owing to the refusal of the Government to produce their redistribution scheme. A compromise was at last happily arrived at, and in a short winter session the important measure of the Franchise was carried. The Redistribution Bill, which was the complement of the Reform scheme, was proceeded with early in the session of 1885. It was successfully carried through both Houses, and was accompanied by Registration Bills for England, Scotland, and Ireland. The Egyptian policy of the Government was again severely canvassed, and the news of General Gordon's death excited mingled feelings of sympathy and indignation throughout the country. The Government, nevertheless, succeeded in defeating a vote of censure, moved by Sir Stafford Northcote, by 302 votes to 288. The delimitation of the Afghan territory having broken down in consequence of the Russian advance on Penjdeh, Mr. Gladstone was warmly cheered when in an impassioned speech he protested against the encroachments of Russia on our Indian frontier. For a few days war seemed imminent, but eventually the negotiations were renewed. The Government were unexpectedly defeated in June upon an amendment by Sir M. Hicks-Beach to their Customs and Inland Revenue Bill. Having announced beforehand that such a contingency would be fatal, ministers now resigned office, although a renewed vote of confidence in them might have been carried by the Liberals in a full House. Lord Salisbury was enabled to form an Administration, but only after considerable difficulty, arising out of an attempt to exact pledges which Mr. Gladstone was unwilling to give. He promised, however, to extend a fair consideration to the measures of the new Government, and the session was in consequence productive of some useful legislation. The general election under the new Franchise and Redistribution Acts took place in November and December. Mr. Gladstone again visited Midlothian, where he

delivered a series of addresses on political questions, his main topic being the necessity of Liberal unity. He was returned by a large majority over his Conservative opponent. The elections throughout the country gave the following result—Liberals, 333; Conservatives, 249; Parnellites, 86; Independents, 2. Lord Salisbury did not resign office, but resolved on meeting Parliament as Prime Minister in January. The fruit of Mr. Gladstone's leisure at this time was an elaborate article on *The Dawn of Creation*. As the year expired the public was startled by the promulgation of a scheme for establishing Home Rule in Ireland purporting to come from Mr. Gladstone, but he promptly repudiated all responsibility for it. The Government having been overthrown in February on a motion of Mr. Jesse Collings's for the compulsory purchase of land by local authorities, Mr. Gladstone formed a new ministry, in which Mr. John Morley was the most important new element, and from which Lord Hartington, Lord Selborne, Sir H. James, and other prominent Liberals, stood aloof. Mr. Chamberlain and Mr. Bright also opposed Mr. Gladstone's Home Rule scheme, which was rejected by the Commons. Mr. Gladstone then appealed to the country, and, failing to get a majority, resigned in July, 1886.

G. Barnett Smith, *Life of Gladstone*; Hutton, *Sketches in Parliament*; W. Bagehot, *Biographical Studies*; F. H. Hill, *Political Portraits*; H. W. Lucy, *The Diary of Two Parliaments* (2 vols). The following is a list of Mr. Gladstone's principal writings:—*The State in its Relations with the Church* (1838); *Church Principles Considered in their Results* (1840); *A Manual of Prayers from the Liturgy, Arranged for Family Use* (1845); *Remarks upon Recent Commercial Legislation* (1845); *Translation of Farini's "Roman State from 1815 to 1850"* (1851); *Letters to the Earl of Aberdeen on the State Prosecutions of the Neapolitan Government* (1851); *Studies on Homer and the Homeric Age* (1858); *Translations in conjunction with Lord Lytton* (1861); *The Financial Statements of 1853, 1860-63* (1863); *Speeches on Parliamentary Reform in 1866*; *A Chapter of Autobiography* (1868); *Juventus Mundi* (1869); *The Vatican Decrees bearing on Civil Allegiance* (1874); *Vaticanism, an Answer to Replies to Reproofs* (1875); *Rome and the Newest Fashions in Religion* (1875); *Bulgarian Horrors and the Question of the East* (1876); *The Church of England Ritualism* (1874); *Homeric Synchronism* (1876); *Lessons in Massacre* (1877); *Speeches in Scotland, 1879, etc.*; and *Speeches Delivered at Leeds, Oct., 1881*; *The Irish Question* (1886). [G. B. S.]

Glenelg, THE RIGHT HON.^d CHARLES, BARON (b. 1778, d. 1866), a politician of some note, the last of the "Canningites," belonged to the family of Grants of Grant, who obtained lands in Glenurquhart from James IV. in 1509. His father, Charles Grant, was a director of the East India Company, and for many years M.P. for Inverness-shire. The son was elected M.P. for the Montrose Burghs in 1807, which he continued to represent in the Tory interest till 1818, and represented Inverness-shire from 1818 till 1835, when he was raised to

the peerage as Baron Glenelg. In 1819 Mr. Grant became Chief Secretary for Ireland in the Liverpool administration, having previously acted as a Lord of the Treasury; and in 1827 became President of the Board of Trade in the Canning administration. In 1830 he became Earl Grey's President of the Board of Control, and in 1834 Lord Melbourne's Colonial Secretary. At the Colonial Office he was not quite successful. He imprudently withdrew the British colours from the Kei river, which presented a strong frontier to the Fish river, the old boundary line, which led to great complications with the Kaffirs, and eventually to war, and he unwisely approved Lord Durham's famous "Ordinance" to send those of the rebels in the Canadian rebellion of 1838 who had acknowledged their guilt to Bermuda, and to punish them with death if they returned. The Ordinance having been cancelled, and Lord Durham recalled, Lord Glenelg resigned, and never afterwards took an active part in politics. In 1805 he wrote a poem *On the Restoration of Learning in the East*, and some of his speeches have been republished in pamphlet form.

Gentleman's Magazine, May, 1866; *Times*, April 28th, 1866.

Glover, MARY (b. 1782, d. 1850), actress, was the daughter of Betterton, an actor of some repute. Her theatrical career began at York at the early age of five, and her first appearance before a London audience was in 1797 as Elvina in Hannah More's *Percy*. Shortly afterwards she wisely forsook tragedy for comedy, and speedily became known as the possessor of a fund of spontaneous humour, which made her without a rival in parts like Mrs. Malaprop, Mrs. Candour, and Mrs. Simpson in Poole's farce of *Simpson and Co*. She acted chiefly at Drury Lane until 1818, when she became a member of the Haymarket company, and her farewell performance was given on the stage of that theatre only a few days before her death. Her marriage, which was made at her father's command, in 1799, was one of great unhappiness.

There is a sketch of Mrs. Glover in the printed edition of Dance's *Country Squire*.

Glover, SIR JOHN HAWLEY (b. 1829, d. 1885), administrator, son of the British chaplain at Cologne, was gazetted a lieutenant in the Royal Navy in 1851, and in 1855 commanded the *Otter* on special service on the African coast. He became commander in 1862, and having retired from the service, became Governor of Lagos, where he organised from the Housa tribe a very effective police force. In 1873 he was appointed special commissioner to the friendly chiefs in the British settlements on the Gold Coast, and co-operated with Sir Garnet Wolseley in the Ashantee War. With great labour he

collected and drilled a native force, chiefly consisting of Houssas, and, starting from the Volta river, had penetrated within twenty miles of Coomassie, the Ashantee capital, when news reached him that it had fallen. He then marched through it to the coast. He was made a G.C.M.G. on his return, and was knighted in 1874. From 1876 to 1881 he was governor and commander-in-chief of Newfoundland; from 1881 to 1883 he was Governor of the Leeward Islands, when he was re-appointed to Newfoundland.

Gneisenau, AUGUST WILHELM ANTONIUS NEIDHART VON (b. 1760, d. 1831), after Scharnhorst one of the foremost heroes of the War of Liberation, was born at the village of Schilda, near Torgau, whither during the stress of the Seven Years' War his mother had followed her husband, who was serving in the Austrian army. In 1773 he returned to his father, then stationed at Erfurt, and in 1777 entered the university there, but in the following year obtained a commission in the Ansbach army, and in 1782 was despatched to America among the mercenary troops in British pay. In 1786 he petitioned for admittance into Frederick's service, and was granted a commission after a personal interview with the aged king. The outbreak of the war of 1806 found him still a captain, stationed in command of a Prussian battalion at Saalfeld, where he was wounded in the engagement that preceded the disaster of Jena. Having fought throughout that fatal day, he escaped to Königsberg, where he was raised to the rank of major, and appointed to the command of the fortress of Colberg, which he defended against a furious siege from April, 1807, to the conclusion of the Peace of Tilsit in August. During the years of depression that followed, he was one of the few courageous spirits that refused to despair of their country. He at once began to draw up schemes for the complete reorganisation of the army, especially by means of general conscription. In 1809 the enmity of Napoleon compelled him to resign his position in the army, and, refusing all rewards from an impoverished exchequer, he retired to Silesia, whence he continued to urge upon the king the necessity of a Constitution and military reorganisation. In 1811 he visited the principal European courts in the hopes of arousing a general resistance. In England he was particularly successful. Having re-entered the army in 1812 he became major-general, Governor of Silesia, and finally quartermaster-general under Blücher during the War of Liberation. The victory of the Katzbach, and the ruin of Napoleon's army on the retreat from Leipzig, were mainly due to his vigilance. Throughout 1814 he was second in command to Blücher, and having mobilised the Rhine army in 1815, he was largely instrumental in converting Napoleon's check at Waterloo

into an overwhelming defeat. After holding general command of the Rhine during the next year, he retired to farm his estates, and though appointed Governor of Berlin for a time, and field-marshal in 1825, he took little further part in public affairs, being unpopular at Court owing to his liberal opinions. He died of cholera in Silesia, where he was engaged in quelling revolutionary disturbances.

Hans Delbrück, *Leben von Gneisenau* (1882).

Goderich, LORD. [RIPON.]

Godoy, MANUEL DE, DUKE OF ALCUDIA AND PRINCE OF THE PEACE (b. 1767, d. 1851), Spanish statesman, was the son of noble parents who had fallen upon evil days. In 1784 he was admitted to the Royal Body-guard, and promptly became a prime favourite with the ambitious queen and the weak-minded King Charles IV. In 1792 he rose to the position of Prime Minister, and at first adopted a war-like policy, the arms of Spain being directed against the French Convention. Reverse, however, compelled him, in 1795, to negotiate the Treaty of Basel, and he received from Charles the title of Prince of the Peace. His position was further strengthened by his marriage to Maria de Bourbon, a relative of the king's, an alliance which caused great indignation, as Godoy was believed to have been already secretly married to another lady. In 1796 he drew closer to France, and formed a close alliance with the Republic against England, and in 1800 he co-operated with Napoleon in the conquest of Portugal, himself commanding the Spanish contingent. His policy, however, was wrecked by the battle of Trafalgar, and Napoleon determined to sacrifice him to the growing hatred of the Spanish nation, which, indeed, had already (1799-1800) driven him from power for a brief period. Godoy's fall was hastened by a proclamation which, miscalculating the probable issue of Jena, he issued to the Spanish people, summoning them to arms against an unknown foe. Napoleon determined to drive Godoy and his master from Spain; and Godoy, yielding to the inevitable, promptly began to plan the flight of the royal family to Mexico. He was anticipated, however, by the rising of the Spanish people, headed by the Prince of the Asturias, afterwards Ferdinand VII. Seized and thrust into prison at Aranjuez in March, 1808, he was rescued by Murat (q.v.) and brought to Bayonne, where he was Napoleon's willing tool in persuading Charles to abdicate in favour of Ferdinand. In spite of the disasters which his government had brought upon the Bourbons, Godoy still retained the confidence of the imbecile Charles, with whom he went into exile at Rome. He died in Paris, after having lived for many years on the bounty of others, notably of Louis Philippe.

Memoirs of Don M. de Godoy, written by himself (trans. 1836).

Godwin, WILLIAM (b. 1756, d. 1836), political writer and novelist, after acting for four years as a Nonconformist minister at Stowmarket, in Suffolk, settled in London in 1782, where he published a series of sermons, entitled, *Sketches of History* (1784), and was subsequently engaged as editor of the *New Annual Register*. An acquaintance with the writers of the French school developed the Socinianism which he had received from Priestley into infidelity, and on the outbreak of the French Revolution he brought out *Political Justice* (1793), the most thoroughgoing English version of the political creed of Rousseau. *Caleb Williams*, an attack upon the existing social order, followed in 1794; and three years later appeared the *Enquirer*, illustrating the political tenets of his former works. At the close of the century he published his second novel, *St. Leon*, which had a very large sale; but after this fortune seems to have left him. He became so reduced in circumstances that about the year 1804 he was forced to open a bookseller's shop, under the assumed name of Edward Baldwin, where he wrote books for children. In 1808 he published an *Essay on Sepulchres*; and in 1816 he paid a visit to Edinburgh, where he met Walter Scott, Henry Mackenzie, and other Scottish writers of that period, and made an agreement with Constable, the bookseller, for the novel, *Mandeville*, published in 1817. In 1820 he wrote an unsuccessful reply to Malthus's *Essay on Population*, published some twenty-five years before, and in 1833 he was appointed by Earl Grey Yeoman Usher of the Exchequer. Throughout his works Godwin presents himself as an intellectual utilitarian. Morality with him is nothing but a calculation of consequences, a kind of moral arithmetic. That action is best which produces the greatest sum of happiness. Ultimately reason will be applied to everything, and then men will form a society, without law or government, for where every man listens to reason no such things are needed. Godwin was also the author of two heavy, unpoetical tragedies. He was the husband of Mary Wollstonecraft (b. 1759, d. 1797), the authoress of the *Vindication of the Rights of Woman*, and was the father-in-law of Shelley.

C. Kegan Paul, *William Godwin, his Friends and Contemporaries* (1876); Leslie Stephen in *Fortnightly Review*, Oct., 1876.

Goeben, JOHANN VON (b. 1816, d. 1880), one of the generals of the Franco-German War, rose from the ranks, having entered the Prussian army in 1833 as a private. He served as a volunteer in the Carlist Wars, and published an interesting account of his adventures, *Four Years in Spain*. Re-entering the Prussian service in 1842, he attained the position of commander of a division in 1866, and played an important part in the operations which terminated with the annexation of Hanover to Prussia. In 1870 he com-

m.w.—16*

manded the 8th Army Corps; fought with great distinction at Saarbrück, Gravelotte, and the battles before Metz, and was then sent to the north of France, where he frustrated the efforts of General Faidherbe (q.v.) at Amiens and St. Quentin. He was one of the few generals who received the distinction of the Grand Cross of the Iron Cross. After the war he was stationed at Coblenz in command of his corps.

Goethe, JOHANN WOLFGANG VON (b. 1749, d. 1832), one of the greatest of poets, and perhaps the most impressive personality in the whole history of literature, was born in the Hirschgraben at Frankfurt-am-Main, Aug. 28th. His father, Johann Caspar Goethe (b. 1710, d. 1782), was sprung from a well-to-do family of merchants in Frankfurt, and having himself obtained the dignified title of "Councillor to his Roman Imperial Majesty" for his eminent services to the law, had retired on his fortune to a life of strenuous leisure well suited to his methodical and strictly intellectual nature. He had in 1748 chosen for his wife Katharina Elizabeth Textor (b. 1731, d. 1808), a woman of a free and cheerful disposition. Several other children were born to the marriage, but all died in infancy except Cornelia (b. 1750, d. 1777). In his autobiography, which he called *Poetry and Prose from the Story of my Life* (*Dichtung und Wahrheit aus meinem Leben*), Goethe has left a sunny account of his boyhood and of the strange old-world figures with which it was surrounded. He tells us of the shock given to his childish faith by the news of the earthquake of Lisbon (1755), of the incense-altar he built to the morning sun in his bedroom, of his toy theatre, of the occupation of the town by the French (1759-61), and his adventures behind the scenes in the French playhouse, of his wanderings over old streets and bridges full of traditions, of the mediæval ceremonies at the coronation of Joseph II. (1764), of his ill-fated attachment to Gretchen, and of his first attempts at poetry, an epic version of the story of Joseph in Egypt, and a Pietistic account of the Descent into Hell, the latter of which has come down to us as Goethe's earliest poem (1765). Hitherto his education had been conducted almost entirely by his father. At sixteen he was sent to study law to the university at Leipzig, then the intellectual centre of Germany. Gottsched and Gellert still reigned there, nominally supreme. One directed the literary taste, the other the literary conscience of the cultured, and to a certain extent Goethe fell under the influence of both. His two little comedies, written at this time, *Guilty, One and All* (*Die Mitschuldigen*), and *A Lover's Humours* (*Die Laune des Verliebten*), first printed in 1806, do not rise above the average level of the Leipzig school of operetta and polite farce, and the songs of

these years, published anonymously as twenty *Neue Lieder*, with music, in 1769, show only occasional promise of the greatest of lyrical poets. The great gain of the three years spent in Leipzig was his introduction to the higher ideals and possibilities of art in the works of Winckelmann and Lessing. Goethe himself studied drawing, painting, and engraving on copper, with greater diligence than the average amateur, and for many years his friends regarded him as a promising landscape-painter, as landscape was then understood; nor did his own hopes of conquering the painter's art die out till he was nearly forty. In the summer of 1768 the excitement and irregularities of a student's life brought on a violent illness, from which he scarcely recovered enough to return on his birthday to Frankfurt, where he lay for some months in extreme danger. During convalescence, whilst the spirit of life was still low and its joys faint, he fell under the tender influence of Moravians and extreme Pietists, especially of the Fräulein von Klettenberg, whose autobiography Goethe reproduced in later years as the interlude in *Wilhelm Meister*, known as *The Confessions of a Sainly Soul*. In her company he peered far into the alluring realms of alchemy and dim cabalistic lore. Results of their researches are seen in the first part of *Faust*. In April, 1770, he went to the university town of Strasburg to continue the study of law. In September, Herder, then a young man of twenty-six, already of some notoriety, if not distinction, in literature, came to Strasburg to remain through the winter for an operation; and about the same time Goethe visited Sessenheim, and met the village vicar's daughter, Friederike Brion. Under their double influence his whole nature was deepened, and he became a poet. Of Friederike herself, as she actually was, we know little beyond the fact of her lifelong fidelity to Goethe's memory. But her transfigured image lives in his own account of these months published in the very year of her death (1813), and in the series of unequalled love songs and lyrics of experience which began with the winter and spring of 1770-1. They are the first words of that great personal "confession" that may be read from the long series of Goethe's works. Herder was at his side pointing him to the highest models, and teaching him the difference between formalism and greatness, culture and strength. Already the rebellion of genius against the comfortable conventions of mediocrity, the many-sided movement generally known and sometimes ridiculed as *Sturm und Drang*, had begun. In Aug., 1771, Goethe obtained his Doctor's degree for a thesis and disputation on law, and quitting Friederike, Lenz, and the circle of Shakespearean students in Strasburg, returned to Frankfurt to engage in practical life as an advocate under his

father's eye. Early in this winter (1771) he wrote the first plan of *The Story of Gottfried of Berlichingen with the Iron Hand, Dramatised*, as the title then stood. At the beginning of 1772 he contributed several wild reviews to his friend Merck's *Athenæum* (*Frankfurter gelehrter Anzeiger*), and throughout the summer he was at Wetzlar studying practice in the Imperial Court of Justice, and living in close friendship with Charlotte Buff, afterwards the wife of Kestner, from whose character and history much of the substance of *Werther* was afterwards derived. Having returned to Frankfurt and published an essay on German architecture in a book of Herder's, he re-wrote *Götz* (the former *Gottfried*), published it in the spring (1773), and became famous throughout Germany. Gottfried's autobiography had fallen into his hands at Strasburg. In the sixteenth-century hero he recognised an ideal for his own times. The failure of the work is in want of dramatic complexity in the characters. Nevertheless, the story is bold, picturesque, and very German. In form it marks the completion of revolt against the French stage and the return to Shakespeare; in substance it marks the beginning of the romantic literature of knight and captain and man-at-arms. These years were the period of Goethe's richest and noblest poetic conception. *Faust* was already seething in his head. In 1773 the grand fragments of *Prometheus* and *Mahomet*, and some farces in the manner of Hans Sachs, were produced. In February, 1774, *Werther* (*Die Leiden des jungen Werthers*) was written, and for the first time the world recognised that Germany had a literature. If we except the lyrics and, perhaps, *Faust*, *Werther* remains the most complete and perfectly developed work of art that Goethe ever produced. There is much that reminds us of Rousseau in the hero and the landscape, but the picture of German girlhood and German country life in the first half of the story, and the remorseless analysis of the wretched subjection to feeling that in the second half drags the unhappy man step by step down to destruction, are unequalled in romance. It was followed by some unimportant dramas, *Clavigo*, *Erwin and Elmire* (printed 1775), *Claudine of Villa Bella*, and *Stella*, of which the last is the most interesting for the scandal it occasioned and the poet's alteration of the catastrophe in later years; also by some of his most beautiful lyrics, some satirical farces, and the profound and humorous fragment of the *Wandering Jew*. It is uncertain how much of *Faust* was finished at this time, but the poet recited several scenes to a circle of friends in the autumn of 1774, and a year later *Egmont* in its original form was nearly finished. But in the midst of this extraordinary productive activity Goethe did not shut himself up from life, and was very far from becoming a student or a sensitive man of letters. In the summer

of 1774 he wandered down the Rhine with the mystics Lavater and Basedow, and began his long and varying friendship with Fritz Jacobi (q.v.), from whom he learnt to know Spinoza, the one philosopher who exercised strong influence on his mind. During the winter he met in Frankfurt with Anna Elizabeth Schönmann, the "Lili" of the poems and autobiography, from whose power he half hoped, half feared to escape by his journey in Switzerland with the Counts Stolberg in the early summer of 1775. In October came the great change in his outward life. Karl August, the young Grand Duke of Weimar, invited him to his court. Goethe arrived in November, and henceforward Weimar was his home. The time of fervid imagination and youthful energy of conception was over. The ten apparently silent years that followed formed the period of his most assured development and intensest energy of life. When the first wild months of gaiety were passed, he turned with dogged self-control to the duties of his position. The monotony of life in the peaceful but inquisitive little court-town was only broken by a few short journeys, to the Harz in the winter of 1778, and to Switzerland with the Grand Duke in the winter 1779-80. Goethe was appointed Privy-Councillor in 1776, Minister of War in 1779, and President of the Council with the title of nobility in 1782. He also directed the court theatricals and the mining experiments at Ilmenau. By degrees he gathered into his hands almost every department of State. In his leisure he studied botany and geology as a professed man of science. His discovery of the *os intermaxillare* in man (1784) was another step towards establishing the unity of the animal kingdom. Inspired by his friend the Frau von Stein (b. 1742, d. 1827), and writing only for the narrow circle of the Grand Duke, the Dowager Amalia, Herder, and a few others, he composed some of his loftiest poems, *Ilmenau* (1780), the *Fisher's Daughter* (*Fischerin*), with its ballad of the *Erkönig* (1782), *Mieding's Death* (1782), the allegorical fragment of the *Mysteries* (*Geheimnisse*, 1784), and the lyrics in the vast piece of criticism on life known as *Wilhelm Meister*, upon which he began to work in 1777. Numerous farces and masques were written for the court, the best being *The Triumph of Sentiment* (*Der Triumph der Empfindsamkeit*), a satire on affectation, acted in 1778, but much altered in its published form. In 1779, the prose version of *Iphigenia* was produced and acted. *Egmont* was taken up in 1782, and finished at length in Italy (1787). The first scheme and one or two acts of *Tasso* also were written before Italy was reached. With Italy a new life began. In September, 1786, he suddenly left Weimar, and made his way to Rome through the Tyrol, Verona, and Venice. From Rome he visited Naples and Sicily, and returning, dwelt almost a year in Rome itself.

A calm, passionless, and somewhat pedantic account of the whole two years' absence is given in the *Journey in Italy* (*Italienische Reise*), selections from his letters published by Goethe himself some years afterwards. Besides writing a few new scenes in *Faust* and completing *Egmont*, he entirely re-wrote *Iphigenia* in iambic verse, according to the strictest rules of classic model. Greatly as this work has been praised by critics, it cannot escape the common fate of imitations, and will not bear to be mentioned in the same breath with Euripides. Years afterwards Goethe himself admitted to Schiller that he took no further interest in the work, and this want of interest pervades the more serious productions of this whole period. When at length, in June, 1788, he "crept back into the North," and found nothing changed but every one two years older, contradiction added strength to his new ideal, and bitterness to his hatred of everything ascetic, Gothic, or mysterious. The intimacy of his friendship with the Frau von Stein suddenly ceased for want of sympathy, and he scandalised society by taking to his home the lovely and cheerful Christiane Vulpius (b. 1764, d. 1816), whom he always regarded as his wife, and married with due ceremony after the sack of Weimar in 1806. Their first child, August (d. 1830), was born in 1789. Five others were born to them, but all died in infancy. In the first months of their union, while his remembrances of Rome were still fresh, Goethe wrote the series of love-scenes known as the *Roman Elegies* (*Römische Elegien*). Unfortunately he chose a classic metre singularly ill-suited to a northern language. At the same time he completed his drama of *Tasso*, a "classical" enactment of Weimar court-life on an Italian scene. After finishing the first issue of his collected works (1787-90), in which *Faust*, beginning with the monologue and ending with the scene in the cathedral, was printed as a fragment, he spent some months in Venice (1790), where he produced the *Venetian Epigrams*, that contain some of his finest and most caustic criticisms on his own life and the state of Europe. Immediately afterwards he went to join the Grand Duke in the camp at Breslau, and for the next few years took an active part in the war of the Confederates against the revolutionary Government in France. He has described his share in the operations in the *Campaign in France* (*Campagne in Frankreich*, 1792) and the *Siege of Mainz* (*Die Belagerung von Mainz*, 1793). His greatest interest at this time was in the study of the natural sciences. In 1790, he published his *Attempt to Explain the Metamorphosis of Plants*, and a poem on the same subject, in which he tried to establish the unity of the vegetable kingdom by deriving all forms from an ideal or original plant, thus bringing science one step nearer to Darwinian evolution. In 1791 and 1792, he published

his *Contributions to Optics* (*Beiträge zur Optik*), his first assault on the Newtonian theory of the composition of light. Goethe's own theory that light was simple and that colours were but degrees between light and darkness has never been accepted by science, and indeed appears to have arisen from an accidental mistake. Nevertheless, he spent much time on its elaboration, and insisted in old age that he would be remembered for his *Doctrine of Colour* (*Farbenlehre*), published 1810, rather than for his poems. The direction of the theatre, which he held till 1817, was the only official appointment that he now retained. Science, practical life, and the realistic comfort of his home, seemed to have extinguished his creative powers altogether at the beginning of the nineties. Such indifferent comedies as the *Gross Cophta* (1791), a satire on Cagliostro, the *Citizen General* (*Bürgergeneral*, 1793), on the condition of France, and a version of *Reynard the Fox* in hexameters (*Reineke Fuchs*, 1794), were almost his only productions. In 1794 Schiller came, and saved him, as Goethe said, from the charnel-house of science. The friendship grew gradually, and in spite of a strong antipathy of nature. But by 1795 it was firm, and encouraged by Schiller's enthusiasm, penetration, and sympathy, Goethe entered upon another intensely productive period of ten years. Besides numerous short poems and large quantities of literary criticisms for the *Horen* and other journals, *Wilhelm Meister's Apprenticeship* (*Lehrjahre*, 1794-6), one of the greatest though least artistic of all Goethe's works, a profoundly wise essay on the conduct of life by self-restraint and self-knowledge, was finished on an altered and perhaps inferior plan. In 1796, literary Philistinism was attacked in the rough epigrams of the *Xenien*, and *Hermann und Dorothea*, the German idyll which Schiller called "the consummation of our whole new art," was nearly finished. In the next two years *Faust* was continued, and several of the greatest ballads, such as the *Bride of Corinth*, were composed. In 1800 the second part of *Faust* was begun. Having recovered from an illness that was nearly mortal at the beginning of the century, Goethe threw much of his highest philosophy into the *Drinking Songs* (*Geistliche Lieder*) of 1803. Then, when both the friends were full of hopes and power and plans for the future, Schiller died (May, 1805), and for the rest of his life Goethe stood alone. Next year followed the shock of Jena, and the overthrow of German independence. In 1808, the second issue of Goethe's works, including the first part of *Faust* as it now stands, was completed. In 1809 the *Elective Affinities* (*Wahlverwandtschaften*) was written. Profoundly tragic as the story is, and abounding in Goethe's maturest wisdom, there is a want of humour in the details and a tediousness in its progress that exclude it from the highest rank of romance. It is, however, of

historical importance as showing his relation to his new circle of admirers, then engaged in founding the Romantic School. From 1811 to 1814, Goethe was occupied with the first three volumes of his autobiography (*Dichtung und Wahrheit*). In 1814-15, the gift of lyric song suddenly returned to him in all or nearly all its early fulness, and under the inspiration of Marianne von Willemer, and the public events that were thrilling Germany with enthusiasm, he wrote the *Divan of East and West* (*West-östlicher Divan*), blending the scenes and life of Persia and the East with the thought of Europe. Under his influence Marianne herself contributed to the book of Suleika two or three songs that are perhaps the finest lyrics a woman ever wrote. In 1821 Goethe allowed his secretary to collect all manner of essays, schemes, proposals, and tales, and piece them together as well as he could into the volume of mingled wisdom and almost incomprehensible allegory known as *Wilhelm Meisters Wanderjahre*. In 1828-30 the edition of his works in forty volumes, including the *Helena* episode in the second part of *Faust*, was published; and just before his last birthday he finished the last words of the great double poem of *Faust* itself, and could securely say, "My work in life is fulfilled." The darkness of death fell on him at noonday on Thursday, March 22nd, 1832, and he was buried by the side of Schiller. There is much in Goethe's nature that is at first sight repulsive and disappointing. The seriousness that is the secret of his personality is sometimes a seriousness about trifles. His boasted many-sidedness sometimes betrayed him into dilettantism. Sometimes the garment of humour falls away and leaves him a naked pedant. Sometimes the encrustation of intellectual interests is so thick that humanity is lost. But, when all is said, it is impossible to resist his attraction or to follow to their furthest end the fibres of his influence throughout the length and breadth of modern European life. By his seriousness he freed literature from folly, and by his example he restored grandeur to human existence. Fully recognising the meaning and value of every phase and tendency of modern society, he uttered his observations on life in a series of sayings and proverbs of almost startling acuteness and simplicity. In his greatest work, the two books of *Faust*, he has given us a picture of man that for wisdom and grandeur can only be compared to *Æschylus* and the *Book of Job*. In science he prophesied with enthusiasm of the present time. In his philosophy, behind the healthy and strenuous Epicureanism of complete physical and intellectual development, lay the dark wisdom of a modern *Heraclitus*. From first to last he would endure nothing half-hearted, hesitating, temporary, or insincere, but lived without flinching for the good, the beautiful, and the

complete. From first to last, insisting only on the affirmative, through good report and evil report he belonged, as he sang in the drinking-song, "to the order of believers," and by the earnestness of his belief he has become an apostle of life to many of the most opposite natures.

Goethe's life is most completely narrated in his own works and the numerous collections of his letters, especially to Frau von Stein, Schiller, and Zelter. Eckermann's *Conversations* are invaluable for his closing years. Of the editions of his works, Hempel's, especially the part edited by Loeper, was the best till the recent issue by various specialists under Dantzer's direction. *Der junge Goethe* is a most valuable reprint of his productions and letters up to 1775. Of biographies, Lewes's is still much read both in England and Germany, and is at least as good as Schiller's (1851), and, in spite of inaccuracies and insufficiency, better than Dantzer's recent work (1882). Carlyle's essays on Goethe are of high importance as showing us the writer's ideal of what a poet ought to be, and a contemporary's estimate of Goethe himself. Professor Seeley's essays in the *Contemporary Review* of August, October, and November, 1884, are perhaps the most complete account of Goethe's position ever written in English. Of the innumerable German works on the subject, Scherer's *Geschichte der deutschen Literatur* (1880), and Herman Grimm's *Goethe* (1877), are brief and valuable. See, too, Hirsch's *Verszeichnis einer Goethes Bibliothek (1767-1874)*.

[H. W. N.]

Gogol, NICHOLAS VASILIEVITCH (b. 1809, d. 1852), one of the greatest of Russian writers, was born in the province of Poltava, and, after attempting the stage, took to literature as a profession. His first efforts were not very fortunate, but in 1831 he published the first of his popular tales of country and peasant life in Russia, *Evenings in a Farm near Dikania*. *Arabesques*, *Taras Balba*, and *Old-fashioned Gentry*, followed. *The Inspector*, a scathing exposure of Russian official life, was acted with great success in 1836, and in 1842 appeared the first part of his great novel, *Dead Souls*, the forerunner of those exhaustive descriptions of Russian society which Tourgenieff and Tolstoi afterwards essayed with so much success. During his later years he was oppressed by religious mysticism, and wrote some painful *Confessions*.

Goldschmidt, MME. [LIND.]

* **Goldamid, MAJOR-GENERAL SIR FREDERICK JOHN, C.B., K.C.S.I.** (b. 1823, at Milan), Persian scholar, was educated at King's College School and King's College, and went to India as ensign in the Madras army in 1839; obtained his company in 1851, and retired with the rank of major-general in 1876. He served in the Chinese campaign of 1840-2, and with the Turkish contingent in the Eastern Crimea in 1855-6; but his career has been chiefly spent in civil and political duties. He was chief director of the Indo-European telegraph, 1865-70; boundary commissioner in Persia, 1870-3; journeyed on various Government

missions to Persia, and through Arabia to Constantinople; in 1880 became English controller of the Daira Sanieh in Egypt, retiring in 1883; and finally was chosen secretary of the Royal Asiatic Society in 1885. He has written many short papers, pamphlets, reviews, etc.; his *Telegraph and Travel* was published in 1874, and his admirable biography of *Sir James Outram* in 1880. He was made a C.B. in 1866, and K.C.S.I. in 1870.

Gomm, SIR WILLIAM MAYNARD, BART. (b. 1782, d. 1875), soldier, the son of Colonel William Gomm, entered the army in 1794, and was engaged in active service at the age of sixteen. His whole life was spent in active employment, and from 1799 to the Peace of 1815 he was continuously engaged: on the Helder (1799), on the coasts of France and Spain (1801), in Hanover (1803), at Copenhagen (1805), Walcheren Expedition (1806), and through nearly all the Peninsular campaigns. When the struggle was brought to an end at Waterloo he had attained the rank of lieutenant-colonel, and in that battle was quartermaster-general to Picton's division. He was made major-general in 1837, and in 1840 he became Lieutenant-Governor of Jamaica, whence, in 1843, he was transferred to the Mauritius, as Governor, where he remained until 1849. From 1850 to 1855 he was commander-in-chief in India, and member extraordinary of the council. He became full general in 1854, G.C.B. in 1859, and field-marshal in 1868. In 1872 this veteran soldier and administrator succeeded Sir F. Pollock as Constable of the Tower.

F. C. C. Gomm, *Letters and Journals of Sir W. Gomm*.

* **Goodall, FREDERICK, R.A.** (b. 1822), the son of the late Edward Goodall, the engraver (d. 1870), very early began to display artistic talents, which his father carefully encouraged. His first picture at the Academy, *Card Players*, was exhibited in 1839; in 1847 came his *Village Holiday*, now in the National Gallery; and in 1851, *Raising the Maypole*. Mr. Goodall was elected A.R.A. in 1853, and full Academician in 1863. From 1858 and onwards he devoted himself chiefly to Oriental subjects, and deserted the scenes of old English life by which he made his fame. But though it may be, perhaps, a subject of regret that he produced no companions to an *Episode of the Happier Days of Charles I.* (1855), and *Cranmer at the Traitor's Gate* (1856), the impressiveness and conviction displayed in Mr. Goodall's illustrations of the Bible narrative cause them to be notable examples of modern religious art in its more favourable aspects. The following are some of the principal of his more recent works, with the date of their exhibition in the Academy:—*The Firstborn* (1861); *The Song of the Nubian Slave* (1864); *Mater Purissima* and *Mater Dolorosa* (1868); *Agriculture in the Valley of the Nile* (1875);

The Daughters of Laban (1878); *Water for the Camp and Sarah and Isaac* (1879); *Moving to Fresh Pastures and Hannah's Yow* (1880); *The Return from Mecca* (1881); *Memphis* (1882); *A Coffee Shop, Cairo* (1883); *Gordon's Last Messenger* (1884); and *A New Light in the Harem and The Flight into Egypt* (1885).

Gordon, CHARLES GEORGE (b. Jan. 28th, 1833; killed at Khartoum, Jan. 26th, 1885), one of the most conspicuous figures of the nineteenth century, was educated at a private school at Taunton, and entered the Royal Military College at Woolwich in 1848. He received his commission in the Royal Engineers in 1852, and entered on his first employment at Chatham, where he remained till 1854. Thence he was ordered to Pembroke, where, until the outbreak of the Crimean War, he was engaged on the construction of the dock. During 1855 he served in the trenches before Sebastopol, and in 1856 took part in the capture of Kinburn and the destruction of the Sebastopol docks. During the same year and the two following—1857-8—he acted as Assistant-Commissioner at Galatz, and as Commissioner in Armenia for laying down the boundaries between Russia and Turkey in Europe. In 1859 he was promoted to captain and adjutant at Chatham. In 1860 he joined the allied army in China, and was present at the capture of Peking. During 1861-2 he was engaged in constructing the Taku forts and the barracks at Tien-tsin, and made a voluntary expedition to the Great Wall. Meantime the great Tai-ping Rebellion had reached its height as a destroying force in the Celestial Empire. Nearly all the chief cities were in the hands of the rebels, and the throne itself was in imminent danger. Gordon's splendid services during 1862, in clearing Shanghai and its neighbourhood of the marauders, led to his appointment to the command of the Ever-Victorious Army, a small force composed of natives, and freebooters of all nations, which had hitherto failed to produce its desired effect. With this rough-and-ready band he succeeded, by rapid manoeuvres by land and water, in wresting the captured cities from the rebel chiefs and their mighty hosts. Thus in less than fifteen months he saved a tottering empire from ruin, and suppressed a rebellion which had taxed the genius of its generals during twelve years. His quiet and unostentatious demeanour; his utter disregard of self; his hairbreadth escapes; his mercy to the fallen; gained for him the love of his foes, and a reputation unique among men. The highest honours in the Emperor's gift were showered upon him. But these Gordon declined, content with having done his duty as an English officer. He returned to England, and being appointed Commanding Royal Engineer at Gravesend in 1865, devoted himself to the obscure duties of building forts, and to relieving the

wants of the sick and poor. During 1871-2 he acted as Commissioner of the Danube at Galatz, and in 1874, accepting an invitation from the Khedive to act as Governor of the Tribes, he proceeded to the Soudan. Here, by his beneficent rule, he bettered the lot of the persecuted blacks, and by his extraordinary military and administrative genius was instrumental in suppressing the slave-trade, which in those regions had baffled the efforts of his predecessors. But in 1876, not meeting with the support promised him from Cairo, he resigned. The Khedive then urged him to return and take up the work in which he had achieved such signal success. In 1877, therefore, he resumed the work, this time as Governor-General of the Soudan and the Equatorial Provinces. During his second reign of three years he acquired an influence over the peoples of this vast region such as no European or Asiatic had ever been known to enjoy. His subjects learned to love him as a divine deliverer, and the slavers, triumphant in the far south before his advent, fled at the murmur of his name. His adventures during this period form a romance only equalled by the story of his campaign against the Tai-pings. They resulted in the establishment of peace and happiness to the blacks, and ruin to the vile traffic of the slave-hunters, and when in 1879 he resigned, the country, once the scene of bloodshed and anarchy, had become a well-ordered and almost civilised State. In May, 1880, he accompanied Lord Ripon, then appointed Viceroy, as his secretary, to India. The appointment by many was accounted strange, and it was not surprising to those who knew the life and character of Chinese Gordon that a few days after his arrival at Bombay he suddenly resigned. He was about to return to England when a message from his old friends, the Chinese, changed his plans, and he at once sailed for Hong-Kong to assist in averting a threatened war between Russia and China. This, by his advice to the satraps at Peking, he succeeded in, and thus once more gained their everlasting gratitude. On his return home he visited the west of Ireland with the view to studying the question of Irish grievances. He was appointed Commanding Royal Engineer at Mauritius in 1881, and was promoted to major-general in the army in 1882. In this latter year he was called to the Cape to settle the Basuto question, but the local authorities placing obstacles in his way, he resigned the post of commander-in-chief of the Cape forces, to which he had been appointed. During the whole of 1883 he resided in Palestine, where for his own pleasure he studied the various sites at Jerusalem and Jaffa. The result was the remarkable book, *Reflections in Palestine*, which is strikingly illustrative of the peculiar mysticism of Gordon's religious views. In 1884, being invited by the King of the

Belgians to administer the vast tract of land watered by the Congo, he went to Brussels, and was about to quit Europe for the scene of his new enterprise, when the English Government called upon him to undertake a difficult and perilous mission to the Soudan. He left London Jan. 18th, 1884, for Khartoum, as British Envoy, and passing through Cairo was once more appointed by the Khedive Governor-General of the Soudan, "with full power to act as he thought fit," and with the fully admitted responsibility of Mr. Gladstone's Government. His mission was to bring away certain loyal garrisons hemmed in by the followers of the Mahdi, a fanatic slave-hunter, who had gained an unprecedented influence in the Soudan since Gordon's departure, and who had given the country up to the cruellest anarchy. It was at first supposed that Gordon would have a "free hand," but as time went on differences broke out between the ministry at home and himself, and they declined to grant his requests. A rebellion which, had he been supported, would have melted away as it had done before in 1878-9 under his rule, was allowed to gain ground. Gordon thus found himself shut up in Khartoum for 337 days, with scant provisions, a miserable soldiery, and a discontented and treacherous garrison. The people of England cried out against the desertion of one of the bravest and best of her sons, but the warnings of the press and the public were alike unavailing. At last the ministry, in answer to a reiterated demand on the part of the English people, sent an expedition to his relief. But it was too late. Before even the army avant-couriers reached the neighbourhood of Khartoum, the city had fallen from sheer hunger, and Gordon had been killed. In this expedition there was no intention to relieve the garrisons, but only the envoy. This made Gordon adhere more firmly than ever to his post. He might at any time have escaped, but he had pledged himself to the cause of the people, and felt himself bound in honour to share their fate.

Gordon, GEORGE WILLIAM. [EYRE, E. J.]

Gordon, LUCY, LADY DUFF (b. 1821, d. 1869), translator, was the only child of John Austin, the jurist. In 1826 she accompanied her parents to Germany, where she casually met Heine, an acquaintance that ripened into friendship twenty years later when Heine was dying at Paris. In 1839 she translated and published Niebuhr's *Greek Legends*; and in 1840 she became the wife of Sir Alexander Duff Gordon. In 1844 Lady Duff Gordon translated Meinhold's *Amber Witch*, in 1845 *The French in Algiers*, and in

1849 Ranke's *House of Brandenburg*. In 1854 she spent some time in Paris; but, her health shortly after giving way, she was obliged to go to the Cape of Good Hope, from which she penned those interesting *Letters from the Cape* (1862-4), full of kindly nature and large-minded humanity. In 1865 she visited Egypt for her health's sake. Among the other works of Lady Duff Gordon are translations of *Remarkable Criminal Trials* (1846) from the German; Wailly's romance, *Stella and Vanessa* (1850); *Letters from Egypt* (1865); and *Sketches of German Life* (1847), in which she was assisted by her husband.

Macmillan's Magazine, Sept. 1860, and Oct. 1874.

Gordon, SIR JOHN WATSON (b. 1790, d. 1864), painter, was a native of Edinburgh, and studied art under John Graham. As a portrait painter he had in his day a high reputation, which, however, has scarcely been since maintained in its integrity. The most distinguished Scotchmen of his time sat to him, including Sir Walter Scott, Lord Aberdeen, and Dr. Chalmers. He was created president of the Royal Scottish Academy, Limner for Scotland to Her Majesty in 1850, and R.A. in 1851.

* **Gordon, THE HON. SIR ARTHUR HAMILTON** (b. 1817), administrator, the youngest son of the 4th Earl of Aberdeen, was educated at Trinity College, Cambridge, and for several years was private secretary to his father. From 1854 to 1857 he sat in Parliament as Liberal member for Beverley; but was defeated at Liskeard during the general election, and in 1858 he was secretary to the special mission to the Ionian Islands. Sir Arthur Gordon's administrative career began in 1861, when he was appointed Governor of New Brunswick, whence he was transferred to Trinidad in 1866, and from thence to the Mauritius in 1870. In 1874 he was the first Governor of the Fiji Islands after their annexation, and in 1877 he became in addition High Commissioner for the Western Pacific. Appointed Governor of New Zealand in 1880, Sir Arthur Gordon remained there until 1883, when he was appointed Governor of Ceylon.

* **Görgey, ARTHUR** (b. 1818), Hungarian general, a native of Toporecz in Upper Hungary, is a Protestant by religion, and having received a military education, entered the Hungarian Body-Guard, but on the death of his father, in 1845, he threw up his profession and went to Prague, where he studied chemistry at the university. After publishing a treatise on acids, he left Prague, and farmed an estate for one of his relatives. On the outbreak of the Hungarian Revolution of 1848, he went to the aid of Kossuth, and by his brilliant achievements speedily gained the grade of general. His retreat through the defiles of the Carpathians was one of the most brilliant feats of the war, but it was

followed by his proclamation at Waitzen, in which he professed his allegiance to the Austrian monarchy. From that time Kossuth, although unable to dispense with his services, determined to use them with caution. General Dembinski was placed over his head in command of the army of the Upper Danube, but Görgey promptly retaliated by refusing to support him at the battle of Kápolna, and finally caused his superior to be placed under arrest. Kossuth in despair restored to him his command, and in the course of April, 1849, he won a succession of brilliant victories, and was rewarded with the portfolio of Minister at War, refusing at the same time the rank of field-marshal. Still holding military command, he neglected an admirable opportunity for seizing Vienna, and when the Russian contingent appeared in his rear, refused to retreat, contenting himself with holding the Austrians in check before Komorn. Replaced by Messaros, he appealed once more to the soldiers, and, as before, received their support. Kossuth could but give way, and the cause of the insurgents was ruined. Though Görgey fought some brilliant battles, his refusal to co-operate with his colleagues caused them to be defeated in detail, and on Aug. 13th he was completely surrounded at Valagos, and surrendered to the Russian General, Rudiger. "His treason," wrote Kossuth, "has inflicted on me, and through me on the Republic, a death-blow." First interned, and then freely pardoned, Görgey was more fortunate than his officers, several of whom were shot. His defence of his conduct was published in 1852, and for the subsequent years he employed himself in science and engineering, working in 1872 upon the Transylvanian railway.

Görgey, *Mein Leben und Wirken in Ungarn in den Jahren 1848 und 1849* (1852; trans. 1858).

Görres, JOSEPH VON (b. 1776, d. 1848), one of the liberators of Germany, and one of the founders of Neo-Catholicism, was born at Coblenz, the son of a German timber merchant and raft-maker, but sprung from an old Italian family on his mother's side. In 1793, just when young Görres had left the gymnasium, the French troops entered the city, and permanently occupied Coblenz and the Rhine provinces. In 1799 Görres led a deputation to Paris to implore the French Government formally to annex the provinces they had occupied. He arrived only a few weeks after Bonaparte's elevation to power, and his enthusiasm for French ideas soon sank into bitter disappointment. Returning to Coblenz, he wrote an *Account of my Mission* (1800), and for some years devoted himself entirely to the study of natural science and philosophy, on which subjects he published a few treatises, the most important being, *Belief and Knowledge* (*Glauben und Wissen*, 1805), which excited much attention

for its attempted reconciliation of Fichte and Jacobi, and its strange admixture of paganism with mystic Christianity. In 1806 Görres removed to Heidelberg for two years, with a view to lecturing in the university. After returning to Coblenz he learnt Persian, and in 1810 published *The History of the Myths of Asia* (*Die Mythengeschichte der asiatischen Welt*). The campaigns of 1813 naturally re-awakened his interest in political life. In 1814 he was appointed General Director of Public Instruction for his district, and began the publication of the *Rhenish Mercury* (*Rheinischer Merkur*), that during its short life perhaps exercised more influence than any other journal of this century. Stein favoured it, and perhaps contributed himself. Goethe in Stein's company paid Görres a visit. Blücher studied every number. Napoleon himself is said to have called it *la cinquième puissance* allied against him. But when Waterloo was behind them, and the German courts forgot their fair promises, the *Mercury* ventured to protest against Prussian reaction, and early in 1816 its last number was silenced. Görres immediately issued his pamphlet on *Germany's future Constitution* (*Deutschlands künftige Verfassung*), a sketch for a federal empire, closely resembling the Constitution that has been established since 1870. Kotzebue's murder redoubled the severity of the reaction, and Görres issued perhaps his greatest work as a second protest, *Germany and the Revolution* (*Deutschland und die Revolution*, 1819). The Prussian Government at once condemned him to imprisonment at Spandau, but, narrowly escaping from Frankfurt, he fled to France, taking refuge at Strasburg. *Europe and the Revolution* appeared in 1820, but is disfigured by signs of the rapid development of a mystic Catholicism into which the author finally subsided. The tendency increased after 1826, when he was invited to Munich as professor of history by Louis I., King of Bavaria. He soon made Munich the centre of the Catholic revival or Neo-Catholicism that has since shown itself so powerful a factor in German affairs. The two most important works of this period were *Christian Mysticism* (*Das christliche Mystik*, 1836-42) and *The Mirror of Time* (*Spiegel der Zeit*, 1848). In 1876 a *Görres-Verein* was founded at Munich in his honour. His son, GUIDO GÖRRES (b. 1805, d. 1852), was a poet and man of letters of some distinction.

J. Galland, *Joseph von Görres* (1876); *Joseph von Görres, ein Denkmahl* (1855); *Germany and the Revolution*, translated by John Black (1850).

[H. W. N.]

* **Gorst, SIR JOHN ELDON, Q.C., M.P.** (b. 1835), the son of the late Mr. E. C. Lowndes (who took the name of Lowndes instead of Gorst), was educated at St. John's College, Cambridge, whence he took his degree as third wrangler in 1857. He was civil commissioner

of Waikato, New Zealand, from 1861 to 1863, and wrote the *Maori King, or the Story of our Quarrel with the Natives of New Zealand in 1864*. Called to the English bar in 1865, he became a Q.C. in 1875. In the same year he was elected M.P. for Chatham in the Conservative interest, after unsuccessful attempts at Hastings (1865) and Cambridge (1868), and has been since returned for the same constituency. In the House of Commons, Mr. Gorst, subsequently to the year 1880, acted as Lord R. Churchill's lieutenant, and ably seconded him in his assaults upon the Government and upon the leaders of the Opposition. He drew down upon himself, however, a severe rebuke from his leader in the autumn session of 1884 for "prostrating himself" before Mr. Gladstone when the latter held out offers of compromise on the franchise question. In 1885 he became Solicitor-General and was knighted. In 1886 he was appointed Under Secretary of State for India.

Gortschakoff, PRINCE ALEXANDER (b. 1798, d. 1883), belonged to an ancient Russian family, and was Minister of Foreign Affairs throughout the reign of the Emperor Alexander II. After being educated at the Lyceum of Tearskoe-Selo, where one of his schoolfellows was the poet Puschkín, he entered the diplomatic service, and in 1824 was attached to the Russian embassy in London. His first diplomatic work of importance was the arrangement of a marriage between the Grand Duchess Olga and the Crown Prince Charles of Würtemberg. The King of Würtemberg was not favourable to the project. But Prince Gortschakoff ended by bringing about the desired union, and at the desire of the Russian empress he was appointed minister at Stuttgart, where for eight years he was the confidential adviser of the Crown Princess. In 1850 he was sent to Frankfurt as minister to the German Confederation; and it was here that he made the acquaintance of Prince Bismarck and laid the foundation of a friendship which was renewed when, some years afterwards, the latter went to St. Petersburg as Prussian ambassador, the former having by this time been raised to the post of Foreign Minister. Prince Gortschakoff had meanwhile had charge of the embassy at Vienna, where he resided during the agitated period of the Crimean War. It was through the hands of Prince Gortschakoff that the Austrian propositions passed on which the peace between Russia and the Allies was to be based. "If Russia rejects them," he said abruptly to Count Buol, the Austrian Foreign Minister, "will Austria declare war?" "I am not at liberty to say," answered Count Buol, whose equivocal attitude perplexed Prince Gortschakoff to the last. Prince Gortschakoff attended the Paris Conference, but purposely abstained from affixing his signature to the

treaty of peace after that of Count Orloff, Russia's chief representative, because, as the Russian official *Diplomatic Study on the Crimean War* sets forth, he had already resolved to undo it. This task he made the business of his life—at least, of his later life, for he was already fifty-eight when the portfolio of Foreign Affairs was entrusted to him (1856). Soon after his accession to office, Prince Gortschakoff issued a circular to the foreign Powers in which he announced that Russia proposed, for internal reasons, to keep herself as free as possible from complications abroad, adding, in a phrase which was to become celebrated, *La Russie ne bonde pas : elle se recueille*. Gortschakoff's masterpiece in the way of diplomatic writing was his reply to Earl Russell's representations in favour of Poland during the insurrection of 1863. In a series of despatches to the various European Governments, all of whom had, with the single exception of Prussia, taken the part of the Poles, Prince Gortschakoff showed himself conciliatory, respectful, reserved, distant, ironical or abrupt, according to the degree of importance belonging to each remonstrant. Earl Russell had traced the Polish insurrection to the withdrawal of the Constitution after the insurrection of 1830; and Prince Gortschakoff satirised in his gentlest manner the English minister's too implicit belief in constitutional forms. Soon afterwards he became Chancellor of the Russian empire. The process of "gathering herself together," which Prince Gortschakoff, in his famous circular, had assigned to Russia as her only possible occupation for some time to come, was, with the exception of the necessary departure caused by the events of 1863, continued until the outbreak of the Franco-German War in 1870. Russia's neutrality, and, in certain eventualities, co-operation, had been promised to Prussia, and, as a reward, Russia's views were favoured by Prussia when, France having been rendered incapable of assisting England should England be threatened by Russia, Prince Gortschakoff reopened the Eastern Question by "denouncing" one of the most important articles of the Treaty of 1856. He sent out a circular to the Russian representatives abroad, asserting that the conditions on which the Black Sea had been neutralised were no longer the same as in 1856. This circular was replied to by Lord Granville in a despatch which, after reproving Gortschakoff's action, intimated that if Russia wished the stipulations of the treaty to be reconsidered, she ought to propose the meeting of a conference. It had been already arranged through Prince Bismarck that England's invitation in the form of a suggestion should be accepted by Russia; and when the conference met in London the article neutralising the Black Sea was simply rescinded. There was another clause in the Treaty of Paris

which gave more pain to the Emperor Alexander than even the one by which Russia was restricted from placing a navy in the Black Sea: the clause which deprived her of a portion of Moldavian Bessarabia containing the mouths of the Danube and the fortress of Ismail. From 1869 and onwards the advance of Russia in Central Asia excited much apprehension in this country, which was only partially allayed by the famous despatch of March, 1869, in which Afghanistan was defined as a "neutral zone" between the Russian and British Empires. The somewhat equivocal declarations put forward concerning the conquest of Khiva excited great indignation in England. Prince Gortschakoff, too, had set his heart on recovering for his country all that had been taken from her by the Crimean War; and the desired retrocession was obtained at the end of the last Russo-Turkish War by the Treaty of San Stefano, and confirmed by the Treaty of Berlin (1878). It can hardly be doubted that the despatch of a Russian mission to Cabul, which brought about the second war between England and Afghanistan, was the Russian Chancellor's method of revenging the partial surrender of her conquests, to which Russia had been forced to submit by the diplomacy and warlike attitude of England. In November, 1879, Prince Gortschakoff revisited Berlin with the view of restoring an understanding between the German and Russian Governments, which recent events had somewhat weakened. Early in the following year he gave up his office and retired to Baden-Baden, where he spent the remainder of his life. In April, 1881, Alexander III. sent him an autograph letter congratulating him on the twenty-fifth anniversary of his appointment to the Russian Ministry of Foreign Affairs, and presenting him with a portrait of Alexander II., whom the prince had so faithfully served.

Klaczko, *Les deux Chanceliers*. [H. S. E.]

Gortschakoff, PRINCE MICHAEL (b. 1795, d. 1861), cousin of the above, and son of Prince Dmitri Gortschakoff, general and poet, entered a cadet school at an early age, passed into the Guards, served in the war of 1828-9 against Turkey, and at the beginning of the campaign composed a war-song on the occasion of the passage of the Danube, which became popular in the Russian army; commanded the artillery in the war of 1830-1 against the insurgent Poles, took part also in the campaign of 1848, against Hungary, and finally, so far as his purely military character was concerned, was sent during the Crimean War to command one of the army corps defending Sebastopol. After the southern part of the fortress had been taken and occupied by the Allies, Prince Gortschakoff effected a masterly retreat at the head of a portion of the garrison to the

northern side, which remained untaken. Soon after the restoration of peace, Prince Gortschakoff was sent by the new Emperor, Alexander II., to act as his lieutenant in the Kingdom of Poland, where he seems to have behaved, at least for some years, with great moderation. Many concessions, too, were made to the Poles, as in allowing them the free use of their language, though no steps were taken towards improving their political position. At the end of 1860 and beginning of 1861 much patriotic enthusiasm was on various historical occasions exhibited among the Poles, and this soon took the form of marked hostility towards the Russian Government. This effervescence of national feeling could not be accounted for by pressure of any kind on the part of Russia. In striking contrast, indeed, with the condition of things maintained under the Emperor Nicholas, the Russian or Russo-Polish administration had, since the accession of Alexander II., shown itself mild and even lax. Russia was about to undergo a great internal change through the emancipation of her serf population; and many believed that this change would be accompanied by something like convulsion. The growing revolutionary party in Poland had received an accession of strength through the return to Warsaw of exiles from Siberia; and it had got abroad that Napoleon, who had just liberated Italy, would make it his next project to raise up Poland. Prince Gortschakoff did nothing to suppress the patriotic manifestations which now followed one another rapidly in Poland. He strengthened the garrison, however, and one day, when a large crowd was singing patriotic hymns in front of the Viceroy's palace, he ordered it to disperse, and when the verbal summons was not obeyed it was charged and fired into by the troops. This was the ominous beginning of a movement destined to culminate in an insurrection which in the end would be put down, even as the demonstration in front of Prince Gortschakoff's official residence had been crushed. The prince did not live to see the smouldering spirit of rebellion burst into flames. Soon after the dispersion of the first hostile crowd he died. The last wish he expressed was that his body should be carried from Warsaw, where he had not distinguished himself, to Sebastopol, where he had covered himself with honour; and at Sebastopol his remains were interred. [H. S. E.]

* **Göschén**, THE RIGHT HON. GEORGE JOACHIM, M.P. (b. 1831), the son of Mr. William Henry Göschén, of German-Jewish family, was educated at Rugby, and at Oriel College, Oxford, whence he took his degree with a first class in 1853. From that date until 1865 he was a member of the firm of Frühling and Göschén. He was returned for the City of London in 1863 as a Liberal, and again head of the poll in 1865, shortly after

which he became Vice-President of the Board of Trade, and in 1866 Chancellor of the Duchy of Lancaster and member of the Cabinet. In 1868 he became President of the Poor-Law Board in Mr. Gladstone's ministry, and in 1871 succeeded Mr. Childers as First Lord of the Admiralty. At the general election of 1874, which resulted in the defeat of his party, he only just managed to keep his seat for the City. Two years afterwards he went to Egypt, with M. Joubert as his colleague, on one of the numerous missions which have attempted to set Egyptian finance on a firm basis; but their success was only temporary. At the general election of 1880, having declined to stand for the City again, he was returned for Ripon. Shortly afterwards, being unable to accept office because of his objections to a further enlargement of the franchise, he was sent to Constantinople as ambassador extraordinary to the Porte. His task was to compel Turkey to carry out the outstanding parts of the Treaty of Berlin, and particularly the cession of territory to Greece. Owing to the firmness of Mr. Göschén, who was greatly hampered by the holding aloof of the French Government, the Sultan eventually ceded to Greece Thessaly and part of Epirus, which the Hellenes accepted with some grumbling. Returning to England in May, 1881, Mr. Göschén became in Parliament "the candid friend" of the Liberal Government. He criticised with great severity their Soudanese policy, and at last voted against them, and also voted against the Government and in favour of Lord John Manners' amendment to the Franchise Bill of 1884, which was a demand for the bringing forward of a redistribution scheme. Outside Parliament he distinguished himself by his opposition to the doctrines of State interference, held by the Radical section of his party, and so came into collision with Mr. Chamberlain. The best exposition of his views is to be found in his interesting address to the Edinburgh philosophical society on *Laissez-Faire and Government Interference* (published 1883). Mr. Göschén has also published many of his speeches and addresses on financial and educational topics, and his treatise on *The Theory of Foreign Exchanges* has been translated into French by M. Léon Say. In 1885 Mr. Göschén was returned for E. Edinburgh by a large majority over a Radical opponent. He opposed Mr. Gladstone's Home Rule Bill, and was not returned to Parliament in the general election of 1886. At the beginning of 1887 he took office as Chancellor of the Exchequer in Lord Salisbury's Government.

Goss, SIR JOHN (b. 1800, d. 1880), musician, was the son of an organist, and was born at Fareham in Hampshire. Having studied music under Attwood, he succeeded his master as organist of St. Paul's Cathedral in 1838, and retained that position till 1872,

when he was knighted and retired. He was the author of several anthems, chants, and services, many of which were written for special occasions connected with his office. We may mention *If we believe*, composed for the funeral of the Duke of Wellington; *The Lord is my Strength*, composed for the thanksgiving service on the recovery of the Prince of Wales (1872), and *Praise the Lord*, perhaps the best known of all his works. His real strength lay in this English Church-music, though he also attempted secular themes with considerable success. His *Introduction to Harmony and Thorough-bass* was long a textbook on the subject, and he was the author of other works immediately connected with his official position.

* **Gosse**, PHILIP HENRY, F.R.S. (b. 1810), naturalist, born at Worcester, began life as a merchant's clerk. In this capacity he proceeded to Newfoundland in 1827, and thence to Canada in 1835, studying the entomology of both colonies, at that time almost quite unknown. He then visited the Southern United States, and, later, the rich island of Jamaica, making extensive collections of natural history in each. Several volumes from 1839 to 1850 were the results of these Occidental explorations, of which *The Canadian Naturalist*, *Letters from Alabama*, *The Birds of Jamaica*, and *A Naturalist's Sojourn in Jamaica*, were the chief. For several years his name was associated with the introduction of the marine aquarium to popular favour; and he has published many works, mostly illustrated, on the marine natural history of our coasts. In 1856 Mr. Gosse was elected a Fellow of the Royal Society, having already contributed to the *Philosophical Transactions* two memoirs on the anatomy of the Rotifera, of which class he is at present engaged (in concert with Dr. Hudson) on a monograph. In the Royal Society's *Catalogue of Scientific Papers* (1863) no fewer than fifty-one are assigned to Mr. Gosse; and he has written many since. He is also a writer on theological subjects. His published works amount to nearly fifty volumes.

* **Got**, FRANÇOIS JULES (b. 1822), French actor, entered the Conservatoire in 1841, and studied under Provost, obtaining the first prize in comedy in 1843. After serving for a year in a cavalry regiment, he made his first appearance on the stage of the Comédie Française in 1844, and, immediately becoming a popular favourite, rose to the position of *sociétaire* in 1850. M. Got is generally recognised as one of the most finished of living comedians, and his creations have been highly appreciated whenever he has visited this country. Although, as a rule, he confines himself to the representation of characters in modern plays, notably in those of M. Emile Augier—for instance, *Les Effrontés* and *Le Fils de Giboyer*, in which his creation of Giboyer

took Paris by storm—he is unequalled in *roles* taken from more classic sources; for instance, that of Sganarelle. His connection with the Comédie Française has been more than once severed; but, as a rule, he has acted at that theatre. He is now a professor at the Conservatoire.

Gough, HUGH, VISCOUNT (b. 1779, d. 1869), soldier, was a native of Woodstown, co. Limerick. He entered the army in 1794, and in the following year he was present at the conquest of the Cape of Good Hope, whence he went to the West Indies. In 1809 he joined the army under Wellington in the Peninsula, with the rank of major, and was second to none during the war in deeds of desperate daring, notably, at Talavera; his exploits on that field gaining him the rank of lieutenant-colonel. After the war he held command in the south of Ireland during a period of much disaffection. Created major-general in 1830, he was despatched in 1837 to India, as commander of the Mysore division of the army. On the declaration of war with China in 1838 he was sent thither as commander-in-chief. Whatever may be said against the justice of the first Chinese War, no flaw can be found in the operations of the British general, who stormed Canton, forced the passage of the Yungtse-Kiang, and in August, 1842, forced the emperor to conclude a peace, signed under the walls of Nankin. Gough was created a baronet, and returned to India as commander-in-chief. There he had no time for idleness. In December, 1843, he took command in the war against the Mahrattas, and having crushed them at the battle of Maharajpore, forced them to conclude peace at Gwalior. In 1845 the first Sikh War broke out, in which Sir Hugh Gough, ably seconded by the Viceroy, Lord Hardinge, defeated the enemy at Moodkee, Ferozeshah, and Sobraon, and compelled them to make peace. He is thought to have been rash in forcing on the battle of Ferozeshah, for our soldiers were much exhausted by their march. War, however, began again with the Sikhs in 1848, when Gough, who had been raised to the peerage two years previously, crushed them by the great victories of Ramnuggur, Chillianwallah, and Goojerat, and thus brought their independence to an end. After this he returned home, and was succeeded by Sir Charles Napier (q.v.). He was created a viscount, and received a pension of £2,000 from Parliament. This admirably thorough soldier never saw service again, but became colonel of the Horse Guards (1854), privy councillor (1859), and field-marshal (1862). His victories form important landmarks in the history of British India.

Despatches of the British generals during the campaign on the Sutlej.

Gough, JOHN BARTHOLOMEW (b. 1817, d. 1886), temperance orator, was born in Kent,

and in 1829 emigrated to America, where he was apprenticed to a bookbinder. He subsequently became very intemperate, but was induced about the year 1842 to take the total abstinence pledge. Since that time he laboured incessantly in behalf of the temperance movement in the United States, Great Britain, and the colonies. His forte was oratory, and he was enthusiastically received wherever he appeared. He made his first visit to England in 1857, and his last in 1878. He published his *Autobiography* in 1846, and a subsequent edition brings it down to 1879. In 1881 he brought out *Sunlight and Shadow*, a book full of interesting gleanings from his life. An edition of his orations, in ten numbers, has been published.

* **Goulburn, THE VERY REV. EDWARD MEYRICK, D.D.** (b. 1818), Dean of Norwich, was educated at Eton, and Balliol College, Oxford (B.A., first class classics, 1839), and was elected fellow of Merton College in 1841. Appointed incumbent of Holywell, Oxford, in the same year, he was from 1850 to 1858 head-master of Rugby School, in succession to Dr. Tait, when he became minister of Quebec Chapel, and prebendary of St. Paul's. In 1859 he became Chaplain to the Queen, and vicar of St. John's, Paddington, and Dean of Norwich in 1866. Dean Goulburn in 1872 led the opposition to Dean Stanley's proposal to make subscription to the Athanasian Creed permissive in the case of ordination, and attempted, but without success, to exclude him from the list of select preachers to Oxford University. Among his numerous theological works may be mentioned:—*Thoughts on Personal Religion* (1862), which have gone through some fifty editions; *Family Prayers* (1857), and *The Office of the Holy Communion* (1863).

Goulburn, HENRY (b. 1784, d. 1856), statesman, was educated at Trinity College, Cambridge, and in 1807 was elected M.P. for the borough of Horsham in the Tory interest. His official career began in 1810, when he became Under-Secretary for Home Affairs in the Portland-Perceval ministry, and in 1812 he was transferred to the Colonial Office as Under-Secretary by Lord Liverpool, an office which he held up to 1821. In that year Mr. Goulburn was made Chief Secretary for Ireland and a Privy Councillor. He held that office under various Prime Ministers until 1828, when the Duke of Wellington made him Chancellor of the Exchequer and a member of the Cabinet. Absent for a time from office after the formation of the Grey ministry of 1830, he was chosen in 1831 to fight Cambridge University against the advocates of reform, Lord Palmerston and Mr. Cavendish, having Mr. H. W. Peel as his colleague, and succeeded in winning the day for the Tory party. Mr. Goulburn was Home Secretary

in the Peel ministry of 1834, and in 1839 was defeated for the Speakership of the House of Commons by Mr. Shaw-Lefevre [EVERSLEY], after a close contest. Mr. Goulburn was, therefore, again available as Finance Minister when Peel formed his ministry of 1841. He was of the utmost value to his chief and warm personal friend, in the great struggle with the Protectionist party previous to the repeal of the Corn Laws, and many of the commercial and financial reforms of that period were entrusted to his care. He retired with Peel in 1846, and ceased to play a very active part in politics except when questions connected with Free Trade were under discussion, and during the last years of his life gave independent support to the Aberdeen ministry. Mr. Goulburn was one of the ablest of that able body of men known as the Peelites, of whom Lord Cardwell and Mr. Gladstone were the last to survive.

Gould, JOHN (b. 1804, d. 1881), ornithologist, was a son of a foreman in the Royal Gardens at Windsor, and acted for some time as gardener at Ripley Castle, in Yorkshire. In 1827 he was appointed curator to the Zoological Society's Museum, when he began to enjoy the friendship of Mr. N. A. Vigors, the naturalist, through whom he received the first opportunity of becoming an author, and wrote *A Century of Birds from the Himalayan Mountains*. In 1832 he brought out the first number of *The Birds of Europe* (in five folio volumes, 1832-7), while simultaneously in 1834 he issued a *Monograph of the Rhamphastidae, or Family of Toucans*, and in 1838 a *Monograph of the Trogonidae, or Family of Trogons*. In 1838 he proceeded to study Australasian birds in their own home, and personally explored Tasmania, the islands in Bass's Straits, South Australia, and New South Wales. Mr. Gould published his great work on the *Birds of Australia* in seven folio volumes (1840-8). He next exhibited a fine collection of humming birds during the Great Exhibition of 1851, bringing out an explanatory monograph on this species of birds, technically called the Trochilidae, in which he was assisted by Mr. Richter. Among his other works may be mentioned *The Birds of Asia* (left unfinished), *The Mammals of Australia*, *The Birds of Great Britain*, and *Birds of New Guinea* (1875).

Nature, Feb. 17th, 1881; *Westminster Review*, April, 1841.

* **Gounod, CHARLES FRANÇOIS** (b. 1818), the French composer, was born in Paris, and educated in music at the Conservatorium under Roicha, Halévy, and Zimmermann, whose daughter he afterwards married (1847). After gaining the prize for composition in 1839, he visited Rome and Vienna, and on his return accepted a position as organist in a church in Paris, his affection for old ecclesiastical music having been conspicuous from

the first. His earlier works were consequently of religious form, and a high mass in 1849 attracted considerable attention. His first opera, *Sappho*, was produced in Paris with considerable success in 1851. In the following year he wrote the music to the choruses of Ponsard's tragedy, *Ulysses*, and was appointed director of the Music School *Orphéon*. Other minor works followed, such as *La Nonne Sanglante* (1853) and music to *Le Médecin malgré Lui* (1858), and in 1859 Gounod on a sudden reached the height of his power and popularity with his universally known opera of *Faust*, the libretto of which is an operatic parody of Goethe's poem. It was brought out in March at the Théâtre Lyrique. The music at once became popular with the patrons of opera throughout Europe, its melody and tenderness having overcome the strictures of severer critics even in Germany, where people soon found traces of close relationship with Meyerbeer, Weber, and Mendelssohn. In 1860 *La Colombe* and *Philémon et Baucis* were produced in Paris, but were far from attaining the success of *Faust*. *La Reine de Saba* (1862) also failed, principally owing to the indifferent libretto. *Mirelle* (1864) was more successful, and has been revived several times, whilst *Roméo et Juliette* (1867) was, for a time at least, almost as popular as *Faust* itself. During the war of 1870-1, Gounod returned to London, and held several important concerts in the Albert Hall. Of his subsequent works we need only mention *Jeanne d'Arc*, a patriotic failure (1873), and the now familiar oratorio of the *Redemption*, produced under the composer's own direction at the Birmingham Festival of 1882. Gounod has also written several shorter pieces, masses, hymns, cantatas, and songs.

* **Gourko, NICHOLAS VASILYEVITCH, COUNT** (b. 1828), Russian general, is of Polish origin. He entered the Imperial Body Guard in 1846, and advancing by rapid promotion, through the favour of the Czar, became captain in 1857 (having fought with credit in the Crimean War), colonel in 1861, commander of the 4th Hussar Regiment in 1866, and major-general in 1867. The outbreak of the Russo-Turkish War gave General Gourko opportunities for distinction of which he was not slow to avail himself. Acting as leader of the advanced column of the Russian army, he took Tirnova, the capital of Bulgaria, on July 7th, 1877, and pressing onwards, he eluded the enemy and penetrated the Balkans by an unknown defile. Forced for awhile by overpowering numbers to entrench himself in the Shipka Pass, he defended himself there with dogged tenacity during many successive days (Aug. 21st to 31st), forcing the enemy at last to retire. As commander of the cavalry under Prince Charles of Roumania he first effected some brilliant feats at the siege of Plevna, and then beat off the relieving force

of Mehemet Ali Pasha at Orkhanieh (Nov. 18th). After the fall of Plevna, he pressed southwards, crossed the Balkans in December, amid severe snowstorms, and occupied Sofia without resistance on Jan. 6th, 1878. On the 26th he arrived at Adrianople, and remained there until an armistice was concluded, which eventually led to peace. After the conclusion of the war he was created Count, and was appointed Governor of Russian Poland.

Gräfe, ALBRECHT VON (b. 1828, d. 1870), one of the greatest oculists of modern Germany, was the son of the physician of Frederick William III. of Prussia, and was born at Berlin, where he received his scientific education in the university hospitals. After visiting Prague, Vienna, Paris, and London, he became professor of diseases of the eye in Berlin, and spent the rest of his life in unremitting labour on this special department, acquiring high reputation in Europe as an operator, lecturer, and scientific physiologist. His great work, entitled *Archiv für Ophthalmologie*, began to appear in 1854, and is still a text-book on the subject. His greatest practical discovery was the operation for the removal of "green cataract" by excision of part of the iris.

Dr. Eduard Michaelis of Berlin, *Albrecht von Gräfe, sein Leben und Wirken*.

* **Graham, SIR GERALD, K.C.B.** (b. 1831), soldier, the son of the late Mr R. H. Graham, a Cumberland doctor, entered the Royal Engineers in 1850, and became captain in 1858, having served throughout the Crimean War, and gained the V.C. for his gallant conduct on the occasion of the assault on the Redan. He served throughout the North China campaign of 1860-1, when he was severely wounded. In 1859 he became a major, lieutenant-colonel in 1869, and major-general in 1881. During the Egyptian campaign of 1882 he commanded the 2nd Brigade of the 1st Division, and conducted operations with conspicuous success at the battle of Kassassin (Aug. 28th). His brigade also took part in the storming of the Egyptian lines at Tell-el-Kebir. For these services he was created K.C.B. In 1884-5 he was in command of the troops on the Red Sea littoral, which operated from Suakim against the Soudanese Arabs under Osman Digna. Here his work was of the most arduous nature, the enemy fighting with unquenchable enthusiasm and refusing to acknowledge defeat. The victories of El Teb (Feb. 29th) and Tamai (March 13th) were won by simple hard fighting, and relieved Suakim for the time; but in Feb., 1885, a second advance was ordered, with the object of clearing the road to Berber. The occupation of Tamai was effected without difficulty after the enemy had been beaten off in a severe engagement near "Baker's Zereba" on March

22nd, but soon afterwards operations were confined to the neighbourhood of Suakim, and Sir Gerald Graham returned home. He was created K.C.B. in 1882, and knighted in 1884.

Graham, SIR JAMES GEORGE, BART. (b. 1792, d. 1861), statesman, was educated at Westminster and at Queen's College, Cambridge. After acting as private secretary to the British minister in Sicily he sat in Parliament, 1818-20 as Whig member for Hull. After five years' absence from public life he was returned for Carlisle, and in 1830 for the county of Cumberland. A zealous advocate of Parliamentary reform, and of the repeal of the corn duties (see his pamphlet *Corn and Currency*), he became First Lord of the Admiralty in Lord Grey's Reform ministry, with a seat in the Cabinet. In 1832, however, he resigned office because he disagreed with his colleagues on the Irish Church question, and went over by degrees to Sir Robert Peel. In 1838 he took office under that statesman as Secretary of State for Home Affairs, and retained it until 1842. During that period his unconciliatory attitude towards the reforming party in the Scottish Church made him very unpopular. [CHALMERS.] In 1844 he incurred further unpopularity through causing some of Mazzini's letters to be opened in the Post Office; but a Parliamentary Committee acquitted him entirely of any unworthy motive. Sir James Graham became First Lord of the Admiralty in the Aberdeen ministry, and as such was directly involved in Mr. Roebuck's motion for a committee of inquiry into the administration of the Crimean War, which led to its overthrow in 1855. He continued to hold office under Lord Palmerston, but resigned, with Mr. Gladstone and Mr. Sidney Herbert, when the Prime Minister agreed to the appointment of a committee. After his retirement this unlucky politician ceased to play a prominent part in public life.

Graham, THOMAS (b. 1805, d. 1869), chemist, was a native of Glasgow, and was educated at the High School of that city, and at Edinburgh University. From 1830 to 1837 he was professor of chemistry at the Andersonian University, and during that period discovered the important law of the diffusion of gases, which gained him the Keith prize of the Royal Society of Edinburgh, and election to an F.R.S. In 1837 he became professor of chemistry at the London University (now University College). The Chemical Society, which was chiefly founded through his exertions, chose him as its first president in 1840; and the Cavendish Society, founded in 1846, paid him a similar compliment. Meanwhile, his discoveries in connection with the constitution of salts and phosphoric acid had gained him the gold medal of the Royal Society, and in 1854 he made public his discovery of the diffusive force of liquids

through a porous membrane. This great chemist wrote comparatively little. His *Elements of Chemistry* appeared in 1842, the *Outlines of Botany* in 1841, and his *Chemical and Physical Researches* were privately printed in 1876. He became Master of the Mint in 1855.

Gramont, ANTOINE AGÉNOR ALFRED, DUC DE (b. 1819, d. 1880), French statesman, married an English lady, Miss Mackinnon, in 1848, and after the *Coup d'État* of Dec. 2nd, 1851, was employed by Louis Napoleon, who was his personal friend, upon various diplomatic missions. After being successively Minister Resident at Cassel, Stuttgart, and Turin, he was sent, in 1857, as ambassador to Rome. The creation of the kingdom of Italy after the campaign of 1859 naturally caused his position at the Papal Court to be extremely embarrassing, and he was accordingly recalled to France. From 1861 to 1870 he was ambassador at Vienna, and then became Minister of Foreign Affairs in the Ollivier Cabinet. In that capacity he covered himself with opprobrium by forcing on the war with Germany, first by announcing to the King of Prussia that the candidature of Prince Leopold of Hohenzollern for the throne of Spain could not be permitted, and then, when the Prince withdrew, by insisting that no member of the Prussian family should be put forward in his stead. The curt refusal of Prince Bismarck led to the declaration of war by France in July. When the ministry fell Gramont fled, a disgraced man, to England, and there published a defence of his conduct, *La France et la Prusse avant la Guerre* (1872). Shortly afterwards he returned to France, and devoted his time to commercial speculation.

* **Grant**, JAMES (b. 1822), a popular novelist, was born at Edinburgh, the son of a military officer, and spent from 1832 to 1839 in American barracks, where his father was during this time located. Returning in the latter year to England, he was gazetted to an ensigncy in the 62nd Foot, and joined the provisional battalion at Chatham. About the year 1843 he resigned his commission, and devoted himself to literature. He became a regular contributor to periodical literature, in particular the *United Service Magazine*; and in 1846 he brought out his first book, *The Romance of War*; or, *the Highlanders in Spain*, followed the next year by a companion volume, *The Highlanders in Belgium*. Mr. Grant has made Scottish antiquities a particular study, and in some of his novels he has been successful in throwing some new light on vexed Scottish questions, e.g., *Bothwell*; or, *the Days of Mary, Queen of Scots* (1851); *Lucy Arden, a Tale of 1715* (1859); and *The Master of Aberfeldie* (1884). All Mr. Grant's novels show evidence of his early bringing up and military training, and also a leaning

towards Roman Catholicism, which faith he embraced in 1875. His style is occasionally too highly coloured. Among his other novels may be mentioned:—*Adventures of Rob Roy* (1863); *The White Cockade* (1867); *Lady Glendonwynd* (1882); *Jack Chaloner, or the Fighting Forty-third*; and *Miss Cheyne of Essilmont* (1883). Mr. Grant has also written *British Battles on Land and Sea* (1873–5); *Old and New Edinburgh* (1880–3); and *Cassell's History of the War in the Soudan* (1885), etc.

* **Grant**, JAMES AUGUSTUS (b. 1827), traveller, is the son of a Scottish clergyman, and was educated at the Main School College, Aberdeen. He entered the army and served in the Sikh Wars and through the Mutiny, being wounded at the relief of Lucknow. He also accompanied the Abyssinian Expedition of 1868, as a member of the Intelligence Department, and in 1872 retired with the rank of lieutenant-colonel. He is, however, better known, perhaps, as an African explorer than as a soldier. In 1860–3 he accompanied Captain Speke (q.v.) during the famous journey into the unknown regions of Central Africa, in quest of the sources of the Nile, which resulted in the discovery of Lake Victoria Nyanza. Captain Grant described the expedition in the *Journals* of the Royal Geographical Society, and its botany in those of the Linnean Society, and his delightful *Walk across Africa* (1874) was supplementary to the joint account of the expedition.

Grant, ROBERT EDMOND (b. 1793, d. 1874), a Scottish naturalist, and one of the founders of comparative anatomy in this country, was born in Edinburgh, and after being educated at the High School and University of that city, graduated M.D. in 1814. After spending five years on the Continent he returned to Edinburgh, became a fellow of the Royal College of Physicians, and began the practice of medicine. Science, however, occupied much of his time, while acting as assistant to Dr. Barclay, then a famous teacher of anatomy in the Extra-Academical School. Several of his zoological papers appeared in the *Memoirs of the Wernerian Society*, and in the *Edinburgh Philosophical Journal*, where (vols. i. and ii.) were published his celebrated discoveries regarding the circulation and development of the sponges, to one of which, *Grantia compressa*, a common species on the British coast, Dr. Fleming attached his name. (*British Animals*, 1828, p. 524.) In 1827 he was elected professor of zoology and comparative anatomy in University College—or, as it was then called, "the University of"—London, a Chair which he occupied for the rest of his life. He now commenced a series of researches into the structure of *Sepioida*, *Loligopsis*, and *Beroë*, which appear in the first volume of the Zoological Society's *Transactions* (1833), and soon afterwards published his *Outlines of Comparative Anatomy*, which for many years was the favourite

text-book not only in this country, but on the Continent and in America. Henceforward he devoted himself mainly to the duties of his post, and to private study. Not only zoology, but philology, occupied much of his attention. When nearly seventy he entered himself as a pupil under the professor of Anglo-Saxon, and among the latest of his acquisitions, only a year or two before his death, he taught himself Danish, during a summer visit to Copenhagen. Travel, indeed, absorbed much of his leisure, for, never marrying, he had no ties to keep him at home the moment his lectures were finished. In 1836 he was elected F.R.S., and in 1837 Fullerman professor of physiology to the Royal Institution. During forty-six years he never missed a lecture, and though latterly rather out of touch with the current ideas, his adaptability was such that he was able to be equally lucid to Hallam the historian, and to the small boy who during one session formed the rather trying occupant of his benches. He bequeathed his fine library and private collections to University College, with a sum of money for the purpose of maintaining and extending them. [R. B.]

Grant, Sir ALEXANDER, BART. (b. 1826, d. 1884), scholar, was educated at Harrow, and Balliol College, Oxford, and was elected in 1848 to a fellowship at Oriel. For ten years he remained in residence, taking private pupils, and preparing the edition of the *Nicomachean Ethics of Aristotle* (1857, 4th ed. 1885), upon which his reputation as a scholar chiefly rests. Although perhaps defective in point of scholarship, this work gave a great impulse to the study of Aristotle, not only at Oxford, but throughout England, the preliminary essays being well written and suggestive. In 1859 Sir Alexander Grant went out to India as inspector of schools and professor of history at Madras, and in 1862 he was transferred to Bombay, where he filled successively the offices of principal of Elphinstone College and director of Public Instruction. In 1868 he was chosen principal of Edinburgh University in succession to Sir David Brewster; and under his principalship new Chairs were created, new scholarships founded, and a splendidly appointed medical school was built. He died a few months after the great tercentenary celebration of the University. Sir Alexander wrote *Aristotle and Xenophon* in the series of *Ancient Classics for English Readers* (1870), and an article on *Aristotle* in the *Encyclopædia Britannica*; and his *Story of the University of Edinburgh during its First Three Hundred Years* (1884) is a very valuable work. He was the editor of his father-in-law Professor Ferrier's *Greek Philosophy* (1866), and the author of several essays.

Academy, Dec. 6th, 1884; *Scotsman*, Nov. 1. 1884.

Grant, Sir FRANCIS (b. 1803, d. 1878), artist, was the elder brother of Sir Hope

Grant, and inherited a considerable fortune from his father, which, however, he ran through when quite a young man. He thereupon determined to apply himself to art, and coming to London managed to gain an extensive *clientèle* through his good family connections. He soon became the fashionable portrait-painter of his day; and, though he can hardly be said to have cultivated art for art's sake, his creations show a considerable amount of technical skill. He was elected A.R.A. in 1841, R.A. in 1851, and president of the Royal Academy in succession to Sir C. Eastlake (q.v.) in 1866.

Grant, Sir JAMES HOPE (b. 1808, d. 1875), soldier, was a brother of Sir Francis Grant (q.v.). He entered the army in 1826, and became captain in 1835. After distinguishing himself in the first Chinese War he rose to the rank of major, and fought with conspicuous skill in the first and second Sikh Wars. On the outbreak of the Indian Mutiny Grant had attained the rank of lieutenant-colonel, and played a prominent part in its suppression. As brigadier of cavalry he was employed in the siege of Delhi, and aided in its recapture on Sept. 20th, 1857. He was then sent with a force of cavalry and artillery to open communications with Sir Colin Campbell [CLYDE], and effected a junction with the commander-in-chief near Alumbagh. Then he was sent, in co-operation with Campbell, to the relief of Cawnpore, and by a brilliant manoeuvre took the rebels in the rear and scattered them. Lucknow was also retaken by his aid, and he was promoted major-general. Sir Hope Grant was next placed in command of the force which stamped out the embers of the rebellion. In 1860 he was placed at the head of the force sent from India to co-operate with a French contingent against China. The Taku forts speedily fell, and after the burning of the emperor's summer palace, Peking surrendered, and peace was made. For these services he was created G.C.B. From 1861 to 1865 he was commander-in-chief of the army of Madras, and in the latter year, having returned to England, he became quartermaster-general at head-quarters. From 1872 until his death he was in command of the camp at Aldershot.

Sir J. Hope Grant, *Incidents in the Sepoy War, and Incidents in the China War of 1860*, edited from his journals by Captain H. Knollys.

Grant, ULYSSES S. (b. 1822, d. 1885), an American general, and eighteenth President of the United States, was called Hiram Ulysses at his birth, but by an error was appointed to a cadetship as Ulysses S., and subsequently in signing his name used the form in which it appeared upon the roll at West Point. He was descended from a family of the early settlers of New England, said to have been of Scottish origin. He entered the Military Academy in 1839, was

graduated in 1843, and was ordered to duty with the 4th Regiment of infantry, then on the Missouri frontier. In the summer of 1845 he joined, with his regiment, General Taylor's army in Texas; was commissioned lieutenant, and served in the battles of Palo Alto, Resaca de la Palma, Monterey, Molino del Rey, and Chapultepec, and at the siege of Vera Cruz. For conspicuous gallantry at Chapultepec he was brevetted captain to date from that battle. In 1848 he married Miss Julia T. Dent, and in 1854, while stationed in Oregon, resigned his commission. In 1861, upon the breaking out of the Civil War, he resided at Galena, Illinois, where he was chosen captain of a company of volunteers, with which he marched to Springfield. He was retained there by the Governor as an aid in the organisation of the State's military contingent. Given a regiment, and rapidly promoted, he was by autumn in command of a military district, composed of parts of Missouri, Illinois, and Kentucky. Grant attacked at Belmont, in Missouri, Nov. 7th, a force organising there for offensive operations in another part of the State, and having inflicted such damage as prevented its contemplated movement, withdrew. This was his first battle as a commander. On Feb. 3rd, 1862, he marched with 15,000 men against Fort Henry on the Tennessee river, which surrendered on the 6th; and with reinforcements, which raised his total to 30,000 men, he moved against and captured Fort Donelson on the Cumberland, Feb. 16th. In answer to the proposition of General Buckner to capitulate, he said no terms would be accepted but those of "unconditional surrender." Grant was promoted major-general of volunteers, to date from Feb. 16th. These operations were immediately followed by a movement against the Confederate army of 50,000 men at Corinth, Mississippi. General A. S. Johnston, commanding that force, assumed the offensive while Grant's force was still in course of concentration at Pittsburg Landing, on the Tennessee river, and fought the battle of Shiloh, April 6th and 7th. In this battle the Union forces were on the first day driven from their lines, but held at night a position near the river, with the river behind. Here they were reinforced by General Buell, and advancing next day gained a decisive victory. On Sept. 19th General Grant defeated General Price at Iuka. On Oct. 16th was created the Department of the Tennessee, which included Mississippi as far as Vicksburg, and Grant was assigned to the command, and began operations against the river stronghold. Five months were consumed in fruitless operations on the north of the city, and at the end of April, 1863, Grant moved southward west of the Mississippi river, crossed to the east side at Bruinsburg, turned the Confederate left, and pushing forward toward Jackson, prevented the junc-

tion of General Joe Johnston with Pemberton, and shut Pemberton within the Vicksburg fortifications. Vicksburg surrendered after a regular siege, July 4th. Grant was promoted to be major-general of the regular army, with commission of the same date. He was now assigned to the Department of the Mississippi, including the armies of Sherman, Thomas, Burnside, and Hooker. During the operations at Vicksburg, General Rosecrans, facing Bragg in middle Tennessee, had remained inactive, and when he moved, the result of his strategy was the battle of Chickamauga in September, from which the Southern army was barely saved. General Thomas was now shut up in Chattanooga, Bragg holding Missionary Ridge and Look-out Mountain. From those positions he was driven by Grant in the brilliant movement of November 24th-25th, and Chattanooga was relieved. In the first session of Congress following this event, a gold medal was voted to Grant, and the thanks of the country to his armies. On March 1st, 1864, Grant was made lieutenant-general, the grade being created for the occasion. He received his commission personally from the President at Washington, and, on March 17th, issued a general order assuming command of all the armies of the United States. From this date the war entered upon a new phase, and peace was proclaimed within twelve months of the first battle following the change. Unity of command over the whole sphere of military operations, and as to all men in the field, was the first result. Previously this had existed in name only. Grant's plan for the operations of the year was a simultaneous forward movement down the Mississippi Valley in the west, and towards Richmond, by the army of the Potomac. Grant remained with the army of the Potomac, which crossed the Rapidan May 3rd. It numbered 120,000 men. Sherman, in the west, moved the same night. Lee's army, 60,000 men, was concentrated in the neighbourhood of Orange Court House. Grant marched from the Rapidan due south with a view to moving around Lee's right. Lee attacked him on the march in the Wilderness, May 5th, and on that day and the next there was hard but indecisive fighting. From the ground of this battle Grant marched to Spottsylvania. This was by some persons called "Grant's retreat;" but Lee did not so regard it. It is true that Lee, having shorter distances, skilfully anticipated his opponent at Spottsylvania, and Grant gained, therefore, by the march, only the advantage of fighting in a more open region. On May 10th, an ineffective attempt was made to force Lee's line. On the 12th a fortified position on his front was carried, but was retaken, and so was captured and recaptured several times in the day. It was from this field that Grant telegraphed his report containing the words, "I propose to fight it out

on this line if it takes all summer." This was a characteristic expression of his resolution, but somewhat under-estimated the duration of Lee's resistance. By March 17th, though there had been hard fighting and very heavy losses on both sides, no effective impression had been made on Lee's line, and Grant again marched towards Richmond, around the Confederate right to the north of the Anna river. Here Lee again confronted him, and Grant, after a conflict comparatively trivial, moved forward again, and reached Cold Harbour, where a terribly bloody but indecisive battle was fought, June 2nd. Grant crossed the James river, and began the siege of Petersburg, which place Lee, always keeping himself between Grant and Richmond, had already seized. Hood had been annihilated at Nashville; Sherman had captured Atlanta and Savannah, and was coming northward through the Carolinas, when, in April, 1865, seeing no hope for his cause but in the desperate project of a combination with Johnston's army, then retiring before Sherman, Lee endeavoured to retreat. He was brought to bay at Five Forks, and in consequence of his defeat in the battle there, he surrendered, and laid down his arms at Appomattox, April 9th, 1865. Johnston surrendered to Sherman in the same month. Grant's plan for the co-ordinate operation of two great armies had produced the result proposed, and resistance was at an end. General Grant's attention was now given to steps taken for disbanding the army, the completion of which was only delayed to secure the evacuation of Mexico by the French. Grant was made general of the armies of the United States, July 25th, 1866. Great political excitement had followed the assassination of Mr. Lincoln, and this was increased by the peculiar attitude of his successor in the presidency, President Andrew Johnson (q.v.), with regard to the restoration of the revolted States to their rights in the Union. In these circumstances Grant, being Secretary of War *ad interim*, pending a disputed removal, it was thought that his discretion defeated a conspiracy planned to deprive the North of the fruits of its success in the field. In 1868 General Grant was elected President of the United States, and was re-elected in 1872. During the eight years of his administration, the main problems of legislation and government were those that related to the restoration of order and industry in the Southern States, the protection of the enfranchised negroes, and those measures of financial administration which, initiated in this period, made possible the subsequent return to specie payments. Under Grant was carried out the negotiation in regard to the *Alabama* claims, in virtue of which the English Government paid to the United States the sum of \$15,500,000 as indemnity for merchant ships destroyed at sea by so-called Confederate cruisers fitted

out or supplied in British ports. Grant was a capable and successful commander. His dominating faculties were close, correct reasoning, and good sense. Happy strategic conceptions are rare in the story of his campaigns, but of gross blunders there is not one. Only a continued series of great faults in the military operations of the stronger side can give ultimate victory to the feebler side in such a war as that between the Northern and Southern States; and Grant was an ideal commander for a Government possessed of overwhelming resources. In politics he was less happily adapted to the position he was called to occupy. Trained from early life in a military school and in the army, he never comprehended the administrative methods of civil life; and the habit of absolute command caused him to fret and chafe against the humiliations of a constitutional office. He chose his Cabinet and appointed many subordinates for reasons of personal inclination rather than from a legitimate judgment of their qualifications; and these beneficiaries of his errors persuaded him that all criticism of his conduct was inspired by the malignity of opponents. Mistaken in his friends, and yet, in a sphere to which he was new, reposing in them unlimited confidence, he was thus almost unconsciously launched upon a policy of defiance of public opinion and political morality. His intention was to govern justly and honestly, to deal fairly and gently with the Southern people in the effort to construct order and prosperity where the war had left chaos. Yet his easy dealing with party and personal favourites resulted in the enormous corruptions of the so-called "Carpet-bag" Governments in the South—Governments organised to enrich political adventurers with the plunder of conquered States—and the extreme demoralisation of the public service in the North. Towards the end of Grant's second term in the presidency his admirers proposed him as candidate for a third term. Other ambitious candidates, alarmed at this danger to their hopes, straightway denounced the proposition as an attempted violation of a great political tradition; and a foolish clamour, the burden of which was Cæsarism, was made by orators and writers, apparently not aware that an essential element in the establishment of the permanent authority of a military commander is the continued existence of the army accustomed to obey him. Grant had himself initiated and pushed to its conclusion the disbanding of the army. Upon his retirement from office, General Grant made a tour around the world, that being his first experience of foreign travel. He was received with a hospitality that assigned to him a representative position, and which assumed the character of a demonstration of goodwill towards his country. Grant was a poor man at the beginning of the war, and was still a poor man after sixteen years of public

service as the head of the army and the head of the State. Some rich citizens, desiring to relieve him of the worry of financial cares, made for him in a private way upon his retirement such provision as is commonly made for successful soldiers by the Government in other countries; but his fortune fell a prey to speculative villany. His great name, and its influence in inspiring confidence, presented themselves to the vision of an arch-schemer only as baits to catch the gullible people; and hence arose the notion of constructing a bubble company, which should be commended to the public by the use of Grant's name. Grant's sole thought was to help his boys; in a scheme which he believed to be honest, he invested his money, and it was lost; and he was in addition left deeply in debt. With characteristic courage and hopefulness he addressed himself, at the age of sixty-three, to writing an account of his life, the sale of which it was believed would be remunerative. It is not the least notable fact in his career that his endeavour to restore his fortunes in this generally unpromising way was entirely successful. In 1884 it was reported that he was suffering from a cancerous disease likely to shorten his life; and it was thought that the chagrin due to the defeat of a Bill in Congress for restoring him to his military grade accelerated the progress of the malady, though he was by another Bill subsequently restored to the position in the army which he had resigned upon his accession to the presidency. His disease made rapid progress, and was fatal after an illness that was in effect a prolonged torture. He wrote his personal memoirs of his public life during the progress of the disease.

Personal Memoirs of Ulysses S. Grant, vols. i., ii. (New York, 1885); Adam Badeau, *Military History of Ulysses S. Grant* (New York, 1888-81); *Report of the Operations of the Union Army from March, 1862, to the Close of the Rebellion* (New York, 1868).

[G. W. H.]

* **Granville**, THE RIGHT HON. GRANVILLE GEORGE LEVESON - GOWER, 2ND EARL, K.G. (b. 1815), was educated at Eton, and at Christ Church, Oxford, where he took his degree in 1834. He first entered Parliament as Liberal member for Morpeth in 1836, which seat he exchanged for Lichfield in 1840, and succeeded to the peerage in 1846. Office first came to him in 1840, when for a few months he was Under-Secretary for Foreign Affairs. Having been appointed Vice-President of the Board of Trade in 1840, he entered the Cabinet in 1851, and was Foreign Secretary during the expiring weeks of the ministry of Earl Russell. From that time no ministry of which Liberals formed a whole or a part was regarded as complete without him, and after filling the offices of Lord President of the Council and Chancellor of the Duchy of Lancaster, he became Lord President of the Council and ministerial

leader in the House of Lords (1855-8). The fall of the Palmerston ministry was followed by the brief Derby administration, but 1859 saw him once more Lord President of the Council, his attempt to form a ministry including both Palmerston and Russell having failed, owing to the latter's preference for Palmerston as a leader. In 1860 he accepted the position of Chairman of the Commission of the Great Exhibition of 1862. Lord Granville continued in office until 1866. In December, 1868, he became Mr. Gladstone's Colonial Secretary, and after the death of Lord Clarendon (q.v.) in 1870, Secretary for Foreign Affairs. As such he arranged the treaty between England, France, and Prussia guaranteeing the independence of Belgium, in 1870, and met with a dignified protest Russia's repudiation of the Black Sea clause of the Treaty of Paris, but the London Conference of January-March, 1871, resulted on the part England in the surrender of her demand that no Russian men-of-war should appear on those waters. About the same time Lord Granville and Prince Gortschakoff confirmed the agreement that Afghanistan should form an "intermediary zone" between England and Russia. This was followed by the Russian advance upon Khiva in 1873, in spite of the assurance given by Count Schouvaloff, made to Lord Granville in January, that no permanent occupation was intended. The general election having resulted unfavourably to the Liberals, Lord Granville again became leader of the Opposition in the Upper House, and conducted with much quiet irony the attacks upon the ministerial party, which was stronger both in numbers and oratorical ability than his own. Some of his speeches on the Eastern Question were particularly incisive. In 1880 he became once more Minister of Foreign Affairs under Mr. Gladstone. The first question that came before him was the settlement of the outstanding matters connected with the Berlin Treaty. By a naval demonstration the Sultan was forced to surrender Dulcigno to Montenegro; but Greece, owing to the supineness of France, had to put up with a frontier line drawn much farther south than she had hoped. In May, 1881, he launched a vigorous protest against the occupation of Tunis by the French. From that time forward Egyptian affairs occupied for the most part the attention of the Foreign Secretary. The military revolt of Araby Pasha against the Khedive was suppressed by British bayonets at Tell-el-Kebir on Sept. 12th, 1882, and early in the following year the Anglo-French control was abolished, and an attempt made to set up popular institutions in the country. These reforms were explained by Lord Granville in a circular note to the Powers. In April, 1884, he issued invitations to the Powers to attend a Conference on Egyptian finance, over which he presided, but it separated in August without result, owing to French hostility.

Meanwhile the appearance of the Mahdi in the Soudan threatened the very existence of the Egyptian Government, and a series of disasters ensued. [EGYPT; GORDON; GRAHAM; WOLSELEY, etc.] In other quarters the Foreign Secretary had cause for anxiety during the last days of the Liberal Government. France was openly hostile owing to our intervention in Egypt; Prince Bismarck showed anger at the English opposition to his colonial schemes; and above all, the attempt to demarcate the Afghan boundary seemed to have failed owing to the non-arrival of the Russian commissioner, while the advance of the Russian troops upon certain positions held by our Government to be within Afghan territory, seemed for a brief moment to have rendered a new war with Russia inevitable. Lord Granville retired with his colleagues from office in May, 1885, but on Mr. Gladstone's return to power in 1886, became Colonial Secretary.

Grattan, HENRY (b. 1746, d. 1820), Irish patriot, was the son of the Recorder of the city of Dublin. He entered Trinity College, Dublin, and was called to the Irish bar in 1772, but devoted little attention to his profession, his gaze being fixed on a political career. Of that career, which was almost entirely outside the century, only a brief summary can be given here. Grattan entered the Irish Parliament in 1775, and at once took his place among the brilliant Opposition. In 1780 he moved his resolutions to the effect that the crown was the only link between England and Ireland, and he was one of the leaders of the famous Volunteer movement of 1782 which, combined with the dangers menacing England from the Continent, compelled the Government to concede independence to Ireland. The career of "Grattan's Parliament," as it is deservedly called, was not fortunate. The ill-defined relations with England, and the utter corruption of the majority, were perpetual obstacles in the way of steady progress, and Grattan's reforms were rejected one after the other. The question of Catholic Emancipation was one on which Grattan thought differently from many of his party; and the result of divided counsels was that the direction of popular feeling passed from him to the United Irishmen, who, after extorting the franchise, but not admission to Parliament, from England in 1793, avenged the recall of Lord Fitzwilliam by the rebellion of '98. This gave Pitt the opportunity for which he had long been seeking, and the motion for the union, backed by extensive promises and rewards, was introduced in the Irish Parliament. It was to oppose it that Grattan, who had been for some years in retirement, re-entered political life, though in feeble health. His speeches upon this, as upon other topics, have few equals in our language for glowing fervour and glittering beauty of phrase. After

the union Grattan once more retired into private life until 1802, when he took his seat in the English Parliament as member for Malton, and in the following year was elected for Dublin. His success in the House of Commons was complete, and forms a striking contrast to the breakdown of Flood. He was offered but refused office in his friend Fox's ministry, and magnanimously brought much odium upon himself in Ireland by supporting the Government during the debates on the Irish Insurrection Bill of 1807. During the last years of his life he directed his efforts solely to the cause of Catholic emancipation, and in 1819 was within two votes of carrying his motion. At the close of a career of spotless integrity, considerable statesmanship, and almost unvarying misfortune, he was buried in Westminster Abbey, near Fox, and not far from Castlereagh.

Grattan's Memoirs, by his son, Henry Grattan, and his *Speeches*, edited by the same; *Lecky, Leaders of Public Opinion in Ireland*.

* **Gray, ASA** (b. 1810), the most distinguished of American botanists, was born at Paris, in the State of New York, studied medicine, and in 1831 graduated M.D. at Fairfield College. After practising for some time, he began the active study of botany under the guidance of the late Dr. Torrey, and in 1834 was appointed to accompany Commodore Wilkes in his exploring voyage round the world. Owing to the delay which attended the starting of the vessels, Dr. Gray resigned his connection with it, and in 1842, after holding some minor offices and publishing various papers on botanical subjects, he was elected to the Fisher Chair of natural history, in Harvard College, Cambridge, Mass. His career was from that period one of uninterrupted labour in the interest of his chosen field of research. In 1838 he began, in collaboration with Dr. Torrey, the *Flora of North America*, but of this work only one volume was published, until in 1877 Dr. Gray undertook to finish it on a new and necessarily enlarged plan. In 1848 his *Manual of the Botany of the Northern States* appeared, and in the same year the *Genera Floræ Boreali-Americanae*, which is still unfinished. The plants of the exploring expedition, which he did not join, occupied him for several years longer, while his *Text-book of Botany*, and a series of more popular elementary treatises, have made him widely known in Europe and throughout the United States. In addition to these works he has published numerous papers in the *Transactions of the Smithsonian Institution*, and the various scientific societies and journals. It may be added that he has also frequently visited Europe for scientific purposes, is a foreign member of the Royal and Linnean Societies, and an Associate of most of the societies of his own country and of Continental Europe. In 1874 he was elected a Regent of the Smithsonian Institution.

In 1877 he accompanied Sir Joseph Hooker on a botanical journey across the Continent of America, and at the Californian meeting of the American Association for the Advancement of Science he acted as president. Dr. Gray was one of the earliest converts to the doctrines of Darwin, and by his speeches and writings has done much to popularise the theory associated with the name of the great English naturalist.

Gray, DAVID (b. 1838, d. 1861), a poet, was born at Duntiblae, a small village on the Luggie, some eight miles from Glasgow. His father was a weaver, and in Gray's childhood the family removed to the neighbouring hamlet of Merkland. Having received a fair education, the boy began to write verses, and imagined himself a greater poet than perhaps he would have become even if he had lived. After several rather hysterical appeals for literary assistance and advice to various celebrities of the time, and some encouragement from Sydney Dobell, he came to London in 1860, and was received into the patronage of Monckton Milnes, who secured him literary employment, and endeavoured to publish his long descriptive poem called *The Luggie*. Some months later signs of consumption showed themselves, and after some vain wanderings in search of restoration, the young poet died in his home at Merkland, leaving for his memory only one little volume, that contains *The Luggie*, some lyrics of nature, and a few sonnets with the title *In the Shadows*, that were written during his closing days, and are the finest remains of his work.

Introductory Notice, by Monckton Milnes (Lord Houghton) to *The Luggie and other Poems* (1862); Matthew Arnold's essay on Maurice de Guérin.

Gray, GEORGE ROBERT (b. 1808, d. 1872), naturalist, brother of John Edward Gray (noticed below), was early imbued with a love for natural history, and contributed, in 1829, descriptions of some new species to Griffith's translation of Cuvier's *Règne Animal*. In 1837 he commenced the publication of the *Genera of Birds*, comprising their generic characters, illustrated with figures by D. N. Mitchell (London, 3 vols. 4to), the appearance of which at once gave its author a high reputation among English naturalists. In 1831 Mr. Gray received an appointment in the Natural History Department of the British Museum, through the influence of the late Mr. Children, for whom he had previously arranged a valuable cabinet of entomology. In 1840 he issued *A List of Genera of Birds, with an Indication of the Typical Species of each Genus*, followed in 1841 by *The Synonyma* of the same, and in 1844-9 by an illustrated edition. In 1846 he published *A Description and Figures of some new Lepidopterous Insects, chiefly from Nepal*. Many of the catalogues of natural history published by the trustees

of the British Museum are from Mr. Gray's pen.

Athenæum, May 11th, 1872.

Gray, JOHN EDWARD (b. 1800, d. 1875), naturalist, was educated for the medical profession, and very shortly exhibited his biological taste by assisting his father, Samuel Frederick Gray, in preparing *The Natural Arrangements of British Plants*. In 1824 he was appointed an assistant in the Natural History Department of the British Museum, where, with the assistance of Dr. Leach, he commenced the study of zoology to such good purpose that in 1840 he succeeded Mr. Children as keeper of the zoological collection of the museum. Under his superintendence the natural history collection in the British Museum, now at South Kensington, became the noblest the world has ever seen. Mr. Gray was the leading spirit of the *Annals and Magazine of Natural History*, and the author of *A Manual of the Land and Fresh-water Shells of the British Islands* (1840), *A Handbook of British Water-weeds* (1864), the *Zoological Miscellany*, the *Knowsley Menageries*, besides editing over a hundred catalogues and lists of natural history exhibits in the British Museum. He was pre-eminently a scientific naturalist as distinguished from a popular writer, and his work is therefore better known to students and professors than to the general reader.

Athenæum, March 13th, 1875; *Nature*, March 11th, 1875.

Greece, THE KINGS OF, or, more correctly, the **KINGS OF THE HELLENES**, date from 1833 only. National independence had been extorted from Turkey, thanks chiefly to the aid of Mr. Canning, by the year 1828, but anarchy followed, and, after the murder of Capodistrias (q.v.), the President of the Greek Republic, the intervention of the Powers became inevitable. A conference was accordingly held at London, at which the Allied Powers (England, France, and Russia), guaranteed a loan of six millions to the new Greek kingdom, and selected, after some difficulty, Frederick Louis, the second son of Louis of Bavaria, to rule over it. OTHO I. (b. 1815, d. 1867), as he styled himself, began to reign in 1833. During his minority a German regency directed affairs, which proved out of sympathy with the Greek nation, and of distinctly despotic tendencies. On attaining his majority in 1835, King Otho found himself confronted by what was little short of a general rising, which, however, was easily suppressed. His marriage with Princess Amalia, daughter of the Grand Duke of Oldenburg, gained him some temporary popularity, which was strengthened by the dismissal of the ex-regent, Count Armandsparg (q.v.), from the presidency of the council, and the proclamation of Greek as the official language. But Otho wished to play the

benevolent despot, though absolutely devoid of initiative, and excelling only in the punctilious performance of routine. The result was chaos. In 1843 the Greek people rose, extorted from King Otho a liberal Constitution wrought after the usual French model, and compelled him to dismiss his Bavarian advisers. For a while there seemed a hope of better things, but gradually anarchy and bankruptcy returned. The unfortunate attempt to profit by the Crimean War, by attacking Turkey on the side of Thessaly and Epirus, was visited by the displeasure of France and England, who occupied the Piræus, and compelled the Greeks to abandon the Russian alliance. Discontent increased; senators might be bribed, but the people would not be quieted. In 1861, during the absence of the king, an attempt was made to assassinate Queen Amalia; and in February, 1862, the revolt began, which, though at first crushed, drove Otho from the throne in October. Otho retired to Bavaria, where he spent the remainder of his days in retirement. He died in July, 1867; having failed in a position where success would have been difficult, chiefly because he was a dull man, who failed to understand that foreign bayonets are an unbearable source of irritation.

Relieved of King Otho, the Greeks proceeded to elect a new king by universal suffrage, and their choice fell upon Prince Alfred, now Duke of Edinburgh, by a huge majority. The protecting Powers, however, having agreed that no member of their own royal families should succeed, Prince Alfred was declared ineligible; and, at the request of the Greek nation, England agreed to find them a king. After some difficulty, Earl Russell succeeded in inducing Prince William of Denmark, the brother of the Princess of Wales, to accept the uneasy throne. *GEORGE I. (b. 1845), as he styled himself, who had served in the Danish navy, began to reign in 1863. Despite the popularity gained at the outset of his reign through the addition of the Ionian Isles, which had been since 1815 under a British Protectorate, to the Greek kingdom, and by the new Constitution of 1864, King George was never too firmly established on the throne. The Constitution, which invested the legislative power in a single chamber (called the Boule) elected by manhood suffrage, unreasonably met with unreasonable objections from the Democratic party, when a Council of State, with powers of revision, was added as a make-weight. The council was abolished in 1865; but since then the Government has been most insecure, and the average duration of a ministry less than a year. In 1875 an attempt to pack the Chamber with an informally constituted majority was warmly resented by the nation, and the king had to avoid a revolution by agreeing to a dissolution. Neither can it be said that of late years agriculture has much

improved, or that brigandage has sensibly diminished. One source of uneasiness to the Government has been the burning desire of the nation to recover its ancient possessions. Strong sympathy was manifested towards the Cretans when in 1866 and 1869 they rose against the Porte; and the outbreak of the Russo-Turkish War naturally fanned the national enthusiasm. After in vain attempting to stem the tide, King George was compelled, early in 1878, to allow his troops to cross the frontier, but the movement, discountenanced by the Powers, came to nothing. At the Congress of Berlin Greece was informed by Lord Beaconsfield that she had a future. The Porte, however, neglected to make good its promises; throughout 1880 vain attempts were made by the Powers to settle the question, and, in the following year, the Greeks had to accept an arrangement by which they received Macedonia and part of Epirus, the Porte still retaining the fortresses of Metzo and Janina. More than once during this period it seemed as if King George would have to abandon the throne: and when, with the queen, Olga, daughter of the Grand Duke Constantine, he started on a long tour through Europe in 1880, rumour had it that he intended never to return. In 1885, when the union of the two Bulgarias under Prince Alexander [BULGARIA] once more re-opened the Eastern Question, the Greek nation armed and entered into friendly relations with Servia. To a collective note of the Powers, requesting her to disarm, Greece returned a refusal; but she was then informed (January, 1886) that in the event of disobedience she would be coerced. Nevertheless, the situation continued to be extremely gloomy throughout the spring.

Finlay, *History of Greece*, vol. vii.; Lewis Serjeant, *New Greece* (*Blackwood's Magazine*, November, 1863); and the *Annual Register* for recent years. [L. C. S.]

Greeley, HORACE (b. 1811, d. 1872), American journalist and politician, was the son of a farmer of New Hampshire, U.S. and was apprenticed to a printer at Putney, in Vermont. In 1831 he arrived in New York with twenty-five dollars in his pocket, and having made a little money by printing, started a daily paper which was a hopeless failure. The *New Yorker*, however, a weekly journal which he founded in 1834, was a fair success for a while, and led up to the issue of the *New York Daily Tribune* in 1841. This paper he edited until almost the day of his death, and wrote many of the leading articles. In spite of much eccentricity of view, he undoubtedly exercised a beneficial influence upon public life, and that chiefly through his transparent honesty of purpose. As a journalist, he soon became a power in the State, but although elected to Congress in 1848, he failed to make his mark there, and was not returned again. Greeley was, during the Civil War, a

firm supporter of the Union, and lent the powerful aid of the *Tribune* to the candidature of Lincoln, and, after the struggle was over, advocated no less eloquently the burial of the past. At the cost of much unpopularity, he was one of the bondsmen of Jefferson Davis, and favoured the plan of universal amnesty and universal suffrage. His *American Conflict* (1864) shows upon every page the simple piety and rugged sincerity of its author. Greeley twice visited Europe, and on the second occasion was one of the jurors of the International Exhibition of 1856. On social questions he was a more or less consistent disciple of Fourier (see his *Hints Towards Reforms*, 1850, and *What I know about Farming*), but his political principles gradually changed. One of the founders of the Republican party in 1855, he gradually drew nearer to the Democrats, and in 1872 was nominated as a candidate for the presidency by the Convention of "Liberal" Republicans at Cincinnati, and accepted by the Democratic Convention of Baltimore. His platform was the abolition of the corruption which was held to have characterised the Grant administration. After an electioneering tour in which he spoke some 150 times, Greeley had to submit to the mortification of a thorough defeat, President Grant being re-elected by a majority of over 725,000, chiefly through the abstention of many of the Democratic party. From this blow, and the death of his wife, he never rallied, and on Nov. 29th he died, having lived a life of much error, but of more integrity.

His interesting autobiography, *Recollections of a Busy Life* (1869), and notices in *Harper's Magazine*, vol. xvi., and the *Galaxy*, vol. xv.

* **Greeley**, MAJOR ADOLPHUS W. (b. 1844), Arctic explorer, was born at Newbury Port, U.S., and enlisted in the volunteer army, at the beginning of the Civil War in 1861. At the end of the war he attained the rank of captain, was brevetted major for his services, and subsequently promoted lieutenant. In 1868 he entered the signal office of the War Department, where he was engaged in telegraphy. In 1873 he surveyed the Mississippi and Missouri, with the object of determining their characteristics in relation to dangerous floods and overflows. In 1880 President Garfield appointed him leader of the U.S. Arctic expedition, a post which, although he lacked a seaman's training, he was eminently fitted to occupy from his intimate acquaintance with meteorological research. In 1881 Lieutenant Greeley, at the head of an expedition of twenty-five men, set sail for the Arctic regions. They were soon lost sight of, and nothing was heard of them till June, 1884, when they were rescued off Cape Sabine, by the United States exploring vessels *Thetis* and *Bear*, under Captain Schley, the third expedition that had gone to their relief. In the meantime Greeley's party had suffered terrible privations, and were accused of cannibalism,

which Major Greeley emphatically denies. Twenty of the crew had perished. The results of the expedition are numerous. Major Greeley carried out the international programme. He made important geographical discoveries and explorations in Grinnell Land and North Coast of Greenland; e.g. Garfield Coast, Greeley Fiord, Mount Greeley, and the Garfield Range, and went farther north than any preceding Arctic expedition, reaching to within eight degrees of the North Pole. From Robeson to Kennedy Channels, westward to Greeley Fiord and the Polar Sea, he found a series of luxuriant valleys, on which were pasturing large herds of musk oxen. He also found that Grinnell Land has the lowest mean temperature in the globe, being about 4° F.; he contributed to the accurate determination of the shape and direction of the tidal wave, and from the existence of coal in Grinnell Land, and the fossil forest near Cape Baird, in 81° 30' N., he suggests the North Pole as the habitat of primitive man (see his *Address to the Scottish Geographical Society*, Nov., 1885).

A. W. Greeley, *Three Years of Arctic Service*, *The Scottish Geographical Magazine*, Edin., vol. i., p. 639; Schley and Soley, *Rescue of Greeley*.

Green, JOHN RICHARD (b. 1837, d. 1883), historian, was born at Oxford, and educated at Magdalen College School and at Jesus College. Even as an undergraduate he showed the bent of his mind by publishing some striking papers on Oxford in the eighteenth century in a local newspaper, the *Oxford Chronicle*. In 1860 he was ordained as curate of St. Barnabas, King's Square, and in a few years was made vicar of St. Philip's, Stepney. In 1868 he became librarian to the Archbishop of Canterbury at Lambeth. He had already become known to a limited circle as a student of history of great promise, and as a constant writer in the *Saturday Review*, when the publication of his *Short History of the English People* (1874) brought him at once among the most popular writers of the day. More than eighty-five thousand copies were quickly sold. Between 1877 and 1880 he also issued a larger edition of the same book, in 4 vols., called *A History of the English People*. He moreover published a volume of stray studies from England and Italy, and in conjunction with his wife a book on English geography. For many years he had struggled against lung disease; but in 1881 he was seized with a violent attack of illness that made his permanent recovery hopeless. Yet his strong will conquered his bodily weaknesses, and in 1882 the publication of the *Making of England* showed that his ability for minute investigation was almost as great as his capacity for popular exposition. After long struggling with death, he expired in 1883. Soon after, his widow published, under the title of *The Conquest of England*, the work of his last hours. During the later years of

his life he had abandoned clerical work. Green's *Short History of the English People* is a brilliant and scholarly exposition of the views of the latest and best investigators of English history. In so wide a field it was inevitable that the work could not be all of the same quality, and the earliest history, among which Mr. Green's own researches chiefly lay, is told with greater force, accuracy, and precision, than that of the more recent periods. Sober historians complained that the truth was sacrificed to picturesqueness. Tories complained of his politics. It was soon found that the work was full of small slips in names and dates; that in his desire to emphasise some aspects of historical development, he had perhaps laid too slight stress on others; that the arrangement of the book departed so often from the true chronological sequence as to be occasionally misleading. But, allowing all this, the immense popularity of the one readable summary of the national life, told by one who had studied it at first hand, and warmly and keenly sympathised with its spirit, was no uncertain testimony to the solid merits of the work. His brilliant literary powers, his keen insight and vivid imagination, give colour and richness to what, in point of size, was little larger than an ordinary text-book. Similar merits are no less found in the work of his later years, composed as it was under extreme bodily weakness and in the immediate prospect of death. The *Making and Conquest of England* were but fragments of his great scheme for writing in detail the history of England before the Norman Conquest. In the former work his minute study of the geographical conditions of early Britain has led him to remarkably brilliant results.

Times obituary, March 8th, 1883; Mrs. Green's preface to the *Conquest of England*. For adverse criticisms on Green, see an article in the *Quarterly Review* by Prof. Brewer, and one in *Macmillan* by Prof. Bowley. [T. F. T.]

Green, THOMAS HILL (b. 1838, d. 1882), an English philosopher, was educated at Balliol College, Oxford, where he was elected to a fellowship in 1862, and in 1867 became the first lay tutor on that foundation. About the same time he published two important articles on the *Philosophy of Aristotle* (1866), and *Popular Philosophy in its Relation to Life* (1868), in the *North British Review*, and in 1874 he took part in the republication of Hume's *Treatise on Human Nature*, for which he wrote the introductions. In 1877 he was appointed Whyte's professor of moral philosophy, and in the same year began to publish his series of articles in the *Contemporary Review* on Mr. Herbert Spencer and Mr. G. H. Lewes: *their Application of the Doctrine of Evolution to Thought*. At the time of his death he was preparing for publication his *Prolegomena to Ethics*, parts of which had formed the subject of his university lectures, and had already appeared in *Mind*. The

Prolegomena were subsequently edited by Professor A. C. Bradley (1883); and two lay sermons, *The Witness of God and Faith*, delivered in Balliol Hall (1870 and 1878), were published in the same year by Arnold Toynbee. He also assisted in the translation of Lotze's *System of Philosophy*. The peculiarity that so strangely distinguished Professor Green from the ordinary professors was that he was not an historian of philosophy, but an actual philosopher. He lived in philosophy, and used his highest metaphysic as the common guiding or restraining motive in every department of thought and every occasion of practical duty. He united in himself with rare harmony powers of profound speculation, of keen political insight, and a Puritan morality in everyday life. Politics and social questions were indeed almost his favourite study. In 1881 he published a pamphlet on *Liberal Legislation and Freedom of Contract*, and for many years he took an active share in the municipal government of Oxford. In philosophy he was at variance with the general English school of empiricism, to which he denied the title of philosophy altogether. He maintained that it was thought alone which constituted reality, and, as thought is related to feeling, we are thus brought down to the primal "self-consciousness" which was the beginning and end of his metaphysic. Though he was generally known as "Hegelian," it is impossible to bind him down to any one school of thought, but it is certain that he would himself have acknowledged Kant as the master from whom he had derived most.

Professor T. H. Green: in *Memoriam*, by Mr. R. L. Nettleship and Prof. Bryce (*Contemporary Review*, May, 1882). [H. W. N.]

Greg, WILLIAM RATHBONE (b. 1809, d. 1881), religious and economic essayist, was born in Manchester, where his family was largely connected with the cotton industry. Having himself little inclination towards the routine of business, he devoted his thoughts to meditation on theological problems, Biblical criticism, and above all to political and economic questions. The tendencies of his mind are indicated by the titles of his most important works, such as *Sketches in Greece and Turkey* (1833), *The German Schism and the Irish Priests* (1845), *The Creed of Christendom* (1851), by far the most widely read of all his works, though its result was too entirely critical and destructive to give it permanent importance; *Essays in Political and Social Science* (1853), *Why are Women Redundant?* (1869), *Enigmas of Life* (1872), *Rocks Ahead* (1874), and *Literary and Social Judgments* (1877). He also contributed numerous articles to the leading magazines, and these were collected with his pamphlets as *Miscellaneous Essays*, two series (1881 and 1882). His aspect of life was profoundly serious, and even melancholy, for he had little enthusiasm

for the rising powers in whose hands he supposed the future would lie. But his unflinching honesty and the earnestness of his style gave him a wide and deep influence over thoughtful minds during a period of violent religious and political transition. In 1856 he became a Commissioner of Customs, and in 1864 was appointed Controller of the Stationery Office.

Gregory XVI., POPE (*b.* 1765, *d.* 1846), was a native of Belluno, and his real name was Bartolommeo Alberto Cappellari. He entered the monastic order of the Camaldoli, and in 1799 became celebrated for a treatise called *Trionfo della Santa Sede* against the Jansenists. This gained him admission to the Academy of the Catholic Religion and the acquaintance of Pius VII. Cappellari withdrew from Rome when his master was carried off by the French in 1809, but returned with him in 1814, and was received into high favour, becoming Vicar-General of the Camaldoli and Prefect of the Propaganda. In 1825 he was created cardinal, and was sent to the Netherlands to settle a concordat which fixed the relations of Catholics and Protestants. In 1831 he was chosen by the Papal Conclave as successor to Pius VIII. From the first his policy was to obviate weakness of material power by strenuous advocacy of spiritual pretensions, and by keeping up a splendid court, which was the home of literature and art. But the rise of the "Young Italy" party under the stimulating influence of the July revolution undid all his plans of benevolent despotism, and compelled him to have recourse to repression. The promises of a liberal Constitution made at his accession under pressure from the Powers were revoked in 1836; and in order to secure the friendship of Russia he put up with much diplomatic discourtesy, and even countenanced at first the persecution of the Polish Catholics, although shortly before his death he solemnly rebuked the Czar Nicholas. During the last years of his life the inhabitants of the Papal States were terribly dragonaded, and risings were suppressed with a severity that created much indignation in Europe. It is characteristic of the Pope that he should have built aqueducts and restored basilicas, while at the same time he steadily refused to allow roads to be re-made or railways to be introduced.

La Farina, Storia d'Italia: Mamiani, Précis politique des Evénements des Etats Romains, Revue des Deux Mondes, June, 1847.

Grenville, WILLIAM WYNDHAM GREENVILLE, LORD (*b.* 1759, *d.* 1834), Prime Minister of England, was the son of George Grenville, the author of the Stamp Act. He was educated at Eton and Christ Church, and in 1782 was elected as a Tory for the county of Buckingham. In the same year he accompanied his brother, Earl Temple, to Ireland as private secretary. In December, 1784, he succeeded

M.W.—17

Burke as Paymaster-General, and gave valuable assistance to the ministry of Pitt. In 1789 he was Speaker for a few months, but then became Home Secretary. In 1790 he was raised to the Upper House, and went to preside over the Foreign Office, where he remained until 1801. During this period he carried out a policy of unquenchable opposition to France, and supported the Prime Minister in his suppression of revolutionary opinions at home. He moved in the House of Lords the Treasons Bill of 1795. Together with Pitt he resigned office in 1801, when George III. refused to agree to a measure of emancipation for the Roman Catholics, and, greatly to his credit, refused to join that statesman's last ministry, because a Catholic Relief Bill was not part of Pitt's programme. By this time he had parted with the Tories, and was generally reckoned as a Whig. In 1806 he combined with Fox to form the ministry of "All the Talents," the idea being that in the face of the great danger of a French invasion, common differences must be sunk, and a national administration formed. The career of the ministry was unfortunate; it was weakened by the illness and subsequent death of Fox; it was formed of orators who could not administrate; its military efforts miscarried, and negotiations for peace broke down. It succeeded, however, in passing a measure abolishing the slave-trade. In March, 1807, the King made an opportunity for overthrowing Grenville by requesting him to drop the small measure of Roman Catholic relief which he had in preparation, and to pledge himself never, under any circumstances, to propose any concessions to the Catholics, and even to remain silent for the future on the subject. To such conditions, which of course were perfectly unconstitutional, Grenville most properly refused to give his consent, and with his colleagues sent in his resignation. During the remainder of his life the country was governed by the "Tory Mediocrities," as Lord Beaconsfield called them, and Grenville remained excluded from power. Twice were overtures made to him to take office again, in 1809 and in 1812; but he and Lord Grey both felt unable to take office unless Catholic emancipation could be obtained, and so remained in opposition. On other points Grenville was by no means disposed to agree entirely with Grey; he was no advocate of Parliamentary reform, and was in favour of meeting popular agitation with severe measures of repression. Moreover, he thoroughly supported ministers in their opposition to Napoleon, unlike Grey, who at that time sighed for peace. In 1817 Grenville rejoined the Tories, and ended life as he had begun it. To the retirement of Lord Grenville's last years, which were spent at Dropmore, Bucks, we owe his publication of the letters of Lord Chatham; and, like most of his great contemporaries, he

dabbled in translations from the classics. His title became extinct on his death. Although an admirable Parliamentary speaker, Grenville was far removed from a statesman of creative genius. Nevertheless, he was a good administrator, especially when working under Pitt, and conducted affairs at the Foreign Office with considerable nerve during a very anxious time. Above all, he was a man of spotless integrity; and his political suicide for the sake of a cause which he believed to be right, is one of the strongest instances which can be adduced against the charge that government by party practically resolves itself into a struggle for office to the oblivion of principle.

Greuze, JEAN BAPTISTE (b. 1725, d. 1805), a French painter, is somehow better known in England than many who in his own art have been finer observers and more dexterous craftsmen. He yet had his merit, and the remembrance of it is widened, as well as prolonged, by the existence of many perfect line-engravings wrought by the masters of line-engraving, after his works, from the *Cruche cassée*, at the Louvre, so nobly rendered by Massard, a contemporary of the painter, to M. Joubert's quite recent rendering of the head and shoulders of a very young girl—the seductive property of Mr. Cholmondeley, and the finest of the many fine Greuzes lodged in English collections. Greuze's art lost very little by engraving. That is as much as to say that he was not a great colourist. Yet his colour, in flesh-painting, was at all events better than that of many of his followers. Likewise he had that gift of temperament which eighteenth century people described as “sensibility.” A member of the lower middle-class, he was born in the country, at Tournus. Part of his youth was spent at Lyons, but he was still young when he arrived in Paris to push his fortunes. In Paris, before he reached middle age, he married the pretty daughter of a bookseller, from whom Diderot used to buy or borrow many volumes, and thus began that association with the philosopher and critic which was to last long, and would always be to the painter's advantage. The most sympathetic account of him is to be read in Messieurs de Goncourt's *L'Art du Dix-huitième Siècle*. Greuze painted his wife's portrait in the *Philosophe endormi*; but she was then no longer young, and retained but the remains of beauty. It is not easy to define who was the most frequent model for that type of exaggerated innocence which the painter portrayed a hundred times, and in which he chose to find the ingenuous countenance of fifteen springs united to the figure

of five-and-twenty summers. The face was always pretty, the figure always well expressed; and, frequent as were Greuze's exercises in the portrayal of feminine charm, he seems to have addressed himself with equal willingness to the realisation of subjects of domestic sentiment. The Revolution was the death-blow to the popularity of Greuze's art, for it was never the people that had seriously cared for it, and the newly governing classes were out of sympathy with its somewhat divided aims. The art of Greuze, after all, like that of Fragonard, ministered to luxury, and there was a moment when luxury ceased to be the fashion. The painter became neglected. Some official patronage he still had, and it is said that he was painting the portrait of the First Consul badly when young Ingres was painting it well. He suffered, anyhow, from the rise of the severe and the fall of the luxurious school. The reaction was absurd because it was disproportioned. But, like Fragonard, Greuze had a daughter to whom he was genuinely devoted, and, unlike Fragonard, he did not lose her in her youth. She did something for the happiness of his latest years. Yet it is probable that he died disappointed, as well as poor. [F. W.]

Greville, CHARLES CAVENDISH FULKE (b. 1794, d. 1865), official and memoir-writer, was the son of Charles and Lady Charlotte Greville. He was educated at Eton and Oxford, and in 1821 became Clerk of the Council in Ordinary, a position which he held until 1860. During that long period he was in intimate relations with the leaders of both political parties, and saw much of the interior of court life. Hence his diary, edited by Mr. Reeve, is of immense historical interest for the student of the reigns of George IV., William IV., and Victoria. The appearance in 1875 of the first series of volumes, which covers the reigns of George IV. and William IV., excited much indignation amongst those who thought that a veil should be drawn over the vices of kings; though Greville was no scandal-monger, but a truthful observer, whose judgment is occasionally severe, but never malignant. The second series, published in 1885, covers the years 1837-52, and is equally interesting, though its court incidents are less sensational. To the historian of the future these volumes will be of unrivalled service when tracing the fortunes of ministries, or sketching the character of politicians. They are evidently the work of a man of culture and fine instincts, and have an interest very similar to Lord Herve's admirable memoirs of the court of George II., the two authors having played a somewhat similar mediatorial part.

The Greville Memoirs, edited by Henry Reeve (1st series, 3 vols., 1875; 2nd series, 3 vols., 1885).

* **Grévy, FRANÇOIS PAUL JULES, dit JULES**, President of the French Republic (b. 1813),

is a native of the Jura. He came to Paris to study law, and distinguished himself as the defender of republican politicians in political cases, and after the revolution of 1848 became a Commissary of the Provisional Government in his native department, and was returned to the Constituent Assembly. He immediately signalled himself as a member of the extreme Left, and became Vice-President of the Assembly, whose constitution-building he attempted to modify by important amendments. He opposed the presidency of Louis Napoleon, and after the *Coup d'État* of Dec. 10th, confined himself to his profession. In 1868, however, he was returned by the Jura department to the Assembly, was re-elected in the following year, the Government not daring to put forward a candidate against him, and was one of the most determined opponents of the Second Empire during its last days. After its fall he held aloof from politics until February, 1871, when he was returned for the Jura, and was elected President of the Assembly, a post to which he was re-elected in 1876, 1877, and 1879. His position was a most difficult one throughout, and the turbulence of the Monarchical majority caused him to resign in 1873, M. Buffet taking his place. During the three years he was absent from the Chair he was a prominent member of the Left, and published a powerful pamphlet, entitled *The Necessary Government* (1873), in which he attacked the schemes of the Monarchist coalition. M. Jules Grévy was also a vigorous opponent to the prolongation of Marshal MacMahon's powers. During his next tenure of the presidential Chair he ruled the Chamber, as before, with great firmness, despite the fact that it contained M. Paul de Cassagnac, and that the Right were in a fever-heat of exultation, the Left of rage, at the prospect of an immediate monarchical restoration. In 1877 he rebutted with much indignation a ministerial calumny to the effect that he had recommended the Left to reconcile themselves to Marshal MacMahon. In January, 1879, the Royalist schemes having broken down, and the Marshal-President having resigned, M. Grévy was re-elected his successor by 563 out of 713 votes. Upon the whole, President Grévy's first presidency can hardly be said to have been accompanied by marked successes either at home or abroad, although he himself is calculated to inspire confidence, and has on occasions displayed remarkable tact, notably when the King of Spain was insulted in the streets of Paris in 1883. At home, no stable ministry has been formed, and commerce has been depressed; on the other hand, the prospect of an Imperialist or Bourbonist restoration has become beautifully less. Abroad, since the death of Gambetta, Prince Bismarck has displayed friendly feeling towards France, more than once at the expense of England; but

the colonial enterprises of the Republic, with the exception of the annexation of Tunis, have not been glorious, and the president abruptly put an end to the Tonquin *imbroglio* by concluding peace with China on his own responsibility (March, 1885). In Dec., 1886, M. Grévy, in spite of his advanced years, was re-elected President of the Republic by a large majority, and promptly had to submit to the annoyance of a change of ministry, M. Brisson retiring in favour of M. de Freycinet.

Grey, CHARLES, 2ND EARL (b. 1764, d. 1845), belonged to the Northumberland family of that name, and was the eldest son that survived of the distinguished general, Sir Charles Grey, whose services Addington, in 1802, rewarded with a peerage. He was educated at Eton, and at King's College, Cambridge. In 1786 he was elected Member of Parliament for his native county. His first speech, in denunciation of Pitt's commercial treaty with France, indicated his attachment to Fox and the Whigs. His birth, connections, and ability soon raised him to a prominent position. He was chosen one of the managers of the impeachment of Warren Hastings. He became an active supporter of the Society of the Friends of the People, and was soon looked upon as its special representative in the House of Commons. Thus early began his connection with the active party of Parliamentary Reformers. In 1792 his notice of motion for inquiry into the representation led to a debate in which Pitt's refusal to "make hazardous experiments" at the crisis of the revolutionary excitement, put his proposals outside practical politics. But next year he persevered with his motion, though he found only forty-one supporters on a division: a result so discouraging that nothing was heard of his plans until 1797, when he brought forward a definite scheme of reform. Meanwhile Grey's faithful adherence to the remnant that still followed Fox involved him in a furious and often factious opposition to Pitt's Government. The boldness which he had shown in championing the Friends of the People was even more signally displayed in his rather senseless motion for Pitt's impeachment, or in the leading share he took in planning the temporary "secession" of the Whigs from a Parliament that refused to reform itself. The accession of the Fox-Grenville ministry to power in 1806 made Grey, now, by his elder brother's death, Lord Howick, First Lord of the Admiralty, and after Fox's death in September he succeeded to his offices of Foreign Secretary and leader of the House of Commons. He was compelled to announce the failure of the negotiations for peace, and to practically justify Pitt's war policy by continuing it. He was more successful in carrying through Parliament the Act abolishing the slave-trade:

a task also handed down from his dead leader. In 1807 the fall of the ministry on the Catholic question brought Howick again into Opposition, and in the same year his father's death raised him to the House of Lords. But his interest in Parliamentary Reform still continued, and his rejection of the insincere overtures of the Prince Regent to form a ministry in 1810 and 1812 attested his adherence to his old principles. He completed his alienation from George IV. by his advocacy of the wrongs of Queen Caroline. In 1827 he refused to lend any support to Canning. At last, in 1830, the death of George IV., the result of the general election, Wellington's ill-timed panegyric of the existing representative system, the gradual coalition of Whigs and Canningites, and the growing national enthusiasm for reform, rendered impossible the longer tenure of power by the Tories. In the middle of November Grey was entrusted with the formation of a reforming Cabinet, in which he became First Lord of the Treasury and Prime Minister. The task was soon successfully accomplished. In March, 1831, Lord John Russell produced the first Reform Bill. The defeat of the Government on General Gascoyne's motion led to a dissolution; which secured, in June, the successful passage of a second Bill through the more thoroughly reforming House of Commons now returned by the constituencies. But on Oct. 8th the Lords threw out the Bill, and riots broke out all over the country. In the spring of 1832 a third Bill passed the Lower House by enormous majorities, and the House of Lords, where Grey brought forward the measure, carried the second reading. Yet Lord Lyndhurst's motion to postpone the disfranchising clauses until the enfranchising clauses had been discussed was passed, despite Grey's declaration that the fate of the ministry would depend on the result. The ministry resigned. Peel refused, Wellington was unable, to construct a Tory Cabinet. Grey returned to office, and the written promise of the King to create enough new peers to pass the Bill, resulted in the withdrawal of Wellington's opposition. On June 4th the Bill was accepted by the Lords. The successful passing of this great measure marks the culminating point of Grey's political career. The first Reformed Parliament gave his party an overwhelming majority; but the veteran Premier grew more and more out of sympathy with the new popular party which he had called into existence. He remained for more than two years at the head of a Government that internal weakness, want of administrative experience, and hostile external criticism from Tories, Radicals, and Repealers soon brought into discredit. He was still able, by passing the Act for the abolition of negro slavery in the colonies, to complete the extinction of a system which received its death-blow when he himself had

procured the suppression of the slave-trade. He secured the passage of an Act which largely reformed the Irish Church, renewed the Bank Charter, and destroyed the trading monopoly of the India Company. But the Irish Coercion Bill, introduced in 1833 by Grey into the Upper House, provoked all the elements of opposition. In that year his own son-in-law, Durham, the Radical leader, left the Cabinet. In May, 1834, the motion of Mr. Ward on the Irish Church led to the resignation of Stanley, Graham, and other more Conservative members of the ministry. At last the blundering conduct of Littleton, the Irish Secretary, gave O'Connell an opportunity of laying bare the disunion and opposition of the Cabinet. Althorpe resigned, and Grey availed himself of the opportunity to abandon a position for which he had no relish. Melbourne succeeded him as Premier. For the rest of his life he took little part in politics. Grey was one of the last, and one of the most typical, of the great Whig aristocrats. Scrupulously honest, fair, generous, and high-minded, able and eloquent, a true friend of progress so far as he understood it, he was nevertheless cautious to the verge of timidity, frigid to the degree of incapacity to inspire an enthusiasm which he himself was hardly capable of experiencing, and was too much of the old school to have much in common with the new Liberalism of his later years. The rash impetuosity of the assailant of Pitt had left no traces on the character of the septuagenarian Premier. Though his personal gifts and great prestige enabled him to preserve the honour of his ministry at the expense of its popularity, his want of insight into the future was a great limitation to his success. But it is his lifelong championship of Parliamentary Reform, proposed in dark times when a mere boy, carried after many vicissitudes in his old age, that constitutes the chief historical interest of Grey's life. That he was unable to deal with the forces he had called into existence, and was unable to perceive how great a revolution he had peacefully established, indicates the touch of narrowness that the best of Whig statesmen could hardly escape. A certain want of originality and initiative, an undue reverence for the traditions of his party, some want of strenuousness in the more laborious duties of a minister, and a too zealous care for the interests of his family and connections, are equally typical. The leader of the aristocratic connection who destroyed the Constitution on which its supreme authority depended, Grey bridges over the gulf between eighteenth-century Whiggism and modern Liberalism. He married, in 1794, a daughter of Lord Ponsonby, and left a large family.

Hon. C. Grey, *Life of Grey*; S. Walpole, *History of England*; Martineau, *History of the Thirty Years' Peace*; Pauli, *Geschichte Englands seit 1815*; Greville's *Memoirs*. [T. F. T.]

* **Grey**, RIGHT HON. HENRY, 3RD EARL, K.G. (b. 1802), the eldest son of the Prime Minister, was educated at Trinity College, Cambridge, and, when Lord Howick, entered the House of Commons in 1826 as member for Winchelsea. In 1832 he took his seat in the Reformed House of Commons for North Northumberland, and was appointed Under-Secretary for the Colonies, but resigned in 1833 because his views in favour of immediate slave emancipation were not accepted by the Cabinet, though he afterwards accepted the post of Under-Secretary for Home Affairs. In 1835 he became Minister at War under Lord Melbourne, and went out of office with his colleagues in 1839. He succeeded his father in the title in 1845, and from 1846 to 1852 was Secretary of State for the Colonies in Lord John Russell's ministry. His *Colonial Policy of Lord Russell's Administration* appeared in 1853. From that time he has never held office, having developed a "cross-bench" attitude towards parties. He offered a vigorous opposition to the Crimean War, and to the Eastern policy of Lord Beaconsfield's Cabinet; on the other hand, he has frequently shown himself out of sympathy with Mr. Gladstone, notably in a letter to the *Times* at the time of the general election of 1880. Of late years he has not spoken much in public. He has published the correspondence of his father with William IV. (1867), and many of his own speeches and letters—for instance, those to the *Times* on *Free Trade with France* (1881).

Grey, SIR GEORGE, 2ND BARONET (b. 1792, d. 1882), statesman, was a nephew of Earl Grey. He was educated at Oriel College, Oxford, where he took a first-class, and was called to the bar in 1828. He was returned to the Reformed Parliament as Whig member for Devonport, and in 1834 became Under-Secretary for the Colonies, and as such defended with great ability the conduct of the Government with regard to the Canadian and Jamaica difficulties. In 1839 he became Judge Advocate General, and in 1841 Chancellor of the Duchy of Lancaster until his party retired from office. In 1846 he became Home Secretary under Lord John Russell, and faced the Chartist agitation with great resolution, it being chiefly owing to his firmness that no outbreak occurred on the memorable April 10th, 1848. In the following session he was compelled by the state of Ireland to introduce a Bill suspending the Habeas Corpus Act. In 1852 the ministry went out on the Militia Bill, and Sir George Grey lost his seat for Northumberland, but was returned shortly afterwards for Morpeth. In 1854 he joined Lord Aberdeen's ministry as Colonial Secretary, and on its overthrow became Home Secretary under Lord Palmerston (1856-8). During this period he restricted transportation, and did much to lessen

the injustice of the ticket-of-leave system. These reforms he supplemented during the Palmerston ministry of 1859-65, notably by the Prison Ministers' Bill, by which Nonconformist prisoners were allowed the attendance of their own ministers. He continued in office under Earl Russell, and was compelled once more to have recourse to repression in Ireland. He retired from public life in 1874, having ceased to hold office in 1866. Sir George was distinctly a member of the Whig section of Liberalism; caring little for the repeal of the Corn Laws, and being frequently opposed to the Radicalism of Mill, Joseph Hume, and Mr. Bright.

* **Grey**, SIR GEORGE, K.C.B. (b. 1812), colonial administrator, and the son of Colonel Grey, a Peninsular soldier, entered the army in 1829, but, retiring from his profession, turned explorer, and from 1837 to 1840 visited the coast of West Australia, and traced the sources of the Glenelg river. His *Journals of Discovery* were subsequently published. In 1841 he became Governor of South Australia, whence, in 1845, he was transferred to New Zealand, and brought the first Maori War to a successful termination. For these services he was made a baronet and K.C.B. In 1854 he was appointed Governor of Cape Colony; but in 1861 was sent again to New Zealand by the Colonial Office, to deal with the outbreak of the second Maori War, which resulted satisfactorily, although Sir George's conduct of affairs met with much undeserved censure. In 1875 he became superintendent of the Province of West Auckland, and strongly opposed in the Legislature the Abolition of the Provinces Act. In 1877 he became Premier of New Zealand, in succession to Mr. Atkinson, and devoted himself towards establishing friendly relations between the natives and the white population. He resigned in 1884.

* **Grieg**, EDVARD (b. 1843), one of the most prominent of modern composers, was born at Bergen, in Norway, and having early shown signs of high musical talent, was sent, by the advice of Ole Bull (q.v.), to the Conservatorium at Leipzig, where he remained till 1862. In the following year he continued the study of composition at Copenhagen, where his natural tendency towards the music of the northern and Scandinavian nations became emphasised. In 1867 he settled in Christiania as director of the Musical Association. Amongst his works, which are published in Leipzig, and now number between thirty and forty, are a piano concerto with full orchestra, some piano sonatas, duets for violin and piano, and a few songs of great beauty. He may be said to have done for Scandinavian music what Dvorák has done for Bohemian.

Grillparzer, FRANZ (b. Jan. 15th, 1791, d. Jan. 21st, 1872), was the son of a Vienna

advocate. He studied jurisprudence, and obtained a small appointment in the Government service in 1813, from which he rose by tardy promotion to be Keeper of Archives at the Ministry of Finance in 1833. He finally retired with a small pension in 1856. In 1817 he wrote a tragedy, *Die Ahnfrau*, which was acted with much success at the Hof Theatre in Vienna. The following year he published his classic tragedy, *Sappho*. Numerous other dramas in the classic and romantic style followed. Among the former are a trilogy on the story of Medea and Jason; among the latter, *King Ottocar* (1822), which obtained considerable success on the stage. But few of Grillparzer's pieces were so fortunate, and after the complete failure of a comedy at the Burg Theatre in Vienna in 1838, he resolved not to submit his plays to the ordeal of representation. He published numerous other dramas, two novels, *Das Kloster von Sendomir* (1828), and *Der arme Spielmann* (1848), and some essays on dramatic criticism of great merit. The old poet lived an exceedingly retired life in Vienna, and was almost forgotten long before his death. His plays, except perhaps the *Ahnfrau*, are not very well adapted for the stage; but they show a true poetic instinct, and a close study of great models.

Grillparzer, *Sämmtliche Werke* (10 vols., Stuttgart, 1872).

Grimaldi, JOSEPH (b. 1779, d. 1837), comedian, was the son of an Italian, who combined the professions of dentist and dancing-master, and who settled in England in 1760. Joseph Grimaldi went on the stage at an early age, and by the beginning of the century had established his reputation as a comic actor of some excellence, his great hit being as clown in the pantomime *Harlequin Amulet*, produced at Drury Lane in 1799. He continued to delight London audiences, chiefly in pantomime, but also in comedy, until 1828, when he retired from the stage. Bad health, the dissipated conduct of his son, and ill-success as manager of various theatres, made his last years unhappy, and compelled him to appeal to theatrical benevolence. "The genuine droll," says Charles Dickens, "the grimacing, filching, irresistible clown, left the stage with Grimaldi."

Memoirs of Grimaldi, edited by "Boz" (Charles Dickens).

Grimm, JACOB LUDWIG KARL (b. 1785, d. 1863), the scholar of the German language, and **WILHELM KARL** (b. 1786, d. 1859), his brother, were the sons of a public notary living in Hanau. In 1791 the family removed to Steinau, and after the father's death Jacob was sent to the Lyceum at Cassel (1798), and afterwards to the University of Marburg (1802), whither his brother followed him in 1803. In spite of their growing inclination to early German literature, both devoted themselves to the study of law, and thus

fell under the powerful influence of Savigny (q.v.), who in 1805 invited Jacob to assist in his work at Paris for some months. In 1808, through Johannes von Müller's influence, he was appointed librarian to King Jérôme, who then held his court at Wilhelmshöhe, close to Cassel. This prosperity lasted till the battle of Leipzig, and it was during this period that the brothers began the series of works that have made their names household words. Wilhelm, who suffered from weak health, had become acquainted with Arnim, Brentano, Bettina (q.v.), and other founders of the Romantic school in the course of his travels. Under their influence he began a systematic study of the ancient Teutonic legends, and in 1811 published his edition of *Old Danish Ballads*. Next year the brothers issued jointly the first volume of the *Fairy Tales* (*Kinder- und Haus-Märchen*). They had collected the tales from various parts of Germany, but chiefly in the wilder districts of Hesse immediately round Cassel. Their main authority was an intelligent old woman in the village of Niederröhren. Seldom has a book won so extensive and immediate a popularity. It was quickly translated into all European languages, and for some three generations has been a general basis of education, having been justly described as the German child's Bible. In the same year Jacob published his edition of the *Song of Hildebrand* (*Hildebrandslied*, 1812), but in 1813 he lost his situation on the withdrawal of the French court, and was appointed, as secretary of the legation, to accompany the army to Paris, and afterwards to attend the Congress of Vienna. In 1815 he was sent back to Paris to recover the MSS. and other art treasures stolen by the French. Next year he was appointed under-librarian in the Cassel museum, his brother being at the same time created secretary to the library. The next thirteen years went peacefully by, and were perhaps the most fruitful period of their lives. The collection of *Fairy Tales* was completed, and they published the collection of *German Sagas* (*Deutsche Sage*, 1816-18). In 1819 Jacob issued the first volume of his great *German Grammar* (*Deutsche Grammatik*), from which philologists date the modern historical method of investigating language. In the second edition of the first volume (1822) he enunciated his great law of consonant variation, known as "Grimm's Law," and endeavoured to introduce various reforms in German spelling that have not yet been generally adopted. In 1821 Wilhelm published his *German Runes* (*Deutsche Rune*), and in 1829 his *German Heroic Sagas* (*Deutsche Heldensage*), which may be regarded as his masterpiece. Soon after Jacob had published his *Antiquities of German Law* (*Deutsche Rechtsalterthümer*), the brothers resigned their positions owing to the slights shown them by

the king and his mistress. They were at once invited to Göttingen, Jacob as professor of German literature, Wilhelm as sub-librarian; the latter being subsequently created professor in the year in which his brother published his work on German mythology (1835). Two years later, however, they both joined the other five professors in the celebrated protest against the new king's unconstitutional measures. Jacob was banished at once, and Wilhelm compelled to follow him. Having settled at Cassel for a time, they began their enormous undertaking of the *German Dictionary* (*Deutsches Wörterbuch*). In 1840 they were invited to Berlin, chiefly through Bettina's influence, a special sum being set apart to enable them to continue their great work. The first part was published in 1852, and in 1885 the letter P was reached under other hands. In 1848 Jacob sat for a short time as a representative in the Frankfurt Parliament, and was an enthusiastic promoter of German unity. Both brothers continued at their work to the last, and died within a short space of each other, having led such lives as every learned man should wish to lead.

Albert Duncker, *Die Brüder Grimm* (1894).

[H. W. N.]

Grimthorpe, BARON. [BECKETT, SIR E.]

Grisi, GIULIA (b. circa 1810, d. 1869), the eminent operatic singer, was born at Milan, of a musical family, and sent at the age of eleven to the Milan Conservatorium, where her powers were at first doubted. Her teacher, Giacomelli of Bologna, was, however, very successful in developing her voice, and at the age of seventeen she appeared for the first time in public as Emma in Rossini's *Zelmira*. She sang with great success in Florence, Pisa, and Milan, and found warm admirers in Rossini and Bellini, the latter recognising in her all the qualifications for the character of Adalgisa in the opera of *Norma*, upon which he was engaged. She sang together with Pasta at the first performance of this opera, which during the first act bid fair to be a failure, the audience only beginning to applaud at the duet of Norma and Adalgisa in the second act. In 1832 she terminated her engagement at the Milan Theatre, came to Paris, and made her *début* in that city at the Théâtre des Italiens as Semiramide in Rossini's well-known opera, taking the audience by storm with her voice, her beauty, and her dramatic power. Her first appearance in London was in 1834, at the old Haymarket Theatre, as Ninetta in *La Gazza Ladra*. It was in the English capital that she gained her brightest laurels, and from this date London became her home, though until the revolution of 1848 she invariably spent the winter season at Paris. Her most successful rôles, in addition to those already mentioned, were those of Des-

demona (*Othello*), Amina (*La Sonnambula*), Leonora (*Il Trovatore*), Pamina (*Il Flauto Magico*), Lucrezia Borgia, and Anna Bolena. She retired from the stage in 1862. She was twice married: firstly, to the Marquis de Melay, from whom she separated; secondly, to Signor Mario, by whom she had four children.

Grote, GEORGE (b. Nov. 17th, 1794; d. June 18th, 1871), historian and philosopher, was born at Clay Hill, near Beckenham. His family, of Low-Dutch descent, were members of the London banking-house of Grote, Prescott and Sons. He was educated at the Charterhouse, and there made the acquaintance of many schoolfellows who afterwards became distinguished men. Destined early to work in the bank, he was not allowed to proceed to Oxford or Cambridge. He had acquired, however, strong literary and intellectual tastes, and regularly devoted those portions of the day not consecrated to business to systematic and laborious study. In 1820 he married Miss Harriet Lewin, a lady of remarkable interest and ability, and lived for some years at the bank in Threadneedle Street. He had already fallen under the influence of Bentham, Ricardo, and James Mill, and warmly sympathised with their views. He wrote largely in the *Westminster Review*, the organ of that school, and published pamphlets advocating drastic parliamentary reform. In 1823 he settled down to the preparation for his great work on Greek history, and announced some of his views in advance by a cutting review of Mitford in the *Westminster*. In 1825 he took a leading part in the establishment of the unsectarian University of London. In 1833 he was returned Member of Parliament for the City, the passage of the Reform Bill having overcome his reluctance to sit in the House of Commons. He became conspicuous among the small yet influential group of "Philosophical Radicals," and at once brought forward his favourite proposal of a Ballot Act. He remained in Parliament until 1841, returned at each election by diminishing majorities. In that year he avoided defeat by retirement, which was the more welcome as he desired leisure for working on his *History of Greece*. In 1846 the first two volumes appeared, dealing with the mythical and legendary period. In 1856 was published the twelfth and last, which took the history as far as the death of Alexander the Great. No sooner was this off his hands than he planned two works on Plato and Aristotle as supplements, in a sense, to the political history. In 1865 appeared *Plato and the other Companions of Sokrates*, and the indefatigable writer at once set to work on his *Aristotle*. He still found leisure for various public works. He always took the greatest interest in University College, as

the institution in Gower Street was now called, and in the London University, which owed its origin to it. In 1862 he became vice-chancellor of the latter. In 1872 what he had completed of his *Aristotle* was given to the world, and in 1873 Professor Bain collected and published his *Minor Works*. In the course of a long life, during most of which the best hours of each day were occupied in business, Grote found time to win distinction as a politician, an historian, and a philosopher. The sturdy and uncompromising Radicalism that cried for the ballot in the reign of George IV., had, perhaps, a more important effect on the character of the author than on the course of public affairs. Yet it would be a grave mistake to estimate the influence of the philosophic Radicals on politics by their numbers in a division, or their direct power over legislation; and among the little group few were more respected and listened to than Grote. His *History of Greece* is the work on which his reputation must mainly depend. The development of more serious and scientific conceptions of history makes it difficult nowadays to estimate the revolution in the current views of ancient history caused by its first publication. Despite the level monotony of its style, despite the strong prejudices which sought to find Radical reformers among the heroes of Athenian democracy, and staid utilitarian philosophers among the sophists, it still remains unsurpassed in English as the most complete and satisfactory account of the period which it covers. Its solid common sense, and grave judicious spirit, atone for the want of imagination which forgets to measure the distance between ancient Greece and modern Europe. The strong political interests of the author gave the work a reality and vividness which was very deficient in earlier histories. His wide knowledge and judicious use of the authorities accessible to him secured a high level of accuracy and thoroughness, and the partisanship itself is seen rather in the colour than in any such distortion of facts as sprang from the rabid Toryism of Mitford. The same great qualities which characterised the history, are to be found in the companion works—partly historical, mainly philosophical—on Plato and Aristotle. But the want of delicate literary appreciation, no less than the philosophical position of a disciple of Bentham and Mill, made it impossible for Grote to do justice to so great a man of letters and so profound an idealist as Plato, and his elaborate vindication of the sophists, not only as thinkers but as men, approaches the paradoxical. For most purposes his *Plato* has been superseded by later works of more literary and philosophical insight. *Aristotle* was in some respects a subject more suited to his powers, but the work of Grote's old age only remains in an incomplete state. Of his

other works, the essays in the *Westminster Review*, and the early treatises on reform, have already been noticed. Worthy of special attention is the study of Swiss history during the war of the Sonderbund, to which he devoted himself because he saw the analogies between the small republics of Switzerland and the City States of ancient Hellas.

Mrs. Grote, *Personal Life of George Grote*;
Professor Bain, *Introduction to Grote's Minor Works*.
[T. F. T.]

Grouchy, EMMANUEL, MARQUIS DE (b. 1765, d. 1847) French soldier, was the son of noble parents, and entered the Royal Body-Guard, but becoming imbued with revolutionary ideas, he took part in the wars of the French Revolution. In 1793 he had become general of division; and when deprived of his military rank, on account of nobility of birth, by the decree of the National Convention, he fought as a simple soldier, and was rewarded for his patriotism by restoration to his former position. In 1796 he was second in command in Hoche's ill-starred expedition to Ireland, and, if he could have had his way, would have landed with a handful of men. Having fought with distinguished valour through Napoleon's campaigns, he was placed in command of the "sacred squadron," which protected the person of the Emperor, and ably seconded him in his resistance to the advancing Allies. During the Hundred Days he was made a marshal, and compelled the Duc d'Angoulême to capitulate near Lyons. Transferred to Belgium, he took Fleurus, and after the battle of Ligny was despatched by Napoleon with 30,000 men after the retreating Prussians. Owing to the Emperor's fatal mistake, he pursued in the direction of Namur instead of Wavre, and so enabled Blücher to effect a junction with Wellington, and win the battle of Waterloo. During the day further orders from Napoleon prevented Grouchy from relinquishing his wild-goose chase and bringing up his troops to support the main body of the army. His retreat was ably conducted, but he refused to accept the office of commander-in-chief offered him by the Provisional Government. An exile in America for several years after the Second Restoration, he returned to France in 1819, and was made a peer of France by Louis-Philippe. During his later years he published numerous vindications of his conduct at Waterloo.

G. de Grouchy, *Mémoires du Maréchal de Grouchy*.

* **Grove, SIR GEORGE, D.C.L.** (b. 1823), was educated as an engineer, and was for some years on the staff of Robert Stephenson. He was secretary to the Society of Arts 1848-52, secretary to the Crystal Palace Company 1852-73, and director of the company 1873-8. He edited *Macmillan's Magazine* for ten years, and

is now editor of the deservedly popular *Dictionary of Music and Musicians*. In 1882 he became director of the Royal College of Music, and was knighted in 1883.

* **Grove, THE HON. SIR WILLIAM ROBERT**, F.R.S., etc. (b. 1811), lawyer and man of science, was educated at Brasenose College, Oxford, whence he took his degree in 1833. He was called to the bar; but for a time was induced by ill-health to turn to the study of electricity. The result was his invention of the "Grove" voltaic battery, and his essay on *The Co-relation of Physical Forces*, which, on its appearance in 1846, created much stir in the scientific world, and which has since passed through several editions. From 1840 to 1847 he was professor of experimental philosophy at the Royal Institution, and in 1866 was president of the British Association. In addition to his scientific successes Mr. Grove gained rapid promotion at the bar. He became Q.C. in 1853, sat on the Commissions on Patents and on Oxford University, was appointed a Justice of the Court of Common Pleas in 1871, and in 1875 a judge of the High Court of Justice (Common Pleas Division). He received honorary degrees from the universities of Oxford and Cambridge.

Grun, ANASTATIUS. [AUERSPERG.]

* **Gubernatis, ANGELODE** (b. 1840), Italian Orientalist and *littérateur*, born at Turin, where he graduated at the university, subsequently (1862) studied philology and Sanskrit under Bopp and Weber at Berlin, and was appointed professor extraordinary of Sanskrit at the Istituto dei Studi Superiori at Florence in 1863, and professor ordinarius in 1869. He has written on diverse subjects. His dramas, dealing chiefly with Roman and Indian characters, have been successful; he has founded five journals, of which the latest was the useful *Bolletino degli Studi Orientali*, which has lately changed its title; he is a correspondent of English, German, and Russian papers; lectured at Oxford on Manzoni; vigorously promoted, as general secretary, the Oriental Congress at Florence in 1878, and in book form has published the *Piccola Enciclopedia Indiana* (1867), *Fonti vediche dell'epopea* (1867), *Zoological Mythology* (1872), and *Mythologie des Plantes* (1878); while, with a view to the Oriental Congress of Florence, he drew up his *Matériaux pour servir à l'Histoire des Langues orientales en Italie* (1876). He is a brilliant and versatile writer, and no mean scholar.

Guérin, GEORGES MAURICE DE (b. 1810, d. 1839), a French poet, was born at Le Cayla, in Languedoc, where his family owned an ancient château. After going to school at Toulouse and studying in Paris, he attached himself to the monastic society that was gathered round the Abbé Lamennais (q.v.)

M.W.—17*

at La Chênaie, in Brittany, in 1832. Having remained there for a year, he returned to Paris, taking little further interest in the monastery after the Abbé's own departure. In Paris he tried to support himself by teaching, and writing for the papers and magazines, employments for which he was singularly unsuited. In 1838 he married a rich Creole, but the seeds of a fatal disease were already developing, and the next year he went to his home in Languedoc to die. Excepting a short prose poem called *The Centaur*, he left little behind him that seemed even intended to endure; but in his journal and letters we find a rare sympathy and intimacy with Nature, combined with an almost unequalled power in her interpretation, that have endeared his name to the masters of criticism. His sister, **EUGÉNIE DE GUÉRIN** (b. 1805, d. 1848), has also received a place in literature, for the spiritual interest and perfect style of her journal, which remains a permanent record of her love for her brother and the high purity of her Catholicism.

Revue des Deux Mondes, May, 1840; Maurice de Guérin, *Reliquie*, with a preface by Sainte-Beuve (1861); Eugénie de Guérin, *Journal et Lettres* (1892); and the essays on the brother and sister in Mr. Matthew Arnold's *Essays in Criticism*.

Guibert, H.E. CARDINAL JOSEPH HIPPOLYTE (b. 1802, d. 1886), Archbishop of Paris, was born at Aix. He was educated for the priesthood, and greatly distinguished himself during the course of his theological studies at Rome. When about thirty years of age he became Vicar-General of Ajaccio, and Bishop of Viviers. His reputation was chiefly made as a religious controversialist, and his pastoral letters and addresses, which were of a distinctly Ultramontane tendency, obtained a wide circulation. He became Archbishop of Tours in 1859, and Archbishop of Paris, in succession to Mgr. Darboy (q.v.), in 1871. Pope Pius IX. created him a cardinal in 1873. Cardinal Guibert is a vigorous opponent of the secularisation of education, upon which he addressed a remonstrance to President Grévy in April, 1886.

Guisot, FRANÇOIS PIERRE GUILLAUME (b. 1787, d. 1874), statesman and historian, was born at Nîmes of a Protestant family. His father was beheaded in 1794, and he was brought up at Geneva by his mother. In 1805 he went to study law at Paris, but soon devoted himself mainly to literature. In 1812 he obtained, despite liberal opinions in politics, a professorship of modern history at the Sorbonne, and married his first wife, a lady much older than himself. In 1814 he was made Secretary-General of the Ministry of the Interior under the Restoration Government. During the Hundred Days he withdrew to Ghent, and he returned to office under the Ministry of Justice, after the final fall of Napoleon. In 1821 he was turned out

of office, and in 1825 prevented from lecturing, but in 1828 he was partially restored. He had already become conspicuous in originating and formulating the theories of the *Doctrinaires*, who sought in a somewhat stiff and pedantic way to mediate between the Revolution and the Restoration in the interests of a middle party that saw its highest ideal in the traditional Constitution of England. Friends of moderate liberty, and foes alike of royal and priestly oppression, and of military imperialism, they desired, while controlling the monarchy by parliamentary institutions, to save the Constitution from revolutionary anarchy by means of a limited suffrage that gave ultimate power to the *bourgeoisie* while they endeavoured to fit the masses for political life by the wider diffusion of education. Guizot was now also actively engaged in historical teaching and research. His first important works were published during this period, including his collection of memoirs illustrating English and French history, the first portion of his *History of the English Revolution*, and his famous lectures on the *History of Civilisation*. In 1830 he was elected deputy for Lisieux, and had made his mark by an eloquent speech against Polignac, when the Revolution of July raised him to the Ministry of the Interior. In 1832 he accepted the less important department of Public Instruction under Marshal Soult. In this office, which he held till 1836, he contributed largely to the development of popular education in France; but before long his quarrels with Thiers broke up the administration. In 1839 common hostility to Molé again united the rival parliamentary leaders; but Guizot's acceptance, in 1840, of the post of ambassador to London withdrew him for a short time from active politics. In October he was recalled by Louis Philippe to form a ministry which repudiated the warlike policy of Thiers, and would aid the citizen king in his "struggle against anarchy." At first Guizot undertook the foreign department, but in 1847 Soult's retirement made him Prime Minister in name as well as in fact. He remained the ruling spirit of the French Government until Louis Philippe's fall. As Foreign Minister he was at first very successful. He had found Thiers and Palmerston bringing France and England to the verge of war. His close alliance with Peel and Lord Aberdeen enabled him to establish an *entente cordiale* that lasted until Palmerston's return to office as Foreign Secretary in 1846. Soon after, the Spanish Marriages intrigue overwhelmed Guizot and his master with discredit, broke up the English alliance, and compelled Guizot to rely on the support of the reactionary courts of the north and east. Meanwhile his government at home had landed him into almost worse difficulties. Cold and unsympathetic both in manner and policy, the austere Huguenot maintained an unpopular Govern-

ment by means of oppression and corruption. His mastery of oratory, and of parliamentary tactics, gave him control over a Chamber elected by an extremely limited suffrage. But he ignored the growing force of unrepresented public opinion out of doors, and while thoroughly believing that he was fighting the battle of constitutional government, he rendered inevitable a revolution that united Liberal and Jacobin against the existing régime. He refused to concede parliamentary reform even to the extent of conferring the suffrage on the land-holding peasantry. With characteristic lack of insight, he left many departments of government—finance, commerce, the army and the navy—in the hands of subordinates whose action largely increased the difficulties of his position. With incredible obstinacy he adhered to the last to the policy he had adopted. In the very midst of the revolution of 1848 he resigned office, but was too late to save the monarchy of Louis Philippe. After some difficulty he escaped to London. His political career was at an end; though until the *Coup d'État* of 1851 he made unsuccessful efforts to regain his position. For the rest of his life he devoted himself to literary and historical studies, to the stimulation of historical research in others, to the deliberations of the Institute, and to the leadership of the orthodox party in the Reformed Church. Speedily restored to France, he spent his declining years at Val Richer, near Lisieux. Soon after his fall he was engaged on the continuation of his *History of the English Revolution*. His declining years were devoted to a popular history of France which owed its origin to his lessons to his grandchildren (*Histoire de France racontée à mes Petits Enfants*, 5 vols.). Guizot was a man of great activity and industry, strong ability and force of character. Few men have obtained fame in so many different departments, yet few men of his calibre have been more rigid and narrow. As a statesman he failed under conditions difficult at the best, but made much harder by the limitations of his own character and policy; he accepted his defeat with great resignation, and the former Prime Minister contentedly earned his bread by literary labour in his Norman retreat. Simple, proud, contented, poor, the main features of his character were singularly massive and imposing, though wanting in attractiveness and charm. Except in the last fatal years of his ministry no one so much as suspected his perfect integrity. His private life was always pure and religious. As an historian he did more than any other Frenchman of his time to develop critical and scientific methods, and both to elevate and popularise the study of history. His account of the times of Charles I. and Cromwell remains one of the best and fullest narratives of an important period; and if the greater research of Germany has made obsolete much of

what he wrote on early European history, his books on these subjects remain works of great learning and literary skill, far superior to most of their predecessors. It is impossible to give a complete list of Guizot's voluminous works. In addition to those above mentioned, his essays on Corneille and Shakespeare may be referred to as examples of his literary writings. He also wrote a variety of meditations on ethics and religion. Of his other historical works may be mentioned his *History of Representative Government*, his *Life, Correspondence, and Writings of Washington*, and his autobiographical *Mémoires pour servir à l'Histoire de mon Temps*. [T. F. T.]

* **Gull**, SIR WILLIAM WITHEY, M.D., F.R.S. (b. 1816), a distinguished physician, was educated by private tuition and at Guy's Hospital, London; M.B., London University, 1841, M.D., 1846. From 1847 to 1849 he was professor of physiology at the Royal Institution of Great Britain, and from 1847 to 1867 physician and lecturer to Guy's Hospital. He was knighted in 1872, in recognition of his skilful treatment of the Prince of Wales during his serious illness in the December of the preceding year. Shortly afterwards he was also appointed one of the physicians-extraordinary to Her Majesty. Among his numerous published lectures and orations may be mentioned:—*Clinical Observations in relation to Medicine in Modern Times* (1869), *Reports on Epidemic Cholera*, by Dr. W. Baly and W. W. Gull (1864), *Alcohol as a Medicine and as a Beverage* (1878). He also wrote the introduction to Miss Ellice Hopkins's *Life of J. Hinton*. Sir W. Gull is president of the Clinical Society, a fellow of various medical and scientific societies, and is generally recognised as one of the leading members of the medical profession.

Guthrie, THOMAS (b. 1805, d. 1873), Scottish divine, was the son of a banker, a native of Brechin, Forfarshire, and was educated at Edinburgh University. He obtained his licence as preacher in 1825, and after studying medicine in Paris, and managing the family bank for two years, he became, in 1830, minister of Arbirlot. In 1837 he became the colleague of the Rev. John Syme, in the pastorate of the Old Greyfriars, Edinburgh, and at once obtained celebrity as a preacher. In 1840 he was chosen minister of St. John's Church. He was an ardent supporter of the Free Church movement, and collected the fund which supported that body during the early years of its existence. Dr. Guthrie was also an ardent supporter of attempts to improve the social condition of the masses. His first *Plea for Ragged-schools* was a great success; its proceeds were applied to the erection of the ragged-school on Castle Hill, and it was followed by a *Second Plea*, and a plea in support of religious instruction in those schools. Total abstinence found

in him a powerful platform advocate, and he published in 1850 a *Plea on behalf of Drunkards and against Drunkenness*. His religious works include a treatise on *The Gospel in Ezekiel* (1856), *The City, its Sins and Sermons* (1857), *Christ and the Inheritance of the Saints* (1858), and *The Parables Read in the Light of the Present Day* (1866). They have all had a considerable sale, and give a good idea of the fervour and wealth of imagery which were the characteristics of Dr. Guthrie's preaching. His health becoming infirm, Dr. Hanna was in 1848 associated with him in the pastorate of the Free Church of St. John's. In 1864 he retired from public life, and was shortly afterwards presented by his admirers with £3,000. For some years afterwards he was editor of the *Sunday Magazine*, which was founded in 1864, and his contributions to it were republished.

Autobiography of Thomas Guthrie, with a Memoir by his sons.

Gutzkow, KARL FERDINAND (b. 1811, d. 1878), one of the most conspicuous men of letters of modern Germany, was the son of an ostler in some prince's stables at Berlin, where he was educated at one of the gymnasia, and in early youth entered the university, with a view to the study of theology under Schleiermacher and Hegel. The revolution of 1830 diverted his thoughts to social questions, and having already displayed considerable power in journalism, he was in 1831 invited by Menzel (q.v.) to Stuttgart, to take part in the famous *Literaturblatt*. Intimate and prolonged connection between the two was, however, impossible; and Gutzkow became acquainted with the small body of reformers to which Wienbarg, one of the members, gave the title of "Young Germany." Gutzkow was soon recognised as the leading spirit of the movement, and in 1835 the rupture of old ties was completed by a savage attack from Menzel upon Gutzkow's most important early work, *Wally, or the Fair Sceptic (Wally, oder die Zweiflerin)*. The Government, with ears always open to charges of political and religious heresy, at once confiscated the book, and imprisoned the author for three months at Mannheim. "Young Germany" and all its works were laid under ban by the Bund, and Prussia even prohibited any of Gutzkow's future writings. Heine's publisher, Campe, however, undertook the risk of some minor critical works, and in 1837 Gutzkow settled in Hamburg for nearly five years, edited the *German Telegraph*, and engaged upon miscellaneous literature, of which *Red Caps and Cows (Die rothe Mütze und die Kapuze)*, a satire on Görres (q.v.), and the *Life of Börne* (q.v.), an answer to Heine, were the most important results. These were followed by the *Letters from Paris*, during a prolonged visit to France. In 1846 he was invited to Dresden as director of the

theatre, the few years before this having been devoted almost entirely to dramatic production. His first acted drama, *Richard Savage*, a tragedy of common life, was performed at Frankfurt in 1839. It was followed by a series of some five-and-twenty plays, one being produced almost annually up to 1850, and after that at intervals. The most important of these, on the whole, were *Patkul*, a tragedy (1841), *Pig-tail and Sword* (*Zopf und Schwert*), a comedy on Frederick the Great's boyhood (1844), and *The Original of Tartüffe* (*Das Urbild des Tartüffe*, 1845). These dramas, especially the comedies, revolutionised the German stage by restoring to it the realities of modern life and interests; though for true art their moral and purpose, social or political, is often too sharply pointed. Illness, and the death of his first wife, prevented him from taking a leading part in the revolution of 1848, though he was in Berlin at the time, and addressed the people on March 19th. Returning to Dresden, he devoted himself to the production of his two greatest works, the vast romances of *The Knights of the Spirit* (1850) and *The Magician of Rome* (1858) (*Die Ritter von Geiste* and *Der Zauberer von Rom*), each of which extends to 9 vols. They deal with two of the main spiritual tendencies of Germany in Gutzkow's time. With the exception of a romance on German unity, *Hohenschwangau* (5 vols., 1868), his subsequent works need not here be mentioned. In 1861 he removed to Weimar, as secretary to the Schiller Memorial, but petty cares and local jealousies drove him to attempted suicide and complete madness (1865). After his partial recovery he travelled about in Switzerland, Italy, and Germany, still occupied with literary undertakings, till one night he was burnt to death in his bed, at Sachsenhausen, whilst under the influence of chloral. Few writers of recent years have done more to free Germany from antiquarian shadows and the maudering sentiment of albums and tea-parties.

Gutzkow, *Rückblicke auf mein Leben* (1875); Introduction to *Zopf und Schwert*, in Pitt Press series, [H. W. N.]

Guyot, ARNOLD (b. 1807, d. 1884), one of the founders of the science of physical geography, was a native of Switzerland, but in 1849 made his home in America, where his influence on a long succession of students can scarcely be exaggerated. His whole life was spent in the advancement of his favourite study. Now he was engaged in measuring the height of a series of mountain peaks, at another period his time was occupied in tracing a line of boulders to their sources. The preparation of mathematical tables for geographers and meteorologists, the tedious elaboration of a geological map, the compilation of a text-book, a popular lecture to a "lyceum," or the training of teachers, seemed

to come equally ready to him. He required no "endowment" to stimulate his researches, no commission, no salary. Like Agassiz, his countryman and colleague, his early studies had been the glaciation of the Alps. Accordingly, when he went to live in America, the first task he undertook was the investigation of the like features in the great Appalachian Mountains, which border the Atlantic seaboard from Maine to Georgia. At a later date he studied the Catskill with equal success. His most eminent service to science and his adopted country was, however, the planning of the system of meteorological observations which has since that date assumed proportions so vast, and the preparation of the *Meteorological and Physical Tables* issued by the Smithsonian Institution (4th ed. 1884). For some time after his arrival in the United States he was without a Chair, a peripatetic teacher engaged by the Massachusetts Board of Education to unfold the right principles of geographical instruction. These views he embodied in his *Earth and Man*, a work which develops the teachings imbibed from Humboldt, Ritter, and Steffens, though the manner in which they are worked out is essentially his own. To this day, this little volume is about the best introduction to physical science in any language. Finding that the maps in use were poor, flat, and unsuggestive, he began the preparation of a better series, and at the same time a set of text-books to accompany them. After becoming professor of geology and physical geography in Princeton College, he continued for thirty years to teach on the lines he had marked out. Through life he was intimate with Agassiz. He wrote a memoir of his friend for the National Academy; and when it is remembered how greatly the two Swiss naturalists, whose studies and careers were in many respects so similar, influenced American science, it is no more than the truth to say that without these earnest emigrants the progress of knowledge would have been seriously delayed.

Sketch in *Science*, vol. iii. (1884), No. 55, pp. 218-20. [R. B.]

Gwalior, THE MAHARAJAS OF, who are generally known by their hereditary title, Sindhia, were formerly members of the great Mahratta Confederacy, which acknowledged the Peishwah of Poonah as its nominal chief. At the beginning of the century DAULAT RAO SINDHIA (d. 1827) was on the throne, and had already convinced the Company's Government that his turbulence would have to be severely punished. He had succeeded his great-uncle in 1794, and at once proceeded to raise a formidable army, many regiments of which were officered by Frenchmen. At first he confined himself to aggressions against the neighbouring chiefs, enlarging his territories at the expense of Holkar [INDOOR] and the Peishwah,

Bajee Rao, who relied upon him to maintain himself on the throne, and seizing Ahmednuggur, the key to the Deccan. Both he and Holkar intrigued for the British alliance, but it was to be given to neither of them, but to the Peishwah, who in 1802 was restored through a British subsidiary force. War thereupon began, Sindhia having as his ally the Bhonslah of Berar, and beginning operations by invading the Deccan, where the Nizam, an ally of the East India Company, had just died. On Sept. 23rd, 1803, the combined force was caught at Assaye by Sir Arthur Wellesley [WELLINGTON], and defeated after a hard-fought battle of three hours, a British success which was repeated at Argaum, in Berar, on Nov. 28th. Meanwhile Sindhia's northern army had been suffering equally severely at the hands of Lord Lake (q.v.), who had stormed Alleghur, occupied Delhi after a pitched battle outside the walls, and finally dispersed the Mahratta forces at the battle of Laswaree. Forced to sue for peace, Sindhia was compelled to resign his acquisitions in Hindustan proper, and the fortress of Gobad and Gwalior (Dec., 1803). This last loss he felt so bitterly that he promptly began to intrigue with Holkar, who was in arms against the British, but was pacified when the Governor-General, Lord Wellesley, agreed to the restoration of the fortresses and the rectification of his northern frontier. On the outbreak of the Pindari War in 1817, Sindhia's attitude was regarded by the British authorities as not altogether satisfactory. He was evidently inclined to support those freebooters, who indeed had frequently done good service in the Mahratta campaigns, and was further known to be in communication with the Peishwah. Although bound by treaty to co-operate with the British against the Pindaris, he allowed them to approach his capital without a shadow of resistance. Before the two armies could fraternise, the Marquis of Hastings appeared on his frontier and compelled him to turn against the Pindaris, who promptly dispersed, and then ordered him to surrender Asseegurh for three years as a security for his good behaviour. This he refused to do; the fortress was stormed and permanently retained by the Company. During the remainder of his life Sindhia was on good terms with the British; he died childless, and without having nominated an heir, leaving the choice to the Government. (2) JANAKJI SINDHIA (b. circa 1818, d. 1843), a mere child, was chosen by the Government, and one of his predecessor's widows, Baiza Bai, was established as regent. The arrangement proved unsatisfactory, although cemented by a marriage alliance; the regent attempted to coerce the chief, until in 1838 he won over the army and drove her from Gwalior. During the remainder of the reign the kingdom was a prey to faction; and Sindhia being childless the succession question

by no means tended to promote tranquillity. (3) * BAJORAT RAO SINDHIA, K.C.S.I. and G.C.B. (b. 1835), a distant cousin, was adopted by Janakji's widow, and recognised by the British Government. The period of his minority was not peaceful, and in 1843 he was driven from the throne. The British thereupon came to his assistance, defeated the rebels in the battles of Maharajpore and Panniar, and replaced him in power, at the same time reducing his army, and placing a disciplinary force, for which the Maharajah paid, at Gwalior. On the outbreak of the Mutiny (1857) he and his able minister Dinkur Rao assured our political agent, Major Macpherson, that they would stand by the English. Sindhia was as good as his word, and though the British contingent and his army were both disaffected, he kept them inactive at Gwalior until they went over to the rebels in June, 1858. Sindhia and his minister fled to Agra, but was speedily restored by Sir Hugh Rose, who took Gwalior. Liberally rewarded for his fidelity by grants of land and an increase of troops, he was nevertheless compelled to submit to a contingent at Gwalior, which, however, was finally handed over to him in Nov., 1885. Maharajah Sindhia sat with the Maharajah of Jeypore, and Sir Dinkur Rao, on the commission which tried the Guikowar of Baroda on the charge of poisoning Colonel Phayre, and in 1876 entertained the Prince of Wales with great pomp. In 1876 he lost his able minister, Sir Dinkur Rao, who was succeeded by his brother, Sir Madhava Rao. The Maharajah enjoys a salute of twenty guns on British territory as well as his own.

For the Mahratta War of 1803, see Harriet Martineau, *Introduction to the History of the Peace*; see also T. E. Holmes, *Indian Mutiny*; Grant Duff, *History of the Mahrattas*; and W. W. Hunter, *Imperial Gazetteer*, art. Gwalior. [L. C. S.]

H

* **Haag**, CARL (b. 1820), painter in water-colours, was born at Erlangen, in Bavaria, and having received some artistic education at Nuremberg, went to study at Munich, which he left in 1846, being overwhelmed by commissions for portraits. After some months spent in Brussels, he visited England in 1847, in order to become acquainted with English water-colour; since then, England has been his home, and water-colour the principal medium of his art. In 1850 he was elected Associate of the Royal Society of Painters in Water Colours. During one of his sketching tours in the Tyrol he met the Prince of Leiningen, by whom he was introduced to the Queen and Prince Albert in 1853. Next year he accompanied them to Scotland, and painted *The Royal Family ascending Loch-*

na-Gar, and *Evening at Balmoral*, both now at Windsor, together with *The Royal Family crossing Poll Tarff*, painted in 1863. From 1855 to 1860 the artist travelled in the East, and it was during these years that he adopted the range of subject for which he has become celebrated. We may here mention:—*The Acropolis of Athens*, *The Holy Rock at Jerusalem*, *The Temple of the Sun at Baalbek*, *General View of Palmyra*, *Happiness in the Desert* (1867), *Desert Hospitality* (1867), *The Sphinx of Ghizeh* (1879), *A Halt in the Desert* (1880), and very numerous landscapes from the Bavarian and Tyrolean Alps.

Catalogue of the works of Mr. Carl Haag, R.W.S., exhibited at the Goupil Galleries, 1880.

* **Habberton**, JOHN (b. 1842), a popular American writer, was born at Brooklyn, and brought up in the West, where he was apprenticed to a printer. He saw service during the Civil War: but about the year 1865 he set up as a printer and bookseller. His first essay in literature was *Selections from the "Spectator,"* which was followed in 1873 by *Helen's Babies*. This latter work, along with its sequel, *Other People's Children* (1877), by its quaint humour, American wit, and realistic portraiture, at once gratified the popular taste. Amongst other works, Mr. Habberton has since written, with varying success, *The Jericho Road* (1877), *The Crew of the "Sam Weller"* (1878), *Mrs. Mayburn's Twins* (1882), and *The Bosham Puzzle* (1884).

Chambers's Journal, Sept., 1877.

Hackländer, FRIEDRICH WILHELM (b. 1816, d. 1877), a German novelist, was born near Aix, in poor circumstances, and having struggled up to manhood, suddenly, in 1840, found himself famous through his *Pictures from a Soldier's Life in Time of Peace*, contributed to a Stuttgart newspaper. He became private secretary and companion to the Crown Prince of Würtemberg, and in 1849 took part in the campaign in Italy, which he described in *Soldier Life in Time of War* (1850). It was followed by his greatest works in rapid succession:—*Ups and Downs* (*Handel und Wandel*, 1850), *Stories without a Name* (*Namenlose Geschichten*, 1851), *Slave Life in Europe* (*Europäisches Sklavenleben*, 1854), *The Moment of Joy* (*Der Augenblick des Glücks*, 1857), and *The New Don Quixote* (1858). He continued to write with great facility even in his later years, and produced *The Hour of Darkness* (*Die dunkle Stunde*, 1863), *Zigzag Stories* (*Geschichten im Zickzack*, 1871), and many others, in his humorous, pointed, and unaffected style. In 1865 he went to live on the Starnberg Lake, near Munich, and there he died.

Der Roman meines Lebens (3 vols., published 1878): an autobiography that breaks off at 1849.

* **Haden**, FRANCIS SBYMOUR (b. 1818), the eminent etcher, born in London, of an old

Derbyshire family, practised for years in Sloane Street and Mayfair as a successful surgeon. He was educated at University College, London, and at the Sorbonne, in Paris, and was a member of the College of Surgeons in 1842, and a fellow in 1857. His first etchings were wrought as early as 1843, but there are only two or three impressions of them, and their execution is halting and uncertain. It was only in 1858 or 1859, when Mr. Haden was a middle-aged man, that the labours of his profession as a surgeon permitted him to etch seriously, and in the latter of those years he produced *Mytton Hall* and *The Water Meadow*, which will always rank among his finer works. It was at this time that Mr. Whistler was doing his Thames-side etchings, and the two artists, who are brothers-in-law, were then much together. To them and to Méryon, and Bracquemond and Jacquemart, the revival of etching is due. Mr. Haden's *Sunset on the Thames* and *Erith Marshes* were produced in 1865, and *The Breaking-up of the "Agamemnon"* in 1870. Later still have been executed—to name only the most notable—a series of etchings in Dorsetshire (*Windmill Hill* is the most attractive of them), a series in Spain (*Grim Spain*, in Mr. Wedmore's *Four Masters of Etching*, is the most impressive), and the *Calais Pier*, an extraordinarily free and masculine rendering of the famous picture by Turner. It will thus be seen that Mr. Haden's work has been very varied. It has likewise been extremely extensive, for Sir William Drake has catalogued one hundred and eighty-five plates, and has omitted one or two; and, for the most part, it has been as original in motive and method as in avowed subject. Before Turner, even as before nature, Mr. Haden has been an interpreter, and not a copyist. The laws of composition are laws which he has mastered, and he is a vigorous and expressive draughtsman, an artist of impulse and of decision. As his own work is comprehensive, so is his appreciation of the work of his brother-artists in the present and the past. He is one of our most diligent and best-endowed collectors, and he has made in print the well-judged eulogium of Hollar as well as of Rembrandt, of Méryon as well as of Vandyke. This comprehensiveness of taste, of vision, and of knowledge, is a quality always admirable, and always perceptible, in his etched and in his written work. It has allowed him to be learned without being academic, and has ensured for him a freedom which has never become licence. It is a mental characteristic, very strongly marked, and its possession has separated his labour from that of most contemporary artists. Mr. Haden's energy and love of adventure have led him into many forms of artistic experiment. Etching originally upon copper, he has etched latterly a good deal upon zinc. It yields, he says, "a fat line," which he

enjoys. He has done at least his part in the revival of mezzotint.

Gazette des Beaux-Arts, 1864; Hamerton, *Etching and Etchers*; Wedmore, *Four Masters of Etching*.

* **Hæckel**, ERNST (b. 1834), the German naturalist, after receiving his preliminary education in his native town of Würzburg, passed two years in the University of Berlin, and three (1855-57) in that of Würzburg, mainly in attendance on the lectures of Johannes Müller, Alexander Braun, Rudolf Virchow, Albert Kölliker, and F. Leydig, graduating Doctor of Medicine and Surgery in the latter year. After a prolonged examination of the seas in the vicinity of Heligoland, Norway, and Nice, for zoological purposes, and a stay in Italy and Sicily, he was admitted a *privat-docent* at Jena, where next year he became extraordinary professor of comparative anatomy, and director of the Zoological Institute, and was named, in 1865, ordinary professor of zoology, a Chair created especially for him. Desiring to perfect himself in the study of the lower animals, he came to London in 1866, made the acquaintance of Darwin, and then visited Lisbon, Madeira, Teneriffe, the Canary Isles, Mogador, Tangier, and Spain. In 1873 he explored, in a ship of war placed at his disposal by the Viceroy of Egypt, the Red Sea, where he studied the coral reefs. Dr. Hæckel having adopted *in toto* the Darwinian theories, is the most prominent exponent of them in Germany. He has attempted to refer the diversity of species to a primitive organism, of simple and rudimentary construction, and supported his ideas with ability in a large number of works or memoirs, of which some have been translated into various languages. Besides the following monographs (in German), *The Radiolaria* (1862), with atlas, *The Development of Syphonophora* (1869), *The Monera* (1870), *Monograph of the Calcareous Sponges*—wherein he discusses the problem of the origin of species—Dr. Hæckel has published other works of a more popular character, among which may be mentioned:—*The General Morphology of Organisms* (1866), *The History of Creation* (1868), *Life in the Depths of the Sea* (1870), *Anthropology* (1874), *History of the Evolution of Man* (1875), and *Red Sea Corals* (1876). His works on *The Kingdom of Protista* (*Das Protistereich*, 1878), and on *Cellular Psychology*, have been translated into French (1879). English translations, though far from good, have also appeared of his principal popular works. The Royal Society's catalogue of scientific papers records fifty memoirs from Professor Hæckel's pen, many of them of considerable length, and all of them displaying a vast amount of laborious research; and since the date of the last volume of that catalogue a great many others have appeared in various publications. As a teacher, and

director of the Jena students' researches, he occupies a large portion of his time, and has thus moulded to his way of thinking many of the rising school, though in his own country serious adversaries to his materialistic teachings have arisen in the persons of Michaelis, His, Semper, and others, though his lectures in Jena continue to attract a large and ever-increasing number of students. Jena has thus become the principal centre of the Darwinian school, though in the unreserved manner in which the doctrines of the great English naturalist are carried to their logical terminations, he is in this country and in France followed by very few of the best thinkers. Mr. Darwin, indeed, never quite approved of his illustrious pupil's conclusions, and on the Continent—besides the opposition of some of his own countrymen—Quatrefages, Prynne, Beu, and Rochet, have offered the most strenuous arguments against the acceptance of his views; while in England Mivart is the best known of his opponents. The strongest part of Dr. Hæckel's works is that devoted to the Invertebrata, and the weakest that devoted to the genesis of man. His classification of the Acrita, however, appears to be generally accepted by modern zoologists. His latest travels (1881-2) have been to India and Ceylon, which he has described in a volume more than once translated into English and other languages, while the scientific results appear in a long series of memoirs. He has also assisted in the report of the *Challenger* expedition, by monographing some of the most important groups of Invertebrata, such as the Acephalæ. It is perhaps unnecessary to add that Dr. Hæckel has received all the most eminent rewards which fall to men of science.

Biographical sketches of him appear in the *Deutsche Rundschau*, Bd. iv., p. 7; and *Gegenwart*, (Berlin), No. 47.

Hahnemann, SAMUEL CHRISTIAN (b. 1755, d. 1843), the founder of homœopathy, was a native of Saxony. In 1789 he established himself as a doctor at Leipzig, and there hit upon the principle of homœopathy, i.e. that what in health gives rise to certain symptoms, is a cure for diseases with similar symptoms; and he further taught that doses should be reduced to a minimum. His great treatise, *Organ der rationalen Heilkunde* (*System of Rational Curatives*, 1810, translated 1869), aroused great opposition, and in 1821, having been "boycotted" by rival practitioners, and prosecuted by the State, he was forced to leave Leipzig, and eventually took refuge at Paris. No amount of persecution could discourage him in the propagation of his ideas.

Albrecht, *Hahnemann, sein Leben und Wirken* (1875).

Hahn-Hahn, IDA MARIA LOUISE GUSTAVE, COUNTESS VON (b. 1805, d. 1880), German

novelist, was born at Tressow, in Mecklenburg-Schwerin, and married her cousin, Friedrich Adolph von Hahn-Hahn, but was divorced in 1829. Her first publications were poems; and as she had travelled throughout the length and breadth of Europe, she also wrote several books of travel. But her reputation rests on her lively and melodramatic novels of social life, such as *Society* (*Aus der Gesellschaft*, 1838), *Sigismund Forster* (1843), *Gräfin Faustina* (1844), *Cecil* (1845), *Doralice* (1863), *Eudoxia the Empress*, a tale of the fifth century (1866), and the series called *Nirwana* (1875). She was converted to Roman Catholicism about 1850, chiefly through Cardinal Wiseman's influence, and defended her position in numerous writings—the most important being *Babylon and Jerusalem* (1854), *A Voice from Jerusalem* (1856), *Maria Regina* (1862), and *Lovers of the Cross* (1864).

Halévy, JACQUES ELIAS (b. 1799, d. 1862), composer, whose real name was Lévi, was a Jew. He studied at the Paris Conservatoire under Cherubini, and in 1819 gained the Prix de Rome with the cantata *Hermine*. It was many years before he attained fame, and his ballet, *Manon Lescaut*, produced in 1830, was perhaps the first of his works to take hold of the public. In 1835 his grand opera *La Juive*, and his comic opera *L'Éclair*, were produced, and created great enthusiasm, and that deservedly. *Les Huguenots*, produced in the following year, created a perfect *furor*. After that Halévy suffered the usual evil effects of musical popularity. He was pestered with demands for operas, and speedily wrote himself out. Of his later productions the best are:—*La Reine de Chypre* (1841); *La Tempesta*, the libretto of which was by Scribe (1850); *Le Nabob* (1853); and *La Magicienne* (1858). Halévy was a professor at the Conservatoire in 1827 and onwards, M. Gounod having been one of his pupils, and became a member of the Institute in 1856. His musical studies, entitled *Souvenirs et Pensées*, were published in 1861.

* **Halévy, LUDOVIC** (b. 1834), French dramatist, is the son of Léon Halévy, who had considerable reputation in his day as a *littérateur*. The son entered the Government service, and rose to the position of secretary to the Corps Législatif in 1861. Dramatic success, however, induced him to abandon office work and to betake himself altogether to writing for the stage. At first alone, and afterwards in conjunction with M. Henri Meilhac (b. 1832), he wrote the librettos to Offenbach's most celebrated operas, *Orphée aux Enfers*, *La Belle Hélène*, *La Grande Duchesse*, and so forth. [OFFENBACH.] This celebrated partnership began in 1860, with the little piece *Ce qui plaît aux Hommes*. The authors have chiefly devoted themselves to comic opera, but among the various efforts

in pure comedy and farce with which they have delighted French, and, through the medium of adapters, English audiences, may be mentioned:—*Frou-frou* (1870), in which the character of Gilberte has been played by two great artistes, Mmes. Desclée and Bernhardt, *Toto chez Tata* (1873), *Tricocoe et Cacoclet* (1872), and *Le Mari de la Débutante* (1879). M. Halévy has also proved himself a novelist of some excellence—for instance, in *Madame et Monsieur Cardinal* (1873), *L'Abbé Constantin* (1882), *Criquette*, and *La Famille Cardinal* (1883). His description of the Franco-German War, entitled *L'Invasion*, was also very popular.

Haliburton, THE HON. JUSTICE THOMAS CHANDLER (b. 1797, d. 1865), humorist, was born in British North America. He was best known by his literary name of "Sam Slick." In 1835 he furnished to a weekly review at Halifax a series of very amusing letters, in which the portraiture of American manners formed an inexhaustible subject. Subsequently they were republished at New York, under the title of *The Clockmaker* (1840-78), of which the hero, Sam Slick, is a thoroughbred Yankee, bold, cunning, and, above all, a merchant—in short, a sort of republican Panurge. In 1840 Mr. Haliburton was appointed a judge in British North America, and, on his retirement, in 1842, from that position, came to this country, where he took up his permanent residence, and sat in the House of Commons as member for Launceston from 1859 to 1864. He attached himself to the Conservative party, but seldom spoke. Mr. Haliburton was also the author of *Historical and Statistical Account of Nova Scotia* (1829), *The Letter Bag of the "Great Western"* (1840), *The Old Judge* (1849), and *The Americans at Home* (1854).

Halifax, VISCOUNT. [WOOD, SIR C.]

Hall, CHARLES FRANCIS (b. 1821, d. 1871), Arctic explorer, was a native of New Hampshire, U.S., and began life as a blacksmith, but eventually became a journalist at Cincinnati. His zeal for Arctic exploration led him to live for two years among the Esquimaux, having originally ventured into those regions in search of the bones of Franklin. Again, from 1864 to 1869, he wandered with the same people. In 1871 the U.S. Government fitted out the *Polaris* for a voyage to the North Pole, and placed Captain Hall in command. He started in August, and by the 30th had reached latitude 82° 16' N. Then, contrary to his own wishes, a move was made southwards, and the expedition wintered in the most northern point ever attained until the Nares expedition—Polaris Bay, on the Greenland coast. There Hall was seized with a sudden illness, and died on Nov. 8th. Suspicions of poison were entertained, but proved to be baseless. His comrades managed

to reach home again after many exciting adventures.

Report of the "Polaris" Expedition, published by the U.S. Government.

Hall, MARSHALL (b. 1790, d. 1857), a distinguished physiologist, was educated at the University of Edinburgh, where he took his degree in 1812. In 1815 he settled at Nottingham as a physician, and speedily acquired a large practice. He removed to London in 1825, about which time he published his comprehensive work on *Diagnosis*, which even at present is still quoted. His researches into the *Effects of the Loss of Blood* (1824), and his *Experiments on the Loss of Blood*, were published in the *Transactions of the Royal Medical Society*. These researches, along with his treatise on *The Circulation of the Blood* (1832), materially modified the practice of medicine. Among his other works published at this time is his valuable *Commentaries upon various Diseases peculiar to Females* (1827). Important as these works were, however, Dr. Hall's claims as a physiologist rest on his discoveries concerning the nervous system. His researches on the circulation of the blood led him to the discovery of the reflex functions of the spinal cord. He was also able to classify the various parts of the nervous system. As an instance of the suspicion with which these discoveries were regarded, it may be mentioned that the Royal Society declined to receive Dr. Hall's memoir on the subject, which he afterwards published under the title of *The Nervous System* (1837). His next important discovery was the "Marshall Hall method" of restoring asphyxiated persons, which was not long in displacing the empirical rules of the Royal Humane Society. Dr. Hall published, among other treatises, *An Essay on Convulsive Diseases* (1848), *Apoplexy and Paralysis* (1851), and *Theory and Practice of Medicine* (3rd ed. 1857); and at the time of his death was engaged in preparing a series of papers for the *Lancet*, entitled *The Complete Physiology of the Nervous System*.

The Lancet, Aug. 15th, 1857; *British Medical Journal*, Sept. 5th, 1857; *Memoir* by Mrs. Marshall Hall, 1861.

* **Hall, THE REV. CHRISTOPHER NEWMAN**, LL.B. (b. 1816), popular writer and preacher, was born at Maidstone, educated at Highbury College, and graduated B.A. and then LL.B. at the University of London in 1855, where he gained the law fellowship. In 1842 he was called to the Albion Congregational Church, Hull, from which, in 1854, he was translated to Surrey Chapel, now Christ Church, Lambeth. As a preacher, Mr. Newman Hall enjoys a very wide popularity; and as a writer, some of his productions have reached millions in circulation. Among them are:—*Come to Jesus, The Call of the Master* (1855), and *The Man Christ Jesus*. Mr. Newman

Hall has also appeared as a controversialist in *The Dangers of Negative Theology* (1857), *The Lord's Prayer, a Practical Meditation* (1883), and a treatise on *Sacrifice*. His *Sermon on Napoleon III.* ran through three editions, and his *Dignity of Labour* (1856), in Dr. W. Clark's *Select Lectures*, is much valued. Mr. Newman Hall's congregation at Christ Church uses the services of the Church of England, slightly modified.

Hall, THE REV. ROBERT (b. 1764, d. 1831), Baptist preacher, born at Ansty, near Leicester, was the youngest of fourteen children. At the age of fifteen he was entered at the Baptist Academy at Bristol. Proceeding to Aberdeen University in 1781, he made the intimate acquaintance of Sir James Mackintosh, with whom he read and discussed philosophy and theology. He graduated in 1785, and became second minister in the collegiate charge of Broadmead Chapel, Bristol, and classical master in the Bristol Academy, which latter post, however, he resigned in 1790. Mr. Hall at once became a popular preacher. In 1791 he succeeded the eccentric Dr. Robinson at Cambridge, where, by the force of his preaching, the influence of his reputation, and the still better influence of his persuasive life and character, he became one of the foremost divines of the day. In 1793 he published his celebrated *Apology for the Freedom of the Press*, and in 1801 his eloquent sermon on *Infidelity; Reflections on the War* followed in 1802, and *Sentiments Proper to the Present Crisis* in 1803. In 1806 he was transferred to Leicester, and in 1825 he returned to Bristol. His argumentative treatise, *Terms of Communion*, which appeared in 1810, is distinguished by logical acuteness and catholicity of sentiment. In all his writings Mr. Hall shows himself to have been possessed of a clear intellect, and of an affluent imagination. Nearly all his life he suffered from spine disease, and from 1804 he was subject to intermittent attacks of insanity. Latterly also he was much troubled by want of sleep.

Memoir by Dr. Gregory, prefixed to the *Works of Robert Hall*, 6 vols.

Hallam, ARTHUR HENRY (b. 1811, d. 1833), the son of the historian, a youth of much promise, was educated at Eton, and at Trinity College, Cambridge, where he graduated in 1832, having gained one of the University essay prizes. He died at Vienna, leaving behind him a number of short poems and essays, which gave expectations of much excellence in the higher domains of literary criticism. His friend, Alfred Tennyson, has made his name immortal by the poem *In Memoriam*.

Henry Hallam, Remains in Prose and Verse of A. H. H., with a Memoir.

Hallam, HENRY (b. 1777, d. 1859), historian, was the son of a Dean of Bristol, and

was born at Windsor, where his father held a canonry. He was educated at Eton, and Christ Church, Oxford, where he took his degree in 1799. He was afterwards called to the bar; but, though he possessed much legal knowledge, and was made a bencher of his inn, he never seems to have practised. He devoted himself to literary work, and wrote several articles in the *Edinburgh Review* that attracted attention. He connected himself with the Whig party, and obtained through them an office in the Stamp Department which, with some private fortune, made him equally independent of law and literature. In 1818 he published his first great work, the *View of the State of Europe during the Middle Ages*. It consisted of a series of clear and dispassionate dissertations on the more important aspects of mediæval history. Each important country is treated separately, and there are other chapters on the feudal system, the ecclesiastical power and the state of society. Terse, clear, sensible, and impartial, as a general survey of the whole subject it is still without a rival in English historical literature, though special research has modified many of the author's conclusions. He dwells with especial knowledge and care on points connected with constitutional history, and his chapter on England is altogether confined to what had already become his favourite study. Nine years later (1827) he gave to the world a continuation of his researches on mediæval English institutions in his celebrated *Constitutional History of England from the Accession of Henry VII. to the Death of George II.* Written on a larger scale and with more narrative power than the earlier work, it was marked by the same high qualities, and won an equal or even greater reputation for its author. Though to the student of the present day it seems old-fashioned, and though its strong Whig bias makes him almost wonder at the high eulogies that have been bestowed on its impartiality, the *Constitutional History* possesses sterling merits that justify its position as the great text-book on its subject. The next ten years were devoted to very different studies, the results of which were published in 1838 in his *Introduction to the Literature of Europe in the Fifteenth, Sixteenth, and Seventeenth Centuries*. It stands in a relation to the last chapter of his *Middle Ages* similar to that of his *Constitutional History* to the English chapter of his earlier work. The great learning, judgment, and sobriety of Hallam's previous books are found in a matured and developed form in the work of his later years. Yet the subject was perhaps a less happy one for his peculiar powers. An unfortunate adherence to the rigid chronological arrangement, some want of imagination, a tendency to limit his criticism to a mere summary of famous books, and a necessary want of detailed technical knowledge in some of the

many fields which his survey includes, make the literature of Europe the least adequate of his great works. In 1848 Hallam issued a learned, if somewhat discursive, series of *Supplementary Notes* to his *Middle Ages*, embodying the results of his later researches. The latter part of Hallam's life was marked by deep domestic affliction. In 1833 he lost his eldest son, Arthur Hallam (q.v.). Next year Hallam published, for private circulation, *The Remains in Prose and Verse of Arthur Henry Hallam, with a Sketch of his Life*. Hallam's wife and eldest daughter soon followed Arthur to the grave. At last, in 1850, his only surviving son, Henry Fitzmaurice Hallam, was suddenly taken from the world. Nine years afterwards the father himself died. Few historical reputations have been more solid than that of Hallam. A cultivated man of the world, who always wrote with a primary view to the wants of the general cultivated reader, he was also a careful, laborious, and critical investigator, a cool and judicious critic. His method of summary survey involved, if not minute original research, broad and comprehensive learning. His wide audience required, if not the more brilliant qualities of expression, a sound, manly, vigorous, and literary style. The antiquities of the Middle Ages and of the English Constitution had been worked at in parts and in detail before his time; but in giving a clue to guide the student through the labyrinth of technicalities, and a general view that strictly regarded the relative importance and permanent value of the various portions of his subject, Hallam performed an inestimable service to English historical literature. He may not quite merit the name of the "philosophical historian," but his transparent honesty of purpose and strenuous search after truth raise him high above most of his predecessors.

Dean Milman, *Memoir of Mr. Hallam, prefixed to the later editions of the Literature of Europe.*
[T. F. T.]

* **Hallé**, CHARLES, or more properly KARL (b. 1819), the well-known pianist and musician, was born at Hagen, near Elberfeldt, in Westphalia, and, having received a musical education, went to Paris in 1836. Driven to England by the Revolution of 1848, he has since then made this country his home, and has perhaps done more for the diffusion and appreciation of classical music throughout England than any other living musician. His connection with Manchester began soon after his arrival, and in 1857 he inaugurated the orchestral concerts in that city that resulted in the formation of the celebrated Hallé Band. He is equally well known in London by his pianoforte recitals and his performances at the Popular and Philharmonic Concerts, whilst his numerous provincial tours, especially in conjunction with Mme. Norman-Néruda, have made his name familiar

throughout England. The Beethoven sonatas are the works to which he has devoted special study, and he may be regarded as perhaps the last great master of the "old classical" style of pianoforte execution.

Halleck, HENRY WAGER (b. 1815, d. 1872), an American general, received the usual military education at West Point, and entered the Engineers in 1839. He gained a professorship at the Academy, and in 1845 he was sent by Government to examine the military resources of the European States. Having greatly distinguished himself during the Mexican War of 1846, he was raised to the rank of captain; and was one of the framers of the Californian Constitution when that State was admitted to the Union. In 1852 he was appointed inspector of light-houses in California, and being a man of some versatility, obtained a considerable practice at law, and was director of a mining and a railway company. In 1861, on the outbreak of the war, he was created major-general in the United States army, and appointed commander of the Missouri department, and in the following year compelled the enemy to evacuate Corinth. In July he was appointed commander-in-chief, and held that position until March, 1864, when he was superseded by General Grant. During that period he directed operations from Washington, and had to bear much undeserved odium on account of the want of success which attended the Unionists. He served loyally under Grant as chief of the staff, and from April to July, 1865, was in command of the James division. At the time of his death he was in command of the South Division at Louisville.

American Annual Cyclopædia (1872).

* **Halsbury, THE RIGHT HON. HARDINGE STANLEY GIFFARD, BARON** (b. 1825), Lord Chancellor of England, was educated at Merton College, Oxford (B.A. 1852). Called to the bar in 1850, he went the South Wales Circuit, and took silk in 1865. He twice contested Cardiff in the Conservative interest in 1868 and 1874, and was without a seat in the House when in 1875 Mr. Disraeli made him Solicitor-General with the honour of knighthood. After several more unsuccessful attempts he was returned for Launceston in 1877, and held office until 1880, when the ministry resigned. In 1885 Sir H. Giffard became Lord Chancellor with a peerage, resigned in Feb., 1886, and resumed office in Aug. when Lord Salisbury returned to power.

Hamilton, ALEXANDER (b. 1757, d. 1804), American soldier, entered the army at the age of eighteen, and became aide-de-camp to General Washington, whose right-hand man he was during the war of American Independence. After the conclusion of the war he made a great reputation at the New York

bar, and in 1789 was appointed Secretary to the Treasury, in which capacity he displayed great financial ability. In 1798 he was again in the field under Washington, fears of a French invasion having necessitated the calling out of the army, and for a few months after the death of his general, in 1799, was commander-in-chief. Again returning to the bar, he was rapidly increasing his fame as a pleader when Aaron Burr (q.v.) forced a quarrel upon him, and shot him in a duel on July 11th, 1804, on the west bank of the Hudson, opposite New York. His death was lamented by the entire nation.

J. C. Hamilton, *Life of Alexander Hamilton*; Reithmüller, *Hamilton and his Contemporaries*; Shea, *Life and Epoch of A. Hamilton*.

* **Hamilton, THE RIGHT HON. LORD GEORGE, M.P.** (b. 1845), statesman, is the third son of the 1st Duke of Abercorn (q.v.). He was educated at Harrow; and in 1864 entered the Rifle Brigade, whence, in 1868, he exchanged into the Coldstream Guards. His political career began in the same year, when he was returned head of the poll for the county of Middlesex in the Conservative interest. This considerable triumph was repeated in 1874, and Lord George was shortly afterwards appointed Under-Secretary of State for India, an office which in 1878 he resigned, to take that of Vice-President of the Council. During the period that the Conservatives were in opposition (1880 to 1885) he was one of the most dashing of the assailants upon the ministerial position; and was accordingly rewarded by Lord Salisbury with a seat in the Cabinet and the First Lordship of the Admiralty, in which office he won high praise from both sides of the House. At the general election of 1885 he was returned for the Ealing division of Middlesex.

Hamilton, SIR WILLIAM, BART., Ph.D. (b. 1788, d. 1856), philosopher, was the son of Dr. William Hamilton, professor of medicine in the University of Glasgow from 1781 to 1790. His grandfather also held the same professorship. He was born in the College Court, Glasgow, and, his father dying in 1790, was designed by his mother for the medical profession. He was educated first at the Glasgow Grammar School, then entered in 1800 at Glasgow University, went thence to Dr. Dean's school at Bromley, returned in 1803 to Glasgow, and, having gained the Snell exhibition, went in 1807 to Oxford. There he studied ancient philosophy extensively, especially the *Organon* of Aristotle. He took a first class in honours, and afterwards the B.A. degree, and, returning to Edinburgh, took up his residence there with his mother, and in July, 1813, was called to the Scotch bar. Though nervous as a speaker, and more interested in civil law and genealogical researches than in practical law, he enjoyed a fair amount of work. Assisted by

John Riddell, the famous antiquary, he succeeded in making out his claim, in 1816, to be the lineal descendant of the Hamiltons of Preston, in Haddingtonshire, and to be entitled to the baronetcy, which had long been dormant. His reading was enormous and thorough, and he especially pursued his researches in the history of philosophy, in modern Latin poetry, and in the history of universities. He was a candidate in 1820 for the succession to Dr. Thomas Brown in the Chair of philosophy in the Edinburgh University, but the election being in the hands of the Town Council, and Hamilton being a Whig, John Wilson ("Christopher North") was elected. In the following year, however, the Faculty of Advocates bestowed on him the Chair of civil history, and though the duties were nominal, and the pay—£100a year, paid irregularly—almost so, he delivered lectures. On March 31st, 1829, he married his cousin, Janet Marshall, a woman of great natural powers, who assisted him largely in his literary work, particularly as his amanuensis. His sole professional promotion came in 1832, when he was appointed His Majesty's Solicitor of Teinds in Scotland. He first began to be celebrated through his connection with the *Edinburgh Review*, to which he was induced to contribute under the editorship of Macvey Napier. His first essay was in 1829 on Cousin, and again in 1830 on Brown. Others of his essays were that on Logic in 1833, and that on Idealism in 1839. He also wrote on the *State of the Universities*, and his ideas so expressed had considerable influence on the subsequent reform of the English Universities. His essays have been collected, and republished in 1852. These writings, so learned, pointed, and forcible, attracted great attention in England, and also on the Continent, and accordingly, in July, 1836, aided largely by the recommendations of Cousin, Brandis, and other Continental philosophers, he was elected to the Chair of logic and metaphysics, which he continued to hold until his death. He was himself a Presbyterian, and in 1843 published a pamphlet on the schism in the Church of Scotland. In 1846 he published his annotated edition of *The Works of Dr. Thomas Reid*, and in 1854 the first volume of an annotated edition of Dugald Stewart's works, but this he did not live to complete. A fellowship in the University of Edinburgh was founded to his memory, and his library was purchased for £2,000, and presented to the University of Glasgow. His lectures were edited after his death by Dean Mansel, one of his most distinguished disciples, and appeared in 1859 and 1860, and in 1865 appeared John Stuart's Mill's *Examination of Hamilton's Philosophy*. It was as professor of logic that Hamilton was most widely known, and undoubtedly he was during a generation the most conspicuous figure in English metaphysics. His

lectures on metaphysics and logic were written during the winters of 1836, 1837, and 1838. His influence over his students and on Scottish thought was enormous. "His philosophy means," says Professor Veitch, "spiritualism in regard to man, realism in regard to the world, analogical, that is broken and imperfect, knowledge of God; a knowledge, therefore, of the universe of things which is not systematic, yet is sufficient for the moral and the spiritual needs of the life of man." In logic he introduced the device of the Quantification of the Predicate, in order to dispense with the conversion of propositions, and accompanied it with an appropriate system of notation. The Port-Royal doctrine of the inverse ratio of the comprehension and extension of terms is worked out by him in its reference to the syllogism. In psychology in general he is a follower of Reid, but very largely influenced by Kant. He denies the existence of any direct consciousness of self, and holds that all we can know of mind, as of matter, is its phenomena. Of the non-ego we have by external perception a direct and not a merely representative knowledge. He devoted himself especially to criticising and refuting the doctrine of representative perception. There is, however, some doubt among his interpreters as to what he conceives the non-ego to be; generally, under the impulse of Kant, he seems to teach that matter is in itself unknown, and, so far as it is known, it is known only in its relations to the sentient and percipient mind. The various laws of association he reduces to a single law of reintegration, according to which parts of the same mental state tend to recall each other. The faculty of thought begins with comparisons, involving a judgment of existence, of discrimination, of similarity, and a collection of several like attributes. Upon this there is superinduced classification, which gives two kinds of notions—collective and abstract. The product is the concept, in respect to the nature of which he ranks himself against the Realists and extreme Conceptualists, and with moderate Nominalists, such as Berkeley. Reasoning is a process of double comparison, in which two parts and two wholes mutually related are compared. Deduction proceeds from the whole to the parts, and induction from the parts to the whole. The only induction which Hamilton recognises is what he calls the purely logical one. That ordinarily so called he rejects as illogical. Causation he holds to be a special application of the law of the conditioned. The mind can conceive of things only under the forms of existence and of time. We cannot conceive of a phenomenon as non-existent, but only as existing at another time and under another form. The same being, necessarily conceived as existing in two forms at different times, is reciprocally cause and effect. This we believe, not in the exercise of

a power of our nature so to think, but under the constraint of a powerlessness to think otherwise.

Professor Veitch's *Memoir*; Ueberweg's *History of Philosophy*.
[J. A. H.]

HAMILTON, SIR WILLIAM ROWAN (*b.* 1805, *d.* 1865), Astronomer Royal for Ireland, was the son of Mr. Archibald Hamilton, a Dublin solicitor, and early evinced a liking for mathematical calculations. His critical notice of Laplace's *Mécanique Céleste* found its way in 1822 into Dr. Brinkley's hands, who at once expressed a wish to meet the author. Young Hamilton immediately presented himself with another paper on *Contacts between Algebraic Curves and Surfaces*, and was received kindly by the venerable mathematician. This was his first introduction to the Dublin Observatory, to which he was appointed keeper in 1827, as also professor of astronomy in the Dublin University. He was knighted by the Lord-Lieutenant at the first Irish meeting of the British Association in 1835. His papers on systems of rays, on the methods of dynamics, on algebra looked at as the science of pure time, on discontinuous functions, and on equations of the fifth degree, which he contributed to the Royal Irish Academy and other learned societies, are each valuable in its particular sphere. His invention of Algebraic Quaternions first appeared in his *Lectures on Quaternions*, in 1853, a more carefully brought-out edition of which, under the title *Elements of Quaternions*, appeared in 1866, edited by Mr. W. E. Hamilton. One of the earliest, and perhaps most popular, of Hamilton's discoveries was that of conical refraction. He asserted, from optical theory alone, by reasoning on the properties of light, that under certain circumstances a ray, instead of being refracted as a ray, should, if the theory were true, split into a cone of rays. This Professor Lloyd found to be the case. No such phenomenon had ever been even imagined; and it has been said that "no more remarkable triumph of theoretical prediction had then occurred in the history of science." Sir William was also a scholar, a metaphysician, and a poet.

R. P. Graves, *Life of Sir W. R. Hamilton* (1885); Prof. P. G. Tait in *North British Review*, Sept., 1866.

* **HAMLEY, LIEUT.-GENERAL SIR EDWARD BRUCE, K.C.B., K.C.M.G.** (*b.* 1824), the son of the late Admiral William Hamley, entered the Royal Artillery in 1843. He became captain in 1850, and brevet-major in 1854. Having served in the Crimean War, he became lieutenant-colonel in 1864, colonel in 1873, and Lieut.-General in 1882. From 1870 to 1877 he was commandant of the Staff College, Sandhurst. General Hamley has the reputation of possessing a scientific knowledge of war equalled by but few among his contemporaries, and after the conclusion of the Treaty of Berlin he served on the com-

missions for the delimitation of the Balkan and Armenian frontiers, and on that which superintended the surrender of her newly acquired territory to Greece. In the Egyptian War of 1882, he commanded the second division, and was stationed on the left at Tell-el-Kebir. General Hamley frequently contributed to *Blackwood's Magazine*, and many of his articles have been republished. His novels, *Ensign Faunce* and *Lady Lee's Widowhood*, also appeared in magazines in the first instance. He is also the author of a description of the Sebastopol campaign; of the highly popular *Operations of War Explained and Illustrated* (1st ed. 1866); a republished lecture, *The Strategic Conditions of our Indian Frontier* (1880); and a monograph on *Voltaire in the series of Foreign Classics for English Readers*. He was created C.B. in 1867, K.C.M.G. in 1880, K.C.B. in 1882 and in 1885 was elected M.P. for Birkenhead in the Conservative interest.

HAMMER-PURGSTALL, JOSEPH VON (*b.* 1774; *d.* 1856), was the son of Joseph von Hammer, and became Von Hammer-Purgstall only in 1835, when he inherited the estates of the Countess of Purgstall in Styria. He began life in the Austrian diplomatic service, and spent his youth in the Levant, where he improved his knowledge of Eastern languages, which he had begun to study at the Oriental Academy at Vienna. In 1796 he published a translation of a Turkish poem, but his long period of literary activity did not really begin till 1804, when he brought out his *Encyclopædia of Oriental Learning*. From that time onwards, for fifty years, he wrote on almost every branch of Arabic, Turkish, and Persian literature and history. Of his encyclopædic works the most important are his *History of the Ottoman Empire* (German, 10 vols., 1827; 2nd ed. 4 vols., 1834-6; and in French 1835 and 1840), which remains the only detailed history of the Turks in any Western language, though for those who can read Turkish these useful if chaotic volumes have been superseded; *History of Ottoman Poetry* (4 vols., 1836); *History of Arabic Literature* (7 vols., unfinished, 1850-6); and *Histories of several Mongol dynasties—the Golden Horde* (1840), *the Ilkhans of Persia* (1842), and *the Khans of the Krim* (1856). As an editor and translator he was no less active, as attest:—*Texts and Versions of Eth-Thaalaby, Ibn Wahshiya's History of the Mongols* (1806), *Ez-Zamakhshary's Golden Necklaces* (1835), *El-Ghazzaly* (1838), and translations of *El-Mutanabby, Er-Resmy, Evliya Effendi's Travels, and Unpublished Tales from the Arabian Nights*. He was a constant contributor to the *Fundgruben des Orients*, which he also edited; to the *Journal Asiatique*; and to the *Transactions of the Vienna Academy of Sciences*, which he helped to found. Von Hammer was undoubtedly the most famous Orientalist of the first half of this century.

He did for Germany what Sir W. Jones accomplished for England. He was in fact the greatest introducer of Turkish, and in a less degree of Arabic and Persian literature, to the European student. Undertaking so much as he did, it is natural that there should be faults of haste in his works; his style was over-florid, and his fancy somewhat whimsical. He was consequently the subject of numerous critical attacks by contemporary scholars, and these disputes not seldom assumed a needlessly acrimonious tone. But when all is said, the immense mass of Von Hammer's works constitutes a mine of valuable materials, and his influence upon Oriental studies in Europe was highly beneficial. Not the least part of his wide influence was due to his personal character, which retained its unusual buoyancy, frankness, vivacity, and charm, to his death. Travel and society at Vienna, where he was court interpreter, kept Von Hammer green and free from the narrowness of a mere bookworm. At the age of seventy-six this extraordinary man was planning a second edition of his *Encyclopædia of Oriental Learning*; and as an *Introduction* to this, he began his history of Arabic literature, which was to be in ten volumes. For the last seven years of his life he regularly published a volume of this huge enterprise, without the help of even an amanuensis.

Comptes Rendus de l'Académie des Inscriptions, 1857, where there is a memoir by Muhl; *Encycl. Brit.* [S. L.-P.]

* **Hampden**, THE RIGHT HON. HENRY BOUVERIE WILLIAM BRAND, VISCOUNT (b. 1814), late Speaker of the House of Commons, is the youngest son of the twenty-second Lord Dacre, and is heir-presumptive to the barony. Educated at Eton, he first entered the House of Commons in 1852, as Liberal member for Lewes, and continued to represent that borough until 1868, when he was first returned for the county of Cambridge. In 1859 he became Financial Secretary to the Treasury, and at the same time undertook the labours of Liberal Whip, which post he resigned in 1868. In 1872 Mr. Brand was elected Speaker of the House of Commons, in succession to Mr. Denison, who had accepted a peerage [OSSINGTON], and was re-elected in 1874. Mr. Brand discharged his duties—which, owing to the organisation of Parliamentary obstruction by the Irish members, became very heavy—from 1879 and onwards, with brilliant success, and having been elected for the third time in 1880, continued to hold office until 1884, when he gained the well-earned promotion of a seat in the Upper House, with the title of Viscount Hampden. The honour of a G.C.B. had been conferred upon him in 1881, and he had been created Privy-Councillor in 1866.

Hampden, RENN DICKSON (b. 1792, d. 1868), divine, was a native of Barbadoes, and

took his degree from Oriel College, Oxford, with a double first-class in 1813. In the following year he was elected fellow, and soon afterwards tutor, of his college. In 1832 he was appointed Bampton lecturer, and delivered his celebrated course on the *Scholastic Philosophy Considered in its Relation to Christian Theology*. The remarkable originality of thought displayed in these lectures caused them to be denounced by the more strictly orthodox as heretical; and the "Hampden controversy" threatened to sunder the Establishment. The excitement was at its height when in 1833 he was appointed principal of St. Mary's Hall, in 1834 professor of moral philosophy, and in 1836 Regius professor of divinity. Hampden went undismayed upon his course, undeterred by votes of censure passed in Convocation, and by the clamours raised against him, chiefly by the High Church party under the guidance of Wilberforce, which were renewed when, in 1847, he was made Bishop of Hereford. A student rather than an administrator, Bishop Hampden had ceased many years before his death to attract much public attention. Among the products of his wide learning and philosophic powers of mind are:—*Observations on Religious Dissent* (1834), and a course of lectures introductory to the *Study of Moral Philosophy* (1835).

A good account of the Hampden controversy is to be found in Dean Stanley's *Life of Arnold*; H. Hampden, *Some Memorials of R. D. Hampden* (1871).

Hampton, JOHN RUSSELL PAKINGTON, BARON (b. 1799, d. 1880), politician, was originally called Russell, but took the name of Pakington on succeeding to the estates of his maternal uncle in 1831. Educated at Eton and Christ Church, he entered Parliament in 1837 as Conservative member for Droitwich; which seat he held until 1874, when he suffered defeat, but was compensated by elevation to the peerage, with the title of Baron Hampton. During this long period Sir John Pakington (he was created a baronet in 1846) was well known in political life as a Tory of unbending opinions. He was one of the most zealous of Lord George Bentinck's supporters in his resistance to the repeal of the Corn Laws; and in 1852 was rewarded with the post of Colonial Secretary in Lord Derby's first ministry. In 1858, and again in 1866, he was First Lord of the Admiralty, and, though the appointment was much ridiculed at the time, he superintended with considerable intelligence the introduction of the ironclad system into the Royal Navy. In 1867 he was transferred to the War Office, and on submitting himself to his constituents for re-election, proceeded with amusing indiscretion to tell them the story of the "Ten Minutes" Reform Bill, so called because the Cabinet decided upon its introduction in that short space of time. He remained Secretary

at War until the resignation of Mr. Disraeli in 1868. His last appearance in public life was in 1871, when he presided over the Social Science Congress, and in 1875 he was appointed first Civil Service Commissioner.

Hancock, WINFIELD SCOTT (b. 1824, d. 1886), an American soldier, was born in Montgomery county, Pennsylvania, educated at West Point, and entered the army as lieutenant of infantry in 1846. He saw service in the Mexican War and in the Florida campaign against the Seminole Indians. When the Civil War broke out in 1861 he was appointed a brigadier-general of volunteers, and joined the army of the Potomac under General McClellan. He was present through all the hard campaigning and fierce fighting of McClellan's advance upon York Peninsula, and of the succeeding retreat across the Chickahominy to the left bank of the James river. In 1862, in the bloody battle of Fredericksburg, Hancock distinguished himself. The Federal attack, which had been intended to open the way to Richmond, completely failed, but Hancock, who for the first time commanded a division, did what he could to retrieve the day, and added much to his military reputation. Then followed the furious battle of Gettysburg, where Hancock's division was conspicuous, and where he received a severe wound, which disabled him for six months. In the Wilderness campaign (May-June, 1864), however, he was again in command of his division, though before the campaign was over his wound again compelled him to withdraw from his more arduous duties. In 1866 he was appointed major-general, and in 1872 he succeeded General Meade to the command of the East Department, with his headquarters at Governor's Island, New York. In 1880 he was Democratic candidate for the presidency of the United States, but was defeated by the electoral majority of fifty-nine in favour of General Garfield. His last public appearance was as pall-bearer to his old opponent, General Grant.

Nation, New York, 1880; *Times*, Feb. 10th, 1886.

Hanna, THE REV. WILLIAM, D.D. (b. 1808, d. 1882), Scottish divine, was the son of Dr. Samuel Hanna, professor of theology at Belfast, and was educated at the University of Edinburgh. In 1835 he was ordained minister of the parish of East Kilbride, Lanarkshire. He followed his father-in-law, Dr. Chalmers, on the disruption of the Scottish Church, and in 1850 was called to the Free St. John's Church, Edinburgh, as a colleague of Dr. Guthrie (q.v.). Mr. Hanna, who became a Doctor of Divinity in 1864, was compelled to resign his charge in 1867 on the ground of ill-health. He was for several years editor of the *North British Review*, and was the author of the well-known *Memoirs of Dr. Chalmers* (1849-52), *The Letters of Thomas Erskine of Linlathen* (1877), and several theo-

logical works, of which *Our Lord's Life on Earth* (1869) is the most celebrated.

Hanover, THE KINGS OF, were from 1814, when Hanover was erected from an electorate into a kingdom, identical with the Sovereigns of England, until on the accession of Queen Victoria, in 1837, when the connection between the two countries was severed, the crown of Hanover being limited to the male line. It passed, therefore, to her eldest surviving uncle, Ernest, Duke of Cumberland, son of George III. (b. 1771, d. 1851), who ascended the throne as ERNEST AUGUSTUS I. In this country he had been decidedly unpopular, owing to his sullen and suspicious nature, and was believed to have been more than passively concerned in the Orange plot of 1835, the object of which was to place him on the throne. True to his character, he proved a harsh and despotic ruler. His first step was to abrogate the Constitution of 1833, which William IV. had accepted, and to banish, amongst others, three of the most distinguished of the Göttingen professors, Grimm, Dahlmann, and Gervinus, for protesting against this act of tyranny. The public indignation grew to a head after 1848, when the Hanoverians, incited by the French Revolution, forced the king, under peril of deposition, to grant reforms, and to embrace the alliance of Prussia. He promptly broke his word, reverted to the Austrian alliance, and dismissed his Liberal ministry. The kingdom was in a state of simmering rebellion when he died in 1851.

Wilkinson, *Reminiscences of the Court of King Ernest Augustus*.

GEORGE V. (b. 1819, d. 1878), the blind son of Ernest Augustus, succeeded him, Nov. 18th, 1851. Although less morose than his father, he was as much an absolutist, and at once set himself to work to reduce popular government to a mere form. By a series of adroit changes of ministry he succeeded in creating a Government after his own heart, which in 1855 abrogated the Constitution of 1848, and restored the system of Ernest Augustus. His next step was to obtain a parliamentary majority, and this he had succeeded in doing by the year 1857. Despotism was in full swing in Hanover, despite a temporary check in 1862, when the outbreak of the Austrian and Prussian War compelled the king to embrace one or the other alliance. Hitherto, notably after the Schleswig-Holstein troubles, he had temporised with some skill, but now, when the critical moment came, he embraced the weaker alliance, and was in consequence involved in the defeat of Austria. Hanover was invaded, after King George had refused to abide by the Prussian ultimatum dictating unarmed neutrality, and after a somewhat blundering resistance on the part of his generals, he was driven from his throne, and

Hanover was annexed to Prussia by the Treaty of Prague (Sept., 1866). The ex-king protested vigorously, but found no support among the Powers, and spent the remainder of his days for the most part at Paris, where music formed his chief solace. He married in 1843 the daughter of the Duke of Saxe-Altenburg.

* **ERNEST AUGUSTUS II.** (b. 1845), titular king, succeeded to his father's pretensions on his death in 1878, and shortly afterwards married the Princess Thyra of Denmark, sister to the Princess of Wales. He is generally known in this country as the Duke of Cumberland, and there would appear to be but little chance of his ever becoming King of Hanover *de facto*. The majority of the citizens of that State are content with Prince Bismarck's régime, and the duke's numerous manifestoes have hitherto failed to attract much attention.

Hansard, LUKE (b. 1752, d. 1828), the founder of the well-known printing house, and printer of the Parliamentary records, was born at Norwich, and coming to London in 1779, he worked as a compositor to Mr. Hughs, at that time printer to the House of Commons. In 1798 he succeeded Hughs as sole proprietor of the business, and established the printing house which still bears his name. He died in 1828, leaving his business to his sons, one of whom, **LUKE JAMES HANSARD** (b. 1777, d. 1851), was the author of a *Proposition for a National Printing Office* (1848), and the *Fertilization of Waste Lands* (1849). *Hansard's Parliamentary History*, from 1066 to 1803, by Cobbett, and *Hansard's Parliamentary Debates*, from 1804, are well known. The Messrs. Hansard still print the Bills before Parliament, the reports of committees, and some of the accounts. In 1836 the case of *Stockdale v. Hansard* raised an important question of Parliamentary privilege, an account of which is to be found in Sir Erskine May's *Constitutional History*.

Biographical Memoir of Luke Hansard (1829); *Report of a Select Committee on Printing done for the House of Commons* (July 10th, 1828).

* **Harcourt, THE RIGHT HON. SIR WILLIAM** (GEORGE GRANVILLE VENABLES VERNON, Q.C., M.P. (b. 1827), the second son of the late Rev. William Vernon Harcourt, the son of the Archbishop of York, was educated at Trinity College, Cambridge, where he took a distinguished degree in 1851. Called to the bar in 1854, he went the home circuit, and took silk in 1866. During those years he was a frequent contributor to the press, notably to the *Saturday Review* and the *Times*. His letters, signed "Historicus," on international law in the *Times* were republished in 1863, and during the same year he was professor of international law in Cambridge University. After unsuccessfully contesting Kirkcaldy Burghs in 1858, he was returned for Ox-

ford City in the Liberal interest in 1869. Mr. Vernon Harcourt promptly distinguished himself as one of the most prominent of the members below the gangway; and his considerable powers of ridicule were turned against his nominal friends quite as often as against his opponents. The "grandmotherly legislation" of Mr. Gladstone's ministry was mercilessly quizzed, and in 1872 he introduced an important amendment into the Ballot Bill against the wish of ministers. In Nov., 1873, considerable surprise was generally expressed at his being appointed Solicitor-General, with the honour of knighthood, an office which he held until the resignation of the ministry in Feb., 1874. His support of the Public Worship Regulation Bill of that session drew down upon him the sarcasm of Mr. Gladstone, who complimented him on his "rapidly and cleverly acquired erudition" in law and history. From that time forward Sir William zealously supported his chief in his attacks upon the home and foreign policy of Lord Beaconsfield's administration, and his speeches during the autumn of 1879 were second only in importance on the Liberal side to those of Mr. Gladstone. The best, perhaps, was that delivered at Bristol, Oct. 6th, in which he ridiculed the responsibilities incurred by the Government in Armenia. In 1880 he was elected again for Oxford City, and made Home Secretary, but on seeking re-election he was defeated by his former opponent, Mr. A. W. Hall. Fortunately, the retirement of Mr. Plimsoll for Derby gave Sir William a seat, and in that session he steered the Ground Game Bill through the House of Commons. In 1881 he introduced the Arms Bill (Ireland), in a speech which created great indignation among the Irish members, and he was responsible for the Prevention of Crimes Bill of 1882. On the occasion of the dynamite outrages of 1883 he produced an Explosives Bill, which became law in the short space of two days. His efforts to reform the municipality of London were, however, unsuccessful. He defended the ministerial policy in the Soudan with some warmth on the occasion of the various votes of censure, and upheld the necessity of the retirement of our forces. During the election contest of that year he showed a decided inclination to adopt more Radical views, and on more than one occasion warmly praised Mr. Chamberlain's programme. In Feb., 1886, having been returned second at the poll for Derby, he became Chancellor of the Exchequer in Mr. Gladstone's ministry.

Hardenberg, KARL AUGUST, PRINCE VON (b. 1750, d. 1822), the Prussian statesman, was born at Esselrode, in Lüneburg, and having studied at the Universities of Leipzig and Göttingen, entered the public service of Hanover. He was appointed Hanoverian minister in London, but in 1781 transferred

his services from the English crown to Brunswick, owing to an intrigue between the Prince of Wales and his wife. Having been appointed Prime Minister of Ansbach-Baireuth, in 1790, he became a Prussian minister when in the following year those provinces were amalgamated with Prussia. Being commissioned to superintend the operations of the Prussian army during the campaign against France of 1793-4, he was mainly instrumental in concluding the Treaty of Basel in 1795. After some years of fruitless diplomatic manoeuvres in south-west Germany, Hardenberg was summoned, in 1803, to take Haugwitz's position as Minister of Foreign Affairs during his leave of absence, and next year, after the conclusion of a defensive alliance with Russia, Haugwitz resigned, and Hardenberg's appointment became permanent. His policy was characterised by his constitutional vacillation and indifference. His one fixed object appeared to be the acquisition of Hanover for the Prussian kingdom, and under promise of this he would willingly have supported Napoleon, both in Italy and Germany, had not some French troops committed a breach of neutrality by passing through Ansbach on their way to meet the coalition of Austria and Russia. Austerlitz followed, and Haugwitz, secretly supported by Hardenberg, signed the shameful Convention of Schönbrunn for the alliance of France. Next year Hardenberg was dismissed from his position, a victim, as it was popularly but wrongly supposed, to his patriotic zeal against France. But henceforward, at all events till the end of the war, his attitude was resolute. After the ruin of North Germany at Jena he was mainly instrumental in effecting the short-lived alliance with Russia, the hopes from which were disappointed by the Peace of Tilsit (1807); and when, immediately afterwards, at the command of Napoleon, he was banished from the Prussian court, and retired first to Riga and then to his Prussian estates, he devoted himself to drawing up a complete scheme for the reorganisation of Germany. In 1810, by permission of Napoleon, he was recalled to office as Chancellor. Though his proposals were unpopular and his policy failed, he deserves the credit of steadily supporting Scharnhorst against the conqueror, and when, after the agonies of doubt of 1811 and 1812, Prussia had feebly joined in the invasion of Russia, only to hear in December of Napoleon's ruin at Moscow, it was Hardenberg who declared that at last the time had come. First came the alliance with Russia, then the alliance with Austria, then the Battle of the Nations. It was the climax of Hardenberg's character and the height of his influence. Immediately afterwards, struck with insane fear of Russia, he began to hesitate once more. In 1814, however, he signed the first Treaty of Paris, and was raised to the dignity of prince. While the negotiations

of 1815 were going on, he made futile efforts to induce the other Powers to consent to the restoration of Alsace to Germany. During the remaining seven years of his life he held the position of Minister of the Interior, but took small actual part in the great work of reorganisation. Though in 1815 he had spoken loudly in favour of popular representation, he supported Metternich and the alarmists when the crisis came in 1819. A man of mediocre character and mediocre talent, he was forced into greatness by his very mediocrity. He can be regarded as a hero of the War of Liberation only by those that think the figure-head steers the ship.

Denkwürdigkeiten des Staatskanzlers Fürsten, von Hardenberg, 4 vols., edited, with biography, by Leopold von Ranke.

Harding, JAMES DUFFIELD (b. 1797, d. 1863), teacher of art and landscape painter, born at Deptford, took an active part in propagating lithography on its introduction to this country. His *Sketches at Home and Abroad* (1839), *Principles and Practice of Art* (1845), *Lessons on Art* (1849, 8th ed. 1867), *Lessons on Trees* (1850, 2nd ed. 1855), and his numerous little books of *Studies* for beginners, were all well received. The last of his lithographic productions, *Picturesque Selections* (1861), employs an entirely new method to give the appearance of an original drawing in black and white. Mr. Harding's pictures are also of some merit. Doubtless his colouring was sometimes rather hard and cold, but in other respects his works were all well executed, as, e.g., *The Alps between Lecco and Como*, and *Angers on the Loire*, both oil paintings, and his two water-colour pictures, *The Park*, and *The Falls of Schaffhausen*, all in the International Exhibition of 1862. Mr. Ruskin speaks of his works in terms of praise.

Ruskin, *Modern Painters*, vol. i.; *Art Journal*, 1850, 1856, and 1864.

Hardinge, HENRY, VISCOUNT (b. 1785, d. 1856), sprung of a family long settled at King's Newton, in Derbyshire, was a descendant of Nicholas Hardinge, celebrated in the time of Henry VII. He was third son to the Rev. Henry Hardinge, rector of Stanhope, in the county of Durham. He went to Eton, and received an ensigncy in a regiment of foot, Oct. 8th, 1798. In 1802 he was promoted to be lieutenant, and in 1804 to be captain. At the embarkation of the troops at Corunna he attracted the attention of Marshal Beresford by his promptitude, and was placed on temporary staff duty. At the age of twenty-five he was attached to the Portuguese army as deputy quartermaster-general, and continued in that position till 1813. His rank was afterwards commuted for a similar rank in the British army. He was at the battles of Rolicca and Vimeira, and in the latter was

severely wounded. He was also at the passage of the Douro, the battle of Busaco, in the lines of Torres Vedras, and at the battle of Albuera, where he took a leading part in the charge which redeemed the fortunes of the day. He was mentioned in despatches after this battle by Beresford, and after Badajoz by Wellington. After Napoleon quitted Elba, he was appointed by Wellington commissioner to the Prussian headquarters. On him mainly depended the joint action of the Prussian army with the English. At Ligny he was present on Blücher's staff, but having there lost his left hand was absent from Waterloo. He received for this wound a K.C.B. and a pension of £300 a year. He subsequently was raised to the grade of general, and took to political life. He sat in Parliament successively for Durham, St. Germans, Newport, and Launceston. When, on Lord Goderich's resignation in 1828, the Duke of Wellington took office, Hardinge succeeded Lord Palmerston as Secretary at War, and was made a member of the Privy Council. In 1830 he was for a short time Chief Secretary for Ireland, and was reappointed when Sir Robert Peel took office in Nov., 1834. In Sept., 1841, he again returned to the same post, and retained it till 1844. Lord Ellenborough being then recalled from India, Sir Henry Hardinge was chosen to succeed him as Governor-General, both the Home Government and the East India House concurring in the election. In July he landed in Calcutta, and for some time devoted himself to internal administration, especially to organising Indian railways. On the death, however, of Runjeet Singh, it became evident that peace with the Sikhs would not be of long duration. On Dec. 13th, the Sikhs crossed the Sutlej with 60,000 men, disciplined under French and Italian teachers, and 150 guns. On the 17th they advanced to Ferozeshah and Moodkee, and entrenched themselves. It was thought that Hardinge would have commanded in person, but he served in the succeeding operations as second in command to General Gough, the commander-in-chief in India. In fact, Hardinge never did, throughout all his long and eventful life, command an army in any important battle. In three weeks the great battles of Moodkee, Ferozeshah, Aliwal, and Soobraon were fought, and the Sikh power broken. Lahore surrendered, and moderate terms were granted to the Sikhs. Dhuleep Singh, the infant son of Runjeet, was recognised as Rajah, and the Julundhur Doab, or district between the Sutlej and Ravi, was annexed, and Major Henry Lawrence was appointed Resident at Lahore. In recognition of these services Hardinge received the thanks of both Houses, was raised to the peerage as Viscount Hardinge of Lahore, and received a Parliamentary pension of £3,000 for his own and two lives, and one of £5,000 from the East India

Company. In Jan., 1848, he was succeeded by Lord Dalhousie, and returning home, became, in Feb., 1852, Master-General of the Ordnance in Lord Derby's Government, and on the Duke of Wellington's death commander-in-chief and a field-marshal, in Sept. In his tenure of office he rigorously followed the principles of the great duke, but during the Russian War his choice of generals was not especially fortunate. In July, 1856, he was seized with paralysis, and resigned the commandership, and on Sept. 24th he died at his seat, South Park, Tunbridge Wells, and was buried at Fordcombe.

Napier, *Peninsular War; Campaign on the Sutlej; Annual Register.* [J. A. H.]

Hardwick, PHILIP (b. 1792, d. 1870), architect, was the son of an architect, and in 1808 became a student of the Royal Academy. He was fortunate enough to obtain the appointments of architect to several of the hospitals and dock companies, and in 1829 became architect to the Goldsmith's Company, for whom he built the fine hall which was opened in 1835. His great work, however, was the new hall and library of Lincoln's Inn, opened in 1845, which is a good example of the modern style. Among Mr. Hardwick's numerous honours may be mentioned those of F.R.S. (1828); A.R.A. (1839), and R.A. (1841). He was one of the founders, and subsequently vice-president, of the Royal Institute of British Artists.

Hardy, RIGHT HON. GATHORNE. [CRANBROOK.]

Hardy, SIR THOMAS DUFFUS (b. 1804, d. 1878), palæographer and antiquarian, born in Jamaica, was the eldest son of Major Hardy of the Royal Artillery. Devoted to an early age to the public service, he was appointed in 1819 a junior clerk in the Record Office in the Tower of London, and ere long distinguished himself by some papers in the *Archæologia* and in the *Excerpta Historica*, chiefly in illustration of the reign of King John. He afterwards edited several important works for the Record Commission, among which were two large folio volumes of the early *Close Rolls* (1833), one of the *Patent Rolls* (1836), and others of the *Norman Rolls* (1836), and *Charter Rolls* (1837). His *Introductions to the Close and Patent Rolls* were published separately (1833-5). He next brought out *William of Malmesbury* in 1840, and his *Catalogue of Lord Chancellors, Keepers of the Great Seal, Masters of the Rolls, and Principal Officers of the High Court of Chancery* in 1843. His publication in 1846 of the celebrated *Modus tenendi Parliamentum* (an ancient treatise on the mode of holding Parliament) was an important contribution to constitutional history. In 1848 he wrote an introduction for Mr. Petrie's unfinished work, the *Monumenta Historica Britannica*; but the

scheme of that work being subsequently superseded by the voluminous series of chronicles issued under the direction of the Master of the Rolls, he undertook the compilation of his elaborate *Descriptive Catalogue of MSS.* (1858 *et seq.*), a work of value to the historical student. In 1861 Mr. Hardy succeeded Sir Francis Palgrave as deputy-keeper of the Public Records, and in 1870 was knighted. Sir Thomas has justly been described as the "most experienced Record scholar of his day." An *Index* to his printed Reports has been prepared by Messrs. E. J. Tabrum and A. Lawson.

Notes and Queries, 5th Series ix. 499; *Athenæum*, June 22nd, 1878.

* **Hardy, THOMAS** (b. 1840), novelist, was born in Dorsetshire, and was educated as an architect. His first essay in fiction was *Desperate Remedies* (1871), which was followed by *Under the Greenwood Tree* (1872), and *A Pair of Blue Eyes* (1873). In 1874, first in the *Cornhill* and then in volume form, appeared *Far from the Madding Crowd*, Mr. Hardy's masterpiece, in which his intimate knowledge of the humours and pathos of the life of the agricultural labourer is displayed with admirably artistic effect. It was subsequently dramatised, and produced with some success. Mr. Hardy has also written *The Hand of Ethelberta* (1876), *The Return of the Native* (1878), *The Trumpet Major* (1880), which was very favourably received, *A Laodicean* (1881), *Two on a Tower* (1882), and *The Woodlanders*, which appeared in *Macmillan's Magazine*. *The Mayor of Casterbridge*, the scene of which is laid in the old Roman town of Dorchester, also appeared in 1886.

* **Hare, AUGUSTUS JOHN CUTHBERT** (b. 1834), man of letters, was born at Rome, and is the nephew of the Archdeacon Julius Hare, and of Augustus Hare, mentioned below. He was educated at Harrow, and University College, Oxford. His studies have been chiefly directed towards artistic or historical antiquities, especially in the ancient cities of Italy, but his name is chiefly known through his biography of Maria Hare, entitled *Memorials of a Quiet Life* (1872-6, 18th ed. 1884), and his *Life and Letters of Frances, Baroness Bunsen* (1879). He has also written *Epitaphs from Country Churchyards* (1856); *Walks in Rome* (1871); *Wanderings in Spain* (1873); *Days near Rome* (1875); *Cities of Northern and Central Italy* (1876); *Walks in London* (1878); *Cities of Southern Italy and Sicily* (1883); *Cities of Central Italy, Cities of Northern Italy, Venice, and Florence*, all published in 1884.

* **Hare, JOHN** (b. 1844), actor, is a native of London, and was educated at Giggleswick Grammar School, Yorks. Betaking himself to the stage, he made his first appearance in

London at the Prince of Wales's Theatre in Sept., 1865, as Short in *Naval Engagements*. Among his most important creations under the Bancroft management may be mentioned Lord Ptarmigan in *Society*, Prince Perovsky in *Ours* (1866), Sam Gerridge in *Caste* (1867), and Beau Farintosh in *School* (1869). He also appeared as Sir Peter Teazle in the revival of the *School for Scandal* (1874). In March, 1875, he became manager of the Court Theatre, and produced, among others, Mr. Gilbert's fairy play, *Broken Hearts*; Mr. Coghlan's adaptation, *A Quiet Rubber*, in which he created Lord Kilclare; Mr. Palgrave Simpson's *Scrap of Paper*; Messrs. Taylor and Dubourg's *New Men and Old Acres*; *The Ladies' Battle*; Mr. Wills's *Olivia* (1878); and Mr. G. W. Godfrey's *The Queen's Shilling* (1879). In Oct., 1879, Mr. Hare became manager of the St. James's Theatre, in conjunction with Mr. W. H. Kendal. He created there Mr. Potter in *Still Waters Run Deep*; the Admiral in *William and Susan* (1880); Baron Croudle in the *Money Spinner*; Captain Mountraffe in *Home*; and the Rev. Paul Dormer in *The Squire* (1881). Of late years the management has relied chiefly on adaptations from the French, of which *Impulse*, *The Ironmaster*, and *Antoinette Rigaud* (1886) have been, perhaps, the most successful; but in the two first of these Mr. Hare, who is almost unquestionably the best character actor on the British stage at the present day, was without a part.

Hare, JULIUS CHARLES (b. 1795, d. 1855), writer and theologian, was born at Hurstmonceux Place, in Sussex, and in boyhood travelled for some time in Germany, being present at Weimar at the time of Schiller's death (1805). On his return to England he was entrusted to the care of the widow of Sir William Jones, the Orientalist, and was subsequently sent to the Charterhouse. In 1812 he was entered at Trinity College, Cambridge, where he became a fellow in 1818, and, after studying law for a short time at the Temple, was appointed classical lecturer in 1822. In the meantime his name had appeared in literature as the translator of Fouqué's *Sintram* (1820), and in 1824 he undertook the task of editing Landor's *Imaginary Conversations*. In 1826 he was ordained, and began the collection of the *Guesses at Truth*, that was published anonymously in the following year. In this work he was largely assisted by his elder brother, AUGUSTUS WILLIAM (b. 1792, d. 1834), who, after being educated at Winchester, was at this time fellow of New College, Oxford, and in 1829 was appointed to the living of Alton Barnes, in Wiltshire. In 1833 Augustus Hare went to Rome and died there, having left, as memorials of his exceptional powers, little besides the *Guesses at Truth*, a pamphlet in defence of the Resurrection (1824), and some fifty-six carefully

written sermons, published in 1835. When the first series of *Guesses at Truth* was completed, Julius Hare undertook the translation of Niebuhr's *History of Rome*, in conjunction with Thirlwall. Whilst travelling in Germany he became acquainted with Niebuhr himself, and also with Schleiermacher, who exercised as strong an influence on his theological views as he was himself exercising on Sterling and Maurice amongst his pupils in Cambridge. In 1832 he was appointed to the living of Hurstmonceux, and again visited Italy and Germany, now in company of Landor. From 1834 to 1835 John Sterling was his curate at Hurstmonceux. In 1840 he was appointed Archdeacon of Lewes, and in 1844 he married Jane Esther Maurice, a sister of F. D. Maurice. In 1848 he edited Sterling's *Essays and Tales*, with a *Life* of the author, through which Hare's name is probably now best remembered; for it induced Carlyle to write his *Life of Sterling*. In 1853 he became a chaplain to the Queen. Though prolonged collegiate life and extreme intellectual refinement prevented his success as a parish priest, Julius Hare was eminently successful as an archdeacon. His annual *Charges* were elaborated with the utmost care, and still form important contributions to the ecclesiastical history of the time. He entered with warmth into every controversy of the time, the Hampden, the Gorham, and the rest, steadily opposing the dogmatic and Romanising tendencies, as he considered them, of the "Oxford Movement," and standing forward as one of the most prominent champions of the "Broad Church" school in its earlier career. [H. W. N.]

* **Harrison, FREDERIC** (b 1831), the Positivist essayist, was born in London, and having been educated at King's College School, was elected to a scholarship, and afterwards to a fellowship, at Wadham College, Oxford. Having been called to the bar in 1858, he made a special study of equity, international law, and the great social questions of the day. He served on the Commission upon Trades Unions in 1867-9, and then became secretary to the Commission for the Digest of the Law. In 1877 he was appointed professor of jurisprudence and international law by the Council of Legal Education. But it is through his political and religious essays, and his public addresses to the Newton Hall branch of the Positivist community, that he is best known. Most of his essays, such as his striking descriptions of the Commune in Paris (*Fortnightly Review*, 1870-1), have appeared in the magazines; but some have been published separately, and of these we may mention the following:—*The Meaning of History* (1862); *England and France* (1866); *Order and Progress* (1875); *The Present and the Future* (1880); *Martial Law in Kabul* (1880); *Lectures on Education* (1883); and *On the*

Choice of Books (1886). In politics Mr. Harrison may be described as a thorough Liberal, though he is not always in unison with the programme of the Liberal party, being at variance with the advanced Radicals on some questions of the day, and with the Whigs on the policy of war and the Egyptian question. He is one of the greatest living masters of English prose style, and his address in Newton Hall, on New Year's Eve, 1883, was a model of elevated language.

Harrison, WILLIAM HENRY (b. 1773, d. 1841), 9th President of the United States, was the son of Benjamin Harrison, one of the signers of the Declaration of Independence. He joined the army in 1791, and in 1792 fought as a lieutenant under Wayne, who was leading against the North-Western Indians. In 1797 he left the army. In 1801 he was appointed Governor of Indiana, and as its representative in Congress, succeeded in passing a law relating to the sale of the Federal land in small parcels, to which the Western States ascribe their prosperity. In the war against the Indians in 1811, which in 1812 became a war against the English in Canada, Harrison gained the celebrated battle of Tippecanoe, and the victory of the Thames. Resigning his commission in 1814, he was elected to Congress in 1816, and became a senator in 1824. In 1828 he was appointed Minister to the Republic of Columbia, and in 1838 he published his *Discourses on the Aborigines of the Valley of the Ohio*. He was nominated by the Harrisburg Convention in Dec., 1839, for the presidency. Mass meetings and processions were at this election first brought into vogue, and the slur which had been cast upon Harrison that he had lived in a log cabin with nothing to drink but "hard cider" was seized upon as an electioneering appeal. He was elected by a majority of 234 against 60. He entered upon his duties on March 4th, 1841, but died one month afterwards.

S. J. Burr, *Life and Times of W. H. Harrison*;
J. R. Jackson, *Life of William Henry Harrison*.

Harrowby, DUDLEY RYDER, 1st EARL OF (b. 1762, d. 1847), statesman, was educated at St. John's College, Cambridge, and entered Parliament as Tory member for Tiverton in 1784. His official experience began in 1789, when he became Under-Secretary for Foreign Affairs, and being fortunate enough to enjoy the friendship of Pitt, he held a succession of minor appointments, until in 1800 he became Treasurer of the Navy. In 1804 he became Secretary of State for Foreign Affairs in Pitt's last ministry, and at once set himself to work to form a coalition against Napoleon, having great hopes from Russia. In Dec., 1804, he was disabled by a fall, and had to resign office, but soon afterwards became Chancellor of the Duchy of Lancaster. In 1805 he went to Berlin, and tried from thence to draw

together the threads of a coalition; but his plans were thwarted by the battle of Austerlitz. On the death of Pitt he was asked by the king to accept the premiership, but he refused the post of responsibility, and the Fox and Granville ministry of "All the Talents" accordingly came into office. In 1809 he became President of the Board of Control under Mr. Perceval, and was raised from a baron to an earl. In 1812 he became President of the Council in Lord Liverpool's Cabinet, and retired from office on the death of his chief in 1819. Lord Harrowby during these memorable years only comes prominently forward in 1819, when he was Chairman of the Currency Committee, which recommended the resumption of cash payments. Lord Harrowby was perhaps a man who failed to make his mark rather from want of energy than from want of abilities.

* **Harrowby**, THE RIGHT HON. DUDLEY STUART RYDER, 3RD EARL OF (*b.* 1831), is the son of the 2nd earl, who was in his day Chancellor of the Duchy of Lancaster (1855), Lord Privy Seal (1855-7), and Vice-President of the Council (1874). Educated at Eton, and Christ Church, Oxford, Lord Sandon—as he was formerly styled—entered public life as Liberal member for Lichfield in 1856. His views gradually veered towards Conservatism, and he lost his seat in 1859, remaining out of Parliament until 1868, when he was first returned for Liverpool. When Mr. Disraeli's Government was formed in 1874, Lord Sandon was appointed Vice-President of the Council on Education. He was a member of the first London School Board, and introduced the Education Act of 1876. From 1878 to 1880 he was President of the Board of Trade in succession to Sir C. Adelerley, who was raised to the peerage. In 1885 and 1886 he was Lord Privy Seal and a member of Lord Salisbury's Cabinet.

* **Harte**, FRANCIS BRET (*b.* Aug. 25th, 1839), American humorist, was born at Albany, in the State of New York, and the son of a professor in a female academy there. His father died when Harte was but seventeen years old; and the family removed to California, the El Dorado of the hour. The "Forty-Niners," so named from the date of their migration, had been five years upon the spot, and had barely shown the possibilities of that new world of adventure, and sketched in vague lines of shanties the great cities that were to arise. Harte was thrown into a world of peculiar men and women at that time of life when the perceptive faculties are both delicate and retentive. He not only saw that world, he was a labouring part of it. He footed it from San Francisco to Sonora; hunted for gold, but did not find it; and opened a school, thus proposing to supply the one thing of which

people there felt the least need. Other occupations followed. He was express messenger, printer, editor, and professor of recent literature in the "University of California." His function in life was apparently found when he began to furnish humorous sketches to the newspapers. All his sketches and stories were idealised transcripts of personal experiences, and all his characters were the persons he saw about him. In a weekly paper called *California*, of which he was editor, he published *Condensed Novels*, a series of parodies on fashionable fictions. These will stand a comparison with similar pieces of pleasantry done by Thackeray. From 1864 until 1870 Harte was employed in the United States Branch Mint at San Francisco. In 1868 he became editor of the *Overland Monthly*, and in that published his *Luck of Roaring Camp*, and in 1869 the *Outcasts of Poker Flat*. His poem entitled *Plain Language from Truthful James*, but commonly called *The Heathen Chinee*, was published in 1869, and immediately gained an extraordinary popularity. In the whole history of literature it would be difficult to find another case where so short a poem, on a subject entirely apart from the master-passions of the human heart, has made an impression so extended and so enduring. Indeed, the author is, in his reputation, somewhat the victim of this success. In 1871 Mr. Harte removed to the East, and made his home in New York. His first contribution to an Eastern publication had been made many years before, when *The Legend of Monte Diablo* was published in the *Atlantic Monthly*—upon the recommendation, it is said, of Mrs. Jessie Benton Fremont. In 1871 he published *East and West Poems and Poetical Works*. *Mrs. Skaggs's Husbands* was published in 1872. In 1878 he was appointed United States Consul at Crefeld, in Germany, which office he held for two years. In that period he published *The Twins of Table Mountain*, and other Stories (1879). One of the other stories was *A Legend of Sarmatadi*, an attempt in a literary style quite different from any previously tried by him. In 1880 he was appointed United States consul at Glasgow, and held that office until the end of Mr. Arthur's administration. In 1885 he published a story entitled *Mariya*, and in 1886 *Snow-bound at Eagle's*. [G. W. H.]

* **Hartington**, THE RIGHT HON. SPENCER COMPTON CAVENDISH, MARQUIS OF (*b.* 1833), eldest son of the 7th Duke of Devonshire (q.v.), was educated at Trinity College, Cambridge (B.A. 1852). Elected in 1857 Liberal member for North Lancashire, he was chosen in 1859 to move the vote of want of confidence which overthrew Lord Derby's Government. His first official experience was in 1863, when he became a Lord of the Admiralty. From 1863 to 1866 he was Secretary of State for War. In 1868, having

lost his seat in Lancashire, he was appointed Postmaster-General, and was soon afterwards returned for Radnor Burghs. He held that office until 1871, and from 1871 to 1874 was Chief Secretary for Ireland. By this time he had become one of the recognised leaders of the Moderate Liberals, and in 1869 as Chairman of a Parliamentary committee, had helped materially to convert public opinion to the principle of voting by ballot; nevertheless, the political world was somewhat surprised when, in Feb., 1875, he was chosen to lead the party in the Lower House on the temporary retirement of Mr. Gladstone. His strong good sense and perfect straightforwardness enabled him, however, to fill the difficult position of opponent to Mr. Disraeli with entire success; and, despite one or two revolts below the gangway, he kept the Liberal party together, and led them to victory at the polls in 1880. Returned for Radnor Burghs and N.E. Lancashire, he elected to sit for the latter constituency, and was asked by the Queen to form an administration. He declined, however, and served under Mr. Gladstone, first as Secretary of State for India, and from 1882 to 1885 as Secretary of State for War. An honest apologist for the foreign policy of the Liberals, he showed, nevertheless, a tendency to regard their views on home affairs with disapproval. Thus in 1883 he denounced the extension of the franchise to Ireland as "madness," and during the election of 1885 his antagonism to Mr. Chamberlain was marked. The scheme for Home Rule for Ireland purporting to emanate from Mr. Gladstone in Dec., 1885, met with Lord Hartington's emphatic dissent. He voted against Mr. Jesse Collings' motion of Feb., 1886, and declined to join the new ministry of Mr. Gladstone. In 1886 he gave an outside support to Lord Salisbury's government.

* **Hartmann**, EDUARD VON (b. 1842), philosopher, was born at Berlin. In 1858, after the usual gymnasium course, he entered the Prussian army, and attended the schools of artillery and engineering between 1859 and 1862. But an affection of the knee caused him to leave the service in 1865, since which time he lives privately in Berlin. By the publication of his *Philosophie des Unbewussten* (Philosophy of the Unconscious), in 1869, he suddenly became famous. The book created quite a *furor* in Germany. It passed through seven editions in as many years, and has since reached a ninth edition (1882). It has recently been translated into English, and forms three volumes of Trübner's *English and Foreign Philosophical Library* (1884). Since 1869 Hartmann has been a most voluminous writer. His chief works are, besides the *Philosophy of the Unconscious*, *Phänomenologie des sittlichen Bewusstseins* (1878), *Das religiöse Bewusstsein der Menschheit im Stufen-*

gange seiner Entwicklung (1881), and *die Religion des Geistes*, the first of which gives the bearing of his philosophy on ethics, while the two last form part of a single work on the philosophy of religion, as conceived from the author's standpoint. A number of minor pieces are important as containing an account of Hartmann's relation to other philosophers, and as acute criticisms of opposite points of view. Such are:—*Ueber die dialektische Methode* (1868), *Schellings Positive Philosophie als Einheit von Hegel und Schopenhauer* (1869), *Die Selbstersetzung des Christenthums* (2nd ed. 1874), *Wahrheit und Irrthum im Darwinismus* (1875), *Kritische Grundlegung des transcendentalen Realismus* (1875), *Zur Geschichte und Begründung des Pessimismus* (1880). A number of smaller articles on philosophical and kindred subjects have been collected, as *Gesammelte Studien und Aufsätze* (1876). Hartmann's metaphysical system is, according to his own contention, the reconciliation of Hegel and Schopenhauer. It is certain, at all events, that both these thinkers have powerfully influenced his thought; but more perhaps than to either of these is due to the later philosophy of Schelling, with which Hartmann claims to be in substantial accord. Hartmann complains that the Idealism of Hegel, while demonstrating the rational structure of the world, deprives existence as it were of its substantial basis. The system of reason hangs entirely in the air, and we have no account of how it came to exist at all—that is, to possess reality. Schopenhauer's theory of Will as the ultimate cause of the universe is an attempt to supply the real basis which is lacking in Idealism as such. Hegel tells us the nature of the world—*what it is*—while Schopenhauer offers an explanation of the fact of its existence—*that it is*. The two principles, the one rational and the other irrational, must be combined, therefore, in the Unconscious, which is to be viewed as the fount from which existence proceeds. The production of the universe is due to the blind craving of an irrational force; for existence itself is an evil, and it had been better if everything had remained for ever in the bosom of the Unconscious. Here Hartmann takes up the Pessimism of his master, Schopenhauer, and endeavours to base it upon a large induction. Hartmann's Pessimism differs from Schopenhauer's, in that it is a Pessimism of the race and of the universe rather than of the individual. Individual asceticism, which Schopenhauer counselled, is, according to the later Pessimist, an unavailing remedy. The only hope lies, on the contrary, in the evolution of the race, which means its growth in knowledge and in consequent insight into the nullity of existence. The individual must labour, therefore, to further this evolution, and thus make himself a willing instrument of the ends of the Unconscious. When rational insight shall finally have snatched the

victory from irrational desire, the world will vanish, never to reappear, into the abyss of the Unconscious from which it should never have emerged. It was Hartmann's Pessimism, rather than his metaphysical doctrine, which captivated many who would not under ordinary circumstances have been tempted by a book on philosophy. He also writes a good popular style, though too diffuse to reach the highest mark of excellency; and the many-sided way in which he applies his hypothesis to the facts of life and to obscure natural phenomena is full of interest and suggestion, even when it cannot be pronounced sound. [A. S.]

Hartmann, MORITZ (b. 1821, d. 1873), a German poet, was born of German-Jewish parents in Duschnik, a village of Bohemia, and studied at the Gymnasium and University of Prague. His first collection of verses, called *Bowl and Sword* (*Kelch und Schwert*) was published in 1845. It contained several of his finest ballads, but the general tone was revolutionary, and in 1848 Hartmann found himself banished from Austria. Next year he was returned to the Frankfurt Parliament by a district of Bohemia, and retained his seat till the dissolution at Stuttgart. During this time he wrote the *Rhyming Chronicle of Father Mauritius* (*Reimchronik des Pfaffen Mauritius*), a satirical and genuinely humorous criticism of contemporary politics. Unable to remain in Germany with safety, he made Paris his home, though he travelled frequently in the Celtic districts of France and in Ireland, on which countries he wrote some of his most popular sketches. He returned to Vienna after the events of 1866. He published also several collections of poems, such as *Shadows* (*Schatten*, 1851), and *New Satires* (1862), some of which are of real merit, and would probably be better known if they were not overshadowed by Heine's mastery of kindred themes. He also wrote large quantities of prose, and some considerable romances, such as *From Nature* (*Nach der Natur*), a series of short stories, and the *Last Days of a King* (*Die letzten Tage eines Königs*).

W. Hartmanns Gesammelte Werke (Stuttgart, 10 vols., 1873).

Hartt, CHARLES FREDERIC (b. 1840, d. 1878), Canadian naturalist, born at Fredericton, New Brunswick, made, while yet in his teens, extensive researches into the geology of Nova Scotia, and subsequently into that of New Brunswick, where he discovered an abundance of plants and insects, of which the latter still remain the oldest known to science. Professor Agassiz was attracted by this last discovery, and invited Hartt to enter his museum at Cambridge as a student. This he did in 1861. In 1864 he was employed, with Professors Bailey and Matthews, on the geological survey of New Brunswick, and, while engaged in this work, obtained the

first full proof of the existence of primordial strata in that province. (See the Provincial Government Reports and Dawson's *Acadian Geology*.) Upon the organisation of the Thayer Expedition to Brazil, by Professor Agassiz, in 1865, Hartt was appointed one of its geologists. In 1867 he returned alone to Brazil, and examined the reefs of the Arolhos Islands, and the geology of Bahia and Sergipe. The results of this work were published in 1870 as the *Geology and Physical Geography of Brazil*. In 1868 he was elected professor of natural history in Vassar College, and shortly afterwards of geology in Cornell University. In 1870, and again in 1871, he visited Brazil. He entered the Amazonian Valley, where he made large collections of fossils of the palæozoic age. In 1875 Professor Hartt was entrusted with the organisation of the geological commission of Brazil, and while engaged at this work, he died of yellow fever, March 18th, 1878. He wrote two interesting works on *Amazonian Tortoise Myths* (Rio de Janeiro, 1875), and *Manufacture of Pottery among Savage Races* (1875).

Popular Science Monthly, New York, June, 1878; Nature, June 13th, 1878.

Harvey, SIR GEORGE (b. 1806, d. 1876), Scottish painter, was born at St. Ninian's, near Stirling, and started life as apprentice to a bookseller. Afterwards he entered the Trustees' Academy at Edinburgh, and became an original member of the Royal Scottish Academy, founded in 1826. His first picture, *A Village School*, had been exhibited in the previous year. Harvey was elected an F.R.S.A. in 1829, and became P.R.S.A. in 1864, three years after which he received the honour of knighthood. His *Notice of the Early History of the Royal Scottish Academy* was published in 1870. As an artist, Sir George Harvey never attained the highest rank; but the popular qualities of his subjects, and his genuine insight into character, caused engravings of his works to be in great request some forty years ago. The best known of them are of a semi-historical nature, such as *Reading the Bible at Old St. Paul's*, the first of his works exhibited in London (1847); *Covenanters Preaching, John Bunyan and his Daughter*, and *Shakespeare Charged with Deer Stealing*. Others deal with ordinary Scottish life, and are not without dramatic power of a quiet kind; for instance, *The Curlers' Sabbath in the Glen*, *Leaving the Manse*, and a *Highland Funeral*.

Harvey, WILLIAM HENRY (b. 1811, d. 1866), an Irish botanist, born at Limerick of Quaker parents, at a very early period exhibited a fondness for collecting objects of natural history, and during one of his rambles he discovered a new species of *Linnaeus* (*L. involutus*, Harv.), in a small Alpine lake in Killarney. In 1835 he went to the Cape of Good Hope with his brother, when he

contributed many papers, descriptive of new genera and species, to the *London Journal of Botany* for 1837-8, and shortly afterwards brought out his *Contributions towards a Flora Capensis* (1838, 2nd ed. 1868). In 1840 he succeeded to his brother's office of registrar-general, and in 1844 he was elected keeper of the Herbarium of Dublin University. In 1845 he projected the first of his great works, the *Phycologia Britannica* (i.e., the history of British seaweeds). In 1849 he published, at the instance of Mr. Van Voorst, *The Seaside Book* (4th ed. 1867), one of the pleasantest of a now very numerous class of books. In 1848 he was elected professor of botany to the Dublin Society, and in the following year he delivered a course of lectures on Algæ (by request), before the Lowell Institute of Boston, U.S. Whilst in America he made large collections of Algæ along the coasts, and the result of his labours was published by the Smithsonian Institute (1852-7). In 1853-6 he visited the Australian coast, and collected over 20,000 specimens and 600 species; and in 1857 he projected the *Phycologia Australica* (1858-63, 5 vols). The *Flora Capensis* was next commenced in conjunction with Dr. Sonder, of Hamburg. About the same time Professor Harvey began a series of illustrations to this flora under the title of *Thesaurus Capensis* (1859 *et seq.*). In 1856 he was elected to the Chair of natural history in the University of Dublin, and died May 15th, 1866.

Memoir of W. H. Harvey, M.D., F.R.S (1869).

* **Hassan**, PRINCE (b. 1854), is the third son of Ismail Pasha, the ex-Khedive of Egypt, and has earned the name of the "Soldier Prince." In 1868 the prince was sent to England to finish his education at Christ Church, Oxford. At the end of 1872 Prince Hassan went to Egypt to get married, and after a short honeymoon he returned to the Continent, entering as a cornet in the Prussian 1st Regiment of Dragoon Guards. He joined the Abyssinian Expedition as a volunteer. He led an expedition against the Abyssinians in 1874, in which he was completely defeated. In the beginning of 1876 he was appointed commander-in-chief of the Egyptian army, and shortly after Minister of War; but he was hardly a month in office when the despatch of 25,000 Egyptians to Turkey offered him a chance to see service in the field. As general commanding the expeditionary force, he remained for about fourteen months at Varna, taking an active part in the engagements of Mehemet Ali's army, of which he commanded the left wing. He was present at the battles of Kara Hassankoi and Loftcha. On his return to Egypt, in 1877, the Prince took once more the portfolio of the War Office, which he retained until the formation of the Nubar-Wilson ministry, when he retired into private life until the appointment of Sherif

Pasha as Nubar Pasha's successor. Solicited once more to undertake the ungrateful task of commander-in-chief, Prince Hassan discharged its duties until the fall of his father, whom he had to follow into exile. In Feb., 1885, the prince was sent by the Khedive, with the concurrence of the English Government, to join the forces under Lord Wolseley, as High Commissioner of the Soudan.

Hastings, FRANCIS RAWDON, 1st MARQUIS OF (b. 1754, d. 1826), Governor-General of India, was the son of an Irish peer, the Earl of Moira, to which title he succeeded in 1793. By that date he had earned a high reputation as a soldier, notably in the War of American Independence, his body of troops, the Irish volunteers, having distinguished themselves in several of the engagements. This reputation he increased during the Duke of York's campaign in Flanders of 1794. In the House of Lords he was a zealous member of the Whig party, among whom his intimacy with the Prince of Wales gave him considerable influence. Lord Moira became Master of the Ordnance in the ministry of "All the Talents," and carried a measure for the relief of poor debtors. In 1809, before Mr. Perceval became Premier, Lord Moira's name was put about as the man who could best lead a coalition, and again in 1812, on the death of Perceval, it was thought that he would lend his support to a Grenville ministry. He was, however, appointed Governor-General of India, in succession to Lord Minto, and landed at Calcutta in Oct., 1813. His administration covers a period of some importance. He was immediately confronted by the aggressions of the Goorkhas upon the protected State of Oude, and war was declared in Nov., 1814. Lord Moira directed the campaign, which, after some rather serious reverses, was brought to a successful issue by General Ochterlony, and the Goorkha State submitted to a cession of territory, and agreed to receive a British Resident. At the conclusion of the war Lord Moira was created Marquis of Hastings. Another war was necessary before the peninsula could be said to be thoroughly under control. The Mahratta Confederacy was a standing source of danger to the peace of India, and in 1817 some of its members confronted the English Government in arms. The occasion of its rising was the campaign against the freebooting Pindharris, whose marauding expeditions into British territory had to be duly chastised. The Mahrattas were requested to join in the campaign, and the great chief Scindhia obeyed; but Holkar, the Rajah of Nagpoor, and the Peishwah rose to arms. The campaign was not one of much severity, owing to the want of combination among the enemy, and at its close the Peishwah, as the nominal leader of the allies, was deprived of his dominions, the greater part of which were annexed

to the territory of the company. [POONAH.] Besides completing Lord Wellesley's policy with regard to the extension of British influence in India, Lord Hastings was successful in introducing order into the Civil Service, and the administration of finance. His beneficent tenure of office came to an end in 1823, he having sent in his resignation two years previously, on account of the unjust charges that were brought against him of having unduly favoured the banking-house of Palmer and Company in transactions of state. His fortune having been considerably impaired through his lavish hospitality, he was compelled to accept the unimportant post of Governor of Malta (1824), and it was there that his career of honourable activity came to an end. Lord Hastings is undoubtedly an important figure in the history of our Indian Empire. Following on the footsteps of Warren Hastings and Wellesley, he aimed at making England the one great power in the peninsula; and by breaking down the Mahratta power he removed the last obstacle in the way of the attainment of that great ideal. His policy of annexation, which included the cession by purchase of Singapore, was much canvassed in his day; but it was really inevitable, and it cannot be doubted that, in refraining from laying hands upon the whole of the Mahratta territory, he acted with great moderation, and at the same time with great far-sightedness, as was proved at the time of the Mutiny.

Prinsep, *History of Political and Military Transactions in India during the Administration of the Marquis of Hastings*; Wilson's continuation of Mill's *British India*. [L. C. S.]

Hatherley, THE RIGHT HON. WILLIAM PAGE WOOD, BARON (b. 1801, d. 1881), Lord Chancellor of Great Britain, was the second son of Sir Matthew Wood, Bart. (d. 1843), twice Lord Mayor of London, and M.P. for the City. He was educated at Winchester College, Geneva University, and Trinity College, Cambridge. When a student at Lincoln's Inn, he became acquainted with Mr. Basil Montague, for whom he translated the *Novum Organum* in Mr. Montague's edition of Bacon's works. He was called to the bar in 1827. An able and a painstaking counsel, he soon obtained considerable practice as a conveyancer and equity draftsman and before parliamentary committees. In 1845 he received silk from Lord Lyndhurst, and in 1847 he became M.P. for Oxford as an advanced Liberal. Two years later, Lord Campbell, then Chancellor of the Duchy of Lancaster, appointed him his Vice-Chancellor, and in 1851 he succeeded Sir Alexander Cockburn as Solicitor-General, in Lord John Russell's ministry, with a knighthood. In Feb., 1852, he retired with his party. In 1853 he became Vice-Chancellor. He was a member of the Chancery Procedure Commission, and the Cambridge University Commis-

sion, and was one of the arbitrators between the Queen of England and the late King of Hanover in respect of the disputed claims to the Hanover Crown jewels. In Feb., 1868, Lord Cairns made him a Lord Justice of Appeal, and in the following December Sir William became Lord Chancellor in Mr. Gladstone's first administration, when he was raised to the peerage as Baron Hatherley of Hatherley, in the county of Gloucester. Lord Hatherley was a conscientious and an able lawyer, and a consistent and painstaking judge. He gained a reputation whilst known only as Vice-Chancellor Wood. He, however, attained to no position of distinction outside the courts of law. He was not a brilliant Chancellor. His name is not prominently associated with any great measure of reform. True, he passed the Bankruptcy Act of 1869, and the Judicial Committee Act of 1871, but he failed to pass a Judicature Bill. He resigned the seals in 1872, on account of failing eyesight, and died on July 10th, 1881. Perhaps we get a truer view of Lord Hatherley's character and disposition from the work he did outside the domains of law and politics. He wrote on *Truth and its Counterparts* (1857), a tract against *Marriage with a Deceased Wife's Sister* (1862, 2nd ed. 1869), and a treatise on *The Continuity of Scripture* (1867-9). He was a Sunday-school teacher for over thirty years, and a philanthropist all his life.

Rev. W. B. W. Stephens, *Memoir of Lord Hatherley* (1882). [W. M.]

Haugwitz, CHRISTIAN AUGUST HEINRICH KURT, COUNT VON (b. 1752, d. 1831), the Prussian statesman, was born near Oels, in Silesia, and studied at Halle and Göttingen. In 1775 he accompanied Goethe and the Stolbergs in their journey in Switzerland, and afterwards fell under the influence of the greatest mystics and quacks of the time—Lavater, Mesmer, and Cagliostro. From 1781 to 1791 he lived in retirement on his Silesian estates, but having become known to Frederick William II. for his tendency to the supernatural, he was sent as Prussian ambassador to Vienna, in 1792, and accompanied the Emperor Francis to the Conference at Mainz, where he strongly opposed the coalition against France in aid of the emigrants. Having returned to Vienna, he watched the increasing irritation of Austria with her Prussian ally, and in 1794 concluded a separate treaty with England at the Hague, the collapse of which a few months later left Prussia isolated from the coalition, and forced Haugwitz in the following year to conclude the Treaty of Basel with France. On the accession of Frederick William III. (q.v.) he continued the new king's chief adviser, though in 1798 he urged him in vain to abandon the policy of Prussian neutrality. In 1800 he entered upon a Russian alliance, decidedly in Napoleon's favour, but on the

renewal of the Franco-English War in 1803, when French troops again occupied Hanover, Haugwitz renewed his entreaties for war, and in the following spring resigned rather than face the responsibility of further neutrality. He continued, however, to assist Hardenberg (q.v.) by his advice, but his hopes of a great league of allies were shattered by the disaster of Austerlitz. In December he was sent to Napoleon, and was flattered and bullied into signing the Treaty of Schönbrunn, and in the following year the still more degrading Treaty of Paris (1806). After this he was recalled to office, but his administration was characterised by carelessness, indifference, and languor. The news, however, that Napoleon was bargaining for peace with England, and promising to restore Hanover, the prize that Prussia imagined she had won at the cost of her own degradation, roused him to some sort of energy. The whole nation clamoured for war; against all military advice Haugwitz mobilised the ill-organised forces. Jena and Auerstädt followed, and the minister's public life was at an end. He fled into East Prussia with the king, retired to Silesia once more, thence to Italy in 1820, and finally died in Venice. He must be regarded as one of the old-fashioned *dilettante* and short-sighted statesmen, whose chief service to Prussia has been to act as warnings to the strenuous leaders of recent years.

Menu von Minutoli, *Der Graf von Haugwitz*, (Berlin, 1844).

Hauptmann, Moritz (b. 1792, d. 1868), German composer and theorist, a native of Leipzig, adopted music as a profession, and in 1811 became a pupil of Spohr. In 1842, on the recommendation of Mendelssohn, he became cantor at the Thomas-schule at Leipzig, and there became famous as one of the greatest teachers of his time, Von Bülow and Joachim having been among his pupils. His great work is *Die Natur der Harmonik und Metrik* (1st ed. 1853), in which he lays great stress upon the æsthetical side of art, and its supplement *Die Lehre von der Harmonik*. His compositions are numerous, and though characterised by good taste rather than inventive genius, are still in request. Among them are, a mass (Op. 28), choruses (Op. 25, 32, and 47), and numerous part-songs. His opera, *Mathilde*, produced in 1824, has been repeatedly performed.

Hauptmann's *Letters* were published in 1871 and 1876.

* **Hausmann, George Eugène, Baron** (b. 1809), French administrator, was born at Paris, and was originally an advocate. His political career began after the July revolution of 1830; and with the rise of Napoleon III. to power he too rose, until in 1853 he became Prefect of the Seine. Immediately he set himself to work to embellish the capital, until Paris became the resort of the nations,

who cared little or nothing whether such a splendid *régime* had any prospect of stability. Unfortunately Baron Hausmann was soon compelled to borrow; and though the loans were readily subscribed, it became evident that the municipal accounts were not above suspicion. In 1869 the Budget of the city was placed under the control of the Corps Législatif, and in 1870 the Prefect, having declined the demand of the new Premier, M. Ollivier, that he should resign, was dismissed by imperial decree. After a brief exile from his native land, the baron returned, but was chiefly occupied in financial speculation until 1877, when he was elected to the Chamber of Deputies by the Corsican arrondissement of Ajaccio. Despite the wavering and waning of governments, the Boulevard Hausmann still keeps green the memory of his brilliantly profligate administration.

Haüy, René Just (b. 1742, d. 1822), French mineralogist, was the son of poor parents, and educated himself under great discouragement. In 1764 he became teacher at the Collège de Navarre, Paris, and shortly afterwards made the great discovery with which his name is associated—the geometrical law of crystallisation. It was at once recognised by Laplace as an important contribution to scientific knowledge, and L'Abbé Haüy, as he was called from being an honorary canon of Notre Dame, was elected to the Academy. His chief works on the subject are *Essai d'une Théorie sur la Structure des Cristaux* (1784), *Traité de Minéralogie* (1803), and *Traité de Cristallographie* (1812). He also made some valuable discoveries in electricity. Fortune did not treat Haüy well. He was thrown into prison by the Jacobins at the time of the revolution, and saved with great difficulty by his pupil, Geoffroy St. Hilaire, only after the restoration to be deprived of the appointments given him by Napoleon.

Havelock, Sir Henry (b. 1795, d. 1857), soldier, the son of a wealthy Sunderland shipbuilder, was educated at Charterhouse School, and in 1813 was called to the bar. A misunderstanding with his father, however, caused him, in 1815, to enter the army. He became a lieutenant in the Rifle Brigade, or 95th as it then was, and in 1823 went to India, having exchanged into the 13th Light Infantry. He served in the first Burmese War, and in 1828 published an account of his experiences—*Campaigns in Arva*. His marriage in the following year with Hannah, the daughter of the missionary, Dr. Marshman, was a singularly happy one, and soon afterwards he joined the Baptist community. Having risen to the rank of captain, he fought through the first Afghan War, and in April, 1842, commanded the right column in the final defeat of Akhbar Khan, and was actual commander at Istalif, where the Afghan resistance finally collapsed (Sept. 29th).

During the Mahratta campaign he was Persian interpreter to Sir Hugh Gough (q.v.), and in 1845 served in the first Sikh War. Absent on leave in England during the years 1849-51, he became in 1854 full colonel and adjutant-general of the troops in India. In 1857 he commanded a division under Outram during the Persian campaign. On the outbreak of the Mutiny, he was chosen to command the column which was to relieve Lucknow, and, if possible, Cawnpore. A series of bloody and glorious engagements at Futtehpore, Aong, and Pandoo-Nuddee, culminated in the capture of Cawnpore on July 16th and the crushing defeat of Nana Sahib, but only to discover the mangled bodies of the English garrison. Havelock then advanced upon Lucknow, and fought a second series of magnificent battles against overwhelming numbers, but his small force suffered so severely that he was obliged to recross the Ganges and await reinforcements. These arrived under Outram, who, though his superior officer, insisted on Havelock's taking the command, of which the Indian Government had thought fit to deprive him, and by brilliant manœuvring he entered the city and relieved the Residency (Sept. 25th). The relieving force was soon itself besieged, but was rescued by Sir Colin Campbell on Nov. 6th. He was too late, however, to save the blameless Havelock, who died on the 26th, worn out by anxiety and toil. "I have," he said to Outram, "for forty years so ruled my life, that when death came I might face it without fear." Two days after his death, came the honours of a baronetcy and a pension.

W. Brock, *Biographical Sketch of Sir H. Havelock*.
[L. C. S.]

Hawker, THE REV. ROBERT STEPHEN (b. 1805, d. 1875), poet and divine, was a native of Plymouth. He was educated at Pembroke College, Oxford, where the expenses of a university career were provided by his wife, a lady double his own age, who had been his godmother. Mr. Hawker gained the Newdigate prize in 1827, the subject being *Pompeii*. In 1834 he was inducted to the vicarage of Morwenstow, on the north Cornish coast, where his lonely surroundings tended to develop the eccentricity of his character. His parishioners, however, many of whom were wreckers, soon ceased to laugh at their vicar, recognising his genuine sympathy with their pursuits and ideas, which extended to a belief in the power of the evil eye. The first collection of his poems appeared when he was seventeen, *Tendrils*, by *Reuben*, and the products of his maturer years were chiefly ballads of great beauty, many of which appeared in the first instance in local papers. They have been frequently republished under various titles, such as *Ecclesia* (1841), *Cornish Ballads* (1869), and *Echoes from Old Cornwall* (1845).

The Song of the Western Men, with its old refrain, *Shall Trelawney die?* was received by Scott and Macaulay as a ballad genuinely ancient throughout. His most ambitious poem was *The Quest of the Sangreal* (1864), which contains passages of great power, but which is only a fragment, and as a complete conception will not bear comparison with the Laureate's *Holy Grail* (published in 1870). Mr. Hawker's only prose work of importance is a reprint of contributions to the periodicals, *Footprints of Former Men in Cornwall* (1870). His last years were saddened by the death of his first wife, the ruin of his church, pecuniary difficulties, and loss of health. He was struck down by paralysis at Plymouth, and is there said to have been received into the Church of Rome through the influence of his second wife, a Polish lady.

The Rev. S. Baring-Gould, *The Vicar of Morwenstow*; the Rev. F. G. Lee, *Life of R. S. Hawker*.

Hawkesbury, BARON. [LIVERPOOL.]

* **Hawkins**, THE HON. SIR HENRY (b. 1816), a judge of the Queen's Bench Division, is the son of Mr. J. H. Hawkins, solicitor, of Hitchin, in Hertfordshire. He was called to the bar at the Middle Temple in 1843, and joined the Home Circuit. In 1858 he became a Q.C., and a bencher of the Middle Temple. He enjoyed one of the most lucrative practices at the bar ever known, being retained largely in compensation cases. In the general conduct of a case, and in cross-examination, he stood unsurpassed, while his addresses to the jury were famous for lucidity. Mr. Hawkins was retained in the memorable convent case *Saurin v. Star*, tried in 1869, where he led for the defence; in the prosecution of the Claimant for perjury in connection with the Tichborne trial; and in the Lord St. Leonards will case. In November, 1876, he was appointed judge of the High Court of Justice, in the Queen's Bench Division, when he was knighted. In 1882 Sir Henry published an Address on *Police Constables and their Duties*, prefixed to Mr. H. Vincent's *Police Code*.

* **Hawkshaw**, SIR JOHN, F.R.S., F.G.S. (b. 1811), the railway engineer, was born at Leeds, and on leaving the grammar-school became a pupil of Charles Fowler, the Yorkshire surveyor. He next passed into the office of Alexander Nimmo, by whom he was sent to Venezuela to look after some heavy copper-mining operations. This visit to South America led him to his first and only venture in authorship, *Recollections of South America* (1838). In 1834 he returned to England, and entered into an engagement with Mr. James Walker, the dock engineer; but in 1837 he was appointed agent to the Manchester and Bolton Canal Railway, which very speedily brought him the like engagement on the Manchester and Leeds Railway. He was next

engaged on the Huddersfield and Sheffield Railway. The admirably constructed, but extremely ugly, Cannon Street, Charing Cross, and London Bridge Railway, is another of his great works. Hawshaw, in antagonism to his friend Stephenson, was the first English engineer to recognise the wisdom and possibility of the Suez Canal (see his *Rapport sur les Travaux du Canal de Suez*, Paris, 1863); and he was the first to propound a practical scheme of a Channel Tunnel, for which enterprise he on the part of England, and M. Lavally on the part of France, became jointly the engineers in 1875. He is also credited with having introduced one of the boldest of the many great changes in engineering since the introduction of railways, viz., that of steep gradients. The examples at Farringdon Road Station and Ludgate Hill proved that such a method was much to be preferred to the old alternative of making circuitous routes. Mr. Hawshaw was knighted in 1873.

The Practical Magazine, vii. 68.

Hawthorne, NATHANIEL (b. July 4th, 1804, d. May 9th, 1864), American novelist, was the descendant of early settlers of the colony of Massachusetts Bay, who generally followed the sea. His father died of a fever on one of his voyages in a tropical country; and his mother, under the stroke of this affliction, lived for thirty years in seclusion. From his sailor ancestors Hawthorne inherited a robust frame and physical vigour; from his mother he inherited that extreme delicacy of sensibility which is perceptible in his romances, and that perpetual mood of the solitary verging upon melancholia, which affected his whole life. He graduated from Bowdoin College in 1825. Franklin Pierce, subsequently President of the United States, and H. W. Longfellow, were his associates in college. His association with them was fortunate for American literature. Longfellow's friendship procured for Hawthorne's early literary efforts a recognition which determined his career; and the possibility of a pursuit seldom remunerative in its beginnings was confirmed by those happy sympathies in politics which three times helped him to lucrative offices. Upon the completion of his collegiate curriculum he returned to his home at Salem, and lived almost as a recluse for several years. In this period he wrote and published *Fanshawe* (1828), his first romance. It fell into oblivion. He also edited at this time a *Magazine of Useful Knowledge*; and it is said that he was also the principal if not the only contributor to this periodical. Occasions upon which Pegasus becomes a dray-horse are not uncommon in literary history; and Hawthorne's useful knowledge may be assimilated with Goldsmith's contributions to natural history. He published in 1837 his collection of *Twice-told Tales*. In 1838 he was appointed weigher and gauger at Boston,

by Mr. Bancroft, the historian, who was then collector of the customs at that port. Appointed as a Democrat during the presidency of Mr. Van Buren, Hawthorne lost his office in 1841, by the rotation of politics. From Boston Hawthorne went to West Roxbury, Mass., and joined the Brook Farm Community. The Brook Farm was one of a dozen attempts to realise the ideals of different social theorists. It was an escapade of amateur communists and it was not the least of its contradictions that Hawthorne, a solitary by every inclination, should figure in a quasi-attempt to force to pre-eminence the social phase of life. In 1843 Hawthorne married Miss Sophia Peabody, and made his home at Concord, Mass., in the Old Manse. His *Mosses from an Old Manse* was published in 1846. In 1845 the Democrats were again in possession of the general government; and in 1846 Hawthorne was made surveyor of the port at Salem, which office he held until 1849, when, by the election of General Taylor, the Democrats were out again. In 1850 he published *The Scarlet Letter*, a romance directly related to his official life, since the seminal idea was derived from some ancient documents discovered in the Custom House at Salem. In 1851 he published *The House of the Seven Gables*. Both these romances were immediately very successful. His *Blithedale Romance* was published in 1852. This story has a certain recognised but undeclared relation to the Brook Farm experiment; though it is neither a description nor a satire of the life there. It is rather a humorous idealisation of the varieties of New England personalities, that always stand ready to reorganise the universe. In 1852 Hawthorne wrote the biography of Franklin Pierce, then a candidate for the presidency. Pierce was elected, and in 1853 appointed Hawthorne consul at Liverpool. He held this office until 1857, when he resigned, and travelled for three years in France and Italy. His romance *The Marble Faun* (*Transformation*), published in 1860, was the product of his residence in Rome. He returned to America in that year, and in 1863 published his book on England, entitled *Our Old Home*. This was the last of his books published in his lifetime. He was deeply troubled by the condition of the country upon his return home; and the chagrin of finding the party that had all his sympathy falsely regarded as the enemy of the Union, to which he was devoted, preyed upon his mind. He died suddenly while upon a journey undertaken for recreation. His American, English, French, and Italian note-books, and two romances, *Septimus Felton*, and *Dr. Grimshaw's Secret*, have been published since his death. His complete works, in 21 vols., were published in Boston in 1871.

Julian Hawthorne, *Life of Nathaniel Hawthorne*; W. D. Howells, *Hawthorne, the English Men of Letters Series*. [G. W. H.]

* **Hawthorne, JULIAN** (b. 1846), novelist, the son of Nathaniel Hawthorne, was educated at Concord and at Harvard University (1863-7). He next entered a school of civil engineering, and went to Dresden in 1868. In 1870 he returned to America, was married at New York, and worked until 1872 in the department of docks under General McLellan. By this time he had begun to write in the magazines with considerable success, and returning to Dresden, devoted himself to the life of a man of letters. *Bressant*, his first novel, appeared in 1873, and *Idolatry* in 1874. In the latter year he settled in England, and in 1882 returned to New York. *Saxon Studies* appeared in the *Contemporary Review* of 1876; *Garth* in 1877; *The Laughing Mill* (1879); *Archibald Malmaison* (a novelette, 1879); *Yellow-Cap* (1880); *Prince Saroni's Wife* (1882); *Fortune's Fool and Dust* (1883); *Beatrice Randolph*, a story (1883); *Miss Cadogna* (1885). His interesting *Life* of his father appeared in 1883, and he brought out a posthumous novel of Nathaniel Hawthorne's, *Dr. Grimshaw's Secret*, which caused some stir. Despite the inequality of his work, Mr. Hawthorne has undoubtedly some of his father's genius.

Haydn, JOSEPH (b. 1732, d. 1809), the great musician, the acknowledged father of modern instrumental music, was probably of Bohemian origin, but was born at Rohrau, a village in Lower Austria, near the borders of Hungary. His father was a coachbuilder, with a fine voice and good musical taste. The boy having shown signs of musical powers almost in babyhood, was sent to Vienna to be trained, and Vienna continued his home for the greater part of his life. His influence, however, belongs almost entirely to the last century, and we must content ourselves here with enumerating only the most prominent points in his career. His first opera, *The Helling Devil* (*Der krumme Teufel*), was produced in 1753; his first quartet in 1754; and his first *Symphony in D* in 1760. Two years after, he came under the patronage of Prince Nicolaus of Eszterhazy, as whose *Capellmeister* he lived during several of the most productive years of his life. For the prince's new theatre at Eszterhazy he wrote the operas *La Fedeltà premiata* (1780); *Orlando Palatino* (1782); and *Armida* (1784). Meantime, Haydn's fame had spread through Europe, and his music was received with enthusiasm, especially in London. At length, after many fruitless negotiations, he was induced to visit London by a concert manager named Salomon, and arrived in Jan., 1791. After giving a series of very successful concerts through the season and the following winter, he returned to Vienna in 1792, but made a second visit to London 1794-5. The interval between the two visits was marked by his instruction of Beethoven. In 1797

Haydn composed the hymn to the Emperor Francis, and began to write the *Creation* (*Schöpfung*), which had been first conceived in England, and was finished in the following year. It was first publicly produced in Vienna, Jan., 1799. Encouraged by the success, Haydn, in 1800, composed the somewhat similar work of the *Seasons* (*Jahreszeiten*), for a libretto founded on Thomson's poem. His last compositions, an unfinished quartet (83), and a piano sonata, are dated 1803. Haydn's influence on contemporary music was inestimable. By date he stands in the gap between Mozart and Beethoven, related to neither, but powerfully influencing both. His operas and much of his other work are inevitably obsolete, but he will be gratefully remembered for his *Creation*, and, above all, for the great series of quartets in which he found his highest form of expression, being at once the modern quartet's originator and master.

C. F. Pohl, *Mozart und Haydn* (1897); and the same author's *Joseph Haydn* (1875).

Haydon, BENJAMIN ROBERT (b. 1786, d. 1846), historical painter, the son of a Plymouth stationer, became a student at the Royal Academy in 1804. In 1807 he exhibited his first picture, *The Repose of the Holy Family in Egypt*, and it was followed by *Dentatus*. Unfortunately, the hanging of this picture involved Haydon in a grave quarrel with the Academy; he quarrelled also with his patrons, partly through angularities of temper, but chiefly because he would not condescend to fawn, and retorted upon his critics with bitterness. Conscious of being a giant among pigmies, he used his strength as a giant, and in his ardour for the advancement of art, became involved in pecuniary difficulties. "My *Judgment of Solomon*," he writes in 1827, "is now in a warehouse in the Borough; my *Entry into Jerusalem* . . . is doubled up in a back room in Holborn; my *Lazarus* [now in the National Gallery] is in an upholsterer's shop in Mount Street; and my *Crucifixion* in a hay-loft in Lisson Grove." A public subscription was started for him, but he was for the second time lodged in prison for debt, where he produced the *Mock Election*, which was purchased by George IV. He now attempted portrait painting, but as he declined to flatter, he was not successful, and though he obtained good prices for some of his pictures, notably for *Napoleon at St. Helena* (1831), *Xenophon and the Ten Thousand seeing the Sea* (1832), and the *Reform Banquet* (1833), his circumstances did not improve. In 1835 he lectured in the chief towns of England and Scotland, and was well received, his audiences being delighted with his originality and enthusiasm. But his hopes of being connected with some great public work were cruelly disappointed when the judges rejected his fresco for the Houses of Parliament. His

last effort was the exhibition of his great pictures, *The Banishment of Aristides*, and *Nero Playing while Rome was Burning*. Tom Thumb was making his first appearance in the same building; his visitors were 120,000 per week, while in the same space of time Haydon had 133. Shortly afterwards, worn out by disappointment, this great painter committed suicide.

Tom Taylor, *Life of B. R. Haydon*, chiefly compiled from the artist's remarkable journal (1853); B. R. Haydon's *Correspondence and Table Talk*, edited by his son, F. W. Haydon (1876).

* **Hayes**, RUTHERFORD BIRCHARD (b. 1822), 19th President of the United States, is a native of Delaware, Ohio, and is the son of a merchant. Educated at Kenyon College, Ohio, and at Harvard University, he was called to the bar in Ohio in 1845, and in 1859 became city solicitor at Cincinnati. He fought in the Civil War on the side of the Union, and emerged from it with the rank of general in 1865, when he was returned to Congress for Ohio. In 1867 he was elected Governor of Ohio, and again in 1869 and 1875. By this time he had become a prominent member of the Republican party, and in 1876 was nominated by the Republican Convention as candidate for the presidency. His opponent, Mr. Tilden, was probably an abler man, and the election was only carried by double returns of electors from the States of Louisiana, Florida, and Oregon, one of the sets being obviously fraudulent. A special electoral commission, however, decided that the disputed votes should count for Mr. Hayes. His tenure of office was uneventful. Even if he had wished to reform the Civil Service thoroughly, his too powerful supporter, Mr. Conkling, would have rendered such attempts impossible, and his attempt to veto the premonetisation of silver had to yield before the two-thirds majority of both Houses of Congress. Mr. Hayes's presidency is, however, memorable as the occasion on which the last traces of the Civil War were removed by the withdrawal of the troops from the Southern States. He did not offer himself for re-election, but was succeeded in 1881 by President Garfield.

American Annual Cyclopædia (1876); W. D. Howells, *Life of Rutherford B. Hayes*.

Haymerle, HEINRICH KARL, BARON VON (b. 1823, d. 1881), Austrian statesman, was the representative of a German family who have been long settled in Bohemia. Educated for the diplomatic service, he went to Constantinople in 1850, as sub-interpreter to the embassy. In 1857 he was appointed secretary of legation, and afterwards *chargé d'affaires* at Athens, when he was transferred to Dresden and afterwards to Frankfurt. After the Danish War he went to Copenhagen, and succeeded in re-establishing friendly relations between Denmark and Austria. His next important

service was in 1866, when he aided in the negotiations which led to the Treaty of Prague, after which he was created a baron, and was *chargé d'affaires* at Berlin until 1868. Once more he was despatched to Constantinople as minister, whence he passed to Athens. In 1878, while minister at Rome, he was one of the Austrian plenipotentiaries at the Berlin Congress. In 1879, on the retirement of Count Andrassy, Baron von Haymerle succeeded him as Minister of Foreign Affairs, the premiership being at about the same time taken by Count Taaffe. Baron Haymerle followed the policy of close friendship with Germany inaugurated by his predecessor, and added Italy to the alliance, so that his sudden death on Oct. 10th, 1881, was deplored by lovers of peace throughout the Empire.

Haynau, JULIUS JAKOB, BARON VON (b. 1786, d. 1853), an Austrian general, a natural son of the Elector of Hesse-Cassel, entered the Austrian service in 1801, and became colonel in 1830, and field-marshal in 1844. During the Italian campaigns of 1848-9, he acquired an unenviable reputation on account of his ruthless rigour, especially at the capture of Brescia. He had the supreme command of the forces in Hungary in 1849, when he stormed Raab, occupied Szegedin, and gained the battles on the Theiss. Many of his marches were of wonderful rapidity, and on all occasions he showed consummate military tact; but his character as a general was marred by his barbarous cruelty towards the defeated Hungarians, and especially by his alleged flogging of women; a charge, however, which the baron denied. In 1850 he was dismissed the service for the "intractability of his disposition," when he travelled throughout Europe. But in every part of Europe he had come to be regarded as the personification of atrocious cruelty, and was hated accordingly. During his stay in London he visited the brewery of Messrs. Barclay and Perkins, when he was assaulted by the draymen, and barely escaped alive. The English Government declined to give any satisfaction for this. He subsequently visited France and Belgium, where he was saved from actual assault only by the vigilance of the authorities.

Baron Schönhals, *Life of Baron Haynau*.

Hayward, ABRAHAM (b. 1803, d. 1884), critic, was born at Wishford, in Wiltshire, and coming to London in 1818, was at first articled as a solicitor, but afterwards entered at the Middle Temple, and was called to the bar in 1830. After attending the Western Circuit for some years he became Queen's Counsel in 1845. The appointment caused great surprise, for Hayward was far more distinguished for literary than legal power, except, indeed, that in 1828 he had been the originator of the *Law Magazine*, and continued its editor till 1844. In the

meantime he had become known in the literary world through his excellent prose translation of the first part of *Faust* (1833), that is still the most popular English version, unless we except Bayard Taylor's. Throughout life he remained a constant contributor to the highest periodical literature, especially the *Edinburgh Review* and the *Quarterly*, and a constant *raconteur* at the highest dinner-tables of intellectual society in London. Of his very numerous publications, few of which rise into permanent importance, the following may be mentioned:—*The Art of Dining* (1852), *Biographical and Critical Essays* (1858), *The Letters and Literary Remains of Mrs. Piozzi* (1861), *Selections from the Diary of a Lady of Quality* (1864), *Goethe, a Biographical Sketch* (1877), a work of remarkably little value; *Short Rules of Modern Whist* (1878), and *Sketches of Eminent Statesmen and Writers*, reprinted from the *Quarterly Review* (1880). In 1848, and for a few following years, Hayward took a large share in the conduct of the *Morning Chronicle*. His correspondence was published in 1886.

Hazlitt, WILLIAM (b. 1778, d. 1830), English critic, the son of a Nonconformist minister, commenced life as a painter, but did not prosper in that capacity, although it was while an artist that he became acquainted with Lamb and Leigh Hunt, having previously been awakened to intellectual life by Coleridge. In 1805 he published his *Essay on the Principles of Human Action*, which attracted very little attention, and three years afterwards married Sarah, the sister of Dr. Stoddart, the editor of the *Times*, from whom he separated in 1822. Hazlitt is now remembered for his essays and criticisms, which although occasionally paradoxical and very unequal, are full of rare insight and literary refinement. A list of them is to be found in Mr. A. Ireland's bibliography, and it is sufficient here to mention the collections of essays, many of which were written for the *Examiner*, entitled the *Round Table* (1817), *Table Talk* (1821), and the *Plain Speaker* (1825), the criticisms on *The Spirit of the Age*, i.e. the leading men of the time (1825), and his lectures, chiefly delivered at the Surrey Institution, on the Elizabethan dramatists, the poets and the English humorists. His *Characters of Shakespeare's Plays* (1817), was a great advance towards the right understanding of the dramatist's genius, and his *View of the Contemporary English Stage* is an invaluable source of information on its subject. His last work, the *Life of Napoleon*, of whom he was an extravagant admirer, was a failure. His want of ballast alienated many of his friends, but Charles Lamb's warm heart readily forgave him what little it had to forgive.

Biographical Preface, by Hazlitt's son, W. Hazlitt, to the edition of the *Essays* published in 1836; *Life of W. Hazlitt* (1867), by his grandson, W. C. Hazlitt.

* **Healy, TIMOTHY MICHAEL, M.P.** (b. 1855), Irish politician, is the son of Mr. Michael Healy, of county Cork. He was a clerk in a merchant's office, or, according to other accounts, in a telegraph office, when, upon the organisation of the Home Rule movement of 1879 and onwards, he became Mr. Parnell's private secretary. In 1880 he was arrested on a charge of intimidation, but was acquitted by the jury, and in the same year was returned for Wexford. In Parliament Mr. Healy soon became a prominent figure. His manner was extremely provocative, and his conduct turbulent. On the other hand, his debating powers were recognised as being of the first rank, and during the discussions upon the Irish Land Bill of 1881, he, Mr. Law (the Attorney-General for Ireland), and Mr. Gladstone, were thought to be the three only men who had grasped thoroughly the bearings of the measure. The "Healy clause" was an important extension of the principle of fixity of tenure, and its author wrote an admirable guide to the Land Act. Arrested in 1882, in company with Mr. Davitt, for using inflammatory language, he was sentenced to six months' imprisonment for refusing to find securities for his good behaviour. In July, 1883, Mr. Healy, having vacated his seat for Wexford, won an important victory for the Parnellites at Monaghan. He was called to the Irish bar in 1884, and in the same year married the daughter of Mr. T. D. Sullivan, M.P. At the general election of 1885 Mr. Healy was returned for both North Monaghan, and South Londonderry, and took his seat for the latter constituency. In 1886 he and Mr. Biggar strongly opposed the candidature of Mr. Parnell's nominee, Capt. O'Shea, for Clare, but the leader of the Home Rule party nipped the revolt in the bud. At the general election in that year Mr. Healy lost his seat.

Heber, REGINALD (b. 1783, d. 1826), prelate and poet, was educated at Brasenose College, Oxford. He took the prize for an English poem on *Palestine*, and having carried off the Newdigate prize, was elected a fellow of All Souls College in 1804. He was ordained, and became rector of Hodnet, in Shropshire, in 1807, was appointed Bampton lecturer in 1817, preacher of Lincoln's Inn in 1822, and Bishop of Calcutta in 1823. His excessive labours in the trying climate of India cut short his exemplary career on April 3rd, 1826. Bishop Heber was a voluminous author, and published editions of his Bampton lectures, his sermons, an account of his Indian travels, and a biography of Jeremy Taylor, with an edition of his works. His name is, however, known to the present generation almost solely as the writer of some of the finest hymns in our language. A collection of them, with additions by other hands, was first made in 1827. It is sufficient here to

mention *From Greenland's icy mountains ; Lo, He comes in clouds descending ; Holy, Holy, Holy, Lord God Almighty ; and Brightest and best of the Sons of the morning.*

Bishop Heber's Life, by his widow (1830), and his journal published in *Murray's Home and Colonial Library*; T. Robinson, *Last Days of Bishop Heber*.

Heeren, ARNOLD HERMANN (b. 1760, d. 1842), German historian, was a native of Ambergen, near Bremen, and was educated at the University of Göttingen. After spending some years in travel he was appointed professor of philosophy in 1794, and in 1801 professor of history at his *alma mater*. He married a daughter of Heyne in 1797, and died on March 7th, 1842. His life, in fact, was as uneventful as that of most German scholars, and its interest is almost entirely literary. Heeren was one of the first, and by no means one of the least, of great German historians of the present century. Perceiving that history ought to be something more than a description of battles and treaties, of the sorrows and joys of kings, or at best hasty generalisations on the facts accumulated in the course of a few months' reading, he encouraged long and systematic study. Together with Ukert he founded at Gotha the famous *Geschichte der Europ.-Staaten* in 1819, which has been the model for many similar collections. His investigations concerned the Old World chiefly, and submitted the economic systems and social arrangements of the Mediterranean civilisation for the first time to the dry light of searching inquiry. Thus he showed many subsequent historians, notably Theodor Mommsen, the way in which to walk. His chief works are the famous *Ideen über Politik, den Verkehr, und den Handel der vornehmsten Völker der Alten Welt* (1st ed., 1793-6, English translation entitled "Historical Researches into the Politics, Intercourse, and Trade of the principal Nations of Antiquity," 1833), and *Geschichte der Staaten des Alterthums* (1799). His *Geschichte des Europäischen Staatensystems* (1800, English translation, "The History of the Political System of Europe," 1834), although inevitably less profound, is suggestive at every turn. Heeren's history of classical literature was not so successful; indeed, he was conspicuously devoid of the higher literary instinct. He also wrote biographies of Heyne and Johann von Müller. Heeren's historical works were edited, in 15 vols., in 1826.

Hegel, GEORG WILHELM FRIEDRICH (b. Aug. 27th, 1770, d. Nov. 14th, 1831), was born at Stuttgart, of an old Protestant family. Destined by his parents for the Church, he proceeded at the age of eighteen from Stuttgart Gymnasium to the theological seminary of Tübingen. Here he had as fellow-students the poet Hölderlin, and Schelling. With Hölderlin Hegel studied Plato and Sophocles, and one of the abiding impressions he car-

ried away from school and college was that made upon him by Greek literature and art. For six years after leaving the university (1793-9), Hegel was engaged as family tutor, first in Berne and latterly in Frankfurt. During these years he was wrestling with the fundamental conceptions of religion, as exemplified historically in the spirit of Greece, in Judaism, and in Christianity, and studying the development of philosophic thought in Kant, Fichte, and Schelling. In 1799-1800 he was trying to weld together the results of this prolonged study in a system of his own. The manuscript, published since his death, shows that he had then reached the leading ideas of his philosophy. In Jan., 1801, he entered upon a species of philosophical partnership with Schelling, who was already in the midst of a brilliant career at Jena. Hegel taught in the university, first as *privat-docent*, and after 1805 as extraordinary professor. He joined Schelling in the publication of a philosophical journal, but in 1803 the latter removed from Jena, and was drawn by his versatile spirit into other undertakings. Meanwhile, Hegel, with a laborious patience, was engrossed in working out his thoughts systematically; and in the process he became aware of the latent differences which existed between his own point of view and Schelling's. These were formulated in the *Phänomenologie des Geistes* (1807), his first important work. The preface to this book is a remarkable piece of veiled criticism, sharply differentiating his own views from those of his immediate predecessors in German philosophy. Shortly before this, Hegel had left Jena; and after acting as newspaper editor in Bamberg for a time, he was appointed rector of the gymnasium in Nürnberg, in 1808, in which post he remained till he was called to a philosophical professorship in Heidelberg, in the year 1816. At Nürnberg was published the *Wissenschaft der Logik* (1812-16), which is, in many ways, its author's chief work. His *Encyclopädie der philosophischen Wissenschaften*, which presents his whole system in outline, appeared in 1817, but was greatly enlarged in a second edition ten years later. In 1818 Hegel was called to the University of Berlin, where he taught till his death, which was caused by cholera. The only new work published by Hegel during this period was the *Philosophie des Rechts* (1821), his activity being almost entirely devoted to his lectures, through which he exercised a far-reaching influence on the younger minds of Germany. By the care of his pupils, a collected edition of his works was published in 18 vols., including his lectures on the *Philosophy of History*, *Aesthetics*, *The Philosophy of Religion*, and *The History of Philosophy*. Hegel's philosophy is usually described as absolute idealism. His system is based, like those of Fichte and Schelling, on the critical investigations of Kant; but the study of Kant was combined

in Hegel's case with an unusually profound knowledge of Plato and Aristotle, and an intimate acquaintance with the chief forms in which religious experience expresses itself. These influences made it impossible for him to acquiesce in the negative or agnostic results which follow, from one side at least, of the Kantian teaching. Hegel may be said, therefore, to have dropped the negative elements of Kantianism, and to have developed its Positive or constructive elements into a system of idealism which claims to demonstrate the rationality of existence in all its parts. "The real is rational and the rational is real," constitutes Hegel's favourite text—a position which is frequently, but perhaps less clearly, expressed, as the assertion of the identity of Knowing and Being. The categories or rational conceptions which Kant had demonstrated to be present in all knowledge, are taken by Hegel in his *Logic* as the skeleton, so to speak, of reality. They are connected one with another in such a way as to form a complete system of thought-determinations, each link of the chain implying all the other links, and therefore guaranteeing the whole chain. Starting from this basis, Hegel endeavours to exhibit both nature and human history as essentially the evolution of reason. In man, reason (which in nature is "out of itself") comes to consciousness of itself, and the process of history shows us the gradual unfolding and deepening of that self-consciousness. But, though self-consciousness is thus the goal towards which we seem to progress, it is, at the same time, the one eternally existent fact which underlies the whole process of development. Hegel differs from Schelling chiefly in his emphatic assertion of rational self-consciousness as the ultimate reality. Full or complete self-consciousness, to which Hegel gives by preference the title of Spirit, is realised only in the Divine or absolute Spirit. Hegelianism remained the dominant philosophy in Germany till about the year 1848; but its adherents were divided among themselves, especially in the attitude they assumed towards religion. The one party, known as Alt-Hegelianer, or right-wing Hegelians, supported a conservative interpretation of the master's doctrine, maintaining his point of view to be that of a true Christian Theism. The left wing, or Jung-Hegelianer, on the other hand, such as Feuerbach, Strauss, and Bruno Bauer, developed the Hegelian philosophy in a pantheistic, and eventually in a materialistic, direction, denying both the personality of God and the immortality of man. Since 1848, and the growth of scientific studies, the influence of Hegelianism has been on the decline in Germany, but it has shown a remarkable vitality in Italy, America, and England.

The chief English works upon Hegel's philosophy are J. H. Stirling's *Secret of Hegel* (1865); Wallace's *Logic of Hegel* (1874); Seth's *Development*—18*

ment from Kant to Hegel (1883); Caird's *Hegel, in Blackwood's Philosophical Classics* (1883). His *Life* was written by Rosenkranz (1844). [A. S.]

Heine, HEINRICH (b. 1799, d. 1856), one of the greatest of modern German poets, was born at Düsseldorf, of Jewish parents. His early youth coincided with the French occupation, and resulted in an enthusiasm for Napoleon, especially natural in a member of a race to whom the Emperor had brought relief from disabilities and oppression. In 1819 he entered as a law student at Bonn University, the funds being supplied by his uncle, Solomon Heine, a wealthy Hamburg merchant, who had made the adoption of the legal profession the condition of his assistance. But the lectures of A. W. von Schlegel had had more attraction for Heinrich than those of the lawyers. In 1820 he transferred himself to Göttingen, whence, when rusticated in 1821, he went to Berlin. There he listened to, but was absolutely uninfluenced by, the teaching of Hegel. The acquaintance of Varnhagen von Ense and his accomplished wife, Rahel, introduced him into literary society, and he devoted himself almost entirely to letters. Besides writing for various newspapers, he published a volume of poems in 1822, and two tragedies, *Almansor* and *Ratcliff*, in 1823. The latter had, however, much less success than the former. In 1825 he returned to Göttingen, and took the degree of Doctor of Law. His race was still under such stringent disabilities that it was necessary for him to qualify himself for the exercise of his profession by baptism into the Lutheran Church. Though this was but a formal act—for Heine never pretended to have any belief in either Judaism or Christianity—it probably had rather a bad effect on his character. It is absurd, however, to denounce him for apostasy. His own kinsfolk must have sanctioned it by pressing him to become a lawyer. Heine, however, never seriously devoted himself to his profession. The next few years, the most critical of his life, were most fruitful in work which was to win him his place in literature. He rose suddenly into fame by the publication of his *Buch der Lieder* (1827) and *Reisebilder* (1826–31). The latter, even more than his songs, excited the wildest enthusiasm. A new literary light had risen, who could, in some measure, step into the place of the aged Goethe. But Heine quickly got mixed up with the revolutionary disturbances of 1830. He was especially obnoxious to the Prussian Government, and in 1831 his democratic writings made Munich an unsafe place of residence; he consequently migrated to Paris, where he lived for the rest of his life, only once or twice paying short visits to Hamburg and his family. Heine was as little of the German patriot as he had been a Jewish religionist, but his involuntary renunciation of his native land added perhaps

another element of bitterness to a nature soured by adversity, and constitutionally incapable of severe or prolonged exertion. His writings became more and more fragmentary and occasional. What little poetry he now wrote was bad. The inspired singer of the *Buch der Lieder* became an active and brilliant journalist. Yet the mass of his French and German newspaper work of the next sixteen years, though brilliant in wit and consummate in style, and often wonderfully sagacious, both in its political and literary criticisms, was necessarily mainly of passing interest. His *Französische Zustände* and *Lutetia* are typical republications of his journalistic efforts of this period. With more literary pretensions are the pieces comprised in *Die Salons*, such as his wonderfully clever articles *Zur Geschichte der Religion und Philosophie in Deutschland*, which first saw the light of day in French in the *Revue des Deux Mondes*, and the very characteristic *Florentinische Nächte*. Nothing can be more perversely brilliant and witty than his account of Kant abolishing God as Robespierre executed Louis XVI., and restoring a Deity as a postulate of the Practical Reason because of the dismal face of his old servant, Lampe. Very spitefully, yet very skillfully, did he fall upon old friends, like Schlegel, in his *Romantische Schule*. His *Ludwig Börne* involved him in a curious duel with the second husband of Börne's widow, but his attack left Börne himself scatheless, as compared with his unmerciful abuse of the living German political exiles in Paris; a body always regarded by him with special detestation. The quaint and disappointing *Deutschland, ein Wintermärchen*, sprang from his German visit in 1844. *Atta Troll* (1846) is a still more unsatisfactory poem. *Shakespeare's Mädchen und Frauen* is very slight, but is made valuable by Heine's great critical insight. In 1835 Heine married a woman of low birth and no education, named Mathilde. In 1848 he was attacked by a disease of the spinal cord, that prostrated him on a "matress-grave" for the rest of his life. His strength gradually ebbed away. His excruciating pains could hardly be stifled by enormous doses of opium. But he endured his loneliness and misery with a patience and courage that his earlier career had shown too few signs of. His intellect remained unimpaired; and with less strength or opportunity for journalism, he reverted to his "holy plaything," poetry. His *Romanzero* (1851) and *Neueste Gedichte und Gedanken* (1853) contain, with much that is painful, some of the most matured and perfect of his poetical compositions. He died early in 1856, and was buried at Montmartre. Heine's most enduring and highest fame will be as a song writer, the Burns or the Béranger of Germany. The well-known pieces of the *Buch der Lieder*, all written long before he was thirty, combine with exquisite simplicity of thought and style

and intense individualism, which makes them unique in literature, a pathos, a gentleness, a weird imagination, and a subtle wit, that are equally peculiar to Heine. Association in many cases with the music of such great song writers as Schubert still further heightens their charm. Simple *Volkslieder*, such as *Die Lorelei*, *Du bist wie eine Blume*, *Auf Flügeln des Gesanges*, the more majestic *Nordsee Bilder*, the profound pathos of *Die Wallfahrt nach Kevlaar*, and the intense sarcasm of his later *Spanische Atriden*, the quaint combination of all most characteristic in Heine in the *Berg Idylle* in the *Harz Reise*, are but a few examples of the variety of his lyric powers. But Heine would have much resented being judged by his poetry alone. He claimed to be a "soldier in the war of the liberation of humanity," the foe of Philistinism, superstition, obscurantism, and oppression. It is hard to judge him quite seriously in these relations of his life. But, like Ulrich von Hütten, he often did good service when in his worst moods. His want of sympathy with the principle of nationality has caused him to suffer much from the hands of his own countrymen. But he kept his mind singularly clear from most species of cant, and if what he professed to be contributions to religion, and philosophy, and politics, are often little more than means to display his jests and vent his cynicism, their extraordinary wit and quaint insight make them, if not always very valuable in themselves, of importance as illustrating the extraordinary mind which inspired them.

Heine's works are published in 21 vols., including 3 vols. of *Letters*, by Hoffmann and Campe, Hamburg. Cheaper editions are now in course of issue. His life has been written at great length by A. Strudtmann. Mr. Stigand's *Life and Opinions of Heinrich Heine* is somewhat thin. Mr. M. Arnold's essay on Heine in *Essays on Criticism* is the best thing written about him in English. There are several translations of all or part of the *Buch der Lieder*. Snodgrass's *Wit, Wisdom, and Pathos of Heinrich Heine* consists of short extracts in English of his prose works. [T. F. T.]

* **Helmholtz, HERMANN LUDWIG FERDINAND** (b. 1821), a celebrated German physician, physiologist, and physicist, is the son of a teacher in the Potsdam Gymnasium, and in that town he received his earliest education. At a later date he entered on the study of medicine in the Military Institute of Berlin, and after graduating M.D., was attached to the staff of La Charité Hospital. He subsequently returned to Potsdam as a military surgeon. Recalled to Berlin as professor of anatomy at the Academy of Fine Arts, he occupied, the following year, the Chair of physiology at the University of Königsberg, was transferred to that of Bonn in 1855, and three years later to that of Heidelberg. In 1871 he was named professor of physics at Berlin, and was elected correspondent of the Academy of Sciences (Physical Section) on

Jan. 3rd, 1870. His works, which enjoy a European reputation, are chiefly directed to explain the physiological conditions of the impressions of senses. To him is due the invention of an instrument devoted to the study of the retina in the living eye. His principal publications—in German, though most of them have been translated, are:—*The Conservation of Force* (1847); *Manual of Physiological Operations* (1856–66); *Theory of the Impressions of Sound* (1862); and *Popular Scientific Lectures* (1865–76). His best known work is that on the *Sensations of Tone as a Physiological Basis for the Theory of Music*, an English edition of which was published in 1875. On Dec. 1st, 1873, the Copley medal of the Royal Society of London was awarded to him in recognition of his eminent services to science. A collected edition of his works was published in two parts, at Leipzig, in 1881–3; and his scattered articles and lectures in two parts (Brunswick, 1884). His researches on the relations of sound to sight have led to the establishment of the general conclusion that there are a series of sound-colours (*Klang-farbe*) which may be arranged according to the definite laws of the solar spectrum. Altogether 122 scientific papers are credited to him in the Royal Society's catalogue, all of them of the highest order of merit. Professor Helmholtz's private life has been uneventful, the chief landmarks in it being the different discoveries which he was able to chronicle. He has received both from his own and from foreign countries numerous public distinctions, and in 1883 the German Emperor issued a decree, by which he was raised to "the status of nobility." In a land of specialists he stands almost alone in being equally distinguished in physics, and in the mathematical relations of physiology, more particularly physiological optics.

Helmholtz has also published works on *Heat considered as a Mode of Motion* (1856, 3rd ed. 1875); *On the Nerves of the Invertebrata* (1842); *A Sketch of the Construction of the Living Eye* (1851); *On the Theory of Permanent Colours* (1852); *On the Relations of Natural Science with the Latest Discoveries in Physics* (1854); *On the Sight of Man* (1855). He is the author of the articles on *Physiological Optics* in the *Universal Encyclopedia of Physics* (1858); *On the Distribution of Nerve-Matter* (1850); *On the Force Required for the Production of Electric Currents*; *On Brewster's New Analysis of Solar Light* (1851); *On the Formation of Electric Currents in Living Bodies* (1853); *On the Origins of Force According to Claudius* (1854); *On the Lights in the Solar Spectrum* (1855); *On the Lines in the Solar Spectrum* (1855); *The Telestereoscope* (1857); *The Sources of Muscular Energy* (1845); *On a Method of Measuring Small Intervals of Muscular Action, and the Indications of Physiological Design* (1852); *On Heat Generated by Muscular Action* (1848); *Measurements Affecting the Periodical Contraction of Muscles and the Distribution of the Nerves Contained in Them* (1850); and *On the Accommodation of the Eye* (1865), etc.

Helps, SIR ARTHUR (b. 1817, d. 1875), essayist and man of letters, began life as private secretary to Mr. Spring-Rice, afterwards

Lord Monteagle, but in the following year (1839) transferred his services to Lord Morpeth, afterwards Earl of Carlisle. In 1859 he succeeded the Hon. W. L. Bathurst as Clerk of the Privy Council, a position which he retained till death. From early years he devoted his intervals of leisure from official duties to literary pursuits. His works may be roughly divided into drama, fiction, history, and social essays, of which the last named were by far the most important. His earliest publication, whilst still in boyhood, was a series of essays called *Thoughts in the Cloister and the Crowd* (1835). It was followed in 1841 by *Essays written during the Intervals of Business*, and in 1844 by the *Claims of Labour*, in which various social questions were discussed from points of view then regarded as very advanced. In 1847 the first series of *Friends in Council* appeared, and was received with great enthusiasm. It consists of brief dialogues on general, social, or intellectual subjects, written with justice, great earnestness, considerable point, and partially successful endeavours not to fall into the almost inevitable commonplace. The tone was well suited to the reflective and moralising tendencies of the time. A second series, including discourses on pleasantness, despotism, war, and biography, appeared in 1859, and met with almost equal appreciation. Meantime, similar studies, entitled *Companions of my Solitude*, had been published in 1851. Of his other essays we may mention *Brevia*, a collection of sayings and short treatises (1871); *Conversations on War* (1871); *Thoughts upon Government* (1872); *Animals and their Masters* (1873); and *Social Pressure* (1875). In history he devoted himself to the study of the discovery of America, and the early Spanish Conquests, and published several works on the period, such as *The Spanish Conquest of America* (1855–61); *The Life of Pizarro* (1869); and *The Life of Cortes* (1871). But he was deficient in the powers of brilliant and picturesque narration that distinguished other writers on the subject—and his books, overweighted also with reflection, had no permanent popularity nor scientific importance. Of his dramas and romances, the following may serve as typical examples:—*Catherine Douglas*, and *Henry II.*, tragedies, both published in 1843; *Oulita the Serf*, a tragedy, published in 1858; *Realmah*, a partly political or allegorical romance (1868); and *Ivan de Brion* (1874), a Russian story, that must rank next to the essays out of all his productions. Having been frequently brought into close connection with the Queen by his official position, he was entrusted by her with the duty of editing the *Principal Speeches and Addresses of the late Prince Consort*, published in 1862, and in 1868 he edited the Queen's book, *Leaves from a Journal of our Life in the Highlands*. He was knighted shortly before his death. [H. W. N.]

Hemans, FELICIA DOROTHEA, *née* BROWNE (b. 1793, d. 1835), poetess, was the daughter of a Liverpool merchant, who had come from Ireland. In 1800, owing to the father's misfortunes, the family settled in Denbighshire. In 1808—age fourteen—Miss Browne first appeared as an authoress. She published a volume of poems, which were abused in some review. In the same year she wrote *England and Spain*, being then under the influence of the events of the Peninsular War, in which one of her brothers was serving. In 1812 she published a second volume of poetry, *The Domestic Affections, and other Poems*; and in the same year she married Captain Hemans, of the King's Own Regiment. The marriage was not a happy one, and in 1818 they separated. Mrs. Hemans next brought out a volume of poetical *Translations*; and about the same time she wrote the several poems which have been included in the series named *Tales and Historic Scenes*. In 1820 she published *The Sceptic*, a mild performance. In the same year she made the acquaintance of Bishop Heber, then rector of Hodnet, who encouraged her in the composition of another poem, intended to extirpate religious error, entitled *Superstition and Revelation*. Towards this time also she wrote a set of papers in the *Edinburgh Monthly Magazine*, on foreign literature; almost the only prose that she ever published, and serving chiefly as a vehicle for poetical translations. She next produced two dramas, neither of which succeeded. In 1826 appeared the *Lays of Many Lands*, including *The Forest Sanctuary*, which she regarded as her finest work. The *Records of Woman* followed in 1828, into which she put more of her personal feeling than into any of her other works. In 1831 she settled in Dublin. Meanwhile her short life was hastening to its close. She became exceedingly ill with palpitation of the heart. In 1834 she wrote her *Hymns*. In the beginning of 1835 she dictated her *Sonnets*. In May of the same year the sweet lyric singer passed away.

H. F. Chorley, *Memorials of Mrs. Hemans* (1837); *Memoir*, by her sister, Mrs. Hughes (1839).

Henley, JOSEPH WARNER (b. 1793, d. 1834), statesman, the son of Joseph Henley, Esq., of Waterperry House, Oxfordshire, was educated at Eton, and at Magdalen College, Oxford, and in 1817 married the daughter of J. Fane, Esq., of Wormsley Hall, in his own county. Till he was nearly fifty Mr. Henley led the ordinary life of a country squire on his own estate, and became known as an excellent landlord, an active and intelligent magistrate, and a good man of business. These qualities recommended him in 1841 to the electors of South Oxfordshire, and he was returned at the general election of that year to support the Conservative majority of Sir Robert Peel.

It is not unlikely that the second half of his life might have passed away with as little public notice as the first, had not the split in the Conservative party in 1846 forced new men to the front, to take the place of those leaders who had cast in their lot with the Liberals. Mr. Henley, however, obeyed the call with great reluctance, and in 1851, on the late Lord Derby's first attempt to form a ministry, Mr. Henley's hesitation was one of the chief reasons which induced him to relinquish it. In 1852, however, on being solicited a second time, he accepted the office of President of the Board of Trade. Lord Derby resigned in the following December, and did not take office again till 1858, when Mr. Henley returned to the Board of Trade. He disapproved of the Reform Bill brought in by the Government in 1859, and he and Mr. Walpole, "the two ravens," as they were called in the House of Commons, resigned together. The Bill would have established a uniform suffrage (£10 qualification) in town and county, and Mr. Henley said that if a hard-and-fast line were drawn between the enfranchised and the unenfranchised, there would soon be an ugly rush to break it down. His opinions on the Reform question did not, however, prevent him from giving a hearty support to Lord Derby's Reform Bill of 1867; and he was mainly instrumental in reconciling the Tory party to its provisions. He never returned to office after 1858, but continued a member of the House of Commons for twenty years longer, and retired in 1878, at the age of eighty-five, after having represented his county in Parliament for thirty-seven years. He was in his way a thoroughly representative man, shrewd, caustic, independent, a high authority on rural affairs and county business; with a fund of Conservative common sense, which occasionally found expression in terms more forcible than delicate. He was greatly respected by both parties as a model English country gentleman, and when that well-known figure in the old-fashioned black coat and waistcoat, the head sunk down upon his chest, and the hat pulled over his eyes, was missed from its accustomed place, men felt that it might be many years indeed before it was worthily filled.

[T. E. K.]

* **Hennequin, ALFRED NICOLÈS** (b. 1842), French dramatist, of Belgian extraction, was at first an engineer and afterwards a director of tramways. In 1875 he betook himself entirely to dramatic literature, his first piece, *J'attends mon Oncle*, having been played in 1869. In conjunction with *collaborateurs*, he is the author of *Les Trois Chapeaux* (1871), *Les Procès Veauradieux* (1875), *Les Dominos Roses* (1876), and *Bebé* (1877), which are familiar to English audiences under the titles of the *Three Hats*, the *Great Divorce Case*, *Pink Dominos*, and *Betsy*. The originals

are full of funny situations, bewilderingly rapid action, amusing dialogue, and gross suggestiveness. *Niniche*, by the same author (1883), was only rendered tolerable through the acting of Madame Judic.

***Henner**, JEAN JACQUES (b. 1832), a French painter, whose refinement and individuality can scarcely in the future be questioned, though the present may deny him some of the recognition that comes of official honours, and though a merely wide popularity can hardly fall within his range, is an Alsatian, having been born at Bernwiller. Salon catalogues describe him as a pupil of Drolling and of Picot, and there is one picture of his at the Luxembourg which proves that there was a time when his art was in the main undistinguishable from that of certain of his brethren and forerunners. It is a figure piece, poetical rather in aim than in actual treatment; in colour, chiefly violet-grey; wanting in atmosphere, wanting in richness of tone, and drawn coldly. The artist had not declared himself. But the Luxembourg contains others of his works—*Églogues* and *Idylles* are the names by which he is wont to call them—in which M. Henner has expressed himself with enough of force and of grace, and by which his later aims and achievements may not unfairly be judged. The poetry of Henner is not literal—it is that of subdued light and creeping shadow, of gracious and gentle line, of subtle, opulent, or pure colour. With allegory he hardly deals, nor with direct story, but an unnamed nymph, coloured like deep ivory, lies stretched in front of the dark massiveness of olive-green woodland, while a pool, in twilight meadows, catches the last lights of the fading turquoise of the sky. His limitations, like those of Albert Moore, may be quickly discerned: in both cases it takes longer to discover how much of artistic variety those limitations enclose. Thus, not to speak of the earliest of his Luxembourg pictures, which is different from his later work only because, as we have said before, he was not yet himself when he painted it, account must be taken of his *Biblis changée en Source* (1867), at the Museum of Dijon, which presents the figure on a larger scale than usual, with a nearer approach to realism, and in the light of ordinary day. Correggio-like in his sudden opposition of light to shadow, in his avoidance of sharp definition, in his preference for form when it is veiled by atmosphere, and for an illumination never so keen as to disturb the repose of his work, Henner is unlike Correggio because he is never voluptuous, never sentimental, and never insincere.

Henry, JOSEPH (b. 1797, d. 1878), American physicist, a native of Albany, was educated at a village school and started life as a watchmaker, but his talents led to his

appointment in 1826 as instructor of mathematics at the Albany Academy, and he there began those investigations in electricity which gained for him the reputation of the foremost of American physicists. In 1832 he was appointed professor of natural philosophy at Princeton, and in 1846 the first secretary of the Smithsonian Institute, which he succeeded in confining to its original objects, "scientific research and publication," instead of allowing it to become a general repository of literature and art. He also rendered great services to the Government as a member of the Lighthouse Board, particularly in investigations connected with fog-signalling. His most important scientific work was done between the years 1828 and 1837, and is to be found recorded in the *Transactions* of the Albany Institute, the American Philosophical Society, and in the *American Journal of Science and Art*. His *Contributions to Electricity and Magnetism* were collected in 1859. The great discovery of his life was the relation between the number of coils of wire round the electro-magnet, and the construction of the battery to work it, which, when supplemented by an intelligible system of registering electric effects, made the electric telegraph possible. [MORSE.] His friends founded a fund for his family, which is eventually to be devoted to scientific research, as a mark of their appreciation of his integrity and talents.

Professor Silliman in the *Am. Jour. of Science and Arts* (1878); *Nature*, vol. xviii.

Henslow, REV. JOHN STEVENS (b. 1796, d. 1861), naturalist, was the son of a Rochester solicitor, and grandson of Sir John Henslow, sometime master of the Dockyard at Chatham. He graduated as a wrangler at Cambridge in 1818, and in the following year took a geological tour in the Isle of Wight with Professor Sedgwick, during which the idea of founding the Cambridge Philosophical Society originated between them. In 1822 he was elected professor of mineralogy at Cambridge, which caused much litigation in the university, not concerning Mr. Henslow personally, but relative to the mode of election (see Cooper's *Annals of Cambridge*, iv. 536). In 1824 he was ordained deacon and priest, and in 1827 he was appointed professor of botany. In 1837 he was presented to the Crown living of Hitcham, where he settled permanently in 1839. In 1830 he published a clear and somewhat philosophical treatise on *The Principles of Descriptive and Physiological Botany*, and in 1844 an interesting pamphlet on *Roman Antiquities*, found at Rougham, in Norfolk. His essays on the *Diseases of Wheat* (*Royal Agricultural Society's Journal*, vols. ii. and iii.) and *Dictionary of Botanical Terms* (1846) are still of value. He was for some time assistant-editor of Maund's *Botanist*. At Hitcham Mr. Henslow introduced the

allotment system, which, although much opposed at first by the farmers, tended greatly to improve the position of the labourers.

Rev. Leonard Jenyns, *Life of Rev. J. S. Henslow*; *Popular Science Monthly*, New York, June, 1873.

Herbart, JOHANN FRIEDRICH (b. May 24th, 1776, d. August 14th, 1841), an eminent German philosopher, was born at Oldenburg. The works of Leibnitz and Kant formed his introduction to philosophy; and when he proceeded in 1794 to the University of Jena, he received a fresh stimulus from the teaching of Fichte. But already the opposite bent of his mind showed itself in the criticism on the *Wissenschafts-lehre*, and on the two first works of Schelling, which he submitted to Fichte. From 1797 to 1800, Herbart was a family-tutor in Switzerland, where he became acquainted with Pestalozzi, whose method of instruction he afterwards adopted in his own system of "Paedagogik." After two more years spent in private study, he qualified at Göttingen as *privat-docent* in philosophy and pedagogics, and in 1805 received the post of extraordinary professor there. In 1809 he was called to an ordinary professorship at Königsberg, where he divided his time between philosophical lectures and the direction of a pedagogical seminary, which he had founded there. In 1833 he accepted a call to Göttingen, where his studious and uneventful life came to an end. Herbart's works have been edited, in 12 vols., by his disciple, Hartenstein (1850-2). Herbart's philosophy was in great part a protest against the idealistic systems founded on Kant by Fichte, Schelling, and Hegel. Accordingly, during the dominance of that mode of thought it received comparatively little attention, but the Herbartian school has since been only second in number to the Hegelian. The name given to his theory by Herbart himself—Realism—emphasises his opposition to the idealistic followers of Kant. While claiming to start, like them, from Kant, Herbart has evidently been chiefly influenced by Leibnitz. The monads or spiritual atoms of which Leibnitz constructs the universe, have their parallels in the "reals" or ultimate units of Herbart. Philosophy arises, according to Herbart, from the criticism of the conceptions furnished to us by experience. These conceptions are found to involve contradictions; and it is the business of philosophy to remove these contradictions (which cannot lie in the real as such), and thereby to reach a harmonious theory of things. The method by which Herbart proposes to remove the contradictions in question is called by him the method of relations or of contingent aspects (*Methode der Beziehungen, der zufälligen Ansichten*). The conception, for example, of a thing with several qualities involves the attribution of plurality to what is expressly described as a unit. Herbart, therefore, transforms, or as he would say, completes the con-

ception by assuming the existence of as many "reals" or substances as there are qualities. The apparent unity of the thing is really a complex of simple essences, each of which existing independently, forms the basis of a single quality. These absolutely simple and qualitatively different points of being resemble the atoms of Democritus, save that they are immaterial and unextended. They suffer no internal change, each remaining eternally the same. The appearance of change is due to the "relations" of the reals, their interference with or pressure upon one another, and the acts of "self-preservation" by which such interference is resisted. Critics have remarked, however, that such terms simply reintroduce that real relation between existences which Herbart's scheme of absolutely simple and mutually independent "reals" begins by denying. Herbart has also failed to give a satisfactory account of the being or consciousness to whom this appearance of change and relation appears. Such difficulties have since led to important modifications of the realistic position by those who, like Lotze, adhere in the main to the Leibnitio-Herbartian conception of the universe. Herbart applied the notions of "interference and self-preservation" with marked success in psychology. His investigations are regarded, indeed, as the beginning of exact or experimental psychology in Germany, and constitute one of his chief titles to remembrance. Herbart's influence has also been great upon the science of education.

[A. S.]

Herbert of Lea, SIDNEY HERBERT, BARON (b. at Richmond, Sept. 16th, 1810, d. at Wilton House, near Salisbury, Aug. 2nd, 1861), statesman, was the son of George Augustus, 11th Earl of Pembroke, and the Countess Catherine, only daughter of Count Woronzoff, for many years Russian ambassador at St. James's. He was educated at Harrow, and Oriel College, Oxford, where he distinguished himself in the Union Debating Society, and was returned to the first Reformed Parliament for the Southern Division of Wiltshire. He entered the House of Commons a pledged adherent of Sir Robert Peel, and a thoroughgoing Tory. He made his maiden speech in 1834, against the admission of Dissenters to the universities. He strenuously opposed the Ballot, and was one of Sir Robert's ablest coadjutors in upholding the system of Protection; in fact, the last gun fired in the Peelite Cabinet in defence of their old position was levelled by his hand. Having been Secretary of the Admiralty from 1841 to 1845, he became in the latter year Secretary at War, with a seat in the Cabinet, and while in this position he was put forward by his chief to oppose Mr. Cobden's motion for a Select Committee to inquire into the effects of protective duties on the

agricultural interest. He performed his task with much ability, and the motion was rejected by a majority of ninety-two. This was in March, and before the end of the year it was all over. Sir Robert had "steered his fleet into the enemy's port," and among the other captains who followed him was the member for South Wiltshire. Mr. Sidney Herbert is henceforth known as a prominent member of that little band of politicians who, according to the *Times*, held themselves better than other men. The Duke of Newcastle, the Earl of Aberdeen, Mr. James Graham, Mr. Cardwell, Mr. Sidney Herbert, and Mr. Gladstone were the chief ornaments, if not, indeed, the sole constituents, of the Peelite party, and it was their object for a long time to endeavour to hold the balance between the two rival connections of the Whigs and Tories, and to occupy the same place in politics as had been occupied in the last century by the Grenvillites, and more recently by the followers of Mr. Canning. They succeeded so far that in the coalition Government formed under Lord Aberdeen, in December, 1852, they occupied, with two exceptions, the most important places, Mr. Herbert being once more Secretary at War. But affairs were about to take a turn unfavourable to the peculiar genius of Peelite statesmanship, and brought into conflict with the stronger character and more decided views of Lord Palmerston, they were forced to give way to measures of which they secretly disapproved. This is the key to the disaster of the Crimean War, which was undoubtedly due to divided counsels in the English Cabinet. The Peelites, and Mr. Sidney Herbert among them, took a very exaggerated view of the power of Russia and the weakness of the Turks, and in a letter written by Lord Palmerston to Mr. Sidney Herbert on Sept. 21st, 1853, he endeavours to combat this opinion, which he well knew to be unfounded. But it was no use, and the war, which might have been prevented by a vigorous attitude in 1853, was forced upon us in 1854. Against the many great services which Mr. Herbert rendered to his country, history will always have to set his participation in that effeminate policy which entailed on us the "hideous and heartrending" story of the siege of Sebastopol. The Secretary at War was not, however, thought to have been equally blamable with the Secretary for War, the Duke of Newcastle, on account of the sufferings of the army, and when the Aberdeen Cabinet fell before a hostile vote of the House of Commons, he accepted the office of Colonial Secretary under Lord Palmerston. He and his friends, however, retired again in a week's time rather than be a party to the committee of inquiry proposed by Mr. Roebuck, which they thought would be an act of disloyalty to their former colleagues; and the subject of this memoir remained out of office

till 1859, when he again accepted office under Lord Palmerston as Secretary for War. The separate Secretaryship had been amalgamated in 1859, and the ordnance, commissariat, and transport services consolidated under one head. Thus Mr. Herbert found the labours of his new office much more laborious than any which he had previously undertaken. But during his short tenure of it he performed great things. He organised the Volunteers, he presided over the fusion of the British and Indian armies, and he carried out extensive reforms in the sanitary arrangements of the entire force. These exertions quite broke down his health, which was never very strong, but he refused to abandon his post, and literally worked himself to death in the public service. He was raised to the peerage by the title of Lord Herbert of Lea in 1861. But the relief, if any, which a seat in the Upper House would have secured him came too late; and he died in August of that year, having not quite completed the fifty-first year of his age. Lord Herbert was extremely popular with all classes, and it was thought by some that he had in him the making of a statesman of the first class. Such men, of course, never forgave the memorable sarcasm of Mr. Disraeli, who described him on one occasion as Sir Robert Peel's valet, sent down to tell the Protectionists, like a cast-off mistress, that he could have no whining there. But though he did not deserve such a sharp thrust as this, he scarcely merited the extravagant flattery of his panegyrists. He was, however, a capital specimen of a first-class English administrator, an accomplished gentleman, and a man of fine taste, of which he has left a monument in the church at Wilton. [T. E. K.]

* **Herkomer**, HUBERT, A.R.A. (b. 1849), is an artist of German parentage, but chiefly of English training. Waal, in Bavaria, is his birthplace, and his father is Lorenzo Herkomer, a skilful wood carver. He was taken to the United States when he was but two years old, and came back when he was eight. His father then settled in Southampton, and at thirteen Hubert was entered at the Art School there. Afterwards he was enabled to study for a while at South Kensington, but it was at Southampton that he made the most progress and obtained the first recognition. He worked also for a while under Professor Echter, at Munich. In 1868 he was living very quietly in a village on the Kentish coast, from which he sent one or two pictures to the Dudley Gallery, then an exhibition of some importance. Soon afterwards he came to London, and the Royal Academy, the Grosvenor Gallery, and the Institute of Painters in Water-Colours, received contributions in one or other of the various mediums of which he has essayed the mastery. As a book and magazine illustrator he won, perhaps,

more immediate distinction, for it was about 1871 that he contributed to the *Cornhill Magazine* some singularly truthful and characteristic designs for a novel of Erckmann-Chatrian's which was passing through its pages. But it was the year 1875 that saw his first very distinguished and very prominent success, and several years elapsed before that success was in any measure repeated. *The Last Muster*—the picture of Chelsea pensioners attending service in church—was exhibited in that year's Academy. Critics praised it, and the English public took to it, and three seasons later it made a sensation in Paris. Since then, as before that time, indeed, Mr. Herkomer's subjects have been very various. Still, perhaps, it was felt, up to 1885, that the promise afforded by *The Last Muster*, of ten years earlier, had not quite been fulfilled, though it was very nearly being fulfilled in 1881 by the forcible and pathetic canvas called *Missing*, which was a very noble and imaginative record of the scene outside Portsmouth Dockyard gates, when the loss of the *Atalanta* and of her crew became known. But in 1885 Mr. Herkomer exhibited two portraits, which rendered the neat phrase, "experimental art," no longer applicable to his production, though as descriptive of his temper of mind it is probable that it will always hold good. The portraits were those of Mr. Villiers Stanford, the admirable musician, and of Miss Grant, a distinguished and sculptural beauty. The character of both of his models was seized by Mr. Herkomer with complete skill, and the realism of the Villiers Stanford was happily audacious; that of the Miss Grant was as refined as it was simple. Since his election to the associateship of the Royal Academy, in 1879, many honours have been pressed on Mr. Herkomer. Among them we need name only two. In 1881 he was made an honorary member of the Imperial Academy of Vienna. In 1885, in recognition, not only of his artistic accomplishment, but likewise of his energy in imparting as well as acquiring knowledge, he was elected to the Slade professorship of fine art in the University of Oxford. He had previously conducted, with extreme enterprise and devotion, an important life-school, of his own founding, at Bushey. Four or five years ago, and again in the beginning of 1886, he went to the United States, partly, no doubt, to lecture, and partly to paint pictures and to sell them. Should he be able to avoid the too profuse and ready scattering of his energies, his real interest in the fortunes of humanity, in combination with his technical achievements, will probably permit him to paint masterpieces. His is, at all events, a very vigorous and distinct personality. [F. W.]

Hérodé, LOUIS JOSEPH (b. 1791, d. 1833), French composer, entered the Conservatoire

at Paris, and produced his first successful opera, *Les Rosières*, in 1817. It was followed by *Le Muletier* (1823) and *Mario* (1826), both of which are occasionally revived. For a short time Hérodé turned aside to compose ballets, of which *La Somnambule* was the most graceful, but soon came back to operatic writing. In 1821 he produced his *chef-d'œuvre*, the immortal *Zampa*, one of the finest works of the French school, and shortly afterwards the *Pré aux Clercs*, which is almost equally fine. A few months afterwards he died of a chest malady, just, as he modestly remarked, as "he was beginning to understand the stage."

Jouvin, *Hérodé*, *sa Vie et ses Œuvres*; M. Gustave Chouquet in *Grove's Dictionary of Music*.

Herries, JOHN CHARLES (b. 1778, d. April, 1855), statesman, was the son of Colonel Herries, and nephew of Sir Robert Herries, the well-known banker. Mr. Herries, though his name is comparatively little known to the present generation, held a prominent place in the political world during the first half of the nineteenth century. He began life as a clerk in the Treasury, at a salary of £95 a year, and rose by sheer merit through various grades of employment to be a Cabinet minister and Chancellor of the Exchequer, and left behind him the reputation of one of the ablest financiers in the country. From 1811 to 1816 he held the office of Commissary-General. From 1816 to 1823 he was auditor of the Civil List; and in the last-mentioned year was appointed Secretary to the Treasury, and entered Parliament as member for Harwich. He was greatly trusted by Lord Liverpool, who was accustomed to consult him on financial questions, and he acquired the full confidence of his successor, Mr. Canning. In the short-lived Goderich administration of 1827 he was Chancellor of the Exchequer, and under the Duke of Wellington Master of the Mint and President of the Board of Trade. In the Peel Cabinet of 1834-5 he was Secretary at War, and had he been able to retain his seat in Parliament would have held high office in the Government of 1842. Unfortunately, however, he was rejected at Harwich and defeated at Ipswich, after which he remained out of Parliament till 1847, when he was returned for Stamford. Though by no means an ultra-Protectionist, he joined that party in the House of Commons, and was welcomed to its ranks with acclamation, as Mr. Disraeli tells us in his biography of Lord George Bentinck. Mr. Herries, however, was now seventy years of age, and though at the solicitation of Lord Derby he accepted the office of President of the Board of Control in 1852, he felt that his official career was nearly over. Lord Derby, it is said, was anxious to make him leader of the House of Commons in his new administration, instead of Mr. Disraeli, thinking, perhaps, that his age and experience

would make him more acceptable to the party, and at the same time take off something from the appearance of rawness presented by the new Cabinet. He was, however, dissuaded from doing so, and though it appears that Mr. Herries, in spite of his age, would have liked to be Chancellor of the Exchequer, other considerations prevailed, and the rising statesman who possessed the necessary mastery of debate, which Mr. Herries did not, was chosen in his place. Mr. Herries was neither a great minister, nor a great statesman, nor a great politician. But he was an admirable public servant, and so great a master of business that no Government which had any colourable claim upon his services was willing to be deprived of them. He has been accused of currying favour with George IV. by pandering to his extravagance, and of intriguing under Lord Goderich to overthrow the ministry and get rid of the Whig alliance, which was not very agreeable to the king. But his son, Mr. Edward Herries, has completely disposed of these charges.

E. Herries, *Memoir of the Public Life of J. C. Herries* (1890), which contains an interesting account of parties and politics from the accession of George IV. to the Crimean War.

[T. E. K.]

Herring, JOHN FREDERICK (b. 1795, d. 1865), animal painter, was a native of Surrey, and having acquired the rudiments of art, contented himself with painting signboards until the sight of the race for the St. Leger Stakes at Doncaster is said to have inspired him with nobler ambitions. For some time, however, he was compelled to drive a coach on the North Road. His farmyard and stable subjects gradually won for him deserved popularity, and his *Frugal Meal*, painted in 1847, was engraved by Burnet. All his animals are depicted with great spirit and fidelity to nature, especially his race-horses; and during the first half of the century very few of the heroes of the turf were neglected by him.

Herschel, SIR FREDERICK WILLIAM (b. 1738, d. 1822), the most illustrious of modern astronomers, was the son of Isaac Herschel, a hautboy player in the Hanoverian Guards, into which service he also entered in his seventeenth year. As a bandsman he visited England in 1755, but two years after his return to Hanover, he suddenly left the service of the Elector King—deserted it, some unkindly critics will declare—and sought his fortune as a musician in this country. What befel him between 1757 and 1760 is not very well known, except that he suffered much privation. About the latter year, however, he obtained employment as an organist and teacher of music in the north of England, though it was not until his appointment in 1766 to the post of organist in the Octagon

Church at Bath, then in the heyday of its fashionable popularity, that fortune began to smile on him. The next five years were busy ones with the German "Kapellmeister." He taught and played, directed musical entertainments, but being a singularly systematic man, found time not only to earn money and make influential friends, but even for the study of Smith's *Harmonics* and Ferguson's *Astronomy*. Feeling that with Beau Brummel and Bath smiling on him he could afford to play the patron, he brought his brother Alexander and his sister Caroline over to assist him in his musical and astronomical pursuits. What we know of William at this period is mainly derived from the *Memoir* which Caroline published towards the close of her long life. For years she was his housekeeper, his secretary, and his assistant, and though never fond of astronomy, and imbued with an absolute distaste for the work on which she was engaged, she learned the routine of observation with such success that she independently discovered eight comets, and received numerous distinctions from scientific societies. Her devotion to her brother has been described as "spaniel-like." But directing an orchestra of a hundred voices, with Caroline as soloist, and Alexander as cellist, in the *Messiah*, *Judas Maccabeus*, and *Samson*, and giving lessons to the fashionable folk every hour of the day, did not absorb all Mr. Herschel's life. Smith's *Harmonics* had led him to mathematics, and mathematics, with his usual thoroughness, to optics, and optics in due time to what astronomy Ferguson, Keill, and Lalande could teach him. Books were, however, soon put aside, and he determined to systematically "sweep" the heavens for himself. Finding a telescope too costly for his means, he endeavoured to construct one, by fixing a small Gregorian reflector first in a tube of pasteboard, and then in one of tin. But sorry as this makeshift instrument proved, it gave him such wonderful glimpses of the stars that he determined to construct a still larger telescope. With the aid of his devoted sister he succeeded, after the tedious toil of years, in producing the *Newtonian* telescope of six feet focal light, on which they had set their heart. But great was their reward, and the reward of the world which they were so soon to astonish. In 1780, when Herschel was forty-two years of age, his first memoir on the varying lustre of the stars was communicated to the Royal Society, and others on different astronomical questions, all showing deep insight and remarkable grasp, speedily followed, until, in 1781, "Mr. William Herschel, organist of the Octagon Chapel, Bath," was able to announce a discovery which at once made the world ring with his name. This was the new planet which he named the "Georgium Sidus," but which is now known as Uranus. This was quickly followed by other papers, in which he proved that the same laws affected the

heavenly bodies that obtained on earth, and that the most distant members of the starry firmament are bound together by the same physical influences as those which cause the solar system to revolve in its harmonious course. In brief, without analysing the entire history of astronomy, it is not too much to affirm that since the days of Galileo no such astounding discoveries had burst upon the world as those which the "Hanoverian fiddler" announced in such rapid succession. "Almost every notion of astronomy," Mr. Holden declares, "comes either from Herschel or from his great predecessors, Ptolemy and Galileo." The mere observing activity of his life was amazing. Double stars, planets, satellites, nebulae, the moon, the sun, all of these he observed with an assiduity that shames us, his successors. But it is not as a mere observer that we must regard him. Up to his time the sky as a whole had never been examined. He formed the plan of examining its every part. But his main end was not to discover stars, it was to unfold the laws of their distribution, of their connection with each other; to find out, in Herschel's favourite phrase, "the construction of the heavens." But long before his task was half accomplished Herschel had begun to reap the harvest of honour which awaits those who can catch the ear of Vanity Fair. "At one bound he became one of the best known men in Europe." The king appointed him his private astronomer, first at Datchet and afterwards at Slough, though, as his salary was never more than £250 per annum, the frugal king "purchased honour" at a very moderate cost to his purse. Now, however, the astronomer had time—and by-and-by money—for his chosen pursuit. Music no longer occupied the hours of daylight, and hence from Datchet and Slough the Royal Society received the long series of memoirs which he contributed to the *Philosophical Transactions*. At Slough also he constructed the forty feet reflector, which his sister regarded as a far finer telescope than Lord Rosse's, and some less partial judges as one of the chief efforts of his genius and perseverance. In 1788 he was knighted, in 1789 received what he valued more highly than this tardy distinction—the Copley medal of the Royal Society; and on the foundation of the Royal Astronomical Society in 1820, he was elected first president, and his only son John (q.v.) first secretary. He died at Slough, Aug. 25th, 1822, and is buried under the tower of St. Laurence Church, Upton. Caroline, who transferred to her nephew the devotion she had paid to his father, died in 1848, in her ninety-seventh year, after receiving the gold medal of the Royal Astronomical Society, not so much for her own discoveries, or for her *Catalogue of Nebulae and Star Clusters* observed by her brother, as for the services which she rendered to him in his illustrious career, a circumstance which was

eloquently alluded to by Sir James South on the occasion.

Sketches of the Herschels will be found in all the contemporary journals, and in the histories of science. A good popular account, with portraits, is that of Prof. Holden, *Century Magazine*, June, 1885, pp. 179-85. Prof. Pritchard's, in the *Encyclopædia Britannica*, from which some facts are taken, is the fullest.

[R. B.]

Herschel, SIR JOHN FREDERICK WILLIAM (b. 1792, d. 1871), only son of Sir F. W. Herschel (q.v.), was an astronomer only less eminent than his father. He commenced life, however, under conditions widely different. He was brought up in a household no longer poor; and had for his daily associates the most illustrious men in England. From Eton he went to Cambridge, where he graduated as senior wrangler, and immediately entered on that brilliant career which he pursued for more than fifty years. Forming, as Professor Pritchard tells us, an informal compact with his fellow undergraduates, Peacock and Babbage, to "do their best to leave the world wiser than they found it," the three associates published a treatise on the differential calculus and cognate branches of mathematical science, which did much to bring mathematical learning up to the level of the Continental methods; while the memoirs which he communicated to the Royal Society at once stamped him as an original cultivator of science. At first his intention had been to study law, with a view to practice. This design was, however, soon abandoned, and for a time he devoted himself with such assiduity to chemistry that he became a candidate for the Chair of that science in the University of Cambridge. This love was, however, also deserted, partly, it may be inferred, from the bad success which attended his application, but mainly from a desire to gratify his father by adopting astronomy as the labour of his life. During the next few years we find him pursuing this study with unflagging zeal, re-examining with Mr.—afterwards Sir James—South his father's discoveries, and making many of his own. Nor could he complain of his labours being unappreciated, for he won in the course of a few years more distinction than usually falls to men less fortunately situated in the course of a lifetime. In 1826 he received the gold medal of the Royal Astronomical Society, and about the same period the Lalande medal of the Institute of France; and four years before he had been awarded the Copley medal of the Royal Society, for his researches in pure mathematics. From 1824-7 he was Secretary of the Astronomical Society, and in the latter year elected president, a post which he occupied on two subsequent occasions. In 1831 he was knighted, and in 1833 was again laureated by the Royal Society, for his investigations regarding the orbits of double stars. He now entered on another phase of

his life. Decided to survey not only the northern sky, he determined to "sweep" the southern heavens. Accordingly, in 1833, he left with his family for the Cape of Good Hope, and early in 1834 began the laborious task which he had allotted to himself. In 1838 he returned, having laid the foundation of all our knowledge of the southern sky, just as his father had put our acquaintance with that of the north on an equally sound basis. The two—or rather, we should say the three—Herschels were thus the founders of modern astronomy. At the coronation of the Queen Sir John Herschel was created a baronet. His subsequent life was less eventful, though still fruitful in admirable work, and even in great discoveries. His example led Lassell to establish himself at Malta, Warren de la Rue to "mind the heavens" in like fashion in London and at Cranford, and a score of other less wealthy amateurs to begin investigations which in time bore excellent fruit. Though Herschel had abandoned scientific chemistry as a calling, he never lost his interest in it. By discovering the solvent action of hypo-sulphate of soda on the salts of silver, he may be regarded as the pioneer of photography, and in 1839 he solved, independently of Mr. Fox Talbot, the problem of taking and multiplying photographic plates. He also, according to Professor Pritchard, was "the first person to introduce the now well-known terms *positive* and *negative* in photographic images, and to deposit upon glass a sensitised film for the reception of the picture. He also paved the way for Professor Stokes's important discovery of the change which luminous waves may suffer in their period of oscillation, by his addition of the lavender rays of the spectrum, and by his announcement of 'epipalial dispersion' as exhibited by sulphate of quinine." He also made other important and successful researches connected with the undulating theory of light, which are embodied in his treatises on *Light* in the *Encyclopædia Metropolitana*. Herschel was, however, not only a physicist and astronomer: he was also a man of letters, and possessed of none of the narrow intellectual prejudices of the specialist. His addresses to the Astronomical Society are models of elegant composition, and his *Discourse on the Study of Natural Philosophy*, and *Outlines of Astronomy*, must always remain classics, even after the data in their pages become more or less obsolete. Much of his time was spent in the useful work of simplifying his store of information. In this he was even more successful than his contemporary, Brewster (q.v.), and was the forerunner of the eminent men who in later years displayed a laudable activity in the same direction. His *Familiar Lectures on Scientific Subjects* and his *Collected Addresses* are models at once of profound knowledge and of simple exposition, while his treatises on *Meteorology*,

Physical Geography, and the *Telescope*, are still among the best text-books. Personally, the character of Sir John Herschel was extremely lovable. A fast friend, without jealousy, or self-seeking, or littleness, he neither disparaged the work of his rivals, nor neglected the labours of his juniors. As Master of the Mint, a member of nearly every scientific society in the world, and the greatest *savant* of his later years, he possessed an enormous amount of influence, which he exercised to the advantage of the nation. He could, had he pleased, have been president of the Royal Society, and the representation of the University of Cambridge in Parliament was not beyond his reach; but he preferred to devote his leisure to translating the *Iliad* into English verse, just as earlier in life he had done a similar service for Schiller's *Walk*. In brief, what Humboldt was in Germany, Herschel was for many years in England, only Herschel was rather the larger-minded of the two men. Every opportunity of life was open to both of them, and it is not saying anything to the disparagement of the great German to affirm that the great Englishman accepted the position in which he found himself, with equal wisdom, patience, moderation, and high purpose. Sir John Herschel died at Collingwood, near Hawkhurst, in Kent, May 11th, 1871, and was buried in Westminster Abbey, close to the grave of Newton.

[R. B.]

* **Herschell**, THE RIGHT HON. FARRER, BARON (*b.* 1837), Lord Chancellor of England, the son of the late Rev. R. H. Herschell, was educated at the University of Bonn, and at University College, London (B.A. Lond. Univ. 1867). Called to the bar in 1860 he became a Q.C. in 1872, and two years later was elected member for Durham, in the Liberal interest. From 1873 to 1880 he was Recorder for Carlisle, and in the last year, on the formation of Mr. Gladstone's ministry, Mr. Herschell became Solicitor-General, and received the honour of knighthood. In Feb., 1886, Sir Farrer, having been defeated for the Lonsdale division of North Lancashire at the general election, became Lord Chancellor, and was raised to the peerage.

* **Hewett**, VICE-ADMIRAL SIR WILLIAM NATHAN WRIGHT, K.C.B. (*b.* 1834), naval officer, the second son of the late Mr. W. W. Hewett, M.D., Yorkshire, was born at Brighton. He entered the navy in 1847, and became lieutenant in 1854, commander in 1858, captain in 1862, and rear-admiral in 1878. He served in the Burmese War (1851) and in China (1857); and his bravery in the field before Sebastopol and at Inkermann during the Crimean War was conspicuous. In 1874 he was nominated K.C.B., for his services in the Ashantee War, where he was present at the taking of Coomassie. He was commodore on the west coast of Africa from 1873-7,

and commanded an expedition against the pirates of the Congo River in 1875. He commanded the naval forces in Egypt in 1882, when he received the thanks of Parliament. In 1886 he was appointed admiral of the Channel Fleet.

Heyne, CHRISTIAN GOTTLOB (b. 1729, d. 1812), the scholar, was born in extreme poverty at Chemnitz, and in 1748 was sent as a penniless student to Leipzig University, where he heard Ernesti. Having attracted the attention of Count von Brühl, he was invited to Dresden in 1752, and next year was made a copyist in his library. In 1755 he edited Tibullus, and in 1756 Epictetus. In 1760 he was appointed sub-librarian to the royal library, but a few weeks afterwards lost the whole of his property and literary possessions in the siege. Nevertheless, next year he married Therese Weiss, and in 1763, when his distress was extreme, he was invited to the professorship of eloquence at Göttingen, various other official posts being attached to the appointment. For the next fifty years his labour was unremitting, and he raised the reputation of Göttingen throughout Europe. Though possessing little of the constructive genius of Wolf, he may be regarded as his forerunner, and he was the first scholar who attempted a serious and scientific explanation of classic mythology. His edition of Virgil is well known (1767-75), and has been the foundation of subsequent issues. He also edited *Pindar* (1773), and the *Iliad* (1802). Heyne's daughter, THERESA (b. 1764, d. 1829), became famous as the wife of George Forster, the naturalist, and after her divorce from him and her marriage with L. F. HÜSER, as the authoress of some books of travels and several novels and tales, of which *Notes on Holland* (1811), and *Ellen Percy* (1822), may be mentioned.

Carlyle, *Essay on Heyne*, and Speech at Edinburgh University, 1865.

* **Heyne**, PAUL JOHANN LUDWIG (b. 1830), one of the greatest of modern German novelists, was born in Berlin, and is the son of a philologist of high reputation. After passing through the usual university course, he went in 1852 to study in Italy, but he had already turned from philological science to literature, and in 1854 he was invited by the King of Bavaria to Munich. His earlier publications were chiefly tragedies, such as *Francesca di Rimini* (1850), and *Meleager* (1854), and from time to time he has returned to the drama and to dramatic stories in verse, such as *Louis of Bavaria* (*Ludwig der Baier*, 1862), *Rafael* (1863), and *The Madonna in the Olive Grove* (*Die Madonna im Oelwald*, 1879); he has also published excellent verse translations of Shakespeare (1867), Giusti (1875), and Leopardi (1878). But his reputation will rest on his two great novels, *The Children of the World* (*Die Kinder der Welt*, 1872), and *The*

Paradise Club (*Im Paradiese*, 1875). They describe severally with great feeling and exactness the most modern and advanced phases of social and artistic life in Berlin and Munich. Though strongly condemned at the time of their publication for their supposed anti-religious and even immoral tendencies, they are now generally recognised as the two most powerful and artistic works of modern German fiction. Since the production of these two great works Paul Heyse has confined himself for the most part to short tales (*Novelle*) for newspapers and magazines. Several of these have been published in collections or in separate form, such as *Tales and Romances* (*Novellen und Romane*, 1881); *Lady F. and Roman Tales* (*Frau von F. und Römische Novellen*, 1881), *The Luck of Rothenburg* (*Das Glück von Rothenburg*, 1881), and a series of *Moral Tales* (*Moralische Novellen*).

Hicks, ELIAS (b. 1748, d. 1830), an eloquent American preacher and controversialist belonging to the Society of Friends, was born in Long Island, U.S., and early apprenticed to the trade of a carpenter. Soon after his marriage in 1770, his religious convictions increased upon him, and in a few years he became a recognised minister in the Society of Friends. He was early convinced of the iniquity of slavery, and accordingly abstained from all participation in the products of slave labour. For many years he was the most eloquent preacher and best organiser among the Quakers. But about the beginning of the century his orthodoxy began to be doubted. He was called upon to formulate his doctrines. He replied that he could not hold the accepted notions as to the deity of Christ and a vicarious atonement; but he had still the deepest reverence for the sacred Scriptures; and he could still recognise the Divine authority of Jesus Christ. Angry disputations followed. The result was a schism; and Hicks's immense influence carried a great number with him. His party, called the Hicksites, was formed in 1828.

Elias Hicks, Journal of his Life and Labours (1828); *History of Society of Friends*, vol. iv., ch. 5.

Hicks, WILLIAM, PASHA (b. 1830, d. 1883), soldier, entered the Bombay army as an ensign in 1849, and served in Bengal during the campaign of 1857-9 with the 1st Belooch Battalion, and as staff officer to the Punjaub Movable Column. He was next in the Rohilcund campaign with Major-General Penny's forces. He was subsequently with Lord Clyde's force. Lieutenant in 1856 and captain in 1861, he served as brigade-major, 1st Division, during the Abyssinian campaign in 1867-8. He was gazetted lieutenant-colonel in 1875, and honorary colonel in 1880. When Baker Pasha was requested by the Egyptian Government, in 1883, to secure the services of retired British officers for the expedition which was being prepared to march against the Mahdi

in the Soudan, he appointed Colonel Hicks to the post of chief of the staff. On Sept 9th, Hicks Pasha, with over 10,000 men, began his march up the Nile from Um-Durma, opposite Khartoum, keeping close to the western side of the White Nile. It was next resolved to strike across the desert to El Obeid, trusting to surface pools for water. For weeks nothing was known of Hicks Pasha's movements, but at length the news reached Khartoum, that through the treachery of a guide, the whole of the Egyptian army had been surrounded and destroyed by the rebels.

* **Hill**, OCTAVIA (*b. circa 1838*), social reformer, began the work amongst the poor by which she is best known, in 1864, partly at the suggestion and under the guidance of Mr. Ruskin, who advanced the necessary capital for the earliest beginning of the scheme. Having purchased three cottages in one of the poorest courts of Marylebone, Miss Hill became her own rent-collector, manager, and agent, and succeeded in the gradual reformation of the court and its tenants without any commercial loss. By degrees the remaining houses of the same court came into her hands, and in time the Countess of Ducie and other landowners or companies entrusted their property in Marylebone and Drury Lane to her management; and since that time (1873) the system has spread rapidly, till it is now recognised as one of the most hopeful means of raising the moral and physical condition of the very poor. Miss Hill gave her support to the Artisan Dwellings Act of 1874, and in 1884 gave evidence before the Special Commission of Enquiry into the Housing of the Poor. She also took an active part in the institution and development of the Charity Organisation Society.

Octavi: Hill, *Homes of the London Poor* (re-published magazine articles from 1866 to 1875), (1875).

Hill, REV. ROWLAND (*b. 1744, d. 1833*), divine, brother of General Lord Hill, was educated at Eton and Cambridge. Before he was of age to take orders, he occasionally preached at the Tabernacle and at the Tottenham Court Road Chapel, which threw some obstacles in the way of his receiving ordination. Eventually, the Bishop of Bath and Wells was induced to admit him to deacon's orders, which was the highest step he was permitted to attain in the Church. Ever tenacious of his clerical character, however, Mr. Hill always regarded himself as an episcopal clergyman. In 1784 the Surrey Chapel, London, was opened, of which he became the nominal pastor, although the chapel was never licensed as under his pastoral care. He retained this connection with the chapel till his death in 1833. His ecclesiastical position was ambiguous. He was a Dissenter within the Church, a Churchman among Dissenters. This very catho-

licism made him a controversialist, as witness his *Imposture Detected* (1777), *Aphoristic Observations* (1790), and *Village Dialogues* (1801). As a preacher he was exceedingly unequal, somewhat unmethodical and rambling, interspersing touches of genuine pathos amid much that bordered upon the ludicrous. Among his sayings, "The devil shall not have all the good tunes," his reason for making use of "Rule Britannia," and other secular melodies in the Surrey service, has passed into a proverb. He generally preached during the winter in the Surrey Chapel, and the summer he spent in various parts of the United Kingdom preaching in places of worship of almost every denomination which would admit of his services. His *Hymns* are admired for their sweetness and sincerity.

Lives of Rev. Rowland Hill, by J. Sherman, E. Sidney, W. Jones, and E. W. Broome.

Hill, ROWLAND, VISCOUNT (*b. 1772, d. 1842*), soldier, nephew of the Rev. Rowland Hill, entered the army at an early age, and by 1793 had attained the rank of captain. He distinguished himself at the siege of Toulon of 1793, and in Abercrombie's Egyptian campaign, and having become brigadier-general in 1803, he was Wellington's right-hand man throughout the Peninsular War. His great achievements were in Portugal, where he won the victory of Arroyo de Molinos, and captured the forts of Almaraz, for which service he was created Baron Hill of Almaraz. His active career was brought to a close at Waterloo, where he repulsed the last charge of the Old Guard. In 1828 he succeeded Wellington as commander-in-chief, and held that office until 1842, when he resigned, to the universal regret of the army, by whom he was deservedly beloved. Created a Viscount, he died at the close of the year.

E. Sidney, *Life of Lord Hill* (1845).

Hill, SIR ROWLAND, K.C.B. (*b. 1795, d. 1879*), was born at Kidderminster, lived for a time at Birmingham, removed to London in 1825, and established a school at Bruce Castle, Tottenham. He, however, soon retired from the office of schoolmaster, on the score of ill-health. About this time an association was formed for the colonisation of South Australia, on the plan of Mr. E. G. Wakefield, in which Mr. Hill took an active part. The Act having been passed and the commission appointed for carrying the objects into effect, Mr. Hill was named secretary. He held this post for four years. He next began to interest himself in postal matters, when he found the working of the Post Office most faulty, and formed large and bold plans for its thorough reorganisation. In 1837 he published his plan in a pamphlet headed *Post Office Reforms*, advocating a uniform penny postage and an adhesive stamp. It was treated with scorn by the authorities at St. Martin's-le-Grand, but quickly roused the interest of the

public. Associations were formed to carry it through, and petitions to Parliament in its favour began to pour in. In the spring of 1838, a Select Committee of the House of Commons was appointed to consider the plan. Uniformity of postage was carried only by the casting vote of the chairman, Mr. Wallace. During the year 1839 the agitation continued; and towards the close of the session ministers reluctantly gave away. Early in 1840 the penny postage was carried into effect, with the assistance of Mr. Hill, and on the lines of his pamphlet, he for the purpose receiving an appointment in the Treasury. On the accession of the Peel ministry, in 1842, he was removed from office, on the ground that his services were no longer required. This conduct was indignantly resented by the public, who presented him with over £13,000 in 1846. In 1845 he became chairman of the London and Brighton Railway Company, and was instrumental in introducing the system of cheap excursions. On the accession of the Liberal party in 1846, he was appointed secretary to the Postmaster-General, and in 1854 he became chief secretary. In 1860 he was made K.C.B. In 1864 his health broke down, and he was forced to retire from the cares of office, when the Treasury awarded him his full salary of £2,000 a year for life, along with a Parliamentary grant of £20,000.

G. B. Hill, *Life of Sir Rowland Hill, and History of Penny Postage*, [W. M.]

Hiller, FERDINAND VON (b. 1811, d. 1885), the composer and musician, was born of Jewish parentage, at Frankfurt, began to compose at twelve years old, and in 1825 was entrusted to Hummel, in Weimar. Two years later he visited Vienna, and composed his first piano quartet. From 1828 to 1835 he lived in Paris. In 1837 he visited Italy, and remained for some time at Milan engaged in the composition of the *Destruction of Jerusalem* (*Die Zerstörung Jerusalems*), which was produced at Leipzig under Mendelssohn's direction in 1840. The following year Hiller spent in Rome, but returning to Germany he set to work upon his two operas, *A Christmas Night's Dream* (*Traum in der Christnacht*), and *Conradin*. In 1847 he was appointed Kapellmeister at Düsseldorf, and in 1850 was invited to the same position at Cologne, where he afterwards became director of the Conservatorium, as he continued till the autumn of 1884. His compositions, some of which are of high, though not the highest, excellence, number 183 works, including the important *Spring Symphony* in E, the cantata of *Nala and Damajanti*, composed expressly for the Birmingham Festival of 1871, and a small volume of songs of considerable merit. He visited England more than once, and was always welcomed as one of the last and best representatives of the strict old "classical"

school. Nevertheless, he will not be remembered for his musical works, but for his annals of musical life and reminiscences of great musicians and poets. The following are the chief:—*Records of Modern Musical Life* (*Aus dem Tonleben unserer Zeit*, 1867, with a continuation, *Neue Folge*, in 1871); *Mendelssohn, Letters and Reminiscences* (1874); *Personal and Musical* (*Personliches und Musicalisches*, 1876); *An Artist's Life* (*Künstlerleben*, 1880); *Goethe as a Musician* (*Goethes musicalisches Leben*, 1883); and *Reminiscences* (*Erinnerungsblätter*, 1884).

Hinton, JAMES (b. 1822, d. 1875), surgeon, the son of a Baptist minister, the Rev. John Hinton, entered St. Bartholomew's Hospital, and both before and after taking his medical degree travelled to Sierra Leone, Jamaica, and Edinburgh. In 1850 he established himself in London as a general practitioner, but gradually confined himself to aural surgery, and from 1862 to 1874 was lecturer on that department of medicine at Guy's Hospital. Dr. Hinton had a great ambition to obtain distinction as a metaphysician as well as a writer on medical subjects, but a remarkable essay on *Man and his Dwelling-place* (1858), and a series of papers, *Life in Nature* (1862), and *The Mystery of Pain* (1865), were all that the exigencies of his profession allowed him to produce. *Philosophy and Religion*, and *The Law-Breaker and Coming of the Law* were published posthumously in 1881 and 1884.

Ellice Hopkins, *Life and Letters of James Hinton*, with an introduction by Sir W. Gull (1878).

Hobart-Hampden, THE HON. AUGUSTUS CHARLES, generally known as HOBART PASHA (b. 1822, d. 1886), sailor, was the third son of the Earl of Buckinghamshire. In 1836 he entered the Royal Navy, and served in the *Rose* and the *Dolphin* in South America for the suppression of the slave-trade. His gallant conduct in the South American waters secured him the appointment to the Queen's yacht in 1845. Afterwards, as lieutenant, he was appointed acting commander of the *Driver* during the Crimean War, was present at the capture of Bomarsund in 1854, and commanded the English mortar boats during the bombardment of Sveaborg in 1855. He retired from active service on half-pay about the year 1860, and on the outbreak of the American Civil War (1861-5) he proceeded to the United States, where he commanded the *Don*, a swift blockade-runner, along the coast of North Carolina. He next found employment in the Turkish service. He suppressed the revolt in Crete in 1867. On his return to Constantinople he was promoted pasha, and created a full admiral. He was next appointed naval adviser to the Sultan, when he raised the standard of efficiency of the fleet. In 1867, when he proceeded in the service of Turkey against our allies, the Greeks, his name was struck off the British

Navy List, in accordance with a provision of the Foreign Enlistment Act; but having made a personal application in 1874 to Lord Derby, then Foreign Secretary, he was restored to his former rank as captain in the Royal Navy on the retired list. In 1877, on the outbreak of the Russo-Turkish War, Hobart Pasha was appointed to the command-in-chief of the Black Sea fleet of Turkey, and again set the Foreign Enlistment Act at defiance, England having proclaimed a neutrality. His name was once more dropped out of the official list. In 1881 the Sultan raised him to the rank of mushir and marshal of the empire. In June, 1885, he was again reinstated to his place in the English Navy List, with the rank of vice-admiral.

Hobart Pasha, *The Story of my Life*.

Hobhouse, J. CAM. [BROUGHTON.]

Hofer, ANDREAS (b. 1767, d. 1810), the Tyrolese patriot, born in the Passeyr valley, was the son of a tavern keeper. His first prominent act was in 1796, when he commanded a company of riflemen against the French at Lake Garda. The Tyrol having been transferred from Austria to Bavaria against the wishes of the people, by the Treaty of Presburg, in 1805, Hofer secretly planned a scheme of national resistance, and when the whole of the Tyrol rose in arms in 1809 he was at once chosen to the command of a large division of the insurgents, and inflicted an overwhelming defeat on the Bavarians at Sterzing. He subsequently repulsed the Bavarians at Innsbruck, and despite the treaty of the evacuation of the Tyrol by the Austrians after Napoleon's victory at Wagram, he gallantly resolved to maintain the struggle. On Aug. 13th he put to flight the combined forces of the French and Bavarians, and completely freed his country from foreign yoke. Thereafter an independent government was set up, with Hofer at its head; but the Bavarians having again asserted their supremacy after the Treaty of Vienna, Hofer made an heroic resistance, but was eventually compelled to seek safety in the mountains. Betrayed by one of his followers, he was captured, and shot as a rebel by the orders of Napoleon a few hours after his condemnation.

Hoffmann, AUGUST HEINRICH VON FALLERSLEBEN (b. 1798, d. 1874), poet and philologist, was born at Fallersleben, in Hanover, and turned to the investigation of old German literature under the influence of the brothers Grimm. Having published some original *Songs and Romances* at Bonn in 1821 he went to Leyden to study Dutch literature, which, next to poetry, remained his favourite pursuit. In 1823 he became sub-librarian at Breslau, and full professor of German literature in 1835. Meantime several of his best-known *Children's Songs* (*Kinderlieder*) had been ap-

pearing since 1827, and in 1836 his *Book of Love* (*Buch der Liebe*) was published. As results of his special and scientific labours we may mention the important treatises *Foundations for the History of German Language and Literature* (1830 and 1837), and *Horæ Belgicæ* (1830-62). He also fully investigated the history of Silesian literature, but whilst thus engaged was dismissed from his professorship (1842) for the supposed revolutionary tendencies of his *Unpolitical Songs* (1840). Between 1843 and 1848 he published the *German Street Songs*, the *Drawing-room Songs*, and *May-wine* (*Maitrank*), all of which were more or less political in tone. But he took no active part in the movements of 1848, and in 1854 settled in Weimar as editor of the *Weimar Annual*. In 1860 he became librarian to the Duke of Ratibor at Corvey on the Weser, where he remained till his death. Popular as many of his lyrics are, and though some of his *Songs for Children* (collected in 1877) almost reach the highest excellence, he cannot be described as a great or successful poet. Perhaps, indeed, his greatest service was to the literature of the Netherlands. Unfortunately he never quite decided whether he was poet, revolutionist, or professor.

J. M. Wagner, *Hoffmann von Fallersleben*. (Vienna, 1868).

Hoffmann, ERNST THEODOR WILHELM, or AMADÉUS, as he called himself in honour of Mozart (b. 1776, d. 1822), the romantic writer, musician, and painter, was born at Königsberg, and after a random bringing up, he entered the university of his native town. After occupying minor positions as a legal official at Gross Glogau and Berlin (1796-1800) he was appointed to a magistracy in Posen, and two years later banished to a similar position at Plock, in East Prussia, for drawing caricatures of Posen dignitaries. In 1804 he was removed as councillor to Warsaw, and there wrote the music to the *Cross on the Baltic*, by Zacharias Werner, his friend and fellow-mystic. The occupation of Warsaw by the French in 1806 drove him to Berlin, where he lived in extreme destitution till invited to undertake the management of the theatre at Bamberg in 1808. In the same year he finished his opera of *Love and Jealousy* (*Liebe und Eifersucht*). Finding the officials at Bamberg both fraudulent and bankrupt, he gave up his position, and supported himself by writing, till in 1813 he was invited as music-director to Dresden. In the meantime he had begun several of the sketches that appeared afterwards in different form—the *Ritter Glück*, the music to *Dirna*, and, above all, *Undine*, his masterpiece of musical composition, an opera for a libretto from Fouqué's story arranged by Fouqué himself. It was produced with great success some years later at Berlin, and was admired by Beethoven. The experiences of the bombardment of Dresden,

and the battles around the city, added the final touch of horror to his already disordered imagination. Besides his *Imaginary Tales* (*Fantasiestücke*), and *The Golden Pot* (*Goldener Topf*), one of the most deservedly popular of his stories, he began the grim series of *Devils' Enchantments* (*Elizire des Teufels*). Next year (1814) he was again cast adrift, and returned to the pursuit of law in Berlin, where after living by his pen for some months he was appointed to a small clerkship under the Minister of Justice, and before his death he had risen to be a councillor of the supreme court and a member of the Senate of Appeal. During these years at Berlin Hoffmann wrote some of his best tales:—*Nutcracker* and the *King of Mice* (*Nussknacker und der Mäusekönig*), the most popular of his fairy stories, was written in 1814; the series known as *Midnight Stories* (*Nachtstücke*) was begun in 1817, and the satirical pictures of modern society called *The Views of Tom-cat Murr* (*Lebensansichten des Katers Murr*) began to appear in 1820. To the last Hoffmann was inexhaustibly productive; his musical works include eleven operas, a symphony, and several songs and shorter pieces; his collected works (Berlin, 1871-3) occupy 12 vols. He may serve as the type of the German romantic writer as Europe gladly welcomed him some sixty years ago. His imaginations are prodigious. When he escapes from the terrific, he is almost a humorist. Wild, exuberant, and uncontrolled in thought, and style, and life, he came of the same stock as Werner and Jean Paul Richter, and may perhaps be best defined as standing between the two.

Hoffmann's *Leben und Nachlass*, edited by his friend, J. G. Hitzig (Berlin, 1823); *Weird Tales*, by Hoffmann, translated by J. T. Bealby, with a memoir (London, 1895).

Hogg, JAMES (b. 1770 or 1772, d. 1835), the Ettrick shepherd, was born of peasant parents dwelling in a hut on the banks of Ettrick, in Selkirkshire. In boyhood he contributed to the support of his distressed family by tending sheep and cows. What little education or culture he received was chiefly due to the consideration of a Mr. Laidlaw, of Blackhouse, in whose service he remained from 1790 to 1800. During this period he made his first attempt at literature—*The Mistakes of a Night* (1794). In 1801 a small collection of his songs and ballads was published under the title of *Scottish Pastorals, Poems, Songs, etc.* In the same year, having returned to his parents' cottage, Hogg made the acquaintance of Walter Scott, who further encouraged him towards literature. The next few years were spent in useless search for more profitable employment in the Highlands, Cumberland, and Nithsdale. He also wrote a *Treatise on the Diseases of Sheep*, and in 1807 his *Mountain Bard* was published, with an introduction by Scott. In the same year he took a farm in Dumfriesshire, but

being reduced to ruin in three years, was at last forced to turn to a literary and journalistic life in Edinburgh. For a time he acted as editor of *The Spy*, but was only partially successful. In 1813, however, he published the *Queen's Wake*, one of his longest poems, and perhaps the best known. He had now obtained considerable local reputation, and in 1814 the Duke of Buccleuch presented him with the farm of Altrive, in Yarrow, where he continued to live for the most part from 1817 till his death. During these years he contributed largely to *Blackwood's Magazine*, and published several separate volumes of poems, and of the short prose tales of shepherd life and fairy lore, in which, perhaps, his best strength lay. Two long romantic poems, *Mador of the Moor* and the *Pilgrims of the Sun*, were published in 1814; the *Poetic Mirror*, a series of parodies on living poets, in 1815; *Brownie of Bodsbeck*, and other Tales in 1817; *Winter Evening Tales* in 1820; *Queen Hynde*, Hogg's longest, but not most successful, poem, in 1826; and *Lay Sermons* in 1834. Hogg was a prolific, and sometimes diffuse and careless, writer, without power of self-criticism. Of his tales, the *Shepherd's Calendar* is the best; of his poems, perhaps the fairy ballad of *Kilmory*. He will probably be remembered as, on the whole, the foremost imitator of Burns and Scott, and his importance was increased by his honest origin and hard experience of nature. In literary history he will remain an interesting figure as an associate of the great names that mark the highest period of Scottish development.

Hogg's *Autobiography*; Thomas Thomson's *Memoir*, prefixed to his edition of Hogg's works (1868). [H. W. N.]

* **Hohenlohe** CLODWIG CARL VICTOR, PRINZ VON (b. 1821), Bavarian statesman, is the representative of the line of Hohenlohe-Schillingsfürst, of the line of Waldenburg. He entered the Prussian diplomatic service, which he exchanged for the Bavarian on becoming possessor of the family estates of Schillingsfürst. In 1867 he succeeded Baron Pfordten as Bavarian Prime Minister, and became at the same time Minister for Foreign Affairs. As such he became an inevitable opponent of Prince Bismarck's designs for German unity, and was even thought to be organising a southern rival to the North German Bund. His election in 1868 and 1869 to the post of vice-president of the Customs Parliament of the German Confederacy was supposed to be a direct slight upon Prince Bismarck. Although a Roman Catholic, Prince Hohenlohe was no Ultramontane, and on account of his opposition to the decrees of the Ecumenical Council of the Vatican, the influence of the priests was brought to bear against him at the Bavarian elections of 1870, and he was compelled to resign. By this

time he had become a convert to the creation of a new empire, and the incorporation in it of Bavaria, and the members of the first German Parliament marked their sense of his services by electing him their vice-president. After the recall of Count Arnim (q.v.) in 1874, Prince Hohenlohe was chosen to succeed him as German ambassador at Paris, an appointment which he resigned in Sept., 1885, and his investigations were the cause of the famous Arnim trial. In 1878 he was one of the three German plenipotentiaries at the Congress of Berlin. In 1885, having entered the Prussian service, he was appointed Stadtholder of Alsace-Lorraine.

Holkar. [INDORE.]

* **Holl**, FRANK, R.A. (b. 1845), portrait and subject painter, is the son of the late Francis Holl, A.R.A. (d. 1884), a well-known engraver, and was born in London. After being educated at University College School, London, he entered as a student at the Royal Academy, and in 1863 won the students' gold medal for historical painting, his subject being *Abraham about to sacrifice Isaac*. Soon after this he began to exhibit in the Royal Academy annually. The following are some of his more important contributions, with the dates of their exhibition:—*Fern-Gatherers* (1866); *No Tidings from the Sea* (1871); *Leaving Home* (1873); *Deserted* (1874); *Going Home* (1877); *The Gifts of the Fairies*, portrait of Signor Piatti, and *Abandoned* (1879); *Ordered to the Front* (1880); *Home Again*, and portrait of General Rawlinson (1881); portraits of Lord Cranbrook and General Roberts (1882); portraits of the Duke of Cambridge, Lord Wolseley, and Mr. Bright (1883); and portraits of Dr. Haig-Brown and Mr. Francis Holl (1884). It will be observed from this list how portraiture has of late turned the artist's thoughts from the province of painting in which his earlier powers were displayed with such rare dramatic force and technical skill. Mr. Holl was elected A.R.A. in 1878, and R.A. in 1883.

Holland, THE KINGS OF, date from the year 1806, when Louis Bonaparte, the father of Napoleon III., was imposed by Napoleon I. on the Republic which had been established in 1795, with the title of King of Holland. [BONAPARTES.] On his abdication in 1810, Holland was for the time being united to France, but in 1814 it was again erected into a kingdom by the Allied Powers, and the representative of the House of Orange, which formerly ruled with the title of Stadtholders, was placed on the united throne of Holland and Belgium, with the title of King of the Netherlands and Duke of Luxembourg. **WILLIAM (FREDERICK) I.** (b. 1772, d. 1843), had hitherto been known as the Hereditary Prince of the United Pro-

vinces. He had married a daughter of the King of Prussia, and had commanded the Dutch troops in the various campaigns against the French Republic, and had fought in the Allied Armies against the Empire with some ability. He came over from England in 1813, was proclaimed by an assembly of notables in the following year, and the Congress at Vienna set to work to demarcate the boundaries of the new kingdom of the Netherlands, and to formulate a Constitution. Their labours, interrupted for a time by the events of the Hundred Days, were eventually brought to a conclusion. The Powers imagined that they had established a kingdom with well-defined frontiers, powerful enough in material strength to bar the way to French aggression towards the north-east, and furnished with a well-balanced system of government, consisting of a king, estates-general, and provincial councils, with a wide franchise, free press, and free religion. Unfortunately, however, it was discovered that Gallic and Catholic Belgium was not disposed to live harmoniously with German and Protestant Holland; and the character of King William, whom exile had rendered suspicious and reactionary, was not calculated to make him particularly popular in either province. The Belgians caught the spirit of the French Revolution of July, 1830; they threw off the Orange yoke, and the Powers sitting in conference at London decided that the independence of Belgium should be recognised. The obstinacy of King William, however, delayed the final settlement of the question for nine years, and plunged Holland into much financial distress. The Dutch Government showed its resentment at the assumption of the throne of Belgium by Leopold of Saxe-Coburg by invading that country; it refused to surrender the citadel of Antwerp which it had seized, and had to be coerced by England and France. The Convention of 1833 settled some of the difficulties at issue, but it was not until 1839 that a definitive peace was signed. The tenacity of William had been so far fortunate that he had succeeded in keeping hold of Limburg and a portion of Luxembourg, but his subjects felt that such result was not commensurate with the outlay, and the signs of popular discontent became so unmistakable that the King abdicated in favour of his son in 1840, and spent the remainder of his life in morose retirement.

WILLIAM II., his son (b. 1792, d. 1849), passed his childhood in England, where he was educated by Dr. Howley, afterwards Archbishop of Canterbury. He smelt powder in the Peninsular War in the capacity of extra aide-de-camp to the Duke of Wellington, and commanded the Army of the Netherlands during the Hundred Days, being severely wounded at Waterloo. He endeavoured to win for his bride the Princess Charlotte of Great Britain; she, however, placed her hand at the

disposal of Leopold of Saxe-Coburg, the future King of Belgium. Upon his accession to the throne William II. gave proofs of the possession of liberal tendencies, and his short reign was in consequence peaceful and prosperous. Shortly before his death he wisely neutralised the effect upon his subjects of the French Revolution of 1848, by agreeing to the revision of the Constitution. He married a sister of Nicholas of Russia.

* **WILLIAM III.** (b. 1817), succeeded his father, having ten years previously married the Princess Sophia of Würtemberg. He has, on the whole, had a successful reign, and is personally popular with his subjects, who appreciated the generosity of his voluntary surrender of half the Civil List. The chief features in home affairs have been protracted disputes between the Chambers and the ministry; some outbreaks of religious bitterness, notably after the revival of the Roman Catholic hierarchy in 1853; and the great development of the canal system, the great canal connecting Amsterdam with the North Sea having been finished in 1876. Abroad a policy of strict neutrality has been pursued towards European complications. When Prussia and France were wrangling over Dutch Luxemburg, the King of Holland, to whom it had been guaranteed by the Powers in 1867, kept in the background as much as possible, and with equal prudence, when war did break out, he espoused neither side. The Dutch colonies are still of some importance. Slavery was abolished throughout the Dutch West Indies in 1863; in 1867 the Dutch effected a transfer of territory on the Gold Coast with England, the new frontier being the Sweet River; and in 1873 they were involved in a vexatious war with the Sultan of Achin in Sumatra, which lasted until 1879, and which appeared likely to begin again in 1884 when he seized the crew of the English vessel *Nisero*. The most serious question now impending is that of the succession. Alexander, the Prince of Orange, the last male descendant of the line (b. 1851) died in 1884; and by his second marriage, with the Duchess of Albany's sister, Queen Emma, King William has issue one daughter, the Princess Wilhelmina (b. 1880). There is, therefore, in any case, the certainty of a minority reign, and the probability of a foreign Prince Consort; but the Chambers, with wise precaution, have already elected Queen Emma Regent. [L. C. S.]

Holland, HENRY RICHARD VASSALL FOX, 3RD BARON (b. 1773, d. 1840), the nephew of Charles James Fox, was educated by his uncle, and then at Eton and Christ Church. In 1797 he married Lady Webster, the wife of Sir Godfrey Webster, after having figured as co-respondent in the trial in which her husband gained a divorce. His political career began about the same time, when he

became prominent among the few Whigs who still supported Fox's policy in the House of Lords. In 1806 he became Privy Counsellor, and was sent by Fox with Lord Auckland to negotiate the commercial treaty with the United States which ultimately produced the aimless war of 1813. After the death of Fox Lord Holland was, during the brief remaining existence of the ministry of "All the Talents," Lord Privy Seal. During the long period of Tory ascendancy which followed, Lord Holland continued to support Whig principles steadily, but with no superabundance of energy. He was not a man to lead a party from defeat to victory, and his polished utterances found more attentive audiences in Holland House, which his own social charms, combined with those of his wife, converted into the nearest approach to a Parisian *salon* that England had perhaps ever been able to produce. When at last the Tories collapsed in 1830, Lord Holland became Chancellor of the Duchy of Lancaster, and held that office, with the exception of two short intervals, until his death. He was the author of some translations from the Spanish, a country to which he paid several visits; *Foreign Reminiscences* (1850), and *Memoirs of the Whig Party during my Time* (1862-4)—an acquaintance with which is indispensable to an accurate knowledge of the political history of the period.

The Opinions of Lord Holland, as recorded in the Journals of the House of Lords from 1797 to 1841, edited by D. C. Moylan; Lord Brougham, *Statesman of the Time of George III. and George IV.*; Macaulay's essay on Lord Holland; Princess Mary Lichtenstein, *Holland House* (1874).

Holland, SIR HENRY (b. 1788, d. 1873), physician, was educated at private schools, and became clerk in a merchant's office, but afterwards embraced a medical career, and graduated at Edinburgh University in 1811. In 1816 he set up as a doctor in London, and speedily acquired a considerable practice, which was due in part to his social powers. He was also a great traveller, and wrote a pleasant account of his *Travels in the Ionian Isles, Albania, Thessaly, and Greece* (1st ed. 1812). Sir Henry Holland published his *Medical Notes and Reflections* (1839), *Chapters on Mental Physiology* (1852), and some reprints from the reviews in 1862. He became F.R.S. in 1816, F.R.C.S. in 1828, physician in ordinary to Prince Albert in 1840, physician in ordinary to the Queen, 1852, and a baronet in 1853.

His *Recollections of my Past Life* were published in 1872.

* **Holland, SIR HENRY THURSTON, K.C.M.G., 2ND BARONET** (b. 1825), was educated at Harrow, and at Trinity College, Cambridge (B.A. 1847). He was called to the bar in 1849, became legal adviser to the Colonial Office in 1867-70, and Assistant Under-Secretary at the same office from

1870-4. In 1874 he was first returned for Midhurst in the Conservative interest. In 1885 he became Financial Secretary to the Treasury, and at the general election of the same year was returned for Hampstead. In 1887 he entered Lord Salisbury's Cabinet as Colonial Secretary, having previously served as Vice-President of the Committee of Council on Education.

* **Holmes, OLIVER WENDELL** (b. Aug. 29th, 1809), an American author, is the son of Rev. Abiel Holmes, of Cambridge, U.S., author of *The Annals of America*. His primary instruction was acquired in local schools, and in Phillips' Academy at Andover. At sixteen he entered Harvard University. He composed and read a number of poems while at college, and was the poet of his class. He graduated in 1829. Upon leaving college he began to study law. He contributed several poems to a short-lived periodical entitled *The Collegian*. After a year's trial of law he relinquished it for the study of medicine. This he studied with Dr. James Jackson during two and a half years, when, for fuller instruction and for observation of practice in the great hospitals, he went to Europe. His degree of Doctor in Medicine, from Harvard, was taken in 1836. In 1839 he was appointed professor of anatomy and physiology in Dartmouth College. This office he held two years, and resigned it in order to devote himself to the practice of medicine in the city of Boston, where he has lived for fifty years. He married in 1840 Miss Amelia Lee Jackson. In 1847 he was appointed professor of anatomy in the Harvard Medical College. He held this office until 1882, when he resigned his professorship, and was appointed professor emeritus. For fifty-six years, consequently, he has studied, taught, or practised medicine; but his lifelong relation with medical science has been mainly that of a teacher of its principles. Dr. Holmes's first literary ventures were made in college periodicals and in the annuals. These ventures were mainly occasional poems, humorous in spirit, and a collection of these was, his first volume, and was published in Boston in 1836. His *Urania* was published in 1846; and a second edition of his collected poems in 1849. For nearly thirty years his literary activity has been associated with the *Atlantic Monthly Magazine*. This periodical was from its beginning in November, 1857, the organ of a literary group, of whom the most famous individuals were Emerson, Longfellow, Lowell, Motley, and Holmes. In its pages has appeared all that Holmes has written since its origin, except his books upon medical science, and it has given parts even of these. His breakfast-table series was its great feature for years. This series began with *The Autocrat of the Breakfast-table*, was continued

with *The Professor at the Breakfast-table*, and concluded with *The Poet at the Breakfast-table*. These books are an artistic construction around an idea not new in literature. "Table talk" is common enough; but from Selden downwards it has always been more suggestive than satisfying—as at best the mere scraps of a feast. Dr. Holmes has treated this subject artistically, and given the whole menu of the wise, witty, and genial rambling of an inextinguishable talker. *The Autocrat of the Breakfast-table* was published separately in 1858, *The Professor* in 1859, and *The Poet* in 1872. *Elsie Venner, a Romance of Destiny*, was published in 1861, and *The Guardian Angel* in 1867. In addition to his originally collected poems, Dr. Holmes has published *Songs in Many Keys* (1862), *Songs of Many Seasons* (1875), and *The Iron Gate and other Poems* (1880). His *Homoeopathy and its Kindred Delusions* (1842), *Currents and Counter-Currents in Medical Science* (1861), *Border Lines of Knowledge* (1862), and *Mechanism in Thought and Morals* (1871), are books related to medical subjects, as the titles indicate, but they are contributions to the philosophy of medicine. Dr. Holmes's *Memoir of Ralph Waldo Emerson*, in the series of *American Men of Letters*, was published in 1884, and in 1885 he published a tale entitled *A Mortal Antipathy*. He paid a visit to England in 1886. [G. W. H.]

Hone, WILLIAM (b. 1780, d. 1842), satirist and antiquarian, was the son of a Bath citizen of strict religious principles. In 1790 he entered an attorney's office in London, and was afterwards clerk to a solicitor in Gray's Inn. Having imbibed the political and religious ideas of the London Corresponding Society he rapidly drifted from the orthodoxy of his youth, and, abandoning the law in 1800, he made several ventures as book-seller, writer, and publisher, all of which were *fiascos*. In 1817 he started the *Reformer's Register*, and his talent for parody and lampoon soon made it a power in the land. He was accordingly prosecuted by Government on three informations: the first, for publishing Wilkes's *Catechism of a Christian Member*; the second, for a libel on the Prince Regent, *The Litany or General Supplication*; and the third, for a parody on the Athanasian Creed and *The Sinecurial's Creed*. He gained acquittals in each case, having defended himself with great acuteness. This result naturally gave great impetus to the sale of his satirical poems, which acquired additional popularity from Cruikshank's illustrations. Nevertheless, Hone gradually abandoned free-thought and satire for religion and antiquarian research. His *Every-Day Book* (1826), *Table Book* (1827-8), and *Year Book* (1829) are full of out-of-the-way information, and are still read with pleasure, more especially when it is remembered that Lamb took part in their preparation.

They were, however, at the time distinct failures, and poor Hone saw the inside of the King's Bench prison for debt. His last publication of importance was an edition of Strutt's *Sports and Pastimes* (1830), but he never succeeded in rescuing himself from indigence. Hone at least deserves admiration for possessing the courage of his opinions, and in the history of Radicalism his name has an honourable place.

There is a good account of Hone's trials in Harriet Martineau's *History of the Peace*, vol. i., chap. x.

Hood, THOMAS (b. 1799, d. 1845), poet and humorist, was the son of a London publisher, partner in the firm of Verner and Hood. Thomas, the second son, was born in the Poultry in May, 1799, and educated in a private school at Clapham. After the loss of his father and his elder brother, he was the mainstay of his mother until her death, which, however, followed at no great interval upon that of her husband. In his *Literary Reminiscences*, published in *Hood's Own*, the poet states that he was early placed "upon lofty stool at lofty desk" in a merchant's counting-house, and that he continued in this capacity until his health began to fail. Mr. W. M. Rossetti considers that this statement is not to be implicitly accepted as serious. What is certain is that towards the age of fifteen Hood was apprenticed to his uncle, Mr. Sands, as an engraver, and afterwards to one of the Le Keux family. This occupation he was eventually compelled to abandon on the ground of his weak health. On the recommendation of physicians, he was "shipped, as per advice, in a Scotch smack," to his father's relations in Dundee. He made his first literary venture there in the *Dundee Advertiser* in 1814, being then fifteen and a half years old. Returning to London in 1820, Hood began to practise as an engraver. In 1821 he became sub-editor of the *London Magazine*, and in that capacity his talent first displayed itself in the shape of humorous answers to correspondents. It was through this magazine that Hood became acquainted with John Hamilton Reynolds, Charles Lamb, De Quincey, and other men of letters. In 1824 Hood married the sister of Reynolds, and she is described as a lady of cultivated mind and literary tastes. The *Ode to Dr. Kitchener*, and the more important poem *Lycus the Centaur*—which first testified to the breadth and originality of Hood's powers—appeared in the *London Magazine*. In conjunction with Reynolds, the poet published in 1825 the *Odes and Addresses to Great People*. To this succeeded the first series of *Whims and Oddities*, issued in 1826, and in the year following the second series was published. Two volumes of *National Tales*, constructed on the model of the Italian writers, next appeared, but met with a mixed reception. At this time Hood fully established

his reputation as a genuine poet, and one of fine promise, by the publication of a volume containing *The Plea of the Midsummer Fairies*, *Hero and Leander*, and other poems. The volume was rich in imaginative poetry, though the conceptions were not in the usual popular grooves. In *The Gem*, an annual which Hood edited for a year, appeared *The Dream of Eugene Aram*, Hood's most striking and powerful ballad, and one which will always hold its place in English literature. But the comic side of Hood's genius was also, from first to last, irrepressible, notwithstanding the humorist's chronic ill-health. As he laughingly observed, he was "compelled to be a lively Hood for a livelihood." The first of Hood's *Comic Annual* series was issued at Christmas, 1830, and for two years subsequently its writer occupied himself with theatrical work. He wrote the libretto for an English opera, an entertainment for Mathews, a pantomime for the Adelphi, and, conjointly with Reynolds, dramatised *Gil Blas*. While living at Lake House, Wanstead, he produced the poem of *The Epping Hunt*, and his novel of *Tynney Hall*. About the close of 1834, a firm with which Hood was connected failed, and the disaster involved him in serious loss. Declining to avail himself of any legal protection, he left England for a time, with the intention ultimately of paying all his creditors in full. He proceeded to Coblenz, his health at the time being in a most precarious condition. From Coblenz he migrated to Ostend, where he resided for nearly three years, returning to England in 1840. A medical examination demonstrated that he was suffering from a complication of disorders, and his mental activity and indomitable spirit were a marvel to his friends. During his stay on the Continent Hood's *Own* had appeared, and this was followed by *Up the Rhine*. The latter work had a most encouraging success. But legal proceedings with publishers ensued, and their protracted nature embittered the remainder of his life. After a brief residence in Camberwell, and then at St. John's Wood, Hood settled down at Finchley, where he produced his *Rhymes for the Times*, *Miss Kilmansiegg*, and other effusions. In 1841 he succeeded Theodore Hook in the editorship of the *New Monthly Magazine*, from which he received a salary of £300 per annum. The Christmas number of *Punch* for 1843 contained Hood's pathetic lyric *The Song of the Shirt*, a poem which thrilled the heart of England, and the fame of which is now universal. Relinquishing his connection with the *New Monthly Magazine* in January, 1844, Hood began a periodical of his own with the title of *Hood's Magazine*, but under its continuous demands upon him, aggravated by other troubles and anxieties, his health utterly broke down. The grief of his closing days was assuaged by the kindness of Sir Robert Peel, who recommended a

Government pension of £100 to Mrs. Hood, in consideration of the serious illness of her husband. After months of intense suffering, Hood at length died. A monument erected to his memory in Kensal Green Cemetery was unveiled on July 18th, 1854, by Mr. Monckton Milnes (Lord Houghton), who pronounced a glowing eulogium on the author of *The Song of the Shirt*. The springs of humour and pathos never lay more closely together, than in the case of Hood, and both had their rise in the heart. His sensitiveness, his tenderness, and his deep love of humanity has given him an abiding place in the affections and admiration of his countrymen. Hood left two children, one a daughter, Mrs. F. F. Broderip, compiler of the *Hood Memorials*, and a son, Thomas (b. 1835, d. 1874), better known as Tom Hood, who also made a position for himself in letters. The younger Hood was the editor of *Fun* and the *Comic Annual*, and in addition to various humorous writings, he was the author of *Fairy Realm*, *Pen and Pencil Pictures*, and a number of novels, including *A Disputed Inheritance*, *A Golden Heart*, *The Lost Link*, and *Love and Valour*.

Mrs. Broderip, *Memorials of Thomas Hood*, with a preface and notes by his son (2 vols., 1840); *Works of Thomas Hood, Comic and Serious*, edited by his son and daughter (1862-3); *The Poetical Works of Thomas Hood*, edited, with a critical memoir, by W. M. Rossetti; *Moir's Poetical Literature of the Past Half Century*; *Gillilan's Second Gallery of Literary Portraits*; *Gentleman's Magazine*, July, 1845. [G. B. S.]

* **Hook, JAMES CLARKE, R.A.** (b. 1819), painter, the son of a former judge-arbitrator in the mixed Commission Courts, Sierra Leone, is descended on his mother's side from Adam Clarke, the Biblical commentator. He was entered as a student at the Royal Academy in 1836, and his connection with its schools was long and successful. He took the first medal in the Life school in 1842, he had the gold medal for historical painting in 1846, and he obtained the travelling pension of the Royal Academy in 1846. Upon this he went to Italy. He married in the same year. His absence from England did not exceed eighteen months, and at its close he settled down to paint what it is hardly too much to say that everyone now forgets—almost countless subjects from Italian and French history and poetry. Thus having been inspired by Boccaccio in 1844, he illustrated, in oil-painting, *The Merchant of Venice* in 1847, and *Othello* in 1849. In 1850 Mr. Hook was elected an Associate of the Royal Academy, and in 1860 he was made a full member. Between these two dates came some change, though not the final change, in his practice, and a great change in his subjects; for, while he was elected an Associate solely by reason of his acceptability as a painter of history and elegant romance, it is impossible that his landscape should have

counted for nothing when he was elected a full member. *The Brambles in the Way*, *The Passing Cloud*, *The Welcome Bonny Boat*, had been exhibited in 1856; *The Signal on the Horizon* in 1857; *The Coast Boy Gathering Eggs* in 1858; and the admirable *Luff, Boy!* in 1859. A painter of the sea and of the coast and of fisher-folk had then declared himself, and the foundations had been laid of that edifice of fame which we respect to-day. But Mr. Hook, like David Cox, has improved with his later years. For years, during a period of life in which a painter often retrogrades, Mr. Hook preserved accuracy and picturesqueness of vision, and added certainty and force to his touch, and charm to his presentation of colour. We will only mention *Home with the Tide* and *Sea Pools* in 1880, *Catching a Mermaid*, and *Carting for Farmer Pengelly* in 1883, and *The Broken Oar* in 1886. He is fond of an incident rather large in his canvases, and his incidents cannot always or even often be important, or in themselves deeply interesting. And now and again his figures are not in perfect relation to the landscape they pass or pause before: in sky or moving waters remains the essential charm. At other times a genuine beauty and delight belongs to these seaboard faces, coloured with the Cornish sun and with the saltiness of the western wind, and they hold their place, not unworthily, by the impressive spectacle of the great waters. Following after Turner and Cotman, who had painted our seas with power and beauty, and after Clarkson Stanfield, who had painted them with pleasantness, Mr. Hook had much ado, it may be thought, to be at the same time original and veracious, the more so as he never gave himself to minute detail like Mr. Brett, nor to the chiefly exceptional aspects of the waste of waters, like Mr. Powell, of the Water Colour Society. Yet Mr. Hook has managed to stand absolutely alone, and in doing so to be perfectly faithful to the various impressions he has laid himself open to receive. His art is not an art of violent contrasts, but of variations as subtle and infinite almost as Nature's. [F. W.]

Hook, THEODORE EDWARD (b. 1788, d. 1841), wit, satirist, and author, born in London, was the son of James Hook, a popular composer, by his wife Miss Madden (d. 1805), author of *The Double Disguise*, and other novels. Theodore Hook was educated at Harrow and Oxford. At the age of seventeen he produced his first drama, *The Soldier's Return*, a comic opera, which was acted in 1805. In 1806 he wrote the farce *Catch Him Who Can*, and *Killing no Murder*, with a host of other operative pieces, soon followed. In 1813 he was appointed treasurer of the Mauritius, and held the office till 1818, when the confused state of the accounts entrusted to his charge led to his being sent home by

the Governor under a charge of defalcation. His friends, however, rallied round him, and his cell in the King's Bench, where he was confined for a considerable time, rang loud with bursts of laughter. Liberated at length, he began to write again. Ever a staunch Tory in principle, he became editor of the *John Bull* newspaper. Many of his poems, essays, and *jeux d'esprit*, in the *Bull*, from his pen, were afterwards collected and published in a separate form. During the last twenty years of his life, Mr. Hook wrote extensively in biography and fiction. His *Sayings and Doings*, *Parson's Daughter*, and *Births, Deaths, and Marriages* were all pre-eminently successful; and his *Memoirs of Kelly*, the actor, and *Biography of Sir David Baird*, are still the only biographical records we have of these interesting men. His company was much sought after: his wit, his humour, his ready jest, and prompt repartee, and his extemporaneous effusions, whether in poetical or in musical composition, made him the idol of everyone.

Rev. R. H. Dalton Barham, *Life and Remains of Theodore Edward Hook*.

Hook, WALTER FARQUHAR (b. 1798, d. 1875), ecclesiastical historian and divine, was the nephew of Theodore Hook, and lifelong friend of Lord Hatherley, both noticed above. He was born in London, and educated at Winchester College and Oxford. He was ordained in 1821, and the first curacy which he served was that of Whippingham, in the Isle of Wight, of which parish his father was rector. In 1825 he removed to a curacy in Birmingham, and in 1827 he was appointed one of the royal chaplains under George IV., and continued to hold that post under William IV. and Queen Victoria. Even at this time he gave a significant proof of the sentiments for which he was destined to be subsequently so widely known, by the publication of two sermons on *The Peculiar Character of the Church of England*, and *The Catholicity of the Church of England*. From 1828 to 1837 Mr. Hook was one of the vicars in Coventry. In 1837 he became vicar of Leeds. He now confessed himself to be a "High Churchman, and something more;" and to the principles enunciated in the earlier *Tracts for the Times*, he gave a general adhesion. In 1838 he proclaimed his views in a sermon, *Hear the Church*, which speedily ran through a hundred thousand copies. A whole army of pens—Episcopalian, Nonconformist, and Roman Catholic—were set to work in order to reply to it, and, if possible, refute it. The Tractarian movement shortly after showing its Romeward tendencies, Dr. Hook became estranged from it, and passed from strictly theological to educational labours. He was the means of having the vicarage of Leeds divided up into seventeen districts or parishes, and of establishing upwards of twenty new schoolrooms with accommodation for some

8,000 children. In 1846 he suddenly astonished his party by coming forward, in spite of his High Church theories, as the advocate of a larger and broader system of national education than that which the clergy of the Establishment had as yet accepted (see *Letter to Lord Bishop of St. David*). In 1859 he was appointed to the deanery of Chichester. His leisure hours he devoted to writing *The Lives of the Archbishops of Canterbury* (1860-76) from the earliest times down to the post-Reformation era. The work is not without its defects, but it is at least a monument of his unflinching industry and vigour. If no enduring literary work will record his name, he was nevertheless true to the literary traditions of his family. Of his works, perhaps the best known are his *Dictionary of Ecclesiastical Biography* (8 vols., 1845-52). The *Church Dictionary* (1842); *Meditations for Every Day in the Year* (1864); and *The Three Reformations, Lutheran, Roman and Anglican* (1847). Dean Hook held very dogmatic opinions regarding the position of the Church, and denounced in strong terms the "schism" of Dissenters.

Rev. W. R. W. Stephens, *Life and Letters of Dean Hook*. [W. M.]

* **Hooker**, SIR JOSEPH DALTON, C.B., K.C.S.I., F.R.S., etc. (b. 1817), naturalist, the only surviving son of Sir Wm. Hooker (q.v.), was born at Halesworth, brought up in Glasgow, and studied medicine in the university there, graduating M.D. in 1839. Medicine, however, had less attractions for him than science, for though almost immediately he was appointed assistant-surgeon to H.M.S. *Erebus*, then on the eve of being despatched with the *Terror*, under Sir John Clarke Ross, on a voyage of discovery in the Arctic regions, it was well understood that the botany of the region to be visited was to receive the special attention of Dr. Hooker. During the three years' cruise of the vessels, he not only examined the botany of every land they touched at, but made the first extended collection of the flora of New Zealand and Tasmania, which subsequently appeared in the great *Flora Antarctica*, in which he had the assistance of various botanists, though the notes and the extremely valuable essays on the origin and nature of the different floras were contributed by the nominal author. These *Floras* are still standard works. On returning, he acted for a time as the substitute for Professor Graham in the Edinburgh Chair of botany, though he failed to be elected to the professorship when it fell vacant in 1845. At a later date he received the appointment of botanist to the Geological Survey. But in 1848 he started on another journey, viz. to India and the Himalayas, which lasted two years. The *Rhododendrons* of the *Sikkim Himalayas* and the *Flora Indica*, which is still in progress, contain the principal

technical achievements of the expedition, and in his *Himalayan Journals* (1854) may be found a more popular account of the journey. In 1860 he accompanied Admiral Washington on a journey in Palestine. In 1871 he made, in conjunction with Mr. John Ball, an interesting visit to Morocco, including the Atlas, which is described in their *Tour to Morocco* (1878), and in 1877 he crossed America on a botanical expedition with Professor Asa Gray. However, in 1855 he was appointed assistant-director of Kew, and on the death of his father, in 1865, to the sole directorship, so that from that period the chief labours of his lifetime were the increase of the collections there, and the extension of its field of operation. In this he has been so successful that when he resigned office in 1885 he might be said to have as much enlarged Kew from what it was when he took over the establishment as his father did during his tenure of office. For more than twenty years Kew was the Mecca of botanists. From it, as from a clearing-house, plants were sent hither and thither, and to it come to be named, described, and distributed collections more numerous even than those which accumulated there during Sir Wm. Hooker's life. The series of colonial floras which had been begun by his father were continued by Sir Joseph, and the State aid to botany was extended in directions never before contemplated. But this was only a portion of the director's work. The great *Genera Plantarum* which he and Mr. Bentham (q.v.) carried to a successful conclusion, might have served as the basis of any man's reputation. *The Student's Flora of the British Isles* was a less important though a not less useful volume, while his numerous memoirs—such as those on the nature of the Arctic flora and on insular floras—display the highest philosophical insight, these questions being considered from the Darwinian point of view, Dr. Hooker having been one of the first—the very first, indeed—to adopt Mr. Darwin's theory. He it was who was entrusted with the original draft of it, and by him the germ of the “origin of species” was communicated to the Linnean Society. In 1868 Dr. Hooker was president of the British Association, his address being an advocacy of, and popular explanation of, Darwinism; and in 1873–8 he served as president of the Royal Society. In 1869 he was nominated C.B., and in 1877 was made a K.C.S.I. He is also a V.P. of the Linnean Society, a corresponding member of the Institute of France, and of most of the home and foreign learned societies and academies, an LL.D. of Cambridge, Dublin, Glasgow, and Edinburgh, and a D.C.L. of Oxford. His son-in-law is the present director of Kew.

Hooker, Sir William Jackson, F.R.S., LL.D., D.C.L. (b. 1786, d. 1865), botanist, was a

native of Norwich. His father, Joseph Hooker, a man of independent means, claimed to be of the same family as the author of *Ecclesiastical Polity*. Not compelled to adopt any profession, he early devoted himself to natural history studies, led to them by the example of his father. At first he was more attracted by entomology and ornithology than botany, but happening to consult Sir James Edward Smith, also a Norwich man, regarding a rare moss which he had discovered, he was impelled, like Robert Brown (q.v.), through an exactly similar incident, to confine himself to that field. His first investigations were made in Iceland, not then so familiar a hunting ground as at present. Unfortunately, the expedition which was undertaken in 1809 at the suggestion of Sir Joseph Banks, turned out badly, for the collections, drawings, and notes made were lost by the burning of the ship in which he sailed for England. Aided, however, by a good memory, he wrote his impressions in the privately printed *Journal of a Tour in Iceland* (2 vols., 1811), of which a second edition was published in 1813. Failing, owing to the disturbed condition of the island, to carry out the plan which he had formed for the exploration of Ceylon, he bent all his energies to the formation of a herbarium and the study of the species which speedily began to pour in upon him. With this object in view, he not only entered into correspondence with botanists in all parts of the world, but made many excursions into France, Switzerland, and Northern Italy, and formed excellent relations with various Government departments and his fellow-workers in the different European States. In 1816 he married the daughter of Mr. Dawson Turner, the eminent botanist and Anglo-Saxon scholar, and henceforth remained at home, occupied at great personal sacrifice in enlarging his collection, and publishing the result of his researches. His first home was at Halesworth, in Suffolk, which speedily became a haunt of botanists, and there he remained until he was appointed in 1820 Regius professor of botany in the University of Glasgow. His *British Jungermannias* (1816) was a monumental work, and is still a classic, while his edition of Curtis's *Flora Londinensis* (1817–28), his description of the cryptogamic plants in Humboldt's voyage, his *Muscologia Britannica*, undertaken in 1818 in conjunction with Dr. T. Taylor, and his *Musci Exotici* (1818–20), form the principal works which he either began or issued prior to entering on his official life. At Glasgow he was exceedingly popular as a teacher and a counsellor of his students. Here also he continued to enrich literature with some notable works. The chief of these were his *Botanical Illustrations* (part i., 1821), *Exotic Flora* (3 vols., 1822–7), the *Botanical Magazine* (1827–65), *Icones Filicum* (in partnership with Dr. Greville, 1829–31); the *Flora Scotica* (1867);

the *British Flora* (in conjunction with Dr. Walker-Arnot, 1830), *Flora Boreali-Americana* (1840); *Icones Plantarum* (1837-54); the *Botany of Beechey's Voyage* (in partnership with Dr. Arnot, 1841); the *Genera Filicum* (1842); the *London Journal of Botany* (1842-8); *Species Filicum* (1846-64), etc. In 1841 he was appointed director of the Royal Gardens, Kew, and immediately began those reforms which, under him and his son and successor, made what had been for years little better than a playground for the royal children the first botanical establishment in the world. Here, in addition to some of the works already mentioned, appeared his *Journal of Botany and Kew Miscellany* (1849-57); his *Century of Orchideæ* (1846); his *Filices Exotice* (1857-9); and numerous other works and memoirs. But Kew was his greatest work. Under him it expanded in area. Museums were built, the herbarium enlarged, and successive Governments had such confidence in him, that Sir W. Hooker—for in 1836 he had received the order of K.H.—was until the close of his life the virtual patron of all botanical appointments. On his recommendation, naturalists were assigned to the different surveying or exploring expeditions; and the collections made by these expeditions gravitated to Kew as a matter of course. Scarcely one of these narratives does not contain enumerations by Sir William. The nucleus of the noble herbarium was formed of the collection presented to the nation by Sir William, while the equally extensive library was also due in great part to his munificence. He was busily engaged with Mr. Baker on his *Synopsis Filicum* when he was carried off on Aug. 12th, 1866. Personally, Sir W. Hooker was a man of the most amiable and honourable character, highly respected by all with whom he came in contact. He was elected F.R.S. in 1810. He was also a vice-president of the Linnean Society, D.C.L. of Oxford, LL.D. of Glasgow, and an honorary member of nearly every scientific academy abroad. Mount Hooker, in the Rocky Mountains, was named in his honour by David Douglas, the botanist. "*Hookeria*" is a natural order of mosses, of which *Hookeria lucens*, a British species, is the type. [R. B.]

* **Hope, THE RIGHT HON. ALEXANDER J. BERESFORD** (b. 1820), politician, is the son of the late Mr. James Hope, a man of letters of some ability. He was educated at Harrow and at Trinity College, Cambridge, whence he took a distinguished degree in 1841. His political career has been chequered; from 1841 to 1852, he sat for Maidstone, and again from 1857 to 1859. He was defeated at Cambridge University in 1868, and at the subsequent elections, including that of 1885. Mr. Beresford Hope is styled an Independent Conservative, and his personality stands out distinctly among the rank and file of that

party. He is perhaps even better known for his energetic support of ecclesiastical undertakings, and is an ardent advocate of the Gothic revival. In 1844 he purchased the buildings of St. Augustine's Abbey, Canterbury, and founded a college for missionary clergy there, and was president of the Royal Institute of British Architects from 1855-67. Besides numerous papers and articles upon religion, religious architecture, and politics, Mr. Beresford Hope has written two very clever novels, *Strictly Tied Up* (1880), and *The Brandreths* (1882).

Hope, THOMAS (b. 1770, d. 1831), novelist and antiquarian, was the descendant of a family of rich Scottish merchants, and having acquired considerable artistic tastes, went in 1788 for a prolonged tour abroad, and returned with a valuable collection of antiquities. His *Costumes of the Ancients*, *Designs of Modern Costumes*, and *Historical Essay on Architecture* (the last published posthumously), display considerable research, and his *Household Furniture and Design*, published in 1805, went not a little way towards improving the somewhat barbaric tastes of the age. He is now chiefly, if not solely, remembered for his novel *Anastatus*, published anonymously in 1817. It created some stir, not so much on account of its merits, which, however, are not inconsiderable, as its subject, modern Greek life, and its tone of emphatic philhellenism caused it to be ascribed at first to Lord Byron. Hope's *Origin and Prospects of Man*, published in 1831, displays distinct originality of mind, and he was one of the first to recognise the talents of Thorwaldsen, Flaxman, and Gibson.

* **Hornby, SIR GEOFFREY THOMAS PHIPPS** (b. 1825), admiral, is the son of a distinguished admiral, Sir Phipps Hornby, and a nephew of Sir John Burgoyne (q.v.). He entered the Royal Navy in 1840, and was present at the bombardment of Acre in 1840. In 1852 he became captain, rear-admiral in 1869, and vice-admiral in 1875. He was a Junior Lord of the Admiralty in Lord Beaconsfield's administration until 1878, when he was made commander-in-chief in the Mediterranean. It was under him that the British fleet made the famous passage of the Dardanelles, when the capture of Constantinople by the Russians seemed imminent. Created admiral in 1879, he was president of the Naval College, Greenwich, from 1881 to 1882, when he was appointed naval commander-in-chief at Portsmouth.

Horne, RICHARD HENRY (b. 1803, d. 1884), poet, dramatist and miscellaneous writer, first saw the light on New Year's Day 1803. Designed for the army, he was educated at Sandhurst; but he left the college abruptly, and at an early age entered the Mexican naval service, went through the Mexican War, travelled a good deal, and returned to

England, to start afresh as a literary man. Dating from 1828, when he contributed an ambitious poem called *Hecatompyles* to *The Athenæum*, he was a rapid and notable producer. His *Exposition of the False Medium and Barriers excluding Men of Genius from the Public* came out in 1833, and his *Spirit of Peers and People, a National Tragi-Comedy*, in 1834. For a time he edited *The Monthly Repository*, writing a great deal for it; and in 1837 he issued his tragedies of *Cosmo de' Medici* and *The Death of Marlowe*, and an edition of Hazlitt's *Characteristics*. About the same time he published an anonymous pamphlet, *The Russian Catechism, with Explanatory Notes*; and in 1839 he contributed an introduction to Black's translation of Schlegel's *Lectures on Dramatic Art and Literature*. His tragedy of *Gregory VII.* appeared in 1840; and in 1841 came out *Chaucer Modernised*, of which he did a large portion, as well as *The History of Napoleon*, written by Horne with assistance. His labours connected with the Royal Commission on the employment of children in mines, etc., kept him off literature to some extent for awhile; but in 1843 he made his most ambitious literary appeal to public judgment, in offering the epic poem *Orion* for one farthing. A small but notable dramatic piece called *The Fatches* appeared in *Finden's Tableaux* about this time. In 1844 came out *A New Spirit of the Age*, an admirable critical work, written by Horne with the assistance of Mrs. Browning (then Miss Barrett) and Robert Bell. In 1846 followed a volume of *Ballad Romances, The Good-natured Bear, a Story for Children of all Ages*, and *Memoirs of a London Doll, written by Herself, edited by Mrs. Fairstar*. Another pseudonymous work of Horne's was *The Life of Van Amburgh, the Brute Tamer, by Ephraim Watts*, and to the same period belongs *Murder Heroes*, which, before being printed under that title, had appeared in a periodical as *Gottlieb Einhalter, or the Philanthropic Assassin*. In 1848 came out the miracle-play of *Judas Iscariot*, and in 1850 *The Poor Artist, or Seven Eyesights and one Object*, and a reconstruction of Webster's *Duchess of Malft*. In 1851 the remarkable two-volume story *The Dreamer and the Worker* was reprinted from *Douglas Jerrold's Magazine*; and in 1852 Horne abandoned the exclusive calling of letters for that of roughing it in the gold-fields of Australia. There he filled many important posts, still sending home articles, etc., which appeared in *Household Words*, and writing poems and plays, many of which have never yet seen the light. His *Australian Facts and Prospects* (containing his Australian autobiography) was published in 1859, and in 1864 came out the lyrical drama *Prometheus the Fire-bringer*, five years before Horne's return to England. Since that time (1869) *The Great Peacemaker*, a poem on the first Atlantic cable, has been published (1872);

M.W.—19

Cosmo de' Medici has been republished with some miscellaneous poems (1875); and Mrs. Browning's letters to Horne, with Horne's comments on them and on contemporaries; have appeared (1877). In the same year he reprinted from a magazine his novelette *The Countess Von Labanoff, or the Three Lovers*. The tragedy of *Laura Dibalzo, or the Patriot Martyrs*, followed in 1880, *Bible Tragedies* and *King Nihil's Round Table* in 1881, and *Sithron the Star-stricken* in 1883. Horne's extraordinary literary merits, though fully recognised by his leading contemporaries forty years ago, have never been appreciated by the general public, who are liable to resent those qualities which were salient in all he did—great daring, advanced views, and a clear ulterior purpose, philosophic, moral, or educational. Indeed, he never wrote without having a purpose outside the region of pure art. *Orion*, *Cosmo*, *Marlowe*, and *Judas*, alone, would, nevertheless, have ensured a permanent reputation. The great mass of his extremely clever work may not improbably obstruct eventual justice to his masterpieces. [H. B. F.]

Horne Tooke. [TOOKE.]

HORNER, FRANCIS (b. 1778, d. 1817), political economist, a native of Edinburgh, was educated at Edinburgh University, and called to the Scottish bar in 1800. He came to London in 1802, and five years afterwards was called to the English bar. In 1806 he entered Parliament as member for St. Ives, in the Whig interest, and his knowledge of economical and financial matters soon made him one of the most convincing members of the House. Office was offered to him by Lord Grenville in 1811, but he refused it, on the ground that no man should accept a ministerial appointment if the income attached to it was indispensable to him. Mr. Horner was chairman of the Bullion Committee of 1810, and it was chiefly through his efforts that payment in cash was resumed, and the evils of an inconvertible paper currency, which financial ignorance had thrust on the kingdom, at last checked. His letters prove in what high regard he was held by Romilly, Lord Holland, and the other great Reformers of the time.

Memoirs and Correspondence of F. Horner, M.P., published in 1843.

* **HORSLEY**, JOHN CALLCOTT, R.A. (b. 1817), artist, the son of a musician of some eminence, was educated as an artist, and exhibited at the Royal Academy. In 1855 he was elected A.R.A.; R.A. in 1864, and treasurer of the Academy in 1882. Mr. Horsley has distinguished himself in many branches of his art: in fresco, notably at the competition for the decoration of Westminster Palace (his *Religion* securing a place in the House of Lords), in portraiture, in religious and in ideal subjects. The following of his productions are perhaps to be specially mentioned:—The

altar-piece of St. Thomas's Hospital, *The Healing Mercies of Christ*; *L'Allegro* and *Il Penseroso*, executed for Prince Albert; *The Holy Communion*, *The Gaoler's Daughter*, *The Banker's Private Room*, *Coming Down to Dinner*. His variety has not staid in his more recent exhibitions in the Royal Academy, among which may be mentioned, *Leading Strings* (1880), *Château Gardens at Fontainebleau* (1881), *A Merry Chase* (1882), *Wedding Kings* (1883), and *Hide and Seek* (1884).

Horsman, EDWARD (b. 1807, d. 1875), statesman, was educated at Rugby School, called to the Scottish bar in 1832, and entered Parliament in 1836 as member for Cocker-mouth, in the Liberal interest. He sat for Cocker-mouth until 1852, when he was defeated, and for Stroud from 1853 to 1868, after which he was returned for Liskeard, and again at the general election of 1873. For a brief period in 1841 he was a Junior Lord of the Treasury, and from 1855 to 1857 was Chief Secretary for Ireland. After that Mr. Horsman held no further official post, but was well known in Parliament as the "candid friend" of several Liberal ministries. "That superior person" was the description once bestowed upon him by Mr. Disraeli, and it was felt that the shaft was well aimed.

Hortense, QUEEN (b. 1783, d. 1837), sometime, Queen of Holland, was the step-daughter of Napoleon Bonaparte, by his wife Josephine, sister of Eugène Beauharnais, quondam Viceroy of Italy. In 1802 she was married to Louis, third brother of Napoleon, but the marriage was an unfortunate one. In 1804 Louis was proclaimed King of Holland, and Hortense Queen. Hortense is said not to have liked the Dutch, nor her husband; at any rate, she quitted Holland in 1807, and never saw her husband afterwards, except on one or two public occasions. Three sons were born of the marriage, the eldest of whom died in childhood, the second was killed in the insurrection in the Romagna of 1832, and the youngest became Napoleon III. By the Comte de Flahaut, or, perhaps more accurately, the Dutch Admiral Verhuell, she was the mother of the Duc de Nemours.

L. Wrazall and E. Wehrhan, *Memoirs of Queen Hortense*.

Houghton, RICHARD MONCKTON MILNES, BARON, F.R.S., LL.D., D.C.L. (b. 1809, d. 1885), was the only son of Robert Pemberton Milnes, of Fryston Hall, Bawtry Hall, and Great Houghton, by his marriage with a daughter of the 5th Viscount Galway. At Trinity College, Cambridge, where he took his Master's degree in 1831, his friends included Tennyson, Arthur Hallam, and Charles Buller. The fruit of his association with such companions was soon seen in his literary tastes and his early appearance as a writer of verse. On leaving Cambridge he proceeded to add the usual finishing touch to a "liberal education"

by a course of foreign travel. His poetry falls mainly within the ten years included between 1834 and 1844, and bears the impress of his experiences as a wanderer. *Memorials of a Tour in Greece*, chiefly Poetical, appeared in 1833; *Memorials of a Residence on the Continent*, and *Poems of Many Years*, in 1838; *Memorials of Many Seasons*, and *Poetry for the People*, in 1840; and *Poems, Legendary and Historical*, and his best-known work, *Palae Leaves*, dealing with Eastern life and thought, in 1844. Monckton Milnes, to use the name by which he is best known, was hardly a poet, but he had a happy taste in verse, and his pieces are almost always graceful, simple, and finished. In prose he was gifted with a bright and perspicuous style, which was, however, displayed chiefly in short essays, prefaces, memoirs, and introductions. His most considerable prose work, *Monographs, Personal and Social* (1873), consists merely of a collection of scattered essays written in the preceding twenty-seven years, and descriptive of some of the principal persons with whom he had been intimate, such as the Miss Berrys, Lady Ashburton, Sydney Smith, Cardinal Wiseman, Landor, and Humboldt, together with an interesting monograph on Heine, whom Monckton Milnes had succeeded in translating with more skill and apprehension than have distinguished most attempts to render Heine into English. He also edited Keats's *Life, Letters, and Literary Remains*, in 2 vols. (1848), and wrote a short memoir for the edition of Keats's *Poems* of 1864; *Boswelliana* (1855), a preface to David Gray's *The Luggie* (1862), and to Peacock's works, (1875), make up the list of his literary productions. It was more by reason of his conversational powers, and the unfailing interest he took in all literary work, than on account of his own writings, that he came to occupy the unique position that he long held in London society. He has been well styled the modern Mæcenas. His breakfast-table was the rendezvous of the young writers of the day, and there was not one who did not retain a warm memory of his brilliant host's kindly interest, and often very substantial assistance. Lord Houghton was not, however, simply a generous man of letters and friend of writers; he took a keen interest in political matters. He entered Parliament in 1837, as member for Pontefract, and sat for that constituency for twenty-six years, till called to the Lords in 1863. He began as a follower of Sir Robert Peel, but on the break-up of the Tories on the Corn Law policy he joined Lord John Russell, and afterwards, though he declined office, gave his consistent support to Palmerston. Foreign affairs especially excited his interest. He defended Italy against Austria in a telling pamphlet, *The Events of 1848*, which gave some offence to the Conservatives, and spoke eloquently on behalf of the Poles during the insurrection of 1863. In social

reforms, the first Juvenile Reformatory Bill was due to Monckton Milnes. He wrote on "the admission of the working classes as a part of the social system," in *Essays on Reform* (1867); and advocated in *The Real Union of England and Ireland* the concurrent endowment of the Protestant and Catholic churches. Besides occasional literary work, attendance at the House of Commons, and afterwards in the Lords' chamber, Lord Houghton exercised his remarkable influence in a number of useful capacities. He was president of the Newspaper Press Fund and of the London Library, and the Royal Literary Fund owed much to his support. He was trustee of the British Museum, a fellow of the Royal Society, foreign secretary of the Royal Academy, president of the Royal Society of Literature, and represented the Geographical Society at the opening of the Suez Canal. Among academic distinctions, it may be mentioned that he was hon. fellow of Trinity College, Cambridge, hon. D.C.L. of Oxford, and hon. LL.D. of Edinburgh. The last years of his life were not marked by any continued literary work, and on one of his frequent journeys abroad he was afflicted with a stroke of paralysis at Athens, which, although apparently slight, hastened his end.

Times, Aug. 12th, 1855; *Athenæum*, No. 3,016.
[S. L.-P.]

* **How**, THE RIGHT REV. WILLIAM WALSHAM, D.D. (b. 1823), divine, was born at Shrewsbury, and was educated at Shrewsbury School, and at Wadham College, Oxford (B.A. 1843). He became curate of St. George's, Kidderminster (1846), of Holy Cross, Shrewsbury (1848), and in 1851 he became rector of Whittington, Shropshire. In 1860 he became honorary canon of St. Asaph's Cathedral, and in 1869 was elected proctor for the diocese. In the same year Mr. How was select preacher at Oxford University. In 1879 he was appointed rector of St. Mary Axe, London, and Prebendary of St. Paul's, but in July he became Suffragan Bishop of Bedford (East London). Bishop How has displayed great energy and powers of organisation in his work in the East End, and was a member of the Royal Commission inquiry into the Housing of the Poor (1884-5). He administers the Bishop of Bedford's Fund, established in 1880. Many of his sermons and addresses have been published, and he is the author of a *Commentary on the Four Gospels*.

Howe, SAMUEL GRIDLEY (b. 1801, d. 1876), American philanthropist, graduated at Brown University in 1821, and began a medical career in his native city, Boston. In 1824 he fought with courage in the War of Greek Independence, and brought welcome contributions from America to Greece during the famine of 1827. On his return to Boston, in 1831, he established a school for the blind known as

the Perkins Institution, of which he became principal. He was also most successful in his treatment of deaf-mutes, and the case of Laura Bridgeman, a blind deaf-mute, whom he taught to spell, write and play the piano is justly celebrated. Dr. Howe also established a college for idiots in South Boston. He was a prominent abolitionist, and the author of an *Historical Sketch of the Greek Revolution*, besides numerous reports and treatises on the education of the blind and the idiotic.

J. W. Howe, *Memoir of Dr. S. G. Howe*.

* **Howells**, WILLIAM DEANE, (b. 1837), American novelist, and the son of a journalist, was born at Ohio. He was first a printer, and then became a member of the staff of the *Ohio State Journal*. His literary ability procured for him the post of United States Consul at Venice from 1861 to 1866, and on his return to America he published *Venetian Life and Italian Journeys*. Mr. Howells edited the *Atlantic Monthly* from 1871 to 1880. Among his writings may be mentioned *Poems of Two Friends*, himself and J. J. Pratt (1860), *Poems* (1873), *Life of Rutherford B. Hayes* (1877). His celebrity rests almost entirely upon his novels, which, like those of Mr. Henry James (q.v.), are full of delicately finished etchings of character, and which have been very justly described as "the strongest exponents of that union of national feeling and extra-national judgment which constitutes the representative quality of American genius." Mr. Howells's best-known novels are *A Chance Acquaintance* (1873), and *A Foregone Conclusion* (1874), and he has also written *No Love Lost* (1868), *Suburban Sketches* (1870), *Their Wedding Journey* (1872), *Counterfeit Presentment and A Day's Pleasure* (1876), *The Parlour Car and Out of the Question* (1877), *The Lady of Arcoostook* (1879), *The Undiscovered Country* (1880), *A Fearful Responsibility* and *Dr. Breen's Practice* (1881), *A Modern Instance* (1882), *A Woman's Reason* (1883), *The Register Farce and The Rise of Silas Lapham* (1884), *An Indian Summer* (1886). His play, *Yorick's Love*, has been acted in this country, as well as in America. A volume of critical and biographical notices on the Italian poets was published in 1886.

Mrs. S. Orr, in the *Contemporary Review*, vol. xxxvii.

Howitt, WILLIAM (b. 1792, d. 1879), and * **MARY** (b. 1805), miscellaneous writers, belonged to Quaker families in the Midlands. William Howitt showed a precocious tendency, and began to publish verses as early as 1808. In his twenty-eighth year he married Miss Mary Botham, a lady of remarkable talent. The newly wedded couple immediately took to literature as a profession. In 1823 they published their first volume of poems, *The Forest Minstrel*; this attracted favourable notice, and was followed by a narrative poem, *The Desolation of Eyam*, in 1827. Meanwhile,

William Howitt had published alone, in 1824, *A Poet's Thoughts at the Internment of Lord Byron*. In 1831 he produced *The Book of the Seasons*, the most popular of his early works. A rather fiercely polemical work, *The History of Priestcraft*, followed in 1834, and had a great success. The publicity forced upon Mr. Howitt in consequence—he had been made an alderman, and was being urged to enter upon politics—forced him to leave Nottingham for Esher. Among his works at Esher, *Pantika*, a romance, is the most remarkable. In 1838 appeared his popular *Rural Life in England*. In 1840 the Howitts settled at Heidelberg for the education of their children. Here their attention was drawn to the literature of the North. They immediately resolved to introduce Fredrika Bremer and Hans Andersen to the English public, and while Mrs. Howitt translated the tales of those authors, Mr. Howitt published, in 1845, her *Life in Dalecarlia*. In 1847 he brought out perhaps his most original and delicate composition, *The Homes and Haunts of the British Poets*. He was now largely engaged in journalistic work. In 1846 Howitt became editor of the *People's Journal*; but in 1848 began to publish on his own account a rival serial, *Howitt's Journal*, which did not run, however, to more than three or four volumes. A visit to the Australian gold-fields in 1851 resulted in several popular works, such as *Land, Labour, and Gold*, and *The History of Discovery in Australia*. He next wrote *Illustrated History of England* (1854–61). Amongst the many other works which he wrote in conjunction with his wife is *Ruined Abbeys of Great Britain*. Mrs. Howitt is the authoress of *Steadfast Gabriel* (1881), *Tales of English Life* (1881). Most of the writings of William and Mary Howitt have proved to be ephemeral, but their influence has always been healthy and noble in its tendency. In their joint works they are as difficult to dis sever in thought, the Corn-Law Rhymer has remarked, “as the heads of William and Mary on the face of an old coin.” About the year 1873 they became converts to spiritualism.

Mrs. Howitt Watts, *Pioneers of the Spiritual Reformation* (1883); London Standard, March 3rd, 1879; Godey's Lady's Book (1858).

Howson, THE VERY REV. JOHN SAUL (b. 1816, d. 1885), took a distinguished degree at Cambridge in 1837, and entered holy orders in 1845. In 1849 he became principal of the Liverpool College, and in 1867 Dean of Chester. He was a prolific writer, dealing chiefly with theological and antiquarian subjects. He was the author of the *Metaphors, Character, Companions, and Scenes from the Life of St. Paul* (1864–71), *The Miracles of Christ* (1871–7), *Horæ Petrinæ* (1883), *Chester as it was* (1872), *The River Dee, its Aspect and History* (1875), and *The Life and Epistles of St. Paul* (1852), which he wrote in

conjunction with the Rev. W. J. Conybeare, and which is an esteemed authority.

Huber, FRANÇOIS (b. 1750, d. 1831), Swiss naturalist, was a native of Geneva. At the age of eighteen he became totally blind from over-study, but aided by his wife Marie Aimée, and servant, François Burnens, he was able to continue his researches in natural history. *Nouvelles Observations sur les Abeilles* (1st ed. 1792, trans. 1806) paved the way for Sir John Lubbock's wonderful investigations in the manners and customs of the bee-tribe, and he collaborated with Senebier in the valuable *Mémoire sur l'Influence de l'Air dans la Germination*. Huber's son, Pierre Huber (b. 1777, d. 1840), was the author of a great monograph on ants, *Recherches sur des Mœurs des Fourmis indigènes* (1st ed. 1810).

Hudson, GEORGE (b. 1801, d. 1871), the notorious “Railway King,” was the son of a small Yorkshire farmer, and was early apprenticed to a draper at York. His apprenticeship over, he was immediately offered by his employers a share in their business. The firm, under the name of Nicholson and Hudson, was successfully carried on till 1828, when a distant relative unexpectedly bequeathed Mr. Hudson a legacy of £30,000. Mr. Hudson shortly afterwards retired from the haberdashery establishment, took part in the politics of the city, became local head of the Tory party, and in 1837 was elected Lord Mayor of York. In 1833 he made his first venture in speculation by successfully establishing the York Banking Company, a joint-stock concern. He next became the guiding spirit of the York and North Midland Railway Company, which was also a success. The general adoption of his amalgamating schemes, and of the system of uniform working of railways, brought him a prestige. Railway boards competed to have him for their chairman, and the public had faith in his measures. He soon became the arbiter of capitalists—in fact, a railway king. In 1845 he was elected M.P. for Sunderland, and at once took his seat on the front Opposition bench, beside the Protectionist leaders. His power, however, culminated shortly after in the railway mania of 1847–8, and he disappeared from the political scene in 1849. Charges were brought against him of having “cooked” accounts of various companies. Legal proceedings followed, which overthrew his credit and despoiled him of his wealth. In his later years he lived on the charity of friends.

Spectator, Dec. 23rd, 1871; *Fraser's Magazine*, Aug., 1847.

* **Hughes,** THOMAS (b. 1823), author and lawyer, is the son of the late Mr. John Hughes, of Donnington Priory, Berks. He went first to Twyford School, and then to Rugby, to which great school, and its headmaster, Dr. Arnold, he afterwards raised so noble a monument in *Tom Brown's School*.

Days. Mr. Hughes took his B.A. degree from Oriol College, Oxford, in 1845, and was called to the bar at Lincoln's Inn in 1848. He pushed at once into the movement for the improvement of the social and sanitary condition of the London poor, of which Charles Kingsley and F. D. Maurice were the apostles, and in 1865 was returned for Lambeth as a Radical. His political life came to an end in 1874, when he withdrew from the poll at Marylebone. He had been elected for Frome in 1868. In 1869 he became a Queen's Counsel, and was appointed a county-court judge in 1882. It is unnecessary to sound the praises of Mr. Hughes's *Tom Brown's School Days*, by far the best description of public-school life that ever has been, or is ever likely to be, written. The first edition was published in 1857, and it was followed by the less successful *Tom Brown at Oxford* (1861). Mr. Hughes has further written interesting biographies, *Memoirs of a Brother*, G. C. Hughes (1873), and a *Memoir of Daniel Macmillan* (1882), and a biographical preface to Kingsley's *Alton Locke*. *The Scouring of the White Horse* was published in 1859. His publications of a social nature include *A Layman's Faith*, originally published in *Tracts for the People*; and *The Old Church: What shall we do with It?* He has edited Mr. Russell Lowell's *Biglow Papers*, F. D. Maurice's *Friendship of Books, A Manual for Co-operators* (1881), and letters from his sons, entitled *Gone to Texas* (1884).

HUGO, VICTOR MARIE (b. Feb. 26th, 1802, d. 1885), French poet and novelist, was born at Besançon. His father, brothers and sons were all distinguished in literature, but Victor surpassed them all. His father, General Count Hugo, a soldier of the Republic, and a general of the Empire, retired into private life after Waterloo, and devoted the last thirteen years of his life to writing memoirs and military works. His eldest brother, Abel Hugo (b. 1798, d. 1855), was first an officer, then a writer. He embraced different subjects, but never rose above mediocrity. The second, Eugène Hugo (b. 1801, d. 1837), wrote when very young an ode on the death of the Duc d'Enghien, but is especially known for having created, with Victor Hugo, a literary paper called *Le Conservateur Littéraire*. Victor Hugo followed his father to Italy, then to Calabria, of which General Hugo was governor. He saw Paris for the first time in 1809, when Mme. Hugo, with her three sons, settled in the Impasse des Feuillantines, a quiet retreat in the Faubourg St. Jacques. His first teachers were his mother, M. de la Rivière, and General Lahorie, a political exile. Hugo's earliest playfellow was Mlle. Foucher, who was one day to become his wife. In 1811 he went with his mother to Madrid to join his father, then at the court of King Joseph. He

was there sent to the college for the sons of noblemen. Next year he returned to Paris, and continued his education at the "Pension Cordier." He was then already writing ballads, odes, and satires, and at the age of twelve composed his first tragedy, *Irtamène*. In 1817 he competed for the academical prize for poetry. The subject was *Les Avantages de l'Étude*, in which he speaks of himself as a poet of fourteen. The academicians could not believe that he had given the right age, and granted him only an honorary mention. With his certificate of birth in his hand he proved that he had stated the right age, but it was too late. During the Hundred Days, in spite of his vocation for poetry, he was, with his brother Eugène, destined to follow the military profession, and sent to a preparatory school, but at last his father let him follow literature. Unwilling to compete any longer for the prizes of the Paris Academy, he sent for three consecutive years three poems to the Academy of Floral Games at Toulouse, and each time got the prize. Chateaubriand, then in the zenith of his glory, nicknamed him "l'Enfant Sublime." He was but nineteen when he lost his mother. It was then he wrote his first novel, *Han d'Islande*, the hero of which is so terrible, and yet so attractive. This novel, written in 1823, and the next, *Bug Jargal* (1825), mark Hugo's separation from the Classical style, and the advent of the Romantic school of which he was to become the chief. In 1828 Hugo's early poetical productions were published under the title of *Odes et Ballades*, but the complete edition appeared in 1828. The following year Hugo brought the Romantic school on the stage with a drama, *Cromwell*. In 1829 appeared a second volume of poems, under the title of *Les Orientales*, and the following year, *Le dernier Jour d'un Condamné*. In the meanwhile appeared further dramatic works, all of the new school:—*Marion Delorme*, temporarily forbidden by the "Censure"; *Hernani*, and *Le Roi s'amuse*, played on Nov. 22nd, 1832, and forbidden after the first night. The second performance took place exactly fifty years after, on Nov. 23rd, 1882, and Victor Hugo was present. Then came *Lucrèce Borgia*, and *Marie Tudor* (1833), *Angelo* (1835), *Ruy-Blas* (1838), and *Les Burgraves* (1843). Hugo's most remarkable historical novel, *Notre-Dame de Paris*, appeared in 1831. In the same year another volume of poems, *Les Feuilles d'Automne*, made its appearance. Then followed, in quick succession, *Les Chants du Crépuscule* (1835), *Les Voix intérieures* (1837), *Les Rayons et les Ombres* (1840). In the meantime several works in prose had been published—*Étude sur Mirabeau*, *Littérature et Philosophie mêlées*, and numberless articles which appeared in the *Revue de Paris*, the principal of which is *Claude Gueux*. In spite of his ultra-romantic style, so contrary to the

traditions of the French Academy, such was his great popularity and genius that he was at last elected a member in 1841. He pronounced his *discours de réception* on June 3rd. It was M. de Salvandy, the president of the day, who received him. He shortly afterwards made a tour on the Rhine, and next year (1842) published *Le Rhin* (two volumes of letters), a magnificent description and relation of his voyage. He soon made another voyage, and while in Spain was suddenly recalled to Paris by a terrible boating accident near Le Havre, which cost the life of his daughter, Leopoldine, and his son-in-law, Charles Vacquerie. This sad event also deprived of her reason another daughter of Victor Hugo, Adèle, the only child who survives him, and whom he used to go and visit every week in the *maison de santé* where she was confined. His last visit was but a few days before his death. In 1845 Victor Hugo was made a peer of France by King Louis Philippe, and the king's eldest son, the Duke of Orleans, with his wife, went to congratulate him in person when he made his *discours de réception* at the Luxembourg Palace. Ever since the year 1830 Victor Hugo was staying in the Place Royale, in a stately and grandiose mansion of the Louis XIII. style, where his old friends, and also the younger generation, were hospitably received. All the great men in arts and literature were seen at his homely receptions: Paul Foucher, Alexandre Dumas, Emile and Antony Deschamps, Alfred de Vigny, Louis Boulanger, Méry, Gustave Planche, Sainte-Beuve, Alfred de Musset, Alphonse Karr, Théophile Gautier, Paul Meurice, Laurent Pichat, Gérard de Nerval, Arsène Houssaye, Léon Gozlan, Jules Sandeau, and numberless others, formed round the man whom they delighted in calling "the master," an intrepid phalanx under the banner of the Romantic school. Victor Hugo's receptions were resumed when he returned to Paris after years of exile, and lasted till his death. The Revolution of 1848 threw Victor Hugo into the political life. He was elected a member of the constituent assembly by the electors of Paris, and appears on the list between the names of Pierre Leroux and Louis Napoléon Bonaparte. In that assembly he invariably voted with the Conservative party. He claimed the abolition of the penalty of death in political matters, supported all the decrees against revolutionary measures introduced by the Radical members of the Assembly, and also voted against the amendment of Deputy Grévy (the present President of the French Republic) on the question of the election of the President of the Republic. This amendment was to the effect that the President should be elected not by universal suffrage, but by the vote of the assembly, and if carried would have rendered impossible the election of Louis

Napoléon Bonaparte. Even after the election of Bonaparte, on Dec. 10th, and until the dissolution of the Assembly, Victor Hugo continued to vote with the party which assumed the name of *le parti de l'ordre*. Very different was his attitude in the next, the Legislative Assembly to which he was again elected tenth out of twenty-eight, by the Département de la Seine. He had been converted to republican and democratic ideas by another former Conservative and Royalist, the publicist, Emile de Girardin (q.v.). Victor Hugo soon became one of the chiefs, and especially one of the principal orators of the ultra-republican party. With all the warmth of a new convert he spoke in favour of, and voted for, all the measures he had condemned in the previous Assembly, and was bitterly reproached for his change of opinions by the Moderate Republicans, the Royalist and the Catholic members, and especially by M. de Montalembert, who threw in his teeth the Royalist poems of his youth, and the moderate works of his manhood. At the same time he fought for the cause of revolution in a newspaper (*L'Événement*) which he founded in 1848, and which, after being condemned and suppressed, reappeared under the title of *L'Avènement*. Victor Hugo also seized every opportunity of attacking the President of the Republic, whose ambition of becoming an emperor he already feared. After the *Coup d'État* of Dec. 2nd, 1851, Victor Hugo was on the first list of proscription of the most ardent enemies of the then existing Government. He first went to Brussels, where he published, in 1852, that most biting satire, *Napoléon le Petit*; the following year appeared a volume of poetry written in the same spirit, *Les Châtiments*. Victor Hugo went afterwards to London, then to Jersey, with his family and Auguste Vacquerie, the brother of Charles Vacquerie. From the windows of his study Victor Hugo could see the coast of France, that he loved so much. But he was yet considered as being too near by the Government of the period, and in 1855 all the French exiles were expelled from Jersey by the order of the Palmerston Government. It was then that Victor Hugo settled at Hauteville House, Guernsey, where he remained till the fall of the Empire. Victor Hugo was greatly respected at Guernsey, and made himself especially popular by a yearly treat he gave to one hundred poor children. There he wrote *Les Contemplations*, which were published in 1856 (2 vols.), and in 1859 another grand poetical composition, *La Légende des Siècles*, 1st series (2 vols.). On Aug. 15th of that year, after the successful campaign of Italy, a general amnesty was granted in all political cases, but several refugees refused to avail themselves of the opportunity of returning to France, and amongst the principal ones were E. Quinet, L. Blanc, and V. Hugo, who sent to the decree a haughty protestation. He

again refused to profit by the fresh amnesty granted ten years later, in 1869. The further poetical productions of Victor Hugo were:—*Chansons des Rues et des Bois* (1865); and after his return to Paris, *L'Année terrible* (1872); *La Légende des Siècles* (nouvelle série, 1873); *L'Art d'être Grand-père* (1877); *Le Pape* (1878); *La Pitié Suprême* (1879); *Religions et Religion* (1880); *L'Âne* (1880); *Les Quatre Vents de l'Esprit* (1881); *La Légende des Siècles* (dernière série, 1883). Victor Hugo's most celebrated prose work after *Notre-Dame de Paris*, is undoubtedly *Les Misérables*, that great dramatic novel translated beforehand in nine different languages, which appeared on the same day (April 3rd, 1862), in Paris, Brussels, London, New York, Madrid, Berlin, St. Petersburg, and Turin. It has since been translated into twelve more languages. Victor Hugo wrote four more descriptive novels and prose works:—*Les Travailleurs de la Mer* (1866), *L'Homme qui Rit* (1869), *Quatre-vingt Treize* (1872), and *L'Histoire d'un Crime* (1877). The greatest Parisian triumph of Victor Hugo during the years of his exile was the revival of *Hernani*, which was played at the Théâtre Français in 1867, on the occasion of the Universal Exhibition. The enthusiasm was indescribable. There were, after 1870, several revivals of his former pieces, but since *Les Burgraves* (1843), he wrote nothing for the stage until the year 1882, when *Torquemada* appeared. It is, however, supposed that *Torquemada* was one of Victor Hugo's earlier works, put aside and then revised by the author. Madame Victor Hugo died at Brussels in 1868. Victor Hugo, his sons, and some political exiles and friends of the family, accompanied the body as far as the frontier of France, when some other friends took charge of it and saw it conveyed to Paris, where the funeral took place. Victor Hugo returned to Paris on Sept. 5th, 1870, the day after the fall of the Empire, and, except on some very few occasions, never left it to the day of his death. A member of the National Assembly, he was made a senator for the Département de la Seine in the year 1879, and re-elected the first on the list in 1882. On Feb. 26th, 1881, Victor Hugo entered his eightieth year. This was made the occasion of a magnificent national demonstration organised in Paris in honour of the poet. It was partly renewed on Feb. 26th, 1882, and Victor Hugo, hale and hearty, lived to see three more birthdays, which were each time celebrated by a banquet organised by his friends. He died on May 22nd, 1885, and it was decided that he should have a national funeral at the expense of the state. On May 26th a decree pronounced the secularisation of the Pantheon, where Victor Hugo was to be buried. On May 31st the body was laid in state under the *Arc de Triomphe de l'Étoile*, and on June 1st the funeral took place. In literature Victor Hugo is the undisputed chief of the Romantic school, and the greatest

French poet, novelist, and historian of the nineteenth century. For the stiff rules of classical tradition he substituted life, poetry, and action. He revived love for mediæval art, literature, and architecture, and gave a great impetus to the artists of a whole generation.

To Victor Hugo's works already mentioned might be added a few of lesser importance which cannot easily be classified:—*Amy Robart*, a drama written in 1825, and played at the Odéon Theatre, but without success; *La Emeralda*, an opera adapted from *Notre-Dame*, and of which Mlle. Berlin composed the music; a series of articles, translations, and pieces of poetry which appeared in the following papers: *Le Conservateur Littéraire*, *La Revue des Deux Mondes*, *La Revue de Paris*, *Le Globe*, *L'Étincelle*, and *L'Aténisme*; three speeches pronounced at the French Academy, his speeches pronounced in the house of peers, and in the republican assemblies of the second and third republic; his addresses to his electors; a series of speeches called *Discours de l'Exil*, and which appeared at Brussels in 1853; a collection of light poetical works suitable for children, and called *Les Enfants*; *Livre des Mères* (1858); *Littérature et Philosophie naïves* (1864, 2 vols.); *William Shakespeare* (1864), and a series of sketches entitled *Actes et Paroles*, and subdivided into three parts: *Avant l'Exil*, *Pendant l'Exil*, and *Depuis l'Exil*. Victor Hugo was also a remarkable draughtsman, and a clever caricaturist. He drew all the illustrations of a work of his called *Livre d'Étrennes*, and also contributed to a literary and artistic publication called *L'Artiste*. Two of his most important sketches, *Un Château en Espagne* and a ship in a storm, entitled *In Mare Malus Et Crux*, have been engraved. There are several editions of Victor Hugo's works. The oldest, published in 1838 in 22 vols., has been illustrated by Raffet, Tony Johannot, Colin, and L. Boulanger, all of them friends of the poet. Another one was published by Charpentier. Victor Hugo himself superintended the publication of a general and final edition of his works (1860 and following years) in 40 vols. There is also an autobiography of the poet, entitled *Victor Hugo: raconté par un Témoin de sa Vie* (1863, 2 vols.), and written, it is said, by Madame Hugo. Since the poet's death, his executors, one of whom, M. Lockroy, married Charles Victor Hugo's widow, found amongst his papers several manuscripts, and numberless unpublished pieces in prose and poetry. After careful selection they will gradually appear, and be added to the final edition. The first to be published will be a poem of 6,000 verses, entitled *La Fin de Satan*. The publishers of the *Édition Définitive* have also issued a volume of extracts of all the works of the veteran poet. This book is called *Édition du Monument*, the reason being that the financial proceeds of the publication are to be devoted to contribute to the funds now being collected for a national monument. The best English studies of the poet are those of Mr. Swinburne and Mr. D. Cappon, and among the numerous biographies of the poet, besides *Victor Hugo raconté par un Témoin de sa Vie*, may be mentioned *Victor Hugo*, by Paul de Saint-Victor; *Victor Hugo et son Temps*, by H. Barbon; *Victor Hugo*, by E. de Mircourt; and *La Jeunesse de Victor Hugo*, by M. de Challes. The first anniversary of the poet's death was commemorated by the publication of a series of illustrations of his works by M. François Flameng, which will be included in the definitive edition. [H. L.]

Hullah, JOHN PYKE (b. 1813, d. 1884), a native of Worcester, became a pupil of Horsley, a glee-writer of some celebrity,

and in 1832 entered the Royal Academy. His first important production, *The Village Coquettes*, to which Charles Dickens wrote the words, was produced by John Braham at the St. James's Theatre in 1836, and it was followed by the *Barber of Bassora* (1837), and the *Outpost* (1838), both produced at Covent Garden. In 1840 he adopted Wilhem's *Orphéon* system of singing, and established a training college at Battersea, which was a great success. In 1847 St. Martin's Hall, in Long Acre, was built for him by his friends, but it was unfortunately burnt down in 1860. He became professor of music at King's College, London, and from 1874 to 1882, when he was succeeded by Dr. Stainer, was Inspector of Training Schools for the United Kingdom. He received the degree of LL.D. from Edinburgh University in 1876, and in 1882 received a Civil List pension. Dr. Hullah was a copious author; two courses of lectures were republished under the titles of *A History of Modern Music*, and *The Transitional Period of Musical History*, and he wrote some good educational works, the *Grammar of Harmony*, the *Grammar of Counterpoint*, etc. His collections of part music and vocal scores are of considerable value.

Life of John Pyke Hullah, by his widow (1886).

* **Humbert I.**, KING OF ITALY (b. March 14th, 1844), the eldest son of Victor Emmanuel, received, under his guidance, an excellent political and military education. In 1859, then only fifteen, he followed his father in the field, and learnt and saw with his own eyes how Victor Emmanuel fought for Italy. Humbert took an active part in the reorganisation of the kingdom of the Two Sicilies, and in the visit he paid to Naples and Palermo in 1862 he was enthusiastically received. During the war against Austria in 1866, he and his brother Amadeus, Duke of Aosta, distinguished themselves, particularly at the disastrous battle of Custoza. Humbert, then Prince of Piedmont, would certainly have lost his life, had not the 4th battalion of the 49th Regiment formed in haste a square, and enclosed him in their midst. He married, on April 22nd, 1868, at Turin, his first-cousin, Princess Margherita of Savoy, "the angel of Italy," daughter of Ferdinand, Duke of Genoa, brother of Victor Emmanuel, who died in 1855. From that union a son was born in Naples, Nov. 11th, 1869, who received the name of Victor Emmanuel, and the title of Prince of Naples. Humbert succeeded his father on Jan. 9th, 1878, as Humbert I., or more properly, Humbert IV. It was a time of great difficulty. The ministry was unpopular, the Republican party unsettled. But the new king was assisted by fear of the Clerical party, by the death of the Pope, and the general horror at the attempt of a would-be assassin. As he was visiting Naples with his queen in Nov., 1878, a lunatic

from Salerno, Passanante by name, attempted his life with a poniard, but he received only a slight scratch. Passanante was condemned to death, but the king generously commuted the sentence into imprisonment for life. When, in 1884, the cholera was causing frightful ravages in Naples, Humbert, against the advice of his ministers, hastened there, and his courage and generosity were much admired. Under him the kingdom has considerably increased in material prosperity, and political parties have begun to crystallise, making durable Governments possible. The visit of King Humbert to Vienna in 1881, was a matter of some importance, as it marks the admission of Italy to the triple alliance of the Emperors. His Government has shown considerable hostility towards France, particularly when the Republic annexed Tunis in 1880; and a strong disposition to co-operate with England in questions of international importance, such as the financial condition of Egypt. In 1885, during the English campaign in the Soudan, a body of Italian troops occupied Massowah, but the acquisition is not likely to be of permanent value, though the supposed defensive alliance of Italy with Great Britain was considered of some importance at the time, and was made the subject of several sarcastic allusions.

Humboldt, FRIEDRICH HEINRICH ALEXANDER, BARON VON (b. 1769, d. 1859), a famous German geographer and naturalist, was born at Berlin, where his father held the post of royal chamberlain; but from the year 1779 the education of himself and his elder brother, who was scarcely less eminent (q.v.), devolved on the mother, a woman of much ability, though imbued with many extremely aristocratic prejudices. For a time the future naturalist displayed little of the comprehensive intellect for which he was subsequently celebrated, and his health was very feeble. But in the passion for collecting and arranging plants, shells, and other natural objects, the "little apothecary," as he was called, proved that the boy was father to the man. Intended for a political career, he joined the now vanished University of Frankfurt-on-the-Oder, in order to study finance, but here, as at Göttingen (where he was a pupil of Blumenbach and Heyne), Jena, and Berlin, science claimed the greater portion of his attention. Entering the famous mining academy of Freiberg, he listened to the lectures of Werner, and had for his bench-fellow Robert Jameson. An excursion up the Rhine resulted in his first work, *Mineralogische Beobachtungen über einige Basalte am Rhein* (1790), and his investigation of the mines of Freiberg, in the *Flora Subterranea Freibergensis Specimen* (1793), while the range of his studies may be judged from the fact that in 1797 he printed two volumes on muscular irritability, which in its French translation had the honour of being

annotated by Blumenbach himself. By this time Humboldt had received the appointment of mining assessor, and, in discharge of his studies, spent some years chiefly in Upper Franconia. Hitherto, however, he had only been preparing himself for the future labours of his life. The friendship which he had contracted at Göttingen with George Forster, the companion of Cook on his second voyage, and the excursions they took through Belgium, Holland, England, and France, had imbued him with an eager desire for distant exploration. Humboldt, therefore, eagerly studied languages, astronomy, meteorology, and other sciences, though his adhesion to the philosophical coterie of Weimar for a period led him into the airier world of metaphysics. However, *Die Lebenskraft, oder die rhodische Genius*, which he contributed, in 1795, to Schiller's *Die Horen*, was almost his only excursus in that direction. It was not until the death of his mother in 1796 that he felt free to follow the bent of his own inclinations. At first he had intended joining Captain Baudin on his voyage of circumnavigation. Then he and Bonpland, the designated botanist of the proposed voyage, hoped to have formed part of Bonaparte's expedition to Egypt, but the means of transport being insufficient, they were compelled to turn their eyes to the New World. Armed with powerful introductions from the Madrid authorities, the two friends set out on their memorable journey on June 5th, 1799, and after visiting Teneriffe, and making many observations on the Peak, landed at Cumana, in Venezuela, on July 16th. The next four years were spent in exploring a vast extent of country in Venezuela, Grenada, Ecuador, and Peru, after which Humboldt sailed for Mexico, which he crossed from west to east, afterwards visiting Cuba, and collecting materials for his *Essai politique sur l'île de Cuba* (1826). Thence he proceeded by sea to Philadelphia, from whence he sailed to Bordeaux, and lived for awhile in Paris, in order to arrange the vast collections and notes in every department of science, which he had accumulated with so much labour and skill and cost. After a visit to Italy, and a political mission, with Prince Wilhelm of Prussia, from Berlin to Paris, he in 1807 settled down in that city, which he regarded as his true home up to the year 1827. Germany in these turbulent times was a country ill-fitted for preparing such a work in as that on which Humboldt was engaged, or for such researches as those with which he continued to occupy the little leisure this labour left him. But in 1807 the first volume of his great work appeared, and, at uncertain intervals volume after volume followed, until, in 1817, when the last was issued, the narrative, with the subsequent appendices, comprised thirty folio, quarto, and octavo volumes, and atlases, containing no less than 1,425 copperplates. It was not really one work, but seven

M.W.—19*

systematic treatises. Even then it was incomplete, and to the end of his life he was every now and again bringing out addenda, expansions, or corrections of this monumental report. Immediately he became the most famous of *savants*, and a person almost as much talked about as the "Corsican ogre." Honours out of number were heaped upon him. His king gave him the post of royal chamberlain, with a pension—which for Prussia was handsome—without exacting any duties in return, and would fain have made him Minister of Public Instruction. In 1814 he came with the Allied Sovereigns to England, and in 1817 accompanied the king to the Congress of Aix-la-Chapelle. Five years later he served in the same capacity at Verona, visiting on the way Rome and Naples. Still Paris was his home, and when at last he was summoned to Berlin, and its narrow, pedantic, "nebulous society," which he never ceased to detest, he left the former place with sincere sorrow. At first he tried to break the monotony of his life by frequent visits to Paris. By-and-by, however, the friendship of the king and his successor, if they did not reconcile him to Berlin, kept him there, and for the next thirty years Potsdam, or the Prussian capital, knew no more familiar figure than the somewhat self-conscious, very benignant form of the famous traveller, generally with a book or a pamphlet in hand, moving along its streets on his way to or from the court or the academy. Scientific work occupied much of his time, and the great influence which he possessed helped him to lay the foundation of magnetic science, by inducing Russia and other Governments to found magnetic observatories, or order magnetic surveys of their territories. In 1829 he made a journey across part of Siberia, which, though rapid, resulted in several valuable discoveries, and between 1830 and 1848 he was sent on various diplomatic and other missions to France, England, etc., lecturing in the interval on *Cosmos*, publishing his *Examen critique de la Géographie du Nouveau Continent* (1835-8), his *Cosmos* (1845-8), and many other memoirs and works of a more or less popular character. This remarkable series of labours was in great part undertaken when far advanced in life, during what he used to call his "improbable years;" but up to the last his intellect was—for science—sound, though in other matters he displayed a deplorable amount of weakness. He never married nor, it is believed, ever entertained the thought of marriage. But, as one of his biographers (Miss Clerke) remarks, he was under more than "matrimonial bondage" to his old servant, Seifert, to whom, before his death, he made over his entire property, notwithstanding the affection the donor entertained for his brother's family. Humboldt had so long been the pet of the great world of two capitals that he was unhappy when not basking in royal sunshine.

Indeed, he latterly failed to understand that what was of interest to him, to his gracious Sovereigns, Wilhelm III. and Wilhelm IV., might not be so entrancing to a younger prince and court. In truth, to the young people of the last years of his life the aged *savant* was something of a bore. Prince Bismarck gives a trenchant picture of the evenings at the sleepy court of the present Prussian king's predecessor—Humboldt reading out to the ladies, while half of the courtiers were asleep; the conversation at supper—Humboldt trying to monopolise the talk, and nobody except his immediate friends listening to him. But all the time, spite of his chagrin, the philosopher on no condition omitted to make an excellent supper. It may from this be inferred that he was somewhat arbitrary, transparently vain, very egotistic, and though warm in his friendships, and social, if not domestic, rather inclined to be snappish in his *unprinted* criticism on his contemporaries. His worst feature was his habit of being everything to every man, and his unwillingness to acknowledge his extensive obligations to those whose ideas he had assimilated, except in the form of laudatory citations. But, on the other hand, the services he rendered to science raise him head and shoulders above all of his contemporaries. He was the founder of modern meteorology and magnetism, and laid the broad foundations of our knowledge of the natural history and geography of the New World. No department of science did he touch which he did not adorn, and it is impossible to point to any of his numerous works and memoirs which we would willingly lose. In botany his treatise on the geography of plants is extremely important; in zoology and anatomy he has left behind him proofs of vast industry and knowledge, and in his *Vues des Cordillères et Monuments des Peuples indigènes de l'Amérique* (1810) are to be found excellent observations on the ethnology of the American continent. Geology has equally benefited by his researches, and in his *Essai politique sur le Royaume de la Nouvelle-Espagne* (1811) philosophical reflections and statistical facts bearing on political economy abound. Finally, the respiration of fishes, reptiles, and fungi, the chemical constitution of the air, and the ways of electric eels, may be cited among the many subjects with which this many-sided man busied himself. He died within six months of entering his ninetieth year. His funeral was a state ceremony, in which the principal part was taken by the present German emperor, then prince-regent; and ever since the world has honoured his name. Cities, countries, lakes, and rivers are named after him. Statues of him have been erected in the Old World and the New, and his first centenary (Sept. 14th, 1869) was celebrated with the utmost enthusiasm.

Many biographies of Humboldt have appeared. The fullest of these is that of Bruhms and his

coadjutors, of which there is an English translation (1873) by the Misses Lassell. In the German edition there is a bibliography of his literary labours, and most of his more popular works have appeared in English versions. His letters to Varnhagen von Ense (1861) have also been translated, and in this volume, as well as in his correspondence with "einem jungen Freunde" (Friedrich Althaus), with Heinrich Berghaus, with Pictet, with Bunsen, and with his brother, all of which have been published, may, with his *Correspondance scientifique et littéraire* (1865-9) afford a fair idea of this remarkable man's life, labours, and character.

[R. B.]

Humboldt, KARL WILHELM VON (b. 1767, d. 1835), the elder brother of Alexander (q.v.), is almost as distinguished in literature as the latter was in science. Like his brother, he was educated at Berlin, Göttingen, and Frankfort-on-the-Oder, the subjects to which he principally devoted himself being antiquities, philology, the philosophy of Kant, art and law—themes which he afterwards pursued during the usual grand tour. Receiving the rank of Counsellor of Legation, he might, through the interest of his family, have obtained immediate employment. But literature had already weaned his affections from diplomacy. In the years 1795 and 1797 he had brought out translations of several of the Odes of Pindar, which the rather artificial taste of the period affected to hold in considerable esteem, though a critical essay on Goethe's *Hermann und Dorothea* (1800) gave him a firmer claim as a scholar with deep æsthetic insight. His marriage with a wealthy lady of rank still more disinclined him for an official career, while his friendship with Schiller led to his busying himself with poetry and kindred pursuits. For some years he remained in retirement on his wife's estate in Thuringia, or engaged in philological investigations in France and Spain, until in 1802 he was recalled to take up the post of Prussian plenipotentiary at Rome. Here he was the life and soul of literary society, and the judicious patron of many a struggling artist. While there he printed *Rom*, a poem. Being offered the post of Councillor of State and Minister of Public Instruction, he returned to Berlin, and during his brief tenure of this office, which had been created for him, he did much to promote the instruction of his native country, having, among other services, been instrumental in founding Berlin University. He soon, however, withdrew from a post which was little in keeping with his retiring disposition, but in 1812 was again summoned in order to go to Venice as envoy during the stirring times which witnessed the remaking of Europe on the fall of the Napoleonic Empire. At Prague he is credited with having persuaded Austria to unite with Prussia and Russia in opposing France. In 1815 he signed the capitulation of Paris; in the same year he managed to aggrandise Prussia at the expense of Saxony; in 1816, at Frankfurt,

he aided in resettling the map of Germany; in 1817 he was conducting negotiations in London; and in 1818 attended the Congress of Aix-la-Chapelle. But in 1819 Wilhelm von Humboldt, who was less reactionary than his brother, disgusted at the tendencies which the King of Prussia was beginning to display, resigned his office, and retired to his estate, nevermore to take any part in political affairs. Tegel, for the next sixteen years, was his principal place of residence. Here he laid out fine gardens, and formed a valuable collection of ancient sculptures, devoting the best portion of his time to those literary pursuits which public life had interrupted. Wilhelm von Humboldt's labours, though of less popular interest than his brother's, and in a manner overshadowed by his, are nevertheless of great scientific value. Leaving out of account his more literary labours, his *Ästhetischen Versuchen* (1799), his poems, and incursions into philosophical speculation, he has left an enduring mark on philology. The Basque language he especially studied, and to him is due the theory, still very widely held, that the Basques at one time inhabited a large section of France and Spain, where they are no longer found, and are akin to the old Iberians, whom again he regards as identical with the Berbers of Northern Africa. This view is developed in his *Prüfung der Untersuchungen über die Urbewohner Hispaniens vermittelst der Baskischen Sprache* (1821). *Ueber den Dualis* was another philological research on which he entered in 1828. The ancient Kawi language of Java was occupying him at the time of his death, his researches in it being issued in 1836-40 by Dr. Buschmann (*Ueber die Kawi-sprache*, 3 vols.), and in 1836 appeared a posthumous fragment by him on the diversity of language and its influence on the development of speech (*Ueber die Verschiedenheit des menschlichen Sprachbaues und ihren Einfluss auf die geistige Entwicklung des Menschengeschlechts*), which is still a classic in philology, since it showed that speech must necessarily be as diversified as the people using it, and that a sound has no value until a meaning is infused into it, which meaning embodies the opinions of the entire community. These, and his scattered memoirs in the transactions of the Berlin and other academies, were collected and edited by his brother in 7 vols. (1841-52), which contain not only his poems already mentioned, but his translation of the *Agamemnon* of Æschylus, published in 1816, indicating that it had been made while he was supposed to be engrossed in diplomatic affairs. Indeed, his additions and corrections to Adelung's *Mithridates*, published in 1817, must have been collected and edited during the same stirring period. The genial character of Wilhelm von Humboldt is favourably displayed in his *Briefen an eine Freundin* (Letters to a Lady Friend, 1847), which have appeared

in English, while his correspondence with Schiller (*Briefwechsel zwischen Schiller und Wilhelm von Humboldt*), published in 1830, form a valuable contribution to literary history, and to the character of the two men of letters, who, to the close of Schiller's life, kept up the warmest friendship. Personally the great philologist was better liked than his brother. His sympathies were warmer, his self-esteem less marked, and his courtier-like leanings not so intrinsically a portion of the man as they were in Alexander. [R. B.]

Hume, JOSEPH (b. 1777, d. 1855), political reformer and economist, was a native of Montrose, his father being the master of a coasting vessel trading from that town. Mrs. Hume, who was early left a widow with a large family, established a retail crockery business in Montrose, and by her energy and industry supported and educated her children. Joseph Hume's elementary education was acquired in the local schools of his native town. At the age of thirteen he was apprenticed to a surgeon, with whom he remained for three years, and in 1796 he was admitted a member of the College of Surgeons of Edinburgh. In the following year he entered the marine service of the East India Company as assistant-surgeon. Finding that few of the Company's servants at Calcutta had acquired the native languages, he resolutely set to work and mastered the difficult accomplishment. From this time forward Hume's progress in the service was rapid, and it was materially assisted by an incident which occurred in 1802, on the eve of the Mahratta War. Lord Lake, the British commander, discovered that the gunpowder in store had become useless through damp, a fact which excited much consternation. Hume, who possessed considerable knowledge of chemistry, undertook to restore the powder to a serviceable condition, and succeeded. During the ensuing five years, 1802-7, Hume not only filled the office of Persian interpreter to the army, but at the same time continued his medical duties. He further filled in succession posts in the offices of paymaster and postmaster of the forces, in the prize agencies, and in the commissariat. He was also enabled to amass considerable wealth; and when he resigned his employment under the East India Company, and returned to England in 1808, he was the possessor of a fortune of upwards of £30,000. Hume now commenced studying the history and resources of Great Britain. In the same spirit he visited a large portion of the Continent, to increase his stores of political experience. Through the influence of Sir J. Lowther Johnstone, Hume entered Parliament for Weymouth in 1812, being then, and for a brief period subsequently, a Tory. Losing his seat in 1813, he was for nearly six years out of the House. During this period he was a member of the

central committee of the Lancastrian school system. He also advocated the establishment of savings banks upon principles afterwards adopted. One of the chief objects of his ambition was to obtain a seat on the East India Board of Directors, but he was invariably unsuccessful in his candidature. He became a sleepless critic, however, of British administration in India. In 1818 Hume re-entered Parliament as member for the Montrose Burghs, and soon became known as the most prominent of the philosophic Radicals. He was returned for Middlesex in 1830, but losing his seat for that constituency in 1837, he was returned for Kilkenny through the influence of Daniel O'Connell. In 1842 he was once more returned for the Montrose Burghs, which he continued to represent until his death. More than once Hume declined office under Liberal Governments, on the ground that it would fetter his action. He was a strong supporter of all the great remedial measures of his time, including the repeal of the Test and Corporation Acts, Catholic emancipation, and the Reform Act of 1832. He waged a continuous war against all classes of sinecures, proposed radical reforms in the army, navy, the Church, and the ecclesiastical courts. He laboured earnestly for the abolition of military flogging, naval impressment, and imprisonment for debt; and he was mainly instrumental in procuring the repeal of the old Combination Laws, in removing the prohibition from the export of machinery, and in abolishing the Act which prevented workmen from going abroad. Wherever he could discover abuses he exhibited an almost Quixotic zeal in attacking them, and he accomplished much good work in reforming local and municipal government, the licensing and election systems, and in reducing the duties on paper, print, tea, and other useful articles. In 1835 he brought forward a series of resolutions in the House of Commons showing the existence of an enormous number of Orange lodges in the army, whose proceedings were in contravention of the army regulations; and these resolutions led to action on the part of the Government and the commander-in-chief. Hume advocated a relaxation of the civil and criminal laws, the adoption of a better system of public accounts, and a great reduction in general taxation, duties, and customs. Many and vigorous were his attacks upon the public expenditure. He died Feb. 20th, 1855. Lord Palmerston, in alluding to the event in the House of Commons, observed that "it had been said of one eminent statesman (Mr. Burke) that he 'to party gave up what was meant for mankind,' whereas the very reverse might be said of Mr. Hume, for the party to which he had devoted himself was his country, and, beyond his country, the general interests of mankind at large." Hume's whole career was of the most dis-

interested character. He had an abiding hatred of abuses, a love of liberty, an uncompromising honesty, and unconquerable perseverance.

J. B. Hume, *J. Hume, a Memorial*; Harriet Martineau, *History of the Thirty Years' Peace*; *Hamard's Debates*, vol. 136, March, 1855; *Gentleman's Magazine* (1855). [G. B. S.]

Hummel, JOHANN NEPOMUK (b. 1778, d. 1837), German musician, was a pupil of Mozart and Haydn, and at one time was thought to be one of the first musicians of the age. Time, however, has not substantiated that verdict, and it is difficult now to understand the adulation with which he was regarded by his contemporaries. He succeeded Haydn as *capellmeister* to Prince Esterhazy in 1804, became conductor of the theatre of Stuttgart in 1814, and of Weimar, where he died. He composed several operas, which are now forgotten, two masses (Op. 80 and 111), which have also fallen into neglect, though less deservedly, and numerous pieces for the pianoforte. By these he is still remembered, and they are not unworthy of his great masters. Among them are the concertos in A and B minor, the sonata in F sharp minor, and some chamber music. His *Great Pianoforte School*, a book of instructions, proves him to have possessed an excellent method.

Hunt, GEORGE WARD (b. 1825, d. 1875), politician, was the son of the Rev. George Hunt, of Wadenhoe. He was educated at Eton, and Christ Church, Oxford, whence he took his B.A. degree in 1848. In 1851 he was called to the bar, and was first returned for North Northamptonshire in the Conservative interest in 1857. Mr. Ward Hunt soon distinguished himself by his knowledge of agricultural matters, and became Financial Secretary to the Treasury in July, 1866, whence he was transferred, from February to December, 1868, to the office of Chancellor of the Exchequer. On the formation of the Conservative ministry of 1874, Mr. Ward Hunt became First Lord of the Admiralty, and held that appointment until his death. It cannot be said that his administration was altogether a success. He promptly raised a scare as to the state of the navy which proved for the most part baseless, and this was followed by the fugitive-slave circulars of 1875, and Admiralty decisions on the loss of the *Vanguard* and the destruction of the *Mistletoe* in the same year, which were not too favourably criticised. On the other hand, the uniform courtesy of the First Lord, and the courage with which he struggled to perform his duties down to the very last, caused his loss to the House of Commons to be sincerely regretted.

Hunt, HENRY (b. 1773, d. 1835), reformer and orator, was in the early part of his life a successful Wiltshire farmer, noted for his flocks of Southdowns. In 1801, when the

fear of French invasion seized the English mind, he was active in preparation for defence, and his zeal on this occasion earned the special thanks of the Lord Lieutenant. An enthusiast in everything he undertook, he was a fine huntsman and a Yeomanry officer of repute. In consequence of some misunderstanding between him and his commander he was asked to resign his commission. Indignant at such treatment, he at once challenged his superior; and for this offence he was fined and imprisoned. This was the turning point in his life; henceforth the opulent farmer was a Radical reformer. He unsuccessfully contested Bristol in 1812; but he made his mark as an orator, advocating the repeal of the Corn Laws and Parliamentary Reform. He was again defeated at Somerset, Westminster, and other places. He declaimed at the meeting at Spa Fields which resulted in the "Manchester massacre" of 1819, and was sent to prison for three years for his seditious speech. He was elected M.P. for Preston in 1830, as a Reform Bill candidate; but was defeated in the Tory reaction of 1833. Mr. Hunt was the author of several violent political pamphlets.

Autobiographical Memoirs, written in prison.

Hunt, JAMES HENRY LEIGH (b. 1784, d. 1859), poet, essayist and critic, was the son of Isaac Hunt, a refugee from America, the representative of a Barbadoes family whose fortunes had declined, and was educated at Christ's Hospital. After being some time in the office of his brother, who was an attorney, he received an appointment in the War Office from Mr. Waddington. Already, however, he had written literary and theatrical criticisms for the *Times* and other London papers, and in 1802 he published *Juvenilia*, a collection of juvenile verses. In 1808 he quitted the War Office, to become editor of the *Examiner*, which was being started by his brother John. The journal soon gained a reputation for literary ability. With Hazlitt and Lamb, Leigh Hunt vindicated the fame of the Lake poets, and established a school of criticism independent of the reviews. At first non-political, the journal was soon forced by the reactionary times to speak somewhat boldly, and an attack upon the Prince Regent occasioned the prosecution of the editor and an imprisonment for two years (1813-15) in Surrey Gaol, with a fine of £1,000. The imprisonment, though actually undergone, was lightened by the public sympathy and occasional visits from friends, such as Brougham, Shelley, and Keats. Among the literary fruits of his leisure in prison, published after his release, was the well-known story of *Rimini* (1816), which has made a permanent mark in English literature, uniting as it does a return to Chaucer's versification with a fine art of poetical narrative. The subsequent works of Shelley and Keats manifested the deliverance that Hunt had effected in narra-

tive poetry. Hunt defended Shelley with spirit in the *Examiner*, and welcomed Keats, whose sensitive nature was much hurt by the harsh treatment of the *Quarterly*, with enthusiasm. In 1821 Hunt accepted an invitation from Byron and Shelley to join them in Italy, and aid them in starting a periodical work, in which Liberal opinions should be advocated with more freedom than was possible at home. His arrival in Italy, however, in 1822, was almost coincident with the tragic death of Shelley. Four quarterly numbers of the *Liberal* appeared, when Byron sailed for Greece, and the magazine that was to do so much collapsed. Hunt stayed on at Genoa, however, till 1825, producing in the meantime his matchless translation of Redi's *Bacco in Toscana*, and the religious work *The Religion of the Heart*. In 1828 he published *Lord Byron and his Contemporaries*, which gave much offence to Byron's friends, and which Hunt afterwards regretted, as being "unnecessarily harsh and bitter." He next made some vain attempts at serial works. *Ralph Esher*, a romance of the period of Charles II., was more successful, and *Captain Sword and Captain Pen*, a spirited contrast between the victories of peace and the victories of war, ranks among his best poems. In 1840 appeared *The Legend of Florence*, a play of merit. Since the prosecution in 1813, Hunt had scarcely ever been free from pecuniary difficulties. But in 1842 Mrs. Shelley settled an annuity of £120 upon him, and in 1847 Lord John Russell procured him a pension of £200. With improved comfort and augmented leisure he produced some literary essays of remarkable power, and made his mark on English literature as a critic. Indeed, he possessed all the requisites for superior criticism: a man of various reading, a good scholar, catholic in taste, and widely sympathetic in feeling. Even his early ephemeral notices (which were separately published in 1807) are stamped with the fairness and freedom which mark his late writings; and the purely literary essays of the *Indicator* and its companion publications, and *Wit and Humour*, and *Imagination and Fancy*, are fine, almost faultless, specimens of genial criticism. His essays on general and literary topics were too many and too varied to be all good. In his *Autobiography* (1850) he confesses to the emotions—sometimes keenly painful—of composition, and it may be said that on many subjects he felt too deeply to be a perfect master of the best modes of expression. His favourite subjects were country walks, flowers, and old poetry. Through all his writings there is the sunshine of a happy spirit, and the grace of a genuine scholarship.

Autobiography; Thornton Hunt, *Letters and Correspondence of Leigh Hunt*. Mr. Alexander Ireland has published a full bibliography of his works. [W. M.]

Hunt, WILLIAM HENRY (b. 1790, d. 1864), an English water-colour painter of great popularity and technical merit, was the son of a tin-plate worker, and was born in a small street out of Long Acre. He had, as may be imagined, little literary education, but he was apprenticed, while a lad, to John Varley—an artist from whom so many English water painters have learnt so much—and in 1808 he was admitted to the schools of the Royal Academy. About the same time he made the acquaintance of Dr. Monro, the patron-friend of Turner and Girtin, and some of his earliest drawings or pictures must have been sold to this connoisseur. It is said that he first exhibited at the Old Water-Colour Society in 1814, but he did not become an associate till 1824, and three years later he was made a full member. The comparative tardiness of his attainment of such honours as the Society could bestow is attributable probably to much of his earlier work having been done in oil; but the Royal Academy no more recognised him than it recognised De Wint and David Cox, and it is certainly upon his water-colours that his fame will rest. To the annual exhibition of his society he often sent twenty or thirty drawings, and it was chiefly for his art that he lived. He had been sickly from childhood. His painting, faultless as it often is, betrays no singular energy of mind and no intellectual preoccupations. His existence was calm, not to say monotonous; his ways simple. He was never married, and a good deal of his time was spent away from London. Hastings was his favourite resort. The public know him as a painter of flowers and of fruit, of green moss and birds' nests, and assuredly it was in still-life, and still-life of this particular order, that Hunt excelled. Yet he executed in his middle period, and in his later years, a certain number of homely figure pieces, and, chiefly as a younger man, he wrought some interiors and a very few London street views. His interiors were chiefly of Cassiobury, and were the consequence of a commission. Among the finest of his London pictures, economical of means, yet of abundant effect, was a view of one of the courts of the Temple. Of his figure pieces, two of the very finest are his *Old Man Saying Grace*—otherwise *The Blessing*—and his *Shy Sitter*, a not very pretty child model depositing herself awkwardly, or nervously wriggling in the chair the artist has chosen for her. The one has an obvious yet permissible pathos. In its own way it is not inferior to *The Parish Clerk* of Gainsborough. The other has an almost humorous appreciation of untrained character. True landscape he hardly painted at all; but his bits of hedge-row are at least fragments of the country he loved, and he painted them laboriously, yet without sign of fatigue. Broad and summary, decisive and swift, inspired by the delightfulness of a moment's impression, his

art never pretended to be. It was, rather, painstaking and complete, detailed and delicate, even to a fault. His work, solidly executed, and bearing well the passage of time, is habitually either luscious or sparkling. Of course it leaves nothing to the imagination; lacks, to our minds, the poetry of the still-life of Chardin; and realises too much to suggest anything at all. Yet we have written but ineffectually about him here if it has not been made evident that his place is a high one, and that the pedestal he stands on is his own. It is not likely that he can ever cease to be among the worthy celebrities of English art. There have, within the memory of middle-aged men, been two particularly notable private collections of his works. The one which was by far the larger of the two belonged to his old doctor, Mr. Wade, and was lodged, until about fifteen years since, in a small front parlour of a house on the west side of Dean Street, Soho. The other, limited to a few of his masterpieces, was made by Mr. Orrock, in Bedford Square. A greater and more miscellaneous public exhibition was organised, under the auspices of Mr. Ruskin, at the rooms of the Fine Art Society, about six years ago. [F. W.]

* **Hunt, WILLIAM HOLMAN** (b. 1827), is an English Pre-Raphaelite painter, whose later work, in contrast to that of more than one of his brethren, is, rightly or wrongly, in accord with the principles he espoused in his youth. Devoting himself for the most part to the illustration of sacred themes, he has been peculiarly successful both in winning and retaining the attention of the large public. He is the son of a warehouseman in London, but fortunately fell in with John Varley, and abandoned the desk at the age of seventeen. His art education was mainly acquired at the Schools of the Royal Academy. Though he began to exhibit about 1846, it was not till 1853 that he produced anything which the world found striking. *Claudio and Isabella* and *The Awakened Conscience* were wrought in that year, and they were enough to convince men of the arrival of an artist who commanded strange intensity of expression, and who enjoyed, as it were, the painfully accurate representation of every detail of every scene he undertook to depict. In the *Claudio and Isabella* the lady is dilating, with all the passion of chastity, upon the wrongs her brother is not altogether unwilling she should undergo. The feebleness and meanness of Claudio's character are emphasised in Mr. Hunt's picture more than in the dialogue of Shakespeare, and on Mr. Hunt's canvas Isabella commands our sympathetic admiration. *The Awakened Conscience* is a very fair pendant to the other. The carefully painted interior is in every detail hideous and tawdry. In 1854 came *The Light of the World*, which has now found a fitting

resting-place in Keble College, Oxford. It was begun in 1852. When the almost complete exhibition of his works was held at the Fine Art Society in the spring of 1886, there appeared a brief account of this picture in a catalogue inspired, if not written, by Mr. Hunt himself. We are told in that that the work was begun at a farmhouse in Surrey, and that the background was derived from its orchard. "*The Light of the World*," truly adds the catalogue, "is a purely mystical picture, inasmuch as it is a painting of something less material than a parable—a mere metaphor." There is not space in this notice to analyse the sources of its power, but the picture is strangely impressive. When it was finished Mr. Hunt journeyed to the East, and in 1856 there was exhibited the first picture which bore upon it the substantial signs of local knowledge and study; this was *The Scapegoat*, suggested by the text, "And the goat shall bear upon him all their iniquities into a land not inhabited." In the distance are the barren mountains of Moab, towards Petra; the water nearer us is that of the Dead Sea, and in the marsh and moor of the foreground there stands the lonely beast, bearing, as it seems, a weight of suffering and woe. The picture is an extraordinarily vivid rendering of a cruel and dreadful conception. *The Finding of the Saviour in the Temple* was the next really important canvas to engage Mr. Hunt's attention. In that, as in so many others of his pictures, the scheme of colour is anything but pleasant; its hues are such as distress an eye that desires harmony. It has, however, the charm of imagination displayed in the grouping of wisely selected types. Mr. Hunt's art, even when it is not agreeable, is apt to be convincing, and in his Oriental pictures the East is somehow realised. In 1867 the painter made what was by no means his first departure from the habit of dealing with Biblical themes, by selecting a subject from Keats, and by painting, in Florence, *Isabella and the Pot of Basil*. It shows the dark Florentine, lightly draped, in her rich chamber, adorned with ebony and ivory, Italian walnut, silk embroideries, and opalescent glass. She has just risen from her bed, and stands with sad head bending over the now flourishing plant. The ardency of this Isabella's nature Mr. Hunt has thoroughly appreciated—it is true, perhaps, that she does not quite rise above the accessories so splendidly realised. In 1874 came *The Shadow of Death* or *the Shadow of the Cross*, now the property of the City of Manchester; and ten years later, after infinite trouble, and more than one curious accident, Mr. Hunt completed *The Holy Innocents*, and publicly exhibited it in London and the provinces. That, too, had necessitated a prolonged residence in the East. It realises in one canvas the flight into Egypt and the

vision of the massacred children, already glorious and joyful, like cherubs of the Renaissance, and accompanying the tired travellers on their long journey. As is the case with nearly all the works by this justly celebrated master of English Pre-Raphaelite practice, it includes passages of delicate and elaborate painting, and it is certain to appeal to mind and feeling even more than to eye. Mr. Hunt's labour is peculiar; it is almost unique in its strenuousness; it is clearly unexampled in impressiveness for the many. It is wrought with conviction, and there are occasions—not too scarce either—on which it compels the interest and wins the admiration of the student of pictorial art.

F. G. Stevens in the *Portfolio*, vol. ii.

[F. W.]

* **Hunter**, THE HON. WILLIAM WILSON, C.S.I., C.I.E. and LL.D. (b. 1840), Indian civilian, and high authority on all matters relating to India, was educated at Glasgow University. Proceeding to India in 1862, he in due course received the usual collectorship. He came to the front on the outbreak of famine in 1866, when he was sent into Orissa and the south-western division of Bengal. His superintendence was a success, and he was gazetted the thanks of the Government. In 1869 he was attached to the secretariat of the Government of Bengal, and in 1871 he became Director-General of Statistics. His labours in the statistical department were at first very great, for he had to organise and carry out the first census of 1872. In 1882 he became an additional member of the Viceroy's Council, and president of a special education commission. Dr. Hunter has also found time to write largely on Indian topics. In *Orissa* his accounts of the rise of the village communities, the village politics, and the characteristics and customs of the Kandhs and non-Aryans are valuable contributions to juridical literature. Dr. Hunter has published *The Annals of Rural Bengal* (1868), *Indian Musalmans* (1871, 3rd edit. 1876), *Brief History of the Indian People* (1882, 4th edit. 1884), *Imperial Gazetteer* (9 vols., 1881 et seq.)—an invaluable work of reference, of which a new edition is promised for 1886—*Life of Lord Mayo* (1872), and *A Statistical Account of Assam* (1879).

Huskisson, WILLIAM (b. 1770, d. 1830), statesman, was born at Birch Moreton, in Staffordshire, in which county his family had owned a small estate for many generations. They belonged to that lesser class of rural gentry which was once so numerous, and, like most other Staffordshire families of the same period, were firm Tories. William was not sent to either a public school or a university, but was brought up by his mother's uncle, Dr. Gem, a physician, who took him to Paris about the time of the outbreak of the

Revolution, and the horrors which he then witnessed cured him of an incipient tendency to Radicalism, which he shared in common with Canning, who got rid of it in the same way. In 1795 he entered the Government as Under-Secretary for War and the Colonies, and in 1796 was returned to the House of Commons for the borough of Morpeth. In 1797 he married Miss Milbank, and in 1802 exchanged Morpeth for Liskeard. In 1804 he became Secretary to the Treasury, a post which he resumed under the Duke of Portland. From 1809 to 1814 he was out of office; but in the latter year was appointed Commissioner of Woods and Forests, a place which he retained till 1823, when, on the reconstruction of Lord Liverpool's Ministry, he became President of the Board of Trade, with a seat in the Cabinet. He was for some years member for Harwich, and represented Chichester from 1813 to 1822, when he succeeded Mr. Canning at Liverpool. Under that statesman and Lord Goderich he was Secretary to the Colonies, and held the same office for a short time under the Duke of Wellington. He was one of the band of popular or liberal Tories who regarded Mr. Canning as their leader, and he shared that gentleman's opinions on all the great questions of the day. Indeed, it is said that some of the financial speeches of Mr. Canning, which were so greatly admired at the time, especially as coming from one who had not made a study of commercial questions, were prepared for him by Mr. Huskisson. On all questions of currency, trade, and commerce he was a recognised authority, and represented those economical doctrines which Pitt had inherited from Shelburne, and Shelburne from Bolingbroke. His admission to Lord Liverpool's Cabinet in 1823 marked an era in the Tory administration which had now, according to Sir G. C. Lewis, become a sufficiently able and enlightened Government to merit the support of the country. Mr. Huskisson, moreover, agreed with Mr. Canning in his opposition to Parliamentary Reform, for though it was on a question of this nature that he quitted the Duke of Wellington's Government, he declared himself an uncompromising enemy to any general or comprehensive change. He seems to have been a man of peculiar temperament. He was apparently jealous, though certainly without any reason, of Mr. Herries, and gave infinite trouble to Lord Goderich in settling the details of his ministry. In 1828 he supported a motion introduced by Mr. Tennyson for transferring the franchise of East Retford to Birmingham, voting against the Government and his own colleagues, who were opposed to it. On the same evening he wrote to the Duke of Wellington placing his resignation in his hands, and hence arose what may be called one of the *causes célèbres* of English party history. The Duke of Wellington, already irritated by the attitude of

the Canningites, who affected to form a party of their own within the Cabinet, and also by the speech of Mr. Huskisson at Liverpool, in which he said that the duke had given him a guarantee that the policy of Mr. Canning should not be departed from, chose to take him at his word, and at once laid his resignation before the king. Mr. Huskisson was unprepared for so decided a step, and made some efforts to convince the Duke of Wellington that he had been too hasty. The tenor of the duke's replies was always the same. There had been no mistake, and should be no mistake. The upshot was that Mr. Huskisson retired in dudgeon, and with him the other Canningite Tories, who were soon absorbed into the Whigs. It was a very unfortunate occurrence, for the Government could ill spare the loss of two such men as Mr. Huskisson and Lord Palmerston; but on the merits of the quarrel public opinion seems likely always to be divided. If Mr. Huskisson was to blame for trying to gain the credit of magnanimity without the cost, the duke was to blame for his summary treatment of an able and meritorious public servant, whose weakness and want of dignity on this particular occasion scarcely deserved the punishment with which they were visited. The Prime Minister felt, perhaps, that it was necessary to show this little section of his colleagues that he could do without them if he chose. Lord Beaconsfield in *Sybil* speaks very severely of the duke's conduct in this affair. It was perhaps too arbitrary, but still it had the merit of common sense and straightforwardness, which Mr. Huskisson's behaviour had not. On leaving the Government, Mr. Huskisson during the remainder of the session frequently acted with the Opposition, and notwithstanding his protestations against reform, would probably have been drawn into the Whig ranks had he survived. But on Sept. 15th, 1830, he was present at the opening of the Liverpool and Manchester Railway, when he was knocked down by the engine, and sustained such severe injuries that he died in a few hours. [T. E. K.]

* **Huxley, THOMAS HENRY, F.R.S., LL.D.** (b. 1826), naturalist, was born at Ealing, Middlesex, where his father was master of a school. After receiving his preliminary education in that suburb of London, he studied medicine at the Charing Cross Hospital, and in 1846 took the diploma of M.R.C.S., in order to qualify himself for the medical service of the Royal Navy, which he entered as assistant-surgeon. After doing duty at Haslar, under Sir John Richardson, the Arctic traveller and naturalist, he was appointed to the *Rattlesnake*, commissioned for the survey of the Barrier Reef of Australia, New Guinea, and the Louisiade Archipelago, under the command of Captain Owen Stanley. By the time Mr. Huxley had taken in earnest to the

study of natural history—indeed, while still a student, he had discovered and written a short notice of that layer of the root-sheath of the hair which has since borne the name of Huxley's Layer. He now threw himself with vigour into original research. His first paper to the Royal Society, sent with a good deal of diffidence as to its value, was on the Medusæ. Paper after paper was despatched during the progress of the cruise, and appeared in the publications of the Royal and Linnean Societies, so that when the *Rattlesnake* returned to England in 1854, Mr. Huxley found himself a man of some note in the scientific world. He now left the navy, and, aided by very slender resources, supplemented by occasional literary work, set himself to the task of arranging the large accumulation of facts and observations made on the voyage, but was disappointed to find that the Admiralty would contribute nothing to the cost of publishing these unremunerative labours. They were, however, pleased to express a hope that the treatise, when it did appear, would be to the credit of the nation—"an excellent jest, no doubt," the theme of it remarked, when in after-days (1869) the Ray Society published his *Oceanic Hydrozoa: a Description of the Calycophoridae, and Physophoridae of the Voyage of the Rattlesnake*, but one which at the time an assistant-surgeon on seven-and-sixpence a day could scarcely be expected to appreciate. He, however, still continued to contribute to the Royal and other societies, in 1851 was elected F.R.S., and in 1852 received one of the Royal medals in recognition of the scientific value of the papers mentioned. In 1854 he succeeded Edward Forbes in the natural history Chair of the School of Mines, and from that day he continued to occupy a prominent place in the public life of the country. Honour after honour has fallen to him, and had he cared for political distinction, it is certain that the popularity which secured his election to the first School Board for London would have carried him into Parliament, and doubtless into the ministry. In the next few years which followed, Mr. Huxley enriched zoology with numerous memoirs, and in 1857, the same year that he joined Dr. Tyndall in studying the nature of glaciers, he was appointed to deliver the Croonian Lecture *On the Theory of the Vertebrate Skull*. He also contributed largely to the *English Cyclopædia*; published his lectures on *Comparative Anatomy* (1864); his *Lessons in Elementary Physiology* (1866); and an introduction to the *Classification of Animals* (1869): *Elementary Biology* (with Dr. Martin, 1875); *The Crayfish* (1881); besides a treatise on *Physiography*, or, as the science he renamed is better known, *Physical Geography*. However, valuable as Professor Huxley's work was privately, as palæontologist to the Geological Survey, as professor in the School of Mines, and professor of

physiology to the Royal Institution, it is questionable whether his strictly scientific labours would alone have given him the widespread reputation which he enjoys. His fame is for the most part due to the popularity of his expositions in untechnical language of abstruse natural-history questions. He was among the first eminent zoologists who set themselves seriously to popularise the ever-accumulating piles of scientific information. When the Darwinian theory was first promulgated, Professor Huxley immediately ranged himself on its side. It may, indeed, be doubted whether without his powerful support the doctrines of the great English naturalist would have found so ready an acceptance in the highest scientific circles. Without his aid in magazine articles, and in the lectures which afterwards appeared as *Man's Place in Nature* (1863), the great truths which are almost universally allowed to underlie the theory would have been slower to gain acceptance than they were. No one has ever excelled Mr. Huxley in expressing in clear, masculine language the facts which he desired to enforce. Hence, not only his *Hume*, in the *English Men of Letters Series*, but his *Lay Sermons, Addresses, and Reviews* (1870), his *Critiques and Addresses* (1873), and his *American Addresses* (1879), may be taken as models for the imitation of every one desirous of acquiring a correct English style. During the absence of Sir Wyville Thomson, he divided with Dr. Carus the duty of acting as his substitute in the Edinburgh Chair of natural history; and on the death of Mr. Buckland (1880) he was appointed Inspector of Fisheries, to which he subsequently added the duties of dean in the Normal School of Science at South Kensington. His health had, however, never been strong, and when in 1883 he was elected president of the Royal Society on the death of Mr. Spottiswoode, his labours were so increased, that in November, 1886, he felt it necessary to resign not only the appointment, but all his other offices, except that of dean of the School of Science, and the honorary professorship in the same institution. It is, indeed, one of Mr. Huxley's maxims, that at sixty a man of science has done all the original work the world need expect of him. This doctrine, however applicable to others, is not proved by the latest labours of the subject of this notice, for the controversies with Mr. Gladstone in the *Nineteenth Century* on Genesis showed all his old freshness and vigour. Professor Huxley has received nearly all the honours usually offered to learned men in his line of research. He has been president not only of the Royal Society, but of the Geological Society and of the British Association (1870), and Lord Rector of Aberdeen University in 1872. Breslau, Dublin, Edinburgh and Cambridge have conferred on him their honorary doctorates.

* **Hyacinthe**, FATHER, is the former religious name of Charles Loyson (b. 1827), theologian, a native of Orleans, who was ordained priest of the Roman Catholic Church in 1849. He acquired high renown as a pulpit orator, particularly from sermons preached in Paris from 1865 to 1869. At the same time, his views were thought to savour of heresy, and complaints were lodged against him at Rome. On Sept. 20th he issued a trenchant manifesto, addressed to the General of the Barefooted Carmelites, against the corruption of the Church. It caused a great stir, and Père Hyacinthe seized the opportunity to pay a visit to the United States. At length the Pope thought it advisable to relieve him of his monastic vows (1870). The Abbé Loyson, as he was now styled, was a determined opponent of the doctrine of Papal Infallibility, favoured the Old Catholic movement, and took a new departure in 1872 by marrying an American lady named Butterfield, Dean Stanley being present at the registry office at which the ceremony took place. He is now head of the "Gallican" Church of Paris. Dean Stanley also wrote a preface to Mrs. Loyson's translation of the Abbé's discourses and letters, entitled *Catholic Reform* (1876).

* **Hyndman**, HENRY MAYERS (b. 1842), socialist, was educated at Trinity College, Cambridge (B.A. degree 1864), and entered the Inner Temple in 1863. He was special correspondent of the *Pall Mall Gazette* in the Italian campaign of 1866, travelled in the Colonies and United States from 1868 to 1870, and from 1871 and onwards was a constant contributor to the *Pall Mall Gazette* and to the reviews. Mr. Hyndman published *The Indian Famine and the Crisis in India* in 1877. His views rapidly developing in the direction of socialism, Mr. Hyndman, in January, 1881, was one of the chief founders of the Social Democratic Federation, then called the Democratic Federation, and at the first conference, in June, presented his *England for All* to the delegates. From that time forward he wrote and lectured extensively for the Federation. His *Historic Bases of Socialism in England* was published in 1883. Among Mr. Hyndman's later publications are *The Social Reconstruction of England*; *Socialism and Slavery*, a reply to Mr. Herbert Spencer; and *A Summary of the Principles of Socialism*, all of which appeared in 1884, and in the same year was published a verbatim report of the debate between Mr. Hyndman and Mr. Bradlaugh held in St. James's Hall on the question *Will Socialism benefit the English People?* In 1886 he was committed for trial, in company with Messrs. Williams, Burns, and Champion, on the charge of having incited a mob of so-called "unemployed," which, starting from Trafalgar Square, looted several West-End streets; but they were all acquitted.

I

Ibrahim Pasha. [EGYPT.]

* **Ibsen**, HENRIK (b. 1828), the Norwegian dramatist, was born at Skion, and began active life as an apothecary, but turned to poetry and scholarship. He wrote an unsuccessful tragedy, and his drama, *Catiline* (1850), in bad iambic verse, fared even worse. In 1851 he entered the University of Christiania, and while here he wrote, amongst other things, a long drama, *Norma*; or, a *Politician's Love*, a rather impertinent lampoon on the Storting (Parliament). In 1852, through Ole Bull, the violinist, Ibsen became director of the theatre at Bergen, for which he wrote a great deal. In 1857 he proceeded to Christiania to direct the National Theatre there. During the next seven years he produced several historical dramas of great and increasing merit. In 1863 Ibsen discovered that the natural bent of his genius lay towards satire, for in that year he published *Lore's Comedy*, a poem full of elaborate irony. The following year he left Norway for Rome, where he wrote the book that has popularised his name most thoroughly. The drama *Brand* (1866) is more harmonious in conception than the earlier works, and its aim more Titanic. The verse in which it is written is finished work of a high lyrical order. Ibsen next removed to Ischia, where he wrote his great work, *Peer Gynt* (1867), in which he idealises in the character of its hero the selfishness and mean cunning of the worst of ambitious men, thus the direct opposite of *Brand*, which portrayed an ideal of stainless virtue. Amongst his numerous other works (many of which are translated into English) are:—*Kaiser og Galilæer* (1873), *Et Dukkehjem* (1880), *Gengangere* (1881); and *Gildet på Solhaug* (1883).

Henrietta Frances Lord's *Life of Ibsen*, prefixed to her edition of *Nora* (1882); Mr. E. W. Gosse in *Fortnightly Review*, vol. xiii.

Iddesleigh, THE RIGHT HON. STAFFORD HENRY NORTHCOOTE, EARL OF, G.C.B. (b. 1818, d. 1887), statesman, the eldest son of Henry Stafford Northcote, the eldest son of the 7th baronet, and the representative of an old Norman family, was educated at Eton, and at Balliol College, Oxford, where he gained an open scholarship (B.A. 1839, 1st class classics; M.A. 1842). His apprenticeship to public life began in 1843, when he became private secretary to Mr. Gladstone, then President of the Board of Trade, and he was called to the bar in 1847. In 1851 he succeeded his grandfather in the baronetcy, and was secretary to the Commissioners of the Great Exhibition, for which services he was created C.B. In 1855 he first entered Parliament, as Conservative member for Dudley; from 1858 to 1866 he was member for Stamford,

and from 1866 to 1885 he sat for North Devon, for which constituency he had been an unsuccessful candidate in 1857. Sir Stafford's ministerial career began in 1859, when he was Financial Secretary to the Treasury in Lord Derby's second ministry; and in the third Derby administration—that of 1866—he was President of the Board of Trade. His financial reputation had been considerably aided by a treatise, *Twenty Years of Financial Policy*, published in 1862. Transferred to the India Office in 1868, Sir Stafford undertook the responsibility of the Abyssinian expedition, and its successful termination was largely due to his administrative powers. In 1871 he was appointed by Mr. Gladstone, formerly his leader, now his political opponent, special commissioner to America, to arrange the *Alabama* difficulty. On the formation of Mr. Disraeli's ministry of 1874, Sir Stafford Northcote, according to general expectation, became Chancellor of the Exchequer, and during the first years of the Conservative Government he introduced several useful measures into the House of Commons, besides the annual Budget; e.g. the Friendly Societies Bill of 1875. He also spoke frequently upon the foreign policy of the Government; notably upon the purchase of the Suez Canal shares, and upon the conduct of affairs in the East. Upon the elevation of Mr. Disraeli to the peerage as Lord Beaconsfield, Sir Stafford became leader of the Lower House, his task being made additionally difficult by the development of the arts of Parliamentary obstruction by the Home Rule party. When the general election of 1880 had resulted in the crushing defeat of the Conservatives, Sir Stafford continued to lead the party in the Lower House, and upon the death of Lord Beaconsfield shared the direction of the whole of the Opposition with Lord Salisbury. His position was a very difficult one. The Conservatives were discouraged by defeat, they were by no means equal to their opponents in debating strength, and a section of the party was not unfrequently in factious and open revolt. Under the circumstances, Sir Stafford's conciliatory and entirely unselfish conduct of affairs cannot be too highly praised; and after he had, on several occasions, nearly overturned the Government upon its Egyptian policy, he witnessed its fall in 1885. Lord Salisbury having undertaken to form a Government, Sir Stafford was raised to the peerage with the title of Earl of Iddesleigh and Viscount St. Cyres, and became First Lord of the Treasury. Shortly afterwards he became chairman of the committee appointed to inquire into the depression of trade. He was elected Lord Rector of Edinburgh University in 1883. In 1885 Lord Iddesleigh delivered to the students an admirable lecture on *Desultory Reading*. Early in 1886 he was presented with a handsome testimonial by politicians of both parties. In August,

1886, he became Foreign Secretary, but resigned his post in January, 1887, and a few days later died very suddenly at Lord Salisbury's official residence in Downing Street.

Iffland, AUGUST WILHELM (b. 1759, d. 1814), one of the most celebrated theatrical managers, actors, and dramatists of Germany, was born at Hanover, and having shown an early inclination for the stage, left his home abruptly in 1777, and joined the celebrated troupe, then under Ekhof, at Gotha. In 1779 he proceeded to Mannheim, where he educated himself to high mastery of the actor's and manager's art, and also wrote a large number of minor dramas, some of which, such as *The Foresters* (*Die Jäger*, 1785), were of high merit, were popular in England, and still hold the German stage. In 1796 he was invited to Berlin as director of the National Theatre, which he gradually raised to the highest renown. Besides numerous plays, he wrote *The Theatrical Almanack* (1807-12), which became a text-book for actors. In 1811 he was appointed general director of the stage at Berlin. As an actor he was much admired in the great tragic rôles of Shakespeare and Schiller, but Schiller himself maintained that his true function was polite comedy and farce.

Briefe von A. W. Iffland, edited by Otto Devrient (1881); *Goethe and Schiller Correspondence*.

* **Ignatieff**, NICHOLAS PAULOVITCH (b. 1832), Russian diplomatist and soldier, is the son of a distinguished soldier, and entered the Imperial Guard in 1849. During the Crimean War he served under General Berg in the Baltic provinces, was afterwards military attaché at London, and in 1859, having received the complimentary grade of major-general, became ambassador at Peking, where he concluded a commercial treaty with China, which included the cession of the province of Ussuri to Russia. In 1863 he became director of the Asiatic department of the Russian Foreign Office, but was transferred in 1864 as ambassador to Constantinople. Having succeeded in acquiring immense influence over the Sultan Abd-el-Aziz, chiefly by his judicious discouragement of the Cretan insurrection, he remained carefully watching events, and in the meantime urged justice towards the Christian populations of Bosnia and Bulgaria. It is probable that General Ignatieff, who was an ardent Pan Slavist, was desirous from the first of a settlement of affairs by the sword; at any rate, after the revolt of the provinces of Bosnia and Herzegovina, the atrocities in Bulgaria, and the declaration of war by Servia, his attitude towards Turkey became considerably less cordial; and at the conference of Constantinople, which assembled in Sept., 1876, to bring the Turco-Servian War to a close, and to compel the Sultan to give reasonable guarantees for internal reforms,

the conditions propounded by him were too hard for the Porte. He left Constantinople on the break-up of the Conference, and in March, 1877, was despatched on a mission to the courts of Europe, with the object of trying to induce them to act collectively against the Porte, but in the end Russia declared war alone. When that war had resulted in the complete overthrow of the Turkish armies, General Ignatieff repaired to head-quarters, and there, on March 3rd, 1878, settled the terms of the Treaty of San Stefano with the Turkish plenipotentiary, Sâfvet Pasha, which practically deprived the Porte of both the Bulgarias. The able diplomatist was extremely wroth when Prince Gortschakoff, rather than risk the armed intervention of England, decided to submit the Treaty to the Congress of Berlin, and, retiring to Nice, took no part in its deliberations. In 1881, on the accession of the Czar Alexander III., he replaced Count Loris Melikoff (q.v.) as Minister of the Interior, and began a relentless campaign against Nihilism, winking the while at the persecution of the Jews. It failed, however, to suppress the movement; and in June of the following year General Ignatieff was dismissed from office.

* **Ignatius**, FATHER, is the monastic name of Joseph Leicester Lyne (b. 1837), a native of London, who was educated at St. Paul's School, and at Trinity College, Glenalmond. He was ordained in 1860, became curate of St. Peter's, Plymouth, and afterwards worked under Mr. Lowder at St. George's-in-the-East. Already his fervid eloquence and originality of views had made him a conspicuous figure among Churchmen, but considerable commotion was created when, in 1862, he took the vow and habit of a monk. His efforts to restore monasticism in the Church of England, as it existed before the Reformation, were at first far from successful; settlements were made and failed, but in 1870 he and his community, claiming to belong to the Benedictine Order, settled at Llanthony Abbey, near Abergavenny, and devoted themselves to a life of seclusion and prayer. Twice a year Father Ignatius leaves the monastery to collect funds by preaching. He is the author of numerous poems, hymns, pieces of sacred music, and monastic tales in which he records the appearance of several visions at Llanthony.

Indore, THE MAHARAJAS OF, are members of the great Mahratta race, and generally called by the family name of Holkar. The founder of the dynasty was Malhar Râo, the son of a shepherd, who created the beginnings of the principality in 1694 and onwards, but at the beginning of the century the State was being torn to pieces by family dissensions. Its fortunes were restored by the able JASWANT RÂO HOLKAR (b. circa 1775, d. 1811),

the illegitimate son of Tûkaji Râo (d. 1796); he carefully reorganised the army, and in 1802 defeated his previous conqueror, Scindhia, and the nominal head of the Mahratta Confederacy, the Peishwa of Poonah, at the battle of Poonah, and took the city. The Peishwa was, however, restored by the British, but in spite of that affront Jaswant Râo Holkar held aloof from the Mahratta War of 1803, hoping to profit by the overthrow of his rival Scindhia. Events having proved that he had made a mistake, he plunged alone into war against the British Government, but after some considerable success he was driven back by Lord Lake, and in 1805 was forced to make peace and to surrender a considerable portion of territory. Although it was speedily restored, Jaswant Râo's mortification was so great that he afterwards became insane. MALHAR RÂO HOLKAR (b. 1805, d. 1833), his son, succeeded, his mother governing as regent. She rightly saw that her best course would be to place the State under British protection. But there was a war party at court, which had her put to death, and the British were opposed in arms. Holkar's army was promptly defeated with great loss, and in 1818 he was reduced to the position of a feudatory prince. Malhar Râo died childless, but his widow adopted a boy, Martand Râo. He was, however, deposed by his cousin, HARI RÂO (d. 1843), who had long been a prisoner of state, and was in consequence utterly unfit to govern. After some years of anarchy HARI RÂO died in 1843, and his adopted son quickly followed him to the grave. The British Government thereupon selected TÂKÂJI RÂO HOLKAR (b. 1825, d. 1886), a cadet of the family, who was installed as ruler of the State. The Maharajah attained his majority in 1852, and has proved an able ruler. During the Mutiny he remained loyal, despite the fact that a not inconsiderable portion of his army rebelled and attacked the British Residency. Of late years the resources of his kingdom have considerably increased. He was created a G.C.S.I. in 1861, received the Prince of Wales with great splendour on the occasion of H.R.H.'s visit to India, and was present at the proclamation of the Queen as Empress of India in 1877. It is said that the conduct of his son and heir was not very satisfactory, and in 1884 he was prohibited from exercising judicial functions.

J. Grant Duff, *History of the Mahrattas* (3rd edition); W. W. Hunter's *Indian Gazetteer*, art. Indore.

* **Ingelow**, JEAN (b. circa 1828), poetess and novelist, was born at Ipswich. Being strongly influenced in youth by the early works of Tennyson and Mrs. Browning, she was drawn to the production of poetry of an elevated but somewhat sentimental tone, that sometimes took the form of a ballad, but was oftener introspective, didactic, or religious. Her first collection of poems, *A Rhyming*

Chronicle of Incidents and Feelings, was published anonymously in 1860, and in the next year appeared the poetic narrative of *Allerton and Drex*. Of her subsequent works that are very numerous and have obtained a wide popularity for their tender feeling and minute observation of nature, we may mention the following collections:—*Home Thoughts and Home Scenes* (1865); *Deborah's Book and the Lonely Rock*; *Grandmother's Shoes*; *The Suspicious Jackdaw and the Life of John Smith*; *The Minnows with Silver Tails*; *Studies for Stories*; and *A Story of Doom* (all published in 1867); *A Sister's Bye-hours* (1868); *The Little Wonder Horn* (1872), and *The High-tide on the Coast of Lincolnshire, 1571* (1883). Some of Miss Ingelow's novels, such as *Off the Skellings* (1872); *Fated to be Free* (1875); *Don John* (1876), and *Sarah de Berenger* (1880) have also been deservedly successful.

Ingles, SIR JOHN (b. 1814, d. 1862), a distinguished general, was born in Nova Scotia, in which colony his father was bishop. He entered the army in 1833, and after seeing service in Canada and the Punjab, gained an undying reputation in the Indian Mutiny of 1857. He was associated with Sir Henry Lawrence and Major Banks in the defence of Lucknow, and on the death of these two gallant officers was called upon to undertake the command. This he did with intrepid bravery for thirteen weeks, when relief was brought by Sir Henry Havelock. On the suppression of the Mutiny, Brigadier Ingles was promoted major-general, and made K.C.B. He died shortly after his appointment as commander of the forces of the Ionian Islands.

United Service Magazine, 1862.

Ingles, SIR ROBERT (b. 1786, d. 1855), was the only son of Sir Hugh Ingles, the 1st baronet. He was educated at Winchester and Christ Church, where he graduated in 1806. He was originally intended for the law, and was called to the bar at Lincoln's Inn in 1818. In 1824, however, he was returned to Parliament for the borough of Dundalk. In 1826 he was chosen to represent Ripon; and in Feb. 1829, he succeeded Sir Robert Peel as member for the University of Oxford when that gentleman, who had changed his opinions on the Roman Catholic question, surrendered his trust into the hands of his constituents to afford them the opportunity of expressing an opinion on his policy. Sir Robert Ingles was victorious by a majority of a hundred and forty-six, the numbers being 755 to 609, and he retained the seat which he had won down to 1847, when he retired, and was succeeded by Mr. Gladstone. His high character, popular manners, and strict regard for principles, enabled him to exercise an influence in the House of Commons disproportioned to his abilities, and not always beneficial. In 1832, on the Duke of Wellington's

attempt to form a ministry for the purpose of carrying a moderate Reform Bill, Sir Robert Ingles was the leader of the Tory mutineers who denounced the compromise as dishonourable, and who were really the authors of its failure. He was a warm supporter of Lord Ashley in his attempts to mitigate the horrors of the factory system, which were afterwards so forcibly exposed in *Sybil*. He took an active part in the opposition to the Maynooth Grant; and he it was who fixed on the Queen's Colleges in Ireland—established by Sir Robert Peel in 1845—the nickname of the "Godless Colleges." Sir Robert Ingles was one of those old-fashioned churchmen who in the early part of the century were High Churchmen. He stood midway between the Evangelicals on the one hand, and the Tractarians on the other, and reflected with perfect fidelity the average ecclesiastical creed of the country gentry of the kingdom. He represented their prejudices also. However, he was a thorough-paced English gentleman, and if he carried his ideas of honour rather too far it was a fault upon the right side. He was deservedly popular both in Parliament and in society, and his retirement from the House of Commons caused many to say that they could have better spared a better man. He was a good scholar, and had he lived a little later would have taken honours at the University. He was well read in English literature, and was for some years president of the Literary Club. [T. E. K.]

Ingoldsby, THOMAS. [BARHAM.]

Ingres, JEAN DOMINIQUE (b. 1780, d. 1866), French painter, by reason of changes in taste and in technique, is no longer permitted to occupy the eminence which thirty years ago was indisputably his. It is possible that he was then overrated: it is certain that, in some quarters, he is now most unduly decried. Ingres was the son of an industrious and somewhat gifted man—half artisan, half artist—and was born at Montauban. It is said of him that in later days, when he was oldish and famous, he was better pleased when anyone praised his fiddling, than when it was declared that the *Source* was beautiful and the *Apotheosis of Homer* dignified. However that may be, it is certain that Ingres's musical talent was serviceable even in money-getting, in his boyhood. With credit to himself, he took a hand in an orchestra. But painting, or to put it plainly at once, the arts of design and of draughtsmanship, rather than that of pure colour, declared themselves soon as those which he must needs most strenuously follow. And it was practically as a pupil of David that he came before the world. Practically, David was his master, and an overpowering master, until he went to Italy. The return to Classicism, which the literature of Winckelmann had counselled, David was in France, as Flaxman was in England, the first

to make. But Ingres's return to it—or, rather, his early and his late devotion to it—was saner and more reasonable than David's. A greater moderation permitted to the art of Ingres what is after all a more permanent as well as a more understandable charm. Still, Ingres, like David, was never a colourist. Rich in all virtues of design and draughtsmanship, he was poor in the qualities demanded for pure painting. Therefore his art, whether his earlier or his later—*The Vow of Louis the Thirteenth*, *The Stratonice*, or the *Source*—will have but a partial fascination. For years, in France, he was a commercial failure. He was forty when he began to be substantially rewarded: *The Apotheosis of Homer*—his most important invention, now at the Louvre—was commissioned in 1826, and painted in the following year; and by 1834 he was already distasteful—the victory seemed to be for the Romantics, and the vivid brutality of Delacroix was preferred to Ingres's calm and coldness. The time when he might easily have starved was, indeed, now past: no one denied him a position; but it was only in discouragement that in 1834 he accepted the post of director of the French Academy at Rome, an office which Vernet was then vacating. "The materials of art," said Ingres himself, "are at Florence; the results are at Rome;" and at Rome "the results," of which Raphael's work was the greatest, did assuredly influence him. Nay, they had already influenced him before his residence as "director." The figures of the *Iliad* and the *Odyssey*, in the *Apotheosis*, only Raphael had made possible. In Rome, Ingres was a good deal interested in portraiture. It had engaged him, off and on, from quite an early time; as early as 1807 he had wrought his masterly if rigid portrait of Madame Devaûay, and there exist all sorts of drawings of common, middle-class, and upper-class people, executed in all cases with unflinching veracity, and yet with style. From Rome now came the portrait of *Cherubini*, which, like the *Apotheosis*, and a smaller replica of the *Source*, is to be seen at the Louvre. The Muse bends approvingly over the aged head of the musician: her introduction was an after-thought, due to the painter's pleasure in a young woman of good society he had met in Rome. In Rome, Ambroise Thomas, the composer, was one of the younger of his friends, and Hippolyte Flandrin was his scholar. His *Notes et Pensées* record many of the wisest of his utterances; and they show his understanding of the art of music to have been as great as, and possibly less prejudiced than, his understanding of the art with which his own fame was associated. After seven or eight years' residence in Rome, Ingres returned to Paris. Great honour was paid him, if not at the very moment of his return, at least in his later years. He was nearly eighty when he

painted his most famous and most admirable nude figure—much better than any of his *Odalisques*; better than even his *Angélique*—the *Source*, which we have named already. A little cold, no doubt, in colour, the work is perfect in modelling, and in conception it is of wonderful simplicity and dignity. The girl has an "âme végétale," as Paul de St. Victor said, and it was so that Ingres intended it. Though it was never exhibited at the Salon, this became by reproduction the most popular of his pictures. Nor even now can its distinction, and the distinction of the artist who wrought it, be reasonably denied by any. Ingres should be studied not alone in his pictures, but also in the collection of drawings which enrich the museum of his native town. Of his home-life it need only be said that he had no children, but that he was twice married. The first time it was to a lady who was devoted to him in his poverty and struggles; the second time it was to "Mon excellente Delphine," who played him the sonatas of Beethoven when he was wearied with his labours and indifferent to social homage.

The most favourable view of him which has found expression in literature, is that which is recorded, very skillfully, by M. le Comte Henri Delaborde, in *Ingres, sa Vie, ses Travaux, sa Doctrine*. It appeared soon after the old man's death, and is a book of authority. But some of its conclusions would nowadays be fiercely contested, and even when it was published, a school opposed to Ingres had its say in its dispraise.

[F. W.]

Irving, EDWARD (b. 1792, d. 1834), the celebrated preacher and founder of the Catholic and Apostolic Church, was born at Annan, the son of a tanner, and at the age of thirteen entered the University of Edinburgh. Here he attracted the attention of Sir John Leslie, the professor of mathematics, who procured him an appointment to a school in Haddington in 1810. The following year he held a similar appointment at Kirkcaldy, where Carlyle afterwards joined him in his profession. Having in the meantime completed his theological training, and having been duly received as a preacher in the Scottish Church, he removed to Edinburgh in 1818, to wait for employment in the clerical profession. In the autumn of 1819 he became assistant to Dr. Chalmers, in Glasgow, where "he was generally well liked," although "some people thought him rather flowery." In 1822 he removed to the Scottish Church, Hatton Garden, London. Within a few months of his settlement, the little church was filled, to use his own words, with "imaginative men, and political men, and legal men, and scientific men, who bear the world in hand." This period of Irving's early ministry was the golden period of his life; it was the time he most deserved success. His *Orations*, published in 1823, and still more a volume of his early *Sermons*, published after his death, show

an intellectual vigour found in few of his subsequent writings, and in none of his subsequent volumes. In the meantime his intellectual life was restlessly working in different directions. He soon arose above the highly systematic, abstract, deductive creed of his early years, and fixed on the Incarnation and the Sacraments as the central ideas of his theology. Contemporary literature and philosophy were mere frivolity; art, industry, and commerce were the play of folly (*vide Sermons, Lectures, and Discourses*, 1828). Irving next indulged in prophetic studies. They turned the balance of his mind just at the crisis of his intellectual fate. In 1826 he removed to the Presbyterian Church, Regent Square, London; and in 1828 arose the first rumours of his heretical views as to Christ's human nature. The death of a saintly peasant girl on the banks of the Gairloch, and the subsequent profession by her sister of the "gift of tongues," were caught up by Irving as an approaching realisation of his prophetic dreams. The disorders introduced by the "prophets" into the congregation at Regent Square soon attracted the attention of the Presbytery of London, which was forced to depose him. But Irving denied its authority, and much public scandal followed. Eventually, in 1831, he was forcibly expelled from the building, and in 1833 he was formally suspended from the Presbyterian Church. The two remaining years of his life were years of obscurity and sorrow. To a nature like Irving's, the wrench from the Church of his fathers was a blow from which he never recovered. The apostles and prophets that gathered around him formed themselves into the "Catholic and Apostolic Church," but for a time withheld their sanction from his preaching. In 1834 he was sent out as a "prophet"—he was deemed unworthy of the higher office of "apostle"—on a mission to Scotland, and died in Glasgow in the December of the same year.

Mrs. Oliphant, *Life of Edward Irving*; Carlye's, *Miscellaneous Essays*; Carlye's *Reminiscences*, vol. i. [W. M.]

* **Irving, HENRY**, whose real name is JOHN HENRY BRODRIBB (b. 1838), actor, is a native of Keinton, near Glastonbury, and was educated at a school in Lombard Street. He became a clerk in the city, but, despite the discouraging remarks of Mr. Phelps, determined to betake himself to the stage, and after a first appearance at Sunderland, in 1856, he worked hard for three years at the Theatre Royal, Edinburgh. His first appearance in London, in 1859, at the Princess's Theatre, was not a complete success, but the critics were much impressed by two dramatic readings given by him at Crosby Hall. For seven years he acted at the Theatre Royal, Manchester, and during that period, in conjunction with Mr. F. Maccabe, he exposed the "spiritualism" of the Davenport Brothers.

When he next appeared in London, at the St. James's Theatre in 1866, he at once made his mark, especially as Doricourt in *The Belle's Stratagem*, Harry Dorniton in *The Road to Ruin*, and Rawdon Scudamore in Mr. Boucicault's *Haunted Down*, and at the Gaiety as Mr. Chenevix in *Uncle Dick's Darling*. In 1867 he migrated to the Queen's, and appeared with great success in *Dearer than Life*, the *Lancashire Lass*, and as Bill Sikes in a version of *Oliver Twist*. In 1870 he made a great hit as Digby Grant in Mr. Albery's *Two Roses*, and in 1871 exhibited to the Lyceum audiences for the first time one of his finest creations, Mathias in *The Belle*. Charles I., Eugene Aram, Louis XI., and Richelieu were added to his *répertoire*, and in 1874 a new period in his career began when, in October, 1874, he first appeared as Hamlet. The merits of this great performance, its genuinely inspired originality, and the absence of any commonplace reliance upon "points" or tricks of effect, were at once generally recognised; and, despite certain peculiarities of gesture and utterance, it was felt that, after an interval of some years, England had once more a great tragedian. Among the other great events of Mrs. Bateman's management were the production of *Macbeth* in 1875, *Othello* in 1876, *Richard III.* and *The Lyons Mail* in 1877. When, in Dec., 1878, Mr. Irving, upon the retirement of Mrs. Bateman, assumed the management of the Lyceum Theatre, it was found that to his great gifts as an actor he united a strong sense of the picturesque, and plays were staged as they had never been staged before. Associated with him in his great productions was the talent of Miss Ellen Terry. The chief productions at the Lyceum, which reopened with *Hamlet*, were *Othello* (1878); *The Merchant of Venice* (1879); *The Corsican Brothers* (1880); Lord Tennyson's drama, *The Cup* (1881); *Romeo and Juliet*, and *Much Ado about Nothing* (1882); *Twelfth Night* (1884); Mr. W. G. Wills's *Olivia* (1885); and *Faust*, an adaptation by the same author (1886). In 1883, and again in 1884, Mr. Irving visited America with the Lyceum company, and was received everywhere with great enthusiasm. He has contributed several thoughtful papers on his art to *The Nineteenth Century* magazine, and wrote an introduction to Mr. W. H. Pollock's translation of Diderot's *Paradox of Acting*. In 1886 he delivered a lecture on *English Actors* before the University of Oxford. Without doubt the revival of the English theatre is due to Mr. Irving more than to any other man.

The Theatre, 1882; W. Archer, *Henry Irving, Actor and Manager*; Joseph Hatton, *Henry Irving's Impressions of America*.

Irving, WASHINGTON (b. 1783, d. 1859), American man of letters, was the son of a New York merchant, was educated for the legal profession, and admitted to the bar in 1806; but his delicate health and literary

tastes alike impelled him to relinquish that vocation, and in 1810 he entered as a partner into the extensive commercial establishment which his brothers carried on at New York and Liverpool. In taking this step, he hoped to secure, without much expenditure of time, an income that would permit him to direct his energies to the field of literary exertion, in which he had already won his first honours by *The Letters of Jonathan Oldstyle*, published in 1802, and the famous *History of New York by Dietrich Knickerbocker*, which appeared in 1809. The unfortunate failure of the Irving Brothers, in 1817, brought about chiefly by the treaty of peace between England and the United States, compelled Irving to resume his pen as a means of subsistence. In 1820 he sold to Murray, the publisher, *Godfrey Crayon's Sketch Book*, which was already appearing in America in a periodical form. The success of these peerless sketches, especially of *Rip Van Winkle*, was so great, that the author, for his next book, *Bracebridge Hall* (1822), a work purely English in subject, received from the same publisher 1,000 guineas. From this time, his pen was for many years actively engaged; and everything he wrote was read with avidity, and admired by all. *The Tales of a Traveller* appeared in 1824; *The Life of Columbus* in 1828; *The Legends of the Conquest of Spain* in 1836; *The Life of Margaret Miller Davidson*, the poetess, in 1841; *The Life of Oliver Goldsmith* in 1849; *Life of Mahomet* in 1851; *The Life of Washington* in 1856, besides many others. From 1816 to 1832 Irving lived in Europe, acting for two years (1829-31) as secretary to the American Embassy in London. In 1842 he was advanced to the post of United States ambassador to Spain, which necessitated his residence at Madrid till 1846, when he returned to his native country. He died Nov. 28th, 1859. Irving was the first American who obtained a European reputation merely as a man of letters; but his writings are not characteristically American—he followed a too scrupulous conformity to acknowledged European standards. But, for all that, he contributed more than any other to raise American literature to its present high position.

Life of Washington Irving, by his nephew Pierre; Irvingiana (New York, 1860).

* **Isabella II.**, EX-QUEEN OF SPAIN (b. Oct. 10th, 1830), is the daughter of Ferdinand VII., and of his fourth wife, Maria Christina. [CHRISTINA.] By the death of her father in 1833, she became queen at the age of three; and, inasmuch as her title to the throne rested only on the recent edict, by which the Salic Law had been revoked, it was promptly challenged by her uncle, Don Carlos. Civil war broke out, which terminated, in 1839, in the victories of Espartero, and the flight of Don Carlos into France. The Government of the regent Christina was, however, extremely unpopular,

and in 1840 she deemed it advisable to surrender the reins of power to Espartero. The fall of Espartero in 1843 was followed by the return of the regent, and the subjection of the unhappy queen to her evil influences. Declared of age by the Cortes in Nov., 1843, Isabella had to marry, in order to secure some hope of a stable government in Spain. Of the three candidates for her hand, the most eligible was Leopold of Saxe-Coburg, the nominee of England, but the designs of Guizot prevailed, and Isabella was wedded to her cousin, Don Francis d'Assisi, Duke of Cadiz, the son of Don Francis de Paulo, her mother's brother, the idea being that the marriage would be childless, so that the succession would revert to the queen's sister, Maria Louisa, who married at the same time the Duc de Montpensier, son of Louis Philippe. The union, of which four daughters and a son, afterwards king as Alphonso XII., were the result, proved an extremely unhappy one, and the court was distracted by a series of quarrels and reconciliations. In 1852 a dangerous attempt was made upon her life by the Jesuit Martin Merino. Meanwhile, first under the advice of Narvaez, and afterwards of Bravo Murillo, Isabella had entered upon a policy of repression. All parties began to combine against the court, and the elections of 1853 having been most unfavourable to the Government, a military insurrection, headed by O'Donnell, broke out at Saragossa, and the kingdom was declared in a state of siege. The flight of the queen-mother, and the placing of the trusty Espartero at the head of affairs for the time, averted complete disintegration, but he quarrelled with O'Donnell, and resigned in 1856, and for the next few years ministry succeeded ministry, and insurrection, whether Carlist or Republican, insurrection. In the midst of this turmoil, a treaty defining the frontier between France and Spain was signed at Bayonne, and a highly successful expedition made against Morocco (1859-60). In spite of these successes abroad, and the strong support of the Papacy, the reactionary character of the monarchy caused it to be extremely unpopular in Spain, and at last, in 1868, the decisive revolution broke out. The royal army was defeated by the insurgents, Isabella retired over the frontier, taking her husband and the favourite Marfori with her, and a provisional government was established by Prim and Serrano (1868). Isabella repaired to Paris, where she abdicated in favour of her son Alphonso, in June, 1870, having a short time before separated from her husband. She returned to Madrid once more in 1876, after the accession of her son, but the visit was short, and was marked by the imprisonment of Marfori, whom the king had wisely ordered out of the kingdom. Relations between King Alphonso and his mother became very cool; she opposed his marriage, in 1878, to the

Princess Mercedes de Montpensier, and began to make overtures to Don Carlos.

Ismail Pasha. [EGYPT.]

J

Jackson, ANDREW (b. 1767, d. 1845), an American general and statesman, and 7th President of the United States, was the son of an immigrant from the north of Ireland. The father died during the son's infancy, the family was left very poor, and the youth received in early life no school instruction; but at the age of thirteen he was already fighting for the independence of the country, and in 1780 endured great hardship as a prisoner of war. Upon the conclusion of peace he studied law, was admitted to practice before his twentieth year, and in 1788 was public prosecutor for that portion of North Carolina which is now the State of Tennessee. He married (1791) Mrs. Rachel Robards, sat in the Convention (1796), which framed the Tennessee State Constitution, and was one of that State's original representatives in Congress. He was elected to the United States Senate in 1797, resigned the next year, and was elected a justice of the Supreme Court of Tennessee. In 1812, upon the declaration of war with England, being commander of the Tennessee militia, he marched to the defence of the Lower Mississippi with 2,500 men. In 1813 he fought against the Creek Indians, and in February defeated them in the decisive battle of Tohopeka, which ended the war. On May 31st, 1814, he was appointed major-general of the United States army. In the summer of that year the English forces were preparing for active operations on the Gulf Coast. Their first objective point was Mobile, and they made Pensacola their base of operations. Jackson determined to attack them there, and he marched upon Pensacola with 3,000 men, and occupied the place Nov. 6th. But it was soon perceived that the main effort of the British forces was to be made at New Orleans, and Jackson marched his whole force thither. He reached the place Dec. 2nd, and began to prepare the defence. On the 14th the British captured five gunboats, the only armed vessels that could obstruct their advance, and Jackson called out the whole force of the State. On Dec. 16th General Keane disembarked the advanced guard of the expedition, and on the 23rd marched to within ten miles of the city. Jackson attacked this body with a force of 2,000 men the same night, and General Keane's force was saved from destruction by the arrival of reinforcements. Jackson meanwhile was fortifying a line nearer the city. The only approach for troops in this direction

was on a ridge at the edge of the river. This ridge had the Mississippi on one side, and a swamp impassable for troops on the other. Jackson's line was a mile long, with his right on the river, his left on the swamp. This line could be made untenable by an advance on the other side of the river by a force well supplied with artillery, as Sir Edward Pakenham was. Pakenham planned the battle with a view to the preliminary capture of the American position beyond the river; but on the day of the battle, Jan. 8th, finding that his column in that direction went on slowly, and growing impatient, Pakenham ordered the advance of his main body to the assault of Jackson's line. Jackson was poor in artillery, but his infantry were unrivalled marksmen, and the event was rather a slaughter of the British soldiers than a fight. Pakenham, who had 8,000 men, lost very heavily, and was himself killed on the field. In 1823 the Legislature of Tennessee nominated Jackson to be President of the United States, and in the election of 1824 he received the largest number of electoral votes; but as no candidate had a majority, there was no election, and John Quincy Adams was chosen by the House of Representatives. In 1828 General Jackson was elected President, and he was re-elected in 1832. During his administration many important subjects were under discussion; and as he was a man apt to take an extreme position, and equally apt to be in fault, and to hold his position with unflinching tenacity, party passions were kept at fever-heat. His bank veto, and his removal of the Government deposits from the vaults of the bank previously authorised to hold them, were instances of his disposition to insist upon his own view. But in the "nullification" crisis the same disposition proved more beneficial. The nullification doctrine was a proposition for resistance to the Federal law, upon the pretence that it led to the invasion of local rights, and was consequently the forerunner of the movement that subsequently produced secession and civil war. Jackson was a patriot, and his declaration made on this occasion, "The Union must and shall be preserved," indicated the uncompromising spirit in which he was ready to perform his duty. His energetic attitude towards the incipient revolt awed its promoters and prevented trouble.

[G. W. H.]

Jackson, THOMAS JONATHAN, known as "Stonewall" (b. 1824, d. 1863), a general of the Confederate army in the American Civil War, was born in Virginia. He entered the Military Academy at West Point in 1842, graduated in 1846, appointed to the 1st

Regiment of artillery, and immediately ordered to Mexico. For gallant and meritorious conduct in the campaign he received successively the brevets of captain and major. In 1851 he was chosen professor of natural and experimental philosophy and artillery tactics in the Military Academy of Virginia; and subsequently was professor of mathematics in the University of Virginia at Lexington. He resigned his commission in the United States army Feb. 29th, 1852. He was noticed at this time for extreme eccentricity of demeanour, and for his earnestness as a "blue-light" Presbyterian. Upon the occurrence of what is called the John Brown (q.v.) raid, he went to Harper's Ferry in command of a battery manned by the cadets—his pupils. It is a noteworthy fact that both R. E. Lee and "Stonewall" Jackson were on duty upon this occasion. Upon the secession of Virginia, Jackson, as a thorough State-rights Democrat, gave himself heart and soul to the Southern cause, and was assigned to the command of the important post at Harper's Ferry, with the rank of colonel of the army of Virginia, April 27th, 1861. He argued with a friend at about this date that "the South should take no prisoners." Upon the removal of the Confederate capital to Virginia, General J. E. Johnston was assigned to the command at Harper's Ferry as an officer in the Confederate service, and there was a short conflict of authority between him and Jackson as a Virginia officer. Jackson yielded. He organised, at his post, what was subsequently known as the Stonewall brigade, composed of the 2nd, 4th, 5th, 27th, and 33rd Virginia regiments. He was appointed brigadier-general June 17th. At the battle of Bull Run Jackson acquired the sobriquet that has since adhered to his name. Colonel Bee, of South Carolina, seeing his own line give way under the Federal fire, called to his men to look where Jackson's line was "standing like a stone wall." In Oct., 1862, General Jackson was assigned to the command of the Confederate forces in the valley of the Shenandoah. He had posted his troops upon good strategic principles, but received, during the winter, a peremptory order to change his dispositions. He obeyed the order, but sent his resignation, because with such a system a commander was unnecessary. He was induced to withdraw it. In the spring he fought small battles at Kernstown, March 22nd, and at McDowell, May 8th; and upon the withdrawal of the greater part of Banks's army, advanced to Winchester and gained a battle there, May 25th. Compelled to retreat up the Valley by a demonstration towards his communications, he gained a victory at Port Republic, June 8th. General McClellan's army, over a hundred thousand strong, was now in front of Richmond. General Lee, in command, determined to make another

attempt where Johnston had failed, and repeated the strategy of concentration which had done so well at Bull Run. Jackson, under orders to that effect, marched secretly and rapidly away from the troops between him and Washington, and reinforced Lee for the assault upon McClellan's lines. Jackson did magnificent fighting at Gaines Mill and Malvern Hill, and the Northern army was driven to the James. Then Lee boldly advanced northward; Jackson's corps was in front, and reached the neighbourhood of Manassas two days in advance of Longstreet and Hill. Pope, the Northern commander, had the opportunity to destroy this isolated corps with his overwhelming force, but did not know how to use it; Longstreet and Hill came up, and Pope was badly beaten in the second Bull Run battle, Aug. 28th and 29th. From this field Lee marched into Maryland, and was beaten at Antietam, Sept. 16th. In this battle Jackson commanded Lee's left wing, which was on the scene of the hard and decisive fighting of the day. On Oct. 11th he was made lieutenant-general of the Confederate army. He bore a conspicuous part in the defence of Fredericksburg, Dec. 13th, 1862, which ended the operations of the year. In the spring hostilities were renewed by the advance of the Northern army under Hooker. It advanced to a position beyond the left flank of Lee's army, and thus compelled him to come out of his strong position on the height behind Fredericksburg. His movement resulted in the battle at Chancellorsville, May 3rd and 4th. In this fight, while the armies confronted one another, Jackson made a rapid flank march of fifteen miles across the whole front of the Northern army, and fell upon its right and rear with such vigour as to crush the corps with which he came into contact. No other part of the Federal army was much engaged in this battle. After the success of his great charge, he rode to the front to observe the position of the enemy, and returning in the dim light of nightfall, was fired upon and seriously wounded by his own men. His death was due to pneumonia, which was a consequence of his wounds. General Jackson was a great corps commander, and, guided by the thoroughly sane conceptions of Johnston or Lee, he was always successful. He handled his troops on the field with the tactical skill of a practised soldier, while he inspired them with an enthusiasm which made them well-nigh irresistible. He never had any considerable success in an independent command; and in some of his most dazzling movements—notably his march to Pope's rear—it is evident that he owed his immunity from destruction to the incapacity of his enemy.

E. L. Dabney, D.D., *Life and Campaigns of Lieutenant-General Thomas J. Jackson* (New York, 1866); E. A. Pollard, *Lee and his Lieutenants* (New York, 1867). [G. W. H.]

Jacobi, FRIEDRICH HEINRICH (b. 1743, d. 1819), the well-known man of letters, and quasi-philosophical writer, was born at Düsseldorf, and having served his apprenticeship in business at Frankfurt, settled as a wealthy merchant on his estate at Pempelfort, near his native city. In 1772 he quitted business, and entered the service of the State as minister. Two years later he met Goethe, with whom, in spite of numerous estrangements and views opposed, he maintained a fairly regular correspondence till late in life. His two most influential works, *Althoff's Correspondence* (*Briefsammlung*), and *Woldemar*, appeared, with frequent alterations, between the years 1775-92, and 1777-81 respectively. In 1780 he visited Lessing, and received his confession of Spinozism, from which sprang the bitter controversy between Jacobi and Moses Mendelssohn, that may be said to mark the beginning of Spinoza's wide influence on science. Having been ruined by the war, Jacobi was invited to Munich in 1805, as president of the Academy. Soon afterwards he engaged in a philosophic controversy with Schelling, and in 1811 published his most important philosophic work, *On the Things of God and their Revelation*, which might serve as a text-book for the philosophy of sentiment (*Gefühls-philosophie*) that at the time commanded a large and earnest following of devotees, and may be traced in the *In Memoriam*, and the works of far greater thinkers than Jacobi himself. His brother, JOHANN GEORG (b. 1740, d. 1814), a poet of some eminence, was professor of philosophy at Halle from 1766 to 1774, when he went to Düsseldorf as editor of the *Iris*, in which many of his best lyrics appeared. In 1784 he became professor in Freiburg, and continued to write with considerable success up to old age. Before the appearance of Goethe, he was perhaps the most popular poet in Germany, and, on the whole, one of the best. Some of his songs have been set to music by the greatest composers.

Correspondence of Fritz Jacobi with Goethe and Herder: E. Zirnlieb, F. H. Jacobi's *Leben, Dichten und Denken* (1867); Correspondence of Georg Jacobi with Gleim.

Jacobini, HIS EMINENCE LUDOVICO (b. 1832, d. 1886), a cardinal-priest of the Holy Roman Church, born at Albano, became, in 1862, *prelatus domesticus*, and referendary of the Segnatura, and subsequently did some secretarial work in connection with the department charged with the affairs of the Eastern Churches. He next became an adviser of the Propaganda, and in 1874 repaired to Vienna as papal nuncio, when he received the customary consecration, with the title of Archbishop of Thessalonica. During his six years' residence at the Austrian capital, he earned a diplomatic reputation, contributing largely to the solution of the difficulties that arose in 1878-9 between Germany and

Russia, and to the ecclesiastical organisation of the new provinces of Bosnia and Herzegovina. In 1879 he became cardinal, and bore the title of pro-nuncio, and in 1880 he returned to Rome to become Papal Secretary of State.

Jacobs, FRIEDRICH CHRISTIAN WILHELM (b. 1764, d. 1847), philologist, was educated at the Gotha Gymnasium, and at Göttingen, where he attended the lectures of Heyne. Jacobs's student career ended in 1785, when he accepted a classical mastership in the Gotha Gymnasium; this post he held for twenty-two years. The stipend was very small, but the generosity of Duke Ernst II. permitted him to carry on the laborious researches for his great work on *Grecian Anthology*, which appeared in 13 vols. (1798-1814). In 1802 he received a post in the ducal library at Gotha. However, in 1807 he accepted an invitation from King Max. Joseph of Bavaria to go to Munich, and by so doing entered on the stormiest period of his career (Nov., 1807—Dec., 1810). Received with great honour by the king, he was nevertheless exposed to the attacks of the Catholic reactionary party, headed by the Freiherr von Aretin. Jacobs maintained a dignified bearing throughout, but he was glad, in 1810, to return to Gotha and fill the post of head librarian. Numerous writings on political questions, collected in his *Vermischte Schriften*, as well as his private correspondence, show how keenly he followed the progress of events. It was to open the eyes of his countrymen to the nature of Napoleon's designs that he published, in 1805, a translation of Demosthenes' orations, and later on he viewed Metternich's policy with the greatest distrust. These, as well as his ethico-historical writings, *Allwin und Theodor* (1802), *Rosalien's Nachlass*, etc., are distinguished by great literary beauty. Of his works on classical literature, it will suffice to mention his numerous critical editions of ancient authors; his *Zweite Iliade* (1793), in which he edited that Byzantine grammarian; the *Anthologia Græca ad finem Codicis Palatini* (1814-17), in 3 large vols.; *Tempe*, in 2 vols.; his *Lectiones Vossianæ*, which inspired new life into the criticism of Horace's poetry, numerous translations of which appeared in rapid sequence from 1828; and literary, historical, antiquarian, and archaeological essays, collected in volumes 3 to 6 of his *Vermischte Schriften*.

Hoffmann, *Lebensbilder berühmter Humanisten*.

Jacoby, JOHANN (b. 1805, d. 1877), was the son of a wealthy Jewish merchant, and established himself in 1830 as a physician in his native town of Königsberg. He had already employed his pen and energy to defend the freedom of religion and the press, when in 1841 his pamphlet, *Four Questions answered by an East Prussian*, in which he vindicated

the claims of the country to a free Constitution, exposed him to a trial for high treason. Condemned to two and a half years' imprisonment, he was acquitted by the higher tribunal to which he appealed. In 1846 his two pamphlets, *Prussia in July, 1845*, and *The Royal Word of Frederick William III.*, again brought him into conflict with the authorities, but once more the sentence passed against him was reversed. In 1848 he was one of the members of the preliminary assembly in Frankfurt, and was chosen one of the committee of fifty. A member of the United Landtag at Berlin, he returned after its dissolution to the National Assembly at Frankfurt, and took part in the session in Stuttgart, where his advocacy of the committee to establish the Constitution exposed him once more to a trial for high treason. He was acquitted in Dec., 1849, and retired from public life until 1859. But the breach between the Liberals and Democrats, whose cause he had espoused, had grown wider, and Jacoby, after another short venture in politics, devoted himself to philosophy until 1863, when the contest between the House of Deputies and the Government induced him to accept the seat he had refused in 1862. An address to the electors brought on him six months' imprisonment. He resolutely opposed Bismarck's schemes for the remodelling of Germany, which he felt to be fatal to national liberty, and carried on his opposition from his seat in the Landtag, and in the pages of his own organ, *Die Zukunft*. In 1872 he formally announced his adhesion to the Social Democratic party, and owing to his action during the Franco-Prussian War, and especially the public condemnation of the annexation of Alsace and Lorraine, he was detained for six months as a State prisoner in the fortress of Lötzen. Dissatisfied with the turn political affairs had taken, Jacoby retired from the conflict in 1871.

Jacoby, *Gesammelte Schriften*; Robert Blum, *Die Fortschritte Männer der Gegenwart*.

[A. M. C.]

Jacquemart, JULES (b. 1837, d. 1880), a French artist, was the son of Albert Jacquemart, a well-to-do collector, possessed of the deepest delight in the beauty and rarity of his possessions. Albert Jacquemart wrote the *Histoire de la Porcelaine* between 1860 and 1862, and the *Histoire de la Céramique* later on. Both books were illustrated more or less by the son Jules. The etched illustrations to the *Histoire de la Porcelaine*, wrought when Jules Jacquemart was but three or four-and-twenty, are of the very daintiest kind. But dainty and vivacious as are the etchings for the *Histoire de la Porcelaine*, they are surpassed in masterliness, in their assured command of style, breadth, richness, by those which, in 1864, Jacquemart was commissioned by the French

Government to undertake—the larger etchings for the publication known as *Gemmes et Joyaux de la Couronne*. The subjects of these are obviously more varied; their perfect execution implies an understanding of a greater number of materials. If one may say so without saying anything in the slightest degree depreciatory of his earlier labour, Jacquemart's observation had now become wider, and his hand more flexible. He was therefore able to do the most complete justice to the treasures of the Louvre in this kind—those that may be studied enshrined in their table-cases in the Galerie d'Apollon. These two important works that we have mentioned ensure the duration of Jacquemart's fame. But other miscellaneous work—the etchings of the Valenciennes porcelain of Dr. le Jael, and of the *Miroir français du Seizième Siècle*, for instance—are not less delightful evidences of his skill; and there are certain pictures which he has reproduced to perfection, bringing us the force of Franz Hals, the cordial impetuosity of Fragonard, the cajoling art of Greuze. Then, later in life, when ill-health fell upon him—he was hardly yet middle-aged—he took to painting landscapes in water-colour, and his visions of Mentone, to which his weakness obliged him to resort in winter, were thoroughly personal. But he was not now to work very much, nor very long. In 1873, while exercising at Vienna his functions as a member of the jury of the International Exhibition there, he caught typhoid fever, and that was seemingly the signal for the breaking-up of his health. Afterwards began his yearly journeys to the South, for winter, and it was in Sept., 1880, that he died of *phthisis laryngis*—tubercle in the throat. He had never been married. He was devoted in the main to etching, and chiefly to be celebrated hereafter as well as now, by reason of his etched reproductions of beautiful objects of art. He was, in his later days, a water-colour painter; and, of his etchings, several of the most popular reproduce pictures of the Dutch and the French schools. It is impossible to translate into black and white with greater perfection than Jacquemart did, such canvases as Van der Meer's, *The Soldier and the Smiling Girl*, and Fragonard's *Premier Baiser*, and Greuze's *Rêve d'Amour*. He rendered these with exquisite understanding and intelligence. Yet it was not, after all, his peculiar function to interpret other men's form and colour. Excelled by none in this matter, when at his best in it, he was yet equalled by a few. But it was when he interpreted not other men's pictures, but famous objects of art, finely wrought in noble and precious material—it was in the etching of jade and porphyry, and rock-crystal, and armour and porcelain, that he stood alone, and led the way for Courty, Greux, Le Rat, and others to follow him.

[F. W.]

Jahn, Otto (b. 1813, d. 1869), archaeologist, philologist, and art critic, was educated at the Kiel Gymnasium and the Schulpforta, attended the Universities of Kiel, Leipzig, and Berlin, graduated in 1836, and after he had travelled, supported by the Danish Government, established himself in Kiel, in 1839, having hesitated for some time whether to devote himself to music or literature. His final choice made for the latter, the former still employed many of his leisure hours, and besides numerous original compositions, and articles upon musical subjects, we owe to his pen the magnificent *Life of Mozart*, published in 4 vols., 1856-9, which is not only a critical biography, but an exhaustive study of many of the principal branches of musical composition. Unfortunately, death prevented his accomplishing the large work on Beethoven, for which he had collected materials. In 1842 he went as professor of archaeology and philology to Greifswald, becoming later one of the directors of the philological seminary, removed the scene of his labours to Leipzig in 1847, but lost his professorship for political reasons in 1851, and continued for some years to teach privately there, until in 1855 he received an appointment in the University of Bonn, where he continued until his death in 1869, after a long struggle with sickness. In addition to his numerous contributions to the learned periodicals, many of which were republished, we may mention his editions of *Persius* (1843-51-68); *Juvenal* (1851-68); *Cicero's Brutus* (1849); *Cicero's Orator* (1851); *Julius Florus* (1852); *Plato's Symposium* (1864); and *Sophocles' Electra* (1861), in philology; his *Vasen Bilder* (1839); *Vasensammlung in München* (1854); *Bemalte Vasen mit Goldschmück* (1865); *Bilder Chroniken* (1873); *Telephos und Troilos* (1841); *Ficoronische Cista* (1852); and *Tod der Sophonisba* (1860), in archaeology; a number of occasional biographical and literary works on *Winckelmann*, *Gottfried Hermann*, *Uhland*, *Gerhard*, and others, and his editions of Goethe's letters to Voigt, and to Leipzig friends.

• **James, David** (b. 1839), comedian, whose real name is Belasco, began his professional career as a member of the ballet corps at the Princess's Theatre during the management of Charles Kean. When the company broke up on Kean's retirement in 1859, young James went on a Cornwall tour. The Cornwall tour completed, he obtained some small provincial engagements, and at Portsmouth, under Mr. Harry Rulley, was promoted to small parts, such as Osric in *Hamlet*. After a brief engagement at the Royalty, he entered the company at the Prince of Wales's Theatre, Birmingham, then under the management of W. H. Swanborough. Returning to London, he was once more associated with the Royalty, and acted with Miss Ada Cavendish in *Ixion*, taking the part of Mercury. In 1862 he was

offered an engagement at the Strand, where Mrs. Swanborough had formed a very strong company for burlesque, then fostered by the brilliant wit and spontaneous fun of Byron and Burnand, and taking a strong hold on the public taste. Here James took leading parts: Will Somers in Burnand's operatic extravaganza, *Windsor Castle*, Tom Foker in *One Tree Hill*, and Zekiel Homespun in *The Heir-at-Law*, produced in 1870. In this year, in conjunction with Thomas Thorne, also a member of the Strand Company, and Henry Montague, he took the new Vaudeville Theatre, the three young lessees being for a long time spoken of as "the Boys." But the "Boys" managed to secure not only a good company, but a powerful writer, and produced in June, 1870, after a short run of *For Love or Money*, Albery's comedy, *The Two Roses*, in which James afterwards took the part of Our Mr. Jenkins, originally played by George Honey. At the Vaudeville his name is associated with the characters of Bob Prout in *Apple Blossoms*; Goldfinch in *The Road to Ruin*; Sir Benjamin Backbite; Sir Ball Brace; the immortal but-terman, Perkyn Middlewick, which he continued to play during the unparalleled run of Byron's comedy, *Our Boys* (Jan. 16th, 1875, to April 18th, 1879); and of the testy old boat-builder, Macclesfield, in *The Guv'nor*. The connection with the Vaudeville was broken in 1881, and at a revival of *The Two Roses* at the Lyceum, Mr. James played his old part of Our Mr. Jenkins. He joined the Haymarket company in 1863, played in the *Overland Route*, and took the part of Eccles in *Caste*. A successful revival of *Our Boys* was given at the Strand in 1884, and in 1885-6 Mr. James was Blueskin in the burlesque *Little Jack Shepherd*, at the Gaiety, and afterwards appeared in a revival of *David Garrick* at the Criterion.

James, George Paine Rainsford (b. 1801, d. 1860), novelist, was educated in France, and began a literary career at an early age. Encouraged by Washington Irving and Scott, he directed his efforts chiefly towards the production of historical novels. *Richelieu*, perhaps his best, was published in 1829, and was speedily followed by some sixty others, among which *Philip Augustus* (1831), *Henry Masterton* (1832), *Darnley* (1839), *Henry of Guise* (1847), *The Huguenot* (1847), and *The Smuggler* may perhaps be mentioned. He also wrote numerous volumes of poetry and compilations which may perhaps be dignified with the title of history. He was British consul at Richmond, Virginia (1855-8), and was then transferred to the Austrian ports in the Adriatic. He died at Venice. James's novels are seldom read now, nor perhaps would it be charitable to rescue them from the oblivion to which they were consigned by the witty parody of Thackeray. Beyond a certain easy amble of style, and a knowing eye for the picturesque, he possessed

few, if any, positive merits as a writer. His plots are feeble, and full of redundant incidents, and his dialogue of the baldest.

* **James, HENRY** (b. 1843), novelist, a native of New York, is the son of the late Mr. Henry James (d. 1882), a skilled religious controversialist, and the brother of Professor William James, of Harvard. He has lived chiefly on the Continent and in England, and is the author of a number of novels and tales which are equally popular in America and in this country. Not conspicuous for wealth of incident, nor for complexity of plot, their charm lies in the presentment of the delicate shades of character, and in the acute perception of national peculiarities and defects. Perhaps the best known of them is *Daisy Miller* (1879); and he has also published:—*Transatlantic Sketches* and *A Passionate Pilgrim and other Tales* (1875); *Roderick Hudson* (1876); *The American, A Bundle of Letters, and Confidences* (1877); *The Europeans, and Watch and Ward* (1878); *An International Episode* (1879); *The Madonna of the Future, and The Diary of a Man of Fifty* (1880); *The Portrait of a Lady, Washington Square, etc.* (1881); *Portraits of Places, and The Siege of London, etc.* (1883); *Tales of Three Cities* (1884); *The Bostonians* (1886). Mr. James has also written *French Poets and Novelists* (1878), and *Hawthorne in the English Men of Letters Series*. An edition of his novels and tales, in 14 vols., was published in 1883.

* **James, SIR HENRY, M.P., Q.C.** (b. 1828), the son of the late Mr. P. J. James, of Hereford, was educated at Cheltenham College, and was called to the bar in 1852, having been lecturer's prizeman for the two previous years. In 1869 he became a Q.C., and was elected member for Taunton in the Liberal interest, and became a Bencher of the Middle Temple in 1870. In 1873 Mr. James became Solicitor-General in Mr. Gladstone's ministry, and was knighted, and shortly afterwards was appointed Attorney-General (1873-4). On the return of the Liberals to power in 1880, Sir Henry James again became Attorney-General, and held that office until 1885. During that period he steered the Corrupt Practices Bill of 1883 successfully through the House of Commons. In Jan., 1886, Sir Henry James, having been returned for Bury, was offered the Lord Chancellorship by Mr. Gladstone, but declined it, owing to his disapproval of the Prime Minister's Irish policy.

Jameson, ANNA (b. 1797, d. 1860), writer on art, born at Dublin, was the daughter of a painter named Murphy, and in 1825 married a barrister, Robert Jameson. He proved an unkind husband, and she refused to accompany him when in 1829 he obtained an appointment at Dominica, and only lived with him again for a brief period (1836-7). She had previously published her charming *Characteristics of Women* in 1832. She also

wrote upon the questions of penitentiaries, hospital nursing, and female labour. Mrs. Jameson is, however, chiefly known as an art critic of great delicacy of feeling and historical research. Her chief books, which are still read with pleasure, are:—*Handbook to Public Galleries in and near London* (1832); *Lives of Early Italian Painters* (1845); *Poetry of Sacred and Legendary Art* (1848); *Legends of the Monastic Orders* (1850); *Legends of the Madonna* (1852); and the well-known *History of our Lord and of his Precursor John the Baptist, as represented in Art*, completed after her death by Lady Eastlake.

G. Macpherson, *Memoirs of Mrs. Jameson*.

Jang Bahadur, SIKH (b. 1816, d. 1877), Prime Minister of Nepal, was the nephew of a man who was a high functionary of Bengal. His method of gaining power was truly Oriental. He acquiesced in the murder of his uncle at the instigation of the queen-regent in 1834, and accepted from her the post of commander-in-chief of the army. When the new Prime Minister was murdered by the partisans of the opposite side, Jang Bahadur seized and put the ringleaders to death, and made himself Prime Minister. He then banished the queen and the imbecile king, raised the heir-apparent to the throne, and so established himself without a rival. Having performed his necessary cruelties, Jang Bahadur developed into a most enlightened ruler. He had the good sense to see that his best policy was to be on good terms with the English, and sent a Goorkha contingent to our aid during the Mutiny, which fought bravely at Oudh. In 1850 he visited England, was knighted and created a G.C.S.I. On his death, his brother, Ranadeer Singh, succeeded him as Prime Minister.

Janin, JULES GABRIEL (b. 1804, d. 1874), the French critic and novelist, was the son of poor parents, and educated at St. Etienne and Paris. Compelled by poverty to earn his living by teaching, he soon drifted towards journalism. First on the staff of the *Figaro*, and then of the *Quotidienne*, he finally became connected with the *Journal des Débats*, and as dramatic critic for this paper inaugurated an entirely new epoch in the domain of dramatic criticism. Bright, airy, full of gossip, trenchant, and witty, but destitute of real intellectual criticism, his articles delighted and amused, and earned for their writer the title of the "Prince of Critics," and displaced the heavy but scholarly and conscientious reviews of the *Planché* type. In 1870 he became a member of the Academy in the place of Sainte-Beuve, having been previously passed over for M. Prévost-Paradol. Of his numerous novels and shorter stories the earliest, *L'Ane mort et la Femme guillotinée*, was worthless, and *Barnave* (1831) is accounted the best. *Contes Fantastiques*; *Contes Nouveaux*; *La Confession*; *Le Chemin de Travers*; *La Fin*

d'un Monde et du Neveu de Rameau, a picture of the eighteenth century; *Les Catacombes*; *La Religieuse de Toulouse*; *Un Cœur pour deux Amours*; *L'Interné*; *Les Oiseaux Bleus*; and *La Dame à l'Éillet* are also popular. The best of his contributions to the *Débats* were collected in 6 vols. in 1862, under the title of *Histoire de la Littérature dramatique*. He wrote numerous prefaces and independent works on literature. *Béranger et son Temps*; *Lamartine*; *Tableaux anecdotiques de la Littérature française*; *Histoire du Théâtre à Quatre Sous*; *Cours sur l'Histoire du Journal en France*; *Paris et Versailles il y a Cent Ans*; *La Normandie historique, pittoresque, et monumentale*; *La Bretagne*; and *Voyage en Italie*; a prose translation of Horace, whom he also cherished the desire of rendering into verse; a rendering of *Clarissa Harlowe*; *Les Beautés de l'Opéra*, edited in conjunction with Chasles and Gautier; and fragments from *Manon Lescaut*, edited with Houssaye and Sainte-Beuve, are among the works with which his pen enriched French literature. A selection from these was published in his *Œuvres Choies* (1875-8, 12 vols.); and his *Correspondance* appeared 1877.

JAPAN, THE RULERS OF, *de facto*, were at the beginning of the century styled *Shogun* (general), or when dealing with foreign nations, *Tycoon* (great-lord), a title which had been hereditary in the Tokugawa family since 1603. The ruler *de jure*, was the Mikado or Emperor, whose family origin is dated at 660 A.C., but he was practically a prisoner of state. The dynasty of Tycoons continued to exist until 1868, the names of the successive rulers, and the dates of their reigns, being *Iyémori* (1787-1838); *Iyéyoshi* (1838-53); *Iyēada* (1853-9); *Iyémochi* (1856-66); and *Yoshinobu* (1867-8). During this period Japan was in a condition of apparent peace; a highly complex feudal system, with the *Daimios* as great territorial nobles, had every appearance of stability, and relations had been opened with several of the European nations. In 1858 Lord Elgin obtained the Treaty of Yeddo, opening Japan to British commerce, and in the following year an embassy with Mr. (afterwards Sir R.) Alcock as consul-general, was established at Yeddo. The people, however, who objected to strangers, not unfrequently attacked the embassies and fired on English ships, and on more than one occasion hostilities had to be resorted to, notably in 1864, when the Straits of Simonsaki were forced by English and American vessels. After this lesson, relations once more became smooth; Sir Harry Parkes visited the Tycoon in 1867, and his brother, Prince Minbontaiyou, came to England, and was presented to the Queen. This state of affairs was brought to a close in 1868, when a revolution broke out with the object of restoring the *Mikados*, or Emperors. The *roi fainéant*, in fact, asserted himself

against the mayor of the palace, and through the defection of several powerful clans, he won an easy victory. The Tycoon was defeated in several engagements, and had to abandon his pretensions; military feudalism was abolished, and absolutism took its place. * Moutrz Hirro (b. 1852) had succeeded to his father's titular honours in 1867, and he now celebrated the destruction of feudalism by making Yeddo his capital, and changing its name to Tokio (the Eastern capital). He did not sweep away the recent régime without some difficulty, and has been more than once menaced by revolts, particularly in 1877, when there was some severe fighting. Indeed, conservatism in Japan must find its feelings gravely outraged by the Mikado's passion for Europeanising his country. A brand-new Constitution was created by Imperial authority in 1875, and about the same time materials for a brand-new religion were being diligently collected among the nations of the West. The telegraph was introduced one year, railways the next, and ironclads shortly afterwards. Occasionally the Imperial mind seemed to be seized with caprice, if such an assertion can be made without irreverence; on one occasion a royal edict went forth that every Japanese should possess a pig or two—the edict was promptly revoked, and the more loyal the subject the more heavy, of course, was his loss. The external relations of the monarch have been on the whole pacific, especially with Europeans, and it is the insistence of the Western Governments upon the "most favoured nation" clause of individual treaties alone, which prevents him from throwing open his country to the stranger. With China there have been occasional disputes, chiefly concerning the suzerainty over Corea; but in 1875, and again in 1884, the matter was finally settled without fighting, the two Governments wisely determining not to give Russia a pretext for intervention.

Sir R. Alcock, *The Capital of the Tycoon*; Sir E. J. Reed, *Japan*.

JARDINE, SIR WILLIAM (b. 1800, d. 1874), ornithologist, was born at Jardine Hall, in Dumfriesshire, and educated at Edinburgh. In 1825 he commenced, in conjunction with the late Mr. Selby, of Twizell, the publication of the *Illustrations of Ornithology*, and almost immediately became recognised as one of the leading zoologists in Scotland, if not in the United Kingdom. In 1833 he undertook a still more important work, *The Naturalist's Library*, 40 vols. of which appeared in the course of the next ten years. Sir William Jardine next brought out an excellent edition of Wilson's *American Ornithology*, wrote the *Memoirs of H. E. Strickland*, the naturalist, his son-in-law (1858), published his *Contributions to Ornithology*, and started *The Magazine of Zoology and Botany* (afterwards merged in *The Annals of Natural History*).

His expedition with Selby, in 1834, to Sutherlandshire, gave a great impulse to the study of the British fauna and flora, and almost marks an epoch in the history of biology in Britain. Sir William made a valuable contribution to geology in his *Ichthyology of Anandale* (1853), the chief materials of which were found on his own ancestral estate.

Nature, xi. 74.

Jasmin, JACQUES (b. 1798, d. 1864), the Gascon barber-poet, was the son of a tailor living at Agen, in Lot-et-Garonne, where, too, the poet continued to live and exercise his humble calling, even after he had reached fame. The real family name was Boé. Jasmin's early life is told in *Mons Soubenis* (*Mes Souvenirs*, 1830). A youthful escapade procured his expulsion from school, and he returned to his native town to be apprenticed to a barber, setting up in business for himself, and marrying, when eighteen. His first published song, *Nu cal mouri*, soon attained a widespread celebrity in Southern France. His genius was generally serious, but *Son Chalibar* (*Le Charivari*, 1825) is a mock-heroic poem, which has been favourably compared to Boileau's *Lutrin*, and Pope's *Rape of the Rock*. In 1832 he became known to Charles Nodier, whose admiration for his genius was unbounded, and the first collected edition of his works, *Les Papillotes* (*The Curlpapers*) appeared in 1834. From this time, his recognition by the foremost literary men in France was rapid. Toulouse presented him with her golden laurel; Lyons gave him two crowns; Louis Philippe presented him with the Légion d'Honneur; and in 1852 the French Academy awarded him a prize of 5,000 francs. This last honour did not pass unchallenged, as it was urged that Jasmin's works were not a contribution to French literature at all. The poet's enthusiasm for the beautiful tongue in which he wrote was great, and there is a poem addressed to M. Dumon, who had written on the inevitably moribund state of the *langue d'oc*, in which he asserts its long-enduring vitality. The longer and best known of Jasmin's poems are the beautiful and pathetic *L'abuglo de Castéleuillè* (*The Blind Girl of Castéleuillè*, familiar through Longfellow's version), read before the Bordeaux Academy, 1835, amid a perfect storm of plaudits, and, again, at a reception held by M. Augustin Thierry, during the poet's first visit to Paris in 1842; *Franconnetto* (1840), sometimes, but not universally, considered his masterpiece; *Lous dus frays besous* (*The Twins*, 1841); *Maitro Finocento* (*Crazy Martha*, 1845), the most loved and known of all his works, *La Semano d'un fil* (*The Son's Week*, 1849); and *La Couronne des Brès* (1856), in commemoration of the golden crown presented to him by his own town of Agen.

Jules Andrien, *Jasmin et son Œuvre*; Rabain, *Jasmin, sa Vie et ses Œuvres*.

* **Jebb**, RICHARD CLAYVERHOUSE (b. 1841), classical scholar, was born at Dundee, and educated at Dublin, Charterhouse School, London, and Trinity College, Cambridge, graduating as a senior classic in 1862. In 1869 he became public orator to the University, and the following year he published *The Characters of Theophrastus*. In 1872 he was appointed tutor of Trinity College, and in 1875 he succeeded Dr. Lushington to the Chair of Greek in the University of Glasgow. Since then Professor Jebb has published a fine edition of the *Attic Orators*, with notes (1876), and an edition of *Sophocles* (1883). In 1880 he brought out an interesting work on *Modern Greece*, and has written a *Life of Bentley*, in the *English Men of Letters Series*. He became a D.C.L. (Edinburgh) in 1877.

* **Jefferson**, JOSEPH (b. 1829), American actor, a native of Philadelphia, is the last and most celebrated of a family of actors, and his mother, who first married the comedian Mr. Burke, was a celebrated singer. He went on the stage at the age of three, and had little or no schooling, but his first attempt at any considerable part was a complete failure, owing to stage-fright. In 1848 he appeared with success in *The Maid and the Magpie*; in 1849 he was at the National Theatre, New York, and married a member of the company, Miss Margaret Lockyer. From 1852-6 he played at Baltimore, and in 1857 he produced *The Sea of Ice*, with great success, at Laura Keane's Theatre, New York. His creation of the part of Asa Trenchard in *Our American Cousin* made him, as the part of Lord Dundreary in the same play made Sothorn. During the Civil War he toured in Australia, and produced *The Ticket-of-Leave Man* among audiences that were not unacquainted with tickets-of-leave. He had first played Rip Van Winkle (Burke's version) in 1860, but Mr. Boucicault's version of that immortal story was first produced by him at the Adelphi Theatre, London, in 1862. Mr. Jefferson returned to the United States in 1865, having by that time achieved the reputation of being one of the greatest actors of his time. His second visit to London was made in 1874-7. For years Mr. Jefferson has played Rip almost exclusively, occasionally appearing as Bob Acres, or as Cousin Joe in *The Rough Diamond*. The creation is still one of the most perfect that has ever been seen upon the stage, and it is impossible to imagine a more complete presentment of Washington Irving's light-hearted, lovable hero. It is an utter mistake, nevertheless, to talk of Mr. Jefferson as a "one-part actor." He is also a painter of more than amateurish skill, and a keen sportsman. Mr. Jefferson married a second wife, Miss Warren, in 1868.

Jefferson, THOMAS (b. 1743, d. 1826), 3rd President of the United States, was the

son of a wealthy Virginia planter. After receiving a regular education, he studied law, began the practice of that profession in 1767, and continued it until the conflict with the mother country closed the courts. He represented his country in the Virginia House of Burgesses at the age of twenty-six. In 1772 he married Mrs. Martha Skelton. In 1773 he was appointed the member for Virginia of "the committee of correspondence and inquiry" between the colonies. He was chosen a member of the State Convention to consider the relation of the colonies to the mother country; but though he did not sit, his *Summary View of the Rights of British Americans* gained him the position of a literary champion of the popular cause. In 1775 he was elected to the Continental Congress as the substitute for Peyton Randolph. Mr. Randolph was detained in Virginia by official duties, and Jefferson sat and was appointed on the committee to draw the declaration of taking up arms, and on that to frame the Declaration of Independence, of which he was the author, Benjamin Franklin and John Adams, his associates on the committee, having merely made verbal changes in Jefferson's draft. Jefferson sat in the Virginia House of Delegates in 1776, and initiated some great reforms in the law. He brought in Bills for the abolition of primogeniture, the cutting off of entails, and the disestablishment of the Church, a law for religious liberty. He prevailed in carrying these democratic propositions against vigorous resistance of the aristocratic party. In a subsequent session of the same body he proposed a law against the future importation of slaves. In 1779 he was elected Governor of Virginia, and was much reproached for the ineffective resistance to the British force sent into the State under Cornwallis, then operating in the Carolinas. But the State was without means to resist. He declined a re-election as Governor, but was returned to the Continental Congress, and as chairman of one of its committees reported the treaty of peace with England. In 1784 he was associated with Franklin and Adams as plenipotentiaries for the negotiation of treaties of commerce with European States. His *Notes on Virginia* were published while he was in Paris upon this mission. In 1785 he was appointed minister plenipotentiary to France. He was a successful diplomatist, and was in a peculiar degree a *persona grata* in Parisian society. In 1789 he returned home upon leave of absence, but remained to accept the position of Secretary of State in the Cabinet of Washington, which he entered in March, 1790. Opposing currents of political thought already divided men in the new republic, and made themselves strongly felt in the Cabinet. Jefferson was the recognised head of one of these currents. Alexander Hamilton, the Secretary of the Treasury, was conspicuous as a champion of the opposing

theories. Jefferson's party, the Republican party so called, stood for State sovereignty and democratic ideas, and sympathised with all the theories of the French Republic; while Hamilton was, like Washington himself, opposed to those theories, and a believer in the doctrine that the federation of the States should be pushed upon all possible occasions towards the goal of national unity. In December, 1793, Jefferson resigned his seat, and left the Cabinet. In 1796 he was a candidate for the presidency against John Adams; but Adams became President, while Jefferson became Vice-President under the law as it then stood. This period was one of great political agitation, mainly relative to the respective sympathies of the two parties in the great conflict then raging in Europe. In 1800 Jefferson and Burr, the candidates of the Republican party for president and Vice-President, had the largest number of votes, but as they had equal votes there was no choice, and the election was made by the House of Representatives. Jefferson was elected. Louisiana, ceded by Spain to France in 1800, was purchased by President Jefferson in 1803 for 15,000,000 dols. The development that this gave to the territory of the Republic makes it the most momentous fact in his presidency. He was re-elected in 1804 by a nearly unanimous vote. Upon the expiration of his second term he retired to the repose and privacy of his home, where he died on July 4th. He was a very successful politician and diplomatist, and a graceful and accurate writer, but as to his political theories, was rather a philosophical democrat than a statesman. His dogma, "all men are created equal," was one in which he believed so far as he saw its application in politics and social organisation; but while he moved upon terms of presumed equality with all whom he met, his theories failed to separate this fact from the notion of condescension.

Thomas Jefferson Randolph, *Memoirs, Correspondence, and Private Papers of Thomas Jefferson* (4 vols., London, 1829); James Parton, *Life of Thomas Jefferson* (Boston, 1874).

[G. W. H.]

Jeffrey, FRANCIS, LORD (b. 1773, d. 1850), Scottish judge and literary critic, was born at Edinburgh, and educated at the Royal High School (where he had Scott and Brougham for schoolfellows), and at the University of Glasgow. He subsequently spent a year at Oxford. In 1794 he was called to the Scottish bar, where he soon became distinguished for the vigour of his eloquence, and the wit and boldness of his invective. The world is familiar with Sydney Smith's account of the starting of the *Edinburgh Review* in 1802. Smith was the editor of the first three numbers, but on his leaving Edinburgh for promotion in the Church in 1803, Jeffrey took his place, which he continued to hold till the year

1829, when he was elected to the office of Dean of the Faculty of Advocates, a judicial appointment of distinction at the Scottish bar. In 1830 he became Lord Advocate, and represented Perth, and subsequently Edinburgh in the House of Commons, but soon growing weary of attendance in the House, he asked Lord Melbourne (1834) for what he had long coveted—a seat on the Scottish bench, received the appointment with the “paper title” of lord, and retired to Edinburgh. Lord Jeffrey is to be looked upon as an editor and a critic, and not as a judge. “Envy must own” that he conducted the *Edinburgh Review* with admirable skill, though with violent and often brutal partisanship, and that he showed great judgment as to the writers whom he brought about him. His position as editor led him into more than one unpleasant quarrel. The Lake Poets seldom spoke of him except in terms of hatred and contempt; and the memorable duel at Chalk Farm in 1806 with Moore will long be remembered by the “Little’s leadless pistol” of the *English Bards and Scotch Reviewers*. His *Essays* (1843), selected from his two hundred contributions to the *Edinburgh Review*, are marked by a subtlety of opinion and nicety of disquisition, and will well repay perusal.

Lord Cockburn, *Life of Lord Jeffrey, with a Selection from his Correspondence; Carlyle's Reminiscences.*

Jenkin, FLEMING (b. 1833, d. 1885), engineer and electrician, was born in Kent, and educated at Edinburgh, at Frankfurt-on-the-Main, at Paris, at the University of Genoa, where he took the degree of M.A., and ultimately at Marseilles, where he began the engineering career which he followed so successfully. Returning to England in 1851, he made rapid progress in his profession—so much so that in 1858 the electrical teeting of the first Atlantic cable was put under his charge. In 1865 he was elected a fellow of the Royal Society, and in the same year professor of engineering in University College, London. Three years later he was appointed to the newly instituted Chair of engineering in the University of Edinburgh. In 1877 he delivered two lectures before the Edinburgh Philosophical Institution on *Sanitary Houses*, and these led to the formation of the Edinburgh Sanitary Protection Association, and similar associations throughout the kingdom. Latterly he devoted considerable attention to a system of electrical transport, which he was working out, and which he termed “telpherage.” Among his most important contributions to scientific literature may be mentioned *Magnetism and Electricity*, which has gone through more than half a dozen editions, and been translated into German and Italian; a *Treatise on Bridges* (1876), and *Healthy Houses* (1878). In consequence of Professor Jenkin’s criticism of *The Origin of Species* in the *North*

British Review for 1867, Mr. Darwin modified some of his views.

Scotsman, June 6th, 1885.

Jenner, EDWARD (b. May 17th, 1749; d. Jan. 26th, 1823), an English physician, was born at Berkeley, Gloucestershire. He was the third son of the Rev. Stephen Jenner, Vicar of Berkeley, who apprenticed him, at the age of fourteen, to Mr. Ludlow, a surgeon in Sudbury, near Bristol. In 1770 he went to London, to study under John Hunter for two years, and was selected by Sir Joseph Banks to classify Captain Cook’s natural history collections. He declined the appointment of exploring naturalist to Cook’s second expedition, and returned to Berkeley to practise as a surgeon. In 1792 he received the degree of M.D. from the University of St. Andrews. He soon became the favourite doctor of his neighbourhood, and under Hunter’s direction investigated certain points in rheumatic inflammation of the heart. During his apprenticeship he once heard a milkmaid dispute his master’s diagnosis. The surgeon thought she had small-pox. The girl said that was impossible, because she had taken cow-pox whilst engaged in milking a diseased cow. Young Jenner found that the country people believed that cow-pox was antagonistic to small-pox, and he told this to Hunter, who drew attention to it in his lectures, and urged his pupil to follow up the clue scientifically. Hunter was the only medical man of his time who gave Jenner the least encouragement. After a long series of experiments, Jenner found—(1) that only one form of eruption on the cow’s udder was a protective against small-pox; (2) that this form of cow-pox was communicable from one person to another without losing protective power. In 1798, armed with evidence proving these two points, he went to London, but was attacked with bitter hostility by Dr. Ingenhousz and others as a quack, who wished to “bestialise” humanity by the inoculation of diseased bovine “humours.” Still more hostile to Jenner’s interests was the rash advocacy of those who, like Dr. Pearson, attempted to appropriate the honours and profits of the discovery. They made vaccination unpopular by using vaccine matter tainted with the virus of small-pox. His discovery, however, was generally accepted. In 1800 he was presented at court, and during the next five years testimony of the world’s gratitude came from all quarters. Waterhouse of Cambridge, Massachusetts, and De Carro of Vienna, introduced the practice in America and in Europe. Parliament, on the recommendation of Mr. Addington, voted Jenner a grant of £10,000 in 1802. After a year’s trial he gave up an attempt to practise in London, and returned to Berkeley. In 1804 the grant was paid, £1,000 being docked for fees, so that the balance barely covered the expenses of his investigations. His moral

influence over the world was amazing. Napoleon himself would release a prisoner at his request. The Empress Josephine, when some favour was asked for a friend of Jenner's, exclaimed, "Dr. Jenner! ah, we can refuse nothing to that name." A certificate with his signature was as good as a passport in any foreign country. In 1806 Parliament voted him £20,000, and a subscription was raised in India for him, which amounted to £7,383. In 1813 Oxford conferred on him the degree of M.D. But the College of Physicians refused to admit him unless he consented to submit to a preliminary examination in general knowledge. In 1814 he was presented to the Allied Sovereigns in London, and in 1815 he retired to Berkeley never to leave it again, except to pay brief visits. In 1818 an outbreak of small-pox raised doubts as to the efficacy of Jenner's discovery, but it was traced to the use of bad lymph. In 1823 he presented his last paper to the Royal Society on *The Migration of Birds*.

John Baron, M.D., *The Life of E. Jenner*, M.D. (3 vols., London, 1827-38.)

[R. W.]

* **Jenner, Sir William, Bart.** (b. 1815, the son of the late Mr. John Jenner, was born at Chatham. He was educated at University College, London (M.D., London, 1844). In 1848 he became professor of pathological anatomy in University College, professor of the principles and practice of medicine in 1862, and Emeritus professor of medicine on his retirement from the latter Chair in 1879. Sir William Jenner has held numerous appointments in connection with the London hospitals; he became assistant physician to University College Hospital in 1848, physician in 1854, and professor of clinical medicine in 1857; he was physician to the Hospital for Sick Children from 1852-62, and assistant physician to the London Fever Hospital from 1853-63. Of court appointments he has held those of physician extraordinary to the Queen, 1861; and physician in ordinary, 1862; and to the Prince of Wales (whom he attended through his dangerous illness of 1871) in 1863. He was created a baronet in 1868, and a K.C.B. in 1872, and among his numerous scientific honours may be mentioned those of F.R.C.P. (1848), F.R.S. (1864), the presidency of the Pathological Society (1873), and of the Royal College of Physicians (1881-6). He is the author of the *Gulstonian Lectures of 1852*, a treatise on *Diphtheria* (1861), and *The Identity or Non-Identity of Typhus or Typhoid Fevers*.

Jerrold, Douglas William (b. 1803, d. 1857), wit and author, belonged to a theatrical family. His father, Samuel Jerrold, was manager of the two theatres of Sheerness and Southend, and his mother and two sisters were actresses. Douglas himself appeared at

an early age on the stage with Kean, as the *Stranger's* child. After a two-years' service as a midshipman he came to London, in 1818, and was apprenticed in a printer's office. He attacked Latin and Greek in his spare moments, and he began to contribute sonnets, epigrams, and songs to the magazines. Encouraged by success, he wrote for the stage, and produced numerous pieces ere he was twenty, the best remembered of which is *More Frightened than Hurt*, performed at Sadler's Wells. The knowledge he brought from the quarter-deck he turned to account in *Black-Eyed Susan*, written when he was under twenty, the most successful of his naval plays, and which restored Elliston (q.v.) from a long course of disastrous management. Many dramas, comic and serious, followed this first success—all shining with points and colours. Among these were *Nell Gwynne*, *The Schoolfellows*, *The Housekeeper*, and *Rent Day*, a play suggested and elaborated from Wilkie's pictures. But the effort of mechanical repetition wearied a brain so fertile in invention; and he happily returned to literature and journalism, only to reappear as an actor in the plays performed by amateurs. After this time appeared, in succession, the greatest and maturest of his comedies. In *The Prisoner of War* the two Keeleys harvested their highest comic honours. *Bubbles of a Day* followed, one of the wittiest plays in the English language. Then came *Time works Wonders*, *The Catpaw*, and *St. Cupid*, an exquisite cabinet piece, which appeared at the Princess's Theatre, with Mrs. Kean in Dorothy. Contemporaneously, Jerrold had worked his way into notice as a prose writer of a very brilliant and original type, chiefly through the periodicals. All his chief writings, except *A Man Made of Money*, saw the light in magazines:—*Men of Character*, *The Chronicles of Clovernook*, *St. Giles and St. James*, *The Story of a Feather*, *Punch's Letters to his Son*, and *The Caudle Lectures*, first appeared in *Punch*. About the year 1850 he began to devote himself almost exclusively to political writing. He became sub-editor of the *Examiner*, and in 1852 editor of *Lloyd's Weekly Newspaper*, which post he retained till his death. Douglas Jerrold was one of the most widely read men of the day, and his memory was prodigious; yet the powers which made his fame were inherent. He was best known in his day by his nimble, crackling, original wit. Strong and intellectual, it stood nearer to poetic fancy than broad humour. His works are marked by their subtle analysis and vivid presentation.

Blanchard Jerrold, *Life of Douglas Jerrold: The Wit and Opinions of Douglas Jerrold*. A collected edition of his works, in 8 vols., appeared in 1854.

[W. M.]

Jerrold, William Blanchard (b. 1826, d. 1884), journalist and author, was the eldest

son of Douglas Jerrold, noticed above. He early studied as an artist, but soon was pressed into the service of journalism. In 1847 he wrote a series of papers on emigration for the *Daily News*, and at the same time produced a story entitled *The Disgrace of the Family*. His father was only nineteen when he wrote *Black-Eyed Susan*, and Blanchard was little older when he produced *Cool as a Cucumber*, and both these plays were certainly the most popular, though not the best, of their respective authors. In 1855 Mr. Jerrold went over to Paris to describe the Universal Exhibition for a London paper, and ever after he showed a keen appreciation of the French character. His observations are condensed in the volumes entitled *The Children of Lutetia* (1864), *At Home in Paris* (1864), and *On the Boulevards* (1867). Under the name of "Fin Bec" he wrote *The Cupboard Papers*, *The Dinner Bell*, and edited a weekly paper entitled *Knife and Fork*. It was in France that he became the intimate co-worker of Gustave Doré, whose biography he was completing at the time of his death. *London, a Pilgrimage* (1873), illustrated by Doré, was one of Jerrold's best-known works, but his most important literary undertaking was *Life of Napoleon III.* (1874-82), an able apology for the Imperial régime. In politics Mr. Jerrold was an ardent Liberal, and took great interest in questions affecting the interests of the working classes. On the death of his father, in 1858, he became editor of *Lloyd's Weekly Newspaper*. On several occasions he showed great political foresight, especially during the American Civil War. He from the first adopted the cause of the North, and the American Government ordered some of his articles to be placarded on the walls at New York. In the cause of literature, Mr. Jerrold founded the English branch of the International Literary Association (for the assimilation of copyright laws), of which he was president. Besides the works already mentioned, he was the author of several other plays, such as *Cupid in Waiting*, and *Beau Brummel*, a few novels, and numerous works on Egypt.

Jervis, Admiral. [ST. VINCENT.]

* **Jervois, Lieut.-General Sir William Francis Drummond** (b. 1821), administrator, entered the Royal Engineers in 1839, became captain 1847, major 1864, lieutenant-colonel in 1861, and major-general in 1877. Most of his military experiences were in South Africa, where he served against the Boers in 1842, and in the Kaffir War of 1846-7. He was next employed in the construction of fortifications on the English and colonial coasts. In 1856 he was Assistant Inspector-General of Fortifications under Sir John Burgoyne, and deputy director in 1862. Colonel Jervois was also member of the Royal Commission to report upon the defences of the country (1859). His administrative career began in 1875, when

he was appointed Governor of the Straits Settlements. In 1878 he became Governor of South Australia, and of New Zealand in 1882.

Jessel, The Right Hon. Sir George (b. 1824, d. 1883), one of the greatest of English lawyers, and the first Jew that ever sat on the English bench, was the youngest son of Zadok Aaron Jessel, a coral merchant in the City of London, and was educated at University College, London, where he took his degree with the highest honours in mathematics and philosophy. He also studied physiology and structural botany, and later in life, when appointed a member of the Royal Commission on the Medical Acts, was the moving spirit in preparing the report of the Commission and the Medical Bill that followed. As a young man Mr. Jessel travelled a good deal in the East and in America. In 1847 he was called to the bar at Lincoln's Inn; and for some time "devilled" gratuitously for his old master, Bellingier Brodie, the draftsman of the Fines and Recoveries Act, and sought practice on his own account as a conveyancer. His income stagnated for some years at £600. Ultimately, however, he obtained a large court practice, and in 1865—eighteen years after call—he received the long-wished-for silk. He immediately attached himself to the court of the Master of the Rolls, and in a very short time became leader of that court. In 1868 he entered the House of Commons as Liberal M.P. for Dover, won the attention of Mr. Gladstone by a speech on the Bankruptcy Bill in 1869, and became Solicitor-General with a knighthood in 1871. But he was not a success in the House. His genius was too purely intellectual, and contemptuous of weaker minds, to commend itself to the average member; and he was persuasive by the force of his reasoning only. In 1873 he took his seat in the Rolls Court in succession to Lord Romilly. Here he was eminently satisfactory, for he possessed in a high degree the special gift of judicial genius. When he reasoned, it seemed as though he could dispense with authority; when he quoted, his learning and research admitted of no comparison. No branch of law seemed unfamiliar to him. The Judicature Acts of 1873 and 1875, which aimed at the fusion of law and equity, found an able exponent in Sir George Jessel; indeed, it has been said, with some degree of truth, that he did more for this fusion than the Acts themselves did. "The doctrines of equity," he said in one judgment, "are progressive, refined, and improved;" and his constantly acting on this principle gives us the key to his success as an equity judge. But Sir George Jessel was not only a great lawyer; he was, unlike other great lawyers, a man of wide learning. A student of the civil law, he was familiar with the laws of modern Europe. His judgments are luminous essays,

not only models of orderly arrangement and scientific induction, but great efforts of creation; and it is largely to his enlightened supervision in the Record Office that we owe the magnificent series of publications illustrating the early history of England.

[W. M.]

Jevons, WILLIAM STANLEY, F.R.S. (b. 1835, d. 1882), professor of logic, mental and moral philosophy, and political economy, was born at Liverpool. He was educated at the High School of the Mechanics' Institute, Liverpool, and at University College, London. From 1854-9, he held an appointment in the Royal Mint in New South Wales, graduated M.A. at London University 1862, won the gold medal for logic, philosophy, and political economy, and was elected a fellow in 1864. For ten years (1866-76) he was professor of logic, mental and moral science, and Cobden lecturer on political economy at Owens College, Manchester; this post he resigned to accept the Chair of political economy in University College, London, which he held until within a year of his death, when he determined to withdraw altogether from academical life in order to devote himself entirely to his literary work. In 1872 he had been elected a fellow of the Royal Society, and in 1876 he received the honorary degree of LL.D. from the University of Edinburgh. In the methods adopted and advocated by Jevons we see the influence of De Morgan, exercised on him at University College. He was one of the first to advocate the superiority of symbolic logic, and his two short essays, *Pure Logic* and *The Substitution of Similars*, were successful attempts to modify and popularise Boole's system so as to bring it within the capacity of those ignorant of mathematics. In his *Elementary Treatise on Logic* (1870) we have one of the best introductions to all branches of the subject that exists in any language, and his most important work, *The Principles of Science* (1847), has been pronounced by some thinkers the first true analysis of induction. To demonstrate his theories of reasoning, he invented the Logical Abacus, the working of which was explained in a paper read before the Royal Society in 1870. Nor was his originality confined to the domain of logic. In his *Theory of Political Economy* he applied mathematical conceptions to economics, and has been followed in his method by Marshall and Edgeworth. His essays and addresses on economic questions, notably on the *Coal Supply* and the *Fall in the Price of Gold*, attracted considerable attention. These, with *Money and the Mechanism of Exchange*, complete the list of his works, all of which are marked by admirable clearness, and display great ingenuity and power of thought.

During the latter part of his career he controverted publicly the teaching of Mill.

Letters and Journals of W. S. Jevons (1886).

[A. M. C.]

* **Joachim, JOSEPH** (b. 1831), the greatest modern violinist, was born at Kittsee, near Pressburg, in Hungary, and was sent in childhood to the Conservatorium in Vienna, where he was instructed on the violin by Böhm. His master declared his musical education completed at twelve, and he performed in public at the Gewandhaus in Leipzig, where he came under the patronage of Mendelssohn and the Schumanns, and continued the study of the violin under Ferdinand David. In 1845 he made his first appearance in London in the company of Mendelssohn, and played for the first time in public the Beethoven Concerto with which his name is indissolubly connected. In the same year he produced his first important composition, an adagio and rondo for the violin and orchestra, at Leipzig. After remaining there for some years he accepted Liszt's invitation to Weimar in 1850, but in 1854 he migrated to Hanover as director of the royal concert-hall, and remained there till 1866, spending his vacations in tours to the principal cities of Europe, where his reception continually grew more enthusiastic. In 1863 he married Amelie Weiss, one of the most renowned singers in Germany, and then the leading contralto at the Royal Opera in Hanover. He obtained a divorce, however, in 1882. In 1866 Herr Joachim removed to Berlin, where three years later he was appointed director of the new academical high-school for music, and in 1882 conductor of the Royal Academy of Music. As a perfect master of style, tone, and execution on the violin, and as too true a musician to descend to the common tricks of technical display, Herr Joachim is well known in London and throughout England. For many years he has performed at the London Philharmonic and Popular Concerts in the spring. As an interpreter of the highest classical music, whether as soloist, or leader of quartet or concerto, he is unequalled. As composer he is probably best known by the *Hungarian Concerto* (*Concert in ungarischer Weise*), and his arrangements for the violin of Brahms's *Hungarian Dances*. He was created an hon. Mus. Doc. of Cambridge in 1877.

Johannes II. [ABYSSINIA.]

John of Saxony. [SAXONY.]

Johnson, ANDREW (b. 1808, d. 1875), the 17th President of the United States, was a native of North Carolina, and was almost entirely self-educated. He worked for many years as a tailor at Greenville, Tennessee, and was elected alderman of that town in 1828, and mayor in 1830. In 1835 he was first elected to the Legislature of Tennessee.

In 1843 he was returned to Congress in the Democratic interest, and was a warm advocate of the annexation of Mexico. He was chosen Governor of Tennessee in 1853, and again in 1855. In 1857 he was elected a member of the Senate for six years. Andrew Johnson was a strong anti-secessionist, and in consequence popular in the North, but had to fly for his life from Tennessee. Appointed by President Lincoln Governor of Tennessee, he ruled the State with some severity; and in 1864, on the election of Lincoln, was elected Vice-President of the United States, in order to conciliate the Democrats. He thus became President upon the assassination of President Lincoln (April, 1865). As soon as Congress met it became evident that the views of the Republican majority upon the reconstruction of the Union were distinctly opposed to those of the President, who was in favour of depriving the freed negroes of many of the full rights of citizenship. A prolonged contest ensued, during which the President vetoed Bill after Bill; but in each case the vetoes were overruled by the constitutional two-thirds majority. In 1866 he went on a tour through the middle and western States, and made a series of speeches, in hopes of strengthening his supporters, who, however, were defeated at the elections. In 1867 he had a quarrel *à outrance* with the Senate, in consequence of his making two attempts to rid himself of his Minister of War, Mr. Staunton. General Grant, whom he had appointed minister *ad interim*, found it impossible to hold office, and in Feb., 1868, the President was impeached by the House of Representatives of high crimes and misdemeanours. The trial before the Senate resulted in his technical acquittal, as the necessary two-thirds majority was not obtained. Johnson's last presidential act was to issue a proclamation of general amnesty to the participators in the rebellion (Dec., 1868). After being rejected for the Senate in 1870, he was elected in 1875, and sat for about a month. He was a man of great integrity and some capacity, but it may be questioned whether the storms which agitated his career were not for the most part of his own brewing.

L. Foster, *Andrew Johnson, his Life and Speeches* (1868); *The Trial of Andrew Johnson* (official) (1868); *American Annual Cyclopædia* (1875).

Johnson, REVERDY (b. 1796, d. 1876), United States ambassador, practised for some time as a lawyer in Prince George's County, U.S., and removed in 1817 to Baltimore, and was elected to the State Senate in 1821. In 1845 he became a member of the Senate of the United States, and in 1849 President Taylor's Attorney-General. He took an active part in the peace negotiations before the Civil War of 1861 broke out; and when all hope of a peaceful settlement had vanished, he advocated the preservation of the Union

by the military power of the General Government. In 1868 he was appointed minister to England, and during his stay was the recipient of attention never before paid to an American ambassador. A few months after his arrival he succeeded in negotiating a treaty for the settlement of the *Alabama Claims*, but as the United States Senate declined to ratify it, Mr. Johnson resigned his appointment, and returned to Baltimore to resume his practice as a lawyer.

Eclectic Magazine, New York, April, 1876.

Johnston, ALBERT SYDNEY (b. 1803, d. 1862), American soldier, a native of Kentucky, entered the United States army, but in 1836 joined the service of the Republic of Texas, and in 1838 was appointed commander-in-chief. He fought in the campaign against Mexico (1846). Soon afterwards, Texas having joined the Union, he accepted a commission in the United States army, and in 1857 commanded the expedition sent against the Mormons of Utah. On the outbreak of the Civil War he joined the Confederate side, and commanded their forces at the battle of Shiloh, April 6th, 1862, where he was mortally wounded.

Johnston, ALEXANDER KEITH (b. 1804, d. 1871), the geographer, brought out in 1830 his first maps, which were the results of a walking excursion through the north of Scotland, and were first issued in a traveller's guide book. His first large work was *The National Atlas*, folio, on which he was assiduously engaged for five years. On a suggestion from Humboldt, he visited Germany in 1842, collecting materials for an English physical atlas. Physical geography at that time was an unknown term in Britain, and the project was regarded on all hands as absurd. After fourteen years' laborious work, however, Mr. Johnston successfully completed his *Physical Atlas*. In 1850 appeared the first edition of *The Dictionary of Geography* (8th ed. 1877), and in 1851 Mr. Johnston constructed a physical globe of the earth, thirty inches in diameter, showing in colours its geology, hydrography, meteorology, etc. For this, the first physical globe ever drawn, the medal of the Great Exhibition of 1851 was awarded. Between 1851 and 1855 he constructed and published four atlases—general, classical, physical, and astronomical—some of which have run through thirty editions; and in 1852 he prepared an *Atlas of Military Geography*, to accompany Alison's *History of Europe*. This latter work has been commended by military men. In 1855 he commenced his last great work, *The Royal Atlas of Modern Geography*, and from 1867 till his death in 1871 he was engaged in producing a complete series of geographical works for schools.

Nature, July 20th, 1871.

Johnston, ALEXANDER KEITH (b. 1846, d. 1879), geographer and traveller, son of the preceding, at a very early age explored part of Paraguay, which justified his appointment by the Geographical Society to the leadership of an expedition into Africa in 1879. He left Dar-es-Salaam in May, 1879, under favourable circumstances, but hardly a month passed before the treacherous climate brought on dysentery, to which he succumbed at Behobeho at the early age of thirty-three. The expedition was successfully carried on by his assistant, Mr. Thomson. Mr. Johnston showed his skill as a compiler and graphic writer in his *Book of Physical Geography* (1877), his enlargement of Hallwald's *Africa* (1879), and his edition of *Boyce's Gazetteer* (1879).

Irving, *Book of Scotsmen*; Times, Aug. 6th, 1879.

* **Johnston, JOSEPH EGLESTON** (b. 1807), American soldier, is a native of Virginia, and a descendant by his mother of Patrick Henry. He graduated at West Point in 1846, and distinguished himself in the Mexican War of 1846-7. On the outbreak of the Civil War he resigned his commission in the United States army, and was appointed major-general by Jefferson Davis. General Johnston's first operations were completely successful. Cleverly eluding General Patterson, he effected a brilliant junction with Beauregard at Manassas, and loyally served under him at the battle of Bull Run (July 21st). But for the next two years he did nothing; in 1862 he was beaten by McClellan at Williamsburg, and was defeated and severely wounded at the battle of Four Oaks, or Seven Pines, as it is otherwise called (May 31st). In 1863 he was beaten off when he attempted to relieve Vicksburg, and in December he was placed in command of the army which had been defeated at Chattanooga, and was ordered to oppose Sherman's advance "to the sea." In the following July, when his bold design of enticing the enemy into a devastated country was on the eve of success, he was deprived of his command. As a last resource, he was placed in command of the Federal forces in South Carolina in Feb., 1865, but once more found his old opponent his superior in equipments. He assumed the aggressive, but was speedily in full retreat, and on Aug. 26th surrendered with his army at Durham Station, N. Carolina. His account of his battles was published in 1874, and he subsequently became managing agent to a fire insurance company. Despite his poor record, General Johnston was undoubtedly one of the ablest of the Southern commanders.

Joinville, FRANÇOIS FERDINAND PHILIPPE D'ORLÉANS, PRINCE DE (b. 1818), the third son of King Louis Philippe, was educated for the navy, and went to sea in 1836. In 1838 he distinguished himself greatly in the Mexican

War, and in 1840 conducted the remains of Napoleon from St. Helena. He married a sister of Dom Pedro II., Emperor of Brazil, in 1839. The Prince de Joinville in 1845 commanded a squadron, which, operating on the coast of Morocco, bombarded Tangiers and took Mogador. When the revolution of 1848 overthrew the Orleans monarchy he was far away in Algiers, and occupied some of his subsequent time in writing important works on the state of the French navy, and in witnessing some of the most important battles of the American Civil War. During the Franco-German War he served in the army of the Loire under the alias of "Colonel Lutherod," but he was eventually arrested by the order of Gambetta, and deported to England. In 1871, the law of exile having been abrogated, he took his seat in the Assembly as delegate from La Marche, but played very little part in its deliberations, nor is he believed to have taken an active part in the attempts of 1873 to effect an understanding between the two branches of the House of Bourbon.

Jomini, ANTOINE HENRI, BARON (b. 1779, d. 1869), a celebrated Swiss strategist, was born at Payerne, where his father held the position of syndic. He first entered a banking house as clerk, and removed to Paris, but sharing in the general excitement of 1798, he quitted the counting-house to become Secretary of War in the new Helvetic Republic. He was forced to resign in 1801, when he returned to Paris to write the first volume of his well-known work, *Traité des grandes Opérations militaires*. This work procured him an introduction to Ney, who invited him in 1805 to join his camp, as a volunteer, at Boulogne, promising to have him made aide-de-camp later on. In that capacity he served until the battle of Bautzen, and rendered signal services to France, in return for which he was rewarded by humiliation and insults. At length, in 1813, he entered the service of Russia. In 1828 he took an active part in the military operations at Varna, and in 1855 settled at Brussels. Jomini wrote several other works of value to the military student, besides the one already mentioned, *Histoire critique et militaire des Campagnes de la Révolution* (1806), *Vie politique et militaire de Napoléon* (1827), and *Tableau analytique des principales Combinaisons de la Guerre* (1830). As is usual with men of his type, Jomini was a prig, with no idea of managing men; neither had he the art of winning friends. But, given certain conditions of warfare, no man was quicker in discovering what it was possible for a commander to achieve, or what were the tactics to which his antagonist could and probably would have recourse.

Pascal, *Observations sur la Vie et les Ouvrages de Baron Jomini*; Mr. C. F. Cromie, *Fortnightly Review*, Nov., 1880.

Jones, EMBEZZER (b. Jan. 20th, 1820, d. Sep. 14th, 1860), poet and political writer, was the second son of Robert and Hannah Jones, and was born in Islington. His parents, who were in competent circumstances, were rigid Calvinists; and his early training was correspondingly rigid. Among the *penates* of the household, Watts and Kirke White usurped the place of Shakespeare and Milton, while Byron was taboo, and Shelley unknown. Educated at Calvinistic private schools (in 1828 at that of one John Bickerdike), Ebenezer Jones showed early symptoms of revolt against authority, having when of tender years attempted to prevent an act of cruelty to a dog on the part of an usher. By the time he was fourteen he was writing verses of some character, in a preserved scrap of which it is traceable that he had read some of Scott's novels surreptitiously. While he was yet a boy (seventeen), a domestic catastrophe threw on him the necessity to begin bread-winning, and at the same time removed the spiritual shackles to which he was native. Carlyle and Shelley came to the widening and enlightenment of his views; and, while drudging twelve hours a day as a city clerk, he was encroaching on the hours proper to rest for the performance of literary work, and latterly for the preparation of his one book, *Studies of Sensation and Event*, which was published in 1843. In the meantime, he had issued some of the poems composing that volume in magazines. Convinced by the reception of his book that he could not make a career of poetry, he destroyed the material for a second volume, which was to have been called *Studies of Resemblance and Consent*. He then devoted his nights to political writing, and, again failing of an audience, destroyed the product of this attempt also. A tract survives, entitled *The Land Monopoly, the Suffering and Demoralisation caused by it, and the Expediency of its Abolition* (1849); and another pamphlet was published, thought by his brother (Sumner Jones, also a poet) to have been called *The Condition of England Question*. Jones was as unfortunate in his marriage with Catherine Atherstone as in his literary ventures; and it is scarcely surprising that, balked in all his nobler aspirations, unable to emancipate himself from an almost Egyptian bondage, and ever doing double work under galling conditions, he died at the early age of forty. His poetry can never obtain a wide audience, however much the studious few may affect it; it is too painfully in earnest, and too pronounced in its wilful originality for general acceptance; but it is full of high thought, manly feeling, and individual impulse, has often a true poetic ring, and should survive as work of great promise and some considerable accomplishment.

Memorial notices by Sumner Jones and W. J. Linton, prefixed to 1879 reprint of *Studies of Sensation and Event*. [H. B. F.]

Jones, E. BURNE. [BURNE-JONES.]

Jones, ERNEST CHARLES (b. 1819, d. 1869), one of the Chartist leaders, did not belong by birth to the class whose cause he advocated. His father was in the service of the Duke of Cumberland, afterwards King of Hanover, who was godfather to the future Chartist. Born and educated in Germany, Ernest Jones was called to the bar as a member of the Middle Temple, April 19th, 1844. He had appeared as an author in 1841, when his romance, *The Wood Spirit*, was published, and continued from this date to contribute to various periodicals. In 1845 he joined the Chartist movement, and became one of its most prominent leaders. To devote his whole energy to the cause, he gave up his practice at the bar, and refused to receive any remuneration for his services. At this time he issued *The Labourer, Notes of the People*, and edited the *People's Paper*, which continued for eight years to be the chief Chartist organ. During the agitation of 1848 Jones took a prominent part in the proceedings at Manchester, for which he was prosecuted and sentenced to two years' solitary confinement. During this imprisonment he wrote his *Revolt of Hindustan*, and as ordinary writing materials were denied him, used, according to his friends, for the purpose, the leaves of his prayer-book, a feather dropped by a bird, and blood from his own veins. After his release he resumed the practice of his profession, but though his methods were changed, his schemes for the working classes remained the same, and it was to forward them that he attempted to get into Parliament. He had already unsuccessfully contested Halifax in 1847, and met with the same fate at Nottingham in 1853 and 1857. A few days before his death, due to a chill caught while attending a meeting of the Working Men's Association in the Hulme Town Hall, a test ballot was held in Manchester, where Jones polled 7,282 votes, to Milner Gibson's 4,133. These figures, however, lose somewhat of their significance when we remember that the number polled by Jones did not equal one quarter of the voting power of the constituency. Although his political opinions and method of advocating them belonged to the order generally condemned, his sincerity and pureness of motive were universally acknowledged. Though by no means a rich man he refused the heirship to an estate worth £2,000 a year, the condition attached being his withdrawal from public life.

Jones, HENRY BENCK (b. 1814, d. 1873), physician, was born in Suffolk, and, after going through the usual courses at Harrow and Cambridge, studied medicine at St. George's Hospital, London, and subsequently at Gießen, under Baron Liebig. Immediately on completing his collegiate studies, he directed his attention to pathological chemistry, his first paper, on *Cystine Calculus*,

appearing in 1840. Having become a lecturer in connection with one of the London hospitals, he published, in 1850, a series of lectures on *Animal Chemistry* in its application to stomach and renal diseases. He was among the most authoritative in insisting on the paramount importance of urinary analysis in diagnosing disease. He next made important researches respecting the diagnosis of renal calculus, as well as that of malignant and scrofulous diseases of the kidney. Dr. Bence Jones also published a treatise on *Gravel and Gout* (1842); *Digestion, Respiration, and Secretion* (1867); an interesting historical account of *The Royal Institution* (1871); and his masterly *Memoirs of Faraday* (1870), a model of scientific biography.

Lancet, April 26th, 1873.

Jones, OWEN (b. 1809, d. 1874), architect, a native of Wales, studied art under Lewis Vulliamy, and in 1834 went to Granada and examined the Alhambra. After years of labour he produced, in 1842, the first part of his splendid monograph, *Plans, Elevations, Sections, and Details of the Alhambra*. It was followed by a work on *Illuminated Books*, written in conjunction with Mr. Humphreys (1844). By this time Owen Jones had gained great reputation as a designer; in 1851 he was one of the superintendents of the works at the Great Exhibition, and was afterwards director of decorations for the Crystal Palace, especially superintending the Greek, Roman, Egyptian, and Alhambra courts. He also designed St. James's Hall, Piccadilly. He was awarded the gold medal of the Institute of British Architects in 1857. Owen Jones's most important text-book is *The Grammar of Ornament* (1856), in which he advocates the principle that, the general forms being first cared for, these should be subdivided and ornamented by broad lines; the intersections may then be filled in with ornament, which may again be subdivided and enriched for closer inspection.

* **Jones, THOMAS WHARTON** (b. 1808), an English ophthalmic surgeon and physiologist, was born at St. Andrews, Scotland. After receiving his medical education in the University of Edinburgh, he became a member, and subsequently a fellow, of the Royal College of Surgeons, London, and settled in practice as an ophthalmic surgeon. In those days this branch of surgery was in England far behind the position it had attained on the Continent, so that when Mr. Jones returned from a short stay in Paris and other Continental cities, he may be said to have transplanted to London much of the science and art until then almost unknown in the English metropolis. He soon became lecturer on physiology in the Charing Cross Medical School, Fullerian professor of physiology to the Royal Institution, and professor of ophthalmic surgery in University College Hospital, and enjoyed for many years a large and

lucrative practice. His scientific discoveries consist, for the most part, of papers in the *Philosophical Transactions* on the physiology of inflammation, and of professional memoirs on the failure of sight from railway and other injuries of the spine and head. He has also published a treatise on *The Principles and Practice of Ophthalmic Surgery*, and one on questions connected with the *Physiology and Philosophy of the Bodily Senses*. But the work by which he is most widely and popularly known is the Actonian prize essay (1851) on *The Wisdom and Beneficence of the Almighty Displayed in the Sense of Human Vision*. In medical circles, his Astley Cooper prize essay on *Inflammation* (1850) is still held in esteem. The volume which he published against Darwinism proved less cogent, while in non-professional literature Mr. Jones has gained an honourable place for his edition of *The Life and Death of Bishop Bedell of Kilmore* (1876), which was issued by the Camden Society. He is F.R.S., and a member of many British and foreign medical and learned societies.

Jordan, DOROTHEA (b. 1762, d. 1816), an English actress, whose real name was Bland, was born at Waterford, in Ireland. Her mother's name was Phipps, and she was a strolling player, who married a Captain Bland. She educated her son and two daughters fairly well. The son married Miss Romanzini, who, as Mrs. Bland, was celebrated as "England's best ballad-singer." It was the grief of the mother over the failure of the eldest daughter at her *début* in Dublin, that prompted Mr. Ryder, the manager of the Theatre Royal there, to suggest that "Dolly," the youngest child, should try a part. He gave her Phoebe in *As You Like It*, to study, and her first appearance was so successful, that she had all the romping, hoydenish characters in the casts at the Dublin Theatre allotted to her forthwith. Tate Wilkinson engaged her for the York circuit, and she appeared at Leeds on July 11th, 1782. It was at Leeds she took the name of Jordan. She told Tate Wilkinson one day she wanted to be called Mrs. Somebody, as "Miss" did not look sufficiently imposing for London. The eccentric old manager said, "Well, my dear, you've crossed the water, so I'd call you Jordan if I were your sponsor." At this time a second "leading lady" was wanted in Drury Lane, but Mrs. Jordan, fearing to compete with Mrs. Siddons in tragedy, only engaged for comedy at first, and so she appeared on Oct. 18th, 1785, as Miss Peggy in *The Country Wife*. Her sweet, tender rendering of Viola in *Twelfth Night* vastly enhanced her reputation, and as the hoyden in Sheridan's *Trip to Scarborough* she created a *furor*. In Aug., 1786, she played for a short season in Edinburgh. On May 2nd, 1788, she essayed, with success, Peg Woffington's favourite

part, Sir Harry Wildair, in *The Constant Couple*, and on March 22nd, 1790, she played Celia in *The Greek Slave*, an adaptation of Beaumont and Fletcher's *Humorous Lieutenant*. In 1797 she played Angela in *The Castle Spectre*, a ridiculous melodrama by Monk Lewis (q.v.), and in 1798, she played Cora in Sheridan's *Pizarro*. In 1790 Mrs. Jordan formed a connection with H.R.H the Duke of Clarence, afterwards King William IV., which lasted for twenty years. She bore him ten children, the eldest being created Earl of Munster. This connection was broken, to the sorrow of both parties, for imperative reasons of State. The deed of separation, dictated by the Duke of Clarence, stipulated that she was not to return to the stage. Having to provide for a branch of her family not connected with the Duke, she, however, obtained his permission to resume her profession. His Royal Highness, accordingly, was accused of having left her in penury, after having lived on her salary for many years. Mrs. Jordan herself publicly refuted these charges. Her last appearance was on June 1st, 1814, when she played Lady Teazle in *The School for Scandal* at Covent Garden. A series of misfortunes landed her in bankruptcy. She exiled herself to St. Cloud, near Paris, and her distress of mind brought on illness. She wrote to England for help, and died when the messenger failed to bring the expected letter. Strangers' hands gave her, who had reigned as Queen of English Comedy for fifty years, an obscure grave in a foreign land. *Memento! Lugete!* are the closing words of her epitaph. The Duke of Clarence paid the memory of the woman who was his faithful, though not lawful consort, for twenty years, one tribute of affection. Happening to ask the celebrated actor, Dowton, who was the best Lady Teazle he had ever seen, Dowton, fearing to mention Mrs. Jordan, hesitated to answer. His Majesty helped him out, however, saying, "Oh, I see—I see who you mean. Oh, yes; she was an actress." Then, after a pause, he heaved a sigh, and murmured, "Poor Dora." Mrs. Jordan was a born low comedian, whose sweet, melodious voice made her greater than Mrs. Clive, greater even in some parts than Mrs. Woffington; her range, however, was limited.

[R. W.]

Josephine, MARIE JOSEPH ROSE TASCHER DE LA PAGERIE (b. 1763, d. 1814), Empress of France and Queen of Italy, born at Martinique, was married in 1779 to the Viscount de Beauharnais, and became the mother of Eugène and Hortense (q.v.). Her husband was guillotined in 1794, and she herself narrowly escaped a similar fate. She subsequently met General Bonaparte, to whom she was married in 1796, and on Bonaparte becoming Emperor she was crowned Empress at Paris and Queen of Italy at Milan. In this

position she strongly urged leniency towards the proscribed, and used her influence in cancelling the decrees of the exiled. Having no children by Napoleon, and becoming aware of the wishes of the nation respecting a successor, she nobly sacrificed her position and her feelings, and acquiesced in the proposed marriage of Napoleon with the Archduchess Maria Louisa. She was accordingly divorced from the Emperor in 1809, and spent the remainder of her life in retirement at Malmaison.

Le Normand, *Mémoires historiques et secrets, Aubenas, Histoire de l'Impératrice Josephine*.

* **Joubert**, PETRUS JACOBUS (b. circa 1831), formerly commander-in-chief of the insurgent forces of the Transvaal, is of an old French Huguenot family, long settled in Africa. He is, a farmer, like most of his countrymen, and taking an active part in political life, was Vice-President of the Council of the Transvaal Republic, and Acting State President in the time of President Burgers (q.v.). In 1878 he and Mr. Paul Krüger formed the second Boer deputation which was sent to England to protest against the annexation of the South African Republic, as it was then called. On their return, in conference with the High Commissioner, Sir B. Frere (q.v.), Mr. Joubert formulated the demand for the independence of the Transvaal, but after the change of Government in 1880 he and Mr. Krüger received a letter from Mr. Gladstone informing them that their demands could not be granted. A triumvirate was thereupon formed, consisting of Krüger, Pretorius, and himself, and the flag of independence hoisted (Dec., 1880). Hostilities began before the end of the year, and General Joubert taking command defeated the British troops at Laing's Nek on Jan. 28th, at Ingogo River on Feb. 8th, and finally surrounded the force which had climbed Majuba Hill in the hope of turning his flank on Feb. 29th, and utterly routed them, with the loss of their general. [COLLEY.] Shortly afterwards he arranged an armistice with Sir Evelyn Wood, Colley's successor, which eventually developed into peace. To the demand of the triumvirate made later in the year that the terms might be modified, a refusal was returned by the British Government. General Joubert was not a member of the Boer deputation of 1883, and of late has not taken much part in public affairs.

* **Joule**, JAMES PRESCOTT (b. 1818), electrician, was born at Salford, and was privately educated. He became a pupil of John Dalton, the chemist, and by him was taught mathematics and how to experimentalise. He early took up electro-magnetism, with the view of applying it as a motive power, and in a series of papers in Sturgeon's *Annals of Electricity*, between 1839 and 1841, described various attempts at the perfection of electro-magnetic engines. This led him, independently of the Russian electrician Jacobi, to

announce in 1840 the important principle that the attractive force exercised by two electric magnets is directly proportional to the square of the strength of the magnetising current. In 1840 he began to turn his attention to heat, and communicated to the Royal Society a paper on the production of heat by voltaic electricity, in which he established relations between heat and chemical affinity. This led him further. Robert Mayer had already (in 1842) propounded the theory that the heat evolved in compressing an elastic fluid is exactly equal to the compressing force, but Mr. Joule preferred experiments to guess-work, and in a series of papers between 1842 and 1849 related his attempts to prove this theory of "the mechanical equivalent of heat," which he had conceived independently of Mayer. His conclusion was finally established in a paper read before the Royal Society on Jan. 21st, 1849. (*Philosophical Transactions*, 1850.) The controversy between Robert Mayer and Mr. Joule was acute, the real fact being apparently that the theory without the demonstrations of Mr. Joule would have been a mere conception instead of being of infinitely practical value. Mr. Joule was awarded the Royal medal of the Royal Society in 1852, and the Copley medal in 1870. He became F.R.S. (1850), and is D.C.L. (Oxford) and LL.D. (Dublin and Edinburgh). His researches are multiform, but are embodied in papers to the learned societies, not in popular volumes. From 1853 to 1862 he read to the Royal Society a series of papers relating the experiments conducted by Sir William Thomson and himself on the *Thermal Effects of Fluids in Motion*.

Professor Tyndall in *Nature*, vol. v.

Jourdan, JEAN BAPTISTE, COMTE DE (b. 1762, d. 1833), a French marshal, was born at Limoges, where his father was a surgeon. He entered the army in 1778, embraced with zeal the cause of the Revolution, and soon rose to the rank of general. In 1799 the Directory appointed him to the command of the Army of the Danube, when he was defeated by the Archduke Charles at Stockach. He afterwards published an account of the *Operations of the Army of the Danube* under his command. He became a member of the Council of Five Hundred in 1797, and carried the law of conscription the following year, but having opposed the dictatorship of Napoleon was excluded from the Chamber. Napoleon, however, employed him soon after (1800) in the re-organisation and administration of Piedmont. On the establishment of the Empire in 1804 he was appointed a marshal and a member of the Council of State. He accompanied Joseph Bonaparte to Naples, and afterwards into Spain, and fought against Wellington. In 1815 Louis XVIII. made him a count, and in 1819 a peer of France; but his Republican principles led him to take

an active part in the revolution of 1830. In his retirement he wrote a *History of the Campaign of 1796, containing the Operations of the Army of the Sambre and Meuse*.

Thiers, *Histoire du Consulat et de l'Empire*;
Du Casse, *Mémoires du Roi Joseph*.

* **Jowett, THE REV. BENJAMIN, D.D.** (b. 1817), Master of Balliol, the son of the author of a metrical translation of the Psalms, was educated at St. Paul's School, and at Balliol College, Oxford, where he became scholar in 1835, fellow in 1838, and tutor 1842-70. His undergraduate career was a distinguished one; he gained the Hertford scholarship (1837), a first in classics (1839), and the Latin essay (1841). In 1855 he was appointed Regius professor of Greek by Lord Palmerston. Professor Jowett has written a commentary on the Epistles to the *Thessalonians, Galatians, and Romans* (1855); his translation of Plato's *Dialogues*, including *The Republic* (1871, 2nd ed. 1875), has made Plato, to use Sir John Lubbock's expression, an English classic. He has also translated *Thucydides* (published in 1881), and written a short memoir of Arnold Toynbee (q.v.). In 1885 appeared his translation of *The Politics of Aristotle. The Apology, Crito, and Phædo*, were republished in 1882. Dr. Jowett is emphatically a Broad Churchman, and his essay on *The Interpretation of Scripture* was by no means the least remarkable among the celebrated *Essays and Reviews*. He was elected Vice-Chancellor of Oxford University in 1882.

Juarez, BENITO PABLO (b. 1806, d. 1872), President of the Mexican Republic, is said to have been of pure Indian blood. He studied law, and in 1846 was elected to the Mexican Congress. From 1848 to 1852 he was governor of his native province of Oajaca. Banished by President Santa Anna in 1852, he joined the party of Alvarez, and in 1855 became Minister of Justice under his presidency. He continued in office under General Comonfort as Chief Secretary of State (1855-8), and when the President retired before Zuloaga's *coup d'état*, Juarez claimed the presidency, and was backed by the Liberal party. A civil war, Liberals against Clericals, ensued, in which Juarez triumphed in 1861, and was elected President by Congress. His first act, perhaps not unjustifiable considering the state of the country, was to suspend payments to foreigners for two years. Numerous outrages having been committed on Europeans, France, England, and Spain determined to interfere, and the troops of the three Powers were on Mexican soil in 1862. England and Spain, however, retired when Napoleon III. proposed to set up a monarchical form of government, and the French generals were left to support as best they could Maximilian of Austria (q.v.), who had accepted the crown. Juarez held out with dogged tenacity; though driven to the frontier, he refused to submit, and in

1865, when the United States Government protested against the French occupation, and when Napoleon in 1867 withdrew his troops in deference to that protest, it was evident that the Republican cause must triumph. Juarez seized Maximilian, and had him shot after a mock trial (June 19th), got rid of his rivals by proscription and assassination, and was again elected president in July. Despite his ability, he was unable to maintain order among the undisciplined Mexicans. When second on the poll to Diaz at the presidential election of 1871, he calmly retained office, and obtained the sanction of the populace. He had almost subdued the insurrection raised as a matter of course by the defeated party, when he was carried off by apoplexy. Juarez had all the good and bad qualities of his race to a marked degree, and is an interesting specimen of the noble savage as transformed by Western civilisation. He was infinitely superior to the knaves and desperadoes with whom he contended for power.

Jukes, JOSEPH BEETE (b. 1811, d. 1869), geologist, was born at Birmingham, and after being some time at Cambridge, gave up the notion of entering the Church, and took to the study of geology. He inaugurated his career in 1838 by walking through the Midlands geologising and lecturing wherever he could get a class to attend. Having made himself acquainted with practical surveying, he accepted in 1839 the appointment of Geological Surveyor of Newfoundland, which occupied his time for the next two years. From 1842 to 1846 he was engaged as naturalist to the expedition for surveying Torres Straits, New Guinea, etc., an account of which expedition he published in 1847 under the title, *Narrative of the Survey Voyage of H.M.S. "Fly."* In 1847 he was attached to the Geological Survey, when he joined Professors Ramsay and Forbes at Bala. He made some important contributions to geological science by his discoveries in rock strata south of Conway. In 1857 appeared his *Manual of Geology* (3rd ed. 1871, edited by Professor Geikie), which was an enlargement of his paper on "Mineralogical Sciences" in the *Encyclopedia Britannica*.

The Letters of J. B. Jukes, with connecting Memorial Note by his sister, Mrs. A. H. Browne, Geological Magazine, Sept., 1866.

Julien, STANISLAS AIGNAN (b. 1797, d. 1873), Chinese scholar, was the son of an Orleans mechanic, and having displayed extraordinary aptitude for languages, was appointed in 1821 Professor of Greek at the Collège de France. Shortly afterwards he began to study Chinese, and from 1824-30 published a translation of the philosopher Meng-tze (Mencius). In 1829 he was appointed sub-librarian to the French Institute, professor of Chinese at the Collège de France

in 1832, joint-keeper of the Académie Royale in 1839, and *administrateur* of the Collège de France in 1841. His Chinese translations comprise dramas, tales, a compilation of the Chinese treatises on the growth of the mulberry (1837), which is still widely read, and a grammar. His translation of the work of the philosopher Laou-tze, the founder of the Taoist religion, is a work of great value to the student of comparative hagiology. Sighing for more worlds to conquer, Julien set to work to acquire Sanscrit and Pali, and after twenty years' labour produced his monumental work on the *Voyages des Pèlerins Bouddhistes* (1853). His work on the method of deciphering Sanscrit names, published in 1861, and his *Syntaxe nouvelle de la Langue Chinoise* (1869), have become to a certain extent obsolete, but his *Histoire et Fabrication de la Porcelaine Chinoise* will probably long remain a classic on its subject. Julien was joint-editor of the *Journal Asiatique*, and was a skilled controversialist, with a distinct fondness for the *argumentum ad hominem*.

Jung, JOHANN HEINRICH, always known as JUNG-STILLING (b. 1740, d. 1814), oculist, farmer, and mystic, was born at the remote village of Grund, in the Westphalian forests. Having been schoolmaster, farmer, charcoal-burner, and tailor in turn, he set off in 1762 on a wandering apprenticeship to all the arts, and acquiring some expertness in the removal of cataract, that afterwards developed to extraordinary skill, he entered the school of medicine at Strasburg University in 1770, and there became acquainted with Goethe and Herder. In 1772 he established himself in practice as an oculist at Elberfeld, and wrote the history of his childhood (*Stilling's Jugend*), that was published by Goethe in 1774, and may be regarded as the first of the idyllic stories of German village life. In it the author speaks of himself under the name of Stilling in reference to his connection with the Pietists (*Die Stillen*). Returning to the science of farming, Jung-Stilling was appointed to a university post at Heidelberg in 1784, and in 1787 took up his residence in Marburg, as professor of farming and practical oculist. His tendency to a half-religious, half-philosophic mysticism increased, and he gave much offence to his learned colleagues by the publication of such works as *Scenes from the Spiritual World* (*Scenen aus dem Geisterreiche*, 1800), and especially by his *Homeickness* (*Heimueck*), a book that was found in all pious hands in most countries of Europe. In his time, Jung-Stilling had a large following of trustful believers. He may be regarded as a modern Jacob Böhme, or a less infatuated Lavater. His most meritorious work is as an autobiographer.

Heinrich Stilling (translated by Samuel Jackson, 1835); *Stilling's Alter von ihm selbst geschrieben* (1817).

Jung, SIR SALAR, K.C.S.I. (b. 1829, d. 1883), Dewan or Prime Minister of Hyderabad, was the descendant of a line of statesmen who had directed the affairs of the Nizam of Hyderabad since the beginning of the eighteenth century. Engaged in official work from his youth, he succeeded his uncle, Suraj-ul-Mulk, as Dewan in 1853. The State was a prey to anarchy, the capital was terrorised by Arab mercenaries, and the British Government had recently seized the pretext of misgovernment to deprive the Nizam of the province of Berar. It was evident, indeed, that Lord Dalhousie contemplated the annexation of the remainder of that ruler's dominions. To avert the supreme disaster, and to gain back Berar, was the great task set before him by Salar Jung, and despite the meddling and muddling of the Nizam, Afzul-ul-Doulah, he had completely succeeded in the first part of his task by the time of the Mutiny. The Arab soldiery were gradually paid off, the freebooters of the hills chastised, the court purged of a multitude of corrupt hangers-on, and the civil administration Anglicised. During the mutiny his energies were wisely devoted to keeping back the fanatical element of the population of Hyderabad, and by holding the Deccan tranquil during this great crisis, he removed the last pretext the Calcutta authorities could possibly entertain for annexing the country. The death of the Nizam, in 1869, gave Salar Jung a free hand, the new Sovereign being a mere child, and the State being administered by a regency composed of the chief of the nobility, Amir-i-Kabir and Salar Jung. What abuses remained were promptly swept away, and Hyderabad became a model State indeed. In 1876 Sir Salar undertook a voluntary mission to England in the hope of procuring the restoration of Berar. In that he was disappointed, but must have found some consolation in the genuine admiration entertained for him by Englishmen. He was knighted and created a K.C.S.I. His sudden death was attributed to poisoning, but no evidence in favour of the theory was produced, and no inquiry was held. A Mehemet Ali without his ferocity, Sir Salar Jung may perhaps be best compared to one of the great reforming ministers of the eighteenth century—Pombal, for instance—who to a certain extent succeeded in the attempt to save nations in spite of themselves.

Junghuhn, FRANZ WILHELM (b. 1809, d. 1864), the explorer of Java, was born at Mansfeld, and after a restless and turbulent youth, escaped from Germany to Paris in 1830, and four years later joined a Dutch regiment on its way to Batavia. Except for a brief visit to Europe (1848–51), he remained in Java for the rest of his life, and thoroughly explored the whole islands; devoting special attention to the botany, the native tribes,

and the formation of the great volcanoes. He wrote three or four elaborate accounts of his investigations, the most important of which was *Java; its Topography, Flora, and Geological Formation*, published in Dutch in 1849, but translated into German in 1853. For the breadth of his knowledge, and the accuracy of his observation, Junghuhn has been called the Humboldt of Java.

Junot, ANDOCHE, DUC D'ABRANTÈS (b. 1771, d. 1813), French soldier, born at Bussy-le-Grand, attracted the notice of Napoleon at the siege of Toulon through his famous remark when the shell scattered sand over the despatch he was writing: *Bien ! voici de sable pour sécher l'encre*. Attaching himself to the fortunes of Napoleon, he served with great distinction in the Italian campaign. During the Egyptian campaign he became general of brigade, and had to be left behind to recover from a wound received in a duel. On his way back to France he was captured by an English cruiser, but was released at the intercession of Sir Sydney Smith. Shortly afterwards he married LAURE PERMON (b. 1784, d. 1838), the daughter of an army contractor, who had come to Paris to pick up a husband, and the two plunged into a life of fashionable extravagance. From 1801 to 1803 he was commander of Paris, and at the creation of the Empire (1804), became general of hussars and grand officer of the Legion of Honour, but was not offered a marshal's *bâton*. Sent for awhile as ambassador to Lisbon, he made an entry of great magnificence, but absented himself without leave, and put in an appearance at the battle of Austerlitz. In 1806 he was appointed Governor of Paris; his extravagance, however, was so great that Napoleon sent him to lead the invading army into Portugal. In less than a month he was master of the capital, and had gained the title of Duc d'Abrantès. But the vanity of his wife annoyed the Portuguese, and when they imitated the Spaniards and rose to arms, Junot's situation became precarious, especially when England came to the rescue. He promptly risked and lost the battle of Vimiera, and was glad to be allowed to evacuate Portugal by the convention of Cintra (Aug., 1808). His subsequent military exploits, whether as chief in command, as at Saragossa, or under another's orders, were not particularly successful, and during the Russian campaign Napoleon plainly accused him of want of resolution. Sent into honourable exile as governor of the Illyrian provinces, he became absolutely insane, having long been partially deranged, and in a fit of despair threw himself out of window. Mme. Junot was forbidden by Napoleon to return to Paris, but snapped her fingers at the injunction, and, although utterly bankrupt, set up a large establishment. As a last resource, she betook herself to literature, and produced

numerous novels and some memoirs, which, although full of little better than mere chit-chat, are of some use for a study of her times. She died in poverty at a hospital.

Duchesse d'Abrantès, *Mémoires, ou Souvenirs historiques sur Napoléon, la Révolution, le Directoire, le Consulat, l'Empire, et la Restauration* (1831-4).

Jussieu, ANTOINE LAURENT DE (b. 1748, d. 1836), the most celebrated of the well-known family of French botanists, was trained in botany and medicine by his uncle Bernard, the *Aut deus aut B. de Jussieu* of Linneus. During the earlier years of the French revolution he was in charge of the Paris hospitals, and from 1770 to 1826 he was professor of botany at the Natural History Museum. His works on botany are extremely numerous, and of them the most celebrated is that on the classification of plants, *Genera plantarum secundum ordines naturales disposita* (1789). By it the science of botany was partially revolutionised; the aim of his system, which was founded to a certain extent on that of Ray, being to display the affinities of plants while adopting the simple classification of Linneus. His son ADRIEN (b. 1797, d. 1853) succeeded him as professor, and was the last of the brilliant family.

Jaynboll, THEODOR (b. 1802, d. 1861), Dutch Orientalist, was educated at the Hague and at Leyden University; in 1831 became professor of Oriental languages at the Athenæum of Franeker, in Friesland; in 1841 and 1845 successively professor of the same subjects at Groningen and at Leyden, where he also held the post of interpreter and adviser on Oriental matters to the Government. He wrote on Hebrew philology and criticism, but his principal publications were in Arabic. He edited the geographical dictionary, *Marâsid-el-Ittilâ*, an abridgment of Yâkut, in 1850-4; edited the poems of Mutanebbi (1840), and took part in the edition of Abu-l-Mahâsin's annals. He was a laborious and accurate editor.

K

* **Kalnoky, COUNT GUSTAV** (b. 1832), Minister of Foreign Affairs in the Austro-Hungarian Empire, is descended from the Moravian branch of an old Bohemian family. He entered the army at an early age, but in 1852 exchanged into the diplomatic service. He was successively *attaché* at Munich and Berlin, councillor of legation in London, *chargé d'affaires* at the Vatican, ambassador at Stockholm and at St. Petersburg. On the death of Baron Haymerle, in 1881, Count Kalnoky succeeded him as Minister of Foreign Affairs, with the object of effecting an *entente cordiale* with Russia. His designs,

although unpopular with his Hungarian fellow-countrymen, were crowned with complete success, which was attested at the meeting of the three Emperors, at Skierniewice, in 1884. Among incidents of his conduct of affairs was the rebuke addressed to Prince Charles of Roumania in 1881, when the latter attempted to assume control over the navigation of that part of the Danube which flows through his territory. Support was accorded by Austria to Servia in the Servo-Bulgarian War of 1885. In 1886 Kalnoky opposed the machinations of Russia in Bulgaria.

Kane, ELISHA KENT (b. 1822, d. 1857), American explorer, after taking a medical degree at Pennsylvania, where he was born, entered the United States Navy as assistant-surgeon, and was attached to the first American Embassy to China. He next travelled extensively in Asia, Africa, and Eastern Europe, and saw service in the Mexican War of 1848. He was appointed surgeon and naturalist to the first Grinnell Expedition for the recovery of Franklin, projected in 1850, and on his return in 1852, published a personal narrative of *The United States Grinnell Expedition in Search of Sir John Franklin* (1854). The careful study of the ice formations is the chief scientific merit of the work. Dr. Kane took command of the second Arctic Expedition from New York, fitted out by Mr. Grinnell and Mr. Peabody for the recovery of Franklin, and was only rescued after a three years' absence by a relief party sent out by the United States Government. *The Second Grinnell Expedition* (1856) describes as the result of this expedition the examination of the far northern coast-line, and the probable discovery of an Arctic sea surrounding the pole.

Dr. William Elder, *Biography of Dr. Kane*.

Kant, IMMANUEL (b. 1724, d. 1804), the greatest of modern philosophers, belongs by his influence to this century, but by his date and personal history to the last. He was born at Königsberg, and was sprung from a Scottish family named Cant. After being educated in the great Collegium Fridericianum in Königsberg, he entered the university there in 1740, devoting himself especially to the study of mathematics, astronomy, and the natural sciences. Having acted as private tutor for some years, he began to lecture on philosophy as *privat-docent* in 1755, and in 1762 published his first strictly philosophic work, *On the False Subtlety of the Four Syllogistic Figures*. This was followed in 1763 by *The Only Possible Proof of God's Existence*, and *An Attempt to Introduce the Conception of Negative Quantity into Philosophy*; and in 1764 by *Observations on the Feeling of the Beautiful and Sublime*. In 1766 we find signs of his subsequent "critical" position in his attack on Swedenborg, *Dreams of a Ghost-seer*

Explained by Dreams of Metaphysic. In 1770 he became professor, and the next ten years were spent in meditation on his system. At last, in 1780, his great work, *The Critique of Pure Reason* (*Kritik der reinen Vernunft*), was hurriedly composed, and published in 1781. Basing all knowledge on experience, but admitting that experience must inevitably conform itself to the subjective laws of mind, it denied any possible knowledge of the "Thing in Itself," and was a complete overthrow of the whole system of the dogmatism of earlier metaphysics. Its purport was further explained by the *Prolegomena*, published in 1783. The second edition of *The Critique*, containing several alterations, reservations, and increased difficulties, appeared in 1787; *The Critique of Practical Reason* (*Kritik der praktischen Vernunft*), the ethical side of the system, in 1788; and *The Critique of Judgment* (*Kritik der Urtheilskraft*), forming the link between the other two, and containing Kant's theories of art and beauty, in 1790. The tract on *Religion within the Limits of Pure Reason* was published in 1792, but in the same year the philosopher fell under the royal censorship, and though he continued actively engaged on philosophy for some years, his political treatise on *Eternal Peace* (*Zum ewigen Frieden*, 1796) was his last important work. In philosophy, Kant effected a complete revolution, and having marked out the path for the systems of Fichte, Schelling, Hegel, Herbart, and Schopenhauer on the one hand, and for Comtism, Darwinism, and the English school on the other, his influence is still far from being exhausted.

For Kant's life see Rosenkranz and Schubert's edition of his works (1838-40), and Prof. Wallace's Kant; for his philosophy, consult the works of Schopenhauer, Kuno Fischer, H. Cohen, Otto Liebmann, etc.; and for a hostile examination, Prof. Sidgwick's articles in *Mind*, 1883.

Karageorgevitch OF SERBIA. [SERVIA.]

Karamzin, NICHOLAS MICHAILOVITCH (b. 1765, d. 1826), a celebrated Russian historian, began life as an officer in the Imperial Guard. After a short period of service, he abandoned a military career, and went on his travels through the West of Europe. The results of his observations were given to the Russian public in 1789, in a very interesting work, which was translated at the time into French and English, but is now out of print, called *Letters from a Russian Traveller*. As regards England, the writer gives a vivid description of the humours and ferocities of an election which he witnessed, and which does not seem to have given him a high idea of the beauties of representative government. He, on the whole, spoke favourably of English institutions in their working, if not in their origin, which he, a firm believer in the advantages of autocratic government, could not be expected to admire. After his return to Russia, in the

year which saw the publication of his first work, Karamzin devoted himself to the study of Russian history, all the manuscripts contained in the national archives being placed freely at his disposal. As volume by volume he finished his history, he read it to the Emperor Alexander I., who has been praised for his liberality in tolerating the historian's animated condemnation of the excesses practised by some of the Russian Tsars. "How," asks Mr. Herzen, the Russian exile and revolutionist, "could Alexander have approved of John the Terrible ordering his enemies to be placed between two boards and sawn through?" Karamzin published his first volume in 1816. He brought out seven more during his lifetime; and the four last volumes appeared in 1828, after his death. *The History of the Empire of Russia* is the title of the work; it deals with the early origin of Russia and its occupation by Rurik and the princes of his house in the middle of the ninth century, its division into separate principalities, its conquest by the Tartars, the reunion of the Eastern principalities under Ivan I., after the Tartar power had been broken, and the rule of the Moscow Tsars until the election, in 1612, of Michael, the first of the Romanoffs. Karamzin's history has been translated into French, but not into English; and it has of late years been superseded. He was also a novelist and poet of considerable powers. [H. S. E.]

* **Karatheodori**, ALEXANDER, PASHA (b. circa 1820), Turkish statesman, the son of a Greek doctor and philologist of some celebrity, entered the service of the Porte, and after being attached to several embassies became Under-Secretary of State for Foreign Affairs during the Grand Vizierate of A'ali Pasha (1867). Sent afterwards to Rome as Minister-Resident, he was recalled again to fill the post of Under-Secretary of State for Foreign Affairs, and in 1875 was appointed Minister-Resident to Belgium. In 1878 he was sent, together with Mehemet Ali Pasha (q.v.), to represent the Porte at the Congress of Berlin, and acquitted himself, in an unenviable position, with great ability. He superintended the occupation of Bosnia and the Herzegovina by Austrian troops, in accordance with the terms of the treaty, and in December, 1878, became Minister of Foreign Affairs, but was replaced in the following year by Safvet Pasha (q.v.). Shortly afterwards he was sent as governor to Crete.

Karl August OF SAXE-WEIMAR. [SAXE-WEIMAR.]

* **Karr**, JEAN BAPTISTE ALPHONSE, dit ALPHONSE (b. 1808), man of letters, a native of Paris, was educated at the Collège Bourbon. He became a contributor to the *Figaro*—its editor in 1839; and in the same year founded a monthly satirical journal,

Les Guêpes, which was very successful. A member of the Romantic school, he published a number of novels and imaginative works which are characterised by delicate fancy, and keenly ironical observation of life. Of them the best known are *Sous les Tilleuls* (1832), the collection *Ce qu'il y a dans une Bouteille d'Encre* (1838), *Clovis Gosselin* (1851), and *Fort en Thème* (1853). M. Alphonse Karr is an ardent horticulturist, and his charming book, *Voyage autour de mon Jardin* (1845), has been translated into English by the Rev. J. G. Wood. After the revolution of 1848 he went to live at Nice, but continued to produce a large number of literary, political, and humorous fragments. His memoirs, *Le Livre de Bord*, were published in 1879, and a collected edition of his works began to appear in 1860.

Karslake, THE RIGHT HON. SIR JOHN BURGESS (b. 1821, d. 1881), a successful barrister, was the son of Henry Karslake (d. 1857), a London solicitor with an extensive practice, was educated at Harrow, and practised for some time as a solicitor. Called to the bar in 1846, he joined the western circuit, and in time acquired an extensive practice, especially in arbitration cases; and he became before long one of the recognised leaders of that circuit, conjointly with Lord Coleridge. In 1861 he obtained silk; in 1866 he became Lord Derby's Solicitor-General, with the usual knighthood; in 1867 he was elected M.P. for Andover; and in 1874 he received from Mr. Disraeli the post of Attorney-General. The highest prizes in the legal profession were now within his grasp, had not the terrible calamity of blindness fallen upon him, and compelled him to relinquish his profession at the early age of fifty-three.

Kaufmann, ANGELICA (b. 1741, d. 1807), painter, was the daughter of an artist, Jean Joseph Kaufmann, who early perceived her great talents. Her gift for music was so great that it was at one time almost decided she should devote herself to this art as an operatic singer. When she was only eleven years of age, the family removed from Coire, in Switzerland, to Como, where the bishop and many distinguished persons sat to the young artist. At Milan, she had an opportunity of studying the Lombard school, and when sixteen years old she assisted her father in decorating the interior of a church at Schwarzenberg, where she attempted her first original work, the twelve apostles in fresco. Returning to Italy, Kaufmann took his daughter to the principal cities, that she might have the opportunity of studying exemplifications of the rules of her art, in which she had been thoroughly grounded. Angelica became known to Winckelmann and Mengs, who spoke of her with enthusiasm. Commissions for portraits came rapidly — especially from English

travellers; and in 1766 Lady Wentworth, whom she met at Venice, persuaded the young artist to return with her to England. Here she resided 1766-81, welcomed and honoured by the distinguished both in art and rank, and was made a member of the Royal Academy. Sir Joshua Reynolds took a lively interest in her career, painted and was painted by her, and is said to have wished to make her his wife. An unlucky marriage with an impostor, a valet passing as a Swedish count, was annulled in 1768, and in 1781, before leaving England, she married the Venetian artist, Antonio Zucchi, with whom she lived in the happiest union until his death in 1796. Henceforth she lived on the Continent, principally in Italy, and continued to work at her art until within a short time of her death. Among her numerous friends and admirers we may mention Goethe, who wrote of her:—"The light and pleasing in form and colour, in design and execution, distinguish the numerous works of our artist. No living painter excels her in dignity or in the delicate taste with which she handles the pencil." Many skillful engravers, among them Bartolozzi, Bettelini, and Daw, have engraved her compositions, but copies have become extremely rare. It is as a colourist rather than as a draughtswoman that she excelled, and though her pictures are always pleasing and graceful, they are lacking in power.

Boesi, *Angelica Kaufmann*; Bryan, *Dictionary of Painters and Engravers*. [A. M. C.]

Kaufmann, CONSTANTINE (b. 1818, d. 1882), the chief creator of Russia's empire in Central Asia, was born at Maidani, educated as a military engineer, and became a lieutenant in the army of the Caucasus in 1855. His ability procured for him rapid advancement, and he was entrusted with the arrangement of the terms of the capitulation of Kars. [WILLIAMS, SIR W. F.] By the end of the Crimean War he was a major-general, and in 1861 he became Director of Engineers in the ministry at war. Appointed in 1863 Governor of Lithuania in succession to General Mouravieff, he was transferred to Turkestan in 1867, and administered that province until his death. It was not long before he set himself to accomplish the great task of conquest and civilisation upon which his reputation rests. Bokhara was the first district to feel the weight of his hand, and the declaration of war, the occupation of its capital, Samarkand, and the annexation of the country were accomplished in the year 1868. The governor-general's next exploit was the expedition to Khiva (1873), when, outstripping the second column, under General Lomakin, he entered the capital on June 11th, and forced the Khan to become a vassal of the Czar. This expedition was considered by English diplomatists

to have been contrary to the spirit of the declarations of the Russian Foreign Office, and a sharp eye was kept from that time forward on General Kaufmann's proceedings. The chastisement of the marauding Tekke Turcomans followed, in the course of which Kaufmann was on more than one occasion in great personal danger. The turn of the Khan of Khokand came in 1875; he was deprived of all his dominions north of the Sir Darya, and allowed to retain those that were south of that river under conditions of nominal independence. The Russian advance now menaced the frontiers of Afghanistan, and to Kaufmann is generally attributed the design of embroiling England in a war with the Ameer by despatching a Russian mission to Cabul. [AFGHANISTAN.] The plan was eminently successful; but Kaufmann, sorely though he wished to do so, and though, as he wrote, he had assembled an army "of dimensions as yet unseen in Central Asia," was unable to induce the authorities at St. Petersburg to sanction active intervention, and when Shir Ali fled to the author of his woes at Tashkent he was informed he must expect no assistance. Kaufmann is said to have been so annoyed at the Czar's attitude of moderation that he sent in his resignation. If so it was not accepted, and this lesser Alexander was preparing to add Merv to the dominions of the Czar when he died suddenly while on a visit to Moscow on May 12th. His successor as Governor of Turkestan was General Tchernayeff.

Kaulbach, WILHELM (b. 1805, d. 1874), the painter, was born at Arolsen, and spent his youth in wretched circumstances, till at seventeen he went to Düsseldorf to study art under Cornelius, whose most celebrated pupil he became. Already of some distinction in the world of art for his symbolic cartoon of a madhouse, he accompanied his master to Munich in 1826, and was at once engaged on various large works of mural decoration for the King of Bavaria. Two of these, *The Battle of the Huns*, and the series of illustrations to *Reinecke Fuchs*, are perhaps his most admirable productions. The vast design for the *Destruction of Jerusalem*, with its frigid symbolism and artificial composition, was begun in 1836. In 1839 the artist visited Rome, and on his return was commissioned by Frederick William IV. to execute the enormous frescoes for the hall of the staircase in the New Museum at Berlin. The work occupied the artist for the next twenty years. But his fashion was gone, and when the cholera cut him off, people had almost forgotten the name of the last, and in many ways greatest, representative of the Düsseldorf and Munich school.

* **Kaulbars, GENERAL PAUL, BARON** (b. circa 1837), Russian diplomatist, after the usual military education entered the Russian army, but was transferred to the diplomatic service, and eventually became *attaché* at Vienna. In September, 1886, he was appointed diplomatic agent at Sofia, the Bulgarian capital, the objects of his mission being to save the lives of the conspirators against Prince Alexander (q.v.) and secure the election of a Russian candidate to the vacant throne. In spite of his hectoring conduct he failed to overawe the Regents or the Sobranje, and after a tour through the country, during which he was in considerable personal danger, he left Bulgaria in November.

Kaye, SIR JOHN WILLIAM, K.C.S.I. (b. 1814, d. 1876), historian, was the second son of Mr. Charles Kaye, solicitor to the Bank of England. Educated at Eton and Addiscombe, he entered the Indian service, and became an officer in the Bengal Artillery, from which he retired in 1841 to devote himself to literature. Fifteen years later he entered the Home Civil Service of the East India Company, and on the transfer of the Government to the Crown succeeded John Stuart Mill as Secretary to the Political and Secret Department of the India Office. This post he held until failing health forced him to resign in 1874. He had been created a K.C.S.I. in 1871. In India he had started and edited the earlier numbers of the *Calcutta Review*, and the brilliant and valuable works from his pen relate principally to the history and politics of India. He wrote histories of the *War in Afghanistan* (1851), of the *Sepoy War* (1864), of *The Administration of the East India Company* (1853), of *Christianity in India*, biographies of Lord Metcalfe, Sir John Malcolm, and *Lives of Indian Officers* (1867). Sir John Kaye's place among the historians of India is a very high one, and his forte was the military side of events, upon which he wrote with knowledge and animation.

Kean, CHARLES JOHN (b. 1811, d. 1868), actor, was a native of Waterford, Ireland. When he was three years old, his father came home to his lodgings in Cecil Street, Strand, flushed with his triumph at Drury Lane, and exclaimed, "Charley, my boy, you shall go to Eton." It was not till 1824 that he entered Eton, which he quitted in 1827, when his father's meteoric career had become dimmed by misfortune. He was offered a commission in the Indian Army, but resolved to support his destitute mother by going on the stage. On Oct. 1st, 1827, he made his *début* as Young Norval in *Douglas* at Drury Lane. The audience was kind, but the critics were cruel. He persevered, and in October, 1828, he appeared at Glasgow with his father, playing Titus to his Brutus in Howard Payne's play. On Dec. 29th following, he appeared as Romeo at Drury Lane, but again the critics

drove him back to the provinces. In October, 1829, he first extorted some slight praise from the London Press by his performance of Sir Edward Mortimer in Colman's *Iron Chest*. On Oct. 1st, 1830, he appeared in New York as Richard the Third, and at one bound leaped into popularity and fame there. In 1833 he was engaged at Covent Garden. On March 25th *Othello* was the play, and it brought together Edmund Kean, who played the rôle; Charles, who played Iago; and Miss Ellen Tree, afterwards Mrs. C. Kean, who played Desdemona. This was the occasion of the elder Kean's collapse, and soon afterwards Charles again betook himself to the provinces. The Duchess of St. Albans, better known on the stage as Harriet Mellon, gave him a helping hand for his father's sake, and introduced him to the best county families, so that his provincial tours began to get talked about in society. After five years of this work, Mr. Bunn offered him an engagement at £50 a night at Drury Lane, where he appeared as Hamlet, Jan. 3rd, 1838. He played forty-three nights, during which the receipts were £13,289 2s., or about £309 a night, his characters being Hamlet, Richard the Third, and Sir Giles Overreach. He then appeared at the National Theatre in New York, in September, 1839, as Hamlet. In June, 1840, he appeared as Macbeth at the Haymarket, and in the following year as Romeo, the Juliet being Miss Ellen Tree, whom he married two years afterwards at Dublin, and with whom he lived in inseparable companionship till death parted them. Mrs. Charles Kean played in the summer after their honeymoon at the Haymarket in *As You Like It*, and *The Gamester*, and the next year in *Richard the Third*, which was splendidly mounted at Drury Lane. After this the Keans visited America, where they played for seventy-two nights. It was there that they hit on the idea of giving those spectacular presentments of the drama, chiefly Shakespeare's plays, that, supported by some admirable acting, sent all the world to the Princess's in 1850. *Sardanapalus*, produced in 1853, was the most marvellous of these sumptuous performances. Charles Kean had by nature every bad quality an actor could possess—a bad figure and voice, and an impediment in his speech. But he had fine taste, and an iron will, tireless industry, and if he had no genius, he had splendid talents. His last appearance was at Liverpool in his celebrated character of Louis XI. (1867).

John William Cole, *The Life and Theatrical Times of Charles Kean* (2 vols., 1890-1).

[R. W.]

Kean, EDMUND (b. 1787, d. 1833), actor, was the son of Ann or Nance Carey, granddaughter of Henry Carey, author of *The National Anthem*, who was a natural son of George Savile, Marquis of Halifax. His father was probably one Aaron or Edmund Kean, variously described as a tailor, architect, and

stage-carpenter. Kean himself sometimes claimed as his father the Duke of Norfolk—sometimes Mr. Duncan, a West Indian merchant. His childhood was spent in squalid privation. When two years old (1789), he appeared as Cupid in an afterpiece, and at eight years of age he began his career as a stroller. At seventeen, he had played everything from Cato and Richard to Clown and Harlequin. In 1808 he married a Miss Chambers, who played with him in Beverley's company. For six long, weary years he failed to attract the notice of a London manager. When, through the good offices of Dr. Drury, head-master of Harrow, who was struck by his performance of Kolla, at Teignmouth, in Aug., 1813, he did appear as Shylock, at Drury Lane, on Jan. 26th, 1814, it was under great disadvantages. He and his family were literally starving, and as he was afraid to waste his attenuated strength at the one rehearsal that was allowed, everybody anticipated failure. His success, however, was complete. Lord Byron urged the committee of Drury Lane to keep Kean before the public. Edmund Kean's dramatic life extended from 1814 to 1833; whilst it lasted, it positively dazzled his critics, and the very memory of it is still an exquisite delight to aged playgoers. Kean's energy, passion, fire, and picturesqueness put the stately classicism of Kemble's school out of fashion. In pathetic sweetness of utterance, too, no other lips than his ever shed such musical harmonies on the stage. Some of his greatest points were, as Hazlitt said, like flashes of lightning on Shakespeare's meaning. *Othello*, *Shylock*, *Richard*, *Sir Giles Overreach*, and *Zanga*, he made his own. In *Macbeth*, *Hamlet*, *Wolsey*, *Lear*, *Brutus*, *Coriolanus*, and *King John*, he fell, however, behind Kemble and Macready: he founded no school, for Macready was of Kemble's school rather than Kean's. Again, Kean created no new part, and he brought few new plays on the stage. In comedy he was an atrocious failure. Of Kean's versatility, much might be written. At a dinner party at Mr. Kinnaird's, where Kean and Byron were guests, Kean declared that at Stroud one night he acted *Shylock*, danced on the tight rope, sang a song called *The Storm*, boxed with Mendoza the bruiser, and then acted *Three-Fingered Jack*. Of course, like every other notoriety, he dined at Holland House, where, says Lord Broughton, "he ate most pertinaciously with his knife, and was a little too frequent with his ladyships and his lordships." His private life was one of reckless dissipation, and in 1825 his appearance in the divorce suit of Cox v. Cox and Kean raised against him a violent storm of unpopularity, which expressed itself in a refusal to give him a hearing on the stage. Kean's biographers affect to believe that the shock of this public censure drove him to drink. Kean's debauchery, however, began long before; in

fact, it began immediately after his *début*, when the adulation of venal critics, whom the majestic Kemble rather snubbed, turned his head. His incurable taste for low company wrecked his life. During twelve seasons at Drury Lane he had earned £200,000, yet in 1827 he was penniless. Latterly he lived chiefly on brandy, and in his last essay in a new part, that of Henry V., he exhibited a painful loss of memory. Towards the end of his career a reconciliation took place with his son Charles and his wife, and he retired to Richmond. There his life was one of remorse. When he died, breaking down completely on the stage at Covent Garden, in his forty-seventh year, a shattered, prematurely old man, Mrs. Fanny Kemble, forgetting the jealousies of her family, whose creed she tells us forbade them to consider him a great actor, generously wrote, "Kean is gone, and with him are gone Othello, Shylock, and Richard."

The Life of Edmund Kean, by Barry Cornwall (Bryan Proctor), (2 vols., London, 1835); *Life of Edmund Kean*, by F. W. Hawkins (2 vols., 1869); Lord Broughton's *Recollections of a Long Life*, 5 vols. (not published). [R. W.]

Keane, THE RIGHT HON. JOHN, BARON KEANE of Ghuznee (*b.* 1781, *d.* 1844), a distinguished soldier, was the second son of Sir John Keane, of Belmont, co. Waterford, and entered the army at the age of twelve. He was aide-de-camp to Major-General Lord Cavan in the Egyptian campaign of 1801. Lieut.-colonel at the age of twenty-two, he served in the campaign of Martinique in 1809, and was present at the siege of Fort Dessaix. In 1812 he was promoted colonel, and was subsequently entrusted with the command of a brigade in the third division in Spain, in which he served until the end of the war with France, in 1814, when he attained the rank of major-general. He was subsequently ordered to Jamaica to co-operate with Vice-Admiral Sir Alexander Cochrane in the attack on New Orleans and the province of Louisiana, and won a victory against great odds on Dec. 23rd, 1814, but was then superseded by Sir E. Packenham. From 1823 to 1830 he was commander-in-chief of the forces in Jamaica. In 1833 he succeeded Sir Colin Halket as commander-in-chief of the army in Bombay; and after five years' service in that presidency he was appointed to the command of the forces on the north-west frontier of India. The campaign in Afghanistan of 1838-39 was a success, culminating in the brilliant victory at Ghuznee and the replacement of Shah Shuja upon the throne of Cabul, after which the bulk of the forces returned to India. Sir John Keane was raised to the peerage and received a pension of £2,000. Lord Keane was never a popular general. The sobriquet of "the fortunate youth" was early attached to him, and he was always said by his contemporaries to have been

more lucky than skilful. The brilliant victories he achieved were always severely criticised, and the memorable victory of Ghuznee did not obtain that unqualified approbation which conquests of equal magnitude usually procure.

Gentleman's Magazine, Oct., 1844.

Keary, ANNIE (*b.* 1825, *d.* 1879), was the daughter of an Irish clergyman, and began her career as an authoress by writing for children. Her sympathy with child-life enabled her to do this with a delicate grace and simple directness of style that render her juvenile books inexhaustible favourites to the circle of readers for whom they were written; while they at the same time possess a delightful charm for readers of maturer years. *Blindman's Holiday*, and *Little Wanderlin*, are written for quite young children. *Sidney Grey*, *A York and a Lancaster Rose*, *Mia and Charley*, and *Rival Kings*, are addressed to their elder brothers and sisters; and in the *Heroes of Asgard*, Miss Keary tells the story of the Eddas in simple language. Her first novel, *Through the Shadows*, and its earlier successors, *Janet's Home*, *Clemency Franklyn*, and *Oldbury*, contain faithful pictures of the every-day life of ordinary people, but are rather wanting in interest apart from that of the characters described. The same fidelity to life and naturalness are exhibited in *Castle Daly* (1875), an attempt to set in a clearer light the warring interests between Irish and English, and *The Doubting Heart*, written shortly before her death. It was especially as a delineator of Irish character and scenery that Miss Keary excelled. Her *Early Egyptian History* was published in 1861, after a journey to the Nile, and in *The Nations Around* she groups in picturesque order the result of Assyrian, Egyptian, and Biblical scholarship round the Bible story.

Eliza Keary, Memoir of Annie Keary.

Keats, JOHN (*b.* Oct. 31st, 1795, *d.* Feb. 23rd, 1821), poet, the eldest son of Thomas and Frances Keats, was born in Finsbury. His maternal grandfather, Jennings, had been a livery stable proprietor in Finsbury; and Thomas Keats, at first a servant of Jennings, eventually married his master's daughter and became proprietor of the business. The issue of this marriage consisted of four children, these being, besides John, George, born in 1797, Thomas, born in 1798, and Frances Mary, born in 1803. In 1804 the children lost their father, through an accident: he was thrown from his horse and killed. The widow married again in 1805, with a Mr. William Rawlings, and the children, when not at school, lived with their grandmother. Mrs. Rawlings died in 1810. From about 1803 to 1809 John Keats was being educated at Mr. Clarke's school at Enfield, on leaving which he was apprenticed to Mr. Thomas Hammond, surgeon, of Edmonton. His bent from an early age was for pure litera-

ture; he saw things from the artistic side rather than the scientific; and very early in his apprenticeship he had completed a translation of the *Æneid*, begun before he left school. Of this no vestige has come to light; and we are not even informed whether it was in prose or in verse. The earliest of his extant writings is a small poem in imitation of Spenser, written in 1812, about the time when his relations with Hammond became so unpleasant as to lead to an open rupture, resulting in the relinquishment of his indentures. In 1813 he seems to have formed the acquaintance of Joseph Severn, and he had maintained, as he did to the end, his friendship with his old schoolmaster's son, Charles Cowden Clarke. Among his early friends were George Felton Mathew and the brilliant Charles Wells, afterwards the author of *Stories after Nature and Joseph and his Brethren*. Before the end of 1816 he numbered among his friends Benjamin Robert Haydon and Leigh Hunt; and through Hunt he came to know Shelley and other men of genius of that day. But, notwithstanding his strong literary bent, he followed his medical pursuits in a sound, practical fashion as a student at Guy's Hospital, where he became dresser under Mr. Lucas in March, 1816. Two months later his first published poem appeared in *The Examiner*. In the course of the year he produced a good deal of poetry; and early in 1817 came out his first small volume of poems, containing *I stood tip-toe upon a little hill*; *Sleep and Poetry*; three epistles, some minor poems, and several sonnets, including that on Chapman's *Homer*. He appears to have abandoned medicine as a career just as he was qualified to enter upon it. He had misgivings as to his fitness for the occupation; and in the spring of 1817 he set seriously to work to write his long romantic-classic poem *Endymion*, moving from place to place in the country—the Isle of Wight, Margate, Oxford, Leatherhead, and finally Burford Bridge, near Dorking. Returning from these wanderings, after he had completed the draft, in Nov., 1817, he wintered at Hampstead, wrote one or two dramatic criticisms for *The Champion*, and began a fair copy of *Endymion*, of which Book I. went to press in Jan., 1818. About this time he saw a good deal of Wordsworth; but in the spring he had occasion to unsettle again, and join his brothers at Teignmouth, where the youngest was dying of consumption. It was there that Keats superintended the passage of *Endymion* through the press, saw it published in the course of the spring, and completed his great poem *Isabella, or the Pot of Basil*. In May he returned to Hampstead; and in June his brother George, being newly married, went off with his bride to seek his fortune in America. At the same time the poet started with a friend, Charles Armitage Brown, to visit the English Lakes, and walk over a good

part of Scotland. Although he did not do as much in this way as was planned, he did a great deal too much of roughing it, and exposing a not over-strong constitution. In the Isle of Mull, in July, he caught a terrible cold, and under medical advice he retreated to London, leaving his friend to finish the tour alone. In August came out the notorious "Cockney School" attack in *Blackwood's Magazine*, and in September that in the *Quarterly Review*; the effects of his cold still haunted him when in or about October he fell in with Fanny Brawne, and was very soon desperately in love with her. Before the close of the year his brother Thomas, to whom he was tenderly attached, succumbed to his disease; and, already greatly shaken by approaches of the same malady, the poet went into residence with his friend Brown next door to the house where Mrs. and Miss Brawne lived. During the winter of 1818-19 he began *Hyperion*, and wrote *The Eve of St. Agnes* while on a visit to Chichester and Bedhampton. It was probably about April, 1819, that he became engaged to Miss Brawne. In the first half of the same year, the haunting sore throat still persecuting him, he produced the *Ode to Psyche* and the *Ode to a Nightingale*. In July he visited the Isle of Wight with a fellow-invalid, James Rice, and published the last-named ode in a magazine called *Annals of the Fine Arts*, wrote Part I. of *Lamia*, and, being joined by Brown, began writing the tragedy of *Otho the Great*, on a plot furnished by his friend. In August, he and Brown moved to Winchester and finished *Otho*—the fifth act being wholly Keats's. He went on with *Hyperion* for a time, paid a flying visit to London on his brother George's business in September, returned to Winchester, and before the close of September had composed the poem *To Autumn*, abandoned *Hyperion* as too Miltonic, finished *Lamia*, revised *The Eve of St. Agnes*, and resolved to work for periodicals. In this resolve his characteristic ill-luck appears to have accompanied him, for he got practically no work of the kind. In October he returned to winter again at Hampstead, made an experiment of leaving off animal food, and suffered further with his throat. In Jan., 1820, his *Ode on a Grecian Urn* appeared in the *Annals*; and in February his fatal malady declared itself unmistakably. In May, Hunt published Keats's beautiful ballad, *La Belle Dame sans Merci*, in *The Indicator*; and about the same time Keats wrote the large fragment of a comic poem, *The Cap and Bells*. Early in July his friends, Taylor and Hessey, who had published *Endymion*, brought out the third and last volume of his poems, *Lamia, Isabella, The Eve of St. Agnes*, etc. Except in the way of advances from those friends, who can have done nothing but lose in the matter, Keats's literary work had not really earned him anything like a living; and his many misfortunes culminated in June in a fresh development of

his malady, which soon made it clear that he must seek a warmer climate. Accompanied by his faithful friend Severn, he set sail for Italy in September, but he got no good from this step, and died at Rome. Keats's earnest conviction and workmanlike assiduity in the pursuit of his art are the qualities which, independently of high and unmistakable genius, do most to secure his permanent station in English literature. These qualities have the value of innate moral attributes; and although that aspect of his nature led to some faults in his immature works, the world is indebted to it for much that is great in his final achievements. In the early poems there is a startling freshness of conception, with a thought too much of novelty in the manner. In *Endymion* he displayed a truly luxurious and affluent imagination, and, while creating mass on mass of striking poetry, fell short of attaining a great result. Page after page is found to teem with happy thoughts and images, expressed with absolute felicity; but it is only in the last volume (*Lamia*, etc.) that we find sustained poems characterised by this great felicity of expression, and by an adequate stability of structure. *Lamia*, though much indebted to Dryden for the form of its verse, is in some sense a masterpiece; while *The Eve of St. Agnes* and *Isabella* are masterpieces of a rare kind. It is on these and the fragment of *Hyperion*, with a few odes and sonnets, that Keats's abiding fame as a poet will stand. For the rest, his portrait, as handed down to us by his biographers, is that of a lovable manly youth, prematurely cut off by misfortunes; and his letters to his brothers and sister, Miss Brawne, and his many friends, form one of the most remarkable collections of letters extant.

The Poetical Works and other Writings of John Keats, edited by H. Buxton Forman (4 vols. 1883); E. Monckton Milnes (Lord Houghton), *Life, Letters, and Literary Remains of Keats* (1848). [H. B. F.]

Keble, JOHN (b. 1792, d. 1866), divine and poet, was born at Fairford, in Gloucestershire, near which place his father held the small living of Coln St. Aldwin's. Educated under his father's care, Keble was elected to a scholarship at Corpus Christi, Oxford, in 1806, and, after taking double-first honours, to a fellowship at Oriel in 1811. Having been ordained in 1815, he became a college tutor in 1818, but in 1823 accepted a curacy at Fairford in order to assist his father in his old age. In 1825 he was for a short time curate at Hursley, near Winchester, but returned to Fairford in the following year and began the publication of the *Christian Year*, which was completed in 1827. Since then this collection of short spiritual poems for every Sunday and festival of the Church's year has been a manual of devotion to many thousands of all parties in the Church. It seems to owe its lasting power to the genuine beauty of its

poetic form and the calm sublimity of the singularly pure and religious nature that is revealed in every verse. In 1829 Keble was appointed examiner at the India House, and began his well-known edition of Hooker's *Ecclesiastical Polity* that was published in 1836. In 1831 he was elected professor of poetry in Oxford, a position which he retained for ten years, giving his lectures in Latin, as was then the custom. In the following years he took a prominent part in the ecclesiastical movement in Oxford, afterwards known as the "Tractarian." Not only were the leaders of the movement his closest personal friends—Hurrell Froude, for instance, having even been his favourite pupil at Fairford—but he himself wrote at least four of the *Tracts*, and expressed his entire sympathy even with the final *Tract 90* (1841). In the meantime (1835) he had been appointed to the vicarage of Hursley, which he continued to hold until his death, and had married Miss Charlotte Clarke. Beyond his parish work, and the reconstruction of the churches at Hursley and the two adjoining districts, he was engaged during these years in assisting the publication of Hurrell Froude's *Remains* and a projected edition of a *Library of the Fathers*. His *Lyra Innocentium*, a series of poems on children and their inner life, was published in 1845, and contains many of his noblest verses. In the same year he attempted to realise an old idea of his for the foundation in Oxford of a "Poor Man's College," as it was then called, especially designed for the education of priests for the English Church. A plot of land was even purchased on the top of Headington Hill as a site. But the scheme was at the time a failure, partly perhaps owing to the distance of the proposed position from Oxford, more probably because the "High Church" party was not then strong enough to support the undertaking. It was carried out within a few years after Keble's death, and took the form of the great college that now bears his name. With the exception of the publication of his *Life of Bishop Wilson* (1863), the remaining outward events in Keble's life were chiefly his active participation for the High Church interest in all the theological and religious controversies of the time, such as the Oxford Reform of 1854, the *Essays and Reviews*, and the Colenso case. He died at Bournemouth. He has been called the George Herbert of our time, but he was greater both as a poet and as a man. He stands among the first of those who, by their protest against a merely materialistic liberalism, have raised the ideal of the Church in England to a higher spirituality. His sermons, in twelve volumes, were published in 1867.

A *Memoir of John Keble* was written by his lifelong friend Sir J. T. Coleridge (1868).

[H. W. N.]

Keeley, ROBERT (b. 1793, d. 1869), the comic actor, was originally apprenticed to the

printing trade, but joined, in 1813, the company engaged at the Richmond Theatre. His first appearance in London was at the Prince of Wales's Theatre, Tottenham Street, and in the following year, 1818, he acted at the Olympic in *Giovanni in London*. It was during his connection with the Adelphi that he made his first great hit as Jemmy Green in Moncrieff's *Tom and Jerry*. His talent having attracted Charles Kemble's attention, Keeley was engaged at Covent Garden, and appeared there Oct. 26, 1822, as Darby in *The Poor Soldier*. While engaged at Covent Garden he married, 1825, * Miss GOWARD (b. 1806), an actress, who had made her first appearance in London in the same year at the Lyceum, and who was to acquire such celebrity under her married name in the adaptations from Dickens — *Nicholas Nickleby*, *The Cricket on the Hearth*, and *The Battle of Life*. Among the most successful of Keeley's parts at Covent Garden were Innocent Lambskin; Rumfit, the idiotic tailor; Natty Larkspur; and Billy Black in *The £100 Note*. After a visit to America, Mr. and Mrs. Keeley joined Madame Vestris' company, and were with her at the Olympic and Covent Garden from 1844 to 1847. Mr. Keeley was manager of the Lyceum, and it was during this period that the successful burlesques, *Valentine and Orson*, *The Forty Thieves*, and *Cinderella*, and the adaptations from Dickens were given. Subsequently the Keeleys joined Mr. and Mrs. Charles Kean in the management of the Princess's, with which theatre they had been previously connected. This arrangement lasted for about two seasons only, from 1850, and in 1852 they went to the Haymarket. The Olympic was the last theatre with which Keeley was associated, his final performance being in *The Cure for the Heartache*. There were two daughters, each of whom acted; the younger, Louise, married Mr. Montague Williams. It was said of Keeley, that though inexpressibly funny in low comedy characters, he was never vulgar.

Keith, GEORGE ELPHINSTONE, Viscount (b. 1746, d. 1823), British sailor, the son of Charles Lord Elphinstone, entered the Royal Navy at an early age, and in 1775 was created a post-captain. He distinguished himself during the American war, and especially in 1782, when he captured the French man-of-war *l'Aigle*, and fought with equal gallantry during the war of the French revolution. In 1795 he commanded the naval part of the expedition which reduced the Cape of Good Hope, and was raised to the Irish peerage as Baron Keith. In 1798 he was second in command, and afterwards commander-in-chief in the Mediterranean, and effected, in 1801, the landing of the troops at Aboukir. After commanding in the North Sea (1803), and in the Channel (1814), he was created a Viscount.

Kellermann, FRANÇOIS ÉTIENNE, second Duc de Valmy (b. 1770, d. 1835), French

general, the son of Marshal Kellermann (b. 1735, d. 1830), the victor of Valmy, and the conqueror of loyalist Lyons, served under his father, whose disgrace for the evident reluctance with which he had undertaken the siege of Lyons, he shared. He fought through the Italian campaign, and in 1797 was created brigadier-general. His was the famous charge which converted the battle of Marengo from a defeat into a victory. He was wounded at Austerlitz, fought under Junot in Portugal in 1807-8, and negotiated the convention of Cintra, under which the French evacuated the country. Some of Kellermann's cavalry exploits in the Peninsular war were of the most dashing character; he led the vanguard of Ney's corps at Lützen and Bautzen, and commanded the Polish cavalry during the Russian campaign. He accepted the first restoration, but imitated his men, and went over to Napoleon during the Hundred Days. After the second restoration he took very little part in political affairs.

His memoirs have been edited by his son, under the title *Histoire de la Campagne de 1800*.

Kelly, SIR FITZ-ROY (b. 1796, d. 1890), a Chief Baron of the Exchequer, was the son of a captain in the army, and was educated at a private school in Chelsea. In 1817 he placed his name on the books of Lincoln's Inn, and was called to the bar in 1824. He joined the Norfolk Circuit, where he soon obtained an extensive and lucrative practice, and rose in the course of half a dozen years to become one of the leaders of the circuit. He was at this time a strong Tory, and made several gallant efforts to secure a seat in Parliament. It was not, however, until 1843, having in the meantime been made a Q.C. (1839), that he entered the House as member for Cambridge town. In 1845 he succeeded Sir Frederick Theiger (afterwards Lord Chelmsford) in the Solicitor-Generalship under Sir Robert Peel, when he was knighted, and again held the same post in Lord Derby's ministry in 1852. He became Attorney-General in 1858, but retired with his party the following year. In 1866 he was promoted to the post of Chief Baron on the retirement of Sir Frederick Pollock. Few advocates at the bar ever enjoyed a larger professional practice than Sir Fitz-Roy Kelly. Although not endowed with great powers of oratory, he was possessed of first-rate ability, which secured him engagement in nearly every important case. He was a member of the Commission on Consolidation of the Law, and took a lively interest in the question of codification.

Mr. E. Walford in *The Law Times*, 60,368; Mr. James Grant, *The Bench and the Bar*.

Kemble, JOHN MITCHELL (b. 1807, d. 1857), Anglo-Saxon scholar and antiquarian, was educated by Dr. Richardson, the lexicographer, and at Bury St. Edmund's Grammar School. He subsequently entered at Trinity

College, Cambridge, where, in spite of his brilliant abilities, he did not gain academic honours. He then proceeded to study law, but very soon devoted himself entirely to archæological and philological research. During a lengthened stay on the Continent, he had become acquainted with Professors Ast and Thiersch, and the Grimms. In 1830 he went to Spain to take part in the attempted revolution, but returned after a brief stay, and published, in 1832, editions of *Beowulf*, *The Traveller's Song*, and *The Battle of Finnesbury*. To a new edition of *Beowulf*, in 1837, he added a translation. He contributed a series of papers to the *Foreign Quarterly Review* on "Jäkel," wrote in the *Archæologia and Philological Museum*, and lectured in Cambridge upon Anglo-Saxon literature and language. In 1839 he commenced the publication of his *Codex Diplomaticus Evi Saxonici*, the expenses of which were defrayed by the Historical Society, and the materials for which were the foundation upon which he based his history of *The Saxons in England* (1849). For the *Ælfric Society* he edited the poetry of the *Vercelli Book*, and added an English translation, and *The Dialogues of Salomon and Saturnus*. In the summer of 1854 he was employed by the Hanover Royal Museum to superintend the excavations and explorations of the funeral barrows on Lüneburg Heath, and collected at the same time from the archives of the State Paper Office in Hanover materials for his *State Papers and Correspondence Illustrative of the Social and Political State of Europe from the Revolution to the Accession of the House of Hanover* (1857), which show that his historical research was by no means confined to a remote era.

Kembles, THE, a celebrated family of actors, comprise in the first generation John Philip, Sarah (Mrs. Siddons), and Charles, and in the second the two daughters of Charles, Frances and Adelaide. Of the first generation, much of whose lives lie outside the century, only a brief account can be given here. (1) JOHN PHILIP KEMBLE (b. 1757, d. 1823) was destined by his father Roger, the manager of a travelling company, for the Catholic priesthood. He embraced, however, the dramatic profession, making his *début* at Wolverhampton in 1776. After acting for some years in the provinces, he appeared at Drury Lane as Hamlet in 1783, the management of which he undertook on the retirement of King in 1788, and retained it until 1802, when disagreements with the proprietors, notably with Sheridan, led him to resign. In 1803 he became a part proprietor of Covent Garden, a speculation that—partly from its destruction by fire in 1808, partly from the riots that followed the opening of the new theatre—darkened the end of his non-professional career and that of his brother Charles, to whom he afterwards made over his

share when he retired from the stage in 1871. In his capacity as manager, Kemble was able to indulge his taste for antiquarian lore, and effected a revolution in costume and scenic effects, while as an actor his Shakespearian characters have become one of the traditions of the British stage. His strength lay in the expression of dignity in repose, and in parts like Coriolanus or Julius Cæsar he was without a rival. His Macbeth was also thought a magnificent creation by his contemporaries, though he undoubtedly owed much to the genius of his greater sister as Lady Macbeth. His severely classical style caused him to be unfitted for parts to which passion or pathos were essential, and in comedy he was saved from failure only by his perfect command of a rhetorician's resources, and the sense of incongruity was ever present to his audiences. He also wrote several farces, *The Projects*, *The Pannel*, *The Farmhouse*, etc., and edited Shakespeare's works. (2) SARAH KEMBLE. [SIDDONS.] (3) CHARLES KEMBLE (b. 1775, d. 1854) was at first employed in the Post Office, made his *début* in 1792, at Sheffield, as Orlando in *As You Like It*, and appeared at Drury Lane in 1794, in the part of Malcolm in *Macbeth*. In 1803, after a journey to the Continent, he went to Covent Garden, then under his brother's management, whom he succeeded for a brief and disastrous period in 1817, his reputation increasing as an interpreter of high-class comedy, though he never attained to excellence in tragic parts demanding great power. Unequal in certain respects to his contemporaries—to Kean in boldness and originality, to Macready in impetuous force—his versatility and evenness enabled him to cover a range of character surpassed only by Garrick. "His Macduff or Aufidius," says one biographer, "were scarcely less effectual to the greatness of the scene than the Lady Macbeth or Coriolanus of Mrs. Siddons or her brother. When his great brother and sister were playing the greatest characters of the British drama, their greatest efforts were sustained by the admirable manner in which Charles played up to them. . . . He was the most joyous of Archers, Dori-courts, Charles Surfaces, and Rangers; the most gay and royal of Prince Hals." On the Continent, Charles Kemble was received with enthusiasm, and in 1832 he made a tour in the United States, retiring from the stage in 1840. He married Maria-Theresa De Camp, an actress and dramatic authoress, by whom he had three children, Frances Anna, Adelaide, and John Mitchell (q.v.). Charles, like his brother, also wrote for the stage, and translated several plays from French and German; he also carried on the reforms instituted by him in the mounting of plays. (4) * FRANCES ANNA (b. 1811) was educated by her aunt, Mrs. Siddons, and appeared at Covent Garden in the

role of Juliet in 1829. Her reception by the public was such as might have been expected from the traditions of the family, and was due also to her own high-class ability. She followed her father to the United States in 1832, where her acting created a *furor*, and married there, in 1833, Mr. Butler, from whom she was divorced in 1849, but did not return to the stage, although she re-appeared before the public as an elocutionist, giving Shakespearian readings in the principal towns of England. During her brief theatrical career Fanny Kemble appeared in the parts of Portia, Belvidera in *Venice Preserved*, The Grecian Daughter, Mrs. Beverley, Isabella, Beatrice, Bianca, Constance, Queen Catherine, Lady Macbeth, Julia in *The Hunchback*, Lady Townley, Lady Teazle, and Louise of Savoy in *Francis I.*, a play written by herself when only seventeen. Besides translations from Schiller, she has also written *Journal of a Residence in America* (1835), *The Star of Seville* (1837), a volume of *Poems* (1842), *A Year of Consolation* (1847), and *Residence on a Georgia Plantation*. The story of her own life and much interesting gossip about her contemporaries are contained in her two latest books, *Records of a Girlhood* (1878) and *Records of Later Life* (1882). (5) *ADELAIDE (b. 1820) was intended originally for a concert singer, but obtained a very indifferent success in this capacity, and after studying in France, Germany, and Italy, came out in opera, and achieved a splendid success in *Norma*, before a Venice audience. Her reputation enhanced by her singing at Trieste, Milan, Padua, Bologna, and Mantua, she returned to England, and made her first appearance at Covent Garden, in 1842, again sustaining the part of *Norma*. She continued before the public, holding a front rank in her profession, until her marriage in 1843 to Mr. Frederick Sartoris.

Percy Fitzgerald, *The Kembles*; Bowden, *Life of John Philip Kemble*; Miss F. Kemble, *Records of a Girlhood and Records of Later Life*.

[A. M. C.]

* **Kendal**, MARGARET (Miss Madge Robertson) (b. March 15th, 1848), was born at Great Grimsby. When four years old she acted as the blind child in *The Seven Poor Travellers*, and in 1855 as Eva in *Uncle Tom's Cabin*. Her first appearance in London was at the Haymarket, in the *role* of Ophelia, July 29th, 1865, her next attempt being Desdemona to Ira Aldridge's Othello. A provincial tour followed, and Miss Robertson then appeared at Drury Lane, in 1867, and played Edith in Halliday's *Great City*. Her first striking success was in the part of Blanche Dumont, in Marston's *Hero of Romance*, at the Haymarket, March 14th, 1868, and was followed by her Hypolita, in Colley Cibber's *She Would and She Would Not*. At the Gaiety, in the winter of 1868-9, she played in *On the Cards*, and Lady Clara

Vere de Vere in her brother T. W. Robertson's comedy, *Dreams*. In 1869 she married Mr. William Hunter Kendal, *verè* Grimston (b. 1843), who had also been a member of the Haymarket company since 1866, having made his first appearance at the Soho in 1861. Returning to the Haymarket, Oct., 1869, her creation of the part of Lillian Vavasour in *New Men and Old Acres*, gave her a front rank among the comedy actresses of the day. At the same theatre she and her husband sustained leading parts in *The Rivals*, *The Palace of Truth*, *The Wicked World*, *Charity*, and *Pygmalion and Galatea*. After a few months at the Opéra Comique in 1875, where they acted in *The Lady of Lyons*, *As You Like It*, and *She Stoops to Conquer*, Mr. and Mrs. Kendal joined Mr. Hare's company at the Court in the same year, during which engagement the plays of *Lady Flora*, *Broken Hearts*, *A Nine Days' Wonder*, and *A Scrap of Paper* were produced. But it was in *Diplomacy* at the Prince of Wales's that Mrs. Kendal's greatest triumph was achieved in 1878, a great success having already been scored in the character of Lady Ormond in Sardou's *Peril*. In Jan., 1879, Mr. Kendal, in conjunction with Mr. Hare, opened the St. James's Theatre and revived *A Scrap of Paper*, *The Ladies' Battle*, and produced, April 19th, *The Queen's Shilling*, with Mrs. Kendal as Kate Greville. [HARR.]

* **Kennedy**, THE REV. BENJAMIN HALL, D.D. (b. 1804), scholar and divine, was educated at King Edward's School, Birmingham, Shrewsbury School, and St. John's College, Cambridge, where, after a university career of the highest distinction, he was elected fellow of his college in 1828. He became assistant master at Harrow School in 1830; head master of Shrewsbury School, 1836-66; rector of West Felton, Salop, 1865; and Regius Professor of Greek at Cambridge, and Canon of Ely, in 1867. Dr. Kennedy's numerous educational works are deservedly looked upon as standard authorities, and have gone through edition after edition. Among them are the *Tirocinium*, a Latin reading-book (1848); *Palestra Latina* (1850); *Curriculum Stili Latini* (1858); and *Public School Latin Grammar* (1871; 6th edit., 1883). He has also published collections of Latin and Greek verse, contributed to the *Sabrina Corolla*, and done several Greek plays into English verse. An account of an Italian tour, *My Old Playground Revisited*, was published in 1882.

Kent, H. R. H. PRINCE EDWARD AUGUSTA, DUKE OF (b. Nov. 2nd, 1767, d. Jan. 24th, 1820), was the fourth son of George III. and father of Queen Victoria. Educated principally in Germany, he was in 1787 appointed to a command in the Electoral Guards of Hanover, and in 1789 to a colonelcy in the Royal Fusiliers. With this rank he spent some time in Gibraltar, and in 1791 was trans-

ferred to Canada. He served in the West Indies under Lord Grey, 1793-4, distinguishing himself by personal bravery, and on returning to North America, held a command at Halifax, first as major-general, and in 1796 as lieutenant-general, until in 1798, in consequence of a severe fall from his horse, he was compelled to return to England. In 1799 he was created a peer, with the title of Duke of Kent and Strathearn and Earl of Dublin, and in May of the same year was appointed commander-in-chief of the British forces in North America, a post that ill-health obliged him to give up in 1800. In March, 1802, he was appointed Governor-in-Chief of Gibraltar, and the zeal displayed during his residence in that island to check the terrible licence of the soldiery and suppress the wine-shops, procured for him the thanks of the civilians, but exposed him to the attacks of those whom he wished to curb. He returned to England in May, 1803, and married in 1818 Victoria Maria Louisa, the youngest daughter of the Duke of Saxe-Coburg, and sister to Prince Leopold, the widower of the Princess Charlotte. From this marriage was born, at Kensington Palace, May 24th, 1819, Alexandra Victoria, now Queen of England. The Duke, though taking a great part in all social questions, and devoting his personal influence, and as much pecuniary aid as his narrow means would allow, to all charitable and philanthropic undertakings, kept aloof from politics. He was universally respected, and his early death was regarded as a great calamity by the nation.

* **Key**, ADMIRAL THE RIGHT HON. SIR ASTLEY COOPER (b. 1821), a distinguished naval officer, the son of Dr. Charles Aston Key, entered the Royal Navy in 1835. In the capacity of lieutenant, he took an important part in the rescue of H.M.S. *Gorgon*, stranded off Monte Video, in 1844, of which he published a *Narrative of the Recovery* in 1847; and commanded an armed brig at the action of Obligado in the Parana in 1845. During the Italian revolutions (1847-50), he commanded H.M.S. *Bulldog* in the Mediterranean, and for his services was promoted captain. He next watched in the Baltic during the Russian War, and commanded the *Sans Pareil* during the Indian Mutiny, and led the attack at the capture of Canton in 1858. He was a member of the Royal Commission of National Defence in 1859, Director-General of Naval Ordnance in 1866, and second in command of the Mediterranean station in 1870. In 1873 he became vice-admiral, and was created K.C.B.; in 1878 was promoted admiral; in 1880 received the degree of D.C.L. from Oxford; and in 1882 was made G.C.B. He became senior naval lord of the Admiralty in 1879.

* **Kiepert**, HEINRICH (b. 1818), German geographer, a native of Berlin, was educated

there by the geographer, Ritter, and in 1841 went on a voyage of scientific exploration in Asia Minor. In 1845 he became director of the Geographical Institute at Weimar, and in 1865 was given an appointment in the statistical department of the Prussian Government. His well-known maps and atlases are of the utmost use to the historical, antiquarian, and geographical student. Among them are his *Atlas of Greece* (1840-46), *Biblical Atlas* (1846), *Historico-Geographical Atlas of the Ancient World* (1848), *The Environs of Rome* (1850), and the *Atlas of the World for the Use of the Schools* (1850). Of late years Herr Kiepert has been chiefly interested in modern geography; his map of *Bulgaria* appeared in 1877, and of *Algeria and Tunis* in 1881. The list of his works occupies nearly nine closely printed pages of the map catalogue of the British Museum.

* **Kimberley**, THE RIGHT HON. JOHN WODEHOUSE, K.G., 1ST EARL (b. 1826), statesman, the grandson of the 2nd Baron Wodehouse, was educated at Eton and Christ Church, Oxford, whence he graduated B.A. (first-class classics) in 1847. He succeeded to his grandfather's title in 1846, and from 1852-6 was Under-Secretary of State for Foreign Affairs. He then went as ambassador to St. Petersburg, and shortly after his return, in 1858, was again Under-Secretary for Foreign Affairs (1859-61). In 1863 he was despatched by Lord Palmerston on a special mission to northern Europe in the hope of bringing about a peaceful settlement of the Schleswig-Holstein affair, and from October, 1864, to July, 1866, was Lord Lieutenant of Ireland. He was then elevated to the Earldom of Kimberley. From December, 1868, to July, 1870, he was Lord Privy Seal under Mr. Gladstone, an office which he exchanged for that of Secretary of State for the Colonies (1870-4). The town of Kimberley, in West Griqualand, annexed in 1871, is named after him. When Mr. Gladstone again became Prime Minister in May, 1880, Lord Kimberley was, until June, 1882, again Secretary of State for the Colonies. The chief event of his administration was the Boer war of 1881-2, and Earl Kimberley defended the Government policy against the vigorous attack of Earl Cairns in an able speech, and in December informed the Boer leaders that the Government would decline to entertain the idea of a modification of the terms of peace. On the resignation of Mr. Bright in June, 1882, Lord Kimberley became provisionally Chancellor of the Duchy of Lancaster, and in December, 1882, Secretary for India. In 1883 and onwards the Russian advance towards the Afghan frontier became a matter of some anxiety, and shortly before the resignation of the ministry in 1885 a collision between England and Russia appeared highly probable. In February,

1886, Lord Kimberley became once more Chief Secretary for India, but resigned with the rest of the Government in June.

* **Kinglake, ALEXANDER WILLIAM** (b. 1811), historian, was born at Taunton and educated at Eton and Trinity College, Cambridge. Called to the bar in 1837, he rapidly acquired an extensive Chancery practice, from which he retired in 1856, to devote himself to political and historical work. He was returned for Bridgewater as a Liberal in 1857, and took an active part against the Conspiracy Bill, 1858, and the annexation of Nice and Savoy by the French empire in 1860; in 1868 he was re-elected for Bridgewater, but was unseated on petition, and has not contested any parliamentary constituency since. Mr. Kinglake has written only two books, but they are both English classics. The first was the delightful volume of travels which he published in 1844 with the title of *Eothen*. The brilliancy and richness of his style gave this picture of the East a phenomenal popularity; it went through numerous editions in England and America, and has always held its place at the head of English books of travel, among which it has had many imitators but no rival. In 1854 Mr. Kinglake accompanied Lord Raglan to the Crimea, and the result of his long familiarity with, and admiration for, the general, was his undertaking Lord Raglan's defence in a *History of the War in the Crimea*, of which the first two volumes appeared in 1863, and five others have followed at various intervals, the seventh having been published in 1877. Although the work has been characterised as a defence of Lord Raglan, is based to a large extent upon that general's papers, and is consequently regarded by many as a prejudiced account of the war, it yet possesses qualities that at once raised it to the front rank of modern historical works. The first volume, in which the causes that led up to the war are analysed in a masterly manner, is a very remarkable performance, and was at once recognised as such all over Europe. In particular, its searching but vindictive criticism of the second empire gave violent offence at the Tuileries, but was translated gleefully into German. A similar opposition to certain actors in the war has produced many angry replies to Mr. Kinglake's strictures, and his work cannot be said to have come out quite unshaken from the ordeal. Nevertheless, its singular charm of style, despite a tendency to tautology; its careful and exquisite workmanship; the studied glow of its periods, and the minuteness of its information, give it a place that no other book can fill. Some of its volumes have gone through six editions.

Kingsley, CHARLES (b. 1819, d. 1875), novelist and poet, was born at Holne Vicarage, on the borders of Dartmoor. His father was

a clergyman, his mother sprang from a West Indian family. He was educated first at home, and afterwards under Derwent Coleridge, going to King's College, London, towards 1836, and to Magdalen College, Cambridge, in 1838. He took his degree in 1842. Though at first intended for the law, the Church was chosen, and he was appointed to the curacy of Eversley, in Hampshire. Not long afterwards he succeeded to the living, and remained in it during most of the remaining years of his life. In 1844 he married a daughter of Pascoe Grenfell. In 1848 Kingsley made his first regular appearance as an author by the publication of a drama, entitled *The Saint's Tragedy*, which depicted the struggles of Elizabeth of Hungary with the canons of mediæval priesthood. The dramatic poem was received with some favour. About the same time Kingsley published a volume of his sermons under the title of *Twenty-five Village Sermons*. The book attained to a popularity such as none of his many later works of the same nature achieved. It was in 1849 that Charles Kingsley published the book by which his name will hereafter be chiefly known, *Allan Locke*. This is a novel designed to present in concrete form the opinions, the claims, the aspirations, and the immediate objects of that section of the people who were then agitating England under the name of Chartists. Kingsley's sympathies were strongly on the side of the poor in that historic struggle with the rich. His known partisanship earned him the title of "the Chartist parson," and the letters he wrote under the name of "Parson Lot" in the *Christian Socialist and Politics for the People* gave a great impulse to the movement. The novel came somewhat late as a contribution to the controversy; but its value in awakening sympathy for the persons who led the Chartist movement was probably unequalled by anything else that was said or written. So vivid a picture of the material life of the poorer classes in London had not been presented even by Dickens himself, and if the political purpose sometimes dominated, the imaginative ardour, the creation as a whole was full of noble sentiment, racy humour, and fine dramatic effects. Nothing can be more stirring in its realism than Kingsley's vivid exposure of the "sweating system," as practised by employers of labour, an evil which he had also dealt with in *Cheap Clothes and Nasty*. Nor is the psychological value of *Allan Locke* to be overlooked. The subtlety with which the character of the tailor-poet is delineated must place the novel high in the fiction of its period. Kingsley's second novel, *Yeast*, appeared first in volume form in 1851. A third novel was *Hypatia*; or, *New Foes with an Old Face*, published in 1853, and two years later *Westward Ho* appeared. Both are historical novels; the former deals brilliantly with the early days of the Christian Church in the East, the latter

depicts with wonderful picturesqueness the advance of the Elizabethan adventurers on South America, and their conflict with the Spaniards already settled there. Regarded as pieces of fiction, neither of these later novels can be compared with *Alton Locke* in interest or power. Their remoteness of scene and period must, of course, make a sensible deduction from their strength, and both are disfigured by certain historical inaccuracies. Kingsley was appointed canon of Chester in 1869, and canon of Westminster in 1873. He was for a time chaplain in ordinary to the Queen and to the Prince of Wales. His preaching was simple and earnest, and no less so when he preached at Westminster than when he addressed his village congregation at Eversley. His later works were very numerous, the chief of them being *The Heroes*, a book for children (1856); *Two Years Ago* (1857); *Andromeda, and other Poems* (1858); *Miscellanies* (1859); *The Water Babies* (1863); *Hereward the Wake* (1866); *Madame How and Lady Why* (1869); *At Last*, an account of South America (1871); *Prose Idylls* (1873); *Plays and Puritans*, a collection of historical essays (1873). He visited America late in life, mainly in order to see his eldest son, who was settled there as an engineer; and in the year of his death he published a selection from his *Lectures Delivered in America*. Several of the books enumerated are compilations made from Kingsley's fugitive contributions to periodical literature. Kingsley held for nine years (1860-69) the professorship of modern history at Cambridge, but his lectures were somewhat superficial, and quasi-scientific. He died, after a short illness, at Eversley. Kingsley's position as a poet is perhaps not so high as it deserves to be. The weird atmosphere of *The Sands of Dee*, the pathos of the *Three Fishers*, the bracing vigour of the lines *To the North-east Wind* would be conspicuous in the work of the greatest poets of the century. There is no sufficient body of these best lyrics, however, to secure for Kingsley that eminence as a poet which is undoubtedly his right as a novelist. Kingsley's temperament is described as restless; his sympathies were quick and warm. His personal popularity was latterly very great. Unlike as he was to Robertson of Brighton in the quality of his mind, the fascination which his character had for his disciples was similar. He lived to see his Socialistic principles find popular favour. Perhaps after middle life his ardour as a reformer experienced some abatement, but his sympathies were to the last on the side of the toiling masses.

Charles Kingsley: his *Letters and Memories of his Life*, edited by his wife, F. E. Kingsley (2 vols., 1877).
[T. H. C.]

Kingsley, HENRY (b. 1830, d. 1876), novelist, the brother of Charles Kingsley, was educated at King's College, London, and

Worcester College, Oxford. From 1853, when he left Oxford, to 1858 he was a colonist in Australia. On his return he became a contributor to the magazines and reviews, and wrote novels. In 1869 he became editor of *The Edinburgh Daily Review*, the organ of the Free Church party, a post he held for eighteen months, and was present at the battle of Sedan as his own war correspondent. His novels began with *The Recollections of Geoffrey Hamlyn* (1859), after which came *Ravenshoe* (1861); *Austin Elliott* (1863); *The Hillyars and the Burtons* (1865); *Leighton Court* (1866); *Hetty* (1871); *Hornby Mills* (1872); and *Reginald Hetherage* (1874). Of them, *Ravenshoe* is generally accounted his masterpiece, and holds an honourable place in English fiction. Henry Kingsley had much of his brother's power of Homeric portraiture of character, and shared to the full his admiration for muscular Christianity. If there is but little repose in his writings, and the more delicate shades of idiosyncrasy are conspicuous by their absence, there is, at any rate, a stirring, bracing sweep of changeful incident, varied by pathos that has nothing in common with hysteria. His descriptions of Australian life, notably in *Geoffrey Hamlyn*, are wonderfully epic in their vigour.

Kingston, WILLIAM HENRY GILES (b. 1814, d. 1880), the well-known writer for boys, was the son of a merchant at Oporto, and was obliged to sacrifice his ardent wish to enter the navy, to follow his father's business. It was not until 1844 that he appeared as an author with *The Circassian Chief*, which was very favourably received, and swiftly followed by *The Prime Minister* and *Lusitanian Sketches*, recounting his own travels and adventures in Portugal. During his business journeys he rendered himself intimately acquainted with all the details of life on board ship, a knowledge to which boys owe the graphic pictures of seamen and their adventures that fill his books. His *Western Wanderings* described his journey in the United States and Canada, but it was not until the story *Peter the Whaler* appeared that he found his true avocation, and pursued it so steadily that he has left 125 works of this description. Among the most familiar favourites are *The Three Midshipmen*, *The Three Lieutenants*, *The Three Commanders*, and *The Three Admirals*. Shortly before his death, Kingston undertook the editorship of *The Union Jack*, a boys' paper, but failing health obliged him to resign the task after four months. In addition to his literary activity, he was among the first promoters of the volunteer movement, worked hard in connection with colonial emigration schemes, and supported the mission to seamen. He received a grant from the Crown in reward of his literary labours.

Kirby, THE REV. WILLIAM (b. 1759, d.

1850), entomologist, was educated at Ipswich Grammar School, and at Caius College, Cambridge (B.A., 1781), and took holy orders in 1782. His life was entirely uneventful, as he remained stationary during the whole of it at Barham, in Suffolk, until 1796 as curate, and afterwards as rector. To the serenity of his existence are due the numerous works on the insect world, which are still the delight of students of natural history, and which won for their author much renown among the entomologists of the day. Chief among them are the monograph on *British Bees* (1802), and the excellent *Introduction to Entomology* (1815-26), written in conjunction with Mr. Spence, which, in spite of recent investigation, is still a classic. Outside the range of entomology, his observations, though often acute, are not of enduring worth. Kirby was in every respect the model of an English country clergyman.

The Rev. J. Freeman, *Life of the Rev. W. Kirby*.

* **Kitchener**, HORATIO HERBERT, LIEUT.-COL., R.E. (b. 1851), son of Colonel Kitchener, obtained his commission as lieutenant in 1871, when he was placed in what was then called the "troop." In 1874 he joined the survey of Western Palestine under Captain Conder, whom death had deprived of his colleague, Tyrwhitt Drake. After the attack on the survey party at Safed, in 1875, he came home, and then spent two years in laying down the Palestine Exploration Fund's magnificent map. In 1877 he went out in sole command of the exploring party, and executed the whole of the survey of Galilee, returning to England in 1878. In the same year the administration of Cyprus was taken over by Great Britain, and Lieut. Kitchener was sent out to organise the land courts, a task which occupied him till Sir Charles Wilson, who had accepted the post of commissioner in the protectorate of Anatolia, appointed him vice-consul in the eastern parts about Erzeroum. In 1881 Lieut. Kitchener returned to Cyprus, and carried out a survey of the entire island, from which Mr. Stanford published a splendid map in 1885. Ten years of civil employment however, had not extinguished his military ardour, and when he learned that an Egyptian army was being organised by Sir Evelyn Wood, with the help of British officers, he volunteered for the service, and at the close of 1882 was appointed one of the two majors of the cavalry. As during his explorations in Palestine he had picked up a useful amount of vulgar Arabic, which no other officer in the cavalry possessed, the most difficult part of the work of training the men devolved upon him. When the expedition for the relief of Khartoum was at last set on foot, Major Kitchener was selected for the post of danger, and he was sent forward

to Debbeh, to maintain communications with General Gordon. That he failed to keep touch was due, not to any want of energy, but to the stringency of his daily instructions from Cairo, which made every effort abortive. After the catastrophe at Khartoum, and the collapse of the expedition, he resigned his commission in the now discredited Egyptian army, and returned to England, where his services were recognised by his immediate promotion from the rank of captain (which he had attained in 1883) to that of lieutenant-colonel, and by his appointment as temporary commissioner at Zanzibar (1885). During his residence in Egypt, he took advantage of a short leave to make a survey, with the assistance of Mr. George Armstrong, of the Wady Arabah, of which a map appeared in Professor Hull's geological memoirs, published by the Palestine Exploration Fund (Survey of Western Palestine).

* **Kitchin**, THE VERY REV. GEORGE WILLIAM, D.D. (b. 1827), Dean of Winchester, was educated at Ipswich Grammar School, King's College School, and Christ Church, Oxford. He obtained a double first-class, and graduated B.A. in 1850 (M.A., 1853). He was appointed tutor of Christ Church in 1853; head-master of Twyford School in 1855; censor and tutor of Christ Church in 1861; censor of the Non-Collegiate Students in 1868; history tutor of Christ Church in 1882; and Dean of Winchester in 1883, when he became a D.D. Dr. Kitchin often examined in the modern history schools. His chief works are the editions of the *Noûm Organon*, *Advancement of Learning*, and *Faery Queene*; translations of Brachet's *French Grammar* and *French Dictionary*, and his well-known and picturesquely written *History of France previous to the Revolution* (3 vols., 1873-77). Dr. Kitchin is also part translator of Ranke's *History of England*.

Kitto, JOHN (b. 1804, d. 1854), Biblical scholar, was the son of a Plymouth mason, and chiefly self-educated. An injury resulting in deafness prevented him from working at his father's trade, and after enduring great distress he became apprenticed to a Plymouth shoemaker. Driven by his master's tyranny to the workhouse for the second time, he eventually entered the printing office of the Church Missionary Society (1825), and was attached to the mission at Bagdad. Returning to England in 1832, he produced *The Pictorial History of Palestine*, and *The Pictorial Bible*, for the Society for the Diffusion of Useful Knowledge. These were followed by his highly popular *Cyclopædia of Biblical Literature* (1843-45), and *Daily Bible Illustrations* (1849-53). When incapacitated for work by paralysis, he was fortunately relieved from want by a civil list pension given him in 1850.

Eadie, *Life of Kitto*; Ryland, *Memoir of Kitto*.

* **Klapka**, GEORG (b. 1820), Hungarian general, was born at Temeswar, of which town his father was burgomaster. He entered the army, and after serving in the artillery, received a commission in the Hungarian regiment of guards. In 1847 he was nominated lieutenant-colonel of one of the frontier regiments. At the beginning of the Hungarian War of Independence, he offered his services to the Magyar Government, and was placed at the head of the general staff. In the campaigns of 1849 he won great distinction, especially by his masterly and brilliant defence of Comorn. In Aug., 1849, he issued from that town, and inflicted a decisive defeat on the Austrians. After Görgey's surrender at Vilagos, Klapka refused to obey the orders of his superior officer to lay down his arms. He continued to hold out till Oct., 1849, when he capitulated on honourable terms, and was allowed to quit the country. He came to England, and afterwards lived chiefly in Switzerland. He is the author of *My War in Hungary* (London, 1850), and *The War in the East from 1853 to 1855* (London, 1855).

Klein, BERNHARD (b. 1794, d. 1832), a German composer, more especially of sacred music, was the son of a wine merchant, and intended originally to enter the Church. He early showed great musical ability, and went to Paris in 1812, to study under Cherubini. On his return he was appointed musical director at the Cologne Cathedral, and having attracted much attention by a mass in 1816, and a cantata, *Die Worte des Glaubens*, 1817, was sent to study at Berlin, at the expense of the Prussian Government. In Berlin he was a pupil of Zelter, who unfortunately betrayed great jealousy when he became aware of the unusual talent which threatened him with a rival where he had looked for only a follower. In spite of the master's enmity, Klein remained in Berlin, and was appointed professor of harmony and counterpoint at the new organ school, and musical director and professor of singing at the university. His oratorio of *Job* in 1820, and an opera *Dido* in the manner of Glück, in 1823, vindicated his right to be regarded as a musician of great promise; and having married a rich heiress, the niece of the publisher Nicolai, Klein went to study for several years in Italy, resuming his duties at Berlin on his return. The oratorio *Jephthah* was performed in 1828 at the Cologne, and *David* in 1830 at the Halle festival. Besides the works already mentioned, he left an almost completed oratorio, and part of an opera, besides a number of ballads and other pieces, both sacred and secular. His posthumous works were published by his brother Joseph, also a composer, and his part music became very popular with musical societies.

Reisstab's biographical notices in *Schumann's Neue Zeitschrift für Musik* (3 vols.); *Vossische Zeitung*, 1832, and Schilling's *Tonkünstler-Lexicon*.

Kleist, HEINRICH WILHELM VON (b. 1777, d. 1811), poet and dramatist, was born at Frankfurt on the Oder, and was the son of an officer in the Prussian service. Kleist's father died in 1788, and his mother five years afterwards. At the age of fifteen he obtained a commission in the Prussian Guards. A few years of garrison life at Potsdam thoroughly disgusted him with the military profession. In 1799 he left the army and studied at the university of his native town. In the summer of 1800 he went to Berlin. He studied law, but his plans were unsettled. In 1801 he passed some time in Paris, and towards the end of the year went to Switzerland, intending to settle there. The following summer he returned to Germany, visited Weimar, where he was introduced to Goethe and Schiller, and made a great impression on Wieland, who praised a tragedy, *Robert Guiscard*, which Kleist had written on his travels, and advised him to devote himself to literature. Kleist resolved to take the advice; but he spent another year or two in desultory study and aimless wanderings. In 1804 he was in France, where he went to Boulogne, intending to take part in Bonaparte's great expedition against England, and narrowly escaped being shot as a spy. In 1805 he obtained a small post in the *Domänenkammer* at Königsberg. During the war of 1806, Kleist was unlucky enough to be captured by the French, and was for some months a prisoner of war in France. On his release he settled temporarily at Dresden, where in 1807 his drama *Amphitryon* was published, and aroused a good deal of favourable attention. He now rapidly completed several plays. In the autumn of 1808 he made an attempt, which almost succeeded, to commit suicide. His feelings were greatly stirred by the Austrian war against France in 1809, and in the course of this year he wrote a number of spirited patriotic songs. After a journey to Austria in the same year, Kleist went to Berlin, where his historical and patriotic play, *Prinz Heinrich von Homburg*, was produced. His *Käthchen von Heilbronn*, perhaps the best known of his dramas, had been produced at Vienna, but he could not succeed in getting it acted at the Prussian capital. He now tried his hand at journalism, and started an evening newspaper, which had little success though Brentano, Fouqué, and Achim von Arnim were among the contributors to its pages. Kleist, who was now in embarrassed circumstances, tried hard but fruitlessly to obtain a post under the government. His mind, always unsettled and ill-balanced, became a prey to the deepest melancholy, and he frequently recurred to the idea of suicide. He had formed an intimate acquaintance with a married lady named Henriette Vogel, who believed herself to be suffering from an incurable malady. Kleist and Henriette agreed to end their lives together. On Nov. 20, 1811, the two went to a small inn,

a short distance from Potsdam, and on the following day Kleist shot the lady through the heart, and himself immediately afterwards.

The Kleist literature is very extensive. There are lives of Kleist by A. Wilbrandt and E. v. Bulow. His interesting *Letters* to his sister have been edited by A. Koberstein, and his political writings by Rudolph Köpke. See also Lloyd and Newton, *Prussia's Representative Men* (1875), and *Unsere Zeit* for April, 1886. [S. J. L.]

Klenze, LEO VON (b. 1784, d. 1864), German architect, a native of Hildesheim, studied art in Berlin, at the École Polytechnique, Paris, and in Italy. In 1815 he became court architect to King Maximilian I. of Bavaria, and in 1831 was created privy councillor and ennobled. Profoundly impressed by the excellence of Greek art and of its Roman imitations, Klenze seldom attempted to work after Gothic or any of the later styles; and he was undoubtedly successful in realising in no ignoble manner the vast conceptions that were projected by the mind of King Maximilian, though much of his work is mere imitation. Among his creations are the Walhalla, completed in 1839, the Pinakothek, the Propylæa, and the Ruhmeshalle, all of which adorn the city of Munich.

Kmety, GEORG (b. 1810, d. 1865), a general in the Hungarian Revolutionary Army, and afterwards in the Turkish service, where he bore the name of Ismail Pasha, was the son of a Protestant clergyman, and enlisted in the Austrian army, where, as he was poor and without interest, promotion was very slow. At the outbreak of the Hungarian revolution he was a captain. Allying himself with the revolutionary leaders, he was entrusted with the organisation of the sixth battalion, a body of young volunteers, in training whom Kmety showed real military genius. As commandant of one of the divisions of Görgey's army on the Upper Danube, he took part in the brilliant campaign at the beginning of 1849. His most striking achievement was the annihilation of an Austrian column under General Wiss at Eszorna. Cut off from the army on the Upper Danube, he took a prominent part in the operations in the south, and after the defeat at Temesvar had practically ended the attempted revolution, escaped with Kossuth, Bem, and other leaders into Turkey, where he was entrusted with office, and it is said became a convert to Islamism. The outbreak of the Crimean War recalled him to a military career, after he had attempted to qualify himself for a music master in London. He was appointed by the Turkish Government to the command of the irregulars in Anatolia, and his name is associated with that of Sir F. Williams in the heroic defence of the fortress of Kars against the Russians under General Mouravieff. Shattered in health by the hard service he had seen, Kmety was forced to retire, but was enabled to take an active part in quelling the

disorders in Syria before doing so. He died in London.

Knight, CHARLES (b. 1790, d. 1873), publisher and author, was the son of a bookseller at Windsor. Knight remained in his native town until 1824, helping his father, and edited there the *Etonian*, *Plain Englishman*, and *Knight's Quarterly Magazine*, which was started in 1823, and which he continued to publish in London, having secured for his undertaking such young men of promise as Macaulay, Praed, Moultrie, Maldon, and others. It was Knight's aim to improve public morality by furnishing a supply of high-class literature at low prices, and though his undertakings cannot be said to have been the source of much material profit to himself, he undoubtedly succeeded in the higher object he had in view. He became connected in 1827 with the Society for the Diffusion of Useful Knowledge, for which he published the *Penny Magazine* (1832-45), the success of which was at first so great that the sale reached the number of 200,000 copies per week, and prompted him to new ventures, among them the *Penny Cyclopædia* (1833-56), the *English Cyclopædia* (1854-61), which carried on the last-mentioned in an improved form, the *British Almanac*, and its *Companion*. In addition to many smaller works, Knight also compiled a *Popular History of England* (1862), published in six-penny monthly parts, won a considerable reputation by his *Pictorial Shakspeare* and *Biography of Shakspeare*, *Half-hours with the Best Authors*, and *Half-hours with the Best Letter-writers*, and wrote numerous tracts on social and economic questions, such as *Knowledge is Power* (1855), and *The Struggles of a Book*, in which he attacked the paper-tax, which he regarded as rendering competition impossible so far as pure literature is concerned. In his *Passages from a Working Life* (1864) he gives an account of his own life and struggles in the cause to which he had devoted himself. His appointment in 1860 as publisher of the *London Gazette* secured him a sinecure of £1,200 a year.

Knowles, JAMES SHERIDAN (b. 1784, d. 1862), dramatist, was the eldest son of James Knowles, the compiler of a *Dictionary of the English Language*. The future dramatist was born at Cork, and received the additional surname of Sheridan from his connection with the brilliant family of that name. In 1792 the elder Knowles removed to London, the better to pursue his profession of teacher, and his youthful son accompanied him. At the early age of twelve, Sheridan Knowles manifested a strong bias towards the dramatic and histrionic arts. He became the leader of a band of juvenile performers, for whom he wrote a play, and he also composed the libretto of an opera founded on the history of the Chevalier de Grillon. Becoming acquainted with William Hazlitt and Charles

Lamb, he found their criticisms of much value to him in his earlier productions. Knowles appeared as an actor at Dublin, Waterford, Swansea, and other places, but only with a moderate amount of success. While residing in Belfast he taught grammar and elocution under his father at the Academical Institution; and it was also in that city that his first plays were produced. Four of his earliest dramatic productions—*The Chevalier de Grillon*, *The Spanish Story*, *Herisilia*, and *Leo*—no longer exist. These were succeeded by a volume of poetical *Fugitive Pieces*. *Brian Boroihme*, the first of his plays to be produced on the stage, was brought out at Belfast in 1814, and there succeeded to this, in 1815, *Caius Gracchus*, also produced at Belfast, but acted some years later in London with much *éclat*. The admired tragedy of *Virginus* was played at Covent Garden in 1820, and five years later *William Tell* was produced at Drury Lane. *The Beggar's Daughter of Bethnal Green* appeared in 1828, and then came the following dramas:—*Alfred the Great*, performed at Drury Lane in 1831; *The Hunchback*, Covent Garden, 1832; *The Wife*, Covent Garden, 1833; *The Daughter*, Drury Lane, 1836; *The Love Chase*, Haymarket, 1837; *Woman's Wit*, Covent Garden, 1838; *The Maid of Mariandorpt*, Haymarket, 1838; *Love*, Covent Garden, 1839; *John of Procida*, Covent Garden, 1840; *Old Maids*, Covent Garden, 1841; *The Rose of Arragon*, Haymarket, 1842; and *The Secretary*, Haymarket, 1843. Several of the above plays still continue to hold the stage. The dramatist himself sustained the leading characters in many of his plays on their original production. He also made other public appearances, lecturing in various towns on elocution and kindred topics; and twice he visited America. He essayed fiction as well as dramatic literature, and in 1847 and 1849 published two novels entitled respectively *Fortescue* and *George Lovell*. Late in life, Knowles experienced a complete change of view on many important matters. Being the subject of deep religious impressions, he abandoned his former career, and became a Baptist preacher and writer, exhibiting much enthusiasm in his new vocation. His last works dealt with questions of polemical theology. In 1849 Knowles was awarded a pension of £200 from the Civil List, on the recommendation of Sir Robert Peel. A collected edition of his dramatic works was published in 1843, in three volumes, and a revised edition in 1856, in two volumes. Another edition of his plays was published at Calcutta in 1838, with a memoir by R. Shelton Mackenzie; and a further edition of his dramatic works appeared in London in 1883. The plays of Sheridan Knowles have received encomiums in high critical quarters, and Hazlitt regarded *Virginus* as "the best acting-tragedy that has been produced on the

modern stage." The dramatist's strength lay in the home affections; and while he gave a classic form to his conceptions, the human interest in them enabled him to rivet the attention of a nineteenth-century audience.

The Life of J. S. Knowles, by R. B. Knowles, revised and edited by F. Harvey, and privately printed, 1872. [G. B. S.]

Koch, CARL HEINRICH EMIL (b. 1809, d. 1879), a German naturalist and scientific explorer, born at Weimar, was educated in medicine and natural sciences at Würzburg and Jena. In 1836 he proceeded on a scientific exploration to Southern Russia, the literary result of which was *A Journey Across Russia to the Isthmus of the Caucasus* (1842-3). He was subsequently nominated assistant professor of botany at Jena, and in 1843 he travelled through Turkey, Armenia, along the banks of the Caspian Sea, and over the Caucasus, collecting materials for his great work, *Wanderings in the East* (1846-7), a part of which—*Crimea and Odessa*—appeared in English on the outbreak of the Crimean War. Koch became professor of botany at Potsdam, and in 1877 director of the Berlin Botanical Gardens. In 1875 he brought out his greatest work, *Dendrology*, a scientific description of the trees and shrubs cultivated in the forests and gardens of Central Europe. For the purpose of compiling this volume, Koch visited almost every country in Europe.

* **Koch**, ROBERT, M. D. (b. 1843), the discoverer of the cholera germ, was born in the district of the Hartz Mountains, and took his degree in 1866. After acting for some time as assistant physician in a hospital, he was appointed, in 1872, to one of the medical departments at Wollstein, where he remained for seven years. In the meantime he prosecuted his studies in scientific research, winning his first distinction by the publication of the results of his labour on the methods of the artificial dyeing of microscopic objects, especially of bacteria. Between 1879 and 1883, he succeeded in identifying the germs of cattle disease, of consumption, and of cholera. In this latter year he was sent by the German Imperial Government to India to investigate the causes of cholera. In 1884 he discovered and established the existence of a bacterium as the cause of cholera, thus anticipating the labours of Dr. Timothy Lewis, and Dr. Vandyke Carter. His claims to this discovery were discussed by Professor Ray Lankester, and Dr. Julius Althaus in the *Pall Mall Gazette*, Oct. 6 and Oct. 9, 1884. In 1885 he was appointed professor of hygiene at Berlin.

Professor Tyndall, *Fragments of Science*; *British Medical Journal*, 1884, vol. 1, p. 375, et seq.

Kock, CHARLES PAUL DE, dit PAUL (b. 1794, d. 1871), French novelist, the son of a Dutch banker, who suffered death during the Reign of Terror, began life as a banker's

clerk, but lost his place at the age of seventeen, when his first novel appeared. Wavering for some time between novels and melodrama, he eventually adopted almost exclusively the former line of literature. Despite his foreign origin, he was a Parisian of the Parisians, and lived with great zest the life of the French man about town, producing the while novel after novel. The most complete edition of his works that has as yet appeared is in 56 vols., but it is not by any means exhaustive. Perhaps the most widely popular of his works are *Le Barbier de Paris*, *Confessions d'une Jolie Femme*, and *André le Savoyard*. Distinctly a realist, Paul de Kock was looked upon in his day as a writer who could only be read *sub rosa*, and at the same time was enormously popular. Coarse he undoubtedly is, but by comparison with the modern "naturalists" he is almost refined, and is infinitely their superior in the art of setting forth the humorous and also the pathetic side of the low life of Paris. He is an artist, not a photographer; but like many writers of fiction, who in their day were at every one's elbow, he is now practically unread.

Quéhard, *La France Littéraire*; and a criticism on his novels, *Edinburgh Review*, vol. 64; *Foreign Quarterly Review*, vol. 24, and *Monthly Review*, vol. 151; G. Saintsbury, *Short History of French Literature*.

* **Komaroff**, GENERAL ALEXANDER (b. 1830), Russian military officer, is a younger brother of General Komaroff, one of the commanding generals in the Russo-Turkish War of 1877-8. Colonel in 1877, the younger Komaroff accomplished several exploits in Asia Minor in the campaign against Turkey. At the conclusion of the war he was made commandant of Batoum on the Euxine, and after the Akhal Tekke expedition, was placed in command of the Transcaspian army, and made Governor-General of the Russian Transcaspian province. The Russians attribute the peaceable annexation of Merv (March, 1884) to General Komaroff's tact and skill in other than military matters. He was in command of the Russian troops when the difficulties respecting the Afghan boundary arose towards the end of the year 1884. Pending the solution of these difficulties, a collision occurred between the Afghans stationed along the banks of the Kushk river, and the troops under Komaroff, on March 30, when the Afghans were routed before Penjdeh with 500 killed. The incident was within a little of bringing on a war between England and Russia. General Komaroff, however, was presented with a sword of honour (value £160) by the Czar "for valour."

König, FRIEDRICH (b. 1775, d. 1833), the inventor of the steam-press, was the son of a small farmer at Eisleben in Prussian Saxony. In 1806 he arrived in London, having conceived the idea of a printing-press to be worked by

steam power, which he had in vain attempted to introduce to Continental capitalists. He was aided in perfecting his invention by Thomas Bensley, a leading London printer, and in 1811 a sheet of the *Annual Register* was turned out by it. Several improvements were introduced into it in 1813 and 1814, and in the latter year a number of the *Times* was first printed by steam power. Among König's other inventions was a single-cylinder registering machine (1816). Soon afterwards he left England, having been unfortunate in his partner, and finding that his patents were being pirated, and settled down at Oberzell, near Würzburg, where he was joined by a fellow-workman named Bauer. By the end of the year 1829 the firm had manufactured and sold fifty-one steam-presses to the leading printers throughout Germany.

Dr. S. Smiles in *Macmillan's Magazine*, vol. 21.

Körner, KARL THEODOR (b. 1791, d. 1813), German poet, was born of good family in Dresden, his father being a friend of Goethe. At sixteen he went to the School of Mines at Freiberg, and there composed his earliest poems, published as a small volume of lyrics (*Knospen*) in 1810. In the same year he entered at Leipzig University, but was obliged to migrate to Berlin a few months later, for his share in a duel. After visiting Karlsbad for his health in 1811, he proceeded to Vienna, where it seemed likely he would settle for life. Though he did not remain in Vienna two years in all, he produced the tragedies of *Rosamunde* and *Zriny*, and such dramas and minor plays as *Hedwig, Toni, The Betrothed, The Watchman*, and a large number more, besides by far the greater part of his lyrics. In Jan., 1813, he was appointed playwright to the Theatre Royal in Vienna, and he was about to marry the girl to whom he was betrothed, when Prussia's declaration of war with France summoned him to the field. He entered the Prussian army in March, and was attached to the famous Lützow corps of black hussars, chiefly chosen from the students, to whom Napoleon allowed no quarter. He at once began composing the inspired war-songs that have made him the hero of German patriotism. After mustering at Breslau, the troops marched through Dresden, where Körner saw his parents and Goethe once more, and Lützow's regiment was for a time quartered at Leipzig, during a wild sortie from which into Thüringen, Körner was severely wounded. Rejoining his regiment, however, in August, on the Lower Elbe not far from Hamburg, he took part in the almost daily battles to which they were exposed, he himself acting as one of Lützow's staff. On the 26th Aug., as he was riding up to clear a wood of the enemy, on the road between Gadebusch and Schwerin, he was mortally wounded, and was buried in a village near Ludwigslust.

When Goethe was reproached with having written nothing to encourage the struggle for liberation, he answered that he had been content to leave that to Körner. The few short songs that were collected after the poet's death, and published in a little volume as *Lyre and Sword* (*Leyer und Schwert*), number amongst them some of the highest war songs of any nation. Such verses as *Lützow's Hunting Raid* (*Lützow's wilde Jagd*, April, 1813), *Men and Knaves* (*Männer und Buben*, August, 1813), and *The Song of the Sword* (*Schwertlied*), that was written and sung on the morning of the poet's death, are models of what patriotic songs ought to be.

Leben, by Fried. Förster, in Hempel's edition of Körner's works. [H. W. N.]

Kosegarten, JOHANN GOTTFRIED LUDWIG (b. 1792, d. 1862), Orientalist, was the son of the poet Ludwig Kosegarten, and was so far a poet himself that he contributed the translations from the Arabic to Goethe's *West-östliches Divan*. He was a native of Altenkirchen, which was then a portion of Swedish Pomerania, and his nationality afterwards displayed itself in his interest in Pomeranian history, on which he published several valuable works. His removal from the University of Greifswald to Paris, in 1812, led to that enthusiasm for Oriental studies which the teaching of such men as De Sacy, Chézy, and others, at that epoch, invariably created in the minds of their students. After holding the post of "adjutor" in the theological and philosophical faculty of Greifswald for a couple of years after his return from Paris, he was appointed professor of Oriental languages at Jena, in 1817, a Chair which he exchanged for the corresponding post at his own university seven years later, where he remained till his death. Kosegarten's work was singularly varied and wide-ranging, but the list of his publications, all of which are useful, contains a curiously large proportion of first volumes, to which the expected second parts were never added. His earliest works were his *Triga*, three Eastern poems (1815), and an essay on the traveller *Ibn-Batûta* (1818). In Arabic, he published a *Chrestomathy*, in 1828, which had a great reputation for many years; he began the edition of Tabary's *Annals* in 1831; brought out the first volume of the priceless Arabian "Golden Treasury," the *Kitâb-el-Aghâny* (1840), in Arabic and Latin; the first part of the text of *The Poems of the Hudhals*, for the Oriental Translation Fund of London, in 1854; and the first part of an Arabic grammar (1858). In Persian, he edited Nakhshabi's *Tutînâmeh* (1822). He published a set of Hebrew grammatical tables (1829), and edited Aaron ben Elijah the Karaite's *Liber Coronæ Legis* (1824). In Sanskrit, he issued a portion of the *Panchatantra* (1848, 1859), and a translation of *Nala* (1820). He even wrote critical notes on

M.W.—21

Egyptian papyri. His works on Pomeranian history, of which his edition of Hasselbach's *Codex Pomerien Diplomat* (1843) was the most considerable, have already been referred to; and he wrote a *History of the University of Greifswald*, in 2 vols. (1856-7), and a work on the foundation of the city of Greifswald (1846). His interest in German dialects was shown in his *Dictionary of Low German*, of which, as usual, only the first volume, parts 1-3, appeared (1859-60); and in his *Low German Travellers' Aid* (1861). Of all his numerous works, the unfinished edition and translation of the *Kitâb-el-Aghâny* is the most important; but in many fields he struck out useful lines of research, and then left them for others to develop. [S. L.-P.]

* **Kossuth**, LOUIS (b. April 27th, 1806), Hungarian patriot, was born at Monok, in the county of Zemplin, in Hungary. His father was intendant to Baron Vecsey, a wealthy aristocratic proprietor, who took an interest in the young Kossuth, and caused him to be carefully educated. He studied law at the school of Sarospatak, and soon became known as an opponent of the despotic pretensions of the Austrian Government. On this account he was unable to obtain a place for which he applied in the Hungarian Chancellery. He then became intendant to the Countess Szapary, but soon abandoned the office. In 1832 he entered the Presburg Parliament as the representative of one of the great magnates, who were at that time allowed to appear in the chamber by proxy. The press was, at this period, under strict censorship; but Kossuth started a manuscript journal to report the debates in the Diet, which immediately obtained a wide circulation throughout the country. Ordered to discontinue the publication, he refused, and was arrested, and condemned to four years' imprisonment. Released in 1840, he devoted himself with more energy than ever to the national cause. In 1841 he became editor of the newly founded *Pesth Journal*, which soon obtained a large circulation. In 1844 he founded a great National League, nominally to promote industry and commerce, but in reality to form a centre of opposition to the Viennese Government. In the elections of 1847, Kossuth was returned to Parliament as member for Pesth. His abilities and his surpassing eloquence soon made him the most conspicuous figure in the assembly, and the leader of the reforming party. On March 3rd, 1848, he moved the resolution in favour of establishing a responsible Hungarian ministry, and a few days afterwards was at the head of the deputation which went to Vienna to lay the wishes of the Magyar representatives before the Emperor. The demand could not be refused. An Hungarian ministry was formed, in which Count Batthyányi was Minister-President, and Kossuth

Minister of Finance. Its first acts were to complete the series of liberal reforms which had been inaugurated. Equality of civil rights, and liability to taxation for all classes, were decreed; and the nobles consented to renounce their privileges. The land system was transformed, and the franchise widely extended. Kossuth, meanwhile, had effected some useful reforms in the financial system. But these labours were interrupted by the insurrection of the Croats and Serbs, secretly supported by the Vienna Government. On July 11th Kossuth made a great speech in Parliament, in which he called upon the Magyars to defend themselves, and demanded on the part of Government credit for forty-two million florins and two hundred thousand men. The Austrian Government revoked the grant of a responsible Ministry to Hungary, and refused to recognise the new laws. Count Batthyanyi resigned office, and Kossuth became the real head of the ministry, and soon after was nominated by a vote of the Diet President of the Committee of National Defence. In the summer of 1848 he was busily occupied in organising the national resistance, and raising money by a lavish issue of notes. The *honveds*, or national militia, assembled with great rapidity, and by September the Croats under Jellachich had been decisively defeated. In October, revolution broke out in Vienna. Kossuth, much against the wishes of some of the Hungarian leaders, determined to support the insurgents, and ordered a march upon Vienna; but the Magyars were defeated at Schwechat, and obliged to fall back behind the Danube. On the abdication of Ferdinand, the Hungarians refused to recognise Francis Joseph, and Kossuth conveyed the crown of St. Stephen to Debreczin, from which town, and afterwards from Szegedin, he carried on the Government. The campaign of the spring of 1849 was brilliantly successful, though the Hungarian victories were due to the military skill of Görgey, Klapka, and Bem, rather than to the administrative abilities of Kossuth and the Provisional Government, who, if Görgey can be believed, displayed their activity chiefly in thwarting and hampering the generals. Beaten in several battles, the Austrians at length sought help from the Russians. The Hungarians responded by decreeing the deposition of the House of Hapsburg, and nominating Kossuth Dictator. The new governor employed himself in drawing up eloquent appeals to the nation, and to the neutral powers. Meanwhile, the Imperial armies were closing in on all sides, and the quarrel between Görgey and Kossuth intensified. Failing in his attempt to get Bem appointed to the chief command of the army, Kossuth resigned his dictatorship (Aug. 11th, 1849), which was transferred to his rival. The surrender of Vilagos, and the collapse of the Hungarian resistance, compelled Kossuth to

quit his country with all haste. He sought refuge in Turkey, and in deference to the demands of Russia and Austria, was for some time kept in a sort of honourable confinement. In Aug., 1851, he was allowed to leave Turkey to travel to England, where he met with an enthusiastic reception. He made a tour in this country and the United States, and addressed numerous meetings in support of the cause of Hungary. He failed in his political object, but his eloquence produced a profound impression. He passed some years in England, partly supporting himself by literature. He kept up an active correspondence with his countrymen, and was long looked upon as the leader of the "Irreconcilable" party. Clinging to the republican ideas of 1848, he had little sympathy with the moderate Constitutionals under Deák, and no liking for the compromise of 1867, which ended the Austro-Hungarian difficulty. In 1884, however, he announced his cordial allegiance to the House of Hapsburg. Of late years he has lived chiefly in Italy.

Count Teleki, *The Cause of Hungary* (1849); Horn, *Louis Kossuth* (1851); Szemere, *Batthyanyi, Görgey, Kossuth: Kossuth in England* (1851); *Correspondence Relating to the Affairs of Hungary* (1847-9); Görgey, *My Life and Acts in Hungary*; Klapka, *My Work in Hungary*; O. Fodál, *Der Krieg in Ungarn*; Kossuth's *Memoirs*. [S. J. L.]

Kotzebue, August von* (b. 1761, d. 1819), dramatist, was born at Weimar. He studied at Jena, and in 1781 was attached to the Prussian embassy at St. Petersburg. Subsequently he entered the Russian service, and filled judicial offices of some importance in Esthonia. In 1795 he withdrew from the Government service, and devoted himself to literature. He had already rendered himself notorious in 1790 by a bitter and libellous attack on Goethe, the Schlegels, Herder, and the whole Weimar group. He, however, met with little recognition in Germany that in 1800 he returned to Russia. Here he got into difficulties with the administration, and was sent to Siberia, where he remained in captivity for nearly a year. On his release he passed some time as manager of a theatre in St. Petersburg. Subsequently he started and managed several newspapers intended to assist the cause of the Allies, and particularly the Russians, against Napoleon. In 1817 he returned to Germany, and for two years conducted at Weimar a newspaper called the *Litterarische Wochenblatt*. He had been nominated Russian Consul-General in Prussia, and, moreover, acted as an unofficial correspondent and informant of the Czar on German affairs. This caused him to be regarded as a Russian spy, and the dislike he inspired was increased by the tone of his political writings, in which he showed himself a strong supporter of absolutism. The feeling against him was so strong that on March

23rd, 1819, a young student of theology, named Sand, who had persuaded himself that Kotzebue was one of the most formidable opponents of German freedom, killed him at Mannheim. Kotzebue was a very prolific writer. He wrote history, travels, autobiography, satire, poetry, fiction, and drama. His novels are now little read, and most of them are rightly censured for their immoral tendency. Many of his very numerous dramas are open to the same objection. His plays were once exceedingly popular in France and England, as well as in Germany, and have not yet entirely disappeared from the stage. His tragedies and melodramas, though often rough and inartistic, are full of dramatic effects; and his comedies excel those of most German playwrights in the ingenuity of their plots and the liveliness of their situations.

Several Lives of Kotzebue have appeared. The most valuable is that by W. von Kotzebue (Dresden, 1881). [S. J. L.]

* **Krapotkine**, PRINCE PIERRE (b. 1825), a leader of Russian Nihilism, is by birth a member of the highest Russian aristocracy. He studied at the Royal College of Pages, where he finished the curriculum with the highest distinction in 1861, and went to Siberia for several years to pursue geological researches. After having extended his travels as far as China he returned to St. Petersburg, where he was made a member of, and secretary to, the Geographical Society, and wrote several scientific works of great esteem. In 1871 he went to Belgium and Switzerland, where the International Society was becoming a considerable movement. He became an Internationalist, and on his return to Russia entered the revolutionary circle working for the liberation of the country, and was entrusted to draw up the programme of the party. During the winter of the same year he gave secret lectures under the name of Borodin, on the history of the International, which excited great attention among the working men of the Alexander-Neosky district. To escape the vigilance of the police, Krapotkine assumed the disguise of an itinerant artist, and still pursued his agitation. At last, betrayed by a spy, he was tried and condemned to three years' imprisonment in the prison of St. Peter and St. Paul, where, at the earnest request of scientific men, he was allowed by the Government to complete the first volume of his work on the glaciers of Finland. The hardships of Russian imprisonment told on his health, and it was while lodged in the hospital that he cleverly contrived to make his escape, and fled to Switzerland, where he resided under the name of Levachoff. Since that time his position has prevented his taking any active part in the Nihilist movement, but his name is associated with the agitation carried on in all parts of Europe for the subversion of existent social arrangements.

Accused in 1883, with fifty-two others, of complicity in the outrages at Lyons, of being a member of the International Association, and aiming at the abolition of property, family, and religion, he was condemned to five years' imprisonment, a fine of 2,000 francs, ten years' surveillance, and five years' deprivation of civil rights, but received, with other political prisoners, a pardon from the French Government in 1886, and went to England. Prince Krapotkine is an eloquent writer and speaker; while his frank sincerity and earnest enthusiasm recommend him even to those who would forget the revolutionist in the talented man of science.

* **Krehl**, LUDOLF (b. 1826), Arabic scholar, is chief librarian of the University of Leipzig, and has since 1846 taken a principal part in the editing of the *Zeitschrift* of the German Oriental Society, to which he has contributed many valuable papers. His chief work is the edition of Bukhârî's *Corpus of Mohammedan Traditions*, which began to appear in 1862. He also published a work on the *Religion of the Pre-Islamic Arabs* (1863), *Essays on the Koranic Doctrine of Predestination and Faith* (1877), a popular and well-digested *Life of Mohammed* (1884), and a *Catalogue of the Mohammedan Coins of the Royal Cabinet of Dresden* (1856), besides assisting in the edition of the text of *El-Makkary*, and other works of pure scholarship. As professor of Arabic at Leipzig he has long assisted Professor Fleischer in maintaining the high standard of Oriental scholarship for which that university is celebrated.

* **Kremer**, ALFRED VON (b. 1828), Orientalist, a Viennese, studied law at his native university, till his talent for languages induced the Academy of Sciences to subsidise an Eastern tour. In 1849-51 he journeyed in Egypt and Syria, and on his return was given the post of Professor of Modern Arabic at the Polytechnic at Vienna. In 1852 he accepted the office of First Dragoman to the Austrian Consulate in Egypt, and in 1859 became consul at Cairo. After holding the consulates at Galatz (1862) and Beyrut (1870) in succession, he was appointed, in 1872, a councillor of the empire, and consular referee to the Austrian Foreign Office, a post he still holds. He has published some valuable books of travel—*Contributions to the Geography of Northern Syria* (1852), *Mid-Syria and Damascus* (1853), *Topography of Damascus* (1855), and *Egypt, the Country and People* (1863), besides editing the Arabic text of a twelfth-century description of Africa (1852). In philology he has brought out a German translation of the *Divan of Abu-Nuwâs* (1855), some important papers on the *South Arabian Sagas* (1866-7), and the *Himyarite Kasida* (1865), and has edited Wakidy's *Campaigns of Mohammed* (1848). His best known works, however,

treat of the history of Mohammedan civilisation, and the characteristics of Islam. His *Leading Ideas of Islam* (1868) is a masterly examination of the chief features of the Mohammedan religion; and his preliminary studies in Islamic culture (1873), were developed into his greatest work, the *History of Eastern Civilisation under the Khalifs*, which appeared in 2 vols. in 1875 and 1877. The history is not, indeed, a logical tracing of the elements of the Mohammedan state and society, but is rather a series of essays on various departments of Mohammedan life and culture; nevertheless, with certain reservations, it is a work of high value and interest, and in the absence of a rival must hold its place among the leading European authorities on Eastern civilisation.

[S. L.-P.]

Krentzer, CONRADIN (b. 1782, d. 1849), musician, was the son of a Baden miller, and became a chorister in his native town of Mösskirch. In 1804 he went to Vienna, and there produced the operas *Conradin von Schwaben* (1812) and *Libussa* (1822). In 1833 he became conductor at the Josephstadt theatre, and produced *Das Nachtlager in Granada* and *Der Verschwender*, for which, and for some admirable part-songs, he is still remembered. In 1838 he became Capellmeister at Cologne, but ended his life at Vienna. He was no relation to RUDOLF KREUTZER (b. 1766, d. 1831), the violinist and composer, to whom Beethoven dedicated his Op. 47, the so-called Kreutzer Sonata for violin and piano.

Kriloff, IVAN ANDREEVITCH (b. 1768, d. 1844), a celebrated Russian fabulist, was the son of a poor officer, and began life as a clerk in a public office. He had already shown signs of literary talent, and made two or three attempts to succeed as a dramatic author. His works, which were all in the comic vein, obtained no permanent success; and it was not until, under the influence of La Fontaine, he began to compose fables, that he discovered his true talent. In imitation of his master, he wrote his fables in verse; and if they do not equal La Fontaine's masterpieces in grace they are sometimes superior to them in wit. In a large number of cases, moreover, the subjects are of the author's own invention, whereas La Fontaine's themes, happily as he has treated them, are all borrowed. An essay on Kriloff's fables, originally published in a magazine, has been reprinted in *The Russians at Home*; and the fables have been published in an English translation by W. R. S. Ralston. Kriloff appears to have been as original in his mode of life as in much of his work. His room was generally full of pigeons, which, being respected for their sacred character, abound in all the Russian cities, and which Kriloff encouraged to visit him by liberal donations of grain. When he was

presented for the first time at court, he forgot to remove from the gold buttons of his uniform the silver paper in which the tailor had wrapped them up. His biographers mention with an astonishment which among experienced students may itself excite surprise, that when he was already past fifty he was so delighted with the *Odyssey*, which he had met with in a translation, that he resolved to learn Greek in order to read it in the original.

[H. S. E.]

* **Kruger**, S. J. PAUL (b. circa 1825), Boer statesman, a native of Raasenburg, began life as a farmer of considerable ability, though not very highly educated. He entered political life, and became in 1872 a member of the Executive Council of the South African Republic, under President Burgers, a post which he resigned in April, 1877. In conjunction with the Attorney-General, Mr. Jorissen, he was then deputed to go to England and protest against the annexation, and with Mr. P. J. Joubert he formed the second deputation, that of 1878. When the Boers found that independence was not to be granted them, he formed with Messrs. Joubert and Pretorius the Provisional Government (Dec., 1881), and shortly afterwards became President of the Transvaal Republic. Hostilities began before the end of the year, and the British troops suffered several reverses, terminating with that of Majuba Hill (Feb. 29th). Meanwhile, negotiations for peace had been initiated by President Brand of the Orange Free State; and the result of his mediation was a message sent by President Kruger to Sir E. Wood, the English commander, which formed the basis of the armistice arranged by General Joubert. President Kruger induced the Volksraad of the Transvaal to ratify them on Oct. 25th. Elected President for a second term of five years in 1883, Mr. Kruger, with Messrs. Smit and Dutoit, formed a deputation, which in 1883-4 succeeded in gaining considerable modifications in favour of the Transvaal. About the same time the filibustering raids of some of the Boer farmers into Bechuanaland excited considerable indignation in this country; and Mr. Kruger declaring himself unable to prevent them, an expedition was sent out under Sir C. Warren, which by June, 1885, had succeeded in rendering justice to the natives. The financial condition of the Transvaal at this time was understood to be the reverse of prosperous.

* **Krupp**, FRIEDRICH (b. 1812), the well-known German metal founder, was born at Essen, in Rhenish Prussia, in which town his father in 1827 established a small foundry, which under the son has grown to be one of the largest factories in the world. Krupp the younger discovered a new method of casting steel in large masses, each mass weighing

about forty-five hundredweights, which he first exhibited at the London International Exhibition of 1851. The steel manufactured by this process, called Krupp's steel, can now be cast in 100-ton blocks. Krupp's name, however, is more popularly associated with the gigantic steel gun invented by him, which was used by the Germans with such deadly effect at the siege of Paris during the Franco-German War of 1870-1. Among his latest novelties is his eighty-ton breech-loading gun in steel, nearly thirty feet long, and capable of throwing a projectile fifteen hundredweights in weight. He has also designed a 120-ton gun on the same plan, with a projectile of one ton. In 1864 Herr Krupp declined the royal offer of letters of nobility.

* **Kuenen**, ABRAHAM (b. 1828), was brought up in Haarlem, his native town, and at the university of Leyden, where he was a student from 1846 to 1851. In 1853 he was made Doctor of Letters, and in 1855 professor of Hebrew and the Old Testament in the university. In 1862 he published, in conjunction with C. G. Cobet, the text of the New Testament from the Vatican manuscript. Kuenen's great work, by which his renown was first established, is his *Historisch-kritisch Onderzoek naar het ontstaan en de verzameling van de boeken des Ouden Verbonds*—an inquiry into the origin and collection of the books of the Old Testament—published at Leyden in 3 vols. (1861, 1863, and 1865; a French translation by A. Pierson, Paris, in 2 vols., 1866, 1879). It at once exerted a decisive influence upon two foreign scholars, who developed its results in different directions—Bishop Colenso, who translated the part relating to the Hexateuch under the title of *The Pentateuch and Book of Joshua, critically examined by A. Kuenen* (London, 1865), and K. H. Graf, in his *Geschichtliche Bücher des Alten Testaments* (Leipzig, 1866), and in an important article published in 1869, shortly before his death. It was in conformity with Graf's last views on the subject of the composition of the Pentateuch, in regard to the so-called "Elohistic" narrative and legislation, that Kuenen came to modify his own views, having been led to the same results by an independent re-examination of the subject as early as 1866. These conclusions, which involve a reconstruction of Israelitish history, making the priestly code and the historical portions connected with it the latest element in the Pentateuch, are incorporated in his popular work on *The Religion of Israel*, published in the series of *De voornaamste Godsdiensten* (Haarlem, 2 vols., 1869-70; English translation, 3 vols., 1873-5), and in the second edition of the *Onderzoek*, a translation of which, by the Rev. P. H. Wicksteed, appeared in 1886. Among other works by Kuenen, the following may be named:—*The Prophets and Prophecy in Israel* (1875;

English translation, 1877); *National Religions and Universal Religions*, being the Hibbert Lectures for 1882; a lecture on *The Five Books of Moses* (1872; English translation, Edinburgh, 1877); not to mention a variety of contributions to the *Transactions* of the Royal Academy of Sciences at Amsterdam, to the *Theologisch Tijdschrift*, of which he is joint-editor, and to other periodical publications. He also took part in preparing the catalogue of Oriental manuscripts in the university library at Leyden. Kuenen is one of the leaders of the reconstructive school of modern Biblical critics. He never upsets a theory without substituting something in its place; his method is rather to state the positive results first, and then to explain the process by which he has arrived at them in detail. His general conception of the growth of the Hebrew literature and religion at first found but few supporters; but even then his rare gift for historical criticism was immediately recognised; and helped by the clearness of his exposition, his judicial temper, and the singular modesty with which he advanced his views, these have gradually won a general acceptance among scholars, more perhaps in Holland and England than in Germany. But in Germany too they have been taken as a basis for further research by Julius Wellhausen; and it is through Dr. Wellhausen and his disciple, Professor Robertson Smith, that a treatment of the Old Testament essentially to accord with that of Kuenen has been laid (so to speak) authoritatively before the world at large in the *Encyclopædia Britannica*.

Kung, PRINCE. [CHINA.]

L

* **Labiche**, EUGÈNE MARIN (b. 1815), French dramatist, a native of Paris, produced his first play in conjunction with two *collaborateurs* in 1838. It was succeeded by some thirty or forty pieces of the *vaudeville* type, full of ingenious situations and lively dialogues, but at the same time of the most questionable taste. Among his most pronounced successes were *Embrassons-nous* (1850), *Le Choix d'un Gendre* (1869), and the celebrated *Voyage de Monsieur Perrichon*, produced in 1860, and revised with great success in 1879. A collected edition of his plays was produced in 1878. He was elected a member of the French Academy in 1880.

Julius Claretie, Eugène Labiche.

Lablache, LOUIS (b. 1794, d. 1858), actor and singer, the son of French parents, was a native of Naples. He early went upon the stage, and in 1817 obtained great success

as Dandini in Rossini's *Cenerentola*. His renown in Italy rapidly increased; Mercadante wrote for him the opera of *Elisa e Claudio*; and in 1830 he appeared in Paris, where Bellini wrote the *Puritani* for the celebrated quartette (Grisi, Rubini, Tamburini, and Lablache); and Donizetti composed for him the comic opera *Don Pasquale*. His first visit to this country was in 1834, and here he was more popular than Grisi herself. His greatest creation of all was Dr. Bartolo in *Il Barbiere*. Lablache was an inimitable comedian, and in tragedy Tamburini alone could pretend to be his rival; his voice was magnificently sonorous, and embraced two full octaves.

Castel-Blaise, *Biographie de Lablache*.

* **Labouchere**, HENRY, M.P. (b. 1831), the son of the late John Labouchere, of Broome Park, Surrey, and the nephew of Lord Taunton, was educated at Eton, entered the diplomatic service in 1854, and retired in 1864. An amusing account of his adventures as an *attaché* is to be found in Mr. Hatton's *Journalistic London*. Mr. Labouchere sat for Windsor in the Radical interest from July, 1865, to April, 1866, when he was unseated; and for Middlesex from April, 1867, till November, 1868. After unsuccessfully contesting Nottingham in 1874, he was returned for Northampton in 1880, again in 1885, and again in 1886. In the House of Commons Mr. Labouchere's powers of light satire have made him a conspicuous figure; he is a pronounced Radical, and has several times proposed the abolition of the House of Lords. He is equally celebrated in the world of journalism. He became part proprietor of the *Daily News* when it was started as a penny paper in 1868, and during the Franco-Prussian War contributed to it the celebrated *Letters of a Besieged Resident in Paris*. From 1874 he wrote the City articles for the *World*, in which he conducted a celebrated campaign against the money-lenders, and in Jan., 1877, started *Truth*.

Labouchere, THE RIGHT HON. HENRY. [TAUNTON.]

Lacordaire, JEAN BAPTISTE HENRI (b. 1802, d. 1861), the celebrated Dominican preacher, was the son of a doctor. He was educated at the Dijon Lycée (1810-19), and chose the bar as his profession. Going to Paris in 1822, he, however, determined to become a priest, and entered the seminary of St. Sulpice (1824). He was ordained priest 1827, and received the appointment of a chaplaincy to a convent of the Visitation. At this time he came into contact with Lamennais (q.v.), and was associated with him in the editorship of the democratic and Ultramontane papers *L'Avenir* and the *Agence*, for the defence of the Catholic religion. After the condemnation of their work in an

encyclical letter by Gregory XVI. (1832), and an unsuccessful journey to Rome, Lacordaire separated from Lamennais, and submitted to the Church: his *Considération sur le Système Philosophique de M. de Lamennais* was written in response to the *Paroles d'un Croquant*. In 1834 Lacordaire began to lecture with great success at the Collège Stanislas, but was obliged to discontinue his sermons on account of the mistrust still entertained of his zeal by the Church authorities. In 1835, Monseigneur Quélen, Archbishop of Paris, appointed him lecturer at Notre Dame, where his great fame as a preacher was gained. Notwithstanding his great success, he abandoned his pulpit in 1836, and after some time in Rome, where he wrote his *Lettre sur le Saint Siège*, embraced the resolution of becoming a monk, and entered the Dominican order in 1839. During his novitiate at La Quercia he wrote his *Mémoire pour le Rétablissement en France de l'Ordre des Frères Prêcheurs* and the *Life of St. Dominic*, both published in 1840. In 1841 he reappeared at Notre Dame, and spent the next seven years between France and Italy, labouring in the cause of religious freedom, and to re-establish the monastic orders and schools in France. In 1847 he made his splendid funeral oration on Daniel O'Connell, and on the outbreak of the Revolution of 1848 resumed his political activity, and started a journal, *L'Ère Nouvelle*. He was elected a deputy to the Constituent Assembly, but only sat for ten days, and in 1854 retired from public life, and accepted the mastership of the college at Sorèze, whence he published in 1858 his *Lettres à un jeune Homme sur la Vie Chrétienne*. In 1860 he was elected a member of the French Academy in the room of De Tocqueville.

Poisset, *Vie de Lacordaire*; Chocarne, *Lacordaire, sa Vie Intime*; Saint-Beuve, *Causeries de Lundi*, vol. i.

Lacroix, PAUL (b. 1806, d. 1884), a prolific French writer, otherwise known as LE BIBLIOPHILE JACOB, was born at Paris, and in 1824, while still a schoolboy at the Bourbon College, published an edition of the works of Clément Marot. From that time forward his pen was incessantly active. His first successes were gained by works of historical and romantic fiction, in imitation of those of Scott. Amongst his earlier productions of this kind may be mentioned *Soirées de Walter Scott à Paris*, and *Le Bon Vieux Temps*. Although he was afterwards attracted by other departments of letters, M. Lacroix was, throughout his life, one of the most prolific of novelists, and several of his romances have gained a permanent place in literature. In 1834 he published *Histoire du Seizième Siècle en France*, the first of a long series of books treating of French history, which, though exhibiting much curious minuteness of research, are far from accurate, and are characterised by a spirit of anti-revolutionary partisanship. The

works by which he will be best remembered are his magnificent illustrated books on the history of art, manners, and customs in France. In 1855 he was appointed librarian of the Arsenal, a post he held till his death.

Academy, Oct. 24th, 1884.

Lafayette, JEAN PAUL ROCH GILBERT MOTIER, MARQUIS DE (b. 1757, d. 1834), was educated at the College of Plessis, and in 1774 married Mlle. de Noailles. On the outbreak of the American rebellion (1775), he entered into communications with the agents of the revolted colonies, and in 1777 crossed the Atlantic, was present at Brandywine, and rendered valuable assistance in Canada. Forming a warm friendship with Washington, he was entrusted with the defence of Virginia, and was present at the surrender of Cornwallis at York Town. After visiting the German courts in 1785, where he freely expressed his republican sentiments, he went to Paris at the end of the year. The Assembly of the Notables in 1787 gave him an opportunity of practically showing his ardent love of liberty. He voted for the abolition of the Gabelle, of *lettres de cachet*, and suggested the convening of the States General. His *Declaration of Rights* presented to Assembly (July 11th, 1789), became one of the watchwords of the Republic, but it was by his character rather than by his power as an orator that Lafayette obtained popularity. He was unanimously elected general of the newly formed National Guard after the fall of the Bastille, and by his action during the days of October, when the mob marched on Versailles and brought the royal family in triumph to Paris, he incurred the suspicions of the Jacobins and hatred of the Court. On the termination of the Constituent Assembly in 1791 he resigned his command, and retired to Auvergne. He was soon called upon to take the command of one of the armies of defence, and from the camp at Mauberge addressed a letter to the Assembly denouncing the clubs and advocating the retention of constitutional monarchy, and appeared shortly after in person to enforce his demands. But in vain; he was denounced as a Cromwell, and on his departure the mob burnt his effigy before the Palais Royal. Nor were his efforts to save the royal family any more successful. After the overthrow of the throne, he attempted to escape across the frontier. Captured by the Austrians (Aug. 19th, 1792), he underwent a rigorous imprisonment in various German fortresses until Sept., 1797, when Napoleon made his release one of the terms of the peace of Campo Formio. Returning to France after the 18th Brumaire, he refused office, and lived in retirement during the Consulate and Empire. He hailed the return of the Bourbons with joy, believing that under their rule France would enjoy free institutions. He was deputy for Seine-et-Marne, and elected vice-pre-

sident of the Chamber of Representatives during the Hundred Days. In 1818, returned by the department of Sarthe, he became a member of the Extreme Left. In 1824 he failed to be re-elected, and paid a visit to America, where he was voted 2,000,000 dollars and had an estate conferred upon him. He was re-elected in 1827 to the French parliament, and took a prominent part in the July revolution of 1830, when, however, his weakness of character allowed him to be won over by the Duke of Orleans' partisans. Disappointed in the government he had helped to raise, Lafayette spent the remainder of his life in opposing it.

Lafayette, *Mémoires, Correspondance, etc., publiés par sa Famille* (1837); La Bedollière, *Vie politique de Lafayette*. [A. M. C.]

Laffitte, JACQUES (b. 1767, d. 1844), the French financier and politician, son of a carpenter, went to Paris 1788, entered the bank of Perregaux, and became head of the business in 1809. In 1813 he was elected president of the Chamber of Commerce, and in 1814 the Provisional Government nominated him governor of the Bank of France. In 1815 he negotiated large monetary transactions for Louis XVIII. and the Duke of Orleans when they were obliged to fly from Paris on Napoleon's escape from Elba. During the Hundred Days, Laffitte was a member of the Chamber of Deputies, and after the battle of Waterloo Napoleon entrusted to his known probity the sum of 5,000,000 francs. He advanced a sum of 2,000,000 francs to pay the soldiers' arrears, and became guarantee to Blücher for the first instalment of the indemnity, 500,000 francs. Deputy for Paris in 1816, he was a member of the Bourgeois Opposition. He spoke on questions of finance, supported Villèle (1824) in the proposed conversion of the *Rentes* from 5 to 3 per cent., advocated freedom of the press, and on the dissolution of the National Guard proposed the impeachment of ministers. He was well known for the generous use that he made of his great wealth to relieve both private and public necessities. On the outbreak of the July revolution, Laffitte became President of the Assembly which declared the throne vacant, and offered it to the Duke of Orleans with the title of King of the French. Minister of Finance in November, 1830, and president of the Council in Louis Philippe's first ministry, Laffitte soon found that he was in harmony neither with the Assembly nor the Court, and resigned his portfolio March 13th, 1831. In the meantime he had lost the greater part of his colossal fortune during the financial panic of the same year. Having left the Government, he again took part with the Extreme Left, and his was one of the signatures to the address of 1832 demanding a more popular Government and cessation of the shedding of blood. His latter life was embittered by regret for the part that he had played in elevating Louis Philippe to

the throne. His published works are chiefly on financial questions.

Laing, DAVID (b. 1790, d. 1878), antiquarian, was the son of William Laing, an Edinburgh bookseller, in whose business he was engaged from 1821-37, when he was appointed librarian of the Signet Library, a post he held until his death. He was hon. secretary to the Bannatyne Club from its foundation in 1823 by Sir Walter Scott, for the editing and printing of rare books on Scottish history and literature, until its close in 1860, and edited a large number of the books issued. His knowledge of bibliography, especially in reference to the ecclesiastical and literary history of Scotland, was immense, and when he received the honorary degree of LL.D. from the University of Edinburgh, in 1864, Professor Cosmo Innes remarked that "no wise man will undertake literary work on Scotland without consulting Mr. David Laing." In 1823 he became a member of the Society of Antiquaries, for which he was treasurer and foreign secretary for some years, and edited the *Transactions*. Among his numerous works are the *Life and Works of John Knox* (1846-64), and editions of the Scotch poets, Sir David Lyndsay, William Dunbar, and Robert Henryson. At the time of his death he was engaged on the last volume of *Wynton's Chronicle of Scotland* and a new edition of *Lyndsay's Works*.

Lake, GERARD, VISCOUNT (b. 1744, d. 1808), served in the American War and in the war against the French Republic. He was commander in Ulster when the rebellion of 1797 broke out, and suppressed it with brutal severity, compelling the peasants to surrender their arms by barbarous punishments. In Aug., 1798, his army, composed of disaffected militia, fled before the French General Humbert's forces at what was afterwards called the Castletown Races. On the outbreak of the Mahratta War of 1803, General Lake commanded the army sent to operate against Sindhia's forces in the valley of the Ganges, won the battles of Alleghur and Delhi, restored the aged Shah Allum to the throne, and finally crushed Sindhia's northern army at Laswaree. Holkar rebelling in the following year, Lake defeated him with considerable loss, but, calling to his aid the Rajah of Bhurtapore, he was not finally subdued until the end of 1805. Lake returned to England in 1807, and was created a viscount. [DELHI; GWALIOR; INDORE.]

Lamarck, JEAN BAPTISTE PIERRE ANTOINE DE MONET DE (b. 1744, d. 1829), the French naturalist, was born in Picardy, and educated for the Church, but subsequently entered the army. Becoming disabled through an accidental injury, he repaired to Paris to study. In 1778 he published his first

scientific work, *Flore Française*, in which he substituted a new system of classification for that of Linneus—to be abandoned later, however, in favour of the natural system of Jussieu. His other botanical works consist chiefly in descriptions of genera and species. His studies in geology were very speculative, yet he always insisted on the continuous nature of geological changes. In 1788 he became assistant-director of the Jardin du Roi, and in 1793 professor of zoology in the Museum of Natural History. He was amongst the first to recognise the importance of studying biology as a whole. His views were afterwards expanded in his well-known *Philosophie Zoologique*, published in 1809, and in the introduction forming the greatest portion of the first volume of the *Histoire naturelle des Animaux sans Vertèbres* (7 vols., 1815-22). These two works constitute his principal title to celebrity. He was the first to attempt to prove that all species now living are descended from those previously existing, however great may have been the subsequent modifications, and to ascribe the formation both of modern species and the features presented by the earth's crust to the continuous operation of natural agents. His views of life generally agree with those of Darwin and Herbert Spencer in as far as they endeavour to explain the phenomena of life by the action of ordinary physical forces. On the other hand, he held the doctrine of the daily recurrence of spontaneous generation. His religious views were a curious mixture of pantheism and deism.

Cuvier, *Éloge de Lamarck*; Westminster Review, July, 1874; G. Saint-Hilaire, *Discours sur Lamarck*.

Lamartine, ALPHONSE MARIE LOUIS DU PRAT DE (b. 1790, d. 1869), is perhaps, taken all in all, the most thoroughly representative man France has had since the sixteenth century. He came, it should never be forgotten, of an ultra-Royalist stock, and his early education served him well, for it was the reverse of what produced the other men of his age. At nineteen he had already visited, and learned to love ardently, Italy. On the first news of the return of the old monarchy, he hastened back to France; but the escape of the Emperor from Elba caused him to retire to his beloved solitude in the Savoy mountains. On the definite establishment of the Bourbons in 1815 Lamartine came to Paris, and entered the ranks of the Garde Royale. The garrison existence of a French *militaire* in time of peace could not suit the future leader of '48, and once more he returned to his mountains, wandering from time to time over Italy, from sea to sea, and on foot. Here took place the first and lasting impression of his life, and under the names of *Éléire* and *Julie* may be traced the one heart-influence which seized him at that moment and ever after inspired him, making of Lamartine one of the great poets of France. From 1817

till 1829 his influence was at its height. After the first *Meditations* were published, in 1820, the author was, somewhat arbitrarily, appointed First Secretary of Legation, and sent to Naples. A few years later found him already *chargé d'affaires* in Tuscany, and for five years he lived in Florence and acquired his taste for international politics. Meanwhile, he had married an English wife, Marianne Birch, the admirable helpmate whom no one who knew them ever dissociated from her husband's occupations or achievements. On the advent of the Polignac ministry to power in 1829 Lamartine was summoned from Florence, and offered the Secretaryship of State for Foreign Affairs. He refused, because he foresaw at once to what catastrophes the new ministry would lead. Yet was he a Royalist by birth and habits and traditions. Prince Leopold, later King of the Belgians, had been momentarily made King of Greece; and the only post Lamartine could be brought to accept was a mission to the Sovereign best famed in Europe for his liberal opinions. At the same time was published the *Harmonies poétiques et religieuses* (1829), and the outburst of enthusiasm was such that the Académie Française induced the poet to accept what was in fact a unanimous election. With 1830 opens the second part of Lamartine's career. Disapproving of all that brought about the revolution of July, Lamartine could not be persuaded to profit by it, but remained after, as before, a Royalist on principle. His elevation of character, however, had made itself already sufficiently felt for his friends of the Liberal party to desire his presence in the Chamber of Deputies. He was induced to stand for both Dunkerque and Toulon. He was not elected for either constituency, and found himself free—having quitted the diplomatic career on the accession of Louis Philippe—to wander towards the East. His account of his travels, *Souvenirs d'Orient*, was published in 1835. After passing over two years in Oriental travel, Lamartine was recalled to France by his political prospects, and in the autumn of 1833 he was elected in both Macon and Bergues. He chose to sit at first for the latter place, but the townsmen of his birth-place (Macon) would not be gainsaid, and in 1837 they re-elected him almost unanimously. From 1834 to 1848 is the real parliamentary portion of Lamartine's career. During this relatively tranquil time he brought out *Jocelyn* (1836), *La Chute d'un Ange* (1848), and several prose works, culminating in 1847 in his celebrated work, the *Histoire des Girondins*, which was erroneously said by Conservatives to have caused the February revolution. *Les Girondins* caused nothing, but ushered in events which were rapidly ripening for an inevitable explosion. Lamartine was too serene a spirit to condescend to violence, but his instinct never failed him. He could not like the Orleans

rule—first, because he knew that in the July movement the nation really and truly went further than the so-called "Juste-Miheu Régime;" and next, because the mode of attaining the crown of the Orleans dynasty had in it too much willingness to be other than repugnant to his generous and fearless nature. When the monarchy was overthrown, and Louis Philippe had become John Smith, there was, according to the member for Macon, but one thing to do honestly—to discourage all shams and all stop-gaps, such as regencies, or commissions, or whatever devices seemed practicable to more timid men, and at once to proclaim the Republic. But he would not degrade even the populace by turning them into mere slaves. From the moment (May, 1848) that the incurable cowardice of the Moderates (i.e. nine-tenths of all France) made it clear that what they asked for was despotism, reaction against liberty, and the suppression of the individuals who had for years given their entire lives to the Republican cause—from that moment Lamartine refused to reap the profit of his immense popularity by setting aside his more advanced colleagues. He had the nation at his feet, clamouring for what to him seemed unjust. He resolutely refused to consent, maintained the *Républicains de la veille* in their places, and fell from the very topmost pitch of power in one day. He has been all but universally blamed for this. A few years later Louis Napoleon, troubled by none of his predecessor's scruples, took the contrary line, marched through fraud, perjury, and bloodshed to empire, and destroyed the moral fibre of the nation and its nerve, as was so lamentably shown during the war of 1870. The close of Lamartine's existence, during the sixteen years of the despotic rule of Napoleon III., was, as far as speech went, a silent one, but his pen was not idle. During the period included between 1850 and 1866, he published *Raphaël, Genetière*, the *Taillieur de pierres de St. Point*, the two series of the *Confidences*, and the *Histoire de la Restauration*, one of the most substantial works in print on recent history, and absolutely indispensable to any student of Continental politics. Besides this, he edited several *Collections* of his former writings, *Discours divers*, and gave forth monthly his *Entretiens Familiers*, many of which are more remarkable than has been commonly supposed. But never once, during the dreary years in which Lamartine's patriotism so keenly suffered, and in which the public activity he so dearly loved was denied him, was his spirit overcast or the dignity of his serenity shaken. To the last, and in spite of all, he retained his living interest in politics, and everything connected with public life; and his countless devotees would pass long admiring hours listening to the outpourings of his eloquence. When all material resources were exhausted, Lamartine accepted from a

public vote in parliament a moderate pension, and from the Paris Town Council a chalet in the Bois de Boulogne, which the municipal body felt itself honoured in being allowed to offer.

Lamartine's Mémoires; V. de Lamartine, *Correspondance de Lamartine*; *Lives of Lamartine* by Felleton and Janin. [Y. B. DE B.]

Lamb, CHARLES, essayist and poet (b. Feb. 10th, 1775; d. Dec. 27th, 1834), was born in the Temple, where his father was clerk to a Bench. Through the instrumentality of a friend of the latter, Lamb obtained admission to the Bluecoat School, where he became a fair classical scholar. After quitting it he was engaged for some time in the South Sea House, and eventually, through the influence of his father's employer, entered the accountant's department of the East India Company, where the remainder of his working life was spent. A frightful calamity befell him in 1796, through the insanity of his sister Mary, who killed her mother in a fit of madness. Lamb's own reason had been previously, for a time, unsettled, but he completely recovered, and heroically devoted his life to the care of his sister, whose malady was but intermittent, renouncing to this end a youthful affection of his own. The episode is one of the most pathetic in biography, and would entitle Lamb to love and admiration, even if the qualities of his heart had not been equally conspicuous in his writings. All this time he principally wrote poetry, limited in quantity, modest in pretension, but pure and choice in quality. *Rosamund Gray*, a miniature romance, was written in 1795; *John Woodville*, a drama, in 1799. Lamb had maintained an affectionate friendship with his schoolfellow Coleridge, through whom he became acquainted with Wordsworth, Southey, and Charles Lloyd; and Godwin, Hazlitt, and Leigh Hunt were soon added to the list of his intimate friends. His admirable *Tales from Shakespeare*, in which his sister participated, were written for Godwin, and were followed by his *Specimens of English Dramatic Poets*, which effected much towards reviving interest in the Elizabethan drama. In 1818 his works were collected, and in 1820 the establishment of the *London Magazine* gave the impulse to the composition of his delightful *Essays of Elia*, his most enduring claim to literary distinction. Lamb's humour is something quite original, of which it is difficult to convey any idea by description. The writer's quaintness never degenerates into the grotesque, and his sarcasm is allied to the most exquisite tenderness of heart. His character-portraits are most delicately finished. His faults are a tendency to jest for jesting's sake, and the exceeding limitation of his horizon. He cared heartily for little that could not be found in a city; and, unsurpassed in discovering picturesqueness in

things familiar, was indifferent to the grander aspects of nature and life. All his correspondence, and the records of his conversation, are in the same strain as his essays, and equally delightful, except that the determination to be jocose at all hazards is even more pronounced. He continued to write for the *London Magazine* for many years, and his essays, rich in autobiographical matter, as well as the memoirs of Hunt, Hazlitt, and other friends, give a vivid picture of his tastes and pursuits at this time. In 1826 he retired from the India House on a pension, a step not wholly advantageous, for he missed the regular occupation which had aided him to fight off the melancholy which followed his humour like a shadow, and which grew upon him with the deaths of old friends and the aggravation of his sister's malady. He died at Edmonton, from the effects of a slight accident. "Lamb, the frolic and the gentle," as Wordsworth called him, Coleridge's "gentle-hearted Charles," will always remain one of the most beloved figures in English literary history; and infirmities, due in a great measure to the great sorrow of his life, will not weigh against him. Few existences have been so uniformly self-sacrificing. His genius, original in every trait, was that of a genuine English humourist, a type produced by no nation not of English blood. He was a nineteenth-century Addison and an urban Wordsworth. His works have been recently edited by Fitzgerald, Kent, and Ainger. The life of MARY LAMB (b. 1762, d. 1847) cannot be separated from her brother's. When not suffering from her disorder, she manifested very superior talents. After Charles's death her mind became permanently enfeebled, and she died under charge of a nurse in St. John's Wood.

Talfourd, *Letters* (1837) and *Final Memorials* (1848) of Charles Lamb; Procter, *Memoir of Charles Lamb* (1866); Mr. Ainger's memoir in the *English Men of Letters Series*. [R. G.]

Lamennais, FELICITÉ ROBERT DE (b. 1782, d. 1854), the celebrated philosopher and political writer, was educated with his brother by an eccentric uncle, M. des Laurais, in whose library he became acquainted with the eighteenth-century philosophers, reading which resulted in a period of doubt and scepticism. But the influence of his brother, and his own dreamy, mystical nature, eventually won him for the Church, of which he was so long the ardent but not very tractable champion. The freedom with which his *Réflexions sur l'État de l'Eglise en France pendant le 18^e Siècle* (1808) advocated ultra-Catholic views, caused its suppression by the Bonaparte police; but it was probably while a refugee in England, during the Hundred Days, that the Abbé Carron's influence finally determined Lamennais to enter the Church. He was ordained in 1816; his *Essais sur l'Indifférence en Matière de Religion*

were published in 1821-3, and at once he was regarded as the "Modern Boesuet." The essays proclaimed the universality of the Church and denounced Gallicanism; but the later volumes aroused the suspicions of the higher clergy, and in 1824 Lamennais went to Rome to obtain the papal sanction for his book. Leo XII., it is said, at this time offered him a cardinal's hat. Meanwhile, he was contributing to the Ultramontane journals, and *La Religion considérée dans ses Rapports avec l'Ordre politique et civil* (1825-6) contained an extreme exposition of the Church's authority. It was prosecuted, and the author punished by a nominal fine of thirty francs and by the seizure of his book. Gradually his opinions were undergoing a change, and he began to look to liberty rather than authority as the instrument of attaining a higher humanity — still, however, regarding the Church as its leader. *Des Progrès de la Révolution et de la Guerre contre l'Église* (1829) was directed against the ordinance prohibiting the clerical schools, and in his journal *L'Avenir*, with the motto "God and Liberty," founded after the July revolution, Lamennais, together with Montalembert, Lacordaire, and others, demanded liberty of conscience, instruction, the press, and association, and as a consequence the separation of Church and State. The *Agence Générale pour la Défense de la Liberté religieuse* was founded to realise their theories, and after the condemnation of their work by Gregory XVI., in 1832, Lamennais' relations with the Church grew rapidly weaker, and he identified himself more and more with the Democratic party. *The Paroles d'un Croquant* (1834), poured forth in the anguish of his soul at seeing the Church leagued with the oppressors of Poland, marked the rupture; it was condemned by the Pope, and immediately translated into nearly every European language. During the remaining years of his life he returned to the freethought of his youth, and died an unbeliever. He was interred, according to his own wish, among the poor, and without any religious rites. In 1840 he had been condemned to a year's imprisonment for a pamphlet, *Le Pays et le Gouvernement*, and in 1848 was a member of the Constituent Assembly; his political career ending when that assembly ceased to exist. Of his later works the most important are:—*Affaires de Rome* (1834), *Esquisses d'une Philosophie* (1841-6), and the translation of the *Divine Comedy*, the preface to which contains the best testimony to the change in his religious convictions.

Œuvres complètes (Paris, 1836-7, 12 vols.); *Œuvres inédites*, publiées par A. Blaise (Paris, 1866, 2 vols.); *Œuvres posthumes*, publiées par E. D. Forgues (1855-9, 6 vols.).

Lander, RICHARD (b. 1804, d. 1834), and **JOHN** (b. 1807, d. 1839), African explorers, were brothers, and natives of Cornwall.

Richard had rambling inclinations, and in 1823 proceeded in the capacity of servant to Major Colebrook, a commissioner of inquiry into the state of the British Colonies, to the Cape of Good Hope. Returning in 1824, he joined Captain Clapperton's expedition to the Niger (1825-7), and on the death of Clapperton at Sokoto in 1827 assumed the leadership of the expedition (see his *Records of Captain Clapperton's Last Expedition to Africa*, 1830). In 1829 he was entrusted with a Government expedition to trace the river Niger, and was accompanied by his brother John, who had been brought up as a printer. It was this second expedition that established the fame of the Landers. In 1831 they announced the course and termination of the Niger, the real facts being that they were able to lay down with some correctness the lower course of the Niger, and to show that it emptied into the Gulf of Guinea. In 1832 they published their *Journal of an Expedition to Explore the Course and Termination of the Niger*. In the same year Richard proceeded on a third expedition, organised by the merchants of Liverpool for the purpose of opening up the Niger for trade. He was able to establish a commercial settlement at the junction of the Binuë with the Niger, but a little later he and his party were attacked by the natives, and he received a mortal wound. John Lander died in Cornwall.

Autobiographical sketch prefixed to *Records of Captain Clapperton's Expedition*; Denham, *Travels and Discoveries in Northern and Central Africa*; *Gentleman's Magazine*, Sept., 1834.

Landon, LETITIA ELIZABETH (b. 1802, d. 1838), perhaps better known as "L. E. L.," was the daughter of John Landon, of an old Herefordshire family. Her earliest poems were published in the *Literary Gazette*, the editor of which, Mr. Jordan, afforded her valuable critical and literary assistance. Her first long poem, *The Fate of Adelaide* (1820), a very immature production, was followed by the *Poetical Sketches* contributed to the *Literary Gazette*, and during the whole of her career she continued to write for this and other periodicals. Of her longer poems, *The Improvisatrice* appeared in 1824, *The Troubadour* in 1825, *The Golden Violet* in 1826, *The Venetian Bracelet*, *Lost Pleiad*, and other poems in 1829. *The Zenana* was one of the longest contributions to Fisher's *Drawing-room Scrap-book*, which Miss Landon edited from 1830 until her departure for Africa. In 1831 appeared her first prose work, *Romance and Reality*; it was followed by *Francesca Carrara*, *Ethel Churchill* (1836), her most powerful work, as well as the tragedy *The Fortunes of Castruccio Castracani*, gave evidence of maturing forces which might have produced greater results than those by which she is now known. Having spent the greater part of her life in London, Miss Landon married, on June 7th, 1838, George Maclean, Governor of Cape Coast,

and sailed with him shortly after for Africa. The separation from her friends and admirers in England was destined to be a lasting one, for she died in the following year from an overdose of prussic acid administered medicinally by herself. Unlike her writings, which are tinged with a uniform gloom and melancholy, she was of a most sociable and animated nature.

L. Blanchard, *Life and Remains of L. E. L.*

Landor, WALTER SAVAGE (b. Jan. 30th, 1775; d. Sept. 17th, 1864), belonged to a good Warwickshire family, whose dignity and importance he was prone to magnify. From his first school at Knowle, he was sent at the age of ten to Rugby, where he remained for five years, distinguishing himself equally for the excellence of his Latin verse and the unruliness of his conduct. A quarrel with the head-master occasioned his removal. After an interval of three years spent under a private tutor he entered Trinity College, Oxford, in 1793. At the end of a year and a half he was rusticated for firing a gun through the windows of a room inhabited by a Fellow obnoxious for his Toryism. This escapade caused a breach between Walter and his father which threatened to end in the exile of the former; but a partial reconciliation took place, and Walter retired into Wales on an allowance of £150 a year. There he lived for the next three years, during which he composed and published his first important work, *Gebir*, a poem founded on an Arabian tale. It contains many striking passages and many single lines of great beauty, but as a whole is obscure and disjointed. It was little read, but it made Southey a warm admirer of the unknown author. *Poems from the Arabic and Persian* came next, in 1800. The following years yield only fugitive verses, notable among which are the pieces addressed to or concerned with Ianthé, Landor's poetic name for a lady for whom he had a passion. Many of these appeared in 1806 in a volume entitled *Simonidia*, incongruously mixed with elegiacs on the death of friends. In 1805 Landor's father died; and two years later he sold his hereditary estates to invest the proceeds, and more, in the purchase of Llanthony Priory on the Welsh border. There he set on foot wild schemes of agricultural and social improvement, squandering his money and involving himself in quarrels with all around him. The final result was financial ruin and a bitter hatred of the Welsh. Shortly after the purchase of Llanthony he had engaged in a mad and short-lived attempt to aid the Spaniards in their struggle against Napoleon. He was equally precipitate in a matter of even greater importance to himself. In 1811 he met a young lady at a ball, determined on the instant to marry her, and did it. It is not surprising that the pair lived an unhappy life. In the same year Landor wrote *Count Julian*,

his first English tragedy. It shows the same defects of structure as *Gebir*, and the characters are unimpressive. Three years later the Llanthony disaster occurred. After some family bickerings and a temporary separation, he settled with his wife for a short time at Tours, and afterwards, in 1815, set out for Italy. There they lived, for the greater part of the time, at Florence and Fiesole, till 1835. In 1820 Landor published the *Idyllia Heroica*, a volume of Latin verses, part of which had already been printed under the same name. During the Florentine period he struck out a new line of literary production. He abandoned poetry almost entirely, and began his *Imaginary Conversations*. The first two volumes appeared in 1824, and additions were made from time to time in subsequent years. These *Conversations* won an audience, not indeed wide, but more considerable than any Landor had yet addressed; henceforth he was recognised by all literary men as a man of genius. To the years 1834-7 belong three considerable works in prose: the *Citation and Examination of William Shakespeare; Pericles and Aspasia*; and the *Pentameron*. But before the latter date, in 1835, Landor had finally broken with his family and returned to England. For a time he flitted about from place to place, and finally settled down at Bath. His chief literary friends during this period were Forster, his biographer, and Dickens, whose unflattering and not wholly just portrait of him as Boythorn in *Bleak House* is well known. He now turned again to the drama, producing shortly a trilogy on the story of Joanna of Naples: and after that another play, *The Siege of Ancona*. In 1846 Forster's collected edition of Landor's works, including a number of new productions, was published. It was followed in 1847 by the Latin writings, printed separately. The remainder of Landor's life was comparatively unproductive, and a quarrel, occasioned by a volume of trifles published against the advice of his friends, embittered his later years. He had lampooned a lady, she sued him, and he left England to escape the consequences. He went to Fiesole, but he was still unable to live at peace with his family; and as all his property had been made over to them, he had not the means to live apart. Finally, on an allowance made by his brothers, he settled at Florence, where he lived the rest of his life. His last volume, *Heroic Idylls*, appeared in 1863, and on Sept. 17th in the following year he died. Landor is perhaps less known than any other English man of letters of equal calibre. He was remarkable both as a poet and as a prose writer, but neither his matter nor his manner appeals to a wide public. His longer poems are wanting in connection, and all, short and long, are so concise as to repel the casual reader. None of his more ambitious poems can be fairly called great, but all of them contain passages singularly impressive and in

a severe fashion beautiful. His smaller pieces generally ring true, and often reach a very high standard. But Landor was right in recognising, as he did in his middle period, that his vocation was not for poetry. In the *Imaginary Conversations* he found a form of composition that suited him. The dialogues gave scope to his dramatic talent without demanding that power of construction in which he was deficient; and in them he had the opportunity of developing a classical beauty of style unsurpassed by any English writer. Even the *Conversations*, however, are not popular, partly because of the severity of their style, partly because to make them interesting they demand a degree of knowledge the ordinary reader does not possess. The truth is, Landor did not write for and had no sympathy with the people. This is forcibly shown not only by the fact that all through his life he retained the habit of composing in Latin, but that he hesitated whether he should write some of his most important works in that tongue or in English. The penalty he has paid is not entirely undeserved. His interest is not widely human, and consequently his name and fame are known to but a few.

Landor's *Works and Life*, by J. Forster; Mr. S. Colvin's monograph in *English Men of Letters Series*; Emerson, *English Traits*. [H. W.]

Landseer, SIR EDWIN HENRY (b. 1802, d. 1873), the artist, was born in London, and was the youngest son of John Landseer, A.R.A. (b. 1769, d. 1852), an engraver of high reputation. The whole family turned to art by natural instinct, and Edwin sketched animals almost as soon as he could walk. In boyhood he studied the quiet field-life round Hampstead and the northern suburbs. When he was thirteen he exhibited at the Academy, and at fourteen became a student. Henceforward he exhibited with increasing regularity at the Academy and the British Institution. His most noticeable early work was *Fighting Dogs* (1818). In 1824 the well-known *Cat's Paw* appeared, and in the same year the artist visited Scotland with Sir Walter Scott. *Chevy Chase* was exhibited in 1825, and Landseer was elected A.R.A. After the following year a change is observable in his choice of subjects, due to his visit to the Highlands. Elected R.A. in 1830, he entered upon the twenty or twenty-five years that formed the period of his greatest power. The following are the titles of his greatest pictures, and the dates of their production:—*High Life and Low Life* (1831), *The Hunted Stag* (1833), *Bolton Abbey in the Olden Time and Suspense* (1834), *The Drover's Departure* (1835), *The Old Shepherd's Chief Mourner* (1837), *There's Life in the Old Dog Yet* and *A Distinguished Member of the Humane Society* (1838), *Dignity and Impudence and Beauty's Bath* (1839), *Laying Down the Law* (1840), *The Challenge* (1843), *Shoeing the Bay Mare* (1844), *The Cavalier's Pets* (1845),

The Stag at Bay and Peace and War (1846), *A Random Shot and Alexander and Diogenes* (1848), *A Dialogue at Waterloo* (1850), *Midsummer Night's Dream and The Monarch of the Glen* (1851), *The Children of the Mist* (1853), *A Flood in the Highlands* (1860), and *Man Proposes, God Disposes* (1864), representing two polar bears discovering traces of an Arctic expedition. Landseer was knighted in 1850, and in 1865 declined the offer of the presidency of the Royal Academy. In 1858 he was commissioned to execute the lions at the base of the Nelson monument in Trafalgar Square that were finally placed in position in 1867. Though often accused of introducing too human a sentiment and expression into his dogs, and stags, and horses, Landseer may certainly claim the very highest rank among animal-painters, as well as the highest popularity among the English public, with their feeling for the humour and pathos of animal nature. For pure skill in the representation of silky hair and glossy coat no artist has ever surpassed the *Shoeing the Bay Mare* and the *Cavalier's Pets*, whilst the *Shepherd's Chief Mourner* and *A Random Shot* are supreme among the simple tragedies of animal life. His elder brother, THOMAS LANDSEER (b. 1795, d. 1880), was well known for his excellent engravings. A pupil in engraving of his father and of Haydon, he was also remarkable for the beauty of his mezzotints. Animal pictures, such as *Rosa Bonheur's Horse Fair*, were his favourite subjects, and he will be remembered for the numerous engravings by which he made his brother's works familiar in nearly every English home.

W. Cosmo Monkhouse, *The Works of Sir Edwin Landseer*; F. G. Stephens, *Sir E. Landseer*. [H. W. N.]

Lane, EDWARD WILLIAM (b. 1801, d. 1876), Eastern traveller and Arabic lexicographer, was born at Hereford. His father, who was prebendary of that cathedral, dying in 1814, Lane owed his training largely to his mother, a niece of Gainsborough the painter, and a woman of large and cultivated mind. After some years spent at the grammar-schools of Bath and Hereford, he followed the example of his elder brother Richard (q.v.), and adopted the profession of an engraver. Ill-health, however, compelled him to seek the benefit of a warm climate, and a taste already developed for Oriental studies led him to the East. From these fortuitous circumstances his life took its whole bent. He paid three visits to Egypt, the first in 1825-8, the second in 1833-5, and the third in 1842-9. On the first of these occasions he ascended the Nile to the second cataract—an adventure in those early days—and brought back with him in MS. to England a complete description of Egypt and its monuments, illustrated with more than a hundred

exquisite views taken with the camera lucida and coloured in sepia. The cost of reproducing these drawings prevented the publication of the work, but a portion of it, treating of the modern inhabitants, so pleased Lord Brougham, who then presided over the Society for the Diffusion of Useful Knowledge, that he begged Lane to enlarge it into a separate work. With the thoroughness that characterised him, Lane forthwith devoted a couple of years, spent in Egypt, and chiefly in Cairo, to perfecting this work, which was published in 1836, with the title of *The Manners and Customs of the Modern Egyptians*. It was at once recognised as the one exhaustive and accurate authority on the subject, and has not lost its character with time; it has gone through many editions, besides American reprints and a German translation. Lane's next work was a translation of the *Arabian Nights*, which appeared in monthly parts from 1838 to 1840 (2nd ed., 1859, often reprinted). It was the first accurate version of the tales which Galland had only paraphrased, and though it was necessarily incomplete, inasmuch as some portions of the Arabic are unfit for general reading, it is still the standard version. The notes with which the translator enriched the work render it a sort of encyclopædia of Arab manners and customs, literature, religion, and superstitions; they were separately published in 1883 under the title of *Arabian Society in the Middle Ages*. Lane's third visit to Egypt was undertaken with the special object of preparing a lexicon of the Arabic language, of which his previous residence in Cairo had given him such a mastery that the very Ulama of the University of the Azhar were wont privately to seek his help in difficult questions of philology. He devoted the rest of his life to it, working from ten to twelve hours a day for nearly a third of a century. The difficulty of the work was greatly enhanced by Lane's principle of giving chapter and verse for every explanation. Each statement had initials affixed, showing the native source from which it was derived, except in those portions—perhaps the most valuable— which were the fruit of his own personal observation. This immense task was undertaken at the suggestion and with the pecuniary support of Algernon, 4th Duke of Northumberland, who defrayed all expenses connected with its preparation and publication until his death, when his widow continued her husband's munificent support. Lane did not live to finish his vast work; he published five large volumes (1863-74), and died while engaged in seeing the sixth through the press. His grand-nephew, the writer of this article, undertook the editing of the remaining volumes of the main work. Lane's *Arabic Lexicon* was immediately accepted throughout Europe as the supreme authority, and the leading German scholars hastened

to pay homage to the learning and devotion of the author, whose fastidious and almost incredible laboriousness proved that the days of the Scaligers and Castell were not without a parallel. One other book must be mentioned, the *Selections from the Koran*, which was published in 1843, and of which a new edition appeared in 1879. He also contributed a couple of articles (1849 and 1850) to the *Journal of the German Oriental Society*, of which, as of many other learned societies, he was an honorary member. The Queen awarded him a pension on the Civil List, the French Institute elected him a correspondent of the Académie des Inscriptions in 1864, and he was one of the few Englishmen who were chosen for the honour of the degree of Doctor of Literature at the tercentenary of the University of Leyden.

S. Lane-Poole, *Life of E. W. Lane* (1877).

[S. L. P.]

Lane, RICHARD JAMES, A.R.A. (b. 1800, d. 1872), engraver and lithographic draughtsman, elder brother of the preceding, was trained as an engraver by Heath, and was elected an Associate of the Royal Academy at the early age of twenty-seven. The engraving which procured him this honour was after Lawrence's *Red Riding Hood*, and the artist, who was then president, pronounced the work to be unsurpassed in truth and delicacy. Lane had made his mark as early as 1824, when he exhibited a few drawings, and was quickly besieged with commissions. He soon abandoned engraving for the newly discovered art of lithography, in which he displayed a dignity and refinement of expression, and an instinctive sympathy with his originals, which have never been equalled. Many of his lithographs, despite the usually woolly texture of that expressive process, are so delicate that they have been almost mistaken for line engravings. In 1829 he executed a fine profile of the Queen, then the Princess Victoria, aged ten years, and from time to time he made portraits in pencil or chalk of all the members of the present Royal Family. He was appointed lithographer to the Queen in 1837, and to the Prince Consort in 1840. His most memorable lithographs include reproductions of Lawrence's cycle of George IV.; a volume of sketches after his own grand-uncle, Gainsborough; and numerous works after Leslie, Landseer, and the elder Richmond. *The Rivals*, after Leslie, is a remarkable example of extraordinary delicacy of execution and elaboration. Other notable productions of his pencil are a series of portraits of his own children, George IV. in armour, Don Quixote and Sancho Panza after Leslie, Queen Adelaide and Prince Edward of Saxe-Weimar after Winterhalter, and Lord Cosmo Russell after Landseer. In 1871 he finished his thousandth lithograph. In his latter years he directed an etching class at

the South Kensington Art Schools. Lane also, but only as a recreation, turned his attention to sculpture, and evoked Chantrey's warm admiration by his results, among which the life-size seated figure of his brother Edward the Orientalist is the most important.

Magazine of Art, Aug., 1881, pp. 431, 432.

[S. L.-P.]

Lanfrey, PIERRE (b. 1828, d. 1877), historian, led a life of which the importance was entirely literary until the last years. Then he was returned to the Assembly (1871), taking his seat in the Left Centre, and was ambassador at Berne during M. Thiers' presidency. Besides some anti-clerical works, *l'Eglise et les Philosophes du XVIII^e Siècle* and *l'Histoire politique des Papes* (1863), he wrote his famous *Histoire de Napoléon I.* (1867-75, 4 vols.), which may be considered to have given the death-blow to *l'Idée Napoléonienne*.

Langdale, THE RIGHT HON. HENRY BICKERSTETH, BARON (b. 1783, d. 1851), a native of Kirkby Lonsdale, Westmoreland, was the son of Henry Bickersteth, a surgeon and apothecary. After serving as apprentice to his father, he entered Caius College, Cambridge, graduating as senior wrangler and first Smith's prizeman. He then entered the Inner Temple, and was called to the bar in 1811. He became a King's Counsel and a Bench of the Inner Temple in 1827. His practice was confined to the Equity Courts. In 1836 he succeeded Lord Cottenham as Master of the Rolls, and was called to the House of Peers and sworn a privy councillor. To his exertions were due the erection of the present Record Office for the reception of the national archives. He was offered the Lord Chancellorship by Lord J. Russell in 1860; his duties, however, at the Court of Chancery were too exacting to enable him to accept it. Lord Langdale was a zealous advocate of liberal opinions, and a distinguished disciple of Bentham. He retired from his official duties only a few weeks before his death.

Lankester, EDWIN, F.R.S. (b. 1814, d. 1874), an English physician and scientific writer, was a native of Melton, in Suffolk. After studying at University College, and becoming a member of the Royal College of Surgeons and the Apothecaries' Company, he took up his residence at Heidelberg, where he graduated M.D. in 1839. From that date he filled various offices in the different medical schools and museums of London, having been successively lecturer on materia medica and botany in St. George's Hospital School, professor of natural history in New College, lecturer on anatomy and physiology in the Grosvenor Place School of Medicine, and afterwards on the practice of medicine, superintendent of the food collection at

South Kensington, examiner in botany to the Science and Art Department, and finally coroner for Middlesex, as holder of which office he was widely known. He also delivered numerous courses of popular lectures, and in addition to many more or less scientific contributions to magazines and natural history journals, more particularly to the *Quarterly Journal of Microscopical Science*, which he founded and edited, he published *Guide to the South Kensington Food Collection, and Uses of Animals to Man*, edited Macgillivray's *Natural History of Deeside*, translated Schleiden's *Principles of Botany*, and was connected with a great deal of other literary labour. He has left behind him no original work or discovery of importance, his success being for the most part due to his energy in the popularisation of knowledge. It may be added that he was one of the founders and for many years treasurer of the Ray Society.

* **Lankester**, EDWIN RAY, F.R.S., LL.D. (b. 1847), zoologist, son of Dr. Edwin Lankester (q.v.), after leaving St. Paul's School, entered Christ Church, Oxford, and in 1872 was elected fellow and tutor of Exeter College, and in 1874 professor of zoology and comparative anatomy in University College. Professor Lankester early devoted himself to zoology, his first paper being published when a boy at school, and several of his contributions to zoology and paleontology appearing during his undergraduate career. Among the many memoirs which he has produced may be cited his *Fossil Fishes of the Old Red Sandstone*, his *Contributions to the Development of the Mollusca* (*Philosophical Transactions*, 1875), and his treatises on the *Hydrozoa and Mollusca* in the ninth edition of the *Encyclopædia Britannica*. He has also written separate volumes on *Degeneration: a Chapter on Darwinism* (1880) and *Comparative Longevity* (1871), and has edited Haeckel's *History of Creation* and Gegenbauer's *Comparative Anatomy*, while, as principal editor of the *Quarterly Journal of Microscopical Science*, he has aided, either directly or indirectly, in the promulgation of a great amount of scientific work. In 1882 Mr. Lankester was appointed professor of natural history in Edinburgh, but resigned the post before entering upon its duties, and was re-elected Jodrell Professor in University College. He has presided over the Biological Section of the British Association, and may be regarded as the founder of the Biological Laboratory at Plymouth. Mr. Lankester is F.R.S., F.L.S., and received the degree of LL.D. from the University of St. Andrews.

Lannes, JEAN, DUC DE MONTEBELLO (b. 1769, d. 1809), a French marshal, born at Lectoure, was apprenticed to a dyer, but on the outbreak of the French revolution (1792) he entered the army, and was so rapidly

promoted that in 1794 he was *chef de brigade*. The army reform of 1795 necessitated, however, his dismissal; but Lannes, nothing daunted, re-enlisted in the army of Italy. He soon fought his way up again, and in the following year (1796) Bonaparte once more made him *chef de brigade*. He next accompanied Bonaparte to Egypt as general of one of Kléber's brigades, and in 1800 commanded the advanced guard in crossing the Alps, gained the victory at Montebello, and distinguished himself in the battle of Marengo. In 1801 he was sent as ambassador to Portugal, but Lannes was less successful in diplomacy than in war. He soon returned to France to become marshal, and to command once more the advanced guard of the French army. He fought at Austerlitz, Jena, and Friedland, and in 1808, as commander-in-chief, marched into Spain, and overcame the forces of Castaños on Nov. 22nd. He next captured Saragossa (Feb. 21st). From Spain he was ordered to Austria, and at the bloody encounter between Aspern and Essling on May 22nd, 1809, the gallant general received his mortal wound. Napoleon had created him Duc de Montebello in the March preceding.

René Perin, *Vie militaire de J. Lannes*.

* **Lansdowne, THE RIGHT HON. HENRY C. K. FITZMAURICE, 5TH MARQUIS OF** (*b.* 1845), the eldest son of the 4th marquis, was educated at Eton and Balliol College, Oxford, and succeeded to the marquise in 1866. From 1868 to 1872 he was a Lord of the Treasury, and from 1872 to 1874 Under-Secretary for War. In 1880 he was appointed Under-Secretary for India, but resigned soon afterwards on account of his disapproval of Mr. Gladstone's Compensation for Disturbance (Ireland) Bill. In May, 1883, he became Governor-General of Canada, and the chief event of his administration was the half-breed rebellion of 1885.

Lansdowne, THE RIGHT HON. HENRY PETTY FITZMAURICE, 3RD MARQUIS OF (*b.* 1780, *d.* 1863), the second son of the 1st marquis (*d.* 1805), who was better known as Lord Shelburne, was educated partly under Dugald Stewart at Edinburgh, and partly at Trinity College, Cambridge. Entering Parliament in 1802 as Whig member for Calne, Lord Henry Petty distinguished himself as a debater, and his speech against Lord Melville's naval administration gained him the office of Chancellor of the Exchequer in the Ministry of All the Talents. At the same time he was returned for Cambridge University in the place of Pitt, defeating two formidable opponents in Lord Althorp and Lord Palmerston. Raised to the peerage in 1809 by the death of his half-brother, Lord Lansdowne while in opposition was a zealous advocate of Liberal principles, and in 1826 became Canning's Home Secretary. He was

also Foreign Secretary in the short-lived administration of Canning's successor, Lord Goderich, and became Grey's President of the Council in 1831, which office he held for ten years. He then became the leader of the Opposition in the Upper House, and proved a most courteous and moderate adversary to ministers. In 1846 he became Lord President in the Russell ministry, and in 1852 was requested by the Queen to undertake the Premiership, but declined the honour, consenting, however, to hold a seat in Lord Aberdeen's Cabinet without office. Although Lord Lansdowne's Liberalism was not of a very robust type, it was not the less sincere, and his urbanity was a great force in political life.

Laplace, PIERRE SIMON, MARQUIS DE (*b.* 1749, *d.* 1827), a famous French astronomer and mathematician, was of the humblest origin, and his early years were spent in the poverty of a peasant farmer's household of the *ancien régime*. All the education that he obtained was due to the kindness of wealthier friends in his native town of Beaumont-en-Auge, where his abilities soon became conspicuous. His first inclinations were towards theological controversy, but mathematics soon claimed his main attachment, and so ardently did he pursue their study that he obtained the post of mathematical master in the military school of Beaumont, and by the time he was eighteen, through the influence of D'Alembert, the professorship of mathematics in the École Militaire of Paris. From that day his success, social and scientific, was almost uninterrupted. Possessed of a powerful analytical intellect, he soon mastered all that was then known of mathematics and their application to astronomy, and this once accomplished he advanced into unknown regions with such rapid but certain strides, that the "Newton of France," the title which his countrymen apply to him, is better deserved than the majority of such grandiose pseudonyms. Admitted into the Academy of Science at an unusually early age, he fairly astonished the *savants* by the papers which he presented in quick succession, solving problems hitherto regarded as impenetrable, and offering demonstrations which until then had defied the efforts of the most accomplished geometricians. His *Mécanique céleste*, the application of mathematics to astronomy, is a monumental work, though unhappily it requires a knowledge of geometry almost as profound as his own to understand the five volumes (1799-1825). Next to Newton's *Principia*, it is the most prized of the astronomer's text-books. His *Exposition du Système du Monde* (2 vols., 1796) is simpler and more generally read. It is, as Arago said, "the *Mécanique céleste* disencumbered of its analytical paraphernalia." The scientific career of Laplace had up to this date been intellectually of the most brilliant description, and in spite of the charges of scant

acknowledgment of obligations brought against him by Legendre and Thomas Young, it is not really marred by any act of proved dishonesty. The political life into which he was tempted after the revolution was much less to be admired. It displayed nothing save suppleness, time-serving, and incapacity. At first an ardent Republican, he judiciously attached himself to Napoleon, and was rewarded by him with the post of Minister of the Interior. In six months, however, he had to be shelved in the senate, and how inapt he was may be inferred from the fact that Lucien Bonaparte, who succeeded him, was generally regarded as a better administrator. He brought, as the First Consul remarked, the "spirit of the infinitesimal" into the sphere of politics. In 1803 he became Chancellor of the Senate, and Grand Officer of the Legion of Honour, and on the proclamation of the Empire, had the dearest desire of his heart gratified by being named count. By 1814, however, the Napoleonic star had apparently set, and accordingly "Count de la Place" had no difficulty in voting for the appointment of a provisional government, the deposition of the Emperor, and the restoration of the Bourbons. This complaisance secured him the title of Marquis, and a seat in the new House of Peers, where, as in the Napoleonic régime, he displayed astonishing unfitness for the duties assigned him, and the servility which had ever been the most marked characteristic of this great-brained but little-souled man. Personally, his egotism and vanity were equal to his lack of political principle, which rather shocked his contemporaries, even in an age when men regarded the swift revolutions of their country as providential means for securing their own advancement. Yet, though not loved much by his compeers, he is said to have shown great kindness to young men, and even to have displayed something like generosity in his treatment of them. His scientific sagacity was, however, almost unsurpassed, and his memory is said by those who knew him personally to have been well nigh incredible. His investigations cover a great field, but all of them tend in the direction of testing by the laws of gravitation the causes of various irregularities in the motion of the planets, the bearings of which on astronomy and physics are fully recorded in every history of science. "He would have completed the science of the skies," Fourier declared, "had the science been capable of completion." He left one son, who became a general in the French army. An edition of his works in 7 quarto vols. (1843-7) was published at the expense of the Government, and most of them have appeared in English and German translations. Another complete edition is at present in course of issue under the editorship of the Academy of Sciences.

His *Biogé* may be found among the rest of

Arago's *Biographies*, and notices of him, more or less full, are contained in the journals and proceedings of the learned societies between the years 1825 and 1827. [R. B.]

Lapenberg, JOHANN MARTIN (b. 1794, d. 1863), German historical writer, studied medicine at Hamburg and Edinburgh, but afterwards turned to history, and in 1816 took the degree of Doctor of Laws at Göttingen. He was then minister-resident for Hamburg at Berlin until 1823, when he became keeper of the Hamburg archives, which post he resigned in 1863. Lapenberg's works are chiefly connected with Hamburg, and the Hanseatic League, with the exception of his *Geschichte von England* (2 vols., 1834-7), which was translated by Thorpe. It covers the Anglo-Saxon period and part of the Norman (down to 1160); and, though now but little read, is a work of admirable research, the more valuable in that its criticism comes from outside. It was continued by Dr. Pauli (q.v.).

Lardner, DIONYSIUS, LL.D. (b. 1793, d. 1859), was the son of a Dublin solicitor, whose office he entered for a while, but evincing an invincible dislike to the legal profession, entered Trinity College, Cambridge, where he graduated B.A. in 1816. During the ten years he was at the university he published several treatises on the higher branches of mathematics and on the steam-engine (for which he received a gold medal from the Royal Society of Dublin), and contributed to the *Edinburgh Encyclopædia* and *Encyclopædia Metropolitana*. In 1827 he was appointed professor of natural philosophy at the newly founded University of London, and set on foot his *Cabinet Encyclopædia* (1830-4), which extended to 133 volumes, and for which he obtained the assistance of Scott, Mackintosh, Herschel, Nicolas, Brewster, Southey and others. The larger part of the scientific articles were by himself. In 1840 he visited the United States, and afterwards published the successful series of lectures that he had delivered there. From his pen, in addition to the works alluded to, we have *Railway Economy* (1850), *Handbooks on Natural Philosophy and Astronomy* (1854-6), *Popular Essays on Scientific Subjects*, and *The Museum of Science and Art* (1854-6).

Lasker, EDOUARD (b. 1829, d. 1884), German politician, was born of orthodox Jewish parentage at Jaroczyn, near Posen, and after studying law at Breslau and Berlin, and visiting England for three years, he became a prominent solicitor in the Prussian capital. He did not enter upon political life till 1865, when he was elected deputy to the Prussian Diet as a member of the Progressist or Radical party (*Fortschritt-Partei*). The great events of the following year, however, and the consequent formation of the North German Federation, gave him the opportunity for taking a prominent part in the constitution of the Old or National Liberal party, that for

some thirteen years continued to comprise Bismarck's most trusted and enthusiastic supporters. During the first ten years of this period Dr. Lasker occupied one of the highest and most influential positions in the Prussian and German political world. His foresight, eloquence, and uncompromising earnestness gained for him general respect and popularity. He distinguished himself especially by promoting the codification of the criminal law and procedure, and by his eloquent exposure of the great railway swindles of 1873. That year marked the height of his power, and after a serious illness in 1875 it rapidly declined. Unfortunately for himself his residence in England had persuaded him to regard the English Constitution as an ideal exemplar. He was the leading representative of the English or Manchester party in Berlin, and as such was naturally shocked by the Chancellor's increasing tendency to protection and increasing disregard of majorities, especially on the question of the *Kulturkampf*. [FALK.] In 1880 he was the leading spirit in the small party of Secessionists, and henceforward he confined himself to mere negation and criticism, till signs of brain paralysis forced him to visit America in hopes of rest. The excitement of his welcome by German Liberals in the States was, however, too much for him, and he died suddenly at Philadelphia. Some weeks later the House of Representatives at Washington forwarded a sympathetic resolution on his death to be presented before the Reichstag at Berlin; but Bismarck refused to submit the memorial on account of a clause which stated that the labours of the deceased had been of extraordinary advantage to Germany. The incident aroused considerable indignation in America.

C. Lowe, *Prince Bismarck: his Life and Times*.

Lassalle, FERDINAND (b. 1825, d. 1864), Socialist, was the son of Jewish parents, and was born at Breslau. He studied at the University of his native town, and subsequently at Berlin, where his brilliant talents speedily attracted attention. In 1846 his name was brought prominently before the public by his eager championship of the cause of the Countess Hatzfeldt, a lady who was seeking to gain redress in the courts of law for the injuries inflicted upon her by her husband, and after several years he brought the suit to a successful conclusion. In the meanwhile he had become known as one of the leaders of the extreme Democratic party in Germany, and in 1848 suffered a short imprisonment for inciting the working classes to armed resistance. In 1857 he settled in Berlin, and published a learned work on the philosophy of Heraclitus of Ephesus, and a philosophical drama, *Franz von Sickingen*. He was studying history, law and philosophy, as well as economics, and in 1861 gave to the world the fruit of his labours in his *System of Acquired Rights*. At the same time he

came forward prominently as the champion of the rights of the lower orders against the Liberals and Constitutionalists as well as against the Conservatives. In a lecture delivered in the spring of 1862 he declared that the working classes must get the chief power in the State into their own hands. In April he enunciated his famous *Programme for the Working Classes* at a meeting of Berlin artisans. In this *Arbeiterprogramm* the Socialist doctrines of Lassalle are clearly and concisely set forth. He calls for a revolution, though not necessarily a violent one, which will make the conditions of life square with the modern ideal, and break down the monopoly of the propertied classes. Capital has usurped the position and privileges once occupied by the feudal aristocracy; it is necessary that the labourers should transfer the advantages enjoyed by the capitalists to themselves. The essay is, for the most part, moderate in tone, and seldom appeals to passion. The Government, however, caused him to be tried for sedition and exciting the poor to violence, and in spite of a skilful and eloquent defence, he was sentenced to four months' imprisonment. On his release he employed himself actively in spreading his social-democratic ideas among the working men by lectures and pamphlets, and tried especially to wean them from the way of the Liberals and the political economists. He violently attacked Schutze-Delitsch (q.v.), and denounced the workmen's benefit associations. The Schutze-Delitsch party summoned a great workmen's conference at Frankfurt. Lassalle succeeded in bringing over the majority to his views, and a resolution was passed condemnatory of the Liberals and political economists. In May, 1863, under Lassalle's auspices, delegates from the working men of several of the great German towns met at Leipzig to found a great Labour Union, which, however, had for its chief object that of promoting manhood suffrage and reforming the system of taxation. Disputes in the body of the new organisation, the bitter quarrel with the economic party, and the attempts of the Government to convict him of inciting to sedition, caused Lassalle to pass the remainder of 1863 and the early part of the next year in a whirl of excitement. In the summer of 1864 he sought rest in Switzerland. Instead, he found an early grave. In Switzerland he met a lady named Helena von Dönniges, the beautiful daughter of a Bavarian diplomatist. Helena fell violently in love with Lassalle, though she was betrothed to a young Roumanian nobleman; but she was compelled by her father to write him a cold letter of dismissal. Lassalle wrote a furious and insulting letter to both the father and the Roumanian lover, and in a duel with the latter was killed.

There are *Lives* of Lassalle by G. Brandes in German, and A. Aarberg in French.

[S. J. L.]

* **Laveleye, ÉMILE DE** (b. 1822), writer on economics, was educated at the Bruges Athenæum, and the Collège Stanislas at Paris. Having completed his studies there he returned to his native country and studied law at Ghent, and began his literary career in 1844, when he published his *Mémoire sur la Langue et la Littérature Provençale* and *Histoire des Rois Francs* in 1847. Since 1848 M. Laveleye has devoted himself almost exclusively to politics and economics. In 1861 he failed to obtain a seat in Parliament, and was appointed in 1864 professor of political economy at the University of Liège; and, already a corresponding member of the Royal Academy of Belgium, was elected in 1869 to a similar position in the French Academy of Moral and Political Science. Of his numerous writings, the following are the principal :—*L'Armée et l'Enseignement* (1848), *Le Sénat Belge* (1849), *L'Enseignement obligatoire* (1859), *La Question de l'Or* (1860), *Les Nibelungen* (1861), a translation, together with a study on the formation of the Epopée, republished with songs from the Eddas, in 1866; *Questions contemporaines* (1863), *Essai sur l'Économie rurale de la Belgique* (1863), *Étude d'Économie rurale* (1864), *Le Marché monétaire depuis Cinqante Ans* (1865), *Études et Essais* (1869), *La Prusse et l'Autriche depuis Sadowa* (1870), *Essai sur les Formes du Gouvernement dans les Sociétés modernes* (1872), *L'Instruction du Peuple* (1872), *Le Parti Clerical en Belgique* (1873), *Des Causes actuelles de la Guerre en Europe et de l'Arbitrage international* (1873), *De la Propriété et de ses Formes primitives* (1875), *De l'Avenir des Peuples catholiques* (1875), *L'Avenir religieux des Peuples civilisés* (1876), *La Monnaie bimétallique* (1876), *La Question monétaire en 1881*, and *Lettres d'Italie* (1880), *Éléments d'Économie politique* (1882), *Le Socialisme contemporain* (1883), and *Nouvelles Lettres d'Italie* (1884).

Lawrence, JOHN LAIRD MAIR, BARON (b. March 24th, 1811; d. June 27th, 1879), Governor-General of India, younger brother of Sir Henry Lawrence (q.v.), was the son of Colonel Alexander Lawrence, a Peninsular officer. Educated at Foyle College, London-derry, and at Haileybury, he received a nomination to a writership in the East India Company, and in 1831 was appointed assistant to the Chief Commissioner at Delhi. In that territory he remained until 1846, with the exception of part of 1838, during which he settled the land revenue in the district of Etawah, and two years' furlough (1840-2), spent in England, during the course of which he married. His task was twofold—first the extirpation of banditti, which occupied the first few years of his administration, and which he accomplished by a series of well-organised police raids; and secondly the settlement and collection of the land revenue. Appointed officiating magistrate and collector in 1834,

by untiring energy, rigorous justice, and brilliant organisation, he reduced the riotous Paniput district to order. At Etawah he was equally successful; and rapidly introduced the long-lease system of Robert Mertins Bird, by which the ryots, or peasant proprietors, were delivered from the oppression of the talukdars (a class of land middlemen corresponding to the zemindars of Bengal), and given security of tenure. In 1846 came the first Sikh War, and with it John Lawrence's opportunity for distinction. The great battle of Ferozeshah had left our forces utterly exhausted, and would inevitably have been followed by crushing defeat, when John Lawrence sent the necessary supplies in hot haste from Delhi, and enabled the army to gather itself together for the final victory of Sobraon. His reward was the administratorship of the annexed district, the Julinder Doab. Here he had to deal with tribes chafing under defeat, and by the magic of his presence soon succeeded in reducing them to order and content. The second Sikh War followed in 1849, and Lord Dalhousie determined to depose the young Maharajah Dhuleep Singh, and to annex the Punjab up to the Khyber. John Lawrence earnestly supported this step, but at first affairs did not prosper. The board of administration contained jarring elements; its head, Henry Lawrence, differed with his brother John on vital questions of policy, and the two placed their respective resignations almost simultaneously in the hands of Lord Dalhousie. He determined to dissolve the board, and to retain the younger brother as Chief Commissioner. The brothers parted after a period of the most painful tension, and never saw one another again. John proceeded to organise the province which Henry had pacified. Very speedily good government was established over the whole province; it was divided into districts, opened up by roads and bridges, patrolled by the splendid corps of Guides. The revenue was justly assessed and regularly collected, and the Punjab, previously the seat of misgovernment, became the home of prosperity. Good relations were further established with the Ameer Dost Mohammed, with whom, at an important durbar, held in 1851, Lawrence concluded a treaty by which the Ameer was subsidised, and agreed in return to receive a native resident (Vakeel) at Cabul. The infinite value of this arrangement was apparent when a few months afterwards the storm of the Mutiny burst upon India. But of more value to the empire was the genius of the Chief Commissioner himself. He was at Rawul Pindi when the news reached him, and at once saw, and, what was of more importance, had the courage to carry out, the only possible policy. The regular Sepoys, 36,000 in number, were rapidly disarmed; and Lawrence threw himself upon the magnanimity of the irregular Sikhs, whom he had himself reduced to dependence. They readily responded to his

call. Not only did the original force of irregulars remain staunch, but it was speedily raised from 12,000 to 30,000. "It is not our system but our men," he said later on in answer to a request for hints from the Resident at Benar; and there can be no doubt that it was his own personality and that of his subordinates which induced the Punjabis to stand by their conquerors. Meanwhile, with a general's eye he had perceived that Delhi was the true objective, and was urging General Anson to action with all the eloquence at his command. "What we should avoid is isolation," he wrote, "and the commanders of stations each looking to his own charge, and not to the general weal." It was in this spirit that, depending on a force of hastily levied militia, under Neville Chamberlain, to keep the Punjab in order, he sent up the Guides to Delhi, and despatched further levies in their wake as soon as they could be drilled into cohesion. Still the stronghold of the rebels did not fall; and Lawrence knew full well that there were limits to the loyalty even of the Punjabis. He was prepared in the last extremity to hand over Peshawur to Dost Mohammed, retire behind the line of the Indus, and thus set free some 3,000 European troops to reinforce the investing army. This decision was made in August, but on Sept. 30th Delhi fell, thanks to Lawrence's despatch of Nicholson's column, and the worst was past. Lawrence set himself to work to moderate the vengeance of the conquerors. "It seems to me," he wrote to Lord Stanley, "that, setting aside all considerations of mercy and humanity, we have not the means of enforcing such a policy." On his return home in 1859 he received a baronetcy and a life pension of £2,000 a year. During his residence in England he was not idle, but took a seat in the new Indian Council, although work in which he was a subordinate was very distasteful to him. In 1864 Lord Elgin died, and Lawrence was appointed Viceroy in his stead. His five years' tenure of office was not particularly eventful as far as India itself was concerned; the Orissa famine was bravely grappled with, and the tenant-right question was threshed out in all the provinces successively, in the face of much bitter criticism, until Lawrence had succeeded in securing at all events a certain amount of security for the cultivators of the soil. His external policy was styled by the late Mr. J. W. Wylie one of "masterly inactivity," and the designation has passed into a proverb. Lawrence deliberately confined himself to non-intervention beyond the frontier, supporting neither side in the civil war which was desolating Afghanistan, but recognising Shere Ali and Afzul Khan by turns as they got the upper hand. "Should a foreign power," he wrote in his last despatch, "such as Russia, ever seriously think of invading India, or what is more probable, of stirring up elements of disaffection

or anarchy within it, our strongest security would be found to be in previous abstinence from entanglements at Cabul." On his return to England he was created Baron Lawrence of the Punjab, and of Grately, Hants, with the motto, "Be ready." His iron frame was not yet worn out; and as chairman of the Church Missionary Society and of the London School Board he worked with might and main. To the second Afghan War he was a most emphatic opponent; he argued against it with persistency, and he prophesied the death of Cavagnari and his staff. At last he became nearly blind. He was buried in Westminster Abbey, near Outram and Clyde. Lawrence is undoubtedly the most impressive figure of all the Mutiny heroes, and they are all very great men. To the matchless valour which was common to them all, he added a power of organisation, without which they would all have been overwhelmed. Frere and Edwardes can challenge his renown, but he saved India, if any one man can be said to have done so. When the moment came he knew exactly what to do; but even of more importance was the king-like power by which he had bent the Sikhs to his will, and the unerring skill with which he had long before selected the "men" to carry out his imperial policy.

Mr. R. Bosworth Smith's *Life of Lord Lawrence*.
[L. C. S.]

Lawrence, Sir Henry Montgomery (b. 1806, d. 1857), Indian administrator, the elder brother of Lord Lawrence (q.v.), entered the Bengal Artillery in 1822, and having served in the first Burmese War, went home on furlough. In 1829 he returned to India with his brother John, and was appointed revenue officer in the north-west provinces by Lord William Bentinck. While thus employed he married his cousin, Honoria Marshall, who was a model wife to him. Recalled to active service by the outbreak of the first Afghan War, in 1838, he was appointed assistant to Sir George Clark, the Resident at Ferozpur, and displayed extraordinary powers of governing men in the organisation and command of the Sikh contingent which aided Pollock in forcing the Khyber Pass on the way to the relief of Jellalabad. His reward was the superintendship of the Dehra Doon district, conferred upon him by Lord Ellenborough, but the appointment was discovered to be illegal, and he was sent to administer the lapsed State of Kythul. Transferred six months afterwards to Nepaul as British Resident, he remained there until the outbreak of the first Sikh War (1845). During this period he contributed a series of masterly papers on Indian questions to the *Calcutta Review*, republished under the title of *Essays, Military and Political*; and he founded, at great pecuniary sacrifice, and under discouragement from the authorities, the Lawrence Asylum for

Soldiers' Orphans at Sanawar, near Simla. His experience of the Sikhs naturally led to his being summoned to the front in 1845. He served through the war by the side of Lord Hardinge, received the rank of lieutenant-colonel, and when the final victory of Sobraon had been won, gave his opinion against the annexation of the Punjab and in favour of reconstituting the Sikh government. He was then appointed Resident at Lahore and president of the Council of Regency, which was to administer the country during the minority of the Maharajah Dhuleep Singh (Dec., 1846). He soon found that his native colleagues were unstable; the queen-mother intrigued, and was removed; but by the aid of his assistants, Nicholson, Edwardes, and, above all, his brother John, the province was reduced to order. Quitting for England on leave, he was recalled in November, 1848, by the outbreak of the second Sikh War, which resulted in the total annexation of the Punjab. Though still opposed to annexation, and chafing under Lord Dalhousie's régime, Lawrence became president of the new board of administration, with John Lawrence as a member of the commission. The two brothers soon began to advocate divergent views. Henry was in favour of establishing Runjet Singh's old followers as a pensioned and landed nobility. John declared for the cultivators of the soil. The result was a quarrel between the brothers; both sent in their resignation, and that of Sir Henry was accepted by Lord Dalhousie (1853). He was appointed instead agent at Rajputana, and there lost his noble wife. Despite the fact that his heart burned within him on account of Lord Dalhousie's treatment, Lawrence could not be idle, but projected fresh asylums, and issued warnings, which were unfortunately neglected, upon the scanty numbers of our troops in India. He was appointed, on the eve of the mutiny, Chief Commissioner at Oudh, and soon afterwards brigadier-general of the province. On his arrival at Lucknow he at once repressed the disturbances in the city, and for a brief moment it appeared as if the worst had passed. But the mutiny spread far and wide, and Lawrence made the Residency ready for defence. His chief anxiety was not for himself, but for Wheeler, at Cawnpore. In May, Oudh was in full rebellion, and the enemy massed themselves at Chinhut, six miles out of Lucknow. Lawrence, on June 29th, advancing to attack them with a small force, was defeated through the misconduct of the native artillery, and retreated with difficulty into Lucknow. The movement was doubtless a mistake, and the Residency was soon closely besieged. On the second day, July 2nd, he was shot as he was listening to a memorandum on the victualling of the garrison which had been drawn up by his order, and died two days afterwards. Nevertheless his efforts went far to save the empire, not only by

making Lucknow its bulwark, but chiefly by his conversion, years before, of the inhabitants of the Punjab from a sullen and recently conquered State to a loyal people, ready when the time came to aid their conquerors. Had he lived he would have been Viceroy of India.

Sir Herbert Edwardes, *Life of Sir Henry Lawrence* (vol. II. by Herman Merivale): Rees, *Personal Narrative of the Siege*; Sir J. W. Kaye, *Lives of Indian Officers*. [L. C. S.]

Lawrence, Sir Thomas (b. 1769, d. 1830), president of the Royal Academy was the son of a Bristol inn-keeper. Having displayed extraordinary precocity as a drawer of likenesses, he commenced his artistic career at Bath in 1782 by taking crayon portraits. He gained a prize from the Society of Arts in 1784. In 1787 he came to London, and was admitted a student of the Royal Academy, of which he became associate in 1791, full member in 1798, and president in 1826. He also became painter-in-ordinary to the king in 1792, and was, in fact, the fashionable portrait-painter of the day after the death of Reynolds (1792); royalty, nobility, and wealth eagerly competing for the honour of sitting to him. In 1818 he painted the members of the Congress of Aix-la-Chapelle. Nevertheless, he never rose above the conventional, and was at times extremely insipid and artificial. His historical pictures, *Coriolanus*, *Cato*, *Satan*, and so forth, are deservedly forgotten.

D. E. Williams, *Life and Correspondence of Sir T. Lawrence* (1831).

Lawrence, Sir William, Bart. (b. 1783, d. 1867), a distinguished surgeon, was the son of a Cirencester surgeon, and was educated under Abernethy, whose demonstrator at St. Bartholomew's Hospital he subsequently became. In 1805 he became a member of the Royal College of Surgeons, in 1813 was made assistant-surgeon, and in 1824 full surgeon to St. Bartholomew's Hospital. This appointment he continued to hold till two years before his death. In 1813 he was elected surgeon to the Eye Infirmary, now the Royal Ophthalmic Hospital, Moorfields, in 1815 professor of anatomy and surgery to the Royal College of Surgeons, and in 1828 he succeeded Abernethy as lecturer on surgery at St. Bartholomew's. He was elected a Fellow of the Royal Society in 1813, and on the formation of Queen Victoria's household became one of her Majesty's surgeons extraordinary, and at the time of his death was her senior sergeant-surgeon. He was created a baronet in 1867. While yet seventeen, Lawrence produced a translation of a *Description of the Arteries of the Human Body*, a work in Latin by Adolphus Murray of Upsala. The first edition of his well-known work on *Hernia* appeared in 1807, and rapidly ran through half a dozen editions, and his *Observations on Lithotomy*, in which he recommended the use of the knife instead of the gorget, and

the return to the true lateral operation, came out in 1809. The celebrated *Lectures on Anatomy, Physiology, Zoology, and the Natural History of Man*, delivered at the Royal College of Surgeons, were published in 1819. These lectures did valuable work in exciting a love for the study of the comparative anatomy and the natural history of man, but they created great and widespread hostility by the tone and freedom—to say the least, injudicious—with which the connection between organisation and the mental and intellectual faculties of man was discussed. Lawrence was considered a materialist, and was called upon to resign his appointments or change his opinions. He compromised the matter; he regretted the publication of the lectures as “highly improper,” and promised to “withdraw them from circulation, and never publish anything more on similar subjects.” He kept his word in calling in the copies; but the whole edition was privately disposed of to Carlisle, of Fleet Street, by whom they were sent to America. Amongst his other numerous works, his treatises on the *Venerereal Diseases of the Eye* (1830-1) and his work on *Rupture*, are reckoned the most important.

Medical Times and Gazette, The Lancet, and The British Medical Journal, July 13th, 1867.

LAWSON, CECIL (b. 1851, d. 1882) was the youngest son of Mr. William Lawson, portrait painter, and brother of Malcolm Lawson, the composer. His earliest works were rejected at the Academy, and the first that he succeeded in bringing before the public was *Ice on the River*, hung by the New British Society in Bond Street. In 1870 he gained admission to Burlington House, and *Cheyne Walk, Chelsea*, in this, and *The River in Rain*, and *A Summer Evening in Cheyne Walk*, in the following year, were well hung, and attracted considerable notice. Subsequently his pictures were either rejected, or those taken—viz. *A Lament* (1872), representing the Thames in process of transformation, by means of the embankment, from its old picturesqueness, *A Pastoral* (1873), *The Hop Garden* (1876), *View from Don Saltero's, Chelsea* (1877), *The Wet Morn, Old Battersea*, and *An Autumn Sunrise* (1878)—were skied, and the artist remained obscure until the last-mentioned year, when his *Minister's Garden* and *A Pastoral* attracted admiration at the Grosvenor Gallery. The remainder of his brief career was an unbroken success. In 1879 he exhibited at the Grosvenor *Kent* (the earlier *Hop Garden*) and three landscapes, *A Morning Mist*, *'Twixt Sun and Moon*, and *The Haunted Mill*. The same year he married, and went to live at Haslemere, a country residence bought from Mr. Boughton, A.R.A., where he found fresh material for his brush. *The August Morn*, now in the National Gallery, was exhibited at the Grosvenor in 1880. A visit to Yorkshire in this year gave rise to *Wharfedale, The Valley of Desolation*, and

Bardon Moors, exhibited 1881. *The Doone Valley* and *West Lynn* in the Academy of 1882 were reminiscences of a Devonshire tour. An exhibition of his pictures was held at the Grosvenor the winter following his death.

E. W. Gosse, *Cecil Lawson: a Memoir* (1883).

* **LAWSON, SIR WILFRID, 2ND BARONET** (b. 1829), the nephew of Sir James Graham, was privately educated, and succeeded to his father's title in 1867. After unsuccessfully contesting West Cumberland in 1857, he sat for Carlisle in the Radical interest from 1859 to 1865, when he was an unsuccessful candidate. Sir Wilfrid was re-elected for Carlisle in 1868, 1874, and 1880, was rejected by the Cockermouth division of Cumberland in 1885, but gained the seat in 1886. In the House of Commons Sir Wilfrid's power of humour makes him generally popular. He is an ardent temperance advocate, introduced his Permissive Bills as far back as 1864, and in 1880 carried an important resolution in favour of local option.

* **LAYARD, SIR AUSTEN HENRY, G.C.B.** (b. 1817), the discoverer of Nineveh, is an Englishman on his father's side, a Spaniard on his mother's, a Parisian by birth, and an Italian by education: a combination of nationalities which at one time seriously prejudiced a British constituency against him, till he won the electors to his side by humorously demanding of them whether if a man were born in a stable they would call him a horse. His youth was spent chiefly in Italy, whence he came to London in 1833 with the intention of studying for the bar. Law, however, failed to attract his interest, and he found himself bitten with the passion for travel and adventure. In 1839 he journeyed in the countries bordering the Levant, sometimes acting as a newspaper correspondent at Constantinople, at others wandering in Asia Minor and the little-explored countries beyond. He lived in the golden age of exploration, when Egypt had been revealing her antiquities to the patient researches of Champollion and Wilkinson; when Burckhardt and Lane had made the world familiar with the character and customs of the Arab and the Egyptian, and other explorers, like Lepsius, Chesney, and Rich were on the field of discovery. Among this band Layard was destined to hold a conspicuous place. He was fully possessed with the inquiring spirit of the age. Botta was already at work at Khorsabad, whence he conveyed to France those Assyrian monuments which are among the chief glories of the Louvre, when Layard returned to Constantinople full of his plans for excavation in Mesopotamia. In the British Ambassador, Sir Stratford Canning, afterwards Lord Stratford de Redcliffe, he found a ready sympathiser; and it was with the private funds advanced by Sir Stratford himself that Layard

in 1845 began his celebrated excavations at Birs Nimrud, which enriched the British Museum with the splendid collection of Assyrian monuments given to the nation by the generosity of Sir S. Canning. The record of these excavations has been graphically written by their conductor in various books:—*Nineveh and its Remains* (1848-9); *Nineveh and Babylon* (1849-51; abridgment, 1867); *Discoveries in the Ruins of Nineveh and Babylon* (1853); besides the volumes of drawings published in 1849 and 1853. The narrative of discoveries attained an immediate and lasting popularity, and was translated into several languages. A Nineveh Court was erected in the Crystal Palace, for which Layard wrote a guide. Valuable as were his achievements as a discoverer, Layard was not scholar enough to tackle the immense difficulties of the interpretation of the inscriptions he had unearthed. He was content to provide the materials, and he left the task of elucidation to men like Sir H. Rawlinson, Oppert, Hinckes, and Norris. The British Government, less ready than their ambassador to recognise archaeological merit, paid little attention to the popular discoverer, and only in 1849 appointed him *attaché* to the Embassy at Constantinople. Nevertheless, Layard henceforth devoted himself to a political career, with a special view to Eastern affairs. He was returned for Aylesbury in the Liberal interest in 1852, and accepted office as Under-Secretary for Foreign Affairs, where he acted as warming-pan for Lord Stanley (now Earl of Derby), who was on his way home to join his father's ministry. Having surrendered his post, Layard declined any other appointment, since his object was chiefly to obtain an influence over Eastern politics. He spoke often on the Russo-Turkish question, on which he differed from his former patron, Lord Stratford de Redcliffe, and when the Crimean War broke out, he went to the Black Sea, and witnessed the Alma from the maintop of H.M.S. *Agamemnon*. A desire to understand the true causes of the revolt led him to visit India during the Mutiny (1857-8), when his parliamentary career had been interrupted by a defeat at Aylesbury in 1857. He unsuccessfully contested York in 1859, but was returned for Southwark in 1860, when he took office in his old post of Under-Secretary for Foreign Affairs under Lord Palmerston, retiring on the fall of Russell's second administration in 1866. His last ministerial appointment was that of Chief Commissioner of Works in Mr. Gladstone's Government (1869), which he suddenly exchanged for the diplomatic rank of envoy at Madrid. His views on the Eastern Question having commended him to Lord Beaconsfield, he was transferred to the embassy at the Porte in 1877, where his active assertion of the imperial policy procured him the Grand

Cross of the Bath. His last diplomatic achievement was the annexation of Cyprus in 1878, after which the accession to power of the Liberal party in 1880 brought about his supercession. His fame will rest less upon his official and diplomatic career than upon his early archaeological discoveries.

[S. L.-P.]

* **Leader**, BENJAMIN WILLIAMS, A.R.A. (b. 1831), studied art at the schools of the Royal Academy, exhibited his first picture in 1854, and became A.R.A. in 1883. Mr. Leader has gained a well-deserved popularity as the painter of the wild mountain pass, the common, and the lake. His pictures are often darkened with the shadows of evening, or of the black storm-cloud with a gleam of light and hope far away. Among his more important works in 1875 and onwards, are:—*Wild Waters* (1875); *A November Evening after Rain* (1876); *Lucerne*, and *In the Valley of Clear Springs* (1877); *View of the Wetterhorn* (1878); *An English Hayfield* (1879); *A Summer Flood* (1880); the well-known *February Fill-dyke* (1881); *In the Evening there shall be Light* (1882); *Green Pastures and Still Waters*, *An Autumn Evening*, and *Parting Day* (1883); "*The Ploughman Homeward plods his Weary Way*" (1884); *The Old Holy-head Road* (1885).

Leake, COLONEL WILLIAM MARTIN (b. 1777, d. 1860), topographer of Greece, was a member of an old Essex family, and served for some years in the Royal Artillery, retiring with the rank of lieutenant-colonel in 1823. Having been employed in the early part of his career on special service in the East, he travelled over the whole of Greece and Asia Minor, and gave to the public the results of his researches in *Travels in Asia Minor* (1824); *Travels in the Morea* (1830); *Athenian Topography* (1821; 2nd ed. 1841); and *Travels in Northern Greece* (1835). He had only just completed the supplement to his last and most elaborate work, *Numismata Hellenica* (1854), when he died. Colonel Leake, however, was not merely an antiquarian, nor did he prosecute his researches into the past simply for their own sake; he was an earnest politician, and an enthusiastic advocate of the freedom and independence of Greece.

J. H. Marsden, *Memoir of W. M. Leake*.

* **Lecky**, WILLIAM EDWARD HARTPOLE (b. March 26th, 1838), was educated at Trinity College, Dublin, where he graduated B.A. in 1859, and M.A. in 1863, having already published anonymously in 1861 *The Leaders of Public Opinion in Ireland*, four admirable essays on Swift, Flood, Grattan, and O'Connell, of which the last contains by far the truest of existing estimates of that politician. A second and revised edition was published in 1871. He soon won a

prominent place in the branch of study to which he had devoted himself, viz. history in reference to the intellectual and social development of civilised peoples. His *History of the Rise and Influence of the Spirit of Rationalism in Europe* reached a second edition in its year of publication (1865; 5th ed. 1872), and was followed by *A History of European Morals from Augustus to Charlemagne* (2 vols., 1869). Two volumes of his *History of England in the Eighteenth Century* were published in 1878, the third and fourth in 1882. This is a performance of high character, the chapters on Irish affairs in particular being written in a spirit of judicial impartiality, which casts an entirely fresh light upon the later history of that country, and does much to dissolve British prejudices. The chapters on English history are written with equal calmness and judgment, particularly those which cover the War of American Independence. The arrangement of the book is far from being strictly chronological; it consists rather in a series of luminous essays, written from a Liberal standpoint, upon the salient facts of our career as a nation, considerable attention being paid to social phenomena. The last volume terminates with the formation of Pitt's first ministry in English, and the establishment of Grattan's Parliament in Irish affairs.

* **Lecocq**, CHARLES (b. 1832), French musician, studied music under Halévy, and produced his first operetta, *Le Docteur Miracle*, at the Bouffes Parisiennes, in 1857. *Fleur de Thé*, a three-act opera-bouffe (1868), was his first definite success, and it was followed by *Le Myosotis* (1866), and the enormously popular *Fille de Madame Angot* (1873), which ran for five hundred nights, and *Giroflé Girofla* (1874), both of which were adapted for the Philharmonic Theatre, Islington, and became popular. Among his later triumphs were *La Marjolaine* (1877); *Le Petit Duc* (1878); *Le Jour et la Nuit* (1882); and *La Princesse des Canaries* (1883). *Plutus* (1886), won only a qualified success. Lecocq has confined himself to the production of popular music, and perhaps wisely, for in his peculiar walk of unintellectual gaiety he is without a rival.

Ledru-Rollin, ALEXANDRE AUGUSTE (b. 1808, d. 1874), French politician, the son of a wealthy Parisian doctor, Jacques Ledru, assumed the maternal name of Rollin in 1830, when he was admitted to the bar. Besides acquiring political influence in his defence of various Republican conspirators, he obtained fame as a jurist, and in 1837 became editor, of the legal journals, *Le Journal du Palais* and *Le Droit*. After a failure in 1839, he was returned to the Assembly in 1841, for St. Valéry-sur-Somme as a Republican, underwent a futile prosecution by government for some of his election speeches, and became a member of the "Mountain," or Extreme Left. He took a prominent part in the reform ban-

quets of 1847, and on the fall of the Orleans dynasty, accepted the portfolio of Minister of the Interior in the provisional government. He soon found himself confronted by insurrections, and lost the sympathy of the *ouvriers* without conciliating the *bourgeoisie*. Hence, though at one time the dictatorship was within his grasp, in the presidential election of 1848 he received only 370,119 votes against the five million given to Prince Louis Napoleon. On June 13th he attempted to raise an insurrection in Paris, but it was a ludicrous failure. Ledru-Rollin fled to England, and was sentenced to transportation for life. He waged an unrelenting paper warfare against the Second Empire, and was exempted from the amnesty of 1860, but in 1870 he was allowed to return. Under the Third Republic he re-entered the Assembly in Jan., 1874, a few months before his death, as deputy for Vaucluse, but found he had lost touch of the times.

Lee, ROBERT EDWARD (b. 1807, d. 1870), commander-in-chief of the armies of the Confederate States, was a native of Virginia, and the son of Colonel Henry Lee, distinguished in the War of Independence, and commonly called Light-Horse Harry. He entered the Military Academy at West Point at the age of eighteen, and graduated in 1829. Upon leaving the academy he was appointed to the corps of engineers. He married in 1832 Miss Custis, the daughter and heiress of G. W. P. Custis, the adopted son of General Washington. In 1838 he was made captain, and in the Mexican War was chief engineer upon the staff of General Wool, and served also through Scott's campaign. He was brevetted major for gallantry, and was rapidly promoted to the rank of colonel. He was wounded in the assault of Chapultepec. From 1852 until 1855 he was superintendent of the Military Academy at West Point. In 1855 he was appointed lieutenant-colonel of a newly organised regiment of cavalry. In October, 1859, he commanded the forces which suppressed John Brown's attempt to set on foot an insurrection of the slaves. In 1860 he commanded the department of Texas, and in March, 1861, was made colonel of the first regiment of cavalry. Virginia seceded on April 17th, 1861, and Lee resigned his commission in the United States army on the 20th. He was immediately made major-general of the forces of the State. Upon the accession of Virginia to the Southern Confederacy, Lee was made one of the five generals of the Confederate army. Lee was assigned to the command in north-western Virginia against the troops then commanded by Rosecrans and McClellan. He accomplished nothing there, and returned to Richmond with a less dazzling reputation than he had possessed. He was sent to superintend the fortification of the coast, and

was recalled to serve as a sort of military chief of staff to the Executive. At the battle of the Seven Pines, May 31st, 1862, General J. E. Johnston was wounded, and the army of northern Virginia was left without a commander. General Lee was now assigned to the command of this army, and held it until the end of the war. He planned and executed the offensive operation against the Northern army, at that time maintaining a nominal siege of Richmond, by which in a series of battles extending over seven days McClellan was driven to the James River, and Richmond relieved. This operation terminated with a destructive repulse of Lee's last attempt to force the position of the Northern army at Malvern Hills. The removal of McClellan's force was finally accomplished by sending Stonewall Jackson with his corps northward, when the Washington War Department ordered the withdrawal of McClellan's troops. Thereupon Lee followed Jackson with the remainder of his army. His army was thus cut in two for some days, but the enemy had not the skill to take advantage of it. This movement led to the defeat of the Northern army near Manassas Junction; it retired within the line of the Washington fortifications, and Lee advanced into Maryland. He was pursued by McClellan with his old army, and was beaten (Sept. 16th) in the battle of Antietam, or Sharpsburg. He retreated by way of the Shenandoah valley to Culpepper Court House, followed slowly by McClellan, who was relieved from the command (Nov. 7th), and succeeded by General Burnside. General Burnside planned an advance to Richmond by way of Fredericksburg; but at that place found Lee in his path, and was severely defeated (Dec. 13th). This ended the operations of these armies for the season, and they wintered on the opposing sides of the Rappahannock. Hooker had been appointed to the command of the Northern army, and advanced in May by a well-conducted movement around Lee's left flank. Lee attacked Hooker in this position, and won the battle of Chancellorsville (May 2nd, 1863). Hooker retreated across the river, and Lee marching round Hooker's right advanced swiftly northward into Maryland and Pennsylvania. Hooker followed, but on his march resigned the command because interfered with in his plans by orders from Washington, and was succeeded by General Meade, who fought and won the battle of Gettysburg (July 2nd, 3rd, 4th). Lee retreated across the Potomac, and there was no other important operation on this theatre in the same year. Grant, appointed commander-in-chief of the Northern armies, initiated in May, 1864, the final campaign of the war. Lee encountered and fought him in this campaign at the Wilderness (May 5th, 6th); at Spotsylvania (May 12th); at Cold Harbor (June 3rd); and when in the same month Grant crossed the James,

Lee confronted him at Petersburg, and defended that place for ten months. He began the campaign with 60,000 men, and throughout all its bloody battles heroically fought double that number. In February, 1865, he was appointed general-in-chief with command of all the armies of the Confederate States. In April he endeavoured to retreat southward to unite his army with that of J. E. Johnston, in North Carolina, but was forced to fight the battle of Five Forks, was beaten, and surrendered (April 9th) the remnant of his worn-out army, which was dismissed on parole "not to serve against the United States until exchanged." He retired to private life, accepted the Presidency of Washington College, at Lexington, Va., and died suddenly from paralysis in September, 1870. He was a thoroughly instructed, capable, and skilful commander. Some of his operations are criticised, as exposing him to inevitable destruction if done in the presence of a ready and resolute foe; but the character of his opponent was an element in his calculation. He weighed all plans, and tried the best. That his cause was not ultimately successful was simply because in the nature of the case the means at his command were inadequate.

John Esten Cooke, *Life of R. E. Lee* (New York, 1872); E. A. Pollard, *Early Life, Public Services, and Campaigns of General R. E. Lee* (New York, 1867). [G. W. H.]

Leech, JOHN (b. 1817, d. 1864), artist and caricaturist, was a native of London; his father, a man of considerable education, being landlord of the London Coffee House on Ludgate Hill. He was educated with his friend Thackeray at the Charterhouse, and studied medicine, but his talent for drawing could not be repressed, and numerous commissions forced him to turn artist. In 1840 he began to contribute to the magazines; among his most important work at this time being his illustration, in company with Cruikshank, of the *Ingoldsby Legends*. His pathetic *Portraits of the Children of the Mobility* appeared in 1841, and was followed by his admirable etchings in Gilbert & Beckett's *Comic History of England and Comic History of Rome*, and Hood's *Comic Annual*. Leech's connection with *Punch* began in 1841, and lasted until his death, which was hastened by overwork. A very successful exhibition of his drawings was held in 1862. As a social caricaturist, Leech was remarkable not only for the certainty of his aim, but for the gentleness of his stroke. Even when looked at from this distance of time, it is difficult to say that any of his attacks, with the exception perhaps of those on Puseyism, are extravagantly exaggerated. Leech was no violent party man; Lord Brougham and Lord Derby, Sir John Graham, and Mr. Cobden were all the sport of his delicate railery. He had a distinct liking for Lord Palmerston and Sir Robert Peel, and an equally

pronounced dislike of Mr. Disraeli, and in a less degree for Lord John Russell; in fact, the cartoon, *Have you got such a Thing as a Turned Coat for Sale*, a satire on Mr. Disraeli's silence during the debates on the Jewish Disabilities Bill, is almost cruel. Lord John Russell chalking up "No Popery" on Cardinal Wiseman's door, a satire on his conduct on the Ecclesiastical Titles question, and the cartoons on Lord Brougham are, or should be, immortal.

Thackeray in *The Quarterly Review* (1854); Dr. John Brown, *Essay on John Leech*; Ruskin, *Arrows of the Chase*, vol. i.

Lefevre, THE RIGHT HON. CHARLES SHAW. [EVERSLEY.]

* **Lefevre, THE RIGHT HON. GEORGE JOHN SHAW** (b. 1832), is the son of Sir John Shaw-Lefevre (d. 1879), an official of first-rate ability, who served on no less than sixteen unpaid commissions, and who from 1856 to 1875 was Clerk of the Parliaments. Educated at Eton and at Trinity College, Cambridge, Mr. Shaw-Lefevre was called to the bar in 1856. He was first returned for Reading in 1863, and continued to sit for that borough until the general election of 1885, when he was defeated. His official record is: Lord of the Admiralty, 1866; Secretary to the Board of Trade, 1868 to 1871; Under-Secretary to the Home Department, January to March, 1871; Secretary to the Admiralty, March, 1871 to 1874; First Commissioner of Works, 1884; Postmaster-General, with a seat in the Cabinet, November, 1884. Mr. Shaw-Lefevre has been conspicuous for his exertions for the maintenance of rights of common. The chief act of his administration at the Board of Works was the improvement of Hyde Park Corner, and to him was due the system of sixpenny telegrams, carried out by his successor at the Post Office, Lord John Manners. He was returned for Bradford, the vacancy being caused by the death of Mr. Forster, in 1886, and again at the general election of the same year.

Legendre, ADRIEN MARIE (b. 1762, d. 1833), a French mathematician, was born at Paris, and educated at the Ecole Militaire. About the year 1776 he became mathematical professor in the military school at Paris, and was afterwards professor in the normal school. In 1782 he received the prize of the Berlin Academy for a dissertation on the course of projectiles in resisting media. He was soon afterwards placed on a commission for connecting Paris and Greenwich geodetically, and in 1787 contributed to the *Mémoires* of the Academy two papers on trigonometrical operations depending upon the figure of the earth, containing many theorems relating to the subject. The best known, Legendre's theorem, quoted in every treatise on spherical trigonometry, is a fundamental theorem in

geodesy. The decimal system of measurement having been decreed immediately after the Revolution, Legendre was appointed one of the three commissioners to introduce the new system, and he also took an active part in determining the length of the mètre. In 1794 he made one of the many attempts to supersede Euclid as a text-book on geometry by his *Éléments de Géométrie* (translated by Sir D. Brewster), which afterwards gave rise to a lengthened discussion, especially in England, on his treatment of the theory of parallels. This discussion induced Legendre to publish his *Nouvelle Théorie des Parallèles* in 1803. In the meantime Legendre held a few important state offices, but ultimately he withdrew from the public service altogether. He produced his *Théorie des Nombres* in 1798, in which he expounds the theory known as the law of quadratic reciprocity, which Gauss has described as the "gem of arithmetic." This work he followed up by his *Nouvelles Méthodes pour la Détermination des Orbites des Comètes* in 1806, which is important, as containing the first published suggestion of the method of least squares. But Legendre's most important contribution to mathematical science is that on elliptic functions. His researches upon this subject extend over a period of forty years, and his labours were long neglected. In 1827, however, Legendre being seventy-five years of age, Abel and Jacobi having made independent researches, and arrived at conclusions similar to Legendre's, fresh attention was called to the subject, with the result that it was soon completely revolutionised.

Elle de Beaumont, *Mémoire de Legendre*; *Westminster Review*, 50, 424.

* **Legros, ALPHONSE** (b. 1837), a French artist, both in name and work closely associated with England, was born of humble parentage in the Côte d'Or, at or near Dijon, and in 1851, still surrounded by the restrictions of poverty, he made his way to Paris, where for awhile it was uncertain whether his bent towards pictorial art could be turned to useful account, or whether he would have to continue that apprenticeship to a house-painter into which he had been obliged to enter. The existence in France of schools practically gratuitous enabled him to obtain a measure of training in draughtsmanship which would have been out of the reach of a child of impoverished parents in England; but in painting he is not really any one's pupil, and certainly he is original in etching. He began to etch and to paint much about the same time, for it was in 1857 that he sent to the Salon a picture of his father, which won him some notice, while it is from 1855 that the earliest, which are by no means the most characteristic, of his etchings date. In 1859 he sent an *Angelus*, in 1861 an *Ex-Voto*, in 1863 *A Mass for the Dead* to the Salon. In 1863, still poor and lacking the encouragement of patrons, Legros

came to England. Here, among a few amateurs, there came to be recognised the qualities which he brought with him, rare enough in English design. In England, Legros's choice of subjects showed some tendency to widen, but it never became popular save for the occasional selection in his portraiture of some illustrious head or characteristic form. He painted the peasants of the Bouloguais in their work amid the wide farmlands, or sitting still steeped in religious exercises, and in a melancholy which is only in part the result of their restricted fortunes or their pious faith. And if to the middle class and to fashionable people he has nothing to say, because he cares nothing for their lives, or for the aims of them, so he is even too singularly insensitive to pure physical beauty, or to the attractiveness of force. His interest is in the labouring intellect and in the melancholy soul. The first he shows by his great portraiture, which is greatest of all in etching, and which reaches its most exquisite and its most ennobled expression in the portrait of Mr. G. F. Watts. The second he shows sometimes in such a divine allegory or vision as that of *Death and the Woodman*; sometimes in such a realistic and yet poetic portrayal of the sordid and the miserable as may be recognised in *Le Repas des Pauvres*. *Death and the Woodman*—a delicate, pathetic etching—recalls a little the altogether beautiful sadness of Rethel's *Der Tod als Freund*. The figure of Death comes gently to the broken man, and beckons one who, though awed, is not unwilling to be gone. *Le Repas des Pauvres*—a picture sombre of hue—depicts the interior of a fourth-rate French restaurant in the little-known French quarter which extends north of Oxford Street, between Soho and Fitzroy Square. In neither of these designs, and in none of the many which, in Legros's work, are akin to the one or the other of them, is the sadness which has been their motive in the mind of the artist made an excuse for enlisting the suffrages of sentimentality. In this way, as in other ways besides, Mr. Legros scorns to be attractive: he is nearly always stern, he is nearly always austere. At the Slade School, in University College, London, where he was appointed Professor in 1876, it has been his habit to paint, sometimes before his pupils, all of some given head that a couple of hours of observation and labour may enable him to set upon canvas. Thus he has at least educated his pupils in the virtue of decisiveness, and in the skill of selection. Modelling has now for some years a good deal occupied him. Not only has he produced some work in the round, and one or two large reliefs like *La Source*, but he has by his own work, and by his influence as well—which is very great in a restricted circle—given an impetus to the production of portrait medals, founded a good deal on the practice of the *médailleurs* of

the Italian Renaissance. Again, his pencil drawings of the nude figure—some of which are at Mr. Thibaudeau's and at Mr. Ionides', and some, through the artist's gift, at the Museum of Dijon—reveal the most intimate union of realism with style. A last word for his etchings, which, eminently various in theme, are perhaps scarcely less noticeably various in method. In them certainly a mannerism, which he has impressed upon more than one of his pupils, is not always apparent. Mr. Thibaudeau and the late Monsieur Poulet-Malassis published in 1877 a *Catalogue Raisonné of Legros's Work in Etching*. It included, at that time, one hundred and sixty-five pieces. A few are, one may suppose, not unintentionally repulsive; but many are of charming power—landscapes, large portraits, scenes of the interior: things rendered as an individual artist has felt and perceived them. [F. W.]

* **Leighton, Sir Frederick, Bart., LL.D., D.C.L.** (b. 1830), president of the Royal Academy, and not the least popular of well-known English painters, was born at Scarborough. At the age of fourteen he entered, as a student, the Academy of Berlin. A year afterwards he left his desired pursuit to proceed with general education at Frankfort-on-the-Main, and in 1846, while at Florence, he resumed his devotion to it. At Frankfort and at Brussels he spent, chiefly, the next two or three years, and to this foreign education, continued as it was over a series of seasons, winter and summer, we are to attribute something of what there is of cosmopolitan, if not of strange, in his art. Leighton was never influenced—it would appear both from his work and from the story of his life—by any English painter. He has been influenced somewhat by Greek classic work; somewhat by the decorative work of the Italian Renaissance; somewhat, perhaps, by foreign art of later days; but not at all by the productions of the land which gave him birth. A student at the Louvre in 1851, and again at Frankfort in 1853, he was there a pupil of Professor Steinlé, of Vienna, who confirmed his bent for what is still known as historical art. "Historical art" held a much greater position in the public opinion of thirty years ago than it does in that of to-day, and a power of draughtsmanship, now perhaps not very noticeable, sufficed to give distinction to the beginning of a career. Such a power young Mr. Leighton distinctly evinced when he sent from Rome in 1855, to the English Royal Academy, his picture of *Cimabue's Triumph*—a design founded on the well-established tradition that certain work of this admirable Primitive was received in the city of its production with a great demonstration of enthusiasm and honour. Young Mr. Leighton's picture had, unquestionably, other qualities besides that of

accurate and academic draughtsmanship. It had an interesting theme, which had been treated sympathetically; it had dignity of design; also charm of colour. The *Triumph or Procession of Cimabue* was received with surprise and delight at our annual exhibition. Great hopes were founded upon it. For awhile, after the production of this picture, Leighton lived in Paris, where, though he was no longer, in the strict sense, any one's pupil, he received the counsels of Ary Scheffer and of Robert Fleury. The *Triumph of Music*—Orpheus, by the power of his art, redeeming a beloved one from Hades—was the theme of the young Englishman's Academy picture of 1856. Gaining uncontestedly in popular esteem by the added suavity of his somewhat later art, Leighton did not, we think, till 1871 take up the position which in popular opinion he afterwards assumed, and that was by the manly and dramatic picture of *Hercules Wrestling with Death for the Body of Alceste*. That work obtained the honour of reference in Browning's *Balaustion's Adventure*—in the poem, that is to say, of the poet who is most profoundly acquainted with the spirit of Art and with the whole of Art's achievements. The *Daphnephoria* of 1876 was every whit as important as the picture which has last been spoken of; and in 1880 much appreciation was given to the gentle sentiment of *The Sister's Kiss*, and to *Phryne* in 1882. *Dedalus and Icarus*, of 1869, and *The Light of the Harem*, of 1880, represent the one of them the more rigid classicality, which would appear to bear occasional ideal of Leighton, the other the luxury which has at many times fascinated him. Leighton was not then at a period of his life from which, striking into further methods, he might be expected to gratify with wholly new results. Yet his pursuits have the interest of variety. For South Kensington he has finished the great wall decoration of *The Arts of War*, to which *The Arts of Peace* is to be a companion. And, assisted in the first instance by the academician, Mr. Brock, he has ventured into sculpture, in which *Hercules and the Python* (1876), and *The Sluggard* (1886), show him to be really proficient. Nor, perhaps, is it quite enough to say this; for, essentially a draughtsman and a designer, rather than a colourist, Sir Frederick Leighton's faculties may perhaps be held to be even most fitly engaged in the art of modeller and carver. As regards Sir Frederick's official and courtly honours, it should briefly be mentioned that he was knighted in 1878, on his succeeding to the presidency of the Royal Academy, vacant by the death of Sir Francis Grant; that he was made a baronet seven years afterwards; that he is an officer of the Legion of Honour, and that he is LL.D. Cambridge and D.C.L. Oxford.

[F. W.]

* **Leland, CHARLES GODFREY** (b. 1824), American author, was educated at Princetown College, Philadelphia, and after taking his degree, spent several years visiting the European universities. He returned to America in 1848, and, after a short trial of law, devoted himself entirely to literature, contributing to various magazines, and publishing, in 1855, *Meister Karl's Sketch-Book* and the *Poetry and Mystery of Dreams*, followed by *Sunshine in Thought* (1860), *Legends of Birds* (1864), and translations of Heine's *Pictures of Travel*, and *Book of Songs* (1866 and 1868). It is by the immortal *Hans Breitmann Ballads* that Mr. Leland is best known. The first collection was published in 1868, and was followed by a series, under various titles, which described in rollicking verse, written in a wonderful hotch-potch of German-English, the adventures of a German settler in Pennsylvania, with an unlimited appetite for "shprees" and "lager beer." A complete edition appeared in 1876, a later one in 1884. Mr. Leland has also written, among other works, a translation of Scheffel's *Gaudeamus* (1872); *The Music Lesson of Confucius* (1872); *The Egyptian Sketch-Book*, and *The English Gipsies* (1873); *English Gipsy Songs* (1875); *Fusang*; or, *the Discovery of America by Chinese Buddhist Priests in the Fifth Century* (1875); *Pidgin-English Sing-sing, in China-English Dialect* (1876), treating of the humorous side of Chinese life in America; *The Gypsies* (1882), and the *Algonquin Legends of New England* (1884). Mr. Leland is much interested in the minor arts; he is the editor of a series of manuals upon them, entitled *Art-Work Manuals*, and contributed a volume on *Porcelain Painting to the American Art at Home* series.

Lemaître, FRÉDÉRIC (b. 1798, d. 1876), French actor, was the son of actors, and studied at the Conservatoire. His first appearance at the Odéon was not an unqualified success, and it was not until 1832, when he created the part of Robert Macaire, in the play of which he was joint author, that he became celebrated as the greatest master of realistic acting of his time. Among his great impersonations were Ruy Blas, Don César de Bazan, and Kean in Dumas' play. His make-up as Louis Philippe led to the suppression of Balzac's *Dernière Incarnation de Vautrain*, and in 1848 he led his audience from the theatre to the barricades. He retired in 1856, owing to the suicide of his son, but reappeared in 1868, when his voice was so weak that he could scarcely be heard. During his last years he was supported by a pension from the French Government.

Lemon, MARK (b. 1809, d. 1870), wit and author, was born in the neighbourhood of Oxford Street, London, in the middle rank of life, and was educated at Cheam School, Epsom, where he had Charles Butler, the ma-

thematician, for a teacher. His lot was early cast among theatrical people, and his impulses were all towards the stage. His earliest efforts were in the lighter drama. His first farce appeared about the year 1825, under the seemingly *bizarre* title of *The P. L.*; or, 30, *Strand*. This he followed up in quick succession with now a roistering farce, now a melodrama, now a graceful operetta, now a comedy. The fun and frolic of *Domestic Economy*, and *Jack in Green*; or, *Hints in Etiquette*, delighted two generations of frequenters of the Adelphi; and the author's reputation was sustained in the whimsicality of *A Moring Tale*, coupled with the mirthful nonsense of *My Sister Kate*. In the adaptation of several of his dramas Lemon was joined by Gilbert à Beckett. One of their most successful achievements was a dramatised version of *The Chimes* of Charles Dickens. Among his many other plays may be mentioned *The Lewis Club*, *The School for Tigers*, *What will the World Say?* and *Hearts are Trumps*. He was one of the knot of authors who in 1841 set on foot *Punch*; or, *The London Charivari*. From the first he acted as joint editor. In 1843, moreover, his colleague, Henry Mayhew, seceded, and on Lemon devolved the sole and undivided responsibility of the editorship, a trust which he fittingly discharged till his death. His first substantial venture as a novelist, *Wait for the End*, appeared in 1863. Its reception was such that in the very next year (1864) he produced *Lored at Last*. Two years later he brought out probably the ablest of all his productions, *Falkner Lyle*, a story of two wives. In 1862 he appeared at the Gallery of Illustration in a course of lectures, *About London*. These lectures formed the basis of *Up and Down the Streets of London* (1867). In 1868 he impersonated Falstaff on the stage, and joined Dickens's amateur troupe. Besides the works already mentioned, Lemon wrote over fifty dramatic pieces, a hundred songs and lyrics, and scores of charming essays and stories.

Appleton's Journal, New York, Nov. 2nd, 1873; Athenæum, May 22nd, 1870; Gentleman's Magazine, new series, vols. v. and vi. [W. M.]

Lenau, NICHOLAS (b. 1802, d. 1850), Hungarian poet, was born at Csatad. His real name was Niembach von Strehlenau, and his father, who died in 1807, was a minor official in the Austrian service. Lenau, in 1819, attended the philosophical classes of the university of Vienna. He subsequently devoted himself for a time to jurisprudence, and then to medicine and natural science. His first lyric poem appeared in 1828 in the *Aurora*; and in 1832 a volume of his poems was published. The same year he sailed to America, where he intended to settle. He, however, returned to Europe after a few months, and lived chiefly at Vienna and Stuttgart, struggling against a melancholy which gradually deepened into insanity. The crisis

came in the autumn of 1844, when he was on the point of being married. He passed the remainder of his life in confinement as a lunatic. His chief long poems are *Faust*, *Savonarola*, and *Die Abigener*. But he is chiefly known for his exquisite lyrics, which are almost worthy to be ranked with Heine's and Goethe's.

Lenau's collected works appeared in 1855, with a biography by Anastasius Grün. See also Berthold Auerbach, *Lenau*; Schurz, *Lenau's Leben* (1855); *Foreign Quarterly Review* (1839).

Lenormant, FRANÇOIS (b. 1837, d. 1883), archæologist, was the son of another distinguished antiquary, Charles Lenormant, and was born at Paris. He early showed his aptitude for the study of antiquity; at the age of twenty-three he was making excavations at Eleusis, and ever afterwards in the intervals of his work as sub-librarian at the Institute of France (1862-72), and of his lectures as professor of archæology at the Bibliothèque Nationale (1874-83), he threw his wonderful energies into his favourite pursuit of archæological exploration. His writings are too numerous for us to detail even their mere titles. There were few branches of archæology, especially Semitic, to which he did not contribute something of importance, although he cannot be credited with any absolutely prime discovery, and his very universality brought with it the certainty of occasional error. Whatever he wrote within the wide circuit of knowledge embraced in his plan of study was lighted by the power of his genius. For breadth of view, combined with an extraordinary subtlety of intuition, it may be doubted whether he had a rival. No one among his contemporaries possessed to an equal degree the gift of seeing at a glance all the bearings of a new discovery, no one could so illumine the most profound investigations of scholarship with the clear flash of intuitive comprehension. He made the dry bones of antiquity live again in the creations of his indefatigable pen, where other scholars could only describe fossils. In none of his writings is this power so conspicuous as in his *Origines de l'Histoire d'après la Bible*, in which he treats the Biblical records and the ancient traditions of the East as though they were contemporary history, full of life and actuality. His unfinished essay on the propagation of the *Phœnician Alphabet*, and his *Ancient History of the East*, are his best-known works, and deserve their high repute; while in special subjects his contributions to Accadian philology, *La Monnaie dans l'Antiquité*, and *La Magie chez les Chaldéens*, exhibit the same marvellous grasp, the same luminous treatment, that characterise all his many writings.

Athenæum, Dec. 15th, 1883.

[S. L.-P.]

Leo XII., POPE (b. 1760, d. 1829), whose real name was ANNIBALE DELLA GENGA, was a native of Romagna, went as nuncio to

Lucerne in 1793, and as papal plenipotentiary to the Diet of Ratisbon in 1805, and became cardinal in 1816. In 1823 he was chosen Pope as successor to Pius VII., though it was believed that his days were numbered. However, he managed to linger on for several years, ruling with severity, yet not capriciously, and maintaining good relations with the courts of Europe.

***Leo XIII., HIS HOLINESS POPE** (b. 1810), formerly Gioacchino Pecci, the son of Count Ludovico Pecci, was born at Carpineto in the Papal States. He was educated at the Collegio Romano and the Academy of Noble Ecclesiastics, where he studied law and philosophy with considerable success, until he entered the priesthood. In March, 1837, he was appointed by Pope Gregory XVI. domestic prelate and private referendary, with the title of Protonotary Apostolic, and was sent to administer in succession the districts of Benevento—where he suppressed brigandage—Spoleto, and Perugia. In 1843 he was created Archbishop of Damietta, and sent as Apostolic Nuncio to the King of the Belgians. On his return in 1846 he was advanced to the See of Perugia, and in December, 1853, he was created a cardinal. During the lifetime of Cardinal Antonelli, Pius IX.'s Secretary of State, Cardinal Pecci held aloof from Rome; but after his death he was created Chamberlain (Sept., 1877), and had control therefore of all business except foreign affairs. As representative of the moderates, Cardinal Pecci was elected Pope on the death of Pius IX., three scrutinies having been necessary before the two-thirds majority was obtained, and took the title of Leo XIII. His policy proved the very opposite of his agonistic predecessor. In particular, the religious difficulty in Germany was brought to a happy conclusion, and Prince Bismarck showed his high regard for the Pope's moderation by requesting him in 1885 to be arbitrator in the dispute between Germany and Spain, as to the ownership of the Caroline Islands. During Mr. Gladstone's second administration, negotiations were informally conducted through Mr. Errington, M.P., between the Vatican and the British Government, with a view to enlist Pope Leo against the Parnellite movement in Ireland; these, however, failed, as was distinctly shown by the nomination of Archbishop Walsh to the See of Dublin. In his encyclicals he emphasises the position that the influence of the Papacy is the only solution to the socialistic problem.

Leopardi, GIACOMO, COUNT (b. 1798, d. 1837), one of the greatest Italian philologists and poets of this century, was born at Recanati, in the March of Ancona. He was the eldest son of Count Monaldo Leopardi, himself a man of letters, in whose library it was that Giacomo acquired his education. At seventeen he had attained a

marvellous knowledge of the classics and of modern languages. The collection of his manuscripts amounted to seven large folio volumes, and at the age of nineteen he had already published several philological and critical works, which attracted wide attention. But the ardour which he had displayed in his studies totally destroyed his constitution and strength, and during the whole of his life he was a confirmed invalid. In search of health he left his secluded home for the first time about the year 1820, and went to Rome, where he won the friendship of Niebuhr, who, on the part of the Prussian Government, offered him the chair of Greek philosophy in the University of Berlin, which Leopardi, however, declined—partly because of his delicate health, but chiefly because of his ardent love for his native land. He wandered a good deal about Italy, publishing his most admired *Canzoni* (songs), lyrics, and other poems, and works such as the *Operette morali*, chiefly dialogues in the style of Lucian (1827). He had already printed in 1825 a complete translation of Moschus, and shortly after translations of Homer and Virgil, and an *Essay on the Popular Errors of the Ancients*. The bulk of his philological works were sent, in 1830, for publication to Germany; but except a few *Excerpta*, published as an essay at Bonn in 1834, none of them appeared until long after his death—the consignee, M. de Sinner, proving wholly untrustworthy. As a poet and writer, Leopardi was endowed in a peculiar degree with the faculties which belong to the highest order; but his impaired health, deep despondency, and limited means acting upon his temperament, cast a gloom over his spirit, and his keynote is invariably one of dejection. About 1832 he settled in Naples, and lived in close companionship with Antonio Ranieri, an author of some excellence, and his sister, whose kindness made his last years fairly happy. In this period he composed his most beautiful lyric, *La Genestra*, and the *Sequel to the Battle of the Frogs and Mice*, a satire on the Neapolitan Revolution of 1820. Leopardi has been, and is, one of the most popular of Italian poets, and although he did not actually suffer for the liberty of his country, his ardent love for her causes him to be deservedly looked upon as an Italian patriot.

Opere di Giacomo Leopardi, printed at different places and times, and above all his *Epicleria* (Firenze, 1849), containing nearly six hundred of his letters. [A. O.]

Leopold I. and II. OF BELGIUM [BELGIUM.]

Lepsius, RICHARD (b. 1810, d. 1884), Egyptologist, was a native of Naumburg, and acquired a sound classical education at Pforta (1823-9), whence he proceeded to study philology at Leipzig and Göttingen, and

notably to study under Bopp at Berlin. In 1833 he visited Paris, and attended lectures and examined the archaeological collections, and in 1834 his work on *Palaography as an Instrument in the Study of Language* obtained the Prix Volney of the French Institute. Oriental alphabets and the origin of numerals specially attracted his attention, but Egyptology, from its supreme importance for the history of Greek and therefore European civilisation, and from the daring and speculative character of its early investigations, was now beginning to hold the foremost place in his studies. He grounded himself on Champollion; he visited Rosellini at Pisa; he was encouraged at Rome by the admirable Bunsen; and his *Letter to Rosellini on the Hieroglyphic Alphabet* (1837) placed him at a bound in the front rank of Egyptian scholars. Henceforward, although he edited the *Inscriptiones Umbricæ et Oscæ*, wrote on Pelasgians and Etruscans, and published his well-known *Standard Alphabet*, his main study was ancient Egypt. In 1838-40 he was working at the rich collections of the British Museum; in 1842, when he published in seventy-nine tables his celebrated edition of the *Book of the Dead*, he was appointed professor of Egyptology at Berlin, to which post he afterwards added that of chief librarian. At the instance of Bunsen, and with the pecuniary support of the King of Prussia, Lepsius was next sent to Egypt to conduct a scientific expedition, the fruit of which was his gigantic work, the *Monuments of Egypt and Ethiopia*, consisting of nine hundred large plates, and text (1849-59), and containing a mass of inscriptional materials which ever now have not been fully worked out. He also brought back a collection of Egyptian antiquities to Berlin, and commemorated his visit to Egypt by a glaring inscription cut over the entrance to the Great Pyramid by his assistant, Joseph Bonomi. Lepsius's contributions to *Egyptian Chronology* (1849) were of the first importance; and his latest work was the *Nubian Grammar*. He revisited Egypt in 1866, when a new trilingual inscription, resembling the famous Rosetta stone, was discovered; and in 1869 he attended the opening of the Suez Canal, and accompanied the Crown Prince of Germany in his voyage up the Nile. He also revisited England in 1874, on the occasion of the second Congress of Orientalists.

Professor MAX MÜLLER in the Academy (1884).

[S. L.-P.]

Leroux, PIERRE (b. 1798, d. 1871), French socialist, was the son of a Paris artisan, and having adopted journalism as a profession, became of some weight among the Radicals, until in 1831 he became a convert to St. Simon (q.v.). He diverged, however, from St. Simon's follower, Enfantin, on several of the articles of faith, one of them being the emancipation of women, and in 1840 published

his treatise *De l'Humanité*, in which he formulated the creed of the Humanitarian School, a modified Pantheism, the triad in God being "power, intelligence, and love," and in man "sensation, sentiment, and knowledge." His views were somewhat confused, but had, at any rate, this merit, that they inspired George Sand to write *Consuelo* and *Les Septs Cordes de la Lyre*. Elected to the Constituent Assembly in 1818, he delivered a series of speeches, admirable no doubt for Utopia, but rather out of tune with a tottering republic. He was exiled after the *coup d'état* (Dec. 2nd, 1851), returned to Paris after Sedan, and died in the midst of the Commune.

Reybaud, *Études sur les Réformateurs et Socialistes Modernes*.

Leslie, CHARLES ROBERT (b. 1794, d. 1859), one of the most charming of our painters in genre, was of American parentage, and arriving in London in 1811, became a student of the Royal Academy. He was elected A.R.A. in 1821, and R.A. in 1826. England was his home except during the years 1833-34, when he taught drawing at the military academy at West Point, New York. His pleasant *Life of Constable* was written in 1845, his *Handbook for Young Painters* in 1855, and his *Life of Reynolds*, continued by Tom Taylor, in 1865. Leslie at first attempted the terrible, but soon saw that his forte lay in the humorous, and made himself the interpreter of Shakespeare, Cervantes, Goldsmith, and Sterne. Among his most successful pictures may be mentioned *Sir Roger de Coverley* (1819); *Sancho Panza and the Duchess* (1824); and *The Dinner at Page's House* (1831).

Tom Taylor, *Leslie's Autobiographical Recollections* (1860).

* **Leslie, GEORGE DUNLOP, R.A.** (b. 1835), son of the above, entered the schools of the Royal Academy in 1854, first exhibited in the Royal Academy in 1857, became A.R.A. in 1868, and R.A. in 1876. Mr. Leslie's pictures are conspicuous for delicacy of execution, and absence of forced effects. Their subjects are generally taken from the home life of the nation, and their prevailing tone is one of quiet cheerfulness. It is sufficient here to mention *A Summer Song* (1862); *Clarissa* (1866); *Lucy and Puck* (1872); *On the Banks of the Thames* (1875); *My Duty towards my Neighbour*, and *Violet* (1876); *Cowslips*, and *The Lass of Richmond Hill*, his diploma work (1877); *Home, Sweet Home* (1878); *Alice in Wonderland* (1879); *All that Glitters is not Gold* (1880); *Hen and Chickens* (1881); *Molly*, and *A Daughter of Charity* (1882); *Daughters of Eve* (1883); and *Thames Roses* (1884).

Leslie, SIR JOHN (b. 1766, d. 1832), geometer and mathematician, was born at Largo, in Fifeshire, and after spending some time at the universities of St. Andrews and

Edinburgh, acted as private tutor in a Virginian family, translating in his leisure moments Buffon's *Natural History of Birds*, which he published in 1793. He next engaged in physical research, publishing the results of his labours in Nicholson's *Philosophical Journal*. In 1804 he published his *Experimental Inquiry into the Nature and Propagation of Heat*, which introduced him to the Royal Society of London as Rumford medallist. In 1805, despite the violent opposition of the clergy on account of his former friendship with Hume, Leslie succeeded Playfair in the chair of mathematics at Edinburgh, and four years later published the first part of his *Course of Mathematics*, the second part appearing in 1821. In 1810 he invented a process of artificial congelation, which he fully explained in his *Short Account of Experiments and Instruments depending on the Relations of Air to Heat and Moisture* (1813). In 1819 he became professor of natural philosophy, and four years later he brought out the first volume of *Elements of Natural Philosophy*, which work he left unfinished. Leslie contested the invention of the differential thermometer with Count Rumford. With the aid of this instrument he carried out his original investigations in photometry, hydroscopy, and the temperature of space. In 1832, on the recommendation of Lord Brougham, he was made a knight of the Guelphic order.

Stewart, *Short Statement of Facts relative to the Election of Professor Leslie* (1806); Macvey Napier's Memoir in *Encyclopædia Britannica* (7th edition).

Leslie, THOMAS EDWARD CLIFFE (b. 1827, d. 1882), economist, the son of a Protestant rector in County Down, was educated at King William's College, Isle of Man, and Trinity College, Dublin (1842), and subsequently having entered a conveyancer's office, was called to the bar both in Ireland and England. But his appointment in 1853 to the chair of political economy and jurisprudence in Belfast diverted him from the practice of his profession. In his best-known work, *The Land Systems* (1870), he gave examples of the influence of legal and historic customs on economic phenomena in his admirable sketches of the actual condition of the land question in Ireland, Belgium, and France. His *Essays in Political and Moral Philosophy* (1879) deal with the gold question, and with economic method, assailing fiercely what he termed the "orthodox school." Leslie also studied closely the effects of modern militarism on commerce, and his essay on *Financial Reform* in the *Cobden Club Essays* contains many valuable suggestions. No man did more than he to render the labours of foreign economists known in England. He had collected a large mass of material for an economic history of England, but the MS. unfortunately was

lost on the Continent a short time before his death.

* **Lesseps, FERDINAND, VICOMTE DE** (b. Nov. 19, 1805), a native of Versailles, was educated for a diplomatist, became Attaché to the French Consulate at Lisbon, 1825, was promoted to a consulship at Cairo in Nov., 1833, and during the tenure of this office found himself twice called upon to undertake the administration of the Consul-General at Alexandria. He became Consul at Barcelona in 1842. Appointed after the revolution of 1848 to the embassy at Madrid, he negotiated a very advantageous postal treaty with Spain, and was employed by the French Government to mediate with the Roman Republic after the French expedition to restore the Pope. His negotiations being too favourable to the Roman Republic, he was recalled. His *Mémoire au Conseil d'Etat*, and *Réponse à l'Examen de ses Actes*, in connection with this mission, are valuable documents for the history of the time. It was in 1854, while on a visit to Said Pasha, the new Viceroy of Egypt, that Lesseps first revealed the project with which his name will be associated to posterity. The Khedive, to whom he opened the subject, asked him to draw up a memorial upon it, and in 1856 appeared *Percement de l'Isthme de Suez Exposé, et Documents Officiels*, giving all the details of the enterprise. A firm was granted, a company formed, and works commenced in 1859, despite the diplomatic difficulties, the jealousy of the English, and the alleged impracticability of the scheme. Difficulties were increased by the death of the Egyptian Pasha, who had afforded the project practical support, and a question was raised as to the necessity for the sanction of the Porte, the opponents of the scheme alleging it to be political rather than commercial in aim. It resulted in the company not being allowed to hold any Egyptian territory, and the submission of the question of compensation to the Emperor Napoleon III., by whom mutual conditions were imposed. On Aug. 15, 1865, a water-way was opened for steamboats, and gigantic dredges and a new system of machinery for removing the sand widened this passage, so that the canal was completed in 1869, and formally opened in the November of that year with great festivities at Port Said, at which the Empress of the French and the Austrian Emperor were present. A few days after its inauguration M. de Lesseps married a young and rich creole of English extraction, Mlle. Autaud de Bragard. In 1869 he was raised to the rank of Grand Cross of the Légion d'Honneur; and he was created a K.C.S.I. Aug. 19th, 1870, the Freedom of the City of London having been conferred on him in the preceding month. In February of the same year, the Paris Geographical Society had

awarded him the Empress's prize of 10,000 francs, which he contributed to the society's African exploration fund. In 1873 he was elected a member of the French Academy in the room of M. de Verneuil, and in 1876 the same body awarded him a prize of 5,000 francs for his *Lettres, Journal, et Documents pour servir à l'Histoire du Suez Canal*, published 1875. In 1879 Lesseps began to take active measures towards the accomplishment of the Panama Canal, and though American opposition at first endangered the prospects of success, a company was formed, and operations, still going on, began Feb. 1st, 1881. The English expedition to Egypt of 1882 was severely condemned by Lesseps, who was a warm partisan of Araby Pasha, and complications arose as to the management of the canal, in which the English thought they were inadequately represented. Preliminary arrangements were made by the Government for the cutting of a second and subsidiary canal in 1883, but Parliament refusing its sanction, the scheme was abandoned.

Lever, CHARLES (b. 1806, d. 1872), novelist, was born in Dublin. His father was an architect, and at an early age the son was destined for the medical profession. He took his degree at Trinity College, Dublin, in 1827, five years after his entrance there. He continued his studies at Göttingen, and shortly after—the date is uncertain—he visited America, where he is said to have lived among the Indians, adopting their dress and mode of life, and going through adventures afterwards utilised by him in *Con Cregan* and *Arthur O'Leary*. In 1832 the cholera broke out in Ireland, and Lever was appointed doctor to a district in Clare, and afterwards to another in Ulster, around Coleraine, and Newton-Limavady. While engaged in this work he collected the materials for *Harry Lorrequer*; *The Knight of Gwynne*; and also for *Charles O'Malley*, which is perhaps his most popular work. When the cholera outbreak had subsided, and he had married Miss Kate Baker, he took up his residence in Brussels, where he practised medicine. Here he completed the first-named book, which began to appear in 1837; *Charles O'Malley* (1841); *Jack Hinton* (1843); *Tom Burke* (1844), and *The Knight of Gwynne* (1847) following. These novels are made up largely of what the author had either experienced in his own person, or seen of his own countrymen in Brussels, where many British soldiers retired after the war with Napoleon. The incidents in these stories were brought together in the most promiscuous fashion, some of them being repeated over and over again. The chronology is quite bewildering. Notwithstanding such serious historical defects, the rollicking humour of his novels obtained widespread popularity. In 1842 he accepted the position of editor of *The Dublin University Magazine*, and returned to Ireland. His income

M.W.—22

at this time has been estimated by his biographer to be fully £3,000 a year. He was probably the most prosperous author of his time. Lever lived well up to his large earnings. His house, situate a little way outside Dublin, was always open to visitors. He was passionately fond of card-playing, also fond of horses, and his extravagances made residence in Ireland somewhat unprofitable. Magazine work became irksome, and he resigned the editorship in 1845. He went to live at Carlsruhe, subsequently establishing himself in the Castle of Tyrol, a description of which he gives his readers in *A Day's Ride*. After further travelling he settled in Florence. In 1858 Lord Derby appointed him Consul at Spezzia. He continued his literary work, and at this period a remarkable change came in the construction of his stories. But though an improvement is noticeable in this respect, there is not the same rough humour in *Sir Brook Fostbrooke* (1866); *That Boy of Norcott's* (1869); *The Bramleighs of Bishop's Folly* (1868); or his last book, *Lord Kilgobbin* (1872), as in most of his earlier novels. One of Lever's best novels, *A Day's Ride, a Life's Romance*, was published in *All the Year Round* (1867), and curiously enough it has been asserted that it injured the sale of the magazine. Under the pseudonym "Cornelius O'Dowd," Lever contributed articles on miscellaneous subjects to *Blackwood's Magazine*. In 1867 he was transferred from Spezzia to Trieste. His health failed him, and he died at Trieste.

Dr. W. J. Fitzpatrick, *A Life of Charles Lever*, published in 1879. [R. H. C.]

Leverrier, URBAN JEAN JOSEPH (b. 1811, d. 1877), a famous French astronomer, received his early education at St. Lô, in Normandy, where his father held the position of a minor "public functionary," was admitted to the Polytechnic School of Paris, and on graduating selected the Tobacco Board as the field of duty. At first chemistry was his favourite study, and a paper which he published in 1836, on the combination of phosphorus with hydrogen and oxygen, was one of great promise. Astronomy, however, won him, mainly owing to the fact that an "opening" as teacher of celestial physics presented itself in the Polytechnic School. His *Tables de Mercure*, and various memoirs which he published, soon justified his abandonment of chemistry. This secured his election into the Academy of Sciences in 1846, and led him, at the instigation of Arago, to apply himself to the investigation of certain irregularities in the motion of the planets. The result of these researches was his indicating that part in the heavens where a new planet, the cause of these disturbances, would be found. The penetration thus displayed was shown to be based on sound data, for a few days later, without, it appears, being aware of Leverrier's conclusions, Adams

(q.v.) announced the discovery of the planet Neptune in this very region, and is thus for ever bracketed with the French astronomer in the conjoint credit derived from this remarkable addition to knowledge. Honours were soon heaped upon Leverrier. Crosses arrived from foreign Powers, and Louis Philippe conferred on him the Grand Cordon of the Legion, the tutorship of the Comte de Paris, a professorship in the Faculty of Sciences, and other substantial dignities. As for the Royal Society of London, it sent him the Copley medal, and at a later date (1868) the Royal Astronomical Society voted to him and to Adams a conjoint medal, and in 1876 another medal for his own special discoveries, Cambridge having in the previous year made him LL.D. When the Revolution broke out, Leverrier, like so many other men of science, essayed politics as a Republican, though on La Manche sending him to the Legislative Assembly, in 1849, he at once took up a position antagonistic to the more socialistic section of that short-lived body. By the time the *coup d'état* made an end of it, Leverrier was quite ready to welcome the second Empire, and was rewarded by a seat in the senate, the inspector-generalship of Superior Instruction, and among other offices the directorship of the Paris Observatory, in succession to Arago. The sweeping reforms which he instituted raised against him such a storm that in 1870 he resigned, only to resume office three years later, though with restricted authority. During these three years of comparative inactivity, as they seemed to the world, he had been revising the correct theories of planetary motion, forming new and more accurate tables, and generally taking up the subject *de novo*. This gigantic task he had only completed three weeks before his death, which took place at Paris on Sept. 23rd, 1877. Leverrier's most notable achievement was the one already mentioned, but by reorganising the entire meteorological service in France, by founding the French Scientific Association, and by the influence he brought to bear on the Government to infuse a greater amount of scientific teaching into public education, he did excellent though less brilliant work.

Bertrand, *Mémoires de l'Académie des Sciences*, t. xli., second series. Adams, *Monthly Notices of the Royal Astronomical Society*, vol. xxxvi., p. 232. Tisserand, *Annales de l'Observatoire*, 1890.

[R. B.]

* **Levi**, PROFESSOR LEONE (b. 1821), economic writer, was born at Ancona in Italy, and, coming to England in 1844, directed his attention to the study of mercantile problems. In Liverpool, where he had settled, he was instrumental in establishing the Chamber of Commerce in 1849. In 1850 he published his *Commercial Law of the World*, which subsequently appeared revised and enlarged under the title *International Commercial Law* (1873). Mr. Levi next took up the

subject of an international commercial code, in which he elicited the co-operation of Lord Brougham, and had the satisfaction of seeing effect given to his suggestions in the legislation of 1856. In 1852 Mr. Levi proceeded to London to fill the chair of the Practice and Principles of Commerce at King's College, and in 1859 was called to the bar at Lincoln's Inn. In 1856 he suggested the publication of the *Judicial Statistics*, which have been since annually issued in England, Scotland, and Ireland, on a uniform system. In 1860 he wrote *On Taxation*, in 1872 he published his *History of British Commerce and of the Economic Progress of the British Nation*, 1763-1870, since brought down to 1878, and in 1881 he discussed the economical, commercial, financial, and moral phases of *War and its Consequences*, earnestly recommending the establishing of a court of international reference and arbitration. Professor Levi has also written on the *Metric System* (1871), *Economic Condition of the Fishermen* (1883), and *Wages and Earnings of the Working Classes* (1885).

* **Lewald**, FANNY (b. 1811), novelist, was born at Königsberg of orthodox Jewish parentage. After a prolonged tour through Germany with her father in 1832, she went to live in Dantzic, and there acquired the intimate knowledge of the Baltic coast and its inhabitants, that is the most interesting feature of several of her later books. She settled in Berlin by herself when about thirty-two, and began to produce her well-known works of fiction. The following are the titles of some of her best-known works: *Adele* (1855); *The Ladies'-maid* (*Die Kammerjungfer*, 1856); *Companions of the Journey* (*Reisegefährten*, 1858); *Of the Same Household* (*Hausgenossen*, 1864); *Nella* (1870); *A Girl's Ransom* (*Die Erlöserin*, 1873); *Bevernute* (1876); *Helmar* (1880); *Father and Son* (*Vater und Sohn*, 1881), and *Stella* (1883). In 1854 she married the critic and philosophic writer, Adolph Stahr, who obtained a divorce from his first wife. Her dissertation on Woman's Rights (*Für und Wider die Frauen*, 1870) attracted considerable attention.

Fanny Lewald, *Meine Lebensgeschichte* (1861).

* **Lewes**, GEORGE HENRY (b. 1817, d. 1878), critic, biologist, and miscellaneous writer, was born in London, and received a desultory education in the metropolis and on the west coast of France. After trying to gain a footing in business and studying medicine for a time, he turned to the stage, but finally chose literature as his profession, and continued for some years a journalist and dramatic critic of exceptional acuteness and vivacity. His *Biographical History of Philosophy* (1845-6) caused him to be known in another department of thought. In the 3rd edition of 1867, the critical portion was much amplified, though it may be doubted if the work was thereby improved. After the *History of Philosophy*, Lewes turned

for relaxation to fiction, and produced two novels—*Ranthorpe*; and *Rose, Blanche, and Violet* (1847–8), neither of which won the success of popularity. An attempt to resuscitate the memory of Robespierre (1849) as one of the foremost statesmen and orators, remained equally unappreciated; but his next undertaking, the *Life of Goethe*, begun soon after the commencement of his connection with George Eliot (q.v.), and published in 1855, is still the most popular and on the whole the best biography of the poet either in English or German, in spite of its many faults. In this work the growth of Lewes's scientific interest may already be traced, and the rest of his life was devoted almost entirely to the observation of nature and the study of biological and physiological problems. *Seaside Studies* appeared in 1858, the *Physiology of Common Life* in the following year, *Animal Life* in 1862, an essay on *Aristotle* as a biologist in 1864, and the series of essays on *Problems of Life and Mind*, in detachments, from 1874 to 1879. In 1865 Lewes was appointed editor of the *Fortnightly Review*, a position for which he was admirably fitted.

J. W. Cross, *Life and Letters of George Eliot*.

Lewis, MATTHEW GREGORY (b. 1775, d. 1818), novelist, generally known as "Monk" Lewis, was a man of means, popular in society, and for a few years, from 1796, was a silent member of the House of Commons. His taste lay entirely in the direction of the horrible and weird, and his novel, *Ambrosio; or, the Monk* (1796), had to be expurgated before it could be circulated. *The Bravo of Venice*, a translation from the German (1804), is also of the blood-curdling order. He produced several plays, among them being the once-popular *Castle Spectre* (1797). Monk Lewis also published some translations of Kotzebue's plays.

The Life and Correspondence of M. G. Lewis (anon.), 1839.

Lewis, SIR GEORGE CORNEWALL (b. 1806, d. 1863), politician and man of letters, was the son of Thomas F. Lewis, of Harpton Court, Radnorshire, who was made a baronet in 1846 for his services as Poor Law Commissioner. He was educated at Eton and Christ Church, taking his degree in 1828 with a first in classics and a second in mathematics. He was called to the bar in 1831, having during his legal studies attended, and been profoundly influenced by, John Austin's famous lectures on jurisprudence. In 1832 he was appointed a commissioner to inquire into the condition of the Irish poor; and in 1834 into the property and general position of the Irish Church. In 1836 he accompanied Austin on his mission to Malta; and on his return succeeded to his father's Poor Law commissionership. In 1844 he married Lady Maria Theresa Lister, a sister of Lord Clarendon. In 1847 he threw up his appointment,

and was returned member for Herefordshire, in the Whig interest. He was almost at once put in office, first as Secretary to the Board of Control, then as Under-Secretary in the Home Department. In 1850 he became Financial Secretary to the Treasury; but in 1852 his loss of office on Lord John Russell's resignation was quickly followed by loss of his seat at the ensuing general election. He availed himself of his exclusion from practical politics to edit the *Edinburgh Review*. In 1855 his father's death made him a baronet, and his return as member for the Radnor Boroughs caused him to resign the editorship of the Whig quarterly. In the same year Lord Palmerston made him Chancellor of the Exchequer, in succession to Mr. Gladstone, when the secession of the Peelites necessitated the reconstruction of the Ministry. He acquitted himself creditably in a position of exceptional difficulty. He had to raise loans and new taxes to supply the expenditure caused by the Crimean war, to break "Peel's Act" during the panic of 1857, and to defend himself from the attacks of his eminent predecessor. In 1859, when Palmerston formed a new Ministry after the defeat of the Tory Government, Lewis became Home Secretary. Very unwillingly he was transferred, in 1861, to the War Office, a post for which he had few aptitudes and no special knowledge. He was still in office when he died in 1863. As a politician, Lewis's rise was exceptionally rapid. Possessing little brilliancy or eloquence, his strong intellect, sound common sense, and varied information soon gave him the ear of the House. He was trusted by moderate men on both sides, excited little opposition, and generally carried his own way. His great business capacity was widely recognised. At a period when there was but little desire for organic change, when the Conservative influence of Palmerston was paramount, a good administrator like Lewis was sure to make his mark. The most remarkable characteristic of Lewis was the great variety of his literary activity. Yet he was by no means a versatile man; and in his speculations he ever preserved the clearness, method, regularity, and industry that characterised his political life. With strong limitations, and with but plain and homely qualities, he succeeded in making his influence widely felt in several departments of letters. When quite a young man he published a great variety of books on philological subjects, such as the *Essay on the Origin and Formation of the Romance Languages* (1835), in which he demolished Raynouard's absurd theory of a uniform original Romance tongue. He wrote largely for the *Philological Museum*, and its successor the *Classical Museum*. He translated Boeckh's *Public Economy of Athens*, Müller's *History of Greek Literature*, and part of Müller's *Dorians*. His Irish experience he embodied in his *Local Disturbances*

in Ireland, and the Irish Church Question (1836), in which he advocated the payment of State subsidies to the Catholic clergy. In 1832 he issued his most famous work, *Remarks on the Use and Abuse of some Political Terms*, in which he applies the philosophy of Austin to dissolve current fallacies and inaccuracies of political language. Other of his important works are his *Essay on the Influence of Authority in Matters of Opinion* (1850), *A Treatise on the Methods of Observation and Reasoning in Politics*, and his *Enquiry into the Credibility of Early Roman History*, in which he was the first in England to demonstrate the arbitrariness of the then universally accepted theories of Niebuhr. His latest works include an *Essay on Foreign Jurisdiction and the Extradition of Criminals* (1859), a *Survey of the Astronomy of the Ancients*, in which he aspires to demolish Bunsen's elaborate Egyptology, and a *Dialogue on the Best Form of Government*, which shows that the excellence of a particular form of rule depends upon conditions of time and place. His *Essays on the Administrations of Great Britain*, reprinted in 1864 from the *Edinburgh Review*, are a valuable contribution to political history. In 1870 his brother edited a volume of his letters to various friends.

Bagehot, *Biographical Studies*. [T. F. T.]

* **Liddell**, THE VERY REV. HENRY GEORGE, D.D. (b. 1811), son of the late Rev. H. G. Liddell, of the family of Ravensworth, was educated at the Charterhouse and at Christ Church, Oxford (B.A. double first class, 1833). He became senior student, tutor, and censor of Christ Church, select preacher in 1842 and 1847, classical examiner in 1844 and 1845, and professor of moral philosophy in 1845. Dr. Liddell was head master of Westminster School from 1846 to 1855, when he was appointed dean of Christ Church in succession to Dean Gaisford. He was Vice-Chancellor of the University of Oxford from 1870 to 1874. Dean Liddell is the author, in conjunction with the Very Rev. Robert Scott (b. 1811, master of Balliol College in 1854, dean of Rochester in 1870), of a monumental work, *Liddell and Scott's Greek Lexicon* (1st ed. 1843, 7th ed. 1883), which will probably long remain one of the proudest achievements of English scholarship. His *History of Rome* (1855) is, next to that of Mommsen, the best accessible work on its subject, and its conclusions are the work of a sound judgment. The *Student's Rome*, an abridged edition for younger students, has long been the generally received text-book for schools.

* **Liddon**, THE REV. HENRY PARRY, D.D. (b. 1829), canon of St. Paul's Cathedral, was a junior student of Christ Church, Oxford, where he graduated with a second class in classics in 1850. In 1851 he obtained the Johnson Theological Scholarship. Shortly

after taking holy orders, he went to Cuddesdon Theological College as vice-principal (1854 to 1859), and in 1864 he was appointed prebendary of Salisbury Cathedral, having previously been the bishop's examining chaplain. By this time Mr. Liddon had become known as one of the most prominent members of the Liberal High Church party, and one of the most eloquent and profound preachers of the day, combining supreme rhetorical powers with great argumentative skill. He was select preacher at Oxford University in 1863, 1870, 1877, and 1884, and in 1866 he delivered his celebrated Bampton Lectures *On the Divinity of Jesus Christ* (1st ed. 1867, 11th ed. 1885). In 1870 he was created canon residentiary of St. Paul's Cathedral, and shortly afterwards Ireland professor of the exegesis of the Holy Scripture in Oxford University, when he was created D.D. This professorship he resigned, owing to ill-health, in 1882; and for the same reason he is understood to have refused more than one bishopric. Dr. Liddon republished from the *Guardian*, in 1869, a sketch of *Walter Kerr Hamilton, Bishop of Salisbury*, an edition of *Bishop Andrews' Manual for the Sick* (1st ed. 1874), *Dr. Pusey's Prayers for a School Boy* (1883) and *Private Prayers* (1884), and, together with Dr. William Bright, the *English Church Defence Tracts*. He is, however, chiefly influential through his sermons, which have profoundly affected the thought of our time. A good selection from them was published in 1882, and worthy of especial mention are those on *Bishop Wilberforce* (1875) and *Dr. Pusey* (1884); *Sermons preached before the University of Oxford*, 1st series (8th ed. 1880), and 2nd series (2nd ed. 1880), a collected edition of which began to appear in 1881; *Some Elements of Religion—Lent Lectures*, 1870 (1872, 5th ed. 1885); *Thoughts on Present Church Troubles*, four sermons (1880). Dr. Liddon was an emphatic opponent of the Church Discipline Act of 1874, and helped to swell the public indignation against the Bulgarian atrocities of 1876 by his letters to *The Times*. He was much interested in the conference for the Reunion of the Churches held at Bonn in 1875.

Liebig, JUSTUS, BARON VON (b. 1803, d. 1873), a famous German chemist, made his first acquaintance with the science of which he was destined to be so eminent a cultivator in his native town of Darmstadt (where his father was a dyer and dealer in dye stuffs), by performing in private the experiments which he had read about in the Grand Duke's Library. Determining to devote himself to chemistry, he entered the shop of an apothecary at Heppenheim, but finding that the making and mixing of drugs helped him very little on his way to scientific knowledge, he entered the University of Bonn, and subsequently that of Erlangen, where, after much discursive study of lecture-room chemistry,

and some philandering with Schelling's metaphysics, which he ever regretted, he obtained the degree of Ph.D., not, however, without great labour, mainly due to his early neglect of ordinary school education. By this time the Grand Duke had heard of his youthful subject, and by his liberality he was sent to Paris, where he made the acquaintance of some of the famous chemists then living in the French capital. A paper on fulminic acid which he communicated to the Academy of Sciences led to his friendship with Humboldt, by whom he was introduced to Gay-Lussac, who admitted him as a private pupil, and taught him that adroitness in manipulation which Liebig in his turn transmitted as a sort of legacy to two generations of students. But before he could obtain a chance to become a teacher in his native duchy, he had to purge himself of the offence of having taken his academical instruction elsewhere than at the Grand Ducal University of Giessen. In those days this law was very stringent, and even after Liebig had become a teacher of note, two young Prussians who came to his laboratory were peremptorily ordered to return. By the influence of Humboldt, Liebig's *lachesse* was forgiven him, his Erlangen degree recognised, and, when barely of age, the post of professor-extraordinarius given him in Giessen. Here he remained for the better part of his life, raising its university to the highest eminence as a school of chemistry, and attracting students from every part of the world. In brief, his laboratory, library, and lecture-room created something like a revolution in science, and not only benefited Giessen, but by attracting the attention of the other German states and foreign countries to their deficiencies, did much to advance chemical teaching everywhere. He worked hard at his own researches, though during the whole of his life at Giessen much of his time was occupied with his ever-increasing classes. Either singly, or in conjunction with Wohler, first in Poggen-dorff's *Annalen*, and then from 1832 in *Liebig's Annalen der Chemie und Pharmacie*, in the *Handwörterbuch der reinen und angewandten Chemie*, and in his *Jahresbericht der Chemie*, he published over two hundred papers, nearly every one of them containing some original view or discovery of importance, besides issuing several works of a more or less systematic character. In 1845 the Grand Duke created him a hereditary baron. Seven years later he accepted the invitation of the Bavarian Government to the chair of chemistry in the University of Munich, to which in 1860 he added the duties of president of the Academy of Sciences in succession to Thiersch. This office he filled until his death in 1873. A kindly, courteous gentleman, Liebig was held in high esteem not only by his scientific contemporaries, but by all with whom he came in contact. He seemed never unduly exalted by his position, and unlike many students,

and the majority of German specialists, had the broadest tolerance for men of every conviction. Liebig's researches extended over so wide a field, and were continued with such assiduity for more than fifty years, that it is impossible in a few lines to give the gist of even the most important. Organic chemistry, and the accuracy of analysis, gained much at his hands. Physiology, pathology, and agriculture were equally in his debt, though some of the early views which he advanced have not withstood the onset of later criticism, and indeed, before they had been long before the world, were abandoned by the author himself. His *Organic Chemistry in its Application to Agriculture* (English translation by Playfair, 1840), and his *Chemical Letters* (1852), are landmarks in the history of agricultural chemistry, and have appeared in numerous translations in almost every European language. In 1874 appeared a collection of his addresses and shorter papers under the title of *Reden und Abhandlungen*, though a complete biography and edition of his principal writings are still desiderata in scientific literature. His influence on chemistry was great, and is likely to be lasting. At the same time, it is not too much to say that, familiar though his name is, connected with numerous facts and theories—we need not refer to the more material reputation of the *Extractum Carnis Liebigis*—the historian of chemistry may, fifty years hence, come to the conclusion that by improving the teaching of chemistry in Giessen and elsewhere, and by training up a numerous corps of pupils, some of whom ran him closely even before his death, Liebig deserves the gratitude of the world even more than by the data which he added to the stores of knowledge.

Biographies and summaries of his scientific work appeared in all the scientific papers at the period of his death, and in the *Transactions* of the Munich and other academies to which he belonged. A good *précis* of his discoveries is given by Professor Crum Brown in the *Encyclopædia Britannica*, vol. xiv., pp. 566-8.

[R. B.]

* **Liebknecht, WILHELM PHILIPP MARTIN** (b. 1826), German Socialist leader and deputy, though born of poor parents, studied philosophy at the Universities of Giessen, Berlin, and Marburg, and embraced the profession of letters. Having taken part in Struve's revolt in Baden, Sept., 1848, he was imprisoned for three-quarters of a year, and then acquitted. He went to Switzerland and thence to England, where he spent thirteen years, associated with Marx, Engels, Wolff, and other leading Socialists, and became a member of the International, founded in Sept., 1864. Sharing in the amnesty of 1862, he returned to Germany and edited the *Nord-deutsche Allgemeine Zeitung* until it became Bismarck's organ, was implicated in the labourers' agitation of 1865, and retired to Leipzig, where he edited the *Mitteldeutsche Volkszeitung* until its suppression by the

Prussian Government, Sept., 1866. Returning to Berlin, he was arrested and suffered a three months' imprisonment. In 1867 he was elected a member of the North German Parliament, and became editor of the *Demokratisches Wochenblatt*, the organ of the Socialist party, in which he denounced the government of Bismarck, the French war, and annexation of Alsace-Lorraine. Accused with Bebel of high treason, he was imprisoned in 1872 for two years, and during his confinement was elected a deputy to the Reichstag, and took his seat on his liberation in 1875. The Government have tried to prevent his re-election, but in vain, and in 1878 he opposed with his colleagues the passing of the Anti-Socialist Law, renewed in 1881, and again in 1886, throwing at Bismarck, Cavour's maxim, "Any bungler can govern in a state of sieg."

Zache, *Die Rothe Internationale*; Mehring, *Die deutsche Social Demokratie*.

* **Lightfoot**, THE RIGHT REV. JOSEPH BARBER, D.D. (b. 1828), Bishop of Durham, a native of Liverpool, was educated at Trinity College, Cambridge, where he was a scholar. He graduated B.A. in 1851 as senior classic, a wrangler, and Chancellor's medallist, and was elected a fellow of his college in 1852. He gained the Norris University prize in 1853. He was ordained in 1854, became tutor of Trinity College in 1857, Hulsean professor of divinity at Cambridge in 1861; canon of St. Paul's Cathedral in 1871; Lady Margaret professor of divinity at Cambridge in 1875; and Bishop of Durham in 1879. Bishop Lightfoot is one of the greatest Biblical scholars of the day, and has devoted himself especially to the Pauline epistles, of which he has published revised texts with notes, introductions, and dissertations. His latest edition of the Epistles of St. Paul began to appear in 1879, and the text of *Apostolic Fathers* in 1877. Several of the editions of the epistles have been published separately.

Li-Hung-Chang. [CHINA.]

Lincoln, ABRAHAM (b. 1809, d. 1865), an American statesman, and sixteenth President of the United States, was the son of pioneers, and his early experience was that of a farmer's boy, living in Kentucky, on the borderland of civilised countries. The boy received only the trace of a regular education. He learned to read, however, and as books were scarce, thoroughly digested the few he could obtain; and of these a notable pair were *Æsop's Fables* and *The Pilgrim's Progress*. At nineteen he made a voyage as a hand on a Mississippi flat-boat. His father moved to Illinois in 1830, and cleared a farm, and Abraham split rails for the fence; hence he was afterwards known as the "Rail-Splitter." He was noted at this time for his strength and skill as a wrestler, and his talent as a story-teller and

stump orator. In 1832 he enlisted, and served as a volunteer in the Black Hawk War against the Indian chief of that name, and in the same year was an unsuccessful candidate for the Legislature. He then began the study of law, and in 1834 was elected to the Legislature on the Whig ticket. He was re-elected in 1836, in 1838, and in 1840. In 1837 he had begun the practice of law in Springfield, Illinois, and had much success in jury trials. In 1842 he married Nancy Todd. He was elected to Congress in 1846. He opposed the war with Mexico, supported warmly the efforts to abolish slavery in the district of Columbia, and introduced a Bill for that purpose. Lincoln, already known for his endeavours to reduce the limits of slavery, and vigorously in sympathy with all the aspirations of his section, was a leader of his people in the Kansas-Nebraska agitation, which proposed that these territories should be "free soil," and in 1856 was urged by his State as a candidate for the Vice-Presidency, on the ticket with Fremont. In 1858 the election in Illinois was for a Legislature which should choose a senator, and Lincoln "stumped" the State in company with Stephen A. Douglass, the Democratic candidate—that is to say, they argued before the same audiences. This was a great debate, and gave Lincoln a national reputation. In 1860 he was nominated as the candidate of his party for President. There were four candidates, Lincoln being the candidate of all men, North and South, who already perceived the ultimate drift of the conflict, and were for the union against all agitations that threatened its disintegration. Lincoln received 180 electoral votes, or an absolute majority of 57 over the votes for all other candidates. Mr. Breckenridge, the candidate of the pro-slavery party, received 72 votes. His popular vote was 847,900, and of these 348,012 were cast in Northern States. Half a million votes, therefore, or one-ninth of the strength of the country, favoured the extreme theories of the Southern democracy. Between the date of the election in November, 1860, and the "inauguration" in March, 1861, there was time for reflection, but the South employed the interval only in preparing for armed revolt. In this labour it was greatly assisted by the fact that depôts of arms and of war material had been so located by the Southern officials in the War Department as to put them within easy reach in case of insurrection; while the small army of the United States was scattered in squads at remote parts of the country. Consequently the South had five months' start of the North in active preparation for war. An alleged conspiracy to assassinate the President-elect on the way to Washington was defeated by a change of train, and he was constitutionally inaugurated. In his address upon that occasion, he referred to the projected rupture by the declaration that he

held the Union to be perpetual. He said, "Perpetuity is implied in the fundamental law of all Governments. It is safe to assert that no Government ever had a provision in its organic law for its own termination." Eleven States seceded, and authorised commissioners to treat with the Government of the United States for the adjustment of new relations. Mr. Lincoln refused to receive or recognise these gentlemen. Fort Sumter was reduced on April 12th, and on April 15th the President by proclamation called for 75,000 men of the militia of the States. Congress was convened in extra session for July 4th. It voted 40,000,000 dols., gave authority to raise an army of 500,000 volunteers, and ratified all the previous calls for armed force made by the President. The battle of Bull Run, fought in July, only inspired the North with more energetic purpose. Great effort was made to commit the Government to a declaration of the emancipation of the slaves, but this was firmly resisted, and the constitutional position was held that the war was for the maintenance of the Union. In 1862 active military operations were begun upon a grand scale, and in spite of McClellan's defeats, the victory over Lee at Antietam, and the successes of Grant in the west, gave the conflict a fairly hopeful aspect. In September, 1862, the President proclaimed that slaves in all States which should be in insurrection on January 1st, 1863, would then be proclaimed free. Foreign complications had threatened trouble, but had been dealt with upon Mr. Lincoln's theory that one war at a time was enough. On this ground the difficulties of the seizure of the British steamer *Trent* were avoided by concession, and the conduct of Her Majesty's Government in its early recognition of the Confederate States as a belligerent Power, and in extending assistance to the fitting out of Confederate privateers, was ignored. The proffered mediation of the Emperor of France was declined. In 1863 the military history of 1862 was substantially repeated. In this year Lincoln called for 300,000 volunteers, to take the places of those whose term of enlistment would expire. Pardon was proclaimed to all persons in arms against the United States upon condition of taking the oath of allegiance, the promised proclamation of emancipation to slaves in all States in insurrection was made, and the refusal to recognise the Government of Maximilian in Mexico was continued. Military force was concentrated in New York city to suppress riots, which had broken out in consequence of the enforcement of a law for conscription. In 1864 military operations were first conducted upon an effective system, with Grant as commander-in-chief. He was assured by the President that he should have the complete support of the Government in all requirements, and be without restraint as to his plans. In this year trouble was again

threatened with England. Some Southerners resident in Canada abused the hospitality of that country by the organisation of a raid across the border, and committed murder and robbery in the State of Vermont. They were arrested, and brought up on extradition proceedings, upon a demand for their surrender to the Government of the United States; but the judge discharged them from custody upon a technicality. This provoked great irritation in the United States, and the Government revoked the reciprocity treaty, by which Canadian fishermen had had some advantages in the American trade. An attempt was made by some irregular Confederate agents to open a negotiation for settling terms of peace, and Lincoln authorised Horace Greeley to hear the propositions of any persons having authority from the Confederate Government; but the scheme failed, because it was impossible to agree upon Lincoln's basis of negotiation—the restoration of the Union, and abolition of slavery. In November occurred the Presidential election. Lincoln was again the candidate of his party, and General George B. McClellan was the candidate of the Democratic party. As none but the loyal States voted, the electoral vote was only 233; and of this number Lincoln had 212, and General McClellan 21. In the party declarations the Republicans had urged a vigorous prosecution of the war, and demanded the abolition of slavery, while the Democrats had proposed a cessation of hostilities, and the settlement of all difficulties in a national convention. The election was therefore an expression of the deliberate determination of the Northern people to fight it out. In 1865 there was another abortive attempt to make peace. Mr. A. H. Stephens, Vice-President of the Confederacy, R. M. T. Hunter, and J. A. Campbell, authorised representatives, met and conferred with Lincoln upon a gunboat in Hampton Roads on February 3rd. Lincoln's conditions were as before. The Southern commissioners proposed a cessation of hostilities, and the union of the two armies in an operation to drive the French out of Mexico, hoping that this might produce a national sentiment favourable to easier terms. Lincoln declined to consider the proposition. He was inaugurated for the second time in March. Lee's army was surrendered on April 9th; and the President now addressed himself to a practical solution of the difficult political problem involved in the restoration of the States to their proper position in the Union. But this great labour was cut short by a rash hand. On April 14th—Good Friday—John Wilkes Booth [q.v.], an actor, abruptly entered the box where Lincoln sat in the theatre, and approaching him from behind, shot him through the head with a pistol. He died next day. Upon Lincoln's elevation to the Presidency of the United

States, he was well known only in his own State, was known throughout the country only to close observers, and in foreign countries his name had never been heard. For these reasons the case was cited as a reproach to democratic institutions, that they resulted in lifting to great stations of dignity and trust the commonplace personages of rural communities. But no man can be named in the course of history who has conducted a great nation through an arduous and terrible struggle with more courage, patience, dignity, and success, and with so little offence to the liberties of the people and the common rights of humanity. If it be still claimed that such a man is only the average product of the ordinary rural communities of his country, the fact must place those communities high in the scale as nurseries of men. [GRANT, LEE, McCLELLAN.]

W. H. Lamon, *Life of Abraham Lincoln* (Boston, 1870); Henry J. Raymond, *Life and Public Services of Abraham Lincoln* (New York, 1865). [G. W. H.]

* **Lind, JENNY** (Madame Otto Goldschmid), (b. 1820), singer, a native of Stockholm, was the daughter of poor parents, and received her musical education at the school of singing attached to the Court Theatre and at Paris (1841) under Garcia. In 1844 she went to Berlin, where her reputation first began. She sang in Meyerbeer's *Feldlager in Schlesien*, afterwards remodelled as *L'Etoile du Nord*, the heroine's rôle having been written expressly for her, and achieved an unequalled success in *Norma*. The season over, she visited Hamburg, Cologne and Coblenz, and was triumphantly welcomed at Copenhagen and Stockholm. Her first appearance at the Gewandhaus, Leipzig, was on Dec. 6th, 1845. In April, 1846, she sang at Vienna, and on May 4th, 1847, before a London audience on the stage of Her Majesty's Theatre, Covent Garden. The enthusiasm of the public was unbounded; a successful tour in the provinces followed, and in 1848 she returned to Covent Garden, but at the end of the year announced the intention of withdrawing from the stage. This was finally carried into effect after May 18th, 1849, when she acted for the last time in *Robert le Diable*, having associated her name especially with the operas of *Der Freyschütz*, *Norma*, *Lucia di Lammermoor*, *La Figlia del Regimento*, Spontini's *Vestale*, and Mozart's *Flauto Magico*. She still continued to sing in oratorios and concerts, and during a long tour in the States she married Herr Otto Goldschmid at Boston, Feb. 5th, 1852. On her return to Europe, Madame Goldschmid visited Holland and Germany, and returned in 1856 to England, where she has since resided, but seldom making her appearance in public. The Bach Choir, conducted by her husband, has had the benefit of her valuable training for the female voices, and on the establish-

ment of the Royal College of Music, Madame Goldschmid was appointed one of the professors, a post she has recently resigned. The Mendelssohn Scholarship owes its foundation in great part to her magnificent singing in *Elijah* when the oratorio was given at Exeter Hall, Dec. 15th, 1848, to raise funds for the purpose.

Lindley, JOHN (b. 1799, d. 1865), botanist, was the son of a Norwich market-gardener, the author of a *Guide to the Orchard and Kitchen Garden*. His first important work was a *Monographia Rosarum* (1820) with descriptions of several new kinds of roses. This treatise, and his contributions to the transactions of the Linnean Society, having attracted some attention, Lindley was appointed Assistant Secretary to the Horticultural Society, and wrote the descriptive portions of Loudon's *Encyclopædia of Plants*. In 1829 he became professor of botany in University College, London. His great work was his *Introduction to a Natural System of Botany* (1830), in which he advocated the "natural" system of Jussieu in opposition to that of Linneus. He also wrote an *Introduction to Systematic and Physiological Botany* (1832), the *Vegetable Kingdom* (1846), and was editor of the *Gardener's Chronicle*.

Lingard, JOHN (b. 1771, d. 1851), historian, sprang from a Lincolnshire Catholic family which had suffered considerably as recusants. His father was a carpenter settled at Winchester, but as the boy showed signs of ability he attracted the attention of Bishops Challoner and Talbot, and was sent in 1802 to the English Seminary at Douay. His stay there being rendered dangerous by the disturbances following the French Revolution, he escaped to England in 1793, and was for some time engaged as a tutor in the family of Lord Stourton. On the establishment of the Catholic settlement at Crook Hall by some old members of the Douay College in 1794 Lingard became its vice-president, and after having been ordained priest in 1796, was appointed professor of natural and moral philosophy. It was here that he published, in 1806, his *Antiquities of the Anglo-Saxon Church*, which Southey pronounced to be distinguished as much by its Catholic sophistry and misrepresentation as by its large erudition. A revised and enlarged edition was published in 1844. While devoting much time to teaching, Lingard published many polemical writings. In 1811 he was offered and refused the presidency of the college at Maynooth, and retiring from the seminary, which had removed in 1808 to Ushaw, withdrew to a more secluded mission at Hornby, where he was able to devote himself to his great work, *The History of England from the First Invasion by the Romans to the Commencement of the Reign of William III.*, which appeared in

8 vols. (1819-30). A fifth ten-volume edition was published in 1849. The first volumes at once excited great attention, and the history was soon translated into French, German, and Italian. Pope Pius VII. created the author in 1821 a Doctor of Divinity and Canon of Civil Law, and his successor, Leo XII., was anxious to bestow the honour of a cardinalate. Written from a Catholic standpoint, the work distinctly shows the bias of the writer, but the fullness of detail, denoting patient and conscientious research, and the clear arrangement, extorted praise from writers of an opposite school of thought. Hallam speaks of the "acuteness and industry" which would raise the author "to a very respectable place among our historians if he could have repressed the inveterate partiality of his profession;" and Macaulay described him as "undoubtedly a very able and well-informed writer, but whose fundamental rule of judging seems to be that the popular opinion on historical subjects cannot possibly be correct."

Memoir by the Rev. M. A. Tierney in the sixth edition of Dr. Lingard's *History of England*.

Linnell, JOHN (b. 1792, d. 1882), artist, was born in London, and displayed high artistic powers at a very early age. In 1805 he entered as a student at the Royal Academy, and was a pupil of Benjamin West, but especially of John Varley, through whom he probably became acquainted with William Blake. At the Academy he won medals both for sculpture and landscape painting, and in these early years he was equally skilled in the art of engraving. He began to exhibit at the Academy in 1807, and in 1809 won a prize of fifty guineas at the British Institution for his picture of *Removing Timber*. It is interesting to notice that he taught drawing to Mary Godwin, afterwards Shelley's wife. His reputation in middle life rested on portraiture rather than on landscape art; his miniature of his friend and master, Blake, is well known, and he also painted Mulready and Malthus (1833), Archbishop Whately (1838), Sir Robert Peel (1839), Carlyle (1844), Lord Monteagle, and the Barings. Returning, however, to landscape in 1846, he produced some of his masterpieces in the next few years. *The Eve of the Deluge* appeared in 1848, and the *Return of Ulysses* in 1849. He continued to exhibit at the Academy till extreme old age, his subjects being chiefly derived from the scenery of Surrey, where he lived for the most part after quitting his little farm on the farther side of Hampstead Heath. The names of his pictures are but little guide to their identification. The following, however, may be mentioned:—*Harvest Showers* (1868), *Sleeping for Sorrow* (1870), *A Coming Storm* (1873), *Woodcutters* (1874), *Autumn* (1877), and *The Heath* (1878). A large selection of his works was exhibited at the same time as Rossetti's pictures in the Winter Exhibition

M.W.—22*

of 1883. He was the last, and certainly one of the greatest, of those who inherited and maintained the best traditions of the earlier English school of landscape painting.

Portfolio, 1872.

* **Linton, SIR JAMES DRUMGOLE** (b. 1840), president of the Royal Institute of Painters in Water-Colours, was educated first as a designer for stained glass, and was later engaged to some extent as a draughtsman in black and white for at least one of the illustrated newspapers. His early training in draughtsmanship, at Leigh's (now Heatherley's) and at the St. Martin's Lane School of Art, though it was not of a very severe kind, was yet used to such good purpose by him that the quality of his drawing would alone have sufficed to give value to all his work; but it was in the practice of water-colour that he was destined to display the full extent of his ability. James D. Linton had not been long established as a figure painter in water-colours, drawing sometimes modern themes, but oftener illustrating the romance of the seventeenth century, when he was elected a member of the Institute, which occupied rooms in Pall Mall, opposite Marlborough House, in 1867. Its efforts were honourable, but its condition, at that time, was not very flourishing. Linton's accession to the ranks of the members was indirectly, perhaps, the principal means of that immense increase in usefulness, in prominence, in public favour which the Institute, wholly transformed and enlarged, afterwards achieved. Without the enterprise of James D. Linton it is doubtful whether the noble building in Piccadilly would ever have been reared, or the enlarged society, there housed, brought to its subsequent condition of prosperity. It was in 1883 that the Institute removed from Pall Mall to Piccadilly. In the same year Linton became vice-president; he became president in 1884, and was knighted in 1885. Meanwhile he had been a good deal engaged as a painter in oils. In 1877 he exhibited at the Academy his first oil picture, which displayed a happy facility and his usual sense of style. Two years later he began, for the decoration of the apartment of a rich man, a lover of art, at Nottingham, a series of large oil pictures representing scenes in the life of a warrior of the sixteenth century. This series—like his more numerous Scott Series in water-colours—permitted him a measure of dramatic action, while it kept ever in sight his command of dignified composition, harmony and richness of colour, and exquisiteness of texture. His *Marriage of the Duke of Albany*, painted by command of the Queen, is the most artistic vision of a royal marriage that has ever been presented, and was exhibited in 1885. We return to his work in water-colours. Some of his admirers declare that it is in his single-figure pieces that he is most complete, and in

the Scott Series—in the *Leicester*, the *Amy Robart*, and the *Janet*—there is often much reason for thinking this; but, in the Scott Series alone, no one would wish to overlook so exquisite a triumph of taste and of *technique* as is obtained in a scene from *Peveril of the Peak*, exhibited first at the Institute in 1880, and since seen at the exhibition of English water-colours held at Boston (United States) in 1885. Apart from the Scott Series, and this particular drawing from *Peveril of the Peak*, there are to be remembered, very notably, the *Émigrés* for dramatic effect; the *Love the Conqueror* and *Youth and Time* for loveliness of contour and composition; and the noble drawing of the *Admonition*, which appeared at the Institute in 1883. The invention in the latter instance, as, indeed, in several other instances, was Sir James's own, though it may have been suggested by many a romance and history of the Middle Ages and of the Renaissance. What was depicted was the breaking-in of a great ecclesiastic, with his attendant crowd of minor churchmen, upon a prince, his mistress, a jester, and a scornful or indifferent poet, engaged in the pursuits of pleasure, and unmindful of the responsibilities of life. Of Sir James Linton's art it should not now be necessary to say that it is never that of a mere copyist of nature—that it has been largely and radically influenced by the great achievements of the art of the past, which, nevertheless, it never slavishly, or even at all obviously, imitates. But art is cumulative, and Sir James Linton's would not have been what it is if he had not known how to profit wisely by the aims of the Venetians and the Dutchmen. [F. W.]

Liszt, FRIEDRICH (b. 1789, d. 1846), a German economist, born at Reutlingen, emigrated to America in 1825, where he was engaged in coal-mining, and in 1827 published his *Outlines of a New System of Political Economy* (Philadelphia, 1827). In 1832 he returned to Germany as the United States consul at Leipzig, and subsequently published several works on economic subjects, which were instrumental in the formation of the German Zollverein. In 1841 he published his great work, *A National System of Political Economy* (*Das Nationale System der Politischen Oekonomie*, Stuttgart, 6th ed. 1877), in which he passed severe strictures on the doctrines of Adam Smith. True wealth, he reasoned, consisted not in the quantity of exchange-values which a nation possesses, but in the full and many-sided development of the productive powers of the nation. Hence he protested against the cosmopolitan principle, and against the absolute doctrine of Free Trade. He accordingly advocated at least the temporary necessity of Protection to help the growth of important industries in Germany, and thus to educate the nation at the cost of a momentary

loss to consumers. List committed suicide in 1846.

Life of List, prefixed to an edition of his works (Stuttgart, 1851); Carlo Cattaneo in the *Politico*, Milan.

Liston, JOHN (b. 1776, d. 1846), actor, was the son of a Soho watchmaker, and at first taught in a day-school, but took to the stage, and in 1805 made a great impression in the part of Zekiel Homespun at the Haymarket Theatre. From that time forward he was recognised as the greatest low comedian of the day, and was never without an engagement. From 1823 to 1831 he was at Drury Lane, and from 1831 to 1837, when he retired, at the Olympic. His most popular creation was Paul Pry, a part in which he first appeared in 1825.

H. Barton Baker, *Our Old Actors*.

Liszt, THE ARBE FRANZ (b. 1811, d. 1886), pianist, a native of Raiding, near Oldenburg, received his first musical instruction from his father, Adam Liszt, an official in the service of Prince Esterhazy. The young Liszt played in public when only in his ninth year, and was hailed as a new Mozart. After a concert in Presburg, six Hungarian nobles contributed a sum to defray the cost of his musical education, and Adam Liszt, resigning his post, took his young son to Vienna. Here he studied (1821-3) under Czerny and Salieri. In 1823 with his father he removed to Paris with the idea of studying at the Conservatoire, but Cherubini refused to make any exception to the rule that forbade the admission of foreigners, and his studies were continued under Reicha and Paër. In 1825 was produced his opera, *Don Sanche, ou le Château des Amours*, which, though successful on its first production, did not keep the stage. A journey to England and Switzerland followed, but his brilliant career was for a time checked by the death of his father in 1827, and for some years the young musician had to work very hard as a teacher. For years he devoted himself almost entirely to the piano, and resisted the entreaties of friends who urged him to attempt other branches of composition. His career of virtuosity began in 1839, when he left Paris. From that date until 1849, when he settled at Weimar as director of the Court Theatre, he travelled through all the principal towns of Europe. At Weimar his position enabled him to play an important part in gaining a hearing for the music of the rising generation. As his earlier performances had won appreciation for Beethoven, so here he introduced the music of Wagner, Berlioz, Schumann, etc.; here the aspirations and powers of the so-called School of the Future attained definiteness. He left Weimar in 1859 in consequence of the opposition offered to Cornelius's *Barber of Bagdad*, and went to Rome, where, in 1865, he entered the priesthood, and subsequently chiefly wrote church music. In 1871 he

returned to his native country, and in 1875 was appointed director to the Hungarian Academy, having previously received a patent of nobility, and a pension of £600 a year. Shortly before his death he paid a visit to England. Liszt's compositions fall into three periods. The first, extending to the Weimar time, included principally transcriptions and brilliant pianoforte pieces; during the second, or Weimar period, he wrote his symphonies:—The *Faust* and *Dante* symphonies, the *Symphonic Poems*, *Hungarian Rhapsodies*, etc. During the third he wrote his oratorios, *St. Elizabeth* (1865), and *Christus* (1870–5), and other sacred pieces.

L. Ramann's *Frans Liszt, Künstler und Mann* (vol. i., 1811–40); Ludwig Nohl, *Musiker Biographien Liszt*; Mendel and Reissmann, *Musikalisches Conversations-Lexicon*.

Liverpool. ROBERT BANKS JENKINSON, 2ND EARL OF (b. June 7th, 1770; d. Dec. 4th, 1828), statesman, was the son of Robert Jenkinson, the 1st Lord Liverpool, the head of a county family of some consideration in Oxfordshire. The father was private secretary to Lord Bute, and was afterwards known as the leader of the king's friends. He was Secretary at War under Lord North, and a member of the Board of Trade under Mr. Pitt, of whose financial and commercial principles he was a warm adherent. He was created Baron Hawkesbury in 1786, and Earl of Liverpool in 1806. His son imbibed from him those liberal ideas on the subject of trade and tariff, which were characteristic of the early Tory party, and to which, to the day of his death, he was always anxious to give effect. The future Prime Minister was educated at the Charterhouse and Christ Church, where he was a friend and contemporary of Canning, and in 1791 entered Parliament as member for Rye. In 1794 he became a member of the India Board, and in 1801, on the formation of Mr. Addington's ministry, succeeded Lord Grenville at the Foreign Office. He negotiated the Treaty of Amiens, in which he probably made a fairly good bargain for this country, notwithstanding the storm which it provoked; but when Mr. Pitt returned to power he was transferred to the Home Office, not, however, because he was thought to have failed as Foreign Minister, but because it was thought desirable that he should continue to lead the House of Lords, to which he was called up in his father's lifetime. The Home Department was the senior office of the two, and as the new Foreign Secretary was to be in the House of Lords also, the exchange was unavoidable. On the death of Mr. Pitt, Lord Hawkesbury was sent for by the king, but he declined to form an administration, as the schism in the Tory party was not yet healed. But on the break-down of "All the Talents" in 1807, the party reunited itself to a great extent under the Duke of Portland, and Lord Hawkesbury was reinstated at the Home

Office. In 1808, by the death of his father, he became 2nd Earl of Liverpool; and under Mr. Perceval, in 1809, he filled the office of Secretary for War and the Colonies. In this position he is thought to have been one of the delinquents who starved the Peninsular War; and probably the charge is true to this extent, namely, that Lord Liverpool was no Lord Chatham, and that he was overawed by the prestige of Napoleon, and did not employ the great resources of this country with the energy which was necessary. He was what Lord Beaconsfield called him in *Coningsby*—"a mediocrity." On May 11th, 1812, Mr. Perceval was assassinated, and the negotiations for the formation of a new Ministry lasted till June 8th. They form a very interesting chapter of our political history, but can hardly be unravelled in the present memoir. They ended in the construction of a government of which Lord Liverpool was the head, but of which neither Lord Wellesley, Lord Grenville, nor Mr. Canning were members, and it was confidently predicted that it would not last six months. It lasted, in fact, very nearly fifteen years (fourteen years and ten months), and then only came to an end through the illness of Lord Liverpool himself. Lord Liverpool's administration may be divided into two parts—from 1812 to 1822, and from 1822 to 1827. During the first of these two periods, which embraced the conclusion of the war, the negotiations at Vienna, and the various conferences which followed, with a view to the final settlement of Europe, Lord Castlereagh was Foreign Secretary and leader of the House of Commons, and Mr. Vansittart Chancellor of the Exchequer. During the second period Mr. Canning was Foreign Secretary, Mr. Robinson Chancellor of the Exchequer, Mr. Huskisson at the Board of Trade, and Sir Robert Peel Home Secretary. The first ten years of Lord Liverpool's government have not been regarded with much favour, either by Liberal or Conservative critics. The partition of Saxony, the abandonment of Poland, the union of Holland and Belgium, the Austrian establishment in Italy, the alleged connivance of England in the suppression of the revolutionary agitation in Naples, the mismanagement of our finances, the increase in the duty on foreign corn, the coercive measures adopted for dealing with discontent in England, are all pointed to as so many instruments of the incapacity or despotic sympathies of the English government, and have all been visited on the devoted head of Liverpool. The increase of the corn duty was indeed a fatal error. But Lord Liverpool was himself a Free Trader, and when he got Mr. Huskisson and Mr. Canning into the Cabinet with him he set to work to liberalise the tariff, and doubtless, had his life been prolonged, would have anticipated the policy of Sir R. Peel. Liverpool himself regarded the Corn Law of 1816 purely as an experiment, saying

that if it was found not to answer it could easily be repealed; and it should be remembered also to his credit that the first proposal of his government was to have retained a portion of the property tax, which would have obviated all necessity for the imposition of fresh taxes, and, as it affected only men of incomes of £200 a year and upwards, would have been a direct boon to the working classes. But Whigs and Tories alike clamoured against the proposal. The sinking fund was certainly a financial blunder which Lord Liverpool cannot be excused for having sanctioned. But the policy of his government in regard to the currency and the commercial panics which occurred in the reign of George IV. is admitted by all modern financial authorities to have been both wise and courageous, while, notwithstanding the imputations of extravagance which have always been heaped upon the old *régime*, the government of Lord Liverpool was remarkable for economy; and when Lord Althorp introduced his first budget in 1831, he declared that he could not bring the public expenditure one penny below the point at which it then stood. Lord Liverpool was not one of the pro-Catholic Tories; but he regarded the question entirely as one of expediency. His great title, however, to our respect is that he held together for fifteen years a Cabinet which, in all probability, no other statesman of that day would have controlled, and secured for the country the invaluable services of men like Canning, Palmerston, Peel, Huskisson, and Wellington, without losing his hold over the more strait-laced section of the Tories headed by Lord Sidmouth and Lord Eldon, who from the death of Mr. Pitt to the passage of the Roman Catholic Relief Bill represented a larger body of public opinion than any other political connection. He thus secured for this country at a very critical period of its history the advantages of a powerful and broad-bottomed ministry, the members of which, whom neither Canning nor Wellington could manage, all worked easily together under the mild authority and fine temper of Lord Liverpool. It was on Feb. 17th, 1827, that he was seized with an attack of apoplexy, from which he never sufficiently recovered to resume the conduct of public business. No steps, however, were taken to appoint a successor till the end of March, and he remained nominally Prime Minister till the month of April, when Mr. Canning was finally charged by George IV. with the formation of a new government. The best account of Lord Liverpool's character is to be found in Twiss's *Life of Eldon*, where he is very happily described as the "keystone rather than the capital" of his own administration. When he disappeared from the scene, all the latent jealousies and divisions of opinion which had slumbered beneath his sceptre burst forth into a blaze, and he might

have said of himself, even with more justice than Lord Palmerston, "*Après moi le déluge.*"

Twiss, *Life of Eldon*; Fellow, *Life of Sidmouth*; C. D. Yonge, *Life of Lord Liverpool*.

[T. E. K.]

Livingstone, DAVID (b. 1813, d. 1873), was a native of Blantyre, Lanarkshire, where his father, Neil Livingstone (as he spelled his name), occupied a humble position. At the age of ten the future traveller was sent as a "piecer" to work in a cotton-mill, gaining what knowledge he could at an evening school, and from a book so placed that in going backwards and forwards, to and from the treddle he was tending, he could catch a hasty glance at its pages. He managed, however, to pick up a fair acquaintance with the rudiments of education, and as much Greek and Latin as fitted him for beginning the study of medicine and theology in Glasgow, with the object of qualifying himself for a missionary's life. In 1838 he was accepted as a candidate for duty by the London Missionary Society, and during the next two years resided for the most part in the metropolis, attending medical and theological lectures, or in other ways preparing himself for his future career, until in 1840, receiving the licence of the Glasgow Faculty of Physicians and Surgeons, he was appointed to labour in South Africa, greatly, it may be added, to his own regret, for he had all along eagerly wished to be sent to China. Landing at Algoa Bay, he proceeded 700 miles to the northward, where he remained for some time at Kuruman, though Kuruman was really only his headquarters, the greater part of the first two years being spent in travelling about from one place to another in search of a suitable spot for an outpost. Having selected Mabotsa, on a tributary of the Limpopo, 200 miles north-east of Kuruman, he removed there with his wife, the daughter of the Rev. Dr. Moffatt, whom he had married in 1844. But in 1846 he shifted his quarters to Chonuanane, and again in 1847 to Kolobeng, each station being distant respectively forty miles from the other. It was while stationed at the last-named spot that he discovered Lake N'gami, hitherto only known from native report, and crossed the Kalahari Desert. Failing to reach Sebituane, 200 miles north of the lake, he journeyed in 1851 to the Makololo country in the Zambesi Valley, and in 1852 returned to Cape Town with his family, whom he sent to England, so that without dread for their safety he might prepare for the great journey which he had for long meditated. Still bent on seeking a healthy site for a station beyond the utmost bounds to which the missionaries had hitherto reached, he travelled from one place to another until he in eighteen months—January, 1853, to June, 1854—crossed the entire breadth of the African continent, from the Zambesi to the Congo, and thence to Loanda, the capital of the Portuguese colony of

Angola. This feat has been often accomplished since that day. Until then, however, such a vast journey had never been made. But Livingstone's merits were further enhanced by the fact that, starting in Sept., 1854, he recrossed the continent, reaching Linyanti, the capital of the then Makololo empire, from whence he proceeded along the banks of the Zambesi, discovering on the way the great Victoria Falls, reaching on March 2nd, 1856, the Portuguese settlement of Tette; finally arriving at Quilimane, after achieving some of the most remarkable results hitherto made in the field of geographical research. Even if, as the Portuguese claim, much of the work then done by Livingstone had been previously accomplished by Lusitanian travellers—and unquestionably they did traverse much of the ground—their labours were never fully published, or had been long forgotten, and were certainly quite unknown to Livingstone or to any of the historians of African discovery. When he reached England in May, 1856, he received the most enthusiastic reception that had ever been vouchsafed to an African traveller. In 1857 he published his *Missionary Travels and Researches in South Africa*, which immediately attained an almost unprecedented success. Honours poured upon him—doctorates, fellowships, diplomas of learned societies, the medals of foreign geographers—and what he valued above all, the patron's medal of the Royal Geographical Society, was awarded him for "his scientific explorations in Central Africa." Africa had, however, still attractions for him. Accordingly, severing his connection with the London Missionary Society, though never ceasing to consider himself a missionary, he again left for the scene of his labours as her Majesty's Consul at Quilimane, for the eastern coast and the independent districts in the interior, and as commander of an expedition for exploring Eastern and Central Africa. This was in 1858, and it is not until near the close of 1864 that the labours of the commission ended, and Livingstone again reached civilisation. The story of these explorations are described in his *Narrative of an Expedition to the Zambesi and its Tributaries* (1865). The principal results obtained were the explorations of the Zambesi, the ascent of the Shiré, and the discovery of Lakes Shirwa and Nyassa. But the work accomplished aroused less popular interest than his former travels, while the unfortunate infirmities of temper displayed by the leader, and the consequent disagreements which ensued, convinced his friends that he was better fitted to act as a solitary pioneer than as the head of a large party of white men of high spirit, varied experience, and multifarious dispositions. As for himself, he was disappointed with what he had done, for though great it was not so great as he had hoped, nor at all comparable with the victories won in his earlier journeys,

at so little pecuniary cost. In 1866 Livingstone set off on his third and last African expedition, his principal object being to ascertain the exact source of the Nile; for in spite of the discoveries of Burton, Speke and Grant, and Baker, signalised by the addition of Lakes Tanganyika, Victoria Nyanza, and Albert Nyanza to the map of Africa, the problem was still unsolved. This time, however, although the government gave him the nominal rank of Consul to Central Africa, they declined to pay him any salary or to contribute at the outset more than £500 to the cost of an expedition which was destined to redound to the credit of the English name. The rest of the necessary funds was subscribed by private friends, particularly Mr. James Young of Kelly, the companion of his youth, and by the Royal Geographical Society. Latterly, the Government added to this £1,000, when public interest in his fate seemed to warrant the expenditure. For nearly two years no tidings came from him, the first news being his announcement of the water system of the Chambeze or Lualaba, in the mountain region south of Tanganyika. To ascertain whether this water system, which forms a succession of lakes west of Tanganyika, flows to the Nile or the Congo, occupied the rest of his life, much time being spent in idle attempts to discover those "fountains" of which Herodotus gives a description from hearsay. The slave traders—against whom he had waged relentless war—floods, the want of supplies (those sent him from Zanzibar being systematically intercepted), and the desertion of his followers hampered his movements, so that when Mr. Stanley (q.v.) was sent by the *New York Herald* to endeavour to succour him, he was found at Ujiji in sore straits, almost entirely dependent on the Arabs for the necessities of life. On parting with Mr. Stanley he started with a view to explore the river system of the Chambeze, still convinced that instead of feeding the Congo it would turn northward to form the headwater of the Nile. His end was, however, approaching. Dysentery, from which he had frequently suffered, attacked him on the eastern shore of Tanganyika, and in the malarious jungle east of Lake Bangweolo he got so ill that he had to be carried in a litter. At last, on the 29th of April, 1873, he entered in his journal the words "Knocked up quite; we are on the banks of the Molilomo." This was the last entry in the book. On the 1st of May his native attendants found him kneeling by the side of his bed—dead. When first the news reached England there was an inclination to receive it with doubt, as his death had more than once been previously reported. But the arrival of his remains, sundried as best the "boys" could manage, dispelled all hopes, and on the 18th of April, 1874, the Blantyre piecer-lad was laid in Westminster Abbey after a career in many

respects unsurpassed. Livingstone's services to geography are not likely to be under-estimated; but great though his own explorations were, it may be doubted whether the impetus which he gave to African discovery was not greater than the actual work which he himself accomplished. Personally, like most men who live much alone, he was somewhat dogmatic, and what is familiarly known as "difficult to get along with." But with all of this David Livingstone was a great-hearted, self-sacrificing, courageous man, whom no one could fail to respect, and who, in spite of his infirmities of temper, was capable of inspiring the love equally of the rude tribes by whom his memory is still held dear, and the English statesmen and *savants* with whom he associated during his visits to his native land. CHARLES LIVINGSTONE (b. 1821), his brother, who accompanied him on his Zambesi expedition, and afterwards became her Majesty's Consul at Fernando Po, "a fever and hunger-stricken island on which no animal, horse, cow, mule, sheep, goat, or dog can subsist," as he afterwards described it, died at Lagos of African fever less than six months later. Mrs. David Livingstone died in 1862 at Shapunga, but several sons and one daughter survive their father.

W. G. Blaikie, *Life* (1880); *Last Journals of David Livingstone*, edited by Rev. Horace Waller (1874); Stanley, *How I Found Livingstone* (1873); and among many similar notices Sir Bartle Frere's eulogium in *Journal of the Royal Geographical Society*, 1874, pp. cxiii.-cxviii. [R. B.]

Lockhart, JOHN GIBSON (b. 1794, d. 1854), the son-in-law and biographer of Sir Walter Scott, was the son of a former minister of Blackfriars Church, Glasgow. John Lockhart was educated at Glasgow High School and University, and after winning the Snell exhibition went to Balliol, Oxford, where he obtained a first-class while still in his nineteenth year. He became also an apt Spanish scholar, and his translations of *Spanish Ballads*, contributed later to *Blackwood's Magazine*, the staff of which he joined in 1817, were both elegant and faithful. He travelled in Germany, and translated Schlegel's *Lectures on the Study of History*, and was called to the Scottish bar in 1816, but soon found that he was far better suited for a literary career. His connection with *Blackwood* brought him under the notice of Sir Walter Scott in 1818, who introduced him to the historical department of the *Edinburgh Annual Register*. In 1820 Lockhart married the poet's daughter Sophie, and the young couple continued for some years to live at Chiefswood, a cottage within a short distance of Abbotsford. In 1819 he published *Peter's Letters to his Kinsfolk*, a series of clever sketches of Edinburgh men; in 1821 *Valerius, a Roman Story*; *Adam Blair* in 1822, and *Reginald Dalton* (1823). In 1826 he was invited to accept the editorship of the *Quarterly Review*, vacant by Gifford's death. Although a constant writer for the *Review*,

he kept up his contributions to *Blackwood*, and also wrote for *Constable's Miscellany* his *Life of Burns*, a biography which has not been superseded in grace and interest by the more voluminous lives by Cunningham and Chambers. In 1829 he added to his other editorial labours the superintendence of *Murray's Family Library*, to which he contributed as the first of the series his *Life of Napoleon*. His *Life of Walter Scott*, the work by which his name is most widely known, appeared in 1837-9, and the proceeds were devoted to the payment of Scott's creditors. In 1843 Lockhart was nominated by Sir Robert Peel to the auditorship of the Duchy of Cornwall, a sinecure worth £400 a year, and he had in addition private property; but his life was darkened by repeated family bereavements and anxieties. In 1831 he lost his eldest son—"Hugh Littlejohn" of the *Tales of a Grandfather*—and this loss was followed by that of the mother in 1837; her sister Anne, who had lived with them in London, having passed away in 1833. His son Walter also was taken from him two years before his own death, and shattered in health and spirits, Lockhart resigned the editorship of the *Quarterly* in 1853, and leaving London, passed the remaining months of his life in seclusion at Abbotsford. He is buried near his father-in-law in Dryburgh Abbey.

* **Lockyer**, JOSEPH NORMAN, F.R.S., F.R.A.S. (b. 1836), after being privately educated, became a clerk in the War Office in 1857. secretary to the Royal Commission on Scientific Instruction in 1870, and was then transferred to the Science and Art Department at South Kensington, where he became astronomical lecturer in the Normal School of Science. In 1871 he was elected Rede lecturer to the University of Cambridge, directed the eclipse expedition to Sicily in 1870, and to India in 1871. Professor Norman Lockyer was elected F.R.A.S. in 1860, and F.R.S. in 1869, of which society he won the Rumford medal in 1874. He is well known as a popular lecturer, and his chief contributions to science have been *Elementary Lessons in Astronomy* (1868), *Studies in Spectrum Analysis* (1872), contributions to *Solar Physics* (1874), *Astronomy*, in the series of *Science Primers* edited by Professor Huxley, besides numerous lectures and an interesting address on *The Education of our Working Classes* (1883). In 1885 he propounded the ingenious theory that the brilliant sunsets of that autumn were caused by dust created by the Java earthquake. Mrs. Norman Lockyer translated several of the works of Guillemin and Flammarion.

* **Loftus**, THE RIGHT HON. LORD AUGUSTUS, G.C.B. (b. 1817), diplomatist and administrator, fourth son of the 2nd Marquis of Ely, was educated at Trinity College, Cambridge.

He entered the diplomatic service, and after holding various minor appointments, was ambassador at Vienna 1858-60, at Berlin 1860-2, at Munich 1862-5, at Berlin again 1866-8, and to the North German Bund from 1868 (when he was created Privy Councillor) to 1871. In 1871 Lord Augustus was transferred to St. Petersburg, and had charge of our relations with Russia during the critical period of the Russo-Turkish War. Having acquitted himself with great credit, he was in 1879 appointed Governor of New South Wales, and returned to England in 1885. He was created K.C.B. in 1862, and G.C.B. in 1866.

Londonderry, ROBERT STEWART, 2ND MARQUIS OF. [CASTLEREAGH.]

* **Long, EDWIN, R.A.** (b. 1839), the artist, is a great artistic exponent of Oriental antiquity, and especially dwells on scenes of imaginative history derived from the records of Egypt, Assyria, and Judæa. Mr. Long has also established a high reputation as a portrait painter by such works as the portraits of the Bishop of Lincoln (exhibited 1879), Mr. Irving in the character of *Hamlet*, and Mrs. Angerstein (1880), Sir Stafford Northcote (1882), and the Baroness Burdett-Coutts (1883). Of his more important contributions to the Royal Academy the following may be mentioned:—*The Babylonian Slave Market* (1875); *The Pool of Bethesda* (1876); *An Egyptian Feast* (1877); *Gods and their Makers* (1878); *Ester and Vashti* (1879); *An Assyrian Captive* (1880); *Diana or Christ?* (1881); *Why Tarry the Wheels of His Chariots?* (1882); *Merab and Michal* (1883); *Judith and Thibbe* (1884); and *Pharaoh's Daughter and Sacred to Pasht* (1886). His very important work, entitled *Anno Domini*, representing the Virgin with the infant Christ in Egypt, was first exhibited separately in Bond Street in 1883. Mr. Long became an A.R.A. in 1876, and R.A. in 1882.

Long, GEORGE (b. 1800, d. 1879), scholar, a native of Lancashire, was educated at Macclesfield Grammar School, and at Trinity College, Cambridge, where Macaulay, his great competitor, was bracketed with him for the Craven scholarship, and defeated by him for the Chancellor's medal and a fellowship. He accepted a professorship in the University of Virginia, U.S., returning to England in 1828. He then became professor of Greek in the newly established University of London, and from 1842 to 1846 was professor of Latin at University College. In 1837 he had been called to the bar, and having been appointed reader on jurisprudence at the Middle Temple resigned his professorship. In 1849 he became classical lecturer at Brighton College, and retired in 1871, shortly after which he received a well-deserved Civil List pension. Mr. Long's life was one of useful and conscientious

labour; heably supported Brougham, Birkbeck, and their comrades in the movement which developed into the Society for the Diffusion of Useful Knowledge; for it he edited the *Quarterly Journal of Education*, and the well-known *Penny Cyclopædia* (1833-46). His translation of *Plutarch's Lives* was published in 1844, and besides his contributions to the classical series of Messrs. Bell and Dr. William Smith, may be mentioned his *Classical Atlas* (1854), *Thoughts of the Emperor Marcus Aurelius* (1862) and *Decline of the Roman Republic* (1864-9), a learned but not particularly attractive work. Perhaps his most valuable contribution to classical literature was the *Bibliotheca Classica* (1851, etc.), started in conjunction with his Brighton colleague, the Rev. A. J. Maclean, the volumes of which are still in great request by students, and to which he himself contributed an edition of Cicero's orations.

Longfellow, HENRY WADSWORTH (b. 1807, d. 1882), American poet, was a native of Portland, Maine, and a descendant on the mother's side of John Alden, the hero of one of his best-known poems. At fourteen he entered Bowdoin College, having Nathaniel Hawthorne as a class-mate, and graduated with honours at eighteen. While at college he wrote verses for the *United States Literary Gazette*, and was chosen "class poet" of his year. Appointed shortly afterwards to the professorship of modern languages at Bowdoin, he spent some years in European travel with a view to fitting himself for the position, the duties of which he assumed in 1829. In 1833 he published his first volume, devoted chiefly to translations from the Spanish. This was followed in 1833-5 by *Outre Mer*, a work in prose, in which his impressions of Europe were recorded. Chosen professor of modern languages and *belles-lettres* at Harvard in 1835, he revisited Europe in company with his wife, whom he had married in 1831. In 1836 he returned to America, having lost his wife while in Holland, and until 1854 devoted himself to his professorial duties, making his residence at Cambridge, near Boston. *Hyperion*, a so-called romance, appeared in 1839, and in the same year was published *Voices of the Night*, containing some of his best-known pieces. The success of these two volumes was immediate, and the poet's reputation dates from this period. *Ballads and other Poems* appeared in 1841, followed in 1842 by his *Poems on Slavery*, and in 1843 by *The Spanish Student*. In the same year the poet was married to Miss Frances E. Appleton, a member of a well-known Boston family. *Evangeline*, perhaps the most popular of Longfellow's works, was published in 1847, and the collection entitled *The Seaside and the Fireside* in 1849. *Kavanagh*, a feeble attempt in prose, appeared in 1849, *The Golden Legend* in 1851, and the *Song of Hiawatha* in 1855.

The Courtship of Miles Standish, to which allusion has already been made, was published in 1858, together with the "First Flight" of the *Birds of Passage*. The year 1861 was a melancholy one for Longfellow, who then became a widower for the second time. The shock was aggravated by the manner of his wife's decease, she having been burnt to death. In 1863 the *Tales of a Wayside Inn* appeared, and a "Second Flight" of the *Birds of Passage*. A collection of short pieces was issued in 1866, under the title of *Flower-de-Luce*, and in the following year his translation of the *Divine Comedy* of Dante was completed and published. The poet made a fourth visit to Europe in 1868 (his third having occurred in 1842), returning to America for the last time in 1869. The closing years of his life brought physical suffering, but his pen remained constantly busy. His remaining works are *The New England Tragedy* (1868), *The Divine Tragedy* (1871), *Three Books of Songs* (1872), *Aftermath* (1873), *The Hanging of the Crane* (1874), *The Mask of Pandora* (1875), *Keramos* (1878), *Ultima Thule* (1880), and *Hermes Trismegistus* (1882). Since his death an unfinished poem on the subject of Michel Angelo has been given to the world. Longfellow's was a thoroughly sweet and wholesome nature, marked by great simplicity and amiability. His life was useful, harmonious, void of reproach; his home was delightful, his pursuits congenial, his friends numerous and devoted. Few among English or American men of letters have been equally happy in their surroundings. As a writer Longfellow may be characterised as pleasing rather than profound. In his writings as in his life he was emphatically a gentleman, manifesting refined sensibilities, a love of the picturesque rather than of the beautiful, and a genial and affectionate nature. Too plastic for a great poet, he evolved no style of his own, composed no masterpiece. His themes are treated pictorially, and therefore superficially; the local colouring is correct, but the creative genius is absent. His persistent optimism was a real defect, and affects the reader almost like a glare. Never impassioned himself, he never thrills his readers; his verse soon palls upon the taste, fades easily from the mind. Indeed, the serenity which he radiates is foreign alike to his country and his age; yet it is no paradox to assert that in this very quality, united to his religious sentiment, lay the secret of his early and continuous popularity. Longfellow's most appreciative readers were found in England, and among minds of a conservative order. To such minds triteness appears but an added charm; and the want of originality, which is Longfellow's principal defect, actually counts in his favour by bringing him nearer to the level of his audience. In technical execution Longfellow is often faulty, and his fondness for lax metres and feminine rhymes, his

avoidance of the vigorous "blank-verse" iambics, indicate an imperfect mastery of his art. Few of the hexameters in *Evangeline* are rhythmically correct, while many are inexcusably harsh to the ear. His prose writings are deficient in unity, and although containing many brilliant passages and shrewd reflections, are marred by a certain futility and lack of form. But the purity and kindness which endeared Longfellow to his contemporaries, his mental and moral equipoise, the cheerfulness of his temperament, find everywhere expression in his verse, and these have brought light and consolation to many a heart.

Life of Henry Wadsworth Longfellow, edited by Samuel Longfellow (the poet's brother).

[E. J. H.]

Longley, THE RIGHT REV. CHARLES THOMAS (b. 1794, d. 1868), Archbishop of Canterbury, was the fifth son of John Longley, some time Recorder of Rochester, and took a first-class in classics at Oxford. He afterwards became a college tutor, and in 1827 rector of West Tytherley, in Hants, but resigned these charges in 1829 to become head-master of Harrow. On the establishment of the see of Ripon, in 1836, Mr. Longley was appointed its bishop. In 1856 he succeeded Dr. Maltby in the see of Durham; in 1860 he became Archbishop of York, on the death of Dr. Musgrave; and 1862 he became Archbishop of Canterbury on the death of Dr. Sumner. Among his numerous published sermons and tracts may be mentioned:—*Holding the Mystery of the Faith* (1862), and *The Liturgy and Ritualism* (1867).

Longman, WILLIAM (b. 1813, d. 1877), historian and publisher, the third son of Thomas Norton Longman (b. 1770, d. 1842), the head of the celebrated firm of Longman and Co. in the days of Macaulay, became a partner in the firm in 1839, and its director, with his brother Thomas, on the death of his father. Besides being an admirable man of business, with high literary instincts, Mr. Longman was the author of some *Lectures on the History of England* (1859), a careful *History of the Life and Times of Edward III.* (1869), and a *History of the Three Cathedrals of St. Paul* (1873).

Longpérier, ADRIEN DE (b. 1816, d. 1882), archaeologist, was a native of Paris, but educated at Meaux, whence he returned to the capital in 1835 to pursue those antiquarian studies in which he was already almost a master. Numismatics was his first love, and he found an appropriate occupation in a post in the Coin Cabinet of the Bibliothèque. After eleven years at the library, he was in 1847 appointed *conservateur* of antiquities at the Louvre, and here his energies were fully taxed to form the great Musée Napoléon III., and to keep pace with the influx of Assyrian, Egyptian, and American collections, which

recent discoveries had created. Till 1870 he held this important post, and when he resigned it, he continued to preside in his own inimitable way over the progress of archaeological studies in Paris. He had become a member of the Académie des Inscriptions so early as 1854, and his voice was frequently raised at its meetings in behalf of some new discovery, or some promising work by a young and unknown author. His own writings consist almost wholly of papers contributed to periodical publications: he wrote no great books. Nevertheless he held a foremost position among European archaeologists, and this was due to the immense reach of his learning. Whether his opinion was asked on a Babylonian cylinder, or a Roman stela found in Gaul, a Himyeritic inscription or a Jewish coin, a Greek vase or a Merovingian ornament, a Sassanian cup or a Limoges enamel, he was sure to be fully informed on the subject. His reading had been universal, and his memory was singularly tenacious. His writings, despite their small scale, were numerous and important, especially in the departments of numismatics and of Saracenic art. The essay on the coins of the Sassanians and Arsacids, for which he was crowned by the Institute, and others on the Himyeritic and Azum coinages, and on the Arabic issues of the Moors in Spain, may be mentioned as especially original and stimulating. On the subject, then very little explored, of the metal work of the Saracens in the middle ages, he was the first authority; and many other branches of archaeology received a fresh and vivifying stimulus from his always true and scientific investigation; and for nearly twenty years he edited with De Witte the *Revue Numismatique*. But beyond published writings, his personal influence was full of inspiration for the many students who came for his advice. At the Académie des Inscriptions, at the Société des Antiquaires, the Société Asiatique, Longpérier's was a cherished presence. In a more popular direction, his labours at the Exposition du Trocadéro in 1878 were unremitting, and this exhibition, as well as the earlier one of 1867, owed much of its archaeological value and interest to his pervading influence. His sympathy, indeed, was as quick for popular as for abstruse subjects: he spoke and read Arabic fluently, and loved to peruse the *Arabian Nights* in their native tongue; when he went to Spain, to see the vestiges of his favourite Arabs, he delighted in visiting the places hallowed by Don Quixote, and in England he religiously performed the exact journey of the Canterbury Pilgrims. Chaucer and Shakespeare were as much his friends as Makrizi and Benjamin of Tudela. The personal influence of such a man upon the studies of the younger Parisians was unbounded. He was a Chevalier of the Legion of Honour, and honorary member of most learned societies in France, England, Germany,

Russia, and Spain, of the Lincei of Rome, and the Academy of Sciences of Turin.

G. Schlumberger, memoir prefixed to *Œuvres de A. de Longpérier*, vol. i. List of his writings in *Bulletin de la Société des Antiquaires* (1882). [S. L.-P.]

* **Lorne**, THE RIGHT HON. JOHN GEORGE DOUGLAS SUTHERLAND CAMPBELL, MARQUIS OF, G.C.M.G. (b. 1845), eldest son of the Duke of Argyll, was educated at Eton, St. Andrews University, and at Trinity College, Cambridge. He sat as M.P. for Argyllshire from 1868 to 1878 in the Liberal interest, and unsuccessfully contested Hampstead in 1885. In March, 1871, he married the Princess Louise, fourth daughter of Queen Victoria, and from 1878 to 1883 was Governor-General of Canada, in succession to Lord Dufferin. His tenure of office was uneventful, and he was succeeded by the Marquis of Lansdowne. In 1885 he became president of the Royal Geographical Society. Lord Lorne is the author of:—*A Trip to the Tropics and Home through America* (1867); *Guido and Lita, a Tale of the Riviera* (1875); *The Book of Psalms, literally rendered in Verse* (1877); and *Memoirs of Canada and Scotland, Speeches and Verses* (1883); and *Imperial Federation* (1885), in the *Imperial Parliament Series*.

Loth, OTTO (b. 1844, d. 1881), Orientalist, was a native of Meissen, where he received his early education, which he perfected at Leipzig (1863-6) and Heidelberg (1867). From 1870 to 1872 he was busy in London, cataloguing the Arabic manuscripts at the India Office (pub. 1877), after which he returned to Leipzig, and devoted himself until 1879 with the editing of the *Journal of the German Oriental Society*. In 1874 he was appointed a professor-extraordinarius, and from 1879 to 1880 he travelled in the East. His writings consist chiefly in papers on Arabic subjects contributed to the *Journal of the German Oriental Society*, *Morgenländische Forschungen*, and two academical themes, one on the *Life of Abdallah Ibn-al-Mu'tazz* (published posthumously in 1882), the other on *Ibn Sa'd* (1869). He was a true and devoted scholar, indefatigable in collecting MSS. and in verifying his authorities, and his work, slight as it appears, was full of promise.

A. Müller, preface to Loth's *Abdallah Ibn-al-Mu'tazz*.

Lotze, RUDOLF HERMANN (b. 1817, d. 1881), perhaps the last of the old-fashioned philosophers, was educated at a time when Hegelianism reigned supreme in the German universities. His scientific training in mathematics and medicine, however, saved him from the usual fate of Hegel's followers, and inclining him rather towards the school of Herbart, enabled him at length to become one of the chief instruments in the overthrow of the dominant metaphysic. He himself began to expound his system at an unusually early age.

His *Metaphysics* was published in 1841, *General Pathology and Therapeutics as a Mechanical Science* in 1842, his *Logic* in 1843, and *On the Conception of Beauty* in 1845. In the last-named year he was appointed to the Chair of speculative philosophy at Göttingen, where he remained till 1880, when for the brief interval till his death he held a professorship of philosophy at Berlin. His *General Physiology* was published in 1851, his *System of Philosophy* in 1874, the third edition of his early work, *Microcosm, or Contributions to the Natural History of Humanity* in 1876-80, and several editions of his philosophic lectures have appeared since his death. A translation of his *System of Philosophy (Logic and Metaphysics)* by some Oxford scholars, at the suggestion and at first under the direction of the late Professor Green (q.v.), was published by the Clarendon Press in 1884. Lotze was essentially the philosopher of the transition from the exaggerated idealism of the first half of the century to the most recent modifications of materialism. By insisting on the permanent value of the critical position, he became one of the first and stronger opponents of the early materialistic reaction represented by such a name as Büchner, whilst his scientific method and firm hold on nature enabled him to bring philosophy once more into the realm of the Kantian limitations.

E. Pfeiderer, *Lotze's Philosophische Weltanschauung* (1882); Dr. Caspari, *Hermann Lotze: eine kritisch-historische Studie* (1883).

Louis I. and II. OF BAVARIA. [BAVARIA.]

Louis I. OF PORTUGAL. [PORTUGAL.]

Louis XVIII. (LOUIS STANISLAS XAVIER), KING OF FRANCE (b. Nov. 17th, 1755; d. Sept. 16th, 1824), brother of Louis XVI., and fourth grandson of Louis XV., was styled from his birth Count of Provence. In 1771 he married Louise Marie Josephine, daughter of Victor Amadeus III. of Sardinia. "Monsieur," as he grew up, imbibed decided tastes for study and a very creditable liberalism. He was, moreover, a pamphleteer of respectable powers. He was in favour of the convocation of the Estates General, and when the Revolution burst forth, remained in Paris long after his unpopular brother, the Comte d'Artois (Charles X.), had joined the *émigrés*. In June, 1791, however, he withdrew to Coblenz, and after playing a subordinate part in the campaign of 1793, he retired to Hamm, in Westphalia. On the death of his brother, Louis XVI. (1795), he proclaimed his nephew king, under the title of Louis XVII., and two years afterwards himself succeeded to the barren honours of titular royalty. After weary journeyings from court to court, he settled in England in 1807, and remained there until April, 1814, when he returned to France and entered Paris in state. A charter, however, granted at the instigation of the Czar Alexander in accordance with a

declaration previously made at St. Ouen, in which privilege was abolished and constitutionalism established, disgusted the *émigrés*; the peace by which France was reduced to the limits of 1792 disappointed the nation; and Napoleon had only to reappear, to cause Louis XVIII. to betake himself into exile once more. The Hundred Days over, he returned to Paris with the Allied Sovereigns, rid himself of his first minister, Talleyrand, and by the aid of the Duc de Richelieu succeeded in wringing from the Allies a convention which gave France a well-defined frontier, and reduced the war indemnity from eight hundred million francs to six hundred million. Far from a tyrant by disposition, the king exacted few victims, chief of whom was Ney, and was speedily engaged in a contest with the violently reactionary chamber, in which the royalists, with the Comte d'Artois at their head, were in favour of revoking the charter. In 1818 the ministry was dismissed, and the Duc Decazes undertook the direction of affairs. He adopted a policy of balance, his colourless Cabinet trimming between the reactionaries and the Constitutional Monarchists or Doctrinaires, as they came to be called. The assassination of the Duc de Berry, the king's nephew and heir, in 1820, gave the party of reaction the upper hand; Louis, never a man of much perseverance, ceased to oppose his brother, Decazes was dismissed, Richelieu returned to power, to be speedily replaced by reactionary de Villèle. Plots against the House of Bourbon were discovered, and eleven victims suffered death. At the congress of Verona the indiscretion of the French representative, M. de Montmorency, whose appointment had been made by Louis with some hesitation, resulted in France undertaking the odious mission of restoring to the Spanish throne the tyrant Ferdinand VII. The absolutist and clerical majority, strengthened by the general election of 1823, was carrying everything before it when Louis died. "A King of France dies," he said, "but must not be ill," and to the last he struggled to perform the duties of royal routine. "Punctuality is the politeness of kings," was another of his sayings. Compared with his brother and successor, and indeed with most of his family, Louis XVIII. must always gain a very favourable estimate. Guizot rightly described him as a "moderate of the ancient régime, and a freethinker of the eighteenth century," and although his ideas were somewhat belated, having as their motive force a belief in the divine right of kings, and other theories which had long ago served their turn, he was, according to his lights, a thoroughly conscientious man, and at the same time, though wanting in firmness, by no means devoid of insight.

Correspondances et Ecrits de S.M. Louis XVIII. (1824), and the list of his writings given in the *Nouvelle Biographie Générale*; A.de Beauchamp,

Vie de Louis XVIII.; B. de Bertrand, *Règne de Louis XVIII.*; Lamartine, *Histoire de la Restauration*; Vaulabelle, *Histoire des deux Restaurations*; Chateaubriand, *Mémoires d'outre Tombe*; Guizot, *Mémoires pour servir à l'Histoire de mon Temps*.
[L. C. S.]

Louis Philippe, KING OF THE FRENCH (b. Oct. 8th, 1773; d. Aug. 26th, 1850), was the son of Philippe, Duke of Orleans (Egalité), and Louise Marie Adelaide de Bourbon, heiress of the Duke of Penthièvre, the last representative of Louis XIV.'s issue by Mme. de Montespan. From his ninth year his education was placed entirely in the hands of the famous Mme. de Genlis (q.v.). The training of the young prince and his brothers was planned on the principles of Rousseau; and the governess obtained so great an influence over the minds of her pupils as to excite the jealousy of the duchess. Louis Philippe, then Duke of Chartres, long made her the confidante of his life. At the outbreak of the French revolution the Duke of Chartres was sixteen. Both the training of Mme. de Genlis, and his father's influence and example, inclined him to adopt the popular side. On Nov. 1st, 1790, he was admitted a member of the Jacobin club, where he was constant in his attendance until the summer of 1791, when, with the other commanding officers, he was compelled by the decree of the Assembly to rejoin his regiment, and fought with distinction under Kellermann at Valmy, and under Dumouriez at Jemmapes. The battle of Neerwinden (March 18th, 1793) having resulted in the repulse of the French troops, Dumouriez, rather than face the Revolutionary Government, which was not encouraging to its defeated generals, entered into communications with the enemy, and on April 2nd, 1793, he and the Duke of Chartres repaired to the Austrian head-quarters. Service was offered in the Austrian army with his present rank, but the prince refused to bear arms against his country, and went to Switzerland, where he met his sister and Mme. de Genlis, and was employed as a tutor in the college of Reichenau under the name of Chabaud-Latour. Here the news of his father's death reached him, and the secret of his identity having leaked out, he was obliged to leave Switzerland (1795). After wandering over the north of Europe, he spent the years 1796-9 in America, with his brothers, the Dukes of Montpensier and Beaujolais. In 1800 they returned to Europe, and he lived in some style at Twickenham. In 1807 the Duke of Montpensier died from consumption, and the younger brother Beaujolais in 1808. The Duke of Orleans married the Princess Amélie, daughter of Ferdinand II. of Naples, at Palermo, on Nov. 25th, 1809. He at this time showed a desire to bear arms against Napoleon. Already in 1808 he had attempted to act in concert with Ferdinand's son, Leopold, in Spain, but the English Government frustrated this attempt, and again in 1810

vetoed his acceptance of the offer of the Junta to command their troops. The following three years were spent in Sicily, convulsed at that time by internal discord, and the miseries of the English occupation under Berthelink. On the restoration in 1814, the Duke of Orleans reappeared in Paris, and presented himself (May 17th) at the Tuileries in the uniform of a lieutenant-general. Louis XVIII. received him with outward cordiality, but his designs were open to suspicion. His elevation to the throne came under discussion at the Congress of Vienna; but when the second restoration was effected he made warm protestations of his fidelity to the reigning family. Following the traditions of his family, he supported a liberal policy, and though he took no active part against the Government, his attitude towards the people, his familiarity with the bourgeois class, his ostentatious assumption of equality, and tacit disagreement with the reactionary party, exposed him again and again to the accusation of the design of placing himself on the French throne. In 1815 he retired to England, and repudiated in a public manifesto the ambition with which he was accredited. He returned to Paris in 1817, and took up his abode at the Palais Royal, where he lived until 1830, outwardly enjoying the royal confidence. But the measure of Louis XVIII.'s trust in his cousin's fidelity was probably summed up with accuracy in the words addressed to him, that the monarchy was safe from him since he stood nearest the throne after the Duke of Berry; and it was not until Charles X. had succeeded his brother that the Duke of Orleans received the royal sanction to assume the style of Royal Highness. The assassination of the Duke of Berry in Feb., 1820, left him heir presumptive to the throne until the birth of the posthumous Duke of Bordeaux, seven months later. A protest against the legitimacy of the new heir was published in the London *Morning Chronicle*, Nov., 1820, signed by the duke, who, however, warmly disavowed the authorship. Meanwhile it was clear how things were tending, and that the duke had only to play a waiting game. He had on his side such men as Lafitte, Casimir-Périer, Courier, and Constant. His son was sent to the public Lycée to sit on a bench with the citizen boys of Paris. During the days of the revolution the duke was absolutely inactive; he retired with his family to Neuilly, and on the 29th withdrew in disguise to Raincy, the overtures of the revolutionary leaders being communicated to him through his wife and sister. Throughout the whole transaction he appeared to be acting under compulsion, and sent eloquent expressions of condolence to Charles X. at St. Cloud. Forced to abdicate, Charles appointed his grandson, the Duke of Bordeaux, to succeed him, and blindly confirmed the office of lieutenant-general, to which

the deputies present in Paris had nominated Louis Philippe (July 31st). A proclamation was issued, in which the lieutenant-general affirmed that, now "a charter would be a truth," and a scene at the Hôtel de Ville followed, when Lafayette, won over by the Orleanist faction, placed the tricolour flag in the hands of the duke, and embraced him before the assembled multitude. On Aug. 7th the Chamber of Deputies declared the throne vacant by 219 votes out of 252, and offered it to the Duke of Orleans, with the conditions of a modified charter. The July monarchy was the work of the bourgeois class, whose interests it was created to uphold. On the 9th the new king took the oath to the charter, and began his reign, with the title of Louis Philippe, King of the French. Meanwhile the people whom he was called upon to rule, were in a condition bordering upon ruin. Industry was at a standstill, capital having been withdrawn in the panic attending the revolution, and employment was so hard to find, that one of the first cares of the new government was to supply work to the multitude, who had just made its existence possible. Slowly the people recognised the fact that they had been duped, and found expression to their sullen discontent in the constant risings which disturbed the earlier years of the reign. Nor was the policy pursued by the new government likely to meet with the approval of a people still throbbing with the excitement of a revolution. The necessity of redeeming the character of the French monarchy in the eyes of the European Sovereigns, entailed a holding aloof from the revolutionary aspirations of other nations, little consonant with the feeling of the French people, especially in the case of Poland. The suspicious circumstances attending the death of the Prince of Condé brought the crown itself into contempt, and accentuated the feeling with which the nation saw the whole of the new king's immense riches settled on his children. The expenditure of the court throughout the reign seemed utterly disproportionate to the needs of a "bourgeois king." A large doctrinaire element, represented by Guizot, de Broglie, etc., had been admitted into the first Cabinet, but the disturbances attending the trial of the late ministers compelled their dismissal, and the formation of the Laffitte ministry, Nov. 2nd, 1830, which remained in power until the following March, when it was succeeded by that of Casimir-Périer. Meanwhile, under pretence of reorganising the National Guards, the office of commander-in-chief was suppressed, a subterfuge for getting rid of Lafayette, and before long the opposition began to collect in its ranks the very leaders of the revolution. The famous *compte rendu*, signed by 135 deputies, and published after Casimir-Périer's death from the cholera, which swept through France in 1832, and carried off 18,402 victims from Paris alone—formed the pro-

gramme of the Left, and their indictment of the government of July. The universal discontent manifested itself in risings that were rather social than political in character, beginning at Lyons in 1831. In Paris the funeral of General Lamarque was the signal for an outburst of revolutionary energy (June 5th and 6th, 1832), which resulted in the proclamation of a state of siege. An abortive attempt to raise a Legitimist insurrection in La Vendée was made by the Duchess of Berry in the same year, and in 1834 a fresh Republican attempt was made at Lyons, Paris, and other towns, and quelled with severity. The elections following these terrible events resulted in a large majority for the government, and the country, worn out by the long struggle, relapsed into a condition of apparent calmness, while commercial prosperity returned and removed one of the principal sources of danger. Revolt ceased, but attempted assassination took its place. No less than seven attempts were made on the life of the king, besides one on the Duke of Aumale. The earliest took place on Nov. 19th, 1832, and the most terrible was that of Fieschi (q.v.) on July 28th, 1835. The repressive laws of September were the immediate result of this attempt. During the series of ministerial crises which ensued from this date until 1840, when Louis Philippe found in Guizot a minister willing to follow him in his ever-increasingly reactionary policy, the government was a personal and a despotic one, under which an outward show of order and national prosperity was maintained, while the causes which were to effect its overthrow were more or less at work. In 1840 the ashes of Napoleon were brought with great ceremony from St. Helena, and the returning tenderness with which Frenchmen regarded the memory of their past glory, incited Prince Louis Napoleon to make an unsuccessful attempt on the throne, at Boulogne. In 1847 the war in Algeria, which had been begun by Charles X.'s ministers, as a last resource to win popularity, and had been fertile in cheap military glory, in which the king's sons had largely shared, was brought to a successful conclusion by the capture of Abd-el-Kader. In most respects the foreign policy was scarcely a source of satisfaction to the nation. The anger felt at the desertion of Mehemet Ali, necessitated by the combined intervention of the Powers on behalf of Turkey, occasioned a rupture between the king and Thiers. The exchange of visits between the French and English courts in 1843 and 1844 seemed to have placed the alliance between the two countries on a still firmer basis, but the cordial feelings established experienced an irretrievable shock in the following year by reason of Louis Philippe's bad faith with regard to the Spanish marriages. [ISABELLA.] No representative of the English court was

present at the wedding of the Duke of Montpensier with the sister of the Spanish queen, and in addition to the hatred and contempt with which he was regarded at home, the French king had now incurred distrust and dishonour abroad. The tragic death of the Duke of Orleans from a carriage accident, July 13th, 1842, had left his young son, the Count of Paris, as heir to the throne. Expression being denied to public grievances by the usual channels, the leaders of the opposition, Arago, Odillon Barrot, Louis Blanc, Lamartine, and others, borrowed, in 1847, an example from English agitators, and in a series of great banquets, at which thousands of people were present, public matters came under discussion. Nevertheless, the king and Guizot looked upon the agitation with immovable faces, and refused all demands for reform. At the opening of the Chambers, Dec. 28th, 1847, the agitation was characterised as raised by "hostile passions or blind emotions." A large banquet and procession were announced, which were forbidden by the police, and though the promoters made a show of submission, the people, inadequately informed, assembled on the given day, Feb. 22nd (1848), and the revolution commenced. On the 23rd the mob marched on the Tuileries, and while the king was in the very act of signing his adhesion to fresh liberal measures, M. de Girardin entered the chamber, and demanded his instant abdication. Overcome by the tumult without and within, Louis Philippe consented, and resigned his crown in favour of his grandson. Leaving behind them the Duchess of Orleans with her children, and the Duke of Nemours as her protector at the palace, the royal family made their way on foot to the nearest cab-stand, where hired vehicles were procured, in which they departed from Paris, protected from the mob by an escort of cuirassiers and an armed detachment of the National Guard. They arrived at Trouville on the 27th, and, embarking at Havre, March 2nd, on board the *Express*, reached Newhaven on the following day. A residence was appointed the exiled family at Claremont, where Louis Philippe continued to live until his death two years later.

Lover, SAMUEL (b. 1797, d. 1868), Irish novelist, was the son of a Dublin man of business, and having been educated at a dame's school, began life as an artist. Adopting the lucrative calling of miniature painting, he gained a considerable practice in Dublin, and became a member of the Irish Academy of Arts. At the same time he wrote some admirable sentimental ballads of Irish peasant life, which attracted the favourable notice of Moore. *Rory O'More*, a comic love

song, written at the suggestion of Lady Morgan, was a new departure, and upon it and similar effusions Lover's fame as a song-writer chiefly rests. *Legends and Stories of Ireland* appeared in 1832, and *Songs and Ballads* in 1839, four years after his arrival in London. In London society Lover was extremely popular, and in addition to painting, composing, and verse-making, began to write plays, which in their day were popular, and novels. *Rory O'More*, a *National Romance*, was published in 1837; and in 1842 appeared the immortal *Handy Andy, an Irish Tale*, in which the humours of the old Irish peasant life, and of the rollicking, out-at-elbows Irish society, are described with inimitable gusto and fidelity. Obligated through ill-health to seek change, Lover embarked upon a new venture, an Irish entertainment, after the manner of Foote and the elder Mathews, and in 1846-8 he paid a highly successful visit to the United States. Among his later achievements were *Metrical Tales* (1860), which, however, hardly added to his reputation. Until within about four years of his death this amiable and versatile man was busy with his pen, and quite late in life attempted to become a painter in oils.

B. Bernard, *Samuel Lover*.

Lowder, THE REV. CHARLES FUGE (b. 1820, d. 1880), vicar of St. Peter's, London Docks, was educated at Exeter College, Oxford (B.A. 1843), and was ordained in the same year. At first curate at St. Barnabas, Pimlico, he went as curate in 1856 to St. George's-in-the-East, and there established a mission at Wellclose Square. In 1866 "Father" Lowder became vicar of St. Peter's, London Docks, and worked on, though shattered in health, amidst the squalor of his surroundings. His influence over his parishioners was almost incredible, and despite his ritualistic practices, the dignitaries of the Church concurred in shielding him from persecution.

Charles Lowder: a *Biography*, by the author of *The Life of St. Theresa*.

Lowe, SIR HUDSON (b. 1769, d. 1844), Governor of St. Helena during Napoleon's captivity, born in Galway, was the son of a medical officer who had served in Germany during the Seven Years' War, and before he was twelve obtained an ensigncy in the Devon militia, and in 1787 a king's commission as ensign in the 60th. He served at Gibraltar, in Corsica, and at Elba. He was present at the battle of Alexandria in 1801, and through the recommendation of Sir John Moore was appointed to the 7th Fusiliers. In 1803 he was appointed lieutenant-colonel of the Royal Corsican Rangers, which he had raised in the Mediterranean. A full colonel in 1812, he took part in the hard-fought battle of Bautzen, and on the subsequent entry of Paris by the Allied Armies he was the first to bring the news of Napoleon's abdication to England. When it was determined to exile

Napoleon to St. Helena, Sir Hudson Lowe's imperturbable *sang froid*, good temper, firmness, and discretion, joined to an unimpeachable character, remarkably fitted him, it was thought, for the post of governor. The task was a difficult one, but he was encouraged to undertake it by Lord Liverpool, who urged that if he kept Napoleon for three years "it would not stop there." Napoleon at once conceived a dislike towards Lowe, which soon ripened into utter aversion; and he treated his governor with every species of insult. Uninfluenced, however, by such conduct, Lowe rigidly enforced the regulations. In 1821 appeared *A Voice from St. Helena*, by one O'Meara, who had been an attendant on Napoleon, and had been dismissed by the English Government. This production brought many false charges against Lowe, and raised a storm of indignation against him. These charges were subsequently refuted; but the Government of the day had suffered by them. Sir Hudson was accordingly sacrificed, and allowed to die in poverty.

William Forsyth, *History of the Captivity of Napoleon at St. Helena*, which contains a fragment of Sir Hudson Lowe's Autobiography (1853).

* **Lowe**, THE RIGHT HON. R. [SHERBROOKE.]

* **Lowell**, JAMES RUSSELL, LL.D., D.C.L. (b. 1819), man of letters, the grandson of Judge John Lowell, who founded the Lowell Institute in Boston, was born at Cambridge, Mass. Having taken his degree at Harvard University in 1838, Mr. Lowell was called to the bar, but he never practised. In 1841 he published his first collection of poems, entitled, *A Year's Life*, and three years later another volume of *Poems*, containing the *Legend of Brittany* and *Prometheus*. In 1845 he also collected some *Conversations on some of the Old Poets*, his first attempts in that genial criticism for which he has since become celebrated. Hitherto, in spite of the earnestness, the high symbolism, and graceful description in many of his serious poems, Mr. Lowell had produced no monumental and abiding work. The year 1848 marked the climax of his creation. The *Indian Summer Reverie*, perhaps the most genuinely poetical of all his graver poems, was then published in another collection; *The Vision of Sir Launfal*, a romance on the search for the Holy Grail, appeared separately; but, above all, 1848 was the year of the *Fable for Critics*, and the beginning of the first series of *Biglow Papers*. The *Fable* and the *Biglow Papers* together form a permanent addition to the literature of the world. For subtlety of satire, for resource of humour, and insight into the truths of contemporary conditions, they rank with the highest models of comedy. The description of Emerson in the *Fable*, and his contrast with Carlyle, the parodied notices of the press in the *Biglow Papers*, the prose introductions to each set of verses, the

dramatic completeness of each of the three characters, the Rev. Homer Wilbur, Birdfreedom Sawin, and Hosea Biglow, are worthy of the highest humourist. The *Papers* were suggested by the author's indignation at the Mexican War of 1846-7; the second, but less successful series, appeared in 1864, after the War of Secession. Meantime, in 1855, Mr. Lowell had been appointed professor of modern languages at Harvard University, in succession to Longfellow. Of his remaining publications, we may mention *Fireside Travels* (1864); *Under the Willows* (1869); *My Study Window* (1871); *Among my Books*, two series of critical essays (1870 and 1876); *The Cathedral*, a poem (1870); *A Life of Keats* (1873); and *The Rose* (1880), besides a large number of critical and biographical essays. During his long residence at Harvard, Mr. Lowell acted as editor to several American reviews and magazines, such as the *Atlantic Monthly* and *North American Review*. In 1877 he was appointed minister to Spain, and in 1880 minister to Great Britain. He resided in London till 1885, and whenever a statue, memorial, or bust was erected to a man of letters, his graceful oratory was looked upon as an almost indispensable adjunct to the occasion. Oxford and Cambridge conferred on him the degrees of D.C.L. and LL.D. After the accession of the Democratic party to power in 1884, he was recalled, and in the following year returned to America.

W. M. Rossetti's preface to the *Moxon* edition of Lowell's *Poetical Works*; preface to the *Biglow Papers* by Mr. Thomas Hughes.

* **Lubbock**, SIR JOHN, M.P., 4TH BARONET, F.R.S., LL.D., D.C.L. (b. 1834), was educated at Eton, and after unsuccessfully contesting West Kent in 1865 and 1868, sat for Maidstone in the Liberal interest from 1870 to 1880, when, having been defeated at Maidstone, he was returned for London University, and was re-elected in 1885 and in 1886. In the House of Commons Sir John is a recognised authority on finance and education, and is a moderate Liberal. His name is associated with several useful measures of legislation, notably the Bank Holidays Act, and the Ancient Monuments Act. He is also an ardent advocate of the representation of minorities. A partner in the banking firm of Roberts, Lubbock and Co., he is the president of the Institute of Bankers. He will, however, be ultimately remembered chiefly as a man of science; and his investigations, whether into the life of the insect and vegetable world, or into the condition of early man, are monuments of unwearied research and acute generalisation. Besides numerous published lectures, delivered before the learned societies and institutes, Sir John has written the following well-known books:—*Prehistoric Times as Illustrated by Ancient Remains and the Manners and Customs of Modern Savages* (1865); *The*

Origin of Civilisation and the Primitive Condition of Man (1870); *On the Origin and Metamorphoses of Insects* (1873); *Monograph of the Thysanura and Collembola* for the Ray Society (1873); *Our British Wild Flowers considered in their Relation to Insects* (1873); *Ants, Bees, and Wasps* (1882). *A Volume of Scientific Lectures* was published in 1879, and *Fifty Years of Science* in 1882. Sir John is a member of most of the learned societies; he is president of the Linnean Society, vice-president of the Royal Society and British Association, of which he was president in 1881, and is a trustee of the British Museum. He is F.R.S., D.C.L. Oxford (1874), and LL.D. Dublin (1878). He was Vice-Chancellor of London University before becoming its representative in Parliament.

Lubbock, Sir John William, 3rd Baronet, F.R.S. (b. 1803, d. 1865), mathematician and astronomer, was educated at Cambridge, graduating as B.A. in 1825. In 1829 he was chosen F.R.S., and in the same year treasurer and vice-president of the society. Sir John was a well-known banker, but found time nevertheless for numerous contributions to the *Transactions* of the society, and was also the author of several works of great scientific value in their day. Among them are:—*The Computation of Eclipses and Occultations* (1835), *Remarks on the Classification of the Different Branches of Human Knowledge* (1838), *On the Theory of the Moon and the Perturbations of Planets* (1861), *The Discovery of the Planet Neptune, a Lecture* (1861), and a treatise on *Probability for the Library of Useful Knowledge*.

* **Lucca, Pauline** (b. 1842), a native of Vienna, of Jewish birth, but has renounced that faith. Her beautiful voice attracted attention while she was still a child singing in the Karlskirche, when the absence of a soloist gave her the opportunity of singing in a Mozart mass, and it was determined to give her a proper musical training. From Ruprecht she passed under the hands of Uschmann and Lévy. She made her *début* in 1859 at Olmütz in the part of Elvira in Verdi's *Ernani*, and in 1860 sang at Prague as Valentine in the *Huguenots*, and in *Norma*. It soon became evident that in her the opera stage had gained not only a lyrical artist of refinement and ability, but an actress of real dramatic power. Her genius was recognised by Meyerbeer, who wrote for her the part of Selika in *L'Africaine*, and procured her an engagement at Berlin, where she appeared in 1861. In 1863 she made her first appearance at Covent Garden, and has since been a constant visitor during the London season; and in St. Petersburg and other European capitals has gained for herself a place beside Patti and Christine Nilsson. She was engaged at Berlin as court singer for life, but broke off the connection in 1872 in consequence of

the appearance of Mathilde Mallinger, and went to America, where she made a two years' tour through the States. In 1874 she returned to Germany, and has since mainly resided in Vienna, where she is always one of the principal attractions of the operatic season. Pauline Lucca married Baron von Rohden in 1865, and after her divorce from him, Herr von Wallhofen. Her voice is a full and sympathetic soprano with a large compass, easily taking the high c. In addition to the parts already named she has appeared in those of Marguerita, Zerlina (*Fra Diavolo*), Leonora (*Favorita*), Cherubino, Elsa (*Lohengrin*), Angela (*Domino Noir*), Agatha (*Der Freischütz*), and Carmen.

Lush, The Right Hon. Sir Robert (b. 1807, d. 1881), Lord Justice of Appeal, was born at Salisbury, and adopted the law for his profession. After some creditable exertions in the lower branches of his profession, he was in his twenty-ninth year admitted a student of Gray's Inn. In 1838, two years before his call, he published *The Act for the Abolition of Arrest on Mesne Process* (1 & 2 Vict., c. 110), with copious notes explanatory of the alterations in law and practice effected thereby, and an index. Its success encouraged Mr. Lush to publish his more famous work, *Practices of the Superior Courts of Common Law at Westminster in Actions and Proceedings over which they have a Common Procedure* (1840), which appeared at a time when the labours of the Common Law Commission, appointed in 1834, were beginning to bear fruit. About the same time he wrote some notes on the Wills Act of 1837. Mr. Lush was called to the bar in 1840, and partly through the work he had already done, and partly through association with an influential branch of the Nonconformist body, he rapidly acquired a large practice. He became Q.C. in 1857, a Justice of the Queen's Bench in 1865, and a Lord Justice of Appeal in 1880. He came prominently before the public as one of the three judges of the famous trial of Thomas Castro, otherwise Arthur Orton, for perjury and forgery in supporting his claim to the Tichborne estates. Sir Robert Lush's extensive knowledge of practice served him in good stead in the framing of the rules under the Judicature Act.

Times, Dec. 28th, 1881.

Lyell, Sir Charles, Bart. (b. 1797, d. 1875), a celebrated English geologist, was born at Kinnordy, in Forfarshire, where his father was an extensive landed proprietor. Though thus of Scottish birth and extraction, he was entirely of English training, for his family having removed soon after his birth to the neighbourhood of the New Forest, he received his early education at a private school at Midhurst, and his university training at Exeter College, Oxford, where, in 1821, he graduated, obtaining a second class in classics. He then

kept his terms at Lincoln's Inn, where, in 1825, he was called to the bar, and for two years went the Western Circuit. The law was not, however, to be rendered illustrious by Lyell, for during his attendance on Dr. Buckland's lectures, he had become fascinated by geology, and was slowly gravitating to what soon became the sole business of his life. In 1819 he had been elected a fellow of both the Linnean and Geological Societies, and in 1823, after communicating a paper on *The Marls of Forfarshire*, became secretary of the latter society. Two years before being called to the bar he had made the acquaintance of Cuvier and Humboldt, and in 1824 he made a geological tour in Scotland with Dr. Buckland. In 1826 he was elected F.R.S., and in 1827 he finally abandoned the legal profession in order to have no obstacles in the way of the geological studies which had at length come to engross the best part of his time. In 1830, after many tours on the Continent, he published the first part of his *Principles of Geology*, a work which immediately stamped the author as a great master, and may be said to have entirely revolutionised the science. From that day forward geology took another start. The old theories vanished, and henceforward the Huttonian doctrines of the various changes in the earth's surface and in the rocks composing its coast having been caused by physical agencies identical with those now in operation, almost entirely displaced those ideas of cataclysms and catastrophes which had so charmed the earlier students, and still captivate the imagination of the uninstructed, and a small knot of old-school geologists. His subsequent books and papers were all either more or less expansions of the epoch-marking treatise, or observations tending to confirm or extend the doctrines enunciated in it. For this purpose he took many journeys. In 1841 he completed a longer tour to the United States, remaining for a year, and travelling over the Northern and Middle States as far as Carolina, and in 1845 repeated the visit, publishing in 1845 and 1849 narratives of both expeditions, written in a popular style, and containing numerous observations on men and manners. Previous to this period he had for a short time held the professorship of geology in King's College, but finding that the duties of this Chair interfered with his geological excursions and studies, he resigned it, and henceforward neither sought nor occupied any official post, his ample means rendering him independent of public employment. In 1848 Mr. Lyell was knighted, and in 1864 he received a baronetcy. Almost every honour which usually falls to men of science was bestowed on him by his own and other countries. In 1836 and 1850 he was president of the Geological Society; in 1864 he presided over the Bath meeting of the British Association; and

at different times he received the Royal and Copley medals from the Royal Society. For some years before his death, which was caused by a fall down the stairs of his house, he was in very feeble health, and his sight, which had in early life interfered with his law studies, failed him altogether. But to the last he was open to any fresh view, and as a proof of how anxious Lyell was to arrive at the truth, and how free from dogma and preconceived notions was his mind, he was among the first to adopt the views of his pupil Darwin, and in his popular work on *The Antiquity of Man* (1863), defended and expounded the doctrines which ran counter to so many of his early prepossessions. A mere list of Sir Charles Lyell's writings would occupy many pages. However, in the works already mentioned, and in his *Student's Elements, Manual, and Principles of Geology* (all more or less different forms of the same book), the gist of his views and discoveries may be found. Altogether, excluding separate volumes, he published seventy-six papers. Without any risk of exaggeration it may be said that no geologist has ever so deeply or so lastingly influenced the science of the earth and its changes as he. Lyell did not establish the science, but he raised it from being little better than a mass of dogmas without any connecting thread, to the rank of a branch of inductive philosophy. It is not difficult, as has been done, to point out flaws in his doctrines and exceptions to his rules. But it is not at all likely that the Lyellian principles will be ever seriously altered in their broad generalities. Sir Charles married in 1832 a daughter of Mr. Leonard Horner, but he died without issue, and his baronetcy, like that bestowed at the same time on Murchison, his friend and rival, became extinct.

Kathleen Lyell, *Life and Letters of Sir Charles Lyell* (1881), and obituary notes in the *Transactions of the Geological, the Royal, and the Royal Geographical Societies.* [R. B.]

Lyndhurst, JOHN SINGLETON COPLEY, BARON (b. 1772, d. 1863), Lord Chancellor and statesman, was born in Massachusetts, U.S., whither his grandparents had immigrated from Ireland in 1736. His father was John Singleton Copley (b. 1737, d. 1815), the artist who painted *The Death of Lord Chatham*. The family repaired to London on the outbreak of the War of American Independence. Young Copley was educated at Chiswick, and in 1790 entered Trinity College, Cambridge. Four years later he came out second wrangler, and in 1795 he returned to the University and obtained a fellowship of £150 a year, tenable for ten years. A little later he became a travelling bachelor, with an annual grant of £100, and spent three years in America. The American tour was not without its incidents. Copley travelled for some time in the company of the French philosopher Volney, author of *The Ruins of Empires*, and returned to England

in 1798, the rejected suitor of the daughter of Bishop White, of Pennsylvania. He presently entered at Lincoln's Inn, applied himself to the study of the law, and remained for some years "under the bar." But his clients were not numerous, and his profits were not large. After six years of weary waiting, he contemplated entering the Church. He was, however, dissuaded from taking this step, which "would have been equivalent to confessing that his previous life had been wasted." A loan of £1,000 from a generous friend enabled him to become a barrister full-fledged, and at the age of thirty-two he was called. But even yet his progress was "very, very slow," as his mother regretfully records. By-and-by, however, things took a favourable turn, and in 1808 "the reports are all satisfactory." In 1812 Copley successfully defended one Ingham, a Luddite rioter, and became the hero of the hour. Cheered by this success, he took a fresh step in his profession, and assumed the now extinct rank of sergeant-at-law. Four years later (1816) he won a well-merited victory in an intricate patent action, and in the following year he successfully defended some of the Spa Fields rioters. He was now leader of his circuit (the Midland). The Government was in need of a clever young lawyer, and negotiations soon took place to enlist Copley's services. Not to join the Tories was then poverty; to join them was wealth, for they were firmly fixed in office. Like Mackintosh, he was offered a Government seat in the House, but unlike Mackintosh he accepted the offer. It has been freely asserted, and as freely denied, that hitherto Copley had been Liberal in politics. Be that as it may, he was determined to get on. He defended the Government's Alien Bill, and the "Six Acts," and carried the Seditious Meetings Prevention Bill through Committee. Promotion was now rapid. In 1819 he became Solicitor-General, in 1824 Attorney-General, and in 1826 Master of the Rolls. He commended himself to the gracious notice of George IV., by his judicious speech in reply on the occasion of the trial of Queen Caroline, and when Canning became Prime Minister, and Eldon of necessity retired from the Chancellorship, the king insisted on having a Tory Chancellor. Canning accordingly offered the Chancellorship to Copley. He accepted office, and on April 30, 1827, became Chancellor and Lord Lyndhurst. He retained the Chancellorship for over three years under three successive Prime Ministers, Canning, Goderich, and Wellington. In the Wellington Cabinet he attained considerable influence, and was accordingly in a measure responsible for the memorable decision of 1829 on the Catholic Emancipation question. The introduction of that measure introduced discord into the Tory camp, and the Tory party broke up in 1830. Lyndhurst next became Chief Baron of the Exchequer, and at the same time leader of the

Tory opposition in the House of Lords. At the Exchequer he gained some reputation by his luminous judgment in *Small v. Atwood*; in the House of Lords he succeeded in effecting the rejection of the Reform Bill in 1831. The formation of Peel's short-lived ministry of 1834 placed him once more on the wool-sack, and freed him from the restraint which his position at the Exchequer imposed on him. In 1835 he resumed the guidance of the Tory peers, and from that year till 1841 his political conduct was such that it is difficult to reconcile it with the high standard of his intellect. He opposed all the great enactments that mark the reforming era of the "thirties." He was, however, enthusiastically supported by the more staunch section of the Conservatives, and there was much talk about his supplanting Peel in the leadership of the party. On the fall of the Whigs, in 1841, Lord Lyndhurst resumed his seat on the wool-sack, and when the question of the Corn Laws came on he wrote to Mr. Gladstone for the "cream of the subject," and threw himself with his accustomed zeal into the study of the question. In 1846 the Whigs returned to power, and from that date the public career of Lord Lyndhurst may be said to have ended. He spent the remainder of his days in occasionally cheering the Upper House with his vigorous eloquence, and in working out a curious religious creed, embracing the doctrines of original sin, of the atonement, and of redemption by faith. As a lawyer or a statesman Lord Lyndhurst has left no mark on the page of history. His qualities as a judge were not such as to give him a lasting name. He had the peculiar tact of judging any particular case rightly; but lawyers look for more in a judgment than a correct adjustment of the particular dispute. In politics again he seems to have lacked earnestness. He is accused of having abandoned Liberalism for Liverpoolism, the Orange cause for the cause of Emancipation, protection for free trade when the convenient time for each change arrived. There is a story of a clever young official who said "it was inconvenient to keep opinions." This is exactly illustrated by the life of Lord Lyndhurst. His great influence in the country rested on his sheer intellectual pre-eminence. He had one of the best-disciplined intellects of his day.

Sir Theodore Martin, *Life of Lord Lyndhurst*; Campbell, *Lives of the Chancellors*, vol. 8; Mrs. M. B. Amory, *The Domestic and Artistic Life of J. S. Copley* (Boston, U.S., 1881); *Edinburgh Review*, vols. 129 and 159; *The Griville Journals*. [W. M.]

Lyne, J. L. [IGNATIUS.]

Lyons, EDMUND, 1st BARON (b. 1790, d. 1858), entered the navy in 1801, and in 1811 distinguished himself by the daring capture of Fort Marrak, in Java, from the Dutch. He became post-captain in 1814, and

commanded the *Blonde* during the blockade of Navarino in 1828. In 1835 he was knighted and appointed minister at Athens. Transferred to Stockholm in 1849, he was appointed second in command of the Mediterranean squadron in 1853. He was conspicuous in the Crimean War, and his ship, the *Agamemnon*, was ever to the front at the attack upon the fortress of Constantine, the captures of Kinburn and Kertch, and in the attack on Sebastopol. In June, 1855, he became commander-in-chief of the fleet, and on his return home was raised to the peerage.

* **Lyons**, THE RIGHT HON. RICHARD BICKERTON PEMELL LYONS, VISCOUNT, G.C.B., G.C.M.G. (b. 1817), son of the above, was educated at Winchester College and Christ Church, Oxford, succeeded to his father's title in 1858, and after holding various diplomatic appointments, became envoy-extraordinary to the United States in 1858, ambassador at Constantinople in 1865, and ambassador at Paris in 1867. Throughout the troubled period of the Franco-German War he behaved with great discretion and resolution, and was created a viscount in 1881. He is understood to have been offered the Secretaryship of Foreign Affairs by Lord Salisbury in 1886.

Lyttleton, GEORGE WILLIAM LYTTLETON, BARON (b. 1817, d. 1876), scholar and philanthropist, was educated at Eton, and afterwards entered Trinity College, Cambridge, where he was Chancellor's Medallist and senior classic, bracketed in 1838 with Dr. Vaughan, Dean of Llandaff. He was Under-Secretary of State for the Colonies in 1846, having previously unsuccessfully contested the appointment of High Steward of Cambridge University in 1840. His lordship was appointed principal of Queen's College, Birmingham, in 1845. He became in 1869 Chief Commissioner of Endowed Schools, an office which he relinquished in 1874, on that commission being amalgamated with the Charity Commission. His great attainments as a scholar are well known. In 1861, in conjunction with Mr. Gladstone (whose brother-in-law he was), he published a volume of *Translations* (2nd edition, 1863), and in 1865 he brought out *Ephemeris* (2nd series, 1865-72), containing also lectures and addresses. He also wrote on our *Colonial Empire* (1850) and the *English Poets* (1863). He died by his own hand.

Biographical Sketch by Mr. Gladstone, prefixed to Three Brief Memorials of Lord Lyttleton (1876).

Lytton, EDWARD GEORGE EARLE LYTTON BULWER-LYTTON, BARON (b. 1803, d. 1873), novelist, poet, dramatist, and miscellaneous writer, was the youngest son of General Earle Bulwer, of Heydon, Norfolk, by Elizabeth Barbara, daughter of Richard Warburton Lytton, of Knebworth, in Hertfordshire. He was born at 31, Baker Street. His mother

was a woman of exceptional gifts and accomplishments, and it was from her that he received his first lessons. His literary tendencies manifested themselves very early in life, one of his first efforts being a monody on the death of a lady. *Ismael, an Oriental Tale, with other Poems* (1820) was his first published work, and was written before he had attained his sixteenth year. Bulwer took his degree at Trinity Hall, Cambridge, and won the Chancellor's Medal with a poem on sculpture. A small volume of verse, entitled *Delmour, or a Tale of a Sylphed*, was put forth in 1823. In 1826 he printed, for private circulation, *Weeds and Wild Flowers*. A year later a romance in heroic couplets, entitled *O'Neill, or the Rebel*, appeared. These juvenilia, however, were afterwards ignored, the author describing his *New Timon* as his first publication in verse, with the exception of his dramas and translations from Schiller. It was with the publication of *Falkland*, in 1827, that Bulwer entered upon the sphere of literary industry in which he was destined to become famous, but the romance did not achieve the celebrity which the author had looked for. In 1828 *Pelham* was published, and attained instantly to wide popularity. The central character of his book was such as a man of his habits and idiosyncrasy might be supposed to understand, both in its strength and its weakness. It is perhaps natural that this central personage should become identified in the popular mind with the person who created it. Henceforward Bulwer, to the popular intelligence, was "Pelham Bulwer," and the guess was not far removed from fact. In short, the book, in its own range of incident, was vividly real, and was not slow to lay hold of the popular imagination. Bulwer attained at a bound to the full measure of his powers, and perhaps also to the full measure of his fame. *Pelham* was followed by *The Disowned* (1828) and *Devereux* (1829). They were produced in rapid succession, somewhat mechanically, and not without painful labour. Perhaps they lacked the spontaneity which leisure and a less exacting public might have fostered. But though his work fell short of that which had made him famous, the public were not at first conscious of any decadence. *Paul Clifford* appeared in 1830, and *Eugene Aram* and *Godolphin* in 1833. The novelist broke fresh ground with *The Last Days of Pompeii* (1834) and *Rienzi* (1835). The extraordinary success of Scott, while it justified a novelist of genius in any attempted incursion into historical romance, must have restrained a writer conscious of inferior powers. No historical romances, however, not even Scott's, were ever more widely popular in England than these early ones of Bulwer. Still anxious that every succeeding work should be unlike its predecessor, Bulwer published, in 1838, his two romances from Spanish history, *Leila* and *Calderon*. These works

were perhaps less popular than the former ones, owing to a less realistic treatment and a more purely picturesque aim. The author's productions at this period were almost starting in their fecundity. *Ernest Maltravers* appeared in 1837, and its sequel, *Alice*, the year following. Bulwer was essentially a didactic writer, and never attempted to escape from the reproach of writing with a full purpose. In one of his books he claimed to show the influence of circumstance on character; in another, the soul-debasing influence of the English penal code; in a third, to trace the stages by which a man of fine nature may sink into crime. Naturally such aims were not to be attained without offence in certain quarters. Those who objected to all moral purpose in art found Bulwer more than ordinarily aggressive. Those, on the other hand, who looked most for teaching and leading were sometimes offended by Bulwer's choice of scene and subject. The novelist made no terms with either party. At thirty years of age Bulwer had succeeded Campbell as the editor of the *New Monthly Magazine*. In 1838 he projected a magazine of his own, entitled *The Monthly Chronicle*, and contributed to it, as a serial story, the fantastic romance, *Zicci*; but the magazine and story expired together, the latter being afterwards developed in *Zanoni*. Bulwer's career as a novelist came to a stand for some years in order that he might apply his powers in play-writing. Macready's management at Covent Garden gave rise to a poetic revival in English dramatic literature, and the young novelist was among the first to try his hand at reconciling poetry with the stage. His *Duchess of La Vallière* (1836) was not a hit, but *The Lady of Lyons* and *Richelieu*, produced in 1838, and *Money*, a comedy (1840), achieved a distinguished success. *Richelieu* was, in all respects, a better stage work than *The Lady of Lyons*. Terse, dramatic, full of character, heightened by spectacle, it was a play of great mark. The comedy was no less a triumph in its way. These undoubtedly great achievements are at least instances of Bulwer's extraordinary plasticity of mind. Thirty years after, *The Rightful Heir* and *Walpole* were produced, but these were not remarkable plays. Resuming his career as a novelist, he published *Night and Morning* (1841), *Zanoni* (1842), *The Last of the Barons* (1843), *Lucretia, or the Children of the Night* (1847), *Harold, the Last of the Saxon Kings* (1848), *The Castons* (1849), *My Novel* (1853), *What will He do with It?* (1858), the anonymous *Coming Race* (1871), *The Parisians* (1872), *Kenelm Chillingley* (1873), and the unfinished *Pausanias* (1876). He had to face the altered public feeling brought about by the advent of a great realistic novelist, Dickens. But Bulwer's versatility was quite a match for this change of front. He showed something of Dickens's own power of concentrating

his interest and grouping his effects. In 1845 *The New Timon*, a satire directed against Tennyson, appeared; and *King Arthur*, a romantic epic, followed in 1860. *St. Stephen's*, also published in 1860, is a satirical sketch of politicians from the reign of Queen Anne, and has won an enduring reputation. In 1866 appeared *The Lost Tales of Miletus*, and in 1869 he made his last essay in verse in the form of translations of Horace's *Odes*. This ever-various man had yet another side to his intellectual activity. In his most productive period as an author he undertook the duties of a politician. He was returned for St. Ives in 1831, and sat for Lincoln from 1832 to 1841. He spoke in support of the Reform Bill of 1832. During Lord Melbourne's administration of 1835 he was created a baronet. In 1843, on the death of his mother, he succeeded to the Knebworth estates, worth £12,000 a year, and obtained a royal licence to take his mother's maiden name for his surname. He was returned to Parliament for Hertfordshire in 1852, and sat on the Conservative side of the House. In 1856 he became Lord Rector of Glasgow University, and in 1858 was Colonial Secretary in Lord Derby's administration. In 1866 he was raised to the peerage as Baron Lytton. Before the death of his mother, who was adverse to the union, he married. The marriage was not a happy one, and resulted in separation. Lytton's personal character appears to have been a somewhat curious compound. In early life he had the reputation of being like his own "Pelham." At this period he was the friend of Benjamin Disraeli, and the friends had much in common. They frequented fashionable society, and supported the character of men of fashion as assiduously as that of men of letters. Later, Lytton was more of a recluse. Indeed, his tendencies in this direction are said to have been among the main causes of his domestic infelicity. He was a man of enormous personal ambition, and judged every claim to fall short of the demands of fame.

The Life, Letters, and Literary Remains of Edward Bulwer, Lord Lytton, by his son (1883).
[R. H. C.]

* **Lytton**, THE RIGHT HON. EDWARD ROBERT BULWER-LYTTON, EARL OF, G.C.B. (b. Nov. 8th, 1831), statesman, the only son of the novelist, was educated at Harrow, and entered the diplomatic service in 1849. At first attaché at Washington, and private secretary to his uncle, Sir H. L. Bulwer [DALLING and BULWER] (1849-52), he was transferred to the embassies of Florence (1852), Paris (1854), the Hague (1856), St. Petersburg (1858), Constantinople (1858), and Vienna (1859). He was employed as consul at Belgrade in 1860, and in 1862 was sent there on a mission to prevent the renewal of hostilities between Servia and Turkey. He was

successively secretary of legation at Copenhagen, Athens, Lisbon, and Madrid; secretary to the embassy at Vienna (1869-72), and at Paris (1872-74). In 1874 he became minister at Lisbon. In spite of his long official experience, Lord Lytton had hitherto been known as a poet rather than as a diplomatist. His first volume of verse, including *Clytemnestra*, *The Earl's Return*, and *The Artist*, was published in 1859, under the pseudonym of "Owen Meredith," and was received with considerable favour, as the work of a genuine poet, full of all the graces of lighter verse. *The Wanderer*, a Collection of Poems in Many Lands, followed in 1858; *Lucile*, a Poem, in 1860 (2nd edition, illustrated by Mr. Du Maurier, 1868). *Tannhäuser, or the Battle of the Bards*, by "Neville Temple" (Mr. Julian Fane) and "Edward Trevor" (himself), appeared in 1861, and was followed by some Servian songs, *Serbaki Pesme*, in the same year. In 1863 appeared *The Ring of Amasis*, a romance, purporting to be edited by Owen Meredith from the papers of a certain Dr. N——. A collected edition of the *Poetical Works of Owen Meredith* appeared in 1867; *Chronicles and Characters*, published under his own name, in 1868; *Orval, or the Fool of Time*, founded on the Polish drama of Count Krasiński (1869); *Fables in Song, and Speeches, etc., of Edward Lord Lytton, with a Memoir*, in 1874. In Jan., 1876, he was appointed Viceroy of India by Mr. Disraeli, in succession to Lord Northbrook, and in Jan., 1877, he presided at the Delhi durbar, at which Queen Victoria was proclaimed Empress of India. In Dec., 1879, a mad Eurasian made an attempt to assassinate Lord Lytton. The chief events of his Viceroyalty were the Vernacular Press Act of 1878, and the second Afghan War, in the declaration of which Lord Lytton abandoned the Lawrence policy of "masterly inactivity," and adopted one of advance. It was much criticised at the time, and after his resignation, which followed the Liberal victory at the general election of 1880, Lord Lytton, who was created an earl, delivered several defences of it in the House of Lords. In 1883 appeared the first two volumes of his elaborate life of his father; and *Glenaveril, or the Metamorphoses*, a poem in six books, in 1885.

Lytveden, ROBERT VERNON SMITH, BARON (b. 1800, d. 1873), a nephew of the Rev. Sydney Smith, entered Parliament as Whig member for Northampton (1821): was a Lord of the Treasury (1830-34), Under-Secretary for the Colonies (1839-41), Secretary at War (Feb.-March, 1852), and President of the Board of Control (March, 1855, to Feb., 1858). It was thus his misfortune to be in a most responsible post on the outbreak of the Indian Mutiny, and it cannot be said that he was equal to his duties. He was raised to the peerage in 1859. [ELLENBOROUGH.]

M

Macadam, JOHN LOUDON (b. 1756, d. 1836), surveyor, was born in Ayrshire, and about the year 1762 emigrated with his parents to America. He subsequently returned to this country to fill an appointment as Government agent in victualling the navy at Falmouth. In 1815 he was made surveyor-general of the Bristol section of highways, where he effected many improvements in road construction. In 1822 he published his *Observations on Roads*, which, though it is in various respects erroneous, effected a salutary revolution in the system of road-making, by establishing the superior advantages of roads covered with a layer of stones broken into small pieces, without any admixture of sand, clay, gravel, or other material. Roads covered in this way are said to be "macadamised." Macadam in reward for his public services received from Government, in two grants, the sum of £10,000, and declined the honour of knighthood, which, however, was conferred on his second son, Sir James Nicoll Macadam, some time general surveyor of metropolitan turnpike roads.

Gentleman's Magazine, Jan., 1837; *The Book of Scotsmen*.

Macaulay, THOMAS BABINGTON MACAULAY, BARON (b. 1800, d. 1859), was the son of Zachary Macaulay (q.v.), and was born at the seat of an uncle, Rothley Temple, in Leicestershire. After being educated at a private school kept by Mr. Preston, he went, in 1818, up to Trinity College, Cambridge, where, though he won a Craven scholarship, his academical career was hardly so successful as his friends anticipated. Ignorance of mathematics kept his name out of the tripos of 1822, but in 1824 he was elected a fellow of his college, the great object of his ambition. In 1826 he was called to the bar, though he never devoted himself very vigorously to law, and in 1828 Lord Lyndhurst gave him a commissionership of bankruptcy. He had already won reputation in literature, first by his articles in Charles Knight's *Quarterly Magazine*, and then by his contributions to the *Edinburgh Review*, where his famous article on Milton appeared in August, 1825. But his father's financial difficulties, the expiration of his fellowship, and the abolition of his commissionership, caused him to postpone his political ambitions until in 1830 Lord Lansdowne brought him in for his borough of Calne, under conditions which secured him complete freedom to speak and vote as he liked. His speeches, especially those on the Reform Bill, soon made their mark. Leeds returned him to the reformed Parliament, and Lord Grey gave him a commissionership on the Board of Control.

He now devoted himself to Indian affairs, and, as his means were still precarious, gladly accepted in 1834 the post of member of the newly-created Supreme Indian Council at Calcutta, with a salary of £10,000 a year. He remained in India until 1838. In addition to his work in the council, he was appointed president of the commission of inquiry into Indian law, and drew up the draft of what ultimately became the Indian penal code, and has won the high applause of great jurists. But he still devoted himself with more ardour than ever to literature, read Greek persistently, and half thought of abandoning politics for letters. His famous essays on Clive and Hastings were the best fruits of his studies of Indian history. On his return to England he was returned member for Edinburgh, and his appointment in 1839 as Secretary at War, with a seat in the Cabinet, was thought likely to strengthen the tottering Government of Lord Melbourne. But he was beginning to lose his interest in practical politics. During the years of the Peel ministry he more and more devoted himself to historical studies. His ambition was now to become a great historian. When in 1846 he went back to power with the Whigs, he only undertook the leisured office of paymaster; and in 1847, when Edinburgh ejected him from his seat because he was out of sympathy with the Free Church, and an advocate of the Maynooth grant, he not unwillingly retired into private life. His great design had long been to write a History of England from the period immediately preceding the Revolution up to the days within living remembrance. In December, 1848, the first two volumes were published. The sale was enormous, and its popularity prodigious. He found in literary fame more than compensation for his abandonment of politics and society, and for the intense labour of investigation and composition which his method of work involved. He became a rich man. He was so famous that Edinburgh set itself right by returning him unsolicited at the head of the poll in 1852. But he never again took a prominent part in debate. In 1855 the third and fourth volumes of his history appeared, and were read more eagerly than the most popular of novels. In 1857 his literary eminence was rewarded with a peerage, but he never spoke in the Upper House. His sufferings from heart disease became greater, but he had almost succeeded in bringing down his history to the death of William III. when the severe weather of 1859 hastened his end. He died on Dec. 28th, and was buried in Westminster Abbey. He was never married. Macaulay's private character was singularly charming. Though he had had to struggle with poverty, he was always generous and open-handed. He was a warm friend and, at least in private life, a placable enemy. A high standard of

honour marked his public conduct. He was willing to resign in 1833 when he thought the Government were about to palter with the principles of the abolitionists in which he had been brought up, and his lofty rebukes administered to his Edinburgh constituents cost him a seat which by a little compliance he could have easily preserved. He enjoyed life heartily so long as his health remained. In society, where his brilliant conversational and declamatory powers made him always welcome, he shone no less by his knowledge and versatility than by his good-nature and geniality. His devotion to study, and his wonderful memory, enabled him to acquire an equipment of knowledge such as few men have ever had. An excellent classical scholar, he had an extraordinary command of all English literature, and no inconsiderable acquaintance with the best and greatest literatures of modern European nations. He knew by heart all his favourite books, from *Paradise Lost* down to novels and poems. It is in his famous *Essays*, collected from the *Edinburgh Review*, and circulated more widely, perhaps, than any other book of the century, that Macaulay's varied gifts are most readily studied. We admire his readiness, his brilliancy, his allusiveness; his versatility, ranging from politics and history to poetry and criticism; the charms of his gorgeous and attractive style; the force and vigour of his arguments; the clear-cut incisiveness of opinions strenuously held and boldly expressed without hesitation or qualification. With all Macaulay's quickness of intellect, however, he never could be said really to think. Tradition, impression, lively sympathies, and quick feelings led him to his opinions. But when he had made up his mind no power on earth could move him. Lord Melbourne wished he could be as sure of anything as Macaulay was of everything. Dogmatism was inherent in his very nature. He wrote of what he knew nothing about, of Bacon's philosophy, of Utilitarianism, of theories of population, with the same serene self-confidence as he had laid down the law in the fields of history and politics which he had made his own. A profound belief in the commonplace ideals of his age, a glorification of success and material prosperity, is at once the explanation of Macaulay's extraordinary popularity, and the explanation of the limitations of his character and intellect. The same qualities which appear in the unrestrained exuberance of the *Essays*, are found more matured and under greater control in his *History of England from the Accession of James II.* We have the same brilliant rhetoric, the same profound knowledge; the wonderful capacity for narration and disquisition, for exciting our interests and stirring our imagination. But there is the same tendency to exaggeration, to laying on his colouring too thickly, to bedaubing his friends

with praise and his enemies with invective. An ardent Whig of the old school, he carried into the politics of the Revolution stronger prejudices than even moved him in the politics of his own day. The objective temper of the modern scientific historian was quite alien to his mind. He had steeped himself in the debates and pamphlets of the Revolution until he had shared every ideal and every prejudice of a Somers or a Halifax. This personal element, which gives Macaulay's history its unique interest, is the great cause of its onesidedness, of its character as a great Whig pamphlet, an apology for his own side, a philippic against Jacobites, Tories, and Frenchmen. Even when, as in the famous third chapter on the condition of England in 1686, he has less room for political prejudices, materialism, his other characteristic defect, finds full play. The third chapter is an elaborate contrast of his own age with the age of the Revolution in point of prosperity, and his triumphant assertion is that we are better than our forefathers because more opulent. Yet with all its defects Macaulay's history fills, and will fill, a unique place in English literature, and he who reads it with consciousness of its limitations will never cease to find in its vivid pictures of past times and men, in its wonderful narratives, such as the relief of Derry, something great that not even Gibbon could supply. Among Macaulay's minor works must be mentioned his clever and striking ballads of *Ivry* and the *Armada*, and *Lays of Ancient Rome*, which, if not exactly poetry, have a wonderful fire and vividness; his collected *Speeches*, mostly made in Parliament, which, if separated by too narrow a line from his writings to be real oratory of the best sort, yet partake of the most brilliant characteristics of the latter; and some biographies contributed to the *Encyclopædia Britannica*, and some *Essays* in the *Edinburgh Review* not at first republished, which together make up the volumes called his *Miscellaneous Writings*. His whole works were collected by Lady Trevelyan in eight volumes.

Sir G. O. Trevelyan, *Life of Lord Macaulay*; J. C. Morrison, *Macaulay, in English Men of Letters* series; M. Pattison's article in *Encyclopædia Britannica*. [T. F. T.]

Macaulay, ZACHARY (b. 1768, d. 1838), philanthropist, was the son of the Rev. John Macaulay, of Inverary (mentioned in Dr. Johnson's *Tour to the Western Islands of Scotland*), and father of Lord Macaulay, the historian. He was for some years Governor of Sierra Leone, and on his return to London joined the Anti-Slavery Society. For upwards of forty years, in conjunction with Wilberforce, and other well-known philanthropists, he advocated the abolition of slavery, and lived to see his advocacy successful. He was for some time editor of the *Christian Observer*, and published a work on *East and*

West India Sugars (1823) against the claims of the West India colonists to a protective duty on East India sugar.

Appendix to a *Review of the Principal Proceedings of the Committee of the London Anti-Slavery Society* (1839).

MacCarthy, DENIS FLORENCE (b. 1817, d. 1882), poet and translator, was born in Dublin, and was called to the Irish bar. He first became known as a poet through his contributions to the *Nation*, established in 1842 by Sir Charles Duffy; and a volume of *Ballads, Poems, and Lyrics* appeared in 1850. Shelley's translations from Calderon led him to study Spanish literature, and in 1853 he published translations of six of Calderon's dramas, which were followed by further installations in 1861, 1867, 1870, and 1873. He also wrote a volume on *Shelley's Early Life* (1872). His last work was an ode for the *Moore Centenary* in 1879. It is as a poet that MacCarthy will be remembered; some of his ballads, notably the *Bell Founder*, the *Voyage of St. Brendan*, and *Pillar Towers of Ireland*, reaching a high excellence. A collected edition of his poems was published in 1884.

Preface to the *Poems of D. F. MacCarthy* (1884).

* **McCarthy, JUSTIN, M.P.** (b. 1830), novelist and politician, was educated at a private school in Cork, his native city. At first engaged upon the *Cork Examiner* and *Northern Times* of Liverpool, he became reporter to the *London Morning Star* in 1860, and from 1864 to 1868 was editor of that paper. For the next three years he travelled in the United States, and contributed a series of papers to the *Galaxy*, entitled *Modern Leaders* (republished in 1872). Mr. McCarthy was connected with the *Daily News*, under the editorship of Mr. F. H. Hill (1870-85). His novels are deservedly popular; though not conspicuous for complexity of plot or dramatic situations, they are in dialogue always strikingly happy, and they display a fertile creative power, notably in the eccentric type of character. They are: *Paul Massie* (1866), *The Waterdale Neighbours* (1867), *My Enemy's Daughter* (1869), *Lady Judith* (1871), *A Fair Saxon* (1873), *Linley Rockford* (1874), *Dear Lady Diadain* (1875), *Miss Misanthrope* (1877), *Donna Quixote* (1879), *The Comet of a Season* (1881), *Maid of Athens* (1883), and *The Right Honourable*, written in conjunction with Mrs. Campbell Praed (1886). Even more generally appreciated is his *History of Our Own Times* (1837-80), of which the first edition was published in 1879-80. Not professing to be profound, it possesses in a high degree the qualities of impartiality, brilliancy of style, and harmony of proportion. The first volume of his *History of the Four Georges* (1884) was not so favourably received. *The Epochs of Reform*, a volume of the *Epochs of*

History series, appeared in 1874. Mr. McCarthy is a zealous Nationalist, and was returned for county Longford, Ireland, in 1879, and again in 1880, when he was chosen vice-president of the Home Rule party in Parliament. In 1885 he was returned for the north division of county Longford, and again in 1886, though defeated at Londonderry.

MacClellan, GEORGE BRINTON (b. 1826, d. 1885), an American general, entered the Military Academy at West Point in 1842, was graduated in 1846, and appointed to the corps of Engineers as brevet second lieutenant. He served in the Mexican War, and was promoted successively first lieutenant and captain for "gallant and meritorious conduct." He was attached as engineer to the exploring expedition to the sources of the Red River of Texas in 1852; was engineer for the exploration and survey of the western division of the projected Northern Pacific Railroad in 1853-4; and in 1855 was a member of the military commission to the Crimean War. His report was published by order of Congress. He became successively chief engineer and vice-president of the Illinois Central Railroad, and president of the St. Louis and Cincinnati Railroad. In 1861, upon the commencement of hostilities between the States, he was appointed major-general of the Ohio Volunteers, and was assigned on May 13th to the command of the department of Ohio. He was appointed major-general of the United States army on May 14th, and on July 16th was voted the thanks of Congress for "the series of brilliant and decisive victories" by which he forced the surrender of General Pegram in West Virginia. Upon the defeat of McDowell at Bull Run, attention was turned to him as the one commander who had easily defeated the enemy, and he was appointed to the command of the army of the Potomac, and on Nov. 1st was made commander-in-chief of the armies of the United States. His first duty was the organisation of the raw levies into an effective army, and to the great chagrin of the country, active operations were deferred till the next year, 1862, when, in March, the army advanced upon Manassas, only to find that the enemy had retreated. Relieved of all command but that of the army of the Potomac, MacClellan led the expedition against Richmond by way of the Peninsula—a line he insisted upon against the objections made to it by the civil authorities. He besieged Yorktown, which the enemy abandoned on May 4th; fought the battle of Williamsburgh, with the Confederate rear-guard, May 6th; the battle of Fair Oaks, near Richmond, May 31st and June 1st; and in the Seven Days' Battle—June 26th to July 2nd—he was, by the concentration of the armies of Stonewall Jackson (q.v.) and General Lee (q.v.), driven from his lines in front of Richmond to the banks of the James river.

Upon the defeat of Pope in the second Bull Run battle, MacClellan was assigned to the command of the defences of Washington, and upon the advance of Lee into Maryland was again put in command of the army of the Potomac, fought the battle of South Mountain, and in the great battle of Antietam, Sept. 17th, 1862, gained an important and substantial victory. But the opportunity to destroy the defeated army was lost by delay and hesitation. He was relieved from the command in November. In 1864 he was the candidate of the Democratic party for the Presidency, but he obtained electoral votes from only three States. He was elected Governor of the State of New Jersey in 1881. He published in 1864 *The Organisation and Campaigns of the Army of the Potomac*. In knowledge of warfare, the American conflict did not produce his superior; but he persistently overrated the enemy's resources. Reporting the first battle of the Seven-Day series, he said, "I was by this time satisfied that I had to deal with at least double my number;" but it is certain that in this respect the preponderance was greatly in his own favour. Through this fault he retreated by night from fields which he had won in the day, and missed more opportunities than any other man ever hoped for. [G. W. H.]

* **MacClintock**, VICE-ADMIRAL SIR FRANCIS LEOPOLD, K.C.B. (b. 1819), Arctic explorer, was born at Dundalk, and entered the navy in 1831. A lieutenant in 1845, he accompanied Sir J. C. Ross in the Arctic expedition sent out by the Admiralty, in 1848, in search of Sir John Franklin. This expedition failed. But a second one, fitted out in 1850, was successful in finding the first traces of the missing explorers at Cape Riley, and a sledging expedition, commanded by MacClintock, penetrated eighty miles west of Crozier Channel. He returned to England in 1852, when he was promoted to the rank of commander. In 1853 he commanded the *Intrepid* in the Belcher expedition, which proceeded in search of MacClure (q.v.), who, having gone in search of Franklin, had himself been missing since 1850. In 1857, in command of the *Fox*, equipped by Lady Franklin, he proceeded to the Arctic regions, and discovered on the north-west shore of King William's Land documentary evidence of the death of Franklin and the abandonment of the ships. He published a book on *The Fate of Sir John Franklin* in 1859. He was next employed in deep-sea survey, as Admiral Superintendent of Portsmouth Dockyard (1872-7), and in active command in the West India waters, on which station he was commander-in-chief from 1879 to 1882. He was knighted in 1860, in 1877 promoted to the rank of Vice-Admiral, and has received honorary degrees from Dublin, Cambridge, and Oxford.

MacClure, VICE-ADMIRAL SIR ROBERT JOHN LE MESURIER (b. 1807, d. 1873), Arctic explorer, the son of Captain Robert MacClure of the 89th regiment, was educated at Winchester, and entered the navy in 1824. He served in the *Niagara* on the lakes of Canada from June, 1838, till Aug., 1839, when he was appointed first lieutenant to the *Pilot* on the North American and West Indian stations. In 1842 he was appointed to the command of the *Rodney* receiving ship, where he remained until the early part of 1846, and was appointed in December of that year to the coastguard service. He joined the expedition sent in 1850 in search of Sir John Franklin. Stern, cool, and bold in all perils, severe as a disciplinarian, self-reliant, yet modest as became an officer, he was admirably qualified for such a task. It was while engaged in navigating the Arctic seas in this expedition that he had the honour of discovering and completing the north-west passage. On Sept. 6th, 1850, he discovered high land which he named Baring's Land; on the 9th, other land, which he named after Prince Albert; on the 30th the ship was frozen in. MacClure, entertaining a strong conviction that the waters in which his ship, the *Investigator*, then lay, communicated with Barrow's Straits, set out with a few men in a sledge to test his views. On Oct. 26th he reached Point Russell (73° 31' N. lat., 114° 14' W. long.), where, from an elevation of 600 feet, he saw Parry or Melville Sound beneath them. The strait connecting the Pacific and Atlantic Oceans he named after the Prince of Wales. Intelligence of the important discovery was brought to England by Captain Inglefield, and the Admiralty chart was published in Oct., 1853. Captain MacClure was rescued by the Belcher expedition, and returned to England in Sept., 1854. He was promoted to post rank and knighted for his eminent services in the Arctic regions. He was further rewarded by a grant of £5,000, a similar sum being distributed among the officers and crews. He was nominated K.C.B. in 1859, and afterwards served in the East. He became rear-admiral in 1867, and vice-admiral in 1873.

S. Osborne, *Discovery of the North-West Passage*; *The Times*, Oct. 22nd, 1873; *Dublin University Magazine*, March, 1854.

MacCulloch, JOHN RAMSAY (b. 1779, d. 1864), economist and statistician, was born in Wigtownshire, where his father was a small landed proprietor. He spent some time in a lawyer's office in Edinburgh, and was among the first contributors to the *Scotsman* newspaper in 1817, in the following year becoming its editor. He had already published several essays on economic subjects, and in 1820 he repaired to London. In 1823 he became Ricardo lecturer, and in 1828 professor of political economy in the London University. Two years later he published

his *Principles of Political Economy* (1830), and in 1838 he was appointed Comptroller of H.M. Stationery Office. His contributions to economic science are numerous, but do not entitle him to the claim of being an original thinker. He contributed largely to the diffusion of just ideas on the economic questions under discussion in the beginning of this century, and to the right direction of legislation with respect to them. He edited Smith's *Wealth of Nations* (1828), to which he prefixed a life of the author, and did a similar service to Ricardo's works in 1846. His compilations were valuable contributions to the science. *The Dictionary of Commerce and Commercial Navigation* (1832), *The Statistical Account of the British Empire* (1841), and *The Literature of Political Economy* (1845) are monuments of his unceasing industry and varied knowledge.

Scotsman, Nov. 12th, 13th, 1864.

Macdonald, ÉTIENNE JACQUES, DUKE OF TARENTUM (b. 1765, d. 1840), Marshal of France, was descended from a family of Scottish Jacobites, and having distinguished himself in the earlier campaigns of the Revolution, became general of division. Sent into Italy in 1798 as Governor of the Roman States, he defeated the Neapolitans at Otricoli, became master of Naples, and then, hastening northwards, fought a three days' battle with Suvaroff, which terminated in a bare victory for the Austro-Russian force (1799). In 1800 he commanded the right wing of the army of the Rhine under Moreau, and distinguished himself by his march across the Alps by the Splügen. Diagraced from 1804 until 1809 because of his fidelity to Moreau, he rejoined the army before Wagram, and fought with such valour during that engagement that Napoleon created him Marshal and Duke of Tarentum. During the remainder of the Empire he served Napoleon well in the Peninsula, in Russia, and during the terrible days of Lützen and Bautzen. Before the battle of Leipzig he was sent after Blücher into Silesia, but Blücher turned upon him and overthrew his army on the Katzbach (Aug. 26th, 1813). In the great battle itself he fought with reckless valour, and cut off by the blowing up of the bridge across the Elster, swam the river. He remained with Napoleon to the bitter end, and bore his master's first letter of abdication to the allied sovereigns. He took no part in the Hundred Days, but upon the second restoration was a frequent speaker in the Chamber of Peers. After the July revolution of 1830 he retired into private life.

* **Macdonald**, SIR JOHN ALEXANDER, G.C.B. (b. 1815), Canadian statesman, the son of the late Hugh Macdonald, of Kingston, Canada, was called to the bar of Upper Canada in 1836, and was made Q.C. in 1846. He next became the head of the legal firm

of Macdonald and Marsh, Toronto. In 1844 he was elected to Parliament for Kingston, his native town, which constituency he represented till 1878. In 1847 he became Commissioner of Crown Lands, but the ministry of which he was a member having resigned in 1850, he was in opposition till the formation of the coalition ministry in 1854, when he became Attorney-General of Upper Canada. In 1860 he became Premier, and in 1862 he was appointed to preside over the newly reorganised Militia department. He was subsequently defeated on his Militia Bill, when the Liberals took office. Mr. Macdonald next took a prominent part in advocating the union of the provinces of British North America; and when in 1867 the new Constitution came into force, he became first Premier of the new Dominion, and was appointed Minister of Justice and Attorney-General of Canada. In 1871 he proceeded to the United States as one of the High Joint Commissioners to arrange the "Alabama" Treaty. In 1873 he resigned in consequence of the receipt of money by the ministry which was used for party purposes. He returned to power in 1878 as Premier and Minister of the Interior. He at present represents Carlton County. He was created K.C.B. in 1878 and G.C.B. in 1884, and is an hon. D.C.L. of Oxford.

* **Macfarren, SIR GEORGE ALEXANDER** (b. 1813), composer, was born in London, and having been educated at the Academy of Music, became one of the professors of harmony in that institution in 1834. In the same year he published his first symphony, and two years later the fine overture of *Chevy Chase*. Of his main works, omitting several quartets, symphonies, concert pieces, and numerous songs, the following may be mentioned here: *The Devil's Opera* (1837); *Don Quixote*, an opera (1846); *Charles II.*, an opera (1849); *The Sleeper Awakened* (1850); *Leonora*, a cantata (1851); *May Day*, a cantata (1856); *Robin Hood* (1861); *John the Baptist* (1873); *The Resurrection* (1876); *Joseph*, an oratorio, and *The Lady of the Lake*, a cantata (1877); and *King David* (1884). In 1875 Dr. Macfarren was appointed principal of the Royal Academy of Music, and professor of music at Cambridge, in succession to Sterndale Bennett. He was knighted in 1883. His sight, always weak, gave way in manhood, and he has been totally blind for several years.

Macgillivray, WILLIAM (b. 1796, d. 1852), naturalist, was educated at King's College, Aberdeen, and at Edinburgh University. He became curator of the museum of the Royal College of Surgeons at Edinburgh in 1831, and professor of natural history in the Marischal College, Aberdeen, in 1851. As a naturalist, he devoted himself more especially to ornithology, and his *History of British Birds* (1837-52) is a work which, in

m.w.—23

spite of recent observations, is by no means obsolete. His *Natural History of Deside* was published after his death.

Mack, KARL, BARON VON (b. 1752, d. 1829), Austrian general, rose from the ranks, and in 1793 he directed the operations of the allies against the French Republic. In 1798 he commanded the Neapolitan troops against the French, but was worsted at every point, and compelled to surrender as prisoner of war. A prisoner on parole in Paris, he effected his escape, and was placed in command of the Austrian armies during the campaign of 1805. He occupied Bavaria, but was speedily forced to retreat, and capitulated disgracefully at Ulm on Oct. 17th. At first condemned to death, he eventually escaped with a year's imprisonment.

* **Mackenzie, THE HON. ALEXANDER** (b. 1822), a Canadian statesman, was born at Logierait, Perthshire, Scotland, educated at the Perth Academy, and emigrated while a youth to Canada. He settled for some time at Kingston as a builder and contractor, but afterwards embraced journalism, and became editor of the *Lambton Shield*, an organ of Liberal opinions. In 1862 he entered Parliament as member for Lambton, and in 1867, when the new Constitution of Canada came into force, he was returned to the general Parliament of the Dominion. At the same time he sat in the Ontario Legislature for West Middlesex, and held successively the minor posts of Provincial Secretary and Provincial Treasurer. On the defeat of Sir John A. Macdonald's ministry in 1873, Mr. Mackenzie, who had hitherto led the Liberal party, was entrusted with the formation of a Cabinet. He accepted the Premiership, and became Minister of Public Works. In 1875 he visited Great Britain, was received with enthusiasm in Scotland, and was presented with the freedom of Perth and Dundee. In 1878 he received an adverse vote, resigned office, and led the Liberal opposition until he was succeeded by Mr. Blake.

Mackenzie, HENRY (b. 1745, d. 1831), novelist, the son of an eminent Edinburgh physician, who wrote a volume of *Medical and Literary Essays*, was educated at the university of that city. In 1765 he repaired to London to study the modes of English Exchange practice, with some notion of joining the English bar, but eventually returned to Edinburgh and became attorney for the crown. In 1771 he published anonymously *The Man of Feeling*. The great popularity of this novel gave occasion to an audacious fraud on the part of a curate at Bath, who transcribed the whole in his own hand, laid claim to the authorship, and maintained his assertion with such pertinacity that the publishers were compelled to make a formal contradiction. *The Man of the World* (1773) breathes the same tone

of exquisite sensibility. He next projected the *Mirror*, and the *Lounger*, publications after the manner of the *Spectator*. In the *Lounger* he was the first to appreciate the genius of Burns in a review of his poems, then just published, which at once drew the unknown poet from obscurity. Mr. Mackenzie also wrote several unsuccessful dramas. In 1804, he was appointed to the lucrative post of Comptroller of Taxes for Scotland. Collected editions of his works have been published from time to time. All his works are marked by a certain tenderness of feeling, and a sweetness and beauty of style.

Memoir by Sir Walter Scott.

Mackenzie, THOMAS, LORD (b. 1807, d. 1869), a Scottish judge of session, was educated first at Perth and subsequently at the Universities of St. Andrews and Edinburgh. He was called to the Scottish bar in 1832; and one of the first notable cases in which he was engaged was "Charles X. v. Pfaffenhoffen." Mackenzie was appointed Sheriff of Ross and Cromarty in 1851, Solicitor-General for Scotland on Jan. 10th, 1855, and judge on the 29th of the same month. He turned his comparative leisure as a judge to good use by writing *Studies in Roman Law*, a work still a text-book at Oxford and Cambridge. He also wrote some picturesque notes of a vacation tour in Spain in 1859, which were published in *Bentley's Miscellany*, and the beginning of an elaborate treatise on education. But he was compelled to retire from the bench in 1864. Personally he was one of the most genial of men, with a fund of good nature, and not infrequent humour. Most of his instincts were distinctly literary, and he preserved throughout life the closest intimacy with a circle of notable Scottish men of letters.

Mackintosh, SIR JAMES (b. 1765, d. 1832), statesman, historian, and philosopher, the son of a military officer, was born at Aldourie, on the banks of Loch Ness, N.B., and was educated at King's College, Aberdeen, where he met Robert Hall, with whom he formed a life-long friendship. After studying medicine at Edinburgh and taking his degree, he proceeded to London, intending to follow the medical profession. At this time the question of the regency was being discussed, and this occasioned the publication of a pamphlet by him in 1788. In 1791 he published the *Indicia Gallicæ* in reply to Burke's *Reflections on the French Revolution*, which immediately placed him in the first rank of the party in this country that was upholding the cause of France. He now determined to quit the medical profession for law, and in 1795 he was duly called to the bar. Four years later he conceived the notion of delivering a series of lectures in Lincoln's Inn Hall on *The Law of Nature and of Nations*, the publication of which drew commenda-

tions from Pitt, Loughborough, Parr, and others. Mackintosh distinguished himself in his brilliant defence of M. Peltier, an emigrant royalist, who was prosecuted for a libel on the First Consul in 1803, and a few months later he was knighted and sent to India as Recorder of Bombay. All the great reforms that he had projected before leaving England came to nothing, and in 1812, broken in health and spirits, with uncertain prospects and not free from debt, he returned to England. He was at once offered a Government seat in Parliament, and an early promotion to the head of the Board of Control. These offers, however, he peremptorily declined. Shortly afterwards he was returned in the Whig interest for the county of Nairn, and in 1818 he was returned for Knaresborough, which constituency he represented till his death. From 1818 to 1827 he was professor of law at Haileybury. He had long been collecting materials for a History of England, but he was able to accomplish only the fine fragment known as his *History of the Revolution of 1688*. In 1830 he wrote his *Dissertation on the Progress of Ethical Philosophy*, in which he adopts generally the principles and accepts the analyses of the Scottish school of philosophy, although in his ethical theory he was largely influenced by the school of Hartley. In this same year he was appointed to a seat on the Board of Control by Earl Grey, and cordially co-operated in all the great measures of reform that were then being brought forward. His portrait by Lawrence is in the National Portrait Gallery.

Life of Sir James Mackintosh, by his son; Macaulay's Essays. [W. M.]

MacLennan, JOHN FERGUSON (b. 1827, d. 1881), antiquarian, was educated at King's College, Aberdeen, and at Cambridge University. His monumental work on *Primitive Marriage* appeared in 1865, and was followed by *Studies in Ancient History*. These two works were edited by his brother, and republished in one volume after his death. His valuable essays on *Totemism* were published in the same periodical. MacLennan's researches have thrown a flood of light on the condition of early society. He was also the author of a life of *Thomas Drummond*.

Macleod, NORMAN (b. 1812, d. 1872), a popular Scottish preacher and man of letters, a native of Campbeltown, Argyllshire, where his father was parish minister, was educated at the University of Glasgow. He was tutor in a Yorkshire family for several years, and with his pupil lived for some time at Weimar. His first living was the parish of Loudon, in Ayrshire, to which he was presented by the Marchioness of Hastings, widow of the Indian Governor-General (1838). In 1843 he was translated to the parish of Dal-

Keith, and in 1851 to the great charge of the Barony parish of Glasgow. The dignities of the Deanery of the Thistle and the Chaplaincy to the Queen followed in 1854. His first sermon before the Queen, at Crathie, made such an impression on her that henceforward he was perpetually there during Her Majesty's visits, and became a trusted and valued friend. He next started and edited a little monthly magazine, *The Edinburgh Christian Magazine*, not very successful. In 1860 appeared *Good Words*, which he edited, and which became in his hands one of the greatest successes in periodical literature. Macleod wrote a great deal in this magazine. *Reminiscences of a Highland Parish*, *The Old Lieutenant*, *The Starling*, and *Wee Davie*, since published separately, are among his contributions. In 1867 he was sent to India to report on the Church of Scotland missions there; and in 1869 he was chosen Moderator of the General Assembly, his official address dealing largely with his Indian experiences. Thoroughly catholic in all that appertains to religion and the Church, a favourite courtier without being a flatterer, sincerely though not ostentatiously pious, and gifted with real eloquence and much literary power, he enjoyed a unique popularity; and his death was deeply mourned all over the world.

Dr. Donald Macleod, *Life of Norman Macleod*.

Maclise, DANIEL, R.A. (b. 1811, d. 1870), the painter, was born at Cork. He early gave signs of artistic power, and in 1825 attracted attention by a sketch of Walter Scott, then on a visit to the town. Having escaped from the drudgery of a bank at sixteen, he entered the school of art in Cork, and after a few months' training, made his way to London, where he entered as a student of the Royal Academy, 1828. In the following year he exhibited *Malvolio*, his first contribution to the Academy, and continued to exhibit subject pictures till, in 1833, he established his reputation by *All Hallow Eve*. Two years later he was elected A.R.A. for his *Chivalric Vow of the Ladies and the Peacock*, and soon after this he became acquainted with Dickens and Forster, who remained his most intimate associates. In 1840 he exhibited *The Banquet Scene in Macbeth*, and was elected R.A. *The Play Scene in Hamlet*, perhaps his best-known work, was produced in 1842; *Moses and the Spectacles*, from *The Vicar of Wakefield*, in 1850; *Caxton's Printing Office*, in 1851. Soon after this he was appointed to adorn by contract the Royal Gallery in the new Houses of Parliament. After long years of continual disappointment and patient work, 1858-64, he succeeded in completing the two historical scenes so well known from engraving, the *Meeting of Wellington and Blücher after Waterloo*, and the *Death of Nelson*. The frescoes are painted

by the "water-glass" process of stereochromy. Owing to the unavoidable delay in their production, the rest of the contract was cancelled by the commissioners. In 1865 Maclise was offered, but declined, the presidency of the Royal Academy. He continued to work laboriously at easel pictures, and exhibited regularly up to his death. His last work was *The Earls of Desmond and Ormond*, 1870. As a representative British artist, Maclise occupies much the same position in his own sphere as Landseer in animal painting. Without a trace of creative genius or poetic inspiration his work is "healthy," solid, and carefully designed. It may perhaps be taken as showing the highest elevation to which English illustrative art and figure painting could reach before it was purified and inspired by the example of the Pre-Raphaelites.

W. Justin O'Driscoll, *Memoir of Daniel Maclise, R.A.* (1871).

* **MacMahon, MARIE EDMÉ PATRICE MAURICE DE, DUC DE MAGENTA** (b. July 13, 1808), Marshal of France and second President of the French Republic, is a descendant of an Irish family who went into exile with James II. Educated at St. Cyr, MacMahon fought through the Algerian campaigns, and in 1833 became captain, major in 1842, colonel in 1845, and general of brigade in 1848. He came out of the Crimean War with a high reputation, having successfully conducted the assault upon the Malakoff (Sept. 8th) which led to the fall of Sebastopol. In the Italian campaign of 1859 he greatly distinguished himself, and on the battle-field of Magenta, which was won by his timely support (June 4th), was created Duke of Magenta and Marshal of France. Marshal MacMahon represented France at the coronation of William III. of Prussia, 1861, and in 1864 was appointed Governor-General of Algeria. In that capacity he was anything but successful, although it is only fair to state that he was hampered by Napoleon's absurd schemes for making himself a sort of sultan of an Arab kingdom; and complaints of the misery of the province were so numerous, that twice in the course of 1870 he sent in his resignation to the Emperor. On the outbreak of the war with Germany, Marshal MacMahon was placed at the head of the first corps d'armée, with the mission of defending Alsace. On Aug. 6th he was badly beaten at Woerth, and forced to abandon the line of the Vosges. He retreated on Nancy, suffering further reverses by the way, and was then placed at the head of a fresh army with orders to effect a junction with Bazaine. He undertook the operation against his will, marched aimlessly about until on Sept. 1st he was surrounded at Sedan, and only failed to sign the capitulation of his army because he had been wounded early in the battle. Set free by the peace,

he returned from Wiesbaden to France, and was selected by M. Thiers to reduce the communists in Paris. The second siege of Paris was conducted by him with success, and to a certain extent wiped out the memory of Sédan. His name was now put about by his ambitious wife, and by the *Figaro*, as the champion of order, and when the monarchical majority of the Chambers had made up its mind that M. Thiers was too honest to be a useful catspaw, it determined to overthrow him and elect MacMahon. This was done in May, 1873, a Conservative ministry was formed, and the septennate was voted, but the expected *coup d'état* in favour of Henry V. was left unexecuted, the Marshal having decided to abide by "existing institutions." This was his watchword during his tenure of office, which, however, was very unpopular owing to the severe repression of Republican ideas. In 1877 the crisis became once more acute, the moderate Jules Simon ministry having been dismissed and M. de Broglie recalled to power a second time (May 16th). It was evident that monarchical designs were afoot, and the dissolution of June showed that the Marshal was confident of the result of an appeal to the country. If so, he was grievously mistaken, as Gambetta informed him; nor did his electoral campaign mend matters. The Republicans had a clear majority over the united Monarchists of over a hundred, and the Marshal-President was forced, after forming in his desperation an extra-parliamentary Cabinet under General Rochebouët, to accept a Republican ministry under M. Dufaure (Dec. 14th). On Jan. 30th, 1879, he resigned, rather than accept a law depriving monarchical officers of their appointments, and was succeeded by President Grévy. He has since lived in strict retirement, and is said to be writing his memoirs.

Macmillan, DANIEL (b. 1818, d. 1857), was, with his brother *ALEXANDER (b. 1818), the founder of the well-known publishing firm. Their father was a small farmer of the Isle of Arran. Daniel was apprenticed when ten years old to Maxwell Dick, a bookseller and binder at Irvine, with whom he remained ten years. In 1831 he went to Glasgow, and fell dangerously ill from over-work. From 1833 to 1837 he was employed by Mr. Johnson, of Cambridge, came to London in the latter year, and secured a situation in the service of Messrs. Seeley, of Fleet Street, where he remained from 1837 to 1843, at a salary rising from £60 to £130. Here he was joined in 1839 by his brother Alexander, who had been keeping a village school at Nitschill, near Paisley. During this time Daniel's resources were much crippled by having to provide for the younger members of the family, so much so that he had to sell his stock of books, but he had meanwhile formed an acquaintance

with Archdeacon Hare. In Feb., 1843, he had started a small business in Aldersgate Street under his brother's management, and in the summer of the same year his friend's aid and advice enabled him to take over the business of Mr. Newby at Cambridge. Confining themselves at first to the retail trade, the desire of buying Mr. Stevenson's business in 1845 compelled them to take fresh partners, and Daniel was able to gratify his growing desire of turning his attention to publishing. The partnership was already in a flourishing state when failing health forced the elder brother to retire in 1856. A branch was opened in London after his death, and in 1863 the whole business removed to the metropolis, the magazine bearing the firm's name having been started in 1859. In 1863 Mr. Alexander Macmillan was also appointed publisher to the University of Oxford.

Thomas Hughes, *Memoir of Daniel Macmillan*.

***Macmillan, THE REV. HUGH, D.D., LL.D.** (b. 1833), a minister of the Free Church, educated at Breadalbane Academy, Aberfeldy, and Edinburgh University, was appointed successively to the livings of Kirk-michael, Perthshire (1859), St. Peter's, Glasgow (1864), and West Church, Greenock (1875). In addition to his numerous contributions to religious and scientific periodicals, Dr. Macmillan is the author of *First Forms of Vegetation* (1861), *Bible Teachings in Nature* (1866), to which a sequel, *The Sabbath of the Fields*, was published in 1876; *Holidays on High Lands* (1869), *The True Vine* and *The Ministry of Nature* (1871), *The Garden and the City* and *Sunlights in the Wilderness* (1872), *Our Lord's Three Risings from the Dead* (1876), *Two Worlds are Ours* (1880), *The Marriage in Cana of Galilee* (1882), *The Riviera* (1885), and *The Olive Leaf* (1886). *Bible Teachings* and its sequel, and *The Ministry of Nature*, have been translated into various languages. Dr. Macmillan became LL.D. (St. Andrews) in 1871, and D.D. (Edinburgh) in 1879.

Macnaghten, SIR WILLIAM HAY, BART. (b. 1793, d. 1841), Indian official, was the second son of Sir Francis Workman Macnaghten, Bart., a judge at Calcutta, and accompanied his father to India in 1809. He entered the Civil Service of the East India Company when young, and his long training at Malda, Shahabad, and Sudder Dewanny fully qualified him for the highest posts. In 1830 he became secretary to Lord William Bentinck, the Governor-General, and in 1839 was appointed envoy from the Indian Government to Shah Shuja when the latter was restored to his throne at Cabul. It was for his services at this period that he was created a baronet in 1840. After the restoration of Shah Shuja and the departure of the bulk of the British army, Macnaghten was left

behind at Cabul with Sir A. Burnes as his colleague; there was also a force of 8,000 men under General Elphinstone. In Nov., 1841, a general outbreak took place at Cabul, and Burnes was murdered. Macnaghten, who, by the illness of General Elphinstone, was at the head of affairs, considered that the position of the garrison was untenable, and resolved to negotiate for a safe-conduct. On Dec. 23rd he went to a conference with the Afghan leader, Akhbar Khan, and was assassinated by Akhbar himself.

Gentleman's Magazine, May, 1842; 'Sir J. W. Kaye, Invasion of Afghanistan.

Macready, WILLIAM CHARLES (b. March 3rd, 1793, d. April 29th, 1873), English tragedian, the son of a provincial manager, was educated at Rugby School, and made his first appearance on the stage at Birmingham in the character of Romeo (1810). Until 1814 he remained as leading actor and stage manager in his father's company, and acquired a very high reputation in the provinces. From 1814 to 1816 he visited Scotland and Ireland, and in September, 1816, made his appearance at Covent Garden as Orastes in *The Distressed Mother*. The impersonation won the warm approbation of Edmund Kean; nevertheless, it was not until 1819 that, by his creation of Richard III., Macready established his fame as a great actor of the stately school of Kemble, an opinion confirmed by his Virginius in Sheridan Knowles's play (1820). After removing to Drury Lane in 1823, he created the *titlo-roles* in Sheridan Knowles's dramas, *Caius Gracchus* and *William Tell*. A most successful tour in the United States followed in 1826; and in 1827 Macready, on his reappearance at Drury Lane, gave to the public his magnificent Macbeth, a part in which he had appeared once seven years previously. After a visit to Paris in 1828, the next important events in Macready's life are his appearance in Byron's *Werner* (1830), and a most successful season at the Haymarket in 1836. In the following year he undertook the management of Covent Garden, and held it for two years, producing some fine Shakespearean revivals, and Lord Lytton's plays, *The Lady of Lyons* and *Richelieu*. Macready acted Shylock at the Haymarket in 1839, but the impersonation was hardly on a level with his Macbeth, Coriolanus, or Virginius. After a somewhat disastrous period of management at Drury Lane (1841-43), which was marked, however, by the production of Browning's *Blot on the Scutcheon*, Macready revisited the United States; and again in 1849, on which occasion a riot, accompanied by loss of life, took place at the Astor Opera House, New York, occasioned by the friends of the American actor Forrest, who was jealous of Macready. After a series of farewell performances in the provinces, Macready brought his theatrical career

to a conclusion at a benefit at Drury Lane on Feb. 26th, 1851. Shortly afterwards the Macready banquet, with Sir E. B. Lytton in the chair, was held to commemorate the tragedian's efforts to elevate and purify the stage. The remainder of his life was spent at Sherborne, where he was interested in the education of the poorer classes.

Sir F. Pollock's edition of Macready's *Reminiscences*.

Madden, SIR FREDERIC (b. 1801, d. 1873), keeper of the MSS. at the British Museum, was the son of a naval officer, entered the British Museum in 1826, became assistant-keeper in 1828, and was keeper from 1837 to 1866. A learned antiquarian, Sir Frederic published annotated editions of *The Lay of Havelock the Dane* (1833), the old English romance *William and the Werwolf* (1832), and the old English version of the *Gesta Romanorum* for the Roxburghe Club (1838); *Layamon's Brut* for the Society of Antiquaries (1847), and Wycliffe's *Version of the Bible*, in conjunction with his predecessor in office, the Rev. Josiah Forshall, for the Clarendon Press (1850). He also edited Matthew Paris's *Historia Anglorum* for the Rolls Series (1858), wrote with Mr. Henry Shaw a work on *Illuminated Ornaments* in 1833, and translated *Silvestre's Universal Palaeography*, which appeared in 1850.

Madison, JAMES (b. 1758, d. 1836), fourth President of the United States, was born in King George county, Virginia, educated at Princeton College, and was afterwards admitted a lawyer. After some experience in the local legislature, he became a member of the first Congress under the Constitution in 1789, when he gained the friendship of Washington, and took a leading part in the organisation of the United States Constitution. He next became Secretary of State (1801-8), under President Jefferson, and distinguished himself by upholding the rights of the United States as a neutral Power in the great European war. His *Examination of the Doctrines of National Law* has the reputation of being one of the ablest of existing treatises on the relative rights of neutral and belligerent Powers. In 1809 he was elected to the Presidency, which he held for two terms. One of his first acts as President was to forbid all communication with England and France till the Berlin decree and the British Orders in Council should be revoked. France complied, but England declined. This caused the three years' war (1812-15) between the United States and England. Madison was not a great war administrator, and the period of his Presidency is less to his credit than the period of his Secretaryship of State. In 1817 Madison retired from the Presidency with a name for eminent ability and spotless integrity. He spent the remainder of his

days in discharging his academic duties in connection with Virginia University. His speeches, letters, papers, and essays were purchased by Congress for 30,000 dollars, and published in 1840 under the editorial superintendence of H. D. Gilpin.

Madvig, JOHAN NICOLAI (b. 1804, d. 1886), philologist, born at Svaneke in Bornholm, was educated chiefly at the University of Copenhagen, where, in consideration of his labours on the Latin texts, and especially on the philosophic works of Cicero, he was appointed professor of Latin in 1829. His very numerous subsequent treatises on classical literature and grammar were generally written in Danish, but have been for the most part translated into German, French, or English. Probably his best-known and most valuable work is his great *Syntax of the Greek Language, especially of the Attic Dialect* (1847, translated into English 1853, and repeatedly re-issued). His *Latin Grammar for Schools* (1841, translated 1851) is very largely used, especially in Germany. He has further edited texts of Livy, Lucretius, Juvenal, and nearly the whole of Cicero, has published numerous treatises on points of scholarship and classical learning, and a valuable *Essay on Language* (1842). One of his last publications was *On the Constitution and Administration of the Roman State* (1881, translated into French and German 1882). After the disturbances of 1848, Madvig took a prominent part as a Liberal statesman in the politics of the National Diet, to which he had been originally elected in 1839. In support of his views he wrote several political treatises, the most important of which was *The National Policy of the Danish Monarchy* (1864).

* **Magee, THE RIGHT REV. WILLIAM CONNOR, D.D.**, BISHOP OF PETERBOROUGH (b. 1821), the son of an Irish clergyman, and grandson of William Magee, Archbishop of Dublin (1822-31), was a scholar of Trinity College, Dublin, whence he took a distinguished degree in 1842. Ordained shortly after, he became a curate in Dublin, was appointed curate of St. Saviour's, Bath, in 1848, and joint incumbent of St. Saviour's, Bath, in 1850. In 1860 he became minister of Quebec Chapel, London; in 1861, rector of Enniskillen; Dean of Cork in 1864; and Dean of the Chapel Royal, Dublin, in 1865, whence, upon the recommendation of Mr. Disraeli, he was transferred to the see of Peterborough in 1868. Dr. Magee had by this time gained a high reputation as a preacher, notably by a sermon preached before the Church Congress at Dublin in 1868, and as a controversialist, by combating F. D. Maurice in the *Fortnightly Review*, and the Liberationists in lectures and addresses—for instance, one on the *Voluntary System*. In

the House of Lords, Bishop Magee opposed the Disestablishment of the Irish Church in a speech of glowing eloquence, and scarcely less scathing was his attack upon the Intoxicating Liquors Bill (Bruce's Bill) of 1872. He is in favour of a reform of the system of lay patronage. Bishop Magee presided over the Church Congress of 1880. In 1885 his state of health was extremely precarious, but he fortunately recovered.

Dublin University Magazine, vol. lxxvii., where a list of the bishop's writings is given.

Magendie, FRANÇOIS (b. 1783, d. 1855), French physiologist, was appointed demonstrator of anatomy at the Faculty of Medicine in 1804, member of the Academy of Sciences in 1821, and Professor of Anatomy at the College of France in 1831. Ten years previously he had founded the *Journal of Experimental Physiology*, and his investigations, particularly into the nature of poisons, did much for the advancement of science. He aided by his experiments in the completion of Charles Bell's great discovery, the double nature of each nerve, with roots of sensation and motion. His works are extremely numerous, and comprise monographs on absorption, the blood, cholera-morbus, the influence of emetics, and various other subjects. He was an ardent vivisectionist.

L. Louvet in the *Nouvelle Biog. Générale*, where a list of his works is given.

* **Mahaffy, THE REV. JOHN PENTLAND, D.D.** (b. 1839), was educated at Trinity College, Dublin, where he became a fellow in 1864, and professor of ancient history in 1871. In 1873 he was appointed Donnellan lecturer. Professor Mahaffy is widely known as the writer of popular works on ancient, and chiefly Greek, civilisation; among them are *Twelve Lectures on Primitive Civilisation* (1869); *Prolegomena to Ancient History*, on legends, inscriptions, and Egyptian literature (1871); the well-known *Social Life in Greece from Homer to Menander* (1st ed. 1874); and *A History of Classical Greek Literature* (1st ed. 1880). His *Rambles and Studies in Greece* first appeared in 1878. He also wrote a life of *Descartes* for the series of Philosophical Classics in 1880, *The Decay of Modern Preaching* (1883), *The Story of Alexander's Empire* (1886), and edited *Duruy's History of Rome* (1883). His *Commentary on Kant* began to appear in 1872.

Mahdi, THE (b. 1843, d. 1885), was the title applied to Mohammed Ahmed, the late Prophet of the Soudan. It means the "Guided" (by God), and denotes a species of Mohammedan Messiah that has played a prominent part in the sectarian revolutions of the East. The idea of a saviour, who shall come at the end of the world and destroy sin and disbelief, and kill the Antichrist (who appears in Mohammedan theology under the name of "Ed-Dejjal"), is of

course immediately derived from Christianity, but it gained force and circumstance from the ancient Aryan myth which we preserve in the legend of Arthur. Although the doctrine does not appear in the Koran, there is little doubt that Mahomet taught his followers to believe in the eventual appearance of some such Messiah. With the heretical sect of the Alides, in their several branches, the doctrine of the Mahdi attained to serious political importance, and throughout Mohammedan history we find frequent Mahdis leading revolutions and often founding powerful dynasties. The Soudan Mahdi's name was that of the great Arabian Prophet, Mohammed Ahmed, and his parents' names equally agreed with the sacred precedent, for they were called Abdallah and Amina. He was born at Dongola in 1843, and showed an early leaning to devotion. At the age of twelve he knew the Koran by heart, and his brothers sent him to study under two learned professors near Khartoum. When twenty-five years old he retired to the island of Aba, where he imitated his prototype Mahomet by spending fifteen years in solitary meditation, dwelling in a hole in the ground, fasting, and lamenting over the corruption of mankind. He soon came to be regarded as a saint, and at the age of forty (like Mahomet) he took up the prophetic rôle, in the fateful year 1300 of the Hegira, when pious Moslems believed that the last trump would sound. The Mahdi despatched emissaries among the tribes to announce his appearance, and after a year's delay Raouf Pasha, the Governor-General of the Soudan, sent a couple of hundred soldiers against Mohammed Ahmed; they shot a dervish, and were immediately cut down to a man by the Mahdi's followers (August, 1881). Giegler Pasha sent the garrisons of Sennaar, Feshuda, and Kordofan against the Prophet, with a like result; only 150 men escaped out of 7,000. Sennaar joined the Mahdi, and El-Obeyd was captured, and became the headquarters of the insurrection (January, 1883). In the same year an Egyptian army, commanded by an English officer, Hicks Pasha, was sent against the Mahdi, with the permission of the English Government. Hicks and his army were destroyed in November, 1883. The Egyptian gendarmerie, under Baker Pasha, fared equally badly at the hands of Osman Digna (Othman Dakana, or Othman of the Black Beard), the Mahdi's lieutenant in the Eastern Soudan, when advancing from Suakim they attempted to relieve the loyal garrisons of Sinkat and Tokar. Two British campaigns undertaken from Suakim, while marked by conspicuous victories, failed to make any permanent impression upon the revolt, and the Mahdi remained supreme in El-Obeyd. General Charles George Gordon was sent out by the British Government in January, 1884, to attempt to reduce the insurrection by means of his unique prestige and

peculiar influence over the Soudanis; but as a plausible antidote to his influence was found in the theory that he was in fact the Dejjal or Antichrist, who is a necessary complement of a true Mahdi, he soon found himself shut up in Khartoum. Tidings of his position came through the besieging army, and after much delay an expedition under Lord Wolseley was despatched to Egypt in September, 1884, and arrived in the neighbourhood of Khartoum two days after General Gordon had fallen (Jan. 26th, 1885), after having withstood the determined siege of the Mahdi for 326 days. The British expedition was at once recalled by the Government, and the Soudan was definitely severed from Egypt and abandoned to the Mahdi, who did not, however, long enjoy his triumph, for he died of fever in the following June, leaving Abdallah Et-Taashi to succeed him as Khalif. The Mahdi was described as of middle height, and coffee-coloured complexion, with a black beard, and three scars on each cheek. He was probably sincere in his self-belief, and his character, with some reservations, and considering the surrounding conditions, appears to have been not unworthy.

J. Darmsteter, *The Mahdi*, trans. by A. Ballin.
[S. L.-P.]

Mahmūd II. (b. 1785, succeeded 1808, d. 1839), thirtieth Sultan of Turkey, and the last great ruler of the line of Othman, was a son of Abd-el-Hamid I., and younger brother of Mustafā IV., whom he succeeded. In 1808 his brother Mustafa, menaced by the Pasha of Rustchuk and his Albanian followers, resolved to insure his life in the approved manner of Turkish Sultans, by putting to death every other representative of the royal house; and his mutes had just succeeded in giving the bow-string to his deposed cousin Selim III., and were searching for Mahmūd, who lay hidden in a bath oven, when the Albanians forced the palace, deposed Mustafa, and proclaimed Mahmūd II. Sultan in his stead (July 28th, 1808). The Janissaries were engaged in an internecine struggle with the triumphant Albanians, and Mahmūd found himself compelled to acquiesce in the eventual triumph of the former, who continued for some time to exercise a fearful and tyrannous influence over the empire and the throne. Turkey was at that time engaged in war with Russia, and Napoleon was negotiating with the Czar for a partition of the Ottoman dominions. The subject populations were more or less in revolt; and the great pashas were organising independent principalities. At this perilous moment England became reconciled with the Porte, and Sir Robert Adair, with Stratford Canning as his secretary, proceeded as ambassador to Constantinople in 1809. Adair was able in some measure to hold in check the aggrandising schemes of France and Russia; but it was not
